# GIFFYGLYPH'S MONSTER MAKER

Version 2.0

# **GIFFYGLYPH'S MONSTER MAKER**

ONSTERS LIE AT THE HEART OF EVERY adventure, causing trouble for civilians and brave heroes alike. Sometimes your adventure calls for a brand new monster, or you want to mix up combat with some new tricks, or your players go off-road and you need to prep an encounter *fast*. But how do you create fun, balanced monsters? Don't worry— *Giffyglyph's Monster Maker* is here to help.

This 5e supplement introduces guides, templates, and advice to help you build new, exciting monsters and balanced encounters within minutes—perfect for the DM on the go, and compatible with any D&D 5e game! Catch your players off-guard with minion hordes, dangerous elites, and terrifying solo monsters at any level!

## PATREON.COM/GIFFYGLYPH / R/DARKERDUNGEONS5E

# FEATURES

- 7 monster roles: create controllers, defenders, lurkers, scouts, strikers, snipers, and supporters.
- 4 **monster types**: create a range of monstrous minions, standards, elites, and solos.
- 30+ pages of complete monster stat templates.
- Includes 63 monster traits and 35 role powers.
- Transform your boss monsters with **solo phases**.
- Improvise new monster attacks easily with **freeform attacks** and **freeform magic**.
- Update your challenge rating monsters easily.
- Build encounters in seconds with monster points.
- And many more...

A Ratings & Levels p14 Convert challenge ratings to monster levels.

 $\circ$ 

NCE YOU HAVE AN IDEA FOR A MONSTER—OR, AS is often the case, your players have done the unexpected and triggered a surprise encounter it's time to start making monsters.

Maybe you need a high level goblin king protected by an elite entourage, or a drunken giant and some tiefling friends out looking to cause some chaos, or a pack of fierce dire-wolves hungry for fresh flesh?

Whatever your need, scenario, or adventure, this chapter will help you create quickstart monster profiles in seconds to get your combat encounters up and running fast.

Taura					

#### TRAITS

**Indominable:** You are immune to any effects that would alter your mind or will.

**You Can't Leave:** Targets always provoke opportunity attacks, even if they take the Disengage action before leaving your reach. In addition, when you hit with an opportunity attack, the target's speed becomes 0 for the rest of the turn.

# The Monster Profile

A quickstart monster profile is deliberately more vague than a standard monster profile, allowing you greater flexibility to improvise. A quickstart stat block includes:

- **Level:** Quickstart monsters use *monster levels*, a oneto-one match for player *character levels*.
- **Role:** Every monster has a combat role which describes their particular focus on the battlefield.
- Armor Class: This represents how hard the monster is to hit with an attack, whether due to armor, agility, magic, training, or some other significant feature.
- **Hit Points:** This is the amount of damage that the monster can endure before it dies.
- Speed: Your monster's movement speed.
- Attack Bonus: This represents your monster's ability to make successful attacks—melee, ranged, or magic.
- **Damage:** This is the amount of damage the monster can cause with a successful attack action.
- **Spell DCs:** This shows the primary ("I'm good at this") and secondary ("I'm not so good at this") DCs of any spells or effects the monster might use.
- Ability Modifiers: These are your monster's ability modifiers—arrange them however you like. Unlike player characters, monster modifiers can go beyond 5.
- **Saving Throws:** These come in three grades—best, ok, and bad. Use the highest bonus for your monster's best stat, the second bonus for it's 2nd and 3rd best stats, and the worst bonus for the 3 worst stats.
- Initiative: Your monster's combat reaction speed.
- **Perception:** Your monster's ability to notice things.
- **Stealth:** Your monster's ability to hide.
- **Traits & Powers:** These are special abilities and passive perks that the monster has gained from their race, class, faction, role, or some other feature.

#### QUICKSTART MONSTERS

Quickstart monsters are designed to be bare-bones templates useful for combat or improvised scenarios. For that reason—to keep the process quick and simple—they don't obey the same rules as player characters when it comes to calculating AC, HP, attack bonuses, damage, etc.

# • BUILD YOUR MONSTER

Once you're ready to start building your monster, there are five basic steps to consider:

- 1. **Pick a Level:** Decide how dangerous your monster should be—the higher the level, the bigger the threat it will be to your players.
- 2. Assign a Role: Choose how your monster will function in combat—different roles confer different benefits, such as a higher AC or attack bonus.
- Add some Traits: Give your monster some quick racial or class-based flavor with a few basic traits.
- 4. **Choose some Powers:** Add some special combat powers to make your monster stand out in their role.
- 5. **Personalization:** Tweak the default monster stats if necessary to better suit your group of players.

# **STEP 1. PICK A LEVEL**

Your first step is to assign a level to your new monster. Quickstart monsters don't use *challenge ratings* instead, they use *monster levels* to determine their base strength. Monster levels are a one-to-one match for character levels—one 4th-level monster should be a decent contest for one 4th-level player character.

For a medium challenge, use the same level as your average player character. Add +2 levels to make it a more dangerous encounter, or -2 levels for an easier time.

Once you've decided on a level, check the *Monster Statistics by Level* table (p7) to find your monster's basic attributes—AC, hit points, attack bonuses, damage, etc.

Valiant, Clanda and Chansi have been unexpectedly waylaid by some bandits and a combat begins. The PCs are level 3, so the DM decides to create three 3rd-level bandits for a medium-challenge encounter.

From the table, the DM can see that each bandit has (as a base) 14 AC, 33 HP, and deals 5 damage on a + 3 attack roll (melee or ranged).

# **STEP 2. APPLY A ROLE**

Monsters, like player characters, have roles to play. Some charge in to fight in the front-line, some fire away from the back, some devastate and destroy their enemies with wild abandon, and some lend support to their allies.

There are seven core roles that you can apply to your quickstart monsters, each with its own strengths and weaknesses: controller, defender, lurker, scout, sniper, striker, and support.

- **Controller:** Controllers disorientate their enemies, moving them around the battlefield and applying conditions. Controllers deal little direct damage themselves, preferring to weaken their enemies and allow their allies to attack with advantage.
- **Defender:** Defenders shield their allies and block enemy attacks. They are harder to hit thanks to their thicker armor, but often move slower as a result.
- **Lurker:** Lurkers hide out of sight until they see a weak point, then attack for massive damage. They are glass cannons, capable of dealing a lot of damage yet easily defeated if cornered.
- **Scout:** Scouts like to move around, using their speed and high perception to outmaneuver their enemies. They tend to be lightly armored and carry smaller weapons to keep their weight low and speed high.
- **Sniper:** Snipers stay out of harm's way, firing at enemies from a distance. They are good at ranged attacks, but fall quickly if attacked.
- **Striker:** Strikers forgo defense and focus on hitting the enemy hard. Strikers are easier to hit but deal more damage with their attacks.
- **Supporter:** Supporters provide aid to their allies, keeping them in peak condition. Supporters deal little damage and are relatively frail—they need protection to survive long on the battlefield.

Each role changes the default monster statistics in some fashion—granting more AC, or reducing damage, or inflating health. Try to use a variety of roles to create interesting encounters for your players.

Once you've picked a role, check the *Monster Roles* table (p7) to see how it affects your monsters attributes.

With 3 bandits, the DM decides to have one striker dealing heavy damage, one defender to shield the striker, and one sniper to support them both.

- Defender: 16 AC, 33 HP, +3 attack, 5 damage
- Striker: 10 AC, 42 HP, +5 attack, 7 damage
- Sniper: 14 AC, 25 HP, +3 attack, 7 damage

# **STEP 3. ADD SOME TRAITS**

To give your monster some flavor, add one or two passive traits based on its race, class, or faction. Traits help your monsters feel more unique, but try to keep them simple —avoid complicated mechanics or using more than two traits per monster.

See the *Monster Traits* table (p8) for a list of example traits you can apply to your monsters—make your own if the examples don't fit your particular monster.

Because the bandits often work together to overpower their victims, the DM decides to give all three a common trait:

Teamwork: You have advantage on attack rolls when your target is within 5ft of an unrestrained ally.

# **STEP 4. CHOOSE SOME POWERS**

Now it's time to add some combat powers to your monster—special features they gain by virtue of their particular role. Powers are a good way to distinguish monsters from each other and highlight their roles—they allow defenders to defend and strikers to strike.

See the *Monster Powers* table (p10) for a list of example powers you can apply to your monsters.

In addition to their normal melee and ranged attacks, the DM allocates a power to each bandit according to their combat role:

► Defender, Got your Back: When standing next to an ally or an attacking target, you can use a reaction to redirect the attack onto yourself.

Striker, Cleave: You can attack two targets that are within reach and adjacent to each other.

Sniper, Hold Still: You gain advantage on attack rolls against any target that didn't move more than 10ft during their last turn.

# **STEP 5. PERSONALIZATION**

Finally, compare the monster template to your player characters and consider tweaking any values that seem a little over or under-powered. Lower the AC or HP if your players have trouble dealing damage, or reduce the attack bonus or damage if their defenses are a little low.

Because Valiant and Chansi are low on hit points thanks to an earlier encounter, the DM considers reducing the overall damage of each bandit by 2.

But as the party is fortunate enough to be carrying a couple of healing potions, the DM decides to leave the challenge unchanged.

# **STEP 6. START PLAYING**

Your quickstart monsters are now ready. Start your encounter and improvise any extra details as you go.

# **REFINING AS YOU PLAY**

During an encounter, you might discover your monster is too strong or too weak for your party. That's ok—it's hard to predict just how powerful some abilities can be.

If you find you need to update a monster during live play, try to do so naturally. Avoid telling players explicitly what you're doing—instead, fold it into the fiction.

During an encounter, the DM notices that the party are having a hard time reliably hitting the defender's AC of 16. On the next successful hit, the DM says:

"You hear a crack as the bandit's shield splits apart from the force of your attack, and he throws it aside."

# Monster Traits (1/2)

Monster Traits (1	/2)
Name	Description
Adhesive	You adhere to anything you touch. Any huge or smaller creature adhered to you is also grappled, and ability checks made to escape your grapple have disadvantage.
Aggressive	As a bonus action, you can move up to your speed towards an enemy you can see.
Alarm	When you take damage, all other monsters of the same breed within 240 ft are aware of your pain.
Alien Mind	You have advantage on Wisdom saving throws.
Amorphous	You can move through a space as narrow as 1 inch wide without squeezing.
Arcane Protection	You are resistant to all magical damage.
Aura: Antimagic	Any creature within 10ft of you has disadvantage when casting magical spells.
Aura: Damaging	The space around you is dangerous. Creatures take damage equal to your level when they enter your aura or start their turn within it.
Aura: Disruptive	All enemies within 10 ft of you have disadvantage on saving throws.
Aura: Entangle	The ground in a 10 ft radius around you is difficult terrain. Each creature that starts its turn in that area must succeed on a Strength saving throw or have its speed reduced to 0 until the start of its next turn.
Aura: Stench	The air is putrid around you. Creatures within 10ft of you have disadvantage on attack rolls, unless they also have the <i>Stench</i> trait.
Barbed Hide	At the start of your turn, deal piercing damage equal to your level to any creature that is grappling you.
Blood Frenzy	You have advantage on melee attack rolls against any creature that doesn't have all its hit points.
Charger	If you moved more than 20ft in a straight line towards your target, make your melee attack roll with advantage. On a hit, you knock your target prone in addition to any other effect.
Constrict	At the start of your turn, deal bludgeoning damage equal to your level to any creature that you are grappling.
Corrosive Body	Any creature that touches you or makes a melee attack against you takes damage equal to your level. Any weapon that hits you takes a permanent and cumulative -1 penalty to damage rolls—the weapon is destroyed if the penalty reaches -5.
Critical Defence	Critical hits made against you count as normal hits unless you are already bloodied.
Critical Fury	Your attacks score a critical hit on a roll of 19-20.
Damage Absorption	Whenever you would take damage of a specific type, you instead regain that many hit points.
Damage Transfer	When you take damage from an attack, you can transfer half of the damage to another creature within 5 ft of you.
Dangerous Body	Any enemy that touches you or hits you with a melee attack while within 5 ft of you takes damage equal to your level.
Disintegration	When you die, your body distintegrates into dust. You leave behind your weapons and anything else you are carrying.
Dragonbreath	You can breathe dragonfire as an attack, or use it to light small fires.
Earth Glide	You can burrow through nonmagical, unworked earth and stone. While doing so, you don't disturb the material you move through.
Escape	When you would be reduced to 0 hit points outside of your lair, you instead escape and flee to your lair. You remain there, paralysed and resting, until you recover at least 50% of your hit points.
Explosive	When you fall to 0 hit points, your body explodes and deals damage to everyone within 5ft. You can begin detonation on your turn with a bonus action; you explode at the start of your next turn.
False Appearance	When you remain motionless, you are indistinguishable from a piece of the local landscape.
Fey Mind	You have advantage on saving throws against being charmed, and magic can't put you to sleep.
Flight	You can fly your speed. While flying, you must move your entire movement speed or land—unless you can also hover. Launching into flight provokes opportunity attacks, even if you <i>Disengage</i> .
Flyby	You don't provoke an opportunity attack when you fly out of an enemy's reach.
Freedom of Movement	You ignore difficult terrain, and magical effects can't reduce your speed or cause it to be restrained. You can spend 5 ft of movement to escape from nonmagical restraints or being grappled.

# Monster Traits (2/2)

Monster Traits (2	2/2)
Name	Description
Grappler	You have advantage on attack rolls against any target you have grappled. In addition, when grappling a target, any damage you take from an attack is split 50/50 with your victim.
Hover	You can hover in one spot in the air for 6 second before you need to move.
Immortal	You cannot be killed unless you are reduced to 0 hit points by a specific type of attack. Any other form of attack will reduce you to 1 hit point instead.
Immutable Form	You are immune to any spell or effect that would alter your form.
Impenetrable	You are resistant to all non-magical damage.
Incorporeal	You can pass through any solid non-magical matter and cannot be hit by any non-magical weapon or attack.
Indominable	You are immune to any effects that would alter your mind or will.
Inscrutable	You are immune to any effect that would sense your emotions or read your thoughts, as well as any divination spell that you refuse. Wisdom (Insight) checks made to ascertain your intentions or sincerity have disadvantage.
Invisible	You cannot be seen.
Life Eater	When you deal damage that reduces a creature to 0 hit points, that creature cannot be revived by any means short of a wish spell.
Magic Resistance	You have advantage on saving throws against spells and other magical effects.
Magic Weapons	Your weapon attacks are magical.
Martial Advantage	Once per turn you may deal extra damage equal to your level when you hit a target within 5ft of your allies.
Parry	You can spend your reaction to gain +3 AC against one melee attack that you can see.
Rampage	When you reduce a target to 0 hit points with a melee attack on your turn, you can spend a bonus action to move up to half your speed and attack a different target.
Reckless	At the start of your turn, you can gain advantage on all melee attacks you make for that turn. However, all attacks against you gain advantage until the start of your next turn.
Redirect	When you are within 5ft of an ally, you can redirect any single attack made against you to your ally instead.
Regeneration	You regain hit points at the start of your turn equal to your maximum hit points / 10. This regeneration stops for 1 turn if you are hit by a specific damage type (fire/acid/lightning/etc) or you are reduced to 0 hit points.
Relentless	The first time you fall to 0 hit points after a long rest, you are instead reduced to 1 hit point.
Seige Monster	You deal double damage to objects and structures.
Shadow Stealth	While in dim light or darkness, you can take the Hide action as a bonus action.
Shifty	You can <i>Disengage</i> as a bonus action.
Slippery	You have advantage on ability checks and saving throws made to escape a grapple.
Spider Climb	You can climb difficult surfaces, including upside down on ceilings, without needing to make an ability check.
Split	When you are bloodied, you split into two smaller copies. Each new copy has hit points equal to half of your remaining hit points, and acts independantly.
Sure-footed	You have advantage on Strength and Dexterity saving throws made against effects that would knock you prone.
Swarm	You can occupy another creature's space and vice versa. You gain advantage on attacks against any creature that shares your space.
Teamwork	You have advantage on attack rolls when your target is within 5ft of an unrestrained ally.
Uncanny Senses	Unless you are incapacitated, you cannot be surprised.
Undying Fortitude	If damage reduces you to 0 hit points, make a Consititution saving throw with a DC of 5 + the damage taken. On a success, you drop to 1 hit point instead.
Wakeful	You are never caught sleeping.
War Magic	When you use your action to cast a spell, you can make one weapon attack as a bonus action.

