

RESULT APS

RESISTANCE VALUE

SUCCESS NUMBER

STEP ONE: Dial the Wheel so that the Acting Value Window lines up beneath the Opposing Value of the Dice Action.

STEP TWO: With numbers lined up, find the Acting Value of the Success Number that the player must roll.

STEP THREE: Roll the dice. If the Action is successful, count Column Shifts by turning the Wheel clockwise, until the number lined up beneath the Resistance Value of the Success Number that the player must roll is turned in the number greater than the Acting Value.

STEP FOUR: Dial the Wheel so that the Effect Value Window lines up beneath the Resistance Value. When spaces equal to the number of Column Shifts earned, turn the Wheel so that the Acting Value of the word "BREAK" is lined up beneath the Acting Value of the Raps received.

STEP FIVE: With numbers lined up, find the Effect Value of the Action. This is the number of Raps received on the Action.
