ARMOUR

To provide the fantasy gamer with a clear, concise reference book on armour at a reasonable cost is no easy task. For too long has this aspect of the hobby been overlooked, usually with serious side-effects. Often have I heard arguments from mis-informed people as to the weight, flexibility, and appearance of medieval armour; I cannot fault the average gamer however, as it was the designers of the games who should have done the initial research so as not to pass on faulty information.

As anyone who has done research on medieval armour can tell you, even the experts do not agree on many points. What is commonly called "banded mail" is not even known to have existed. Contrary to popular opinion, there is no contemporary account of a knight, even in the heaviest of jousting plate, being hoisted into the saddle.

Each of the armour types in the following list has several numerical values. These are as follows:

In all cases, "RF" means "Resistance Factor".

CUT RF A relative indication, called resistance factor (RF), of how well this type of armour stands up to cut attacks.

CHOP RF A relative indication of how resistant this type of armour is to chop attacks.

THRUST RF A relative indication of how resistant this type of armour is to thrust attacks.

IMPACT RF A relative indication of how resistant this type of armour is to impact attacks.

DEX An indication of how much a suit of armour of this type would inhibit movement. The higher the number the slower the character would be due to less flexibility, higher mass, etc.

MASS The mass of a suit of armour based on the wearer being 180cm (5'10") tall and 80kg (175lbs) in mass.

The main differences between a cut attack and a chop attack are the sharpness of the weapon and the curvature of the blade.

 MASS 3 kg

SOFT LEATHER
 CUT RF 2
 CHOP RF 1
 THRUST RF 1
 IMPACT RF 1
 MASS 3 kg

If you are using a system in which hit location is not needed and one general armour class is, the CHOP RF column may be used.

Thin cloth is equivalent to linen, medium cloth is equivalent to denim, and heavy cloth is equivalent to two or three thicknesses of medium cloth.

Soft leather is equivalent to the outer covering of a modern day leather jacket. Hard leather is approximately equal to five millimeters of leather.

Cuir-bouilli is leather which has been boiled in oil. In this condition it may be molded into the desired shape and then upon drying it becomes very hard.

Quilt armour consists of two layers of cloth between which cotton or some other such material is sandwiched. Padded armour usually consists of a heavy layer of felt from four to eight centimeters thick.

Woven cord armour bears a resemblance to modern macrame.

Ring mail is simply metal rings sewn onto a suitable backing.

Studded armour, sometimes called pourpoint, consists of metal studs fastened to a suitable backing.

Bezainted armour, named because of its resemblance to a type of medieval coin, consists of metal discs secured with studs to a suitable backing.

Jazeraint armour, also known as scale armour, consists of scales of various sizes sewn or riveted onto a suitable backing.

Mail consists of small interlocking rings of metal each of which are individually made and riveted together.

Double mail is a variation of normal mail only the rings are thicker and closer together.

Augmented mail consists of normal mail with strips of leather put through the links.

Bar mail is similar to augmented mail only that small metal bars are put through the links.

Combined mail consists of small plates of metal interspaced with sections of normal mail.

Brigandine armour consists of scales riveted inside a leather garment and then backed by another layer of leather.

Laminated armour consists of metal strips which are overlapped and articulate upon each other.

Lamellar armour, also known as splint armour, consists of a series of splints or scales laced together. The size of the splints depends on the portion of the body it is to cover.

Plate armour consists of large pieces of metal which are either worn over other armour or are attached to one another by a series of straps, lacing, buckles, or screws. Ribbed plate is a variation of normal plate but with many artistic ribs which also serve to deflect blows of weapons. An average suit of plate in the early fifteenth century had a mass of approximately 25 to 30 kilograms (55 to 66 pounds) but a trained person could carry out most activities without undue strain; modern experiments have shown that a man in full plate can run, jump, and lie down and rise without too much

trouble. The main disadvantage of this type of armour was not its weight but its stiffness caused by lack of air and the sweat due to heat or physical exertion.

