MAGIC ITEM FABRICATION FOR DUMMIES: An Improved System for Creating Magic Items in AD&D.

by R. N. Bailey

Copyright © 2012 by R. N. Bailey Author Contact: www.dungeoneersguild.com

One of the most underdeveloped and vague areas of the Advanced Dungeons & Dragons system is the fabrication of magic items by player characters. A cornerstone of the game, magic items are found everywhere—adventurers find them by the handful in dungeons, caves, dragon's hordes, and wizard's towers. It is possible for even a lowly city guard to possess a magic +1 sword. The fact that the designers of the game paid so little heed to developing a comprehensive, well-rounded system of magic item creation is mystifying to say the least.

The system presented in the *Dungeon Masters Guide*, 1^{st} and 2^{nd} edition, are both similar in game mechanics. Generally, the rules are somewhat vague and open-ended with most of the details left up to the Dungeon Master to develop. In short, these rules state that magic-users must be at least 12^{th} level and clerics 11^{th} level to manufacture magic items (7^{th} level for potions and scrolls). The spellcaster pays to have the item fashioned, he then casts *enchant an item*, and then a *permanency* spell (or pray to their god, as the case is with clerics and druids). Then—hopefully—the spells take and—*voila!*—you have a fully functional magic item.

However, this system leaves a lot of questions for the DM and player alike. As soon as a player with a spellcaster reaches a high enough level to begin creating magic-items, typically the first things they ask the DM is "So, what exactly can I make." Going by what is offered in the rules there's not much to tell the player simply because they are vague as to what exactly they a spellcaster can create.

Furthermore, the use of the *enchant an item* and *permanency* spells are quite impractical for a game so suffused with magic items. The former spell requires a magic-user of at least 12^{th} level and the latter at least of 16^{th} level. These are quite powerful spells. I suspect that in most campaigns 12^{th} and 16^{th} level magic-users are quite uncommon. One has to ask, "Why the hell would a mage that powerful waste his time and money enchanting a +1 sword or a handful of +1 sling bullets." It seems to me these mages have a lot more important work to concentrate on than creating a piddly +1 magic weapon. Not to mention the fact that the use of the *permanency* spell lowers the caster's Constitution by 1 point every time it's cast. Not temporarily—*permanently*! This is a heavy price to pay for a +1 dagger.

The following presents a complete set of guidelines for DMs to assist PCs in creating wondrous magic items for use in **Advanced Dungeons & Dragons**, 1st or 2nd edition. This system follows the spirit of the original rules but further elaborates on them to take out much of the guess work involved. This work also introduces a new concert for AD&D, the binding of elemental magic spirits as the source of magical power for enchanted items.

The Basics of Fabricating Magic Items

The creation of magic items follows these four steps: research, finding materials, preparing materials, and enchanting the item.

Who Can Make Magic Items and When

First, who can make magic items? At first level of experience any spellcaster can create magic items. Additionally, thieves and bards have a limited ability to create magic items pertinent to their profession.

Magic-Users: These include all magic-user subclasses (specialists, elementalists, etc.). By far, magic-users have the least restrictions and can create more types of magic items than any other class. Specialist mages from 2^{nd} edition, however, cannot create items that have an affinity with their opposition schools or element.

Clerics: Clerics and the druid subclass are more limited in their choices of magic items to create than are magic-users. Clerics are dependent on the generosity of their deity to impart the power to permanently bind the magic items. Thus, they can only create those weapons and armor that their deity allows them to use. Generally, clerics can create a maximum of four magic items in a year's time (excluding scrolls and potions). Additional items could be created in a time of great need but this places strain on their deity and its lesser agents that grant the magic power. Clerics that insist on creating more than four magic items in a year might find that their deity takes longer or simply refuses to grant the magic power for the item.

Optionally, the DM might rule that a cleric's temple will underwrite 20% to 50% (1d4+2 x 10%) of the cost of a magic item so long as it is created for the benefit of the temple.

Thieves: Characters of the thief class can create a handful of magical items related to their profession. Research is collected as magic-users do: pouring over old tomes and scrolls of magical notes with the thief character using his ability to read languages to decipher the enigmatic language of magic. Since thieves are amateurs in the art of magic, they suffer a -30% to their Research and Creation rolls.