Monste	r Powers	
Role	Name	Description
Controller	Crippling Strike	Halve your attack damage to reduce your target's speed to Oft until the start of your next turn.
	Distraction	Halve your attack damage to grant advantage to the next attack roll made against the target.
	Get Into Position	Halve your attack damage to allow an ally to spend their reaction and move up to half their speed (without provoking opportunity attacks from the target).
	Knockback	Halve your attack damage to knock the target back up to 15ft.
	Sidestep	Halve your attack damage to move yourself and your target 5ft in any direction.
Defender	Don't Look Away	When you attack a target, you can mark them. A marked target has -2 to any attack roll that doesn't include you. You can have one active mark at a time, and marks don't stack.
	Get Behind Me	Allies within 5ft of you count as being in three-quarters cover.
	Got Your Back	When standing next to an ally or attacking target, you can spend your reaction to redirect the attack onto yourself.
	Heavy Defence	Your defence is impenetrable. Gain +2 AC.
	You Can't Leave	Targets always provoke opportunity attacks, even if they take the Disengage action before leaving your reach. In addition, when you hit with an opportunity attack, the target's speed becomes 0 for the rest of the turn.
Lurker	Backstab	If you have advantage on your attack, add your level in extra damage.
	Camouflage	When you are hidden, enemies cannot spot you with passive perception and they have disadvantage when making active checks to find you.
	Cunning Action	You can Dash, Disen <mark>gage, or Hide as a bonus action.</mark>
	Guerilla	When you make an attack while hidden, you don't reveal yourself and can remain in hiding.
	Hide in Plain Sight	You can attempt to hide when behind even light cover.
Scout	Explorer	You can climb and move across difficult terrain without any movement penalty.
	Hard to Hit	When you are standing and unrestained, attacks against you have disadvantage unless you are adjacent to two or more enemies.
	Light-footed	You can Disengage or Dash as a bonus action. When an enemy moves adjacent to you, you can spend your reaction to move away up to half your speed.
	Pincer Movement	When an ally moves adjacent to an enemy, you can spend your reaction to move up to your speed towards that same enemy.
	You Can't Hide	You have advantage when trying to detect hidden enemies. Any enemy that you can see is also visible to your allies.
Sniper	Hold Still	You have advantage on attack rolls when your target moved less than 10ft during their last turn.
	I Can See You	Your ranged attacks ignore half and three-quarters cover.
	Next Time	If you miss a target, you have advantage on your next attack against that same target.
	Ricochet	If your attack misses, you can spend your reaction to make another attack against a different target of your choice within 15ft of the original target.
	Scattershot	When you make a successful attack, you can deal damage equal to your level to everyone within 5ft of your target (once per round).
Striker	Bloodfury	When you are bloodied, you become enraged; -2 AC and +2 attack.
	Cleave	You can attack two adjacent targets that are within reach, dealing full damage to each.
	Press the Attack	You have advantage on attack rolls against bloodied targets (under 50% hit points).
	Revenge	Deal bonus damage equal to your level against anyone that hurt you in the previous round.
	Savage Assault	Once per turn, add your level in extra damage to an attack.
Supporter	Commander	Instead of making an attack roll, you can command an ally to make an attack against a target of your choice (once per round).
	Ferocity	Allies within 10ft of you gain a bonus to damage equal to your level.
	Guidance	Allies within 10ft of you have advantage on their attacks rolls.
	Protection	Allies within 10ft of you gain +2 AC.
	Rallying Cry	Halve your attack damage to remove a condition from an ally.

LL MONSTERS ARE EQUAL ON THE BATTLEFIELD but some are more equal than others, proving to be a much bigger threat in combat. Some monsters are standard rank-and-file troops, while others are expendable fodder controlled by great leaders and commanders. Some exceptional monsters are even capable of taking on an entire party single-handed.

This chapter will help you turn your standard quickstart monster into a minion, elite, or solo creature to pit against your players.

**MINIONS** 

A minion is weaker than other monsters, having very few hit points—they fall quickly in combat, often in one hit, if not protected by a strong defender. These are your lackeys, underlings, and lesser henchmen.

Minions rely on large numbers to overwhelm the enemy—four minions are the equal of one standard quickstart monster—and are a great option if you want to pit your players against mobs, gangs, and hordes.

To build a minion, apply the *Minion* template below to any existing quickstart monster. When creating minion groups, keep things simple for yourself and use the same role, traits, and powers for each group of 4—4 defender minions, 4 striker minions, etc.

#### MINION MONSTER

Apply to any quickstart monster template

Armor Class2	ATTACK BONUS -2
HIT POINTS x0.2	<b>DAMAGE</b> x0.75
SAVING THROWS2	SPELL DC -2
INITIATIVE -2	PERCEPTION -2
<b>XP</b> x0.25	STEALTH -2

# ELITES

Elites are formidable champions, commanders, and leaders. They are a far greater threat than their underlings, able to withstand more damage while hitting back harder and more reliably—one elite is the equal of two standard monsters, and can act twice a round. Elites are a great option for mid-boss encounters, as direct underlings of the adventure's primary threat.

To build an elite, apply the following template to any existing quickstart monster:

# Elite Monster

#### Apply to any quickstart monster template

+2	Attack Bonus	+2
x2	DAMAGE	x1.1
+2	SPELL DC	+2
+2	PERCEPTION	+2
x2	STEALTH	+2
	x2 +2 +2	+2 ATTACK BONUS x2 DAMAGE +2 SPELL DC +2 PERCEPTION x2 STEALTH

Paragon Action: You may take one Paragon Action per round to either move or take an action.

Viridian, Sarien, Clanda, and Chansi are battling through the dangerous *Dreadvault* and the undead guardians within.

At the Infernal Gallery they find Mortanius, an elite necromancer seeking to resurrect the Skeleton Queen. As battle begins, Mortanius summons 8 skeletal minions to shield him from the attacking adventurers.

# Solos

A solo monster is a force to be reckoned with, capable of taking on the entire party single-handed. These are your boss monsters, the big-bad fought at the end of an adventure—a mighty red dragon, a dominating elder brain, a chilling skeleton queen. Solo monsters hit hard, have high defenses, and act multiple times each round.

To build a solo, apply the following template to any existing quickstart monster:

#### Solo Monster

#### Apply to any quickstart monster template

Armor Class	Аттаск Bonus
HIT POINTS x (Players + 1)	DAMAGE x1.2
SAVING THROWS+2	SPELL DC +2
INITIATIVE +4	PERCEPTION +4
<b>XP</b> x 4	STEALTH

# TRAITS

► **Paragon Actions:** You may take one Paragon Action per player (minus 1) per round to either move or act.

► Phase Transition: At 66% and 33% hit points, you may remove all on-going effects on yourself and trigger a new phase transition.

Like elite monsters, solo monsters have the ability to act outside of their normal turn with *Paragon Actions*. Solo monsters gain 1 *Paragon Action* per player minus 1 allowing the monster to act after each player's turn.

"All things end", proclaims the Skeleton Queen, rising to face the four adventurers. "Only death is eternal."

As a 4th-level solo monster fighting four players, the Skeleton Queen has one full turn and three extra *Paragon Actions* per round.

# **PHASED COMBAT**

Fights with a solo monster are a big event—they should be a worthy capstone to your adventure, full of drama and excitement. Solo monsters fight hard, changing as the battle progresses and they start to take damage.

When the solo monster takes enough damage (66% and 33% hit points), it immediately removes any on-going effects and triggers a transition to a new phase of battle:

- The dragon roars angrily and—in its rage—slams down fiercely on the ground, collapsing it and sending everyone falling into the volcanic lair beneath.
- The golem's metal body cracks, and wild arcane lighting lances out around it to strike at anyone wearing or wielding metal.
- The necromancer absorbs the souls of his fallen minions to become a huge, powerful beast.

A phase transition is, in essence, a short cutscene wherein your monster does something to change itself or the environment—the more cinematic, the better.

During a transition, players don't take any damage while you change things around them—but neither can they act during the transition.

At 66% hit points, the Skeleton Queen's rage cracks the Dreadvault, causing a huge chunk of the ceiling to collapse and change the battlefield layout.

At 33% hit points, the Skeleton Queen roars in a cold rage and unleashes a burst of frost magic. The battlefield is covered in ice and a dangerous, frozen vortex surrounds the enraged Queen.

# HEALING SURGE

During a phase transition, any player character that is conscious and bloodied may recover some hit points by spending one hit dice—a temporary respite while your monster is transforming.

# **TRANSFORMATIONS**

Some monsters transform during battle—gaining new powers, changing how they fight, and (sometimes) even changing their form. You can represent transformations with multiple stat blocks—one for each phase transition.

To create a transforming solo monster, first replace your solo's "Phase Transition" trait with the following "Phase Transition (Transformation)" trait:

**Phase Transition (Transformation):** When reduced to 0 hit points, remove all on-going effects on yourself as you transform and start a new phase transition.

Next, create a new stat block as per normal for each of your monster's forms. Finally, divide the HP on each form by the total number of transitions.

The DM wants the Skeleton Queen to have three forms during the final boss encounter.

First, the Queen starts as a defender with thick ice armor. Next, the Skeleton Queen creates bone avatars from her own body and becomes a controller. Then finally, once the Queen is nearing defeat, her rage freezes the battlefield and she becomes a wild striker.

The DM creates 3 different stat blocks per the normal process, and then—because there are 3 forms —divides the HP on each stat block by 3.

A monster can have as many transformations as you like, but try to keep it to 2/3 forms unless your monster is *particularly* exceptional—each form should be distinct and exciting for your players to encounter.

PATREON.COM/GIFFYGLYPH / /R/DARKERDUNGEONS5E

# **PARAGON ACTIONS**

N BATTLE, THE SIDE WITH THE MOST PEOPLE IS usually the side that wins. But what if you want to run a combat encounter with a small number of monsters—elites and solos—and still put some real pressure on the players? How do your limited monster turns compete against a full party of player actions?

To help you put some bite into your boss monsters, this chapter introduces *Paragon Actions*—what they are and how you use them.

GOING PARAGON

Paragon Actions let your monsters act multiple times per round, helping them to even the odds and be a much bigger threat in combat—essential for elite and solo monsters who often find themselves outnumbered.

Mortanius, an elite 3rd-level necromancer, takes his turn. He fires a bolt of foul necrotic energy at Chansi, hitting her for 6 points of damage, and then moves back 20ft behind his horde of skeleton minions.

On Chansi's turn, she fires an arrow back at the necromancer—but misses. At the end of her turn, Mortanius opts to use his *Paragon Action*.

"The grave summons you, ranger," cackles the necromancer as he uses his single action to attack, firing another bolt of energy at Chansi to strike her for 6 additional points of damage.

Elite monsters have one Paragon Action per round while solo monsters have one per player (minus one) per round —this helps to balance the action economy and give your boss monsters a major boost of fighting power.

# **USING PARAGON ACTIONS**

A Paragon Action can be used at the end of any other creature's turn to do one of the following:

- **Move:** The monster can move up to it's speed if it is free to do so. This movement may trigger opportunity attacks and reactions as normal from your enemies.
- **Perform an Action:** The monster can perform a single action—such as Attack, Dodge, or Help.

In addition, whenever a monster uses a Paragon Action it regains its reaction and can make saving throws against any ongoing damage or effect—such as Hold Person, Ray of Enfeeblement, Phantasmal Killer, etc—as if it were the end of its normal turn.

A monster regains any spent Paragon Actions at the start of its turn, so make the most of your actions each round to keep the players in danger.

# **ONGOING EFFECTS**

A Paragon Action does not count as a full turn. If your monster would normally suffer an effect at the start or end of its turn—such as ongoing damage, status effects, etc—these effects *don't* trigger during a Paragon Action.

# ACTION VARIETY

It can be tempting to use *Paragon Actions* to relentlessly attack the nearest character for a whole round—but this can lead to some very dull and predictable combat.

Avoid repeating the same action too often in quick succession, and try to keep the combat dynamic. Use your extra actions to move across the battlefield, push characters around, change the environment, apply conditions, and put pressure on unsuspecting players.

PATREON.COM/GIFFYGLYPH /R/DARKERDUNGEONS5E

# **RATINGS & Levels**

M ONSTER LEVELS ARE NOT THE ONLY WAY TO determine a monster's threat—another common method is to use *challenge ratings*. If you want to mix-and-match monster levels (ML) with challenge ratings (CR) in your encounters, or you just want to give your existing CR monsters a little boost with some new tricks and abilities, this chapter will help guide you.

# Conversions

To mix CR and ML monsters in your encounters, you first need a way to compare challenge ratings with monster levels—this will help you to balance your creatures and encounters more easily.

For simplicity's sake, we do this by comparing XP values—matching the XP of a CR monster to the level XP values listed in the *Monster Templates* (p48).

# **RATINGS (CR) TO LEVELS (ML)**

If you have a CR monster, it's easy to find the equivalent *monster level*—simply take your monster's CR value and look through the *Challenge Rating to Monster Level* table (p15) until you find a matching level and rank.

For example, to find the equivalent ML of a CR 11 remorhaz (5e Monster Manual, p258):

A remorhaz is a CR 11 monster worth 7,200 XP. It has 17 AC / 195 HP, and can deal around 50 damage per round with a +11 attack bonus.

From the conversion table, we can see that this remorhaz (CR 11) may be used as a ML 11 Solo, a ML 16 Elite, a ML 20 Standard, or a ML 28 Minion. As another example, to find the ML of a CR 17 dragon turtle (5e Monster Manual, p119):

A dragon turtle is a CR 17 monster worth 18,000 XP. It has 20 AC / 341 HP, and can deal around 58 damage per round with a +13 attack bonus.