When considering a suit of armour from the above list it must be remembered that the various values and masses do not reflect the normal practice of wearing padding or other such garments under the armour to prevent chafing and to lessen the impact of blows. Characters in most forms of metallic armour should wear some sort of padding under it. When doing this or when layering different types of armour over one another, simply add all of the values in each category together.

MAXIMILLIAN ARMOUR 1525-1600

SUIT OF ARMOUR USED
FOR THE GERMAN COURSE JOUST.

ARMOUR VALUE
PLATE OVER PLATE
ALL RF AT LEAST 2.2
MASS 43 kg

SINCE JOUSTING WAS THE MOST DANGEROUS SPORT EUROPEAN
KNIGHTS UNDERTOOK, IT WAS NATURAL THAT THE PROTECTIVE ARMOUR
WOULD BE EXTREME. THIS SUIT WOULD NOT BE WORN FOR ANY
OTHER PURPOSE.

MAXIMILLIAN ARMOUR 1500-1600

THIS ILLUSTRATION IS AN ADAPTATION FROM A SUIT BUILT FOR KING HENRY VIII. THE JOINTS WERE SO WELL FITTED THAT THEY DID NOT PERMIT THE PASSAGE OF A PIN! THE SUIT CONTAINED OVER 200 SEPARATE PIECES.

ALTHOUGH SUITS OF FULL PLATE GIVE EXCELLENT PROTECTION THEY HAVE DRAWBACKS. A MAN IN THIS ARMOUR WOULD BE ABLE TO PERFORM STRENUOUS TASKS, LIKE FIGHTING, FOR ONLY 15-20 MINUTES. THESE SUITS WERE ALSO VERY EXPENSIVE.

INTRODUCTION

Soon after I was introduced to medieval fantasy role-playing games in 1976, I became intensely interested in the history of the Middle Ages. Perhaps the most interesting aspect of the period is the development of armour and weapons. From my various readings it soon became apparent that the majority, in fact all, of the medieval fantasy role-playing games which I had come across were poorly thought out when it came to arms and armour.

In this book I have attempted to give a cross section of weapons from all cultures and geographical areas. Although gamesmasters may choose to limit the total number of selections in their campaigns, a better understanding of weapons should result from using this book. Over five hundred separate weapons are listed; each entry has the following data:

NAME Self explanatory.

TYPE The general group to which this weapon belongs. The groups are Hafted (H), Knives (K), Miscellaneous (M), Pole arms (P), Spears (Sp), and Swords (Sw).

LENGTH The length of the weapon in meters.

MASS The mass of the weapon in kilograms.

DEX A relative indication of how "quick" a weapon is based on balance, mass, etc. The lower this number the better.

PARRY A relative indication of how easily the weapon can parry other attacks. The higher the number the better.

ATTACK TYPES Not all weapons were designed for the same purpose. The four basic attack types are cut, chop, thrust, and impact. The main differences between a cut and a chop are the sharpness and curvature of the blade.

SYMMETRY Being that any weapon may be thrown, this is a relative indication of how effective the arm would be as a missile. The lower the number the better.

DAMAGE A relative indication of how much damage this weapon would cause to an "average" target.

OTHER Notes of interest about the weapon, usually the geographical area of origin. A (T) in this column indicates the weapon is primarily used with two hands.

It is up to the gamesmaster to adapt the values for the weapons to his/her own campaign. For example, the gamesmaster may choose to evaluate a weapon with a damage rating of one by using a four-sided die, a weapon rated at two with a six-sided die, a rating of three with an eight-sided die, and so on; or s/he may choose to use the damage number as a multiple of four, six, or eight-sided dice. A note about the illustrations, on all edged weapons, (" " " " " " " "), indicates which portion of the blade is sharp.

A User's Guide to Weapons Matt Balent

In the time that the weapons book has been in print, there have been a number of questions and comments which have come to my attention. This paper should prove useful to those who are interested in more information about the weapons in the book.

Compilation of the different weapons themselves was actually undertaken after I had formulated a combat system which I had planned on publishing together with the arms and armour. Many seemingly apparent anomalies in the various values of similar weapons should be explained when my weapons system is published.