Bards: Bards are limited to creating magical instruments. Research is carried out by questioning bards of greater skill for the secrets of creating an item. Typically, the bard fashions any instrument that he intends to enchanted.

Commissioning the Creation of Magic Items

Non-spellcaster characters can commission an NPC spellcaster to construct a magic item. These NPCs charge twice the normal amount for research (if they have to do that) and for the cost of fashioning the item.

Magic Item Ratings

All magic items have a Power Level Rating. Typically the levels range 1 to 25, but a few very powerful magic items go higher, but never more than 30. An item's power level indicates its power and the difficulty of a character to research and create that item, the higher the more difficult. Thus, a *buckler* +1 is rated at level 1 while a *sphere of annihilation* is 25.

Note that artifacts, relics, most magical tomes, the *deck of many things*, and *ioun stones* cannot be created by characters. Cursed items are a result of a failed enchantment, but can be constructed by those depraved characters that wish to do so.

A complete list of Power Level Ratings, experience point and gold piece values, and which classes can create a particular type of item for all the magic items listed in the 1st edition *Dungeon Masters Guide* and *Unearthed Arcana* and those found in the 2nd edition *Dungeon Masters Guide* is provided at the end of this article.

Research

Before a character can start manufacturing a particular magic item they must research how it is made. Since magic is an art, not a science, there is no one formula of how to create a particular magic item. In fact, dozens or hundreds of different methods might exist. Therefore, it is up to the character to discover the procedure of how to craft a desired magic item. Since no set method of research exists either it is up to the DM to spell out the exact details. Characters are assumed to peruse tomes and scrolls, question more experienced mages and magical creatures with much knowledge, use divination spells, contact other intelligent creatures or spirits from other planes, and experiment through trial and error.

Research has two costs: money and time. Research costs, however, are onetime costs. Once a characters learns the formula to create an item he need not pay have to pay these costs when making additional items of the same type.

Research Costs: The amount of money to research the formulae to create a magic item equals half the item's Creation Cost (or one-quarter of the item's G.P. Sale Value; see below for details).

Creation Costs: Creation costs are half the total G.P. Sale Value for that item. See the MAGIC ITEM LEVEL TABLE located at the end of this article for a complete list of the sale value.

Research Roll: Once the character has finished the research he will then makes a Research Roll to determine success. The base chance for success is 50%. This is adjusted up or down 5% for each level of difference between the character and the item's power level. Thus, a 5th level cleric researching a 5th level item has a 50% chance of success. A 6th level cleric researching a 5th level item has a 55% chance of success, while a 5th level cleric researching a 6th level item has a 45% chance. Additional adjustments to the base score are found on the RESEARCH & CREATION MODIFIERS TABLE (see below). A roll equal to or less than the final adjusted score indicates research success. A roll of 5% or less always indicates success no matter the number of negative modifiers. Conversely, a roll of 96% or greater indicates the character has erroneous information but believes it to be correct. Any item constructed with incorrect information automatically fails its Creation Roll. (Thus, it's best to hide the rolls from the player.)

If the roll indicates unsuccessful research, the character can try again. Each new attempt at a new research roll costs an additional 10% of the item's total value and an amount of time equal to 1/10 the initial research time. Once the dice indicate a successful Research Roll the character now possesses the formula to create that magic item.

Research Time: The amount of research time is 2 to 5 weeks (1d4+1) plus 1 week per power level of the item, plus an additional 1 day per 100 experience points of the item.

Research from Existing Formulae: Just like how all spellcasters covet other magic-user's spellbooks, so do they covet existing formulae of magic items that others have researched. Having someone do all the work and spend all the money is always a good thing. Existing magic item formulae can be discovered in magical notebooks, occult tomes, or magical texts. These written formulae are extremely valuable and spellcasters jealously guard these texts. A spellcaster will not simply loan his formulae to just anybody and he probably will not even loan it to a good friend. Owners that agree to part with the fruits of their research will request to be compensated in magic items valued at twice the Creation Cost of the item's formula or more.

Use of an existing formula cuts research time and costs 30 to 50% ($1d3+2 \times 10$). It is up to the DM to create the precise details of an item's formula.

Materials Required & Creation Time

The cost of raw materials equals the Creation Cost of the magic item (see above). These, of course, must be of the highest quality materials fashioned by master craftsmen. The amount of time needed to create the item to be enchanted is 1-4 days per Power Level plus 1 day per 1,000 gp of its Creation Cost (round fractions up, minimum 1 day). For example, construction of a *pearl of wisdom* takes 11-44 days (Power Level 11 item) plus 3 days (2,500 gp Creation Cost, round up).