From the conversion table, we can see that this monster (CR 17) can be used as a ML 17 Solo, a ML 22 Elite, or a ML 26 Standard. It is too strong, however, to be used as a minion.

This isn't an exact system—monster threat varies greatly depending on traits, powers, and the abilities of your adventuring party—but it should give you a rough idea as to your monster's rank on the battlefield.

# LEVELS (ML) TO RATINGS (CR)

To get an idea of your ML monster's *challenge rating*, follow the same conversion steps—take your monster's level and rank and find the equivalent CR in the *Challenge Rating to Monster Level* table. CR reference values can also be found in the *Monster Templates* (p48).

As with other conversions, keep an eye on your ML monster's attack / defense attributes to make sure they're not out of place in their new CR role.

The DM has created a new monster—an orc berserker —for their adventure. As a ML 12 Standard Striker, the orc has 14 AC / 144 HP and deals 35 damage with a +10 attack bonus.

Using the table, we can see that this orc may be used as a CR 5 monster.

Challenge Rating to Monster Level									
Challenge Monster Level (ML)					Challenge		Monster	Level (ML)

# MODIFICATIONS

You may find that your CR monsters don't pack enough punch—especially as an elite or solo—or that your ML monsters are a little too strong as a CR counterpart.

When converting monsters, compare the CR monster's basic stats against the corresponding ML template—this should provide you with a guideline as to attack and defense strength. You may wish to:

- Adjust AC / HP to give your monster staying power.
- Add Paragon Actions to Elite and Solo monsters.
- Add a trait or power for variety.
- Boost damage to keep your players on edge.

A DM wants to use a CR 17 dragon turtle as a ML 17 Solo Defender versus 4 players. They replace the turtle's 20 AC / 341 HP with 25 AC / 1,050 HP, give the turtle 3 *Paragon Actions*, and add the "Heavy Defense" defender trait. They leave the turtle's attacks as RAW—58 damage can still pack a punch, especially when multiplied across the new *Paragon Actions*. With 27 AC and 1,050 hit points, the dragon turtle

is now ready to fight four 17th-level adventurers.

# More Art Than Science

Converting CR monsters to ML is not an exact science. Use this process as a rough guide to get started, and modify your converted monsters to suit your party's combat strengths.

# **EXAMPLE: DRAGON TURTLE**

Below is a stat block for a partially-converted CR dragon turtle. The monster is using ML armor class, hit points, and traits—but continues to use the original CR attack bonus, damage, spell DCs, saving throws, and skills, in addition to its normal attacks and features.

In this way, you can make quick, minor adjustments to your existing CR monsters without first having to do a complete overhaul of the monster profile.

	N TURTL In dragon,		Level 17 Defender Solo vs 4 (18,000 XP)		
ARMOR CLASS         25           HIT POINTS         1,050 (3 x 350)           SPEED         20 ft					
<b>Str</b> +7	<b>Dex</b> +0	Сом +5	<b>INT</b> +0	<b>Wıs</b> +1	<b>Сна</b> +1
				+10, Wis + eption +1, 1	

# TRAITS

**Paragon Actions:** You may take 3 Paragon Actions per round to either move or perform an action.

**Phase Transition:** When reduced to 66% and 33% hit points, you may remove all on-going effects on yourself and trigger your next phase transition.

**(Defender) Heavy Defence:** Your defence is impenetrable. Gain +2 AC.

# PART 2 Attacks

5 Making Attacks p17 Give your monster a range of freeform attacks.

6 Attack Rarity p25 Create common, uncommon, and rare attacks.

Overkill Attacks p27
 Create dangerous overkill attacks.

Randomizing Damage \_\_\_\_\_ p31 Randomize your monster's damage output.

O

# **MAKING ATTACKS**

NCE YOU HAVE A MONSTER, IT'S TIME TO unleash it on your players. All monsters need some form of attack for them to be a true threat a sword to slash with, huge jaws to bite down with, dark magics to cast dangerous spells with.

This chapter describes how to use your quickstart monsters to attack the party in a variety of interesting ways, introducing freeform attacks and magic.

# • Freeform Attacks

Quickstart monsters don't start with any specific attacks listed as part of their stat-block—instead, they can use *freeform* attacks for speed, simplicity, and flexibility.

When you are making an attack, describe an action that feels appropriate for the monster and it's weaponry:

- Is the dragon slashing wildly with huge claws? Then it's making a *slashing* melee attack.
- Is it leaning forward to take a lethal bite? Then the melee attack is *piercing*.
- Is the beast swiping its massive tail at you? Then it's a *bludgeoning* melee attack.
- Is the dragon breathing searing flame at you? Then you'll take *fire* damage from the close attack.

Once you have described how the monster is attacking, make an attack roll using the monster's attack bonus and damage as normal.

#### **KEEP IT SIMPLE**

Keep your attacks simple and straightforward, and try to avoid giving a monster more than 3 different methods of attacking—unless they are particularly notable, such as an elite leader or solo boss character. Whenever possible, use iconic and flavorsome attacks.

# **MULTIATTACKS**

Once your monsters start dealing over 10 points of damage per round, consider splitting their single attack into a multiattack—this helps to prevent players being overwhelmed with massive damage from a single hit.

**Multiattack (X):** The monster makes X attacks against its enemies, dealing [damage / X] damage per attack.

The *Monster Multiattacks* table demonstrates how to create a multiattack based on a monster's damage per action—the higher the damage, the more attacks.

#### Monster Multiattacks

Total Damage per Action	Attacks per Action	Damage per Attack	Damag <mark>e (%)</mark> per Attack	
0-9	1	0-9	100	
10-29	2	5-15	50	
30-59	3	10-20	33	
60-99	4	10-25	25	

#### MINIONS & MULTIATTACKS

Minions don't make multiattacks—they either hit hard with a single attack, or miss.

# FICTION FIRST

Monsters have a lot of flexibility with freeform attacks—but try to use only attacks that make sense for your monster's type, equipment, and personality.

# **CONDITION ATTACKS**

Attacks don't always have to deal direct damage to the enemy—instead, your monster can attempt to inflict a condition on its target, such as blinded, poisoned, or restrained. This is called a *condition attack*.

Before you make a condition attack, describe what your monster is trying to achieve and how:

- The hobgoblin snarls as it throws dust into your face, attempting to *blind* you.
- The giant frog's neck convulses fiercely as it spits a jet of *poisonous* fluid at you.
- The giant reaches down towards your weapon and tries to pull it from your grasp, *disarming* you.

Once you've described the condition attack, make an attack as normal using the attack bonus or spell DC—if successful, the monster deals no damage and inflicts the condition on the target.

# **Recovering from a Condition**

When you use a condition attack, try to consider how a player will recover from it. There are three methods of condition recovery:

- **Take an action:** The player can do something on their turn to end the effect—wipe mud off their face, pick up their sword, get up from the floor. This usually requires a full action to complete, though some effects may be simple enough to need only a bonus action.
- **Make a saving throw:** The player can make a saving throw at the end of their turn to shrug off the effect— strength to resist being pushed back by the wind, constitution to resist the vile poison, intelligence to overcome the terrifying illusions.
- **Wait X rounds:** The effect ends naturally after a set number of rounds (usually within 2-4).

Pick the recovery type that makes the most sense for your particular attack, and be consistent with it.

#### **MULTIATTACKS**

If your monster has a multiattack, you can use one of the attacks to make a condition attack instead.

Whilst journeying through the Elsewood, Valiant is ambushed by a level 7 orc. The orc has *Multiattack (2)* and, during a round of combat, uses one of the attacks to perform a *condition attack* on Valiant.

**DM:** The orc tries to kick your legs out from under you, Valiant, and knock you *prone*. Make a Strength saving throw to resist being knocked down, DC 15.

Valiant: Ok... (rolls 8) damn it, my legs buckle. DM: You fall painfully on the ground. The orc roars victoriously as it follows up with an attack, raising its mighty axe to hack down at you.

Valiant: This can't be good ...

# Avoid Repetition

When using condition attacks, try to avoid doing the same thing each turn—a general rule of thumb is to leave a minimum of 1 turn between each use of a condition type.

# **WORSENING CONDITIONS**

Some special condition attacks become increasingly more severe over time, often when a player fails to make a saving throw at the end of their turn—these are worsening condition attacks.

To make a worsening condition attack, pick three conditions of increasing severity—when the player fails a saving throw, the condition advances to the next stage.

**Gorgon's Glare:** The target's body quickly turns to stone. First it is *blinded*, then *restrained*, then *petrified*.

If the player makes a successful recovery attempt, whether by a saving throw or other relevant action, the conditions end as per normal.

Use the *Conditions* table below to help create an interesting combination for your worsening attack.

#### Conditions

Condition	Description
Condition	Description
Blinded	You can't see anything.
Charmed	You can't attack your charmer.
Deafened	You can't hear anything.
Frightened	You can't move towards your terror.
Grappled	You can't move.
Incapacitated	You can't take actions or reactions.
Paralyzed	You can't move or speak.
Petrified	You are turned to stone (or other material).
Poisoned	You have disadvantage on attacks/checks.
Prone	You are lying on the ground.
Restrained	You can't move.
Stunned	You can't move, act, or speak properly.
Unconscious	You fall unconscious.

Deep within the *Sunken Temple*, Viridian is fighting a dangerous level 10 gorgon. The gorgon has *Multiattack (2)* and the *Gorgon's Glare* ability—a worsening condition that turns victims into stone.

**DM:** The gorgon turns to you, Viridian, with eyes glowing bright. Something about them draws your attention. Make a DC 17 Wisdom saving throw. **Viridian:** Ok... (rolls 14) augh, no luck.

**DM:** You can't resist locking eyes with the gorgon, Viridian—you are *blinded* by her gaze.

Viridian: Son of a...

# **ONGOING DAMAGE**

Sometimes a monster's attack lingers, causing harm long after the initial hit—burning acid, a bleeding wound, painful frostbite. This is *ongoing damage*, and a monster can inflict this instead of dealing direct damage.

Before you make an *ongoing damage* attack, describe what your monster is trying to do:

- The mage tries to immolate your robe.
- The orc slashes at your leg with its hooked blade.
- The kobold throws a vial of bubbling acid at you.

Then make an attack as normal. If successful, the monster deals no direct damage but instead inflicts ongoing damage—the damage is equal to the monster's normal attack damage.

Clanda is hunting a level 3 giant lizard, trying to recover a poison gland for a spell component. The lizard has one attack per round, and deals 5 damage on a normal hit. During the battle, the lizard tries to spit acid and cause *ongoing damage*.

**DM:** The giant lizard spits a bolt of hissing acid at you, Clanda. It... (rolls 24) hits your AC.

Clanda: Augh, these lizards are the worst.

**DM:** The acid splashes over you, and you see the drops quickly eat into your robes. It's going to start burning through into your skin very soon—take ongoing 5 acid damage.

**Clanda:** Oh great, *I can't wait*. Who's turn is it now? **DM:** Yours. Take 5 points of acid damage. **Clanda:** These. Lizards. Are. The. *Worst*.

#### **Recovering from Ongoing Damage**

As with conditions, there are three ways a player can attempt to recover from ongoing damage:

- **Take an action:** The player can do something on their turn to end the effect—pour water on the fire, tear off the bloodsucking tentacle, patch up a wound.
- **Make a saving throw:** The player can make a saving throw at the end of their turn to try and end the effect —strength to crack through burning ice, dexterity to remove a tiny poisoned barb, charisma to sever the bond with a soul-sucking demon.
- Wait X rounds: The damage ends naturally after a set number of rounds (usually within 2-4).

When creating your ongoing damage attack, choose one or more recovery actions—whichever makes the most sense for your particular type of damage.

#### **MULTIATTACKS**

If your monster has a multiattack, you can use one of the attacks to make an ongoing damage attack instead.

# **AREA ATTACKS**

Some monster attacks affect everyone within a wide area —explosive ammunition, frenzied whirlwinds, clouds of poison. These are *area attacks*, and a monster can make these if they have the right tools or abilities.

Before you make an area attack, first describe what your monster is trying to do and how they're doing it:

- The giant swings a huge axe around in a deadly whirlwind of destruction.
- The goblin fires an explosive arrow towards the middle of your adventuring party.
- The dragon tries to burn you to cinders with an arc of scorching dragonbreath.

Once you've described what the attack looks like, decide on it's *point of origin*—this is usually either the monster itself or the point where the attack lands.

Next, choose the size of the area affected by the attack. Pick an area template, and then decide its range. Try to keep the size of your area attacks within 5ft to 20ft —unless your monster is particularly large or dangerous.

# AREA TEMPLATESTypeDescriptionLineA straight line from the origin.SphereA sphere centered on the origin.ConeA cone radiating out from the origin.CylinderA cylinder centered on the origin.CubeA cube with one side on the origin

Finally, decide on whether the attack will deal damage on a miss to determine the final damage value.

# Area Damage

Туре	Damage
No Damage on a Miss	Damage per Action x0.75
Half Damage on a Miss	Damage per Action x0.5

The DM is creating an area attack for a level 4 artificer with a thunder cannon that deals 8 damage on a hit. The attack fires a blast of lightning energy that hurts everyone in it's path—no one can dodge lightning, but a resilient body might fend off some of the pain.

• **Thunderlance:** Attacks everyone in a 20ft line for 4 points of lightning damage. Save vs Constitution, half damage (2) on a miss.

#### MULTIATTACKS

An area attack requires some dedicated effort and attention—you can't use an area attack as part of a standard multiattack.

# **MOVEMENT ATTACKS**

Some monsters use attacks to move you around the battlefield—pushing, pulling, or sliding you into disadvantageous positions. These are *movement attacks*, and a monster can make these in place of doing damage.

To perform a movement attack, first describe what your monster is trying to do:

- The sorcerer casts a powerful thunderwave blast to try and push you backwards into the spiked wall.
- The giant frog tries to hit you with its sticky tongue and pull you into its hungry mouth.
- The warrior tries to use a distracting feint to swap places with you.

Once you've described the attack, decide on the type of movement you want to happen to your target—is it a pull, push, slide, or direct movement?

Μονε	Movement Types				
Туре	Description				
Pull	The target is pulled towards you in a straight line (or as close as possible).				
Push	The target is pushed away from you in a straight line (or as close as possible).				
Slide	The target is moved in a general direction.				
Direct	The target is moved instantly to a spot (such as by a teleport or magical effect).				

Finally, decide on the distance your target should be moved if hit. Try to keep this within 10 ft to 30 ft—unless your monster is particularly large or dangerous.

Chansi is fighting a level 6 giant who—in a drunken rage—is trying to destroy her forest home.

**DM:** The giant kicks out at you with a swing of its huge leg, Chansi. It... (rolls 17) hits your AC.

**Chansi:** Damn, for how much damage?

**DM:** No damage, but the blunt force of the impact sends you flying backwards 30 ft.

**Chansi:** Right into the mud? You *bastard*, these are my new boots!

# **Avoid Cheapshots**

Although movement attacks can move players into or onto dangerous terrain—boiling lava, sharp spikes, cliff edges, etc—take care when doing so.