As stated in the introduction, the different groups of weapons are entitled; hafted, knives, miscellaneous, pole arms, spears, and swords. Each group has a one or two letter code used to identify the weapons in them; H for hafted, K for knife, M for miscellaneous, P for pole arm, Sp for spear, and Sw for sword. To use the index, look up the name of the weapon in the index and find its code; then look in the appropriate section.

In assigning a weapon to a certain group I attempted to set up subjective guidelines. There is a lot of overlap between some groups, such as swords and knives, but for the most part my decisions have been correct.

Weapons consistently listed as swords or knives in my sources were assigned to those groups. Clubs, axes, and other similar weapons were assigned to the hafted group because they consist of some sort of striking head which is attached to a short handle or haft. Weapons listed as miscellaneous were usually either too different to be put into the other groups or were employed with a special combat technique which I felt warranted their being put into a special group. Pole arms and spears sometimes overlapped but once again I referred to my sources.

Notes on the weapons

Hafted

Weapons which consist of a weight attached to a handle by means of a chain, such as the Ball & Chain, can be very dangerous to both the user and his/her enemy. A weapon of this type could actually hit an enemy by going around his/her shield due to the flexible nature of the chain. By the same token if a blow by these weapons missed, one could easily hit oneself in the head, leg, or arm.

The rounded portion of the Cudgel represents a basket like that of a Broadsword.

Weapons from India and the Middle East were often great works of art. Most maces, such as the Dhara, and swords which have knuckleguards were padded with a lining of velvet. The grip of the weapon itself was also covered with velvet in many cases.

The Francisca, one of the better designed axes, was probably used as a missile as often as it was used in the hand. A typical Frankish tactic was to throw the axe and then charge with the sword while the enemy was recovering from the shock of the Francisca's impact.

The obsidian is what makes the Maquahuilt so interesting. Obsidian can be chipped to form edges only ten molecules thick. In this condition it is sharper than any steel edge. Modern operations have been conducted using obsidian scalpels.

In some cases the handle of the Tomahawk was hollow so it could be used as a pipe. The bowl of the pipe was opposite the axe blade.

Knives

The Malaysians placed almost as much importance on weaponry as did the Japanese. Malaysian martial arts relied heavily on the use of knives, swords, and other weapon types.

The Katar and the Katar Dorlicaneh were often called "punch knives" due to the normal method of use being a thrust made as if punching.

The Main Gauche was normally used in the left hand in conjunction with the Rapier or other similar sword. It has a rather large knuckleguard for parrying purposes.

Miscellaneous

The Adarga is one of the most interesting weapons I came across in my research. Held in the center of the spear-like section, the hand was protected by a 30 x 20 centimeter shield which is attached to the spear. The blade which is perpendicular to the spear is mounted in the center of this shield.

The Ahispiess was one of the weapons used by knights in tournaments.

Bagh Nakh or "tiger claws" are concealed in the hand. They were favored by assassins.

The damage number of the Bolas would only apply if the weapon is held in the hand and used like a flail. When thrown it should not do any damage.

Having been hit by one, the author can attest to the capabilities of a Boomerang. Only the ones made as toys will "return" to the thrower.

The Bullwhip is a very tricky weapon to handle and takes a lot of practice to get to an Indiana Jones level of proficiency.

The Chakram is thrown like a modern frisbee. Effective range was about thirty meters for a trained user.

The Japanese seemed to have really had a flair for developing and employing unusual forms of weapons. Chain weapons, like the Chijiriki, were used to entangle or trip, parry, and even disarm a foe.

Fakir's Horns were used by Indian holy men who were forbidden to carry weapons but did so anyway.

The Gensen is a metal fan designed for use as a parrying weapon. The concept of being armed while unarmed occurs again and again in the design of Japanese weapons.

In a society where armour is usually not worn, the Hui-Tho would be a very effective weapon even against a large number of attackers.

The Jo was designed by a man who was beaten by a master swordsman in a duel. In his quest for revenge he developed a martial art based on a staff slightly longer than the Katana. He then beat the swordsman.

The Kusarigama is incorrectly listed as being an impact weapon; it should be a chopping one instead.

