## **DELTA GREEN Activities Matrix** Operation Individuals The activities matrix determines connectivity between individuals and anything other than persons (interest/entity). Analysts develop a tab to the matrix listing the short titles of each interest/entity. Each short title explains its significance as an interest or entity. Suspected Connectivity Known Connectivity

Suspected Deceased Confirmed Deceased The activities matrix reveals an organization's membership, organizational structure, cell structure and size, communications network, support structure, linkages with other organizations and entities, group activities and operations, and, national or international ties. The activities matrix format uses a rectangle base. Rows are determined by the names from the association matrix, and columns are determined by the interest or entity short titles.

Investigator

The activities matrix shows known and suspected connections. Analysts develop the criteria for known connectivity. Criteria may be determined and defined by CCIR, commander's intent or directive, insurgent doctrine, or the staff judge advocate. Known connectivity is depicted as a filled circle and placed in the square where the individual and interest or entity meet within the matrix. An unfilled circle indicates suspected or weak associations.