Avoid moving your player characters into obviously fatal situations if they don't have any reasonable means of defense, escape, or survival. When in doubt, allow them a saving throw to fall prone or grab hold of an edge.

#### **MULTIATTACKS**

If your monster has a multiattack, you can use one of the attacks to make an movement attack instead.

# **Resource** Attacks

Some attacks don't seek to harm you directly, but instead try to leech precious resources from you—stamina, mana, gold, etc. These are called *resource attacks*, and they can be very dangerous to an unsuspecting party.

To make a resource attack, first decide what type of resource your monster is trying to drain. Pick one from the list below, or choose your own if no option fits.

Resource	Types		
Туре	Description		
Exhaustion	The target gains a level of exhaustion.		
Death Saves	The target gains a failed death save.		
Hit Dice	The target is drained of one unspent hit die (if there are multiple sizes, use the lowest size).		
Spell Slots	The target is drained of one unspent spell slot (if there are multiple sizes, use the lowest size).		
Gold	The target is drained of some gold (or other form of wealth).		

Once you've picked a resource, decide how much is drained per hit (1 exhaustion, 1 hit die, 50 gp, etc). Then describe how your monster is performing the attack:

- The master thief pickpockets you (drain gold).
- The spectral wraith wraps around you and starts to feed on your soul (drain *hit dice*).
- The void sorcerer grabs hold of your arm and steals a portion of your magical energy (drain spell slots).

Finally, roll an attack as normal. If successful, the monster deals no direct damage but instead drains their target of the desired resource.

Viridian is fighting *Eldris Brune*, a level 4 warlock who has been commanded by her patron—for unknowable reasons—to destroy all gold in the region.

**DM:** "I'm really sorry about this, but I can't disobey my patron!" says Eldris as she raises a hand towards you, Viridian. Make a DC 12 Dexterity saving throw.

Viridian: Pft easy... (rolls 7) augh, that's *typical*.
DM: A yellow beam strikes you in the chest, but you feel no pain. In fact, you feel lighter. Your hand moves down to your belt purse. Your *now-empty* purse.
Viridian: ... My *what*? I had 50 gp in that purse!
DM: "Oh dear, sorry about that!" winces Eldris. "Can I recommend switching to silver pieces in future?"

Viridian: ... Just. Stop.

# MULTIATTACKS

If your monster has a multiattack, you can use one of the attacks to make a resource attack instead.

PATREON.COM/GIFFYGLYPH / R/DARKERDUNGEONS5E

# **EXAMPLE ATTACK ACTIONS**

To get you started with freeform attacks, here are some basic attack actions you might give your monster. Use these as a starting point to create your own attacks.

#### Slash

Melee Attack, Common

You slash at one target within reach.

- Defense: AC.
- Hit: Deal 100% damage.

# Twin Strike

# Ranged Attack, Multiattack (2), Common

You shoot two arrows at two targets within range.

- Defense: AC.
- Hit: Deal 50% damage.

#### Cross-slash

# Melee Attack, Multiattack (3), Common

You slash wildly at three targets within reach.

- Defense: AC.
- Hit: Deal 33% damage.

#### Rend

## Melee Attack, Ongoing, Common

You tear open a painful wound on one target.

- Defense: AC.
- Hit: Deal ongoing damage equal to 100% of your normal damage, save ends (Constitution vs your spell DC).

# WHIRLWIND

# Melee Attack, Area, Common

You swing your blades in a whirlwind of destruction.

- Defense: AC.
- Hit: Deal 75% damage.

# Fear

# Melee Attack, Condition, Common

You roar fiercely at your target.

- Defense: Wisdom.
- Hit: The target is *Frightened* for 2 rounds.

# ARROW OF SPELL DRAIN Ranged Attack, Resource, Common

You shoot an spell-draining arrow at a single target.

- Defense: AC.
- **Hit:** The target is drained of their lowest-level unspent spell slot.

#### SCORPID STING Melee Attack, Condition (Worsening), Common

You stab at your target with a poisoned dagger that can quickly render your target unconscious.

- Defense: AC.
- **Hit:** The target is *Poisoned*, save ends (Constitution vs your spell DC). If the target fails their saving throw, their condition worsens.
  - First Failed Save: The target is also Paralyzed.
  - Second Failed Save: The target falls *Unconscious* and remains so until the poison is cleansed. In addition, the target automatically fail Constitution saving throws while unconscious.

# Explosive Jar

#### Ranged Attack, Area, Common

You throw a small jar of explosive gas, igniting everyone—friend or foe—within a small area.

- Defense: Dexterity.
- Hit: Deal 50% damage.
- Miss: Deal 25% damage.

#### BEGUILING VOICE Ranged Attack, Condition, Common

You speak mystic words to beguile the mind of your target and sway them to your cause.

- Defense: Charisma.
- **Hit:** The target is *Charmed*, save ends (Charisma vs your spell DC).

# SWORD FEINT Melee Attack, Common

You distract your target with a sly flourish before slashing out with your weapon.

- Defense: Intelligence.
- Hit: Deal 100% damage.

# **USING MAGIC**

Quickstart monsters don't use the same vancian magic system as characters—it requires too much time to set up. Instead of spell-slots and predefined spells, quickstart monsters use a simple freeform magic system.

Pick a narrow one-word theme for your monster such as fire, water, shadow, decay, etc. Now your monster can make freeform attacks using that theme, just as they could if they were using any mundane weapon.

The DM creates a 3rd-level tiefling sorceress with a "fire" magic theme, leading a host of goblins. In a fierce battle against the party, the sorceress can do any simple magical action on her turn, such as:

- **Ranged Attack:** Shoot a scorching-hot jet of fire at a single target (Attack vs AC).
- Area Attack: Launch an explosive fireball at a cluster of people (Spell DC vs Dexterity).
- **Restrain:** Create a cage of fire to imprison an enemy (Spell DC vs Constitution).
- Create Cover: Create a wall of fire to block movement or provide cover (Concentration).
- Force Movement: Force an enemy to move back 5ft from extreme heat (Spell DC vs Constitution).
- Enchant Allies: Imbue her allies with fire magic so their attacks deal fire damage (Concentration).

# **CONCENTRATION**

Any significant and long-lasting magical effects that a monster might cast require some form of concentration —enchantments, ongoing effects, summons, etc. A monster can only maintain one concentration effect at a time, unless they are especially powerful creatures.

#### **ENDING CONCENTRATION**

Monsters can end their concentration spells at will. Unlike player characters, monsters don't have to roll to maintain their concentration spells when they take damage—the spell automatically persists. Spells end naturally if the monster is killed or knocked unconscious.

When her goblin host flees the battlefield, the enraged tiefling sorceress summons 8 fire elemental minions to attack the party. As a *Concentration* effect, however, she must drop her *Flame Wall* spell to do so.

# KEEP THINGS SIMPLE

Don't over complicate your freeform magic spells—keep your spells focused on one specific goal. Are you trying to hurt someone, help someone, or hinder someone?

# **HEALING MAGIC**

Monsters rarely have access to healing magic—unless they are *exceptional* creatures with rare powers, items, or equipment. If your monster has access to any healing or restorative powers, restrict their ability to just 3 uses per encounter.

A basic healing spell restores 30% of the target's maximum hit points per casting. This can be divided evenly across multiple targets to create an area healing spell—healing two people for 15%, three for 10%, etc.

#### **MULTIATTACKS**

Healing magic requires significant attention and cannot be performed as part of a multiattack action unless your monster is specially trained.

PATREON.COM/GIFFYGLYPH /R/DARKERDUNGEONS5E

# COUNTERSPELL

Your monsters might face a party wielding *Counterspell*. This is easy to accommodate—any non-cantrip magic cast by your monster has a spell level equal to half their monster level, rounded up (to a maximum of 5th-level).

Spell Level: Monster Level / 2 (max. 5th-level)

For a particularly notable or signature magic spell cast by your monster, use a spell level of your choosing.

Atop the *Hellfire Pinnacle*, Clanda battles against a ferocious tiefling sorceress (a 5th-level monster).

**DM:** Arcane sigils spiral around the sorceress' hands as she unleashes—

Clanda: I cast Counterspell.

**DM:** Of *course* you do. She's casting a 3rd-level spell (5th-level monster / 2)—the sigils shatter with a spark of arcane power. "You'll pay for that, witch," she hisses. **Clanda:** I'm sure I will. Why don't I start by teaching

you how to cast fireball properly...?

#### **MONSTROUS COUNTERSPELL**

Your monsters can also wield their own *Counterspell* magics in battle. Sorcerers, eldritch horrors, martial spellbreakers—whatever their form, they may have an option to disrupt spellcasting.

Use this sparingly—a standard monster should only be able to cast *Counterspell* once per encounter, if at all. Elite and Solo monsters may be able to use this power multiple times, depending on their nature.

**Clanda:** See, first you say the words "I cast fireball, you wretched tiefling", and then—

**DM:** The tiefling casts *Counterspell*.

Clanda: ...Of *course* she does.

The maximum spell level a monster can *Counterspell* without needing to make a confirmation ability check—is equal to half their monster level, rounded up (to a maximum of 5th-level).

If your monster has multiple charges of *Counterspell*, you can combine them—you gain +1 maximum spell level for each additional charge of *Counterspell* you spend.

# SUMMONING

Some powerful spellcasters have the ability to summon new monsters into battle—conjured familiars, risen undead, planar elementals, etc. A single summoner can quickly turn the odds against an unsuspecting party.

To start adding summoners to your game, all you need is some *Monster Points (MP)* and a little freeform magic.

#### **MONSTER POINTS**

Monster Points (MP) reflect the amount of summoning power your monster has—more power means more MP to spend on summoning spells.

Each monster rank (minion, standard, elite, and solo) is worth a set amount of MP—the higher the rank, the higher the cost. Whenever you perform a summoning spell, simply add up the total MP cost of your summoned monsters and drain that from your summoner.

#### Summoning Costs

Туре	Cost	Туре	Cost
4 Minions	1 MP	1 Elite	2 MP
1 Standard	1 MP	1 Solo	1 MP per player

#### **CREATING A SUMMONER**

To create a summoner, simply give them a budget of MP for the encounter—that's it. Your summoner can now summon any combination of monsters so long as they have enough MP—use this flexibility to surprise your players and keep your combat exciting.

The DM wants to create a low-level necromancer that can summon undead skeletons to fight the party. With freeform summoning, the necromancer is given a small budget of *Monster Points*—2 MP.

During combat, the necromancer can spend these MP in any combination it wishes. For example with 2 MP the necromancer can:

- Summon 8 minions.
- Summon 1 standard and 4 minions.
- Summon 2 standards.
- Summon 1 elite.

Summoned creatures can act immediately after the end of their summoner's turn.

To keep things simple, any summoned creature has the same level as it's summoner—a level 9 summoner creates level 9 minions/standards/elites/solos, for example. But if you want to change the level of your summoned creatures, read *Building an Encounter* (p34) for guidelines on how this will affect your MP costs.

#### **SUMMON DURATION**

Summoned creatures (by default) last for 1 hour—at which point, the magic fueling them fades and they return to their previous state. Summoned creatures also fade/evaporate/collapse when their summoner is killed, stunned, or otherwise knocked unconscious.

#### MULTIATTACKS

Summoning requires significant attention and cannot be performed as part of a multiattack action unless your monster is specially trained.

# **EXAMPLE FREEFORM SPELLS**

To get you started with freeform magic and spell actions, here are some basic spells you might give to your monster. Use these as a starting point and create your own monstrous spell attacks.

#### Firebolt

Ranged Attack, Common

You cast a bolt of fire at a target.

- Defense: AC.
- Hit: Deal 100% damage.

# ACID TOUCH Melee Attack, Ongoing, Common

You smear the target with sticky, burning acid that eats through their armor.

- Defense: AC.
- Hit: Deal ongoing damage equal to 100% of your normal damage, save ends (Constitution vs your spell DC).

# Solar Flare

Ranged Attack, Area, Common

You create a burst of dazzling white light, blinding everyone within 10 ft of you.

- Defense: Constitution.
- **Hit:** The target is *Blinded*, save ends (Constitution vs your spell DC).

# STRANGLE

Melee Attack, Resource, Common

You draw air out of the lungs of your target, causing them to suffocate for a few painful seconds.

- Defense: AC.
- Hit: Gain 1 level of exhaustion.

#### FROST NOVA Ranged Attack, Area, Common

You create a frozen orb that travels up to 30 ft before exploding into a thousand painful shards of ice, slicing everyone within 15 ft of it.

- Defense: Dexterity.
- Hit: Deal 75% damage.

# LIGHTNING SPEAR Ranged Attack, Area, Common

You cast a bolt of lightning from your hands that strikes everyone in a 20 ft line.

- Defense: Constitution.
- Hit: Deal 50% damage.
- Miss: Deal 25% damage.

#### TIME STOP Ranged Attack, Condition, Common

You momentarily freeze time for one target.

- Defense: Charisma.
- **Hit:** The target is *Stunned* for 1 round.

# Illusion

Ranged Attack, Condition, Common

You fill the mind of one target with illusions so they can't tell friend from foe.

- **Defense:** Intelligence.
- **Hit:** The target is *Charmed*, save ends (Intelligence vs your spell DC).

# CRYSTALIZE FLESH Melee Attack, Condition (Worsening), Common

You infect a target with a virulent corruption, transforming their flesh into black crystal.

- Defense: Constitution.
- **Hit:** The target is *Poisoned*, save ends (Constitution vs your spell DC). If the target fails their saving throw, their condition worsens.
  - First Failed Save: The target is also Restrained.
  - Second Failed Save: The target is fully Petrified.

# SUMMON LESSER ELEMENTALS Summon, Common

You summon a number of elementals into this plane to do your bidding. The elementals act under your command until the spell ends.

- Cost: 1 MP.
- **Summon:** You may summon 4 minions or 1 standard monster, all of the same level as you. The summoned creatures act immediately after you.
- Duration: 1 hour.

# **ATTACK RARITY**

OT ALL ATTACKS HAVE EQUAL POWER AND utility—some are simple and have a minor impact, while others are showstoppers that can completely change the course of battle. This chapter introduces attack rarities and how you can use them to vary your monster's attack patterns.

# RARITIES

Freeform attacks, by default, focus on achieving just *one* thing per attack—draining health, applying a condition, moving targets around, etc. But if you want to add some more variety to your monster's attacks, use rarities to adjust your attack damage and effects.

There are three rarities of increasing power and threat—common, uncommon, and rare. When creating an attack, pick one—the rarer the attack, the more devastation it can cause when it hits.

# **COMMON ATTACKS**

Common attacks can be performed without any significant limitation—slashing with a sword, lashing out with a tail, casting a magical cantrip, etc. These are basic actions that focus on achieving *one* thing, such as:

- Deal some damage.
- Apply a status condition.
- Apply ongoing damage.
- Move targets around.

For a more in-depth exploration of possible attack types and effects you can use, read *Making Attacks* (p17).

Give your monster one or two common attacks to start with, and add/improvise additional freeform attacks during play whenever they come up. The DM is building an orc berserker, and—for some variety—creates two common starting attacks: **Slash** (deals damage on a hit vs AC) and **Rend** (deals ongoing damage vs Constitution saving throw).