The Lajatang has to be the most destructive looking weapon in the book.

The Lariat is strictly an entanglement weapon. If the target was roped around the neck or dragged on the ground then damage would be caused.

The Leer-Pa is included because it is a neat weapon. "If you can't cut 'em with one end, then bash 'em with the other."

The Madu is held like a buckler shield, but due to the horns it may also be used to attack.

The Mandehi Liguje, or coup stick, was not really used as a weapon but it could have been. The wielder was more interested in gaining "coup" than in injuring his opponent. Coup was obtained by simply touching an enemy with the staff while in battle.

The Nunchaku and the Tonfa were common agricultural implements in Okinawa. After the island was taken over by the Japanese, the inhabitants were forbidden to carry weapons. Rather than risk being caught with such obvious weapons such as swords or knives, the resourceful Okinawans simply developed martial arts centered around these common tools.

The Pendjepit is best used against non-armoured foes. The jaws of the weapon are provided with teeth to help rip and tear the enemy.

The spiked palms of the Shuko also aid in climbing.

Pole Arms

The Catch Pole was used by officials to capture criminals relatively unharmed. When the center prongs were pressed against the neck, the outer two would spring together forming a circle and entrapping the foe.

Spears

Many Malaysian and South Pacific spears have reversed barbs. This was to prevent a speared enemy from running up the spear and killing the wielder.

The Pelta is shown with an amentium attached. This helped provide extra thrust when throwing the weapon.

Swords

Most Japanese swords, like the Katana and the Tashi, were usually used in a manner which employed both hands. They may be listed as two-handed weapons but this is more a function of the combat style and not the weapon itself.

The Broadsword, Reitherpallasch, and the Schiavona all have basket hilts.

General notes on all weapons

All of the entries represent average values for each weapon. In almost every case longer or shorter weapons bearing the same name can be found.

If a combat system used in conjunction with the weapons book takes space around the wielder into account, the length of the weapon can be used as an indication of the area requirement. This is not true of thrusting weapons which only need one or two feet in front of the attacker to be used effectively.

Naturally no one could hope to be able to use all of the weapons listed in a campaign. Player characters simply do not have an all encompassing knowledge of weaponry. It is up to the gamesmaster to decide if a character knows how to use a particular weapon or whether or not s/he has to train with the weapon.

Other Palladium Books®

Weapons & Castles

- The bow and arrow weapons from around the world.
- Castles and design features.
- 15 different, real world castles complete with *basic* floor plans.
- Siege weapons and layout for a castle under siege.
- Historically accurate.
- For use with any game system. Some adaptation required.
- \$7.95 – 48 pages. Square bound, comic book-sized reference book.

Additional books coming for the Palladium Weapon series:

Weapons & Assassins

Weapons & Castles of the Orient

Exotic Weapons

Contemporary Weapons

The Palladium Fantasy Role-Playing Game®

- A complete game of fantasy, magic and heroic adventure.
- Over 25 Occupational Character Classes.
- Over 300 magic spells.
- 60 wards and 50 magic circles, and more.
- Psionic powers and psychic characters.
- Monsters, demons, and ancient races.
- All kinds of weapons, magic items & equipment.
- A unique world of fantasy.
- \$24.95 – 336 pages!

Heroes Unlimited™ Role-Playing Game

- A complete game.
- Create any type of superhuman and hero imaginable.
- Over 100 super abilities plus skills, gimmicks and more.
- Cyborgs, robots, and super-vehicles.
- Psionic powers, magic and mega-heroes.
- Mutants, Aliens and Martial Arts masters.
- Explore the world of *Heroes Unlimited*™.
- \$24.95 – 352 pages!

Rifts® Role-Playing Game™

Science and magic collide in a post-apocalyptic world gone mad. There has never been anything quite like it.

- A science fiction game where anything is possible.
- The Rifts are portals to alien worlds.
- Humankind struggles on the brink of extinction.
- High-technology is pitted against magic.
- Cyborgs and robots clash with demons and aliens.
- Discover a world limited only by your imagination.
- \$24.95 – 256 pages.