Enchanting the Item

All magic items except potions and scrolls draw their powers from raw magical spirits called gingwatzim that are native to the Ethereal Plane. These floating orbs of light are forced into the magic item and are permanently bound to it through magic. First, the character must use the *spirit ligation* spell (see below for the spell description) to summon one of the appropriate types of six type of gingwatzim to the Prime Material Plane. (Gingwatzim are described in *C3 The Lost Island of Castanamir* and *WGR1 Greyhawk Ruins*. Access to their statistics and description are helpful but not required for use of this system. The spell, *spirit ligation*, is detailed in this article.)

Optional Enchanting Method: Those DMs that wish to forgo use of gingwatzim in magic items for a more traditional approach (i.e. items receive their enchantment via a spell that imbues it with "magical" energy from an unknown source). In this case simply ignore all reference of gingwatzim and the *spirit ligation* spell. However, the *enchant an item* spell level should be reduced to a first-level spell (as lower level casters might access it). The spell should have the caveat that it cannot be used in any other regards than in magic item creation. Clerics and its subclasses would use the method as detailed in the *DMG* (q.v.)

Types of Gingwatzim and Their Uses in Magic Item Construction

		Level	
			<u>R</u>
			<u>a</u>
			<u>n</u>
			g
<u>Type</u>	General Use		<u>e</u>
Tim	Used for minor miscellaneous magic items, weapons, and armor of +1 enchantment.	1-3	
Pakim	Used for magic items of all sorts, including those of +2 or greater enchantment.	4-7	
Graegzim	Used for magic rings and rods, staves and wands up to a +3 enchantment or equivalent thereof.	8-11	
Eoluzim	Used for magic items of all sorts, including those of +3 or greater enchantment.	12-14	
Maronzim	Used for powerful magic items of all sorts, including those of +4 or greater enchantment.	15-18	
Naranzim	Used for powerful magic items of all sorts, including those of +5 or greater enchantment.	19+	

Level range indicates the particular type of gingwatzim used in creation of a magic item based on its Power Level Rating.

Once the gingwatzim is summoned it must be magically forced into the prepared magic item. Successful infusion requires a successful Creation Roll. Like the Research Roll, the base chance for success is 50%. This is adjusted up or down 5% for each level of difference between the character and the item's power level. Additional adjustments to the base score are found on the RESEARCH & CREATION MODIFIERS TABLE (see below). A roll equal to or less than the final adjusted score indicates creation success. With a Creation Roll of 5% or less or a roll of 96% or greater consult the SPECIAL CREATION RESULT TABLE for unique affects on the created magic item. (It's best for the DM to hide the Creation Roll from the player so they are not aware of any special results.)

If the Creation Roll indicates failure, the character can try to summon another gingwatzim and attempt to infuse it after a period of rest (see FINISHING). However, each subsequent attempt results in an additional -10% penalty to the Creation Roll. If the cumulative roll equals or drops below 0%, the unenchanted item disintegrates into a pile of worthless dust.

For a cleric to be able to permanently seal the gingwatzim in an item, they must implore their deity for their blessing. Their Creation Roll reflects the will of their deity and the strength of their faith, not skill in producing magic item, as do magic users. A full week of prayer and fasting is required before the infusion of the gingwatzim.

RESEARCH & CREATION MODIFIERS TABLE

	Research	Creation	Creation
<u>Modifier</u>	<u>Roll</u>	<u>Roll</u>	<u>Time & Cost</u>
Assistance of a higher-level caster of the same class.	+5%	+5%	-5%
Each assistant lower-level spellcaster of the same class (up to two maximum).	0	0	-5%
Each additional 1,000 gp put into item creation (to a maximum of 50% of the item's Creation Cost).	0	+1%	+1%
Inferior material substitution.	0	-5 to -50%	-5 to -50%
Each additional power, charge type level $1-2^1$.	-5%	-5%	+5%
Each additional power, charge type level 3-4.	-10%	-10%	+10%
Each additional power, charge type level 5-6.	-15%	-15%	+15%
Each additional power, charge type level 7-8.	-20%	-20%	+20%
Each additional power, charge type level 9.	-25%	-25%	+25%
Each additional power, permanent type level $1-2^1$.	-15%	-15%	+15%
Each additional power, permanent type level 3-4.	-20%	-20%	+20%
Each additional power, permanent type level 5-6.	-25%	-25%	+25%