# **UNCOMMON ATTACKS**

Uncommon attacks are limited in use, often because they depend on a restricted resource—such as stamina, rage, focus, mana, spell slots, or ammunition—or because they need time to recharge power and strength.

Because of their limitations, uncommon attacks are more powerful and can achieve *two* things—for example:

- Deal *double* damage.
- Deal damage *and* a status condition.
- Apply ongoing damage and a status condition.
- Move targets around and apply ongoing damage.

There are three main forms of uncommon attack: limited charges, recharge, and cooldown. Pick the type that best suits your particular monster and their style of attack.

## LIMITED CHARGES

Charge attacks can be used a set number of times before they are exhausted—usually 2, 3, or 5. Charges reset after the monster completes a short rest *or* completes an action that could reasonably restore some charges.

A kobold slinger is given a **Stink Pot (limited 3)** ranged attack that deals damage and applies the *Poisoned* condition. It can be used 3 times per short rest (if the kobold has access to new stink pots).

#### RECHARGE

Recharge attacks can only be used again after a specific number (or range of numbers) is rolled on a d6. At the start of your monster's turn, roll to see if their attack recharges—if it does, you can use it again as normal.

A tiefling pyromancer uses her **Scorch (recharge 5/6)** attack against a player. At the start of the monster's next turn, the DM rolls a d6—they roll a 4, meaning the attack has not recharged yet and cannot be used.

# Cooldown

Cooldown attacks can only be used again after a specific number of rounds have passed. Whenever you use a cooldown attack, start a countdown timer. At the end of the monster's following turns, reduce the timer by 1 once it reaches 0, the attack has recharged.

An aberrant scourge spits a cone of acid with its **Acid Spray (cooldown 2)** attack, and the DM sets a new countdown timer to 2 (using a d6 to track the time).

At the end of the scourge's following turns, the timer is reduced by 1 until—at the end of the second round—the timer reaches 0.

# **RARE ATTACKS**

Rare attacks are one-use abilities that take a significant time to recover, recharging at the end of a long rest (or longer, depending on your monster). These are some of your monster's most powerful attacks—their limit breaks, overdrive techniques, masterwork magic, etc.

Because they can only be used once, rare attacks can achieve *three* things—for example:

- Deal *triple* damage.
- Deal double damage *and* a status condition.
- Apply ongoing damage and two status conditions.
- Move targets around and apply double ongoing damage.

Give your rare attack plenty of flavor and description these are some of your monster's most dangerous and *exciting* abilities, so put on a good show.

The DM is building a greatsword-wielding soldier to fight the party. As a damage-dealing *striker*, the soldier is given an **Omnislash (rare)** attack which deals triple damage on a successful hit—devastating if it hits.

# KEEP FREEFORMING

These attacks aren't an exhaustive list of *everything* your monster can do. Treat written attacks as suggestions and keep improvising new actions when necessary.

# • Your Monster Profile •

Below is an example monster profile with some premade attacks—a *Herald of Corruption*. This aberrant, barely humanoid figure spreads corruption and sickness across the land in the name of its eldritch master.

Heralds secrete burrowing parasites which can infect and corrupt living flesh, turning victims into new heralds.

HERALD OF CORRUPTION Medium aberration, neutral					el 7 Striker 1,450 XP)
Armor Cl Hit Point					
		• •	SPELL DCs		
<b>Str</b> +0	<b>Dex</b> +1	Сом +4	<b>INT</b> +3	<b>Wis</b> +1	<b>Сна</b> +2
SAVING TH					Wis/Str +1 Stealth +4

# TRAITS

**Paragon Action:** You may take one Paragon Action per round to either move or perform an action.

**Indominable:** You are immune to any effects that would alter your mind or will.

**Aura: Damaging:** The space around you is dangerous. Creatures take damage equal to your level when they enter your aura or start their turn within it.

#### ACTIONS

**Touch of Decay** (common) Melee 5 ft: +9 vs AC. Hit: 18 necrotic damage.

Acid Spit (common) Ranged 30 ft: DC 14 vs Dexterity. Hit: 18 ongoing acid damage, save ends (Constitution vs DC 17).

#### **Poison Breath** (recharge 5/6)

*30 ft Cone:* DC 17 vs Constitution. *Hit:* 18 poison damage and the target is *Poisoned*, save ends (Constitution vs DC 17).

Lifesteal (limited 3)

*Melee 5ft:* DC 17 vs Constitution. *Hit:* 18 necrotic damage and the target loses one unspent hit die.

#### **Burrowing Parasite** (rare)

*Melee 5ft:* +9 vs AC. *Hit:* the target is *Stunned* and takes 18 ongoing necrotic damage, save ends both (Constitution vs DC 17). The target also gains a level of exhaustion. If a creature falls to 0 hit points whilst still infected with a burrowing parasite, it becomes a *Lesser Herald of Corruption*.

# **OVERKILL ATTACKS**

The BIGGEST, SCARIEST MONSTERS NEED THE biggest, scariest attacks to match. When the party's on the verge of thwarting your plans—or gotten themselves into a vulnerable position—that's when it's time to unleash your full power and go into overkill. This chapter introduces *overkill attacks* for your monsters and how to use them in your encounters.

A red dragon takes in a deep breath, fire burning in its chest, as it prepares to melt flesh, stone, and steel. Storm clouds boil above a mad sorcerer as she charges a cataclysmic lightning bolt. A werewolf howls, its bloody teeth shining in the moonlight, ready to tear open the jugular of its grabbed victim...

#### STORM OF CHAOS Overkill Attack (Extreme), Level 5 Controller (Solo)

With foul runes and hellish words, you begin to pull the demonic energies of the Abyss into this world. Glowing red veins tear across your skin as the Abyss pours into you, and black storm clouds—crackling with vicious, red lightning—gather above.

On your next turn, as your action, the abyssal energy erupts from you in a burning wave of chaos.

- **Requirement:** You are bloodied (50% hit points).
- Target: 30 ft area around you.
- **Hit:** Any non-demonic creature within range takes 48 fire damage. Anyone reduced to 0 hit points by this attack is immediately killed, reanimating after one turn as a possessed, demonic vessel.

# **GOING INTO OVERKILL**

An *overkill attack* is a huge, devastating, and almostcertainly fatal attack that a monster can unleash against the party. These are your biggest, most cinematic monster attacks—an ultimate technique that can destroy PCs, NPCs, and scenery alike.

Overkill attacks take a full round to charge up, but when unleashed—hit anyone in range *automatically*, dealing a massive amount of damage in the process.

There are 6 steps to creating an overkill attack:

- 1. **Pick a trigger:** Decide what type of event triggers the start of the overkill attack. You take a lot of damage? Players destroy all your minions? You grab a PC?
- 2. **Choose the area:** Overkill attacks automatically hit anything within a target area. Choose the area and range—as well as any possible safe spots.
- 3. **Calculate the damage:** Overkill attacks do four times the damage of normal attacks—calculate just how devastating the attack will be to your players.
- 4. **Telegraph the attack:** Take an action to start the attack. Let your players know what the monster is doing and where it's dangerous—or safe—to be.
- Charge up power: Your monster spends a full round and it's full attention—charging up the attack.
- 6. **Attack:** The attack happens during the monster's next turn—anyone still in its range is hit automatically.

# CINEMATIC SPECTACLE

Overkill attacks are a great way to add cinematic spectacle to your battles—use plenty of over-the-top description to make them big, loud, and exciting. Add overkill attacks to keep your players on the move and to highlight the lethal threat posed by your monster.

PATREON.COM/GIFFYGLYPH /R/DARKERDUNGEONS5E

# **STEP 1. PICK A TRIGGER**

Your first step in creating an *overkill attack* is to decide exactly when your monster can start using it. Does it go into overkill when bloodied? Or when it's grabbed a player? Or once the players disrupt a sacred ritual circle?

Pick a triggering event from the list below—or create one that better suits your monster. When the event happens, your monster's overkill attack is unlocked.

# **OVERKILL TRIGGERS**

Туре	Description
Bloodied	Your monster is reduced to 50% or fewer hit points.
Event	The players do something that disrupts the monster's plans—release a prisoner, disrupt a ritual, destroy a power crystal, etc.
Free	No restriction—the monster can perform this attack whenever they like.
Player in Peril	A player is in a specific position or dangerous condition—grabbed, restrained, stunned, etc.

The DM wants to create an overkill attack for a new level 9 solo striker—Kaladax, a wild red dragon with a fiery temperament.

To start, they choose the "Bloodied" trigger. Kaladax, when he's hurt, is going to get *very* angry...

# **STEP 2. CHOOSE THE AREA**

Next, decide the range and area of the attack. Overkill attacks originate from your monster, striking out at anyone unfortunate enough to still be in range. Pick a basic template from the list below to get started:

#### OVERKILL AREA

and the second	
Туре	Description
Character	Hits a specific target—such as a grabbed or stunned player within reach.
Area	Hits everyone within a certain area—such as "everyone within 30 ft of the monster".
Cone	The attack hits everyone in a cone originating from the monster.
Line	The attack hits everyone in a line originating from the th <mark>e mon</mark> ster.
Zone	The attack fills an entire zone or region of the map.

In his rage, Kaladax's overkill attack will flood the entire chamber with searing dragonbreath. Instead of a cone, the DM chooses an area template, centered on Kaladax, with a 40 ft radius—the party will have to run for their lives to escape the dragon's hellish flame.

# **THE DANGER ZONE**

Make sure that it's possible for your players (at least, most of them) to get out of range of the attack in only one turn—even if it means dashing. If your players can only move 30 ft, for example, don't use a 70 ft area unless they have a clear means of escape or cover.

#### SAFE SPOTS

Add some interesting scenery that players can use in creative ways to protect themselves—pillars to hide behind, tables to flip over for cover, pools of water to dive into, dead magic zones that nullify magical overkill, etc.

The DM adds a couple of stone pillars to the encounter scenery as possible cover—but not enough for every player. They'll have to decide who gets to hide and who gets to run—fast.

# **STEP 3. DETERMINE THE DAMAGE**

Now, it's time to see how much damage your attack will do. Overkill attacks do *four times* the damage of a monster's normal attack—damage enough to kill a healthy adventurer in one hit. Overkill shouldn't be taken lightly, so make sure to highlight the grave danger.

As a level 9 solo striker, Kaladax can deal around 29 damage per attack action. This means his overkill attack will deal 116 fire damage—almost *certain* to kill any unfortunate creature caught in the blast.

#### **EXTREME OVERKILL**

If you want to make players *really* afraid of your overkill attacks, consider this *Extreme Overkill* variant.

If a player is reduced to 0 hit points by an overkill attack, they are killed outright—any remaining death saves automatically fail.

# WATCH THE WORLD BURN Overkill Attack (Extreme), Level 9 S<u>triker (Solo)</u>

Your chest starts to swell with raging dragonfire, and your body becomes burning hot to the touch. The stone begins to melt beneath you from the scorching heat, steam hissing loudly from your skin.

On your next turn, as your action, you breathe scorching hot dragonfire all around to melt stone, steel, and flesh.

- **Requirement:** You are bloodied (50% hit points).
- Target: 40 ft area around you.
- **Hit:** Any creature within range takes 116 fire damage. In addition, any creature reduced to 0 hit points by this attack is disintegrated.

# **STEP 4. TELEGRAPH THE ATTACK**

Once you've unlocked an overkill attack, it's time to put it to use. Take an action to start your attack and telegraph the impending danger—your players should know what's coming up so they have a chance to avoid it.

Clearly describe what is happening, where it will happen, and when it will happen. Make it clear that anyone in range and not in adequate cover will be hit *automatically*—the only defense is to be out of the attack's reach.

Inside *Redstone Volcano*, Valiant, Krazak, and Clanda battle Kaladax, the wild red dragon. After it has been bloodied, the DM activates an overkill attack.

DM: The red dragon Kaladax starts to draw in breath. Valiant, you can see its chest swell with dangerous power—an incredible amount of heat is radiating from the dragon already as it goes into *overkill*. "Insolent mortals! Now watch this world burn!" he roars. Valiant: Can I see where Kaladax is aiming? DM: You think he's going to flood this entire

chamber with searing, deadly flame in just six seconds. **Valiant:** Uh, everyone? *We should run*.

# **STEP 5. CHARGE UP POWER**

Once your monster has started an overkill attack, it begins gathering whatever energy it needs until the start of its *next* turn—at which point, the attack is fully charged and the monster *must* use its action to unleash it (even if it might want to do something else instead).

While the monster is charging up the attack, it doesn't take reactions nor *Paragon Actions*. It also won't try to move—though it can still be moved by player actions.

# **DISRUPTING OVERKILL**

While the monster is charging its attack, it's vulnerable. Players—with some clever use of roleplay, powers, and effects—might just have a chance to disrupt the overkill attack and cancel it outright.

If your monster is stunned, incapacitated, or otherwise put in a position where the overkill attack no longer makes sense, the action fizzles to no effect.

DM: The heat from Kaladax is intense as the dragonfire builds. What do you do, Krazak?
Krazak: Dragon can't breathe fire if it's stunned. And my *Stormbreaker* axe has a chance to stun on crit...
DM: You attack the dragon?

**Krazak:** Damn right I attack the dragon! I charge Kaladax with Stormbreaker drawn. Dwarven ancestors, if ever I needed a critical it's now... (rolls 1) ...*son of a*.

**DM:** The heat throws your swing off badly, Krazak. You skid to a halt in front of a grinning Kaladax...

# **STEP 6. ATTACK**

Finally, once fully charged, the monster unleashes the overkill attack using their turn action—anyone in range is automatically hit for the full damage. Once the attack has occurred, the monster can act as normal—taking reactions, *Paragon Actions*, movement, etc.

**DM:** "You will burn!" roars Kaladax as he unleashes his volcanic attack. Searing flames flood the chamber.

**Valiant:** We're all safe behind this pillar, right? **DM:** You are, but Krazak isn't. The dwarf, standing his ground in front of Kaladax, is hit full force by the attack and takes 116 points of fire damage.

Krazak: ...I stand defiant, my charred arm holding aloft a melted axe. "That. All. You. Got?" And then I fall, my burnt body exploding into ash as it hits the ground.
DM: Kaladax slams his tail down, scattering Krazak's ashes. "Such is the fate of all who would defy me!"
Valiant: ...WHAT.

A WEAK POINT

When a monster starts to charge an overkill attack, it might expose a *weak point*—a loose scale, a glowing red core, a fragile crystal, etc. Do enough damage to this weak point and you might just stop the overkill attack altogether, stunning the monster in the process.

If you want to bait players into staying within your monster's overkill range, give it an exposed weak point.

# **ADDING A WEAK POINT**

To add a weak point to your monster, first decide what it looks like and how difficult it is to spot. Then, give it a pool of hit points equal to 1/10 of the monster's max HP.

The DM creates another solo creature—a 12th-level mechanical construct with 719 total HP and a ground-shattering overkill attack. To give players a way to interrupt this attack, the DM adds a *weak point*.

