

Palladium Books® Presents:

# MACROSS II

## Deck Plans Volume Two

By: Martin Ouellette, Marc-Alexandre Vezina, & Jean Carrières

Dedicated to George Thorogood for his song Get a Haircut and Get a Real Job. It should inspire all the gamers out there with excellent ideas.

## Warning

This book contains new and original works of art that are **protected by Federal Copyright Law**. NO artwork may be printed or published in any form, for any reason, without *written permission* from the publisher of Palladium Books Inc. The use of this artwork in any product not produced by Palladium Books is a Federal crime! **Offenders will be pursued in Federal Court.**

## • SOME WORDS FROM THE PUBLISHER

BY KEVIN SIEMBIEDA

Welcome to the **Macross II Deck Plans Volume Two**. As most **Macross II** fans probably already know, the **Macross II Role-Playing Game** is a big hit. By the time this book hits the shelves, the role-playing game will be in its second printing and will have sold over 20,000 copies! There seems to be no end to the popularity of well done role-playing games and sourcebooks based on Japanese animation; which the enthusiasm toward the series of Deck Plan volumes seem to confirm. Of course, 1994 is a big year for **Palladium Books**, with new titles coming out for **Macross II**, **Rifts**, **Robotech**, **Heroes Unlimited**, **Beyond the Supernatural**, **The Palladium RPG** and others!

If you've already flipped through these pages, you know that those creative wizards from Canada have worked their magic again. **Deck Plans Volume Two** is another outstanding book of spaceship data and excellent graphics. Like the previous Deck Plan book, all of the diagrams and much of this information is being presented here for the first time anywhere. Thus, it is not only an excellent sourcebook for role-playing gamers, but a valuable reference for collectors and fans of **Macross II** and Japanese animation in general.

In addition to raw data and excellent artwork, **Macross II Deck Plans Volume Two** offers some new insight to the Marduk and introduces some new and interesting non-player characters and a short adventure. One of the nice things about this adventure is the villains it introduces are ideal for a long term campaign and/or can be used as reoccurring menaces.

