

Ironclads #2 Instructions

Okay, so it's actually just Ironclad singular, and really these instructions are here to point you towards the instructions in the Ironclads #1 file. The construction of all of the pieces in this kit are done using the same general principles and techniques as outlined in the IC#1 instructions.

Special notes; The Wheelhouse has one side with no vision slit- that faces aft. The Paddlewheel butts up to the backside of the wheelhouse and should be placed before the other pieces that go on top of the cabin to help with spacing. The center cabin has a small black door on one short side - that side faces aft.

Remember that when working with faces that join to curved areas (paddlewheels, stern) to pre-shape before attempting to attach. Usually just wrapping them around a pencil or bamboo skewer is sufficient to loosen them up and prep them.

Have fun!