While charging the energy for its *Earthquake Strike*, the construct reveals a fragile power core inside its thick armor. The core glows bright blue, has 71 HP, and can be noticed with a DC 12 perception check.

If a player can see the weak spot, they can attack it using the same defense values as the monster itself.

If the weak point is reduced to 0 hit points, the monster immediately takes damage equal to the weak point's max HP and is also *Stunned* until the end of its next turn. This effect cannot be circumvented by *Legendary Resistances* or with *Paragon Actions*.

A weak point can only be seen or attacked while the monster is charging an overkill attack.

# EXAMPLES

To get you started with overkill attacks, here are some basic examples you can give to your monsters.

# SNAP NECK

# Overkill Attack, Level 3 Lurker (Elite)

You wrap your hands firmly around the head of a grabbed creature.

On your next turn, as your action, you sharply twist the head of your victim with a sickening crunch.

- Requirement: You are next to a grabbed creature.
- Target: A grabbed creature.
- Hit: The creature takes 36 bludgeoning damage.

# Devour

# Overkill Attack, Level 4 Controller (Solo)

You unhinge your jaw, teeth glistening, as you prepare to devour a nearby stunned creature.

On your next turn, as your action, you bite into your victim with bone-crushing force.

- **Requirement:** You are next to a stunned creature.
- Target: A stunned creature.
- **Hit:** The creature takes 40 piercing damage. If the creature is reduced to 0 hit points, you swallow it.

#### WHISPERS OF AZATOTH Overkill Attack, Level 5 Supporter (Elite)

With eldritch words, you tear open a rift into the Far Realm and draw on its unknowable power.

On your next turn, as your action, you unleash a blast of psychic energy that tears apart living minds.

- Requirement: Your minions have been killed.
- Target: A 30 ft cone originating from you.
- Hit: Creatures in range take 36 psychic damage.

# REPTILE SPRAY

You swallow a vial of reptile acid, mixing it with your own digestive juices.

On your next turn, as your action, you spew a thick spray of corrosive acid to melt stone, steel, and flesh.

- Requirement: You consume a vial of reptile acid.
- Target: A 30 ft cone originating from you.
- Hit: Creatures in range take 40 acid damage.

# THUNDER LANCE Overkill Attack (Extreme), Level 7 Sniper (Elite)

You overcharge your thunder cannon to create a massive, deadly surge of raw lighting energy.

On your next turn, as your action, you fire a blast of lighting that pierces everyone and everything in a line.

- **Requirement:** Your minions have been killed.
- Target: A 40 ft by 10 ft line, originating from you.
- **Hit:** Any creature in range takes 72 lightning damage. Anyone reduced to 0 hit points by this attack is killed outright by the shock.

# Spirit Bomb

Overkill Attack (Extreme), Level 7 Striker (Solo)

You draw spirit energy from nearby living creatures and channel it into a glowing ball of radiant power.

On your next turn, as your action, you launch the ball into the ground where it explodes in radiant fire.

- **Requirement:** You are bloodied.
- Target: A 50 ft area around you.
- **Hit:** Any creature in range takes 80 radiant damage. If a creature of evil alignment is reduced to 0 hit points by this attack, it is disintegrated.

# You're Already Dead Overkill Attack, Level 9 Striker (Elite)

With necrotic power from the Font of Decay, you summon soul-hungry wraiths from the Shadowfell.

On your next turn, as your action, you send the wraiths out in a deadly wave to consume the living.

- **Requirement:** You consume a Font of Decay.
- **Target:** A 60 ft by 10 ft line, originating from you.
- Hit: Creatures in range take 108 necrotic damage.

#### Ice Age

# Overkill Attack (Extreme), Level 10 Defender (Solo)

With arcane runes you pull cold energy from the Elemental Chaos, becoming a Herald of Winter.

On your next turn, as your action, you unleash a frozen vortex that turns everything to ice and snow.

- **Requirement:** You are bloodied.
- **Target:** A 50 ft area around you.
- **Hit:** Any creature in range takes 104 cold damage. If a creature is reduced to 0 hit points by this attack, it is petrified and turned into an ice statue.

HE MONSTER TABLES AND STAT BLOCKS IN THIS supplement use static damage values for simplicity's sake.

But if you want to add some variety to your monster damage, this chapter will help you to convert your static damage values into randomized damage.

# • STATIC TO RANDOM

Once you have a monster—be it minion, standard, elite, or solo—it's easy to convert your static damage into randomized damage. Simply follow these three steps:

- 1. **Get the static damage:** Find your monster's base static damage value from their profile.
- 2. Choose an attack type: Decide just how accurate or unpredictable the attack's damage should be—the wilder the attack, the bigger the die you roll.
- 3. **Randomize the damage:** Replace the static damage with a dice roll from the *Randomized Damage* table.

# **STEP 1. GET THE STATIC DAMAGE**

First, find your monster's normal static damage for their attacks—from either their profile or the monster template tables.

The DM is creating *Gannimor Strax*, a ferocious orc pit-fighter who, in battle, dual-wields a battle axe and dagger. As a 5th-level elite striker, the orc deals 14 static damage on a successful hit.

For variety, and to emphasis the different weaponry, the DM wants to use two randomized damage values —one for an axe attack, and one for a dagger attack.

# STEP 2. CHOOSE AN ATTACK TYPE

Next, decide just how unpredictable you want the damage to be—the more careless the attack, the bigger the damage die and the wider the range of damage your players might suffer.

There are 7 categories of damage: accurate (d4), predictable (d6), reliable (d8), irregular (d10), volatile (d12), wild (d20), and chaotic (d100). Choose the type that best suits your attack.

As Gannimor is reckless with his axe and precise with his dagger, the DM chooses *volatile* axe damage and *accurate* dagger damage.

# **STEP 3. RANDOMIZE THE DAMAGE**

Finally, look through the *Randomized Damage* table to find a suitable value based on your chosen damage types —update your static damage accordingly.

The DM finds two randomized damage options that are a good fit. Gannimor's profile is updated to replace the static 14 damage with two attack options:

Attack (Axe): 2d12 + 1 (14 - 13) Attack (Dagger): 4d4 + 4 (14 - 10)

# Wild Swings

Rolling big dice for your damage (d10s, d12s, etc) can be exciting, but may lead to some very swingy combat. Make sure to use a variety of dice options to keep things interesting and control the tempo of your monsters.

Randomized [	Damage				-	
Damage Type	Dice	Min/Max	Mean	Deviation	Common Range	Randomized Damage
Accurate (d4)	1d4	1-4	2.5	1.12	1-4	1d4 + (static damage – 2)

O

# **BUILDING AN ENCOUNTER**

T'S TIME TO START A FIGHT. MONSTERS GENERALLY don't act alone, preferring to work with their other monstrous allies to surround and overcome their enemies—unless they're independent solos on a wild, destructive rampage.

This chapter provides some basic guidelines on how to build quickstart encounters with varying types of monster for your players to battle.

# • THE BASIC ENCOUNTER •

Building a basic encounter using quickstart monsters is very simple, requiring three steps:

- 1. Get some Monster Points: Decide how dangerous the encounter should be for your players to calculate how many *monster points* (MP) you'll get to spend.
- 2. Add monsters: Spend your MP to add monsters to the encounter until you reach the limit.
- 3. **Build the monsters:** Create your monster profiles as normal with an eye for interesting synergies.

# **STEP 1. GET SOME MONSTER POINTS**

First, decide the difficulty of the encounter to see how many *monster points* (MP) you get to spend.

#### **ENCOUNTER DIFFICULTY**

Difficulty	Total Monster Points (MP)			
Easy	Number of players x 0.5			
Normal	Number of players			
Hard	Number of players x 1.5			
Extreme	Number of players x 2			

The DM is creating a normal encounter for 4 players. Using the *Encounter Difficulty* table, this generates 4 monster points with which to build the encounter.

# **Step 2. Add Monsters**

Now it's time to start adding monsters to your encounter. Each monster type costs a certain number of *monster points*—the bigger the threat, the bigger the cost. Keep adding monsters until you've spent all of your MP.

Monster Value					
Туре	MP Cost	Туре	MP Cost		
Minion	1/4	Elite	2		
Standard	1	Solo	1 per player		

# **Monster Levels**

Values listed in the *Monster Value* table assume you're using monsters within -3/+3 levels of the average player character—but this may not always be the case. If your monster is under or overleveled, adjust its MP cost.

For every 4 levels higher than the players, double the monster's MP cost. For every 4 levels lower, halve it.

The DM wants to create a horde-style normal encounter for 4 players. They add one elite monster, worth 2 points, leaving 2 points for minions.

Normally, 2 points can buy 8 minions. But by using minions 4 levels lower than the players, the DM is able to add 16 minions instead.
## **STEP 3. BUILD YOUR MONSTERS**

Once you've decided on your encounter monsters, it's time to start building them. Use the normal quickstart rules to help you generate these stat-blocks.

Look for interesting synergies between your monsters based on their type and role—defenders protecting snipers, supporters buffing strikers, controllers enabling lurkers—but try to limit the number of monster roles to three per encounter to avoid overcomplicating things.

## **ENCOUNTER OUTLINES**

Here are some encounter outlines you might use to help construct your own encounters. Each assumes a 4-player party with a budget of 4 *monster points* to spend—change this to suit your own game as and when needed.

## **BASIC ENCOUNTERS**

Basic encounters focus on using standard and minion monsters, usually in equal numbers to the players for simple one-on-one battles. Use these to give your players a straightforward combat challenge against a relatively few opponents.

BASIC BR	Normal vs 4 <i>4 MP</i>			
Number	Туре	Points		
1	Standard	Sniper	+0	1
1	Standard	Striker	+0	1
2	Standard	Defender	+0	2

SNEAK A A defender	Normal vs 4 <i>4 MP</i>			
Number	Туре	Points		
1	Standard	Controller	+0	1
1	Standard	Defender	+0	1
2	Standard	Lurker	+0	2

SHARPSHOOTER Hard vs 4 A range of snipers supported for maximum damage. 6 MP

6	Standard	Striker	+0	6
4	Minion	Sniper	+0	1
4	Minion	Supporter	+0	1

## **ELITE ENCOUNTERS**

Elite encounters feature powerful elite monsters leading a troupe of other monsters. Use these for your mid-boss encounters, or scenes involving named monsters.

ELITE FO An elite mo	Normal vs 4 <i>4 MP</i>			
Number	Туре	Role	Level	Points
1	Elite	Controller	+0	2

TWIN TERRORS Two strong elites are ready to fight.				Normal vs 4 <i>4 MP</i>
Number	Туре	Role	Level	Points
1	Elite	Defender	+0	2
1	Elite	Striker	+0	2

## **Solo Encounters**

Solo encounters put the party up against a single, overwhelming monster. Use these for your major bosses and villains, and to capstone an adventure with a climatic boss battle.

SINGLE COMBAT A solo monster with one stat block.				Normal vs 4 <i>4 MP</i>
Number	Туре	Role	Level	Points

32	Minion	Striker	-8	2

EEP BENEATH THE EARTH LIES AN ANCIENT EVIL, long buried and forgotten—but forgotten no more, for a sinister necromancer now plots to resurrect the *Skeleton Queen* and unleash her dark powers upon the world. Can you save the kingdom from the *Court of Bones*?

This is a **5th-level adventure** outline for 4 players, demonstrating how you can use this supplement to build encounters. The *Court of Bones* is deliberately openended—use it as a starting point and expand the adventure with your own monsters, encounters, and loot.

100 years ago, Queen Celestine of Reinburg—dying from an incurable sickness—made a desperate pact with a death god to save her life and prevent a war of succession from tearing her kingdom apart.

The pact was accepted and her sickness healed, but at a terrible cost—a hunger for souls. Though she tried to resist, Celestine soon began to feast on her aides. As a grim reward for their 'sacrifice', she raised their bodies as undead puppets—her *Court of Bones*.

When the hunger grew, her unholy appetites turned to the rest of her kingdom. But before she could complete a ritual that would turn the entire kingdom to undeath, four brave heroes fought their way into the palace and defeated her. Celestine's spirit was torn from her body and her corrupt palace—the Dreadvault —sank deep into the earth, never to rise again.

Some say that the Queen's ravenous soul still haunts the Dreadvault, seeking a way back into our world. Nobody knows for sure, and none have been brave—or foolish—enough to find out. Until today...

## YOUR QUEST

The necromancer Mortanius wants to **raise the Skeleton Queen** and bind her to his will, using her formidable necromantic powers (and the Court of Bones) for his own purpose—the conquest of the mortal realms.

To achieve this, Mortanius has stolen the *Tome of Awakening* (a powerful book of forbidden necromantic knowledge) and entered the sunken **Dreadvault**. His ritual of resurrection has already begun leeching life from the land above—if you don't stop him, the lifeforce of the entire kingdom will be bled dry.

**Quest:** Find Mortanius and stop his resurrection ritual —or kill the Skeleton Queen once and for all.

The party, following Mortanius' trail through the twisting undercaverns, discover the gates of the Dreadvault. Already, the air crackles with magical energy...

## **A TICKING CLOCK**

Time is a factor—the party must stop Mortanius before he can resurrect the Skeleton Queen at full strength. Upon entering the Dreadvault, if the party take a long rest at any point before defeating Mortanius:

- Mortanius' resurrection ritual completes, killing all plant-life in the kingdom above and poisoning the earth with necrotic energy.
- The Skeleton Queen becomes a gargantuan monster and gains +10 levels (ML 13 instead of ML 3). She kills Mortanius and shatters the roof of the Dreadvault, ascending into the world to wage war against the living and reclaim the throne of Reinburg.

# THE COURT OF BONES

- ORIGINAL MAP BY DYSONLOGOS.COM, EDITED BY GIFFYGLYPH -

## THE HISTORY

100 years ago, the kingdom of Reinburg was ruled by the accomplished Queen Celestine and her husband, Prince Beregor. Their rule was prosperous and Reinburg grew strong under their care. With much celebration, the Queen gave birth to a daughter—Princess Sophia—and all was well—until a day came when everything changed.

A terrible, magical plague swept through the kingdom, killing peasant and noble alike. Prince Beregor and Princess Sophia both died, while Celestine was left terminally ill.

## **A Desperate Pact**

As Celestine lay near death, her two younger brothers the royal twins, Rayner and Remus—each stepped forward to claim the throne for himself. Celestine feared their greed for Reinburg's crown would start a war of succession and tear her beloved kingdom apart.

And so on her deathbed, the Queen turned to the gods for aid. When the gods ignored her pleas, Celestine—in desperation—reached out to darker powers.

One reached back.

#### "Feed me."

The command was overwhelming. And though every fiber of her being screamed to refuse, Celestine was desperate to safeguard her kingdom. She accepted. At once her sickness quickly burned away as new, otherworldly power flowed through her veins.

Celestine was cured, and Reinburg was safe.

## **A SINISTER HUNGER**

It wasn't until some weeks later that Celestine noticed her appetite for food was gone. With dawning horror, she discovered a hunger for something much darker—living souls. She tried to resist it, but day by day the hunger grew and the command grew louder: *Feed me*!