Each additional power, permanent type level 7-8. Each additional power, permanent type level 9.	-30% -35%	-30% -35%	+30%
Each failed Research Roll.	+5%	0	0
Each failed Creation Roll.	0	-10%	0
Each step of difference between the creator's level and the Power Level of the item.	+/-5%	+/-5%	0
INT or WIS 16-17.	+5%	+5%	-5%
INT or WIS 18-19.	+10%	+10%	-10%
INT or WIS 20+.	+15%	+15%	-15%
Has made a similar item before ²	+5%	+5%	-5%
Variant of preexisting magic item.	-15%	0	+15%
No library access ³ .	-20%	0	+20%
Library access, 1-20 works ³ .	0	0	0
Library access, 21-50 works ³ .	+5%	0	+5%
Library access, 51+ works ³ .	+10%	0	+10%
Access to a magical workshop ⁴ .	0	0	0
No access to a magical workshop ⁴ .	-20%	0	+20%

Notes to Table:

1: If the power does not precisely mimic a specific spell, choose the nearest similar spell.

2: Similar items include weapons or armor of the same type or same power. For example, a character that made a dagger + 1 is entitled to the bonus if he makes a knife + 1, but not a knife + 3.

3: Works in these libraries should relate to the magical theory for magic-users or holy works in the case of clerics.

4: A magical workshop consists of the following: alembic, caldron, crucible, balance & weights, vials (at least 10), beakers of various sizes, glass tubing, distilling coils, bellows (large and small), braziers (various sizes), burners, burettes, a cabinet, taper candles, clay (10 lbs.), coal (100 lbs.), metal files, coarse-screen and linen filters, sand time-keeping glasses (1 minutes, 5 minute, half hour, and hour), jars (various sizes), magnets, magnifying lens, oven, kiln, parchment sheets, mortar and pestle, wooden vial rack, beaker stand, 3-pronged heating stand, retorts (various sizes), glass stirring rods (various sizes), writing slate, stick chalk, string, tongs, water reservoir (50 gal.), metal dishes (various sizes), metal pans (various sizes), measuring spoons, and a workbench or table.

Finishing: As noted in the **Fabrication Of Other Magic Items** section on page 118 of the 1^{st} edition *DMG*, creating magic items—whether successful or not—debilitates it maker so completely that no action other than normal daily activities (eating, sleeping, light exercise) are allowed. This also means no spellcasting at this time. The creator of an item (other than a potion or scroll) must seek full rest for one complete day for each 100 xp of the item's total XP value. So forget making magic items while out raiding a dragon's lair!

SPECIAL CREATION RESULT TABLE

<u>d100</u>	Special Quality (rolled a 5% or less)
01-60	Item upgraded to a more powerful type (e.g. bracers of defense AC 7 become AC 6) or has more powerful functions
	(e.g. a longer rope of entanglement that can entangle more victims). Ignore and reroll if the item cannot be upgraded
	(c.f. cloak of displacement).
60-80	Item gains a unique minor beneficial power (e.g. boots of elvenkind that increase movement slightly).
81-90	Item gains a unique major beneficial power (e.g. boots of elvenkind that doubles movement).
91-98	Item gets combined with the powers of another item (e.g. boots of elvenkind combined with boots of varied tracks).
99-00	Item is sentient with an Intelligence of 3-18. Use the guidelines laid out in the Intelligent Weapons section of the
	<i>DMG</i> (2 nd ed., p. 247-249) ignoring the abilities, powers, and special purpose sections.
<u>d100</u>	Special Quality (rolled a 96% or greater)
01-30	Item downgraded (e.g. bracers of defense AC 7 become AC 8) or works in an inferior manner (e.g. a wand of fire
	that does not have the <i>wall of fire</i> function).
31-55	Item destroyed, gingwatzim released. Roll on GINGWATZIM ACTION TABLE below.
56-75	Item appears fine but malfunctions when employed (e.g. a wand of lightning that always over or under shoots its
	target).
76-90	Item appears fine but when first employed explodes for 1-4 damage per Item Level in a 5' radius destroying the item.
91-98	Item becomes a cursed variant (e.g. a bowl of commanding water elementals becomes a bowl of watery death or a
	ring of jumping becomes a ring of delusion). If no preexisting cursed item is available, the DM should create one.
99-00	Item is sentient with an Intelligence of 13-18, a base Ego of 15-20, and Evil in alignment. Use the guidelines laid out
	in the Intelligent Weapons section of the DMG (2 nd ed., p. 247-249) ignoring the abilities, powers, and special
	purpose sections. Item will attempt to dominate its owner to accomplish its own goals.