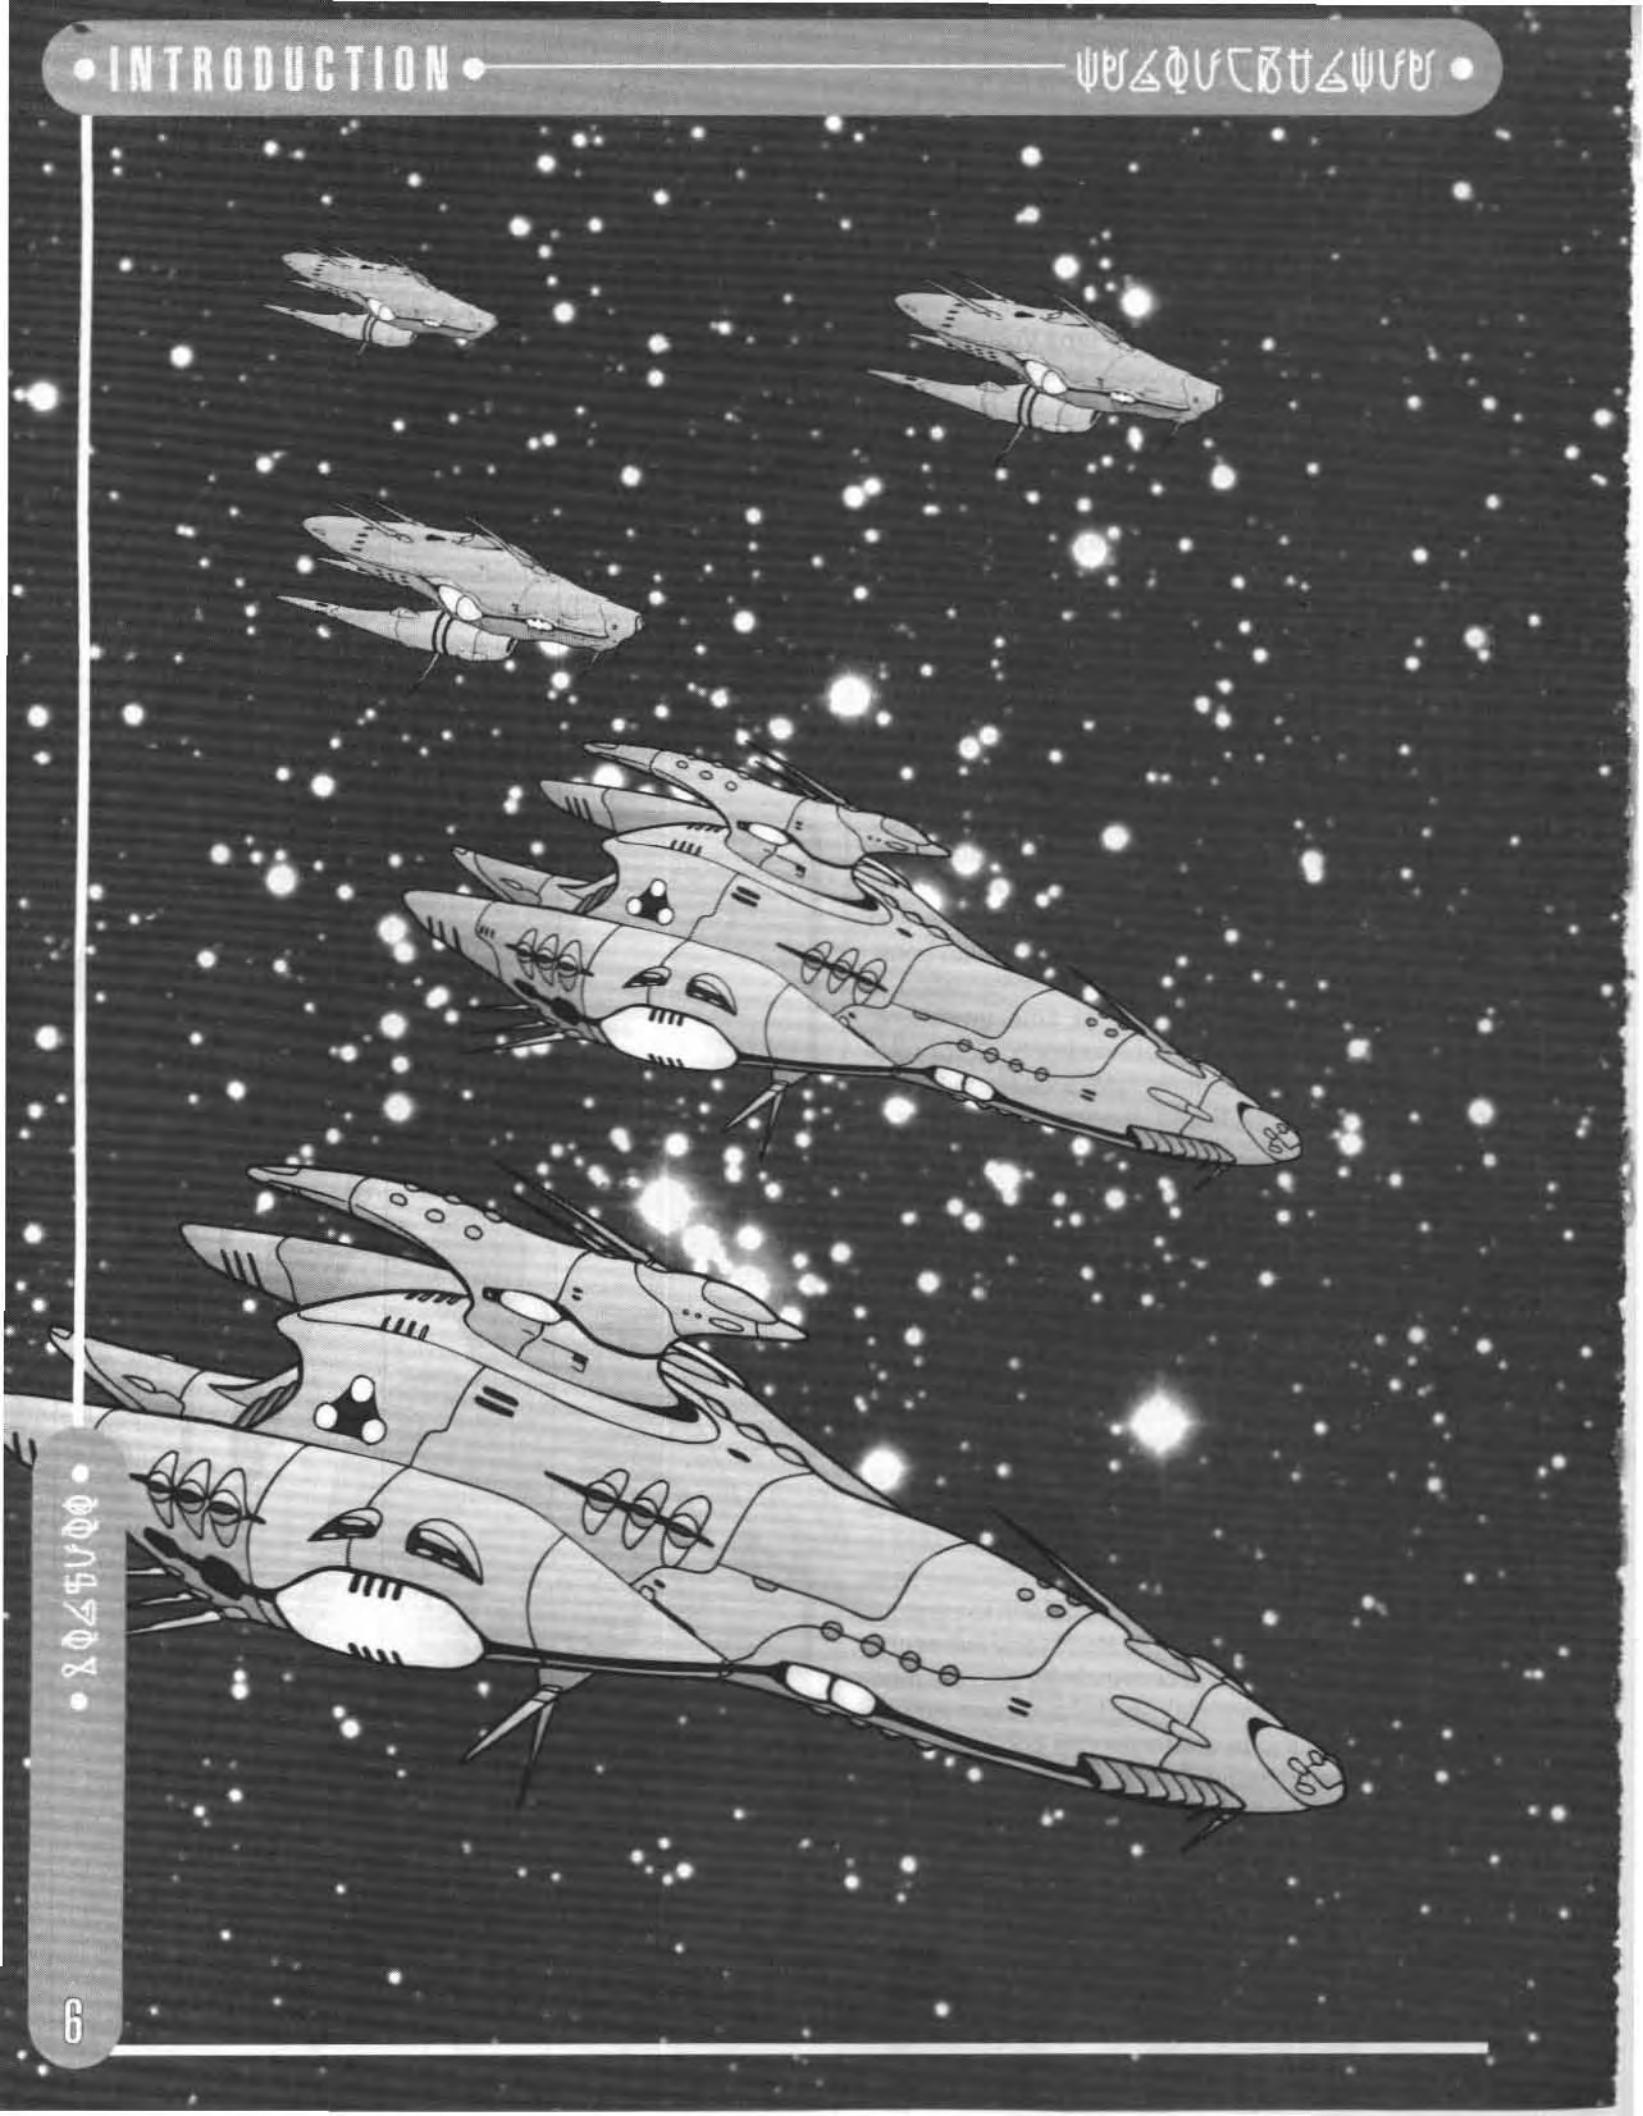

**Mishalla** is the beautiful spy who uses her beauty and cunning like a weapon to learn about Earth's operations. She then secretly provides that information to her Marduk superiors. Although she has been sent to Earth specifically to locate Ishtar (who Mishalla sees as a traitor), she is likely to remain on Earth to continue her work as a spy. If she is implicated in any evil deeds, she'll cover her tracks and convincingly play the innocent bystander (perhaps claiming to have been wrongly accused). This unique character can continue to spy on her human "friends" and undermine Earth's defenses. She can add a nice undercurrent of intrigue and suspense.

**Sherak** is a madman. Villains who teeter on the brink of insanity always make wonderful antagonists. Their actions are unpredictable because they are motivated by intense emotions, anxieties and insanity. Sherak is

