Welcome to the World of Fold-Up Paper Modeling!

Paper modeling is an inexpensive method to visually enhance your Dungeons & Dragons® roleplaying game experience. The three-dimensional paper models included in *Map Folio 3-D* allow you to build your own villages and castles. Moreover, the models are designed and scaled for use with pre-painted plastic D&D miniatures!

Map Folio 3-D contains the following fold-up paper models:

City Wall (4 pages)	Tower (4 pages)
Cottages (4 pages)	Medieval Inn (7 pages)
Smithy (10 pages)	Outbuilding (2 pages)
Windows and Doors (1 page)

CITY WALL

Getting Started: Basic Tools and Safety Tips

You need to make a few preparations before you can start building your fold-up models.

First of all, always work in a well-lit area with good ventilation. Make sure you have a suitable surface, such as an old worktable, for your cutting. We recommend that you get a good-quality cutting mat; you can find one at most art supply and craft or fabric stores.

Next come supplies. You'll need some transparent tape, a pair of scissors, and a craft knife plus a supply of blades. As well, it's handy to have a roller or similar tool, and a few gray or brown markers. Other useful materials include white masking tape and some white glue. Finally, you'll need a metal ruler or straightedge.

Although the fold-up models have been printed on sturdy paper stock, you can make your buildings even more durable by mounting them to card stock or posterboard with spray adhesive.

Observe some basic precautions when working. Never use spray adhesive indoors unless you have a spray booth. Take care when cutting with the craft knife: Always cut away from your hand, and change blades frequently—a dull blade can easily slip. Don't rush, and make sure you're well rested before beginning any project.

TOWER

Cutting and Scoring Instructions

Use a pair of scissors to cut out the paper models. (If you have mounted the fold-up paper models to thicker card stock or posterboard with spray adhesive, allow the adhesive time to bond before cutting.)

Use the knife to make any special detail cuts. You can also use the knife to score the folding lines for easier bending; to do this, lay a ruler or straightedge along the dashed lines and cut along them lightly just through the surface. Don't worry if you cut too deep; you can easily reattach the pieces with some clear tape on the underside.
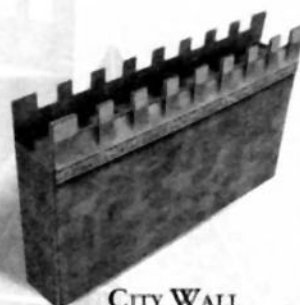

MEDIEVAL INN

Quick Building Tips

Here are four quick tips to help you expertly assemble fold-up paper models:

1. Using glue requires patience. Be sure to give the glue ample time to set, and don't be afraid to hold glued sections together for a few extra seconds to help the glue bond. You might try building two models at once, switching between projects to give the glue time to dry.

2. Use a gray or brown art marker to cover up white edges and fold lines.

3. Apply transparent tape along the inside of a model to make it sturdier.

4. Above all, have fun!

Set the Scene for Adventure

Inside you'll discover intimidating walls, comfortable cottages, a bustling smithy, and other three-dimensional structures. This accessory for the D&D® game provides a small village of highly detailed card-stock buildings, walls, and other structures for you to assemble and use in any game. Scaled for use with DUNGEONS & DRAGONS Miniatures, each structure may be used individually or combined with others. Full-color exteriors enhance your game and capture your players' imagination.