When Celestine first touched the arm of her chambermaid and accidentally drained her soul, she was inconsolable. When a courtier kissed Celestine's hand and she drained his soul, she was upset. When she drained the souls of her knight protectors in one hungry outburst, she was resolved.

"This is for the future of Reinburg," justified the Queen "But I won't let their noble sacrifice go unrewarded. Through me, they will have life eternal."

And thus began the Court of Bones.

### PACTBREAKER

With growing fear over her patron's gluttonous ambitions, Celestine sought to escape her pact. Perhaps, if she consumed enough souls, she would gain the power to fight her benefactor?

And so, with grim resolve, she prepared a ritual that would drain all Reinburg of its spiritual lifeforce.

"Better that Reinburg should lose its soul to its Queen, than lose everything to *Him*."

Just when all seemed hopeless, four brave heroes fought their way into the Queen's sanctum and battled her in the throne room. At the last second, before the ritual could be completed, one of the heroes impaled the Queen with a greatsword, pinning her to the black throne.

With a bloody hand on the sword, surreptitiously etching out eldritch runes in blood, Celestine laughed one final time. "He can't have my soul. Not yet..."

With her final breath, her palace—the Dreadvault began to sink into the earth. Some people claim to have seen tentacles wrapped around the building, pulling it down—whatever the truth, the Dreadvault and Skeleton Queen were thought lost for all time...

## **THE VILLAINS**

There are two primary villains the party will face during this adventure: **Mortanius**—a powerful necromancer with megalomanical aspirations—and **Celestine Reinburg**—a ruthless, soul-eating Skeleton Queen.

## **MORTANIUS, THE NECROMANCER**

Mortanius is a man who wants to rule the world, and he is not in the least bit subtle about this. Arrogant, flamboyant, and utterly convinced that *only he* can bring order to chaos, Mortanius has devoted his life—and his family fortune—to this pursuit of world domination.

But after three failed schemes—thwarted each time by *persistant* adventurers—and having spent the last gold piece of his family fortune, Mortanius has come to one conclusion: a conquerer needs an army.

For this reason, Mortanius has come to Reinburg. With the *Tome of Awakening* in his possession, the necromancer plans to raise the Skeleton Queen and, through her, control the undead *Court of Bones*—an army with which to start conquering the living.

Today, Reinburg. Tomorrow, the world!

### **Celestine, the Skeleton Queen**

In life, Celestine was the accomplished—if stern—ruler of Reinburg. But when a magical plague swept through the kingdom and nearly killed her, Celestine made a pact with an unknown power and became a soul reaver.

Celestine wants to protect her beloved Reinburg, and she believes that the best way to do that is by killing her gluttonous patron—even if it costs every living soul in the world. Better to lose a soul than lose all existence, in her cold opinion.

#### **THE COURT OF BONES**

Though much of the Court was destroyed when the Dreadvault sank into the earth, their bones can be found throughout the palace ruins. Should the Skeleton Queen arise and resurrect her Court of Bones, she will have upwards of 300 undead soldiers at her command.

## **THE DREADVAULT**

Formerly the beautiful gothic marble Palace of Reinburg, the Dreadvault is now little more than a ruined charnel house sunk deep beneath the earth—the final resting place of the Skeleton Queen and her Court of Bones.

**You see:** There is no natural light in the Dreadvault the dead have no need of it. But if you light a torch, you see thick, black, necrotic veins running throughout the walls, pulsing as if to a heartbeat. Ghostly shadows seem to move on the edge of your vision.

All around you are the rotted remains of the former palace—decayed furniture, torn paintings, blocked doorways, collapsed ceilings, and countless bones.

You hear: The faint whistle of wind and the far-off echo of bone clattering on stone. Sometimes, it sounds as if someone is whispering unintelligence words right into your ear—words that set a chill throughout your body.

**You smell:** The air here has been undisturbed for nearly a century. You smell dust, mold, and decay.

**You feel:** It is cold and sinister. At times, you feel an almost overwhelming pressure to flee—as if the Dreadvault itself is trying to break your spirit.

The living are not welcome in the Dreadvault. Linger here at your peril...

## **A1. THE VESTIBULE**

Once a greeting chamber to the palace, this ruined chamber now serves as a warning to those who would dare enter the Dreadvault. Eight skeletons—recently raised by Mortanius—stand guard here.

The heavy door opens slowly with a screech of rusted hinges. Inside, eight skeletal heads turn towards you, blue light burning in their empty eye sockets.

The skeletons attack any intruder that comes within 60 ft. By Mortanius' command, they attack to kill.

Once the intruders have been dealt with, the skeletons drag any corpses to the Halls of Dust (A2) to be later raised as undead zombies.

## **A2. THE HALLS OF DUST**

Once an elaborate dining hall, the only thing the Halls of Dust now serve is death. Four risen skeletons can be found here, guarding a dangerous necromantic device.

The wooden door turns to ash as you push on it, revealing a ruined dining hall. Time—and necrotic magic—has destroyed the room's banquet table, leaving only scant fragments of corrupted wood.

Above, three chandeliers line the ceiling—bereft of candles—their metal chains rusted with age.

In the center of the hall is a **necrotic conduit**, a magical device created by Mortanius to harvest the latent necrotic energies of the Dreadvault and raise the dead.

In the center of the hall, dark purple light shines from a black crystal shard floating 5 ft above a large ritual circle. Black mist spreads from the crystal's core.

You see a bolt of purple lightning arc out from the crystal and strike a nearby pile of broken bones and armor. With a clatter, the bones knit together with necrotic power and rise—a new boneknight, rusted sword in skeletal hand, ready to defend the conduit.

Mortanius has placed this—alongside others throughout the Dreadvault—to help raise the *Court of Bones*. If left active, the conduit will raise a new skeleton every hour. There are enough remains in the Halls of Dust to raise at least 16 more boneknights, flamecasters, and dragoons.

The necrotic conduit is guarded by **four skeletons** that attack any intruder to come within 60 ft.

Surrounding the crystal, four risen skeletons stand guard. These undead seem to be in much better condition than those you faced in the Vestibule, the energy of the conduit still fresh in their bones.

As you enter the hall, they turn their heads towards you and stare with empty eyes...

A search of the room (Investigate DC 15) will reveal 25 gp of old coinage, an intricately carved figurine of a dragon in red stone, and what appears to be a potion of healing (though it is, in fact, a potion of poison).

1	Hazard	Supporter	5	0

#### **Necrotic Conduit**

A special necromantic creation of Mortanius. A necrotic conduit harvests the latent energy within the Dreadvault to fuel a special "Raise Dead" ritual.

The conduit can be deactivated with three successful Arcana or Religion (if your character serves an appropriate deity) skill checks. However, if the conduit suffers 30 damage *or* two failed skill checks, it explodes and releases a damaging blastwave of necrotic energy.

NECROTIC CONDUIT Level 5 Supporter Large hazard, magical

A large, black crystal surrounded by a powerful ritual circle. Purple lightning arcs out periodically, and a black mist spreads from the crystal's core.

The conduit harvests necrotic energy and emits a dangerous aura that hurts the living and heals the dead. Given enough time, it can even raise the dead.

#### TRAITS

**Necrotic Aura:** The conduit emits a 15 ft necrotic aura. Any living creature that enters the aura or starts its turn within it takes 5 necrotic damage.

Any undead creature that starts its turn within the aura regains 5 hit points.

**Raise Dead:** A dead creature left within the aura will be raised as an undead skeleton or zombie. The conduit can raise 1 medium-sized creature per hour (halve the time required for each smaller size category, and double it for each larger size).

**Regeneration:** At the start of each round, the conduit regains 5 hit points.

#### COUNTERMEASURES

**Deactivate:** You can deactivate the conduit with 3 successful Arcana or Religion skill checks—two DC 10, and one DC 15. If you fail twice, however, the conduit overloads and explodes (see *Destroy*).

**Destroy:** The conduit crystal has 30 hit points and is immune to magical damage. When reduced to 0 hit points, the crystal explodes and releases a blast of necrotic energy—any living creature within 30 ft takes 16 points of necrotic damage.

#### SALVAGE

If the conduit was safely deactivated, the crystal shatters into 100 gp of arcane dust. You can use this dust in place of any costed spellcasting component.

#### **SKELETON BONEKNIGHTS**

As former guards of Reinburg, boneknights wear rusted plate armor and carry a broken, metal shield bearing the crest of their old kingdom.

The boneknights try to defend their allies by harrying the enemy. Then, with their *Maneuvering Strike*, they try to move the enemy into disadvantageous positions. Whenever possible, they try to move living creatures into the damaging aura of the necrotic conduit.

Periodically, a boneknight can suffuse its sword with necrotic energy to leave a painful, decaying wound.

#### TRAITS

**Relentless:** The first time you fall to 0 hit points after a long rest, you are instead reduced to 1 hit point.

**Don't Look Away:** When you attack a target, you can mark them. A marked target has -2 to any attack roll that doesn't include you. You can have one active mark at a time, and marks don't stack.

#### ACTIONS

#### Slash (common)

*Melee 5 ft:* +5 vs AC. *Hit:* 10 slashing damage.

#### Manouvering Strike (common)

*Melee 5 ft:* DC 13 vs Dexterity. *Hit:* You force the target to move 5ft in a direction of your choosing, and you can move 5 ft afterwards. This movement does not trigger opportunity attacks.

#### Black Blade of Decay (cooldown 2)

*Melee 5 ft:* +5 vs AC. *Hit:* 10 slashing damage and 10 ongoing necrotic damage, save ends (Constitution vs DC 10).

#### EQUIPMENT

Rusted plate armor, a chipped longsword, and a broken, metal shield with the crest of Reinburg.

#### **Skeleton Flamecaster**

Red veins of fire magic run through the charred bones of this flamecaster. Once a dragonborn—evident from the huge skeletal horns—this skeleton can still wield the fire magic of its former life.

The flamecaster prefers to say out of reach, throwing orbs of explosive fire at the enemy—it's dangerous to stay clustered in groups with a flamecaster around. It uses *Flare* to blind living creatures so its allies can attack with advantage. And, if any enemy ventures too close, the skeleton attacks with searing dragonbreath.

When the flamecaster is reduced to 0 hit points, its arcane energies go wild and explode in a blast of flame.

#### TRAITS

**Explosive:** When you fall to 0 hit points, your body explodes and deals damage to everyone within 5ft. You can begin detonation on your turn with a bonus action; you explode at the start of your next turn.

**Scattershot:** When you make a successful attack, you can deal damage equal to your level to everyone within 5ft of your target (once per round).

#### ACTIONS

Firebolt (common)

Ranged 60 ft: +5 vs AC. Hit: 13 fire damage.

#### Flare (common)

15x15 ft area within 60 ft (living creatures only): DC 13 vs Constitution. *Hit:* The target is *Blinded* until the end of its next turn.

#### **Dragonbreath** (recharge 5/6)

*20 ft cone:* DC 10 vs Dexterity. *Hit:* 9 fire damage and 9 ongoing fire damage, save ends (Constitution vs DC 13).

#### EQUIPMENT

Decayed robes from a far away land, and a gold tooth.

#### **Skeleton Dragoon**

This skeletal dragoon—a tiefling in its prior life—bears two curved horns and wields a long spear.

The dragoons were famed fighters of Reinburg, leaping into battle with *Dragoon Leap* and using their metal spears to pierce their prone enemies. This dragoon likes to attack from a distance, using its long reach to great advantage. It is surprisingly fast for a skeleton, able to parry attacks and stab out at multiple foes in quick succession.

If an enemy gets too close, the dragoon tries to push them back with a *Whirlwind Knockback*. It will also use this to push living creatures into the aura of the necrotic conduit, whenever possible.

#### TRAITS

**Parry:** You can spend your reaction to gain +3 AC against one melee attack that you can see.

**Press the Attack:** You have advantage on attack rolls against bloodied targets (under 50% hit points).

#### ACTIONS

Pierce (common)

Melee 10 ft: +7 vs AC. Hit: 13 piercing damage.

**Rapid Stab** (common, multiattack 2) Melee 10 ft: +7 vs AC. Hit: 6 piercing damage.

Whirlwind Knockback (common) 10 ft area: DC 15 vs Dexterity. Hit: The target is pushed back 10 ft.

#### Dragoon Leap (limited 3)

15x15 ft area within 30 ft (you leap to the center of the area): DC 12 vs Strength. *Hit*: 9 piercing damage and the target is knocked prone.

#### EQUIPMENT

A rusted dragon helmet and a metal spear.

## **A3. THE INFERNAL GALLERY**

The Infernal Gallery was the waiting chamber for those seeking an audience with Queen Celestine. Now,

The walls of the gallery are lined with portraits and statues of Reinburg's former rulers. Cracked from decay and lined with necrotic corruption, you can't help but feel that the eyes are following you around the room...

Mortanius sits here, humming to himself and reading a book while his ritual to raise Celestine progresses in the Throne Room (A4). When he sees an intruder, he looks up with irritation.

"More brave heroes," says Mortanius with a tired sigh. "How original. You've come all this way to try and stop me? Very well. We have some time before Celestine is awake. I'll drain your memories, and then your souls."

Mortanius closes his book, raises eight skeleton minions to his defense, and attacks.

When Mortanius is reduced to 0 hit points, he is not knocked unconscious—instead, he begins to teleport into the Throne Room (A4).

"Insolent wretches," spits Mortanius. "You're not as weak as you look. I'll have to wake the Queen a little earlier than expected..."

As he teleports, Mortanius drops the key to the Throne Room (A4) and his *Ioun Stone of Intellect*. A further search of the room (Investigate DC 15) will reveal 4 onyx gemstones in one of the gallery statues.

#### MORTANIUS, THE NECROMANCER

An egotistical necromancer with megalomaniacal delusions, Mortanius commands the unliving and bends them to his will.

In battle, the necromancer surrounds himself with guardians while volatile skeletons swarm the enemy and explode in a burst of necrotic energy. Mortanius drains the life from his enemies and steals memories from those who get too close. His most powerful attack— *Doom*—curses an enemy with rapid, fatal decay.

## **A4. THE THRONE ROOM**

The door to the throne room is locked tight, and can be opened using Mortanius' key—alternatively, the lock can be picked (DC 15) or the door forced open (DC 20).

Once opened, a large throne room is revealed, lit by a ring of magical blue fire burning all around the room's edge. Two **necrotic conduits** are active here, filling the room with a black mist.

The throne room is dark, decayed, and cold. Thick veins of necrotic energy line the walls, and the floor is almost hidden beneath a sea of bones. 10 ft up, a ring of magical blue fire bathes the room in spectral light.

On either side of a raised dais, two necrotic conduits fill the room with sinister black mist.

Mortanius stands in front of a large, inanimate skeleton— **Celestine, the Skeleton Queen**—hurriedly trying to complete his raising ritual.

Atop a flight of steps, a large and inanimate skeleton clad in royal garb sits atop a black throne. A huge greatsword sticks through the skeleton's chest, pinning it to the throne.

Mortanius takes hold of the greatsword with both hands. "Rise, Queen Celestine! It's time to meet your new King." He pulls the sword free from the body.