An Example of Creating a Magic Item

Cwhyldred, an 11th level magician, recently has become embroiled in a feud with another mage. Determined to go on the offensive and destroy this rival before the rival can do it to him, Cwhyldred decides that he must create a *wand of fire*.

First, he must research a formula on how to manufacture such a potent device. To this end he pours over his years of magical notes; contacts fellow friendly mages for advice; visits the wizard that taught him his craft to consult his prodigious library; asks for and gains access to a monastery's library for more information; through spells he contacts the denizens of the Elemental Plane of Fire and questions them; he summons a blue slaad from Limbo for more information; he even visits a local copper dragon whom he had to bribe for additional information. A *wand of fire* is a 13th level magic item worth 4,500 xp. Thus, research time takes 15-18 weeks plus 45 days. Rolling the dice, we come up with 16 weeks plus 45 days, or 157 days, or just over five months. The total cost of research is 12,500 gp (half the G.P. Sale Value of the item). Once the research time elapses Cwhyldred's player then makes a Research Roll with all the pertinent adjustments.

Base roll: 50%

Difference in the mage's level and the item's power level: -10% Cwhyldred possesses a *luckstone*: +5% Adjusted roll: 45%

The player rolls a 56—not good enough. So Cwhyldred goes back to work and sinks an additional 1,250 gp (10% of the *wand* of fire's 12,500 gp cost) and another 16 days of research time (10% of the initial research time). After this time Cwhyldred makes another roll. The mage hires a local cleric to cast a *prayer* on the research giving him an additional +5% to his roll, and he gets another +5% for failing his first Research Roll (by now Cwhyldred knows a lot about *wands of fire*). With a new adjusted roll of 55%, the player rolls: a 23. Success!

Now, it's on to the creation of the item. For materials, Cwhyldred finds a branch from a 1,000 year old oak scorched by gold dragon breath, a large chunk of greenish glass found near a meteorite crash, 2 ounces of the purest gold infused with the essence from an effreet, and a lacquer varnish created from material from the Plane of Magma and pyrolisk brain. The mage must then hire a master whitesmith, gem cutter, and woodworker to prepare the materials. For good measure he spends an additional 5,000 gp for better quality materials and hired craftsmen. All of this amounts to 17,500 gp (the cost of a *wand of fire* cost plus 5,000 gp) and takes 44 days on average to construct (13d4 days [based on the item's Power Level of 13] plus 13 days [12,500 divided by 1,000, round up] plus another 3 days for additional materials [42 + 5%=44]).

After the wand is created, Cwhyldred them casts *spirit ligation* (see spell description below) to summon an eoluzim gingwatzim and forces it into the readied wand. Now it's time for the Creation Roll to see if the item gets permanently magicked.

Base roll: 50% Additional quality materials: +5% Difference in the mage's level and the item's power level: -10% Cwhyldred possesses a *luckstone*: +5%

Adjusted roll: 50%

Cwhyldred's player then rolls an 86. The gingwatzim does not take and is expelled from the wand. The mage must take 45 days of rest before he can again attempt to infuse the wand with the gingwatzim. After this time the Creation Roll goes down to 40% (-10% for a failed Creation Roll) and it's been 217 days since Cwhyldred thought up the idea of creating the wand (157 research days + an additional 16 research days + 44 fabrication days). If he fails the next roll his next roll goes down to 30%. Hopefully, all this didn't take too much time or his rival might get the best of him while he's preoccupied.

Determining the Initial Number of Charges

Magic items that use charges are always created with maximum number of charges allowable. Unless noted otherwise in its item description in the *DMG*, rods will have 50 charges, staves 25, and wands 100.