As the greatsword is removed, it crumbles to black ash. Removing the weapon allows Celestine's soul—trapped within the Dreadvault—to reclaim her body.

**Hero's Greatsword:** If anyone other than Mortanius should touch the greatsword, they immediately take 40 points of necrotic damage.

You hear tortured, ghostly screams all around as a sudden vortex of wind fills the room. You feel like your own soul is being pulled towards the large skeleton.

With a crackle of purple lighting, you see the skeleton start to rise. Blue fire burns in its eye sockets.

With the Skeleton Queen revived, Mortainus laughs maniacally in victory and turns to face the party.

"At last, the Court of Bones!" laughs Mortanius. "This kingdom, this world, it will all be mine!"

The Queen looks down at the necromancer. "No," echoes her voice from beyond the grave.

Mortanius freezes, the blood suddenly running cold in his veins. "I revived you, I control you!" he shouts.

"...You bore me," says Celestine. She reaches down, grabs hold of Mortanius, and sucks out his soul.

Celestine throws the corpse of Mortanius across the room, where it hits the wall with a sickening crunch.

Celestine is much taller than a normal human, her bones swollen and twisted with necrotic power. Black veins run throughout her skeleton, pulsing to the same beat as the Dreadvault. Atop her head sits a golden crown with a glistening sapphire. Her robes and cloak have remained uncorrupted by the decay of time.

Flickering in and out of vision, you can see the glowing blue spectral outline of her spirit.

As she looks down at the party, a spectral scythe forms in Celestine's hand as ice forms on the ground around her.

"The throne of Reinburg is MINE," proclaims Celestine. "I have sacrificed everything for my kingdom, and only *I* can protect it from what is yet to come."

She points at the party with her scythe.

"Submit to your Queen, brave heroes. Join the Court of Bones. Your souls will become a part of me, and I will carry your memory forward. Your bodies will live forever as my elite vanguard."

If the party refuse her offer, she responds with cold fury.

"It is bad manners to refuse a queen," says Celestine coldy. "And I won't tolerate bad manners in my court."

#### **CELESTINE, THE SKELETON QUEEN**

Celestine is a powerful and intelligent undead skeleton. Recently revived—and not yet at her full power—she seeks to drain her enemies of their health and souls. Celestine has three notable forms during combat:

e crostare nas tar constarte renne daring compat

- **First Form:** With high defences to protect her from harm, Celestine pulls her enemies close and attacks them with her scythe.
- **Second Form:** Celestine uses some of her power to summon skeleton minions into the fight whilst terrifying her enemies with *Undying Terror*.
- **Third Form:** Her bones begin to crack and leak necrotic power, creating a dangerous aura. As a final gambit, Celestine tries to devour everyone's soul.

#### Devour Souls (rare, overkill)

*30 ft area: Hit:* 60 psychic damage. If the target is reduced to 0 hit points, you consume its soul and regain hit points equal to the target's max HP. While charging this attack, you expose a weak point (32 HP, DC 14 perception) in your ribcage.

#### **FALL OF THE SKELETON QUEEN**

When Celestine's final form is reduced to 0 hit points, she falls to one knee as her body starts to crumble. She drops a *Ring of Necrotic Resistance* and the historic *Crown of Reinburg*.

"This... Cannot... Be!" hisses Celestine as necrotic power spills from her cracked body. One by one, her bones turn to ash until all that is left standing is her soul. "You don't understand what you've done here!" shouts the specter in terror.

Suddenly, black spectral tentacles lash up from the ground and wrap around Celestine's ghost. She struggles in vain as they start to pull her down.

"I kept Reinburg safe all these years, but now *He* will have the power to break free. It won't stop at souls now, *He* will consume everything!" she screams as the tentacles finally drag her out of mortal sight.

Celestine's spectral screams are cut short. After a few seconds silence, an inhuman voice resonates throughout the chamber, shaking the very walls.

"FEED ME."

And then all is quiet. Until the rumbling starts...

Without Celestine's presence, the Dreadvault begins to collapse in on itself. The party have **10 minutes to escape** the Dreadvault before they are crushed by the collapsing ceiling.

Behind you, an almighty rumble shakes the cavern as the Dreadvault finally collapses. The Court of Bones is no more, and Reinburg is safe. For now...

The *Court* of *Bones* is an adventure outline that you can customize, edit, and expand to suit your own table and story. There are many unanswered questions and unexplored areas for you to experiment with, such as:

WHAT NEXT?

- Who, or what, was Celestine so afraid of?
- How did Mortanius get the Tome of Awakening?
- Have the players met Mortanius before in a previous adventure or encounter?
- How did the players discover the Dreadvault?
- What's in the Dreadvault's other rooms?
- Who wants the Crown of Reinburg?
- Does Celestine allow the players to walk away instead of forcing a fight?
- Are there any complications/skill checks required to escape the collapsing Dreadvault?
- Who killed Celestine the first time with a greatsword?

Add plot hooks and story expansions as you see fit.

## **Monster Templates**

O HELP YOU GET YOUR QUICKSTART MONSTERS UP and running fast, this chapter features complete stat templates for every monster role and rank across levels –3 to 30 (CR 0 to 30).

Use these templates to get some baseline stats for your monster before adding traits, powers, and attacks.

## • Applying a Template

Quickstart templates are flexible, allowing you to create any type of monster for your adventures. Once you've found the right stats for your desired level, check the guidelines below for advice on how to apply them.

## RANK

Monsters come in four ranks: minions, standards, elites, and solos. For quick reference, three varieties of solo monster (vs 3, vs 4, and vs 5) are included with hit point values already calculated to suit 3/4/5 players—if you need other varieties, read *Minions, Elites & Solos* (p11).

## **HIT POINTS**

Hit points have been divided into quick-reference pools to help you determine when your monster is about to be bloodied (50% or fewer HP) or—in the case of solo monsters—trigger a new phase transition.

A ML 3 Standard Controller has 33 (2 x 17) hit points —it is bloodied while at 17 HP or lower.

A ML 7 Solo (vs 4) Striker has 425 (3 x 142) hit points—it triggers a new phase transition every 142 points of damage.

## **DAMAGE PER ACTION**

This is the amount of damage your monster should be dealing per attacking action. This is per *action*, not necessarily per attack—if your monster is using a multiattack, split this damage across all the individual attacks for that action.

## SPELL DCs

Spell DCs contain a primary ("I'm good at this") and secondary ("I'm not so good at this") DC variant for your monster's spells/effects.

Use the primary DC for anything related to your monster's best attribute, and the secondary DC for everything else.

The DM creates a monster with spell DCs of 18 and 15. DEX happens to be this monster's best attribute, so any spell/effect that uses DEX has DC 18 everything else uses DC 15.

## **SAVING** THROWS

Saving throws come in three grades—best, ok, and bad. Use the highest bonus for your monster's best attribute, the second bonus for it's 2nd and 3rd best attributes, and the worst bonus for the 3 worst attributes.

The DM is creating a ML 5 Elite Supporter with attributes in CON/WIS/CHA/STR/INT/DEX priority. They set the saving throws as Con +8, Wis/Cha +5, and Str/Int/Dex +2.

# QUICK REFERENCE

#### **BUILDING A MONSTER**

- Pick a Level: Decide how dangerous your monster should be—the higher the level, the bigger the threat it will be to your players.
- Assign a Role: Choose how your monster will function in combat—different roles confer different benefits.
- 3. Add some Traits: Add some quick racial or class-based flavor with a few basic traits.
- 4. Choose some Powers: Add some combat powers to make your monster stand out.
- 5. **Personalization:** Tweak the stats if necessary to better suit your group of players.

#### **MONSTER ROLES**

- **Controller:** Disorientates their enemies, moving them around and applying conditions.
- Defender: Shields their allies and blocks enemy attacks with high defense.
  Lurker: Hides out of sight until they see a
- weak point, then attack for massive damage.Scout: Moves around to outmaneuver foes.
- **Sniper:** Fire at enemies from a distance.
- Striker: Forgo defense and hit the enemy hard.
- Supporter: Aid and support their allies.

#### **MINIONS**

A minion is worth 1/4 of a standard monster, and should (usually) be defeated after one good hit.

#### Elites

An elite monster is worth 2 standard monsters and has 1 paragon action per round.

#### Solos

A solo monster is worth a party of adventurers. It has 1 paragon action per player per round.

- **Phases:** When the solo takes enough damage (66% and 33% hit points), it immediately removes any on-going effects and triggers a transition to a new phase of battle.
- **Hit Dice:** During a phase transition, any player character that is conscious and bloodied may spend one hit dice to heal.

#### Paragon Actions

You can spend a Paragon Action to:

- **Move:** Move up to your speed (if free to do so). This movement may trigger opportunity actions and reactions as per normal.
- **Perform an Action:** Perform a single action, such as attack, dodge, or help an ally.

#### **FREEFORM ATTACKS**

To do an improvised attack using your new monster, pick an attack type from the list below:

- Standard Attack: Make a regular attack.
- **Multiattack:** Split your attack across multiple enemies—e.g. *cleave*.
- **Condition Attack:** Inflict a condition.
- **Ongoing Damage:** Put some ongoing damage onto an enemy.
- Area Attack: Attack everyone within an area.
- **Magic:** Tweak the stats if necessary to better suit your group of players.
- Overkill Attack: A monstrous, charged attack.

#### Conditions

Condition	Description
Blinded	You can't see anything.
Charmed	You can't attack your charmer.
Deafened	You can't hear anything.
Frightened	You can't move towards your terror.
Grappled	You can't move.
Incapacitate	dYou can't take actions/reactions.
Paralyzed	You can't move or speak.
Petrified	You are turned to stone.
Poisoned	You have disadvantage on attacks and checks.
Prone	You are lying on the ground.
Restrained	You can't move.
Stunned	You can't move/act/speak.
Unconsciou	s You fall unconscious.

#### MAGIC THEMES

Theme	Description
Restoration	Heal and mend.
Decay	Erode, poison, and corrupt.
Shadow	Create darkness and manipulate
	shadows.
Light	Create light and illusions.
Death	Sever souls from bodies, talk to the dead, animate dead.
Life	Restore a soul to a body, tie souls to inanimate objects.
Destruction	Destroy and obliterate.
Protection	Shield and defend.
War	Enflame emotions.
Peace	Dampen emotions, cause calm.
Earth	Control over earth and rock.
Air	Control over air and wind.
Fire	Control over fire and heat.
Water	Control over water and ice.
Strength	Control physical power, muscle
	mass, and endurance.
Knowledge	Divination, learn secrets.
Body	Transmute flesh, change physical appearance, polymorph, petrify.
Mind	Telepathy, domination, read thoughts, and sense truth.
Metal	Detect/shape/create/move metal.
Lightning	Create/channel lightning, electricity.
Sound	Create sounds, silence, long range communication, change voice.
Sight	Truesight, perception, alter vision, sight-beyond-sight, scrying.
Plants	Control/communicate with plants.
Beasts	Control/communicate animals.
Fear	Create fear and nightmares.
Resolve	Reinforce willpower / create geas.
Time	Alter the flow of time.
Space	Teleportation, size, dimensions.

#### **ENCOUNTER DIFFICULTY**

Difficulty	Total Monster Points (MP)
Easy	Number of players x 0.5
Normal	Number of players
Hard	Number of players x 1.5
Extreme	Number of players x 2

#### **MONSTER VALUE**

MP Cost
1/4
1
2
1 per player

# FAQ

THIS SECTION LISTS AT SOME OF THE FREQUENTLY asked questions regarding the *Monster Maker*. If your question isn't answered here, feel free to contact me.

#### IS THIS OFFICIAL MATERIAL?

No. This an unofficial compilation of house-rules for D&D 5e—rules that can be used to supplement material found in the PHB and DMG.

## WHY MAKE THIS?

As a DM, I tend to improvise a lot—this generally means I need a quick, reliable way of generating combat-ready monsters for my players to fight. But even after running 5e for some years now, I still find the *challenge rating* system needlessly complicated and confusing.

I'm a big fan of D&D 4e's encounter-building system and standardized monster math—and monster roles were an *exceptionally* clever means of adding some very quick variety to a combat. I've been using these mechanics as the basis for my 5e combats for a while now, and it's made encounters much easier for me to improvise as a result.

#### ARE THE NUMBERS ACCURATE?

The stats listed in the *Monster Stats by Level* table (p7) are rough guidelines to follow, but every adventuring party is different. Use the numbers here as a starting guide when building your quickstart monsters and tweak them to better suit your players.

#### WHAT ABOUT THE MONSTER MANUAL?

Quickstart monsters are designed to supplement any other material you choose. Quickstart profiles are not as fleshed out as officially-listed monsters, so mix-andmatch both types as you see fit.

# **CAN I REFERENCE THIS?**

Feel free to reference parts of this book in your own free homebrew—with an appropriate credit back to me. But please don't replicate my work wholesale, nor use it in any for-sale variant or product.

### **CAN I BUY A PRINTED VERSION?**

Not at the moment, no. I'm currently looking into this as a few people have requested a print copy. In the meantime, this project (and most of my other work) is released on *Pay-What-You-Want* terms.

If this supplement has helped out your game and you'd like to support my work:

- **Patreon:** Become a Patron (patreon.com/giffyglyph) to support this and my other projects.
- **Ko-fi:** My Ko-fi page (ko-fi.com/giffyglyph) is always open to kind, one-off donations.
- **Spread the Word:** Share a tweet/like/review/etc if this supplement has helped your game.

# WHAT NEXT?

# • Monster Maker App

Want to create new monsters using your phone or computer? Then try **Giffyglyph's Monster Maker webapp**, featuring:

- Create your own **monster vault** in just a few clicks.
- · Build minions, standards, elites, & solos.
- Apply **monster roles** for quick, balanced variety.
- Keep your monster vault for later with save & load.
- Customize monsters with **traits**, **powers**, & **notes**.
- Export your vault monsters to share with others..
- And many more.

#### Find it at: www.giffyglyph.com/monstermaker/app!

# DARKER DUNGEONS

Want to make your D&D 5e campaign more deadly for your players? Then try **Giffyglyph's Darker Dungeons**, 110+ pages of rules, tweaks, and advice:

- Manage equipment with a revised **inventory system**.
- Track **survival conditions**—hunger, thirst, and fatigue.
- · Add lingering wounds and injuries to combat.
- Push characters to their breaking point with Stress.
- Track long-distance travel with the journey phase.
- Add risk to your magic system with magical burnout.
- And many more.

#### Find it at: www.giffyglyph.com/darkerdungeons!

# Great Heroes Need Greater Villains

О

No adventure is complete without a monster to battle—a wild dragon raging through the town, blood-thirsty gnolls howling in the cold night, a necromancer commanding armies of savage undead.

This supplement offers new rules options and mechanics to help any Dungeon Master quickly create deadly monsters and interesting encounters.

85 pages of rules and templates compatible with **any D&D 5e game** 

Create new monsters in just a few seconds with **Monster Levels** 

Add **Monster Roles** to your monsters for varied encounters

Add **Traits and Powers** to give your monsters an edge

Use Freeform Attacks and Magic for dynamic combat options

Build encounters fast with **Monster Points**