Recharging Magic Items

Magic items that contain charges can be recharged. A spellcaster must recharge the item with spells that must reflect the nature of the item's function. A *wand of fireballs*, therefore, will be recharged with a *fireball* spell. If the item's function does not have a corresponding spell, then the DM should designate one that closest resembles the function. Thus, a *ring of shooting stars*' shooting star function could be recharged with the *Melf's Minute Meteors* spell. Furthermore, the item must contain at least one charge as these items will turn to dust when fully depleted.

To start with, the gingwatzim spirit must be drawn out of the item with a *spirit ligation* first, then the spell charges are placed in. At this time the caster must have the item not more than 1' from his person. Failure to keep the item close by results in loss of ALL of the item's charges and the caster must start over at this point. Once are all charges are placed in, the gingwatzim spirit is then permanently rebound to the device (see spell description for details). If the summoning of the spirit fails to take hold as noted in the spell description, the gingwatzim is permanently released and the item turns to dust.

Each spell cast into the magic item adds one charge. For every five charges placed therein, the item must save versus spells using the caster's saving throw. The save is modified by +1/-1 per difference between the magic item's power level and the caster's level. Thus, in our example above, Cwhyldred has successfully created the *wand of fire*, but used up all the charges and must recharge it. However, Cwhyldred suffers a -2 penalty to his saving throw (11th level caster minus 13th level magic item). If a save for any of the spell charges fails, the item being recharged is destroyed (turned to dust) releasing its trapped gingwatzim. In any case, a 20 is always successful and a 1 always fails.

Creating Scrolls & Potions

Starting at 1st level, the spellcaster classes (i.e. magic-users, clerics and their respective subclasses) can create spell scrolls, protection scrolls, and potions. Research and costs for protection scrolls and potions follow the guidelines as indicated previously. Spell scrolls require no research and cost 100 gp in materials per spell level of each spell transcribed. Creation method for all three of these types of magic items follows the guidelines spelled out in the 1st edition *Dungeon Master's Guide*, p. 116-118 or 2nd edition *Dungeon Master's Guide*, p. 118-120.

Creating Levels for Other Magic Items

The following table is a general guideline for assigning levels to magic items not represented on the MAGIC ITEM LEVEL TABLE. Feel free to raise or lower a new item's power level based on its overall power.

		Item		
			L	
			<u>e</u>	
			<u>v</u>	<u>XP</u>
Item Level	<u>XP Value</u>		<u>el</u>	<u>Value</u>
1	1 to 249	11		4500
2	250 to 499	12		5000
3	500 to 999	13		5500
4	1000	14		6000
5	1500	15		6500
6	2000	16		7000
7	2500	17		7500
8	3000	18		8000
9	3500	19		8500
10	4000	20		9000+

New Spell

The spell that allows spellcasters to summon and bind the essence of magic is a universal spell open to all magic-users and cleric, including any subclasses. In 2nd edition AD&D, all specialist mage classes have access to it, and any priest can access it through the "All" sphere.

Spirit Ligation

(Enchantment, Invocation)

Level: 1 Range: Touch Components: V, S, M Casting Time: Special Duration: Special Area of Effect: 1 item Saving Throw: Negates

The manufacture of magic items other than potions or scrolls is only possible with the help of supernatural entities called gingwatzim. The gingwatzim are the physical manifestation of raw magical energies which, when infused into an item, give it its magical properties.

Only one of any particular species of gingwatzim is needed for an item. In fact, if more than one is placed into an item it can be destroyed outright or become a cursed item—unbeknownst to it creator.

In a thaumaturgic circle, the character summons the particular type of gingwatzim for the magic item. The base chance for the gingwatzim appearing is 50%. This is modified by +2% per level of caster above 2^{nd} . The caster's Wisdom or Intelligence (depending on whether they are a cleric or magic-user; should they be dual or multi-classed spellcasters, the greater score is used) also affects the outcome: +2% for each point above 11; or, -2% for each point below 10. In the case of multiple creatures, a penalty of -5% per hit dice per creature applies. It should be noted that a + x HD is considered one higher hit dice.

In any case a roll of 5% or less always succeeds. Rolls of 96% or greater indicate the gingwatzim appears but has escaped the confines of the summoning circle!

For items with charges, spells are cast into the item at this time, just before the gingwatzim is permanently bound, as the power of the spell primes it for holding the spells. There is a 5% chance for every spell cast into the item that the spell does not take hold and harmlessly dissipates.

Once summoned the gingwatzim is ready to be placed into the prepared magic item. It should be noted that successful use of this spell quells any natural tendencies of the gingwatzim (as note in its monster description) and forces it to behave in a manner as directed by the caster, and no control is need to force it to cooperate.

The material component for this spell is a lit brazier in a thaumaturgic circle. Holy symbols are required for cleric summoners.

Destruction of Magic Items

Damage from physical blows or destructive elements such as fire, cold, lightning, and so forth present a danger to magic items and their wielders. Damage from an attack on a magic item has the potential to release the gingwatzim bound within. Most likely, the spirit will not be in a good mood when unexpectedly released into the Prime Material Plane and even might attack the item's former owner. Consult the table below to determine how much damage a magic item can sustain before being destroyed.

MAGIC ITEM DAMAGE TABLE

Item Level	Gingwatzi		Save
<u>Range</u>	m <u>Type</u>	Damag	<u>Bonus</u>
1-3	Tim	<u>e</u> 10	+2
4-7	Pakim	15	+3
8-11 12-14	Graegzim Eoluzim	20 25	+4 +5
12-14	Maronzim	23 30	+3 +6
19+	Naranzim	35-75	+7

Magic items on a character's person (*e.g.* a suit of armor) struck by normal physical blows should ignore the MAGIC ITEM DAMAGE TABLE. The table would come into play if a very strong physical blow directly strikes a magic item, such as a magic ring sitting a table that is struck by a giant's hammer. Items on a character's person should use this table when struck by an extremely powerful and/or destructive force. A good example of this would be a character wearing magic armor that is trapped in a dragon's maw, or being crushed by a 2-ton block of stone.

Items struck with mass destruction spells or similar destructive elements always use the MAGIC ITEM DAMAGE TABLE whether or not they are on a character's person and their owner has failed a save versus the attack type. Thus, a character hit with a *fireball* or immersed in acid and fails their initial save would have to save for the potential destruction of all of his magic items. Generally, items hit by smaller or less destructive forces, like the fire from a torch or campfire, or a *shocking grasp* spell, should not have to save versus destruction unless exposed for an extended amount of time.

Once an item exceeds the amount of damage listed on the table, it makes a saving throw on the ITEM SAVING THROW TABLE based on the type of material it's constructed from. The item also gains a save bonus based on the type of gingwatzim inside it (see above on the MAGIC ITEM DAMAGE TABLE). If the save fails, the item is destroyed and it gingwatzim is released. The DM then rolls on the table below to determine what action the spirit takes when unexpectedly release from the item it was bound to.

d12 Gingwatzim Action

- 1 Confused for 1-4 rounds. No actions allowed. Roll again for next action.
- 2-3 Flees to back to the Ethereal Plane.
- 4-5 Flees at full speed for 2-5 rounds.
- 6-8 Attacks nearest creature.
- 9-11 Attacks item wielder.
- 12 Explodes in a 5' radius for 1-4 points of damage per Hit Dice.

Optionally, items that fail their saving throw by a margin of 2 points can be considered damaged. It is up to the DM to determine how the magic item functions, but in most cases it will be malefic to the wielder. These items can be repaired at a cost of 20% to 80% (randomly roll 2d4 x 10) of its construction cost.

Conclusion

This system will help take out much of the guesswork for DMs and players alike for creating magic items. However, as the DM, it is up to you to keep this system from being abused. No DM should let his players create a magic item assembly line, allowing them to continuously pump out item after item. Remember, the player character must research or find a magic item's formula. This takes time and money. Do not simply tell the player that his character spends the next five years pumping out magic items from a stack of formulae found in an enemy wizard's laboratory. Make the player work to have his character create items. If making magic items is too easy and threatens to upset game balance, make it more difficult for players to make them. Consider increasing the amount of money and time it takes to create items. You are the final authority of your game.

END.

Table Notes:

* Item Creation Cost is half the G.P. Sale Value.

¹ Consider XP and creation value x10 for research proposes; once the formula is known then use the values indicated.

² This includes weapons of approximately short sword size or less.
 ³ Add an additional Item Level for each additional die of missile after the 2 HD.

⁴Consider XP and creation value x5 for research proposes; once the formula is known then use the values indicated.

⁵ Per charge of the staff; consider the XP and creation value x10 for research proposes. ⁶ Each different type must be researched separately.

⁷ Per facet; roll 1d100 to determine number.