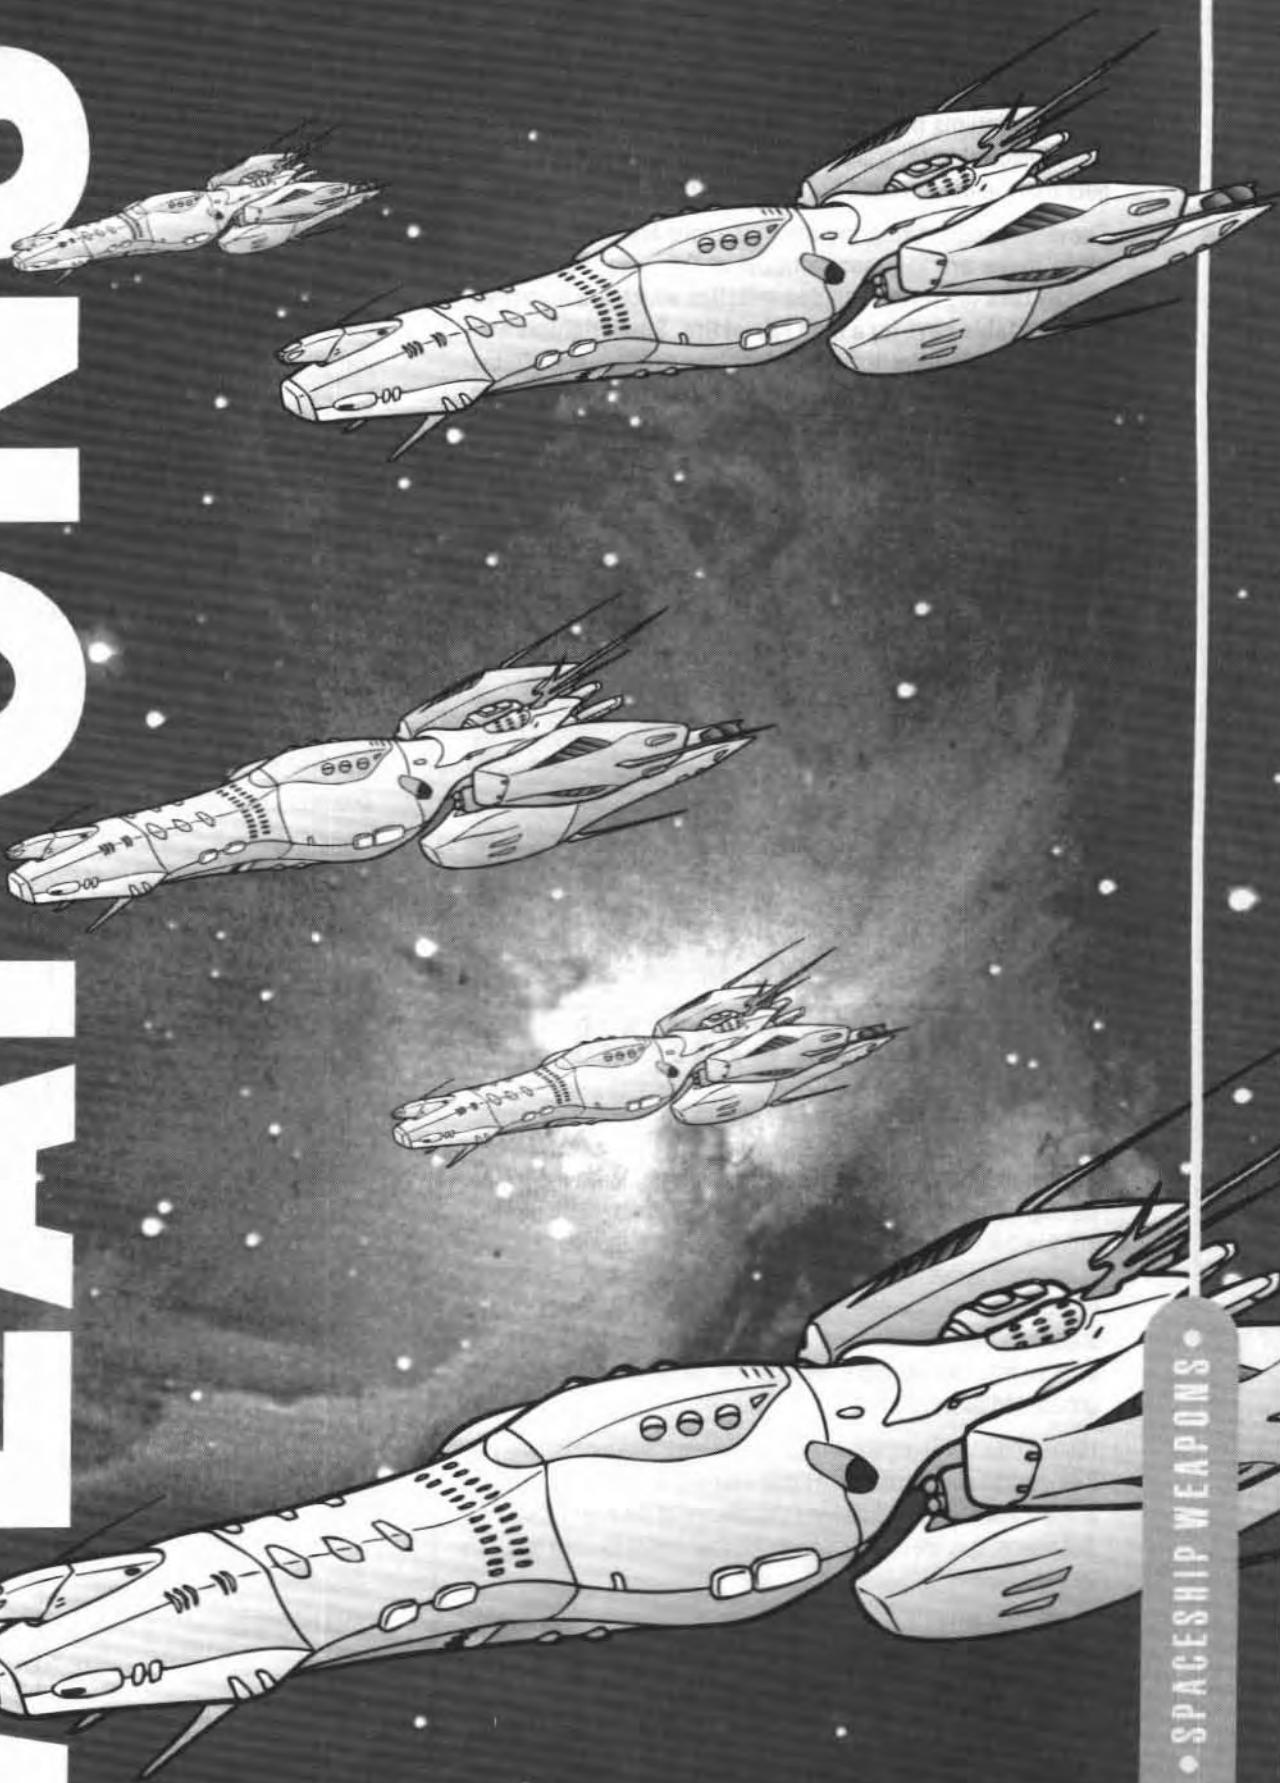

such a character. He makes the perfect reoccurring villain, who may make it his mission in life to destroy the player characters (who dared to thwart him or embarrassed him in front of his people). If any character is going to crave revenge, it is going to be Sherak. This may even apply to events after the Marduk are defeated. If this maniac survives, he may pursue a quest for power (become the new Emperor?) or seek revenge against the despicable humans and Zentran traitors who destroyed Lord Emperor Ingues and brought dishonor to the Marduk people. He will never accept Ishtar or Feff as his superiors. Nor will he accept a life of peace. No matter how the Game Master wants to play him, Sherak spells trouble.

Watch for **Macross II Deck Plans Volume Three** for more inside information and adventure (tentatively scheduled for a November or December, 1994 release). Meanwhile, enjoy the adventure.

# SHAPED WEAPONS

The ships in Macross II are huge battlewagons with weapons capable of obliterating small planetoids. Most of these weapon systems trade accuracy for firepower, which make them unsuitable for tracking and engaging small agile targets like the mecha used both by human and Marduk forces.

The most common ship-mounted weapons are energy based, since these are the most efficient at this size. Projectiles mostly take the form of guided missiles which are launched by reloadable bays for a high rate of fire. Small fighters and mecha complete the armament for close defense and attack, but this section will examine only the fixed weapon systems (as opposed to the mecha, which are considered mobile weapon systems).

## **SHIP WEAPON SYSTEMS**

All Marduk and Zentran spaceships are equipped with very similar weapon systems. In order to save space, they are presented here together and unless so noted, all characteristics are the same, no matter the ship design on which they are mounted. This may seem unlikely, with Marduk designs being slightly more advanced, but the difference in firepower at this level is so small that for convenience it is better to disregard it. Game masters wishing to emulate the Marduk's technical superiority may increase the damage by up to 10% (after damage has been rolled), but no more because the game would *definitely* be unbalanced past that point.

Human-built UN Spacy ships usually have fewer weapon systems than their Zentran counterparts, but these weapons are more compact and efficient than the age-old designs mounted on the alien vessels. For that reason, they are incorporated in the overview of the ship on which they are mounted.

## **1. MAIN LASER CANNON**

- The Main Laser Cannon is mounted on virtually all Marduk or Zentran ships to provide heavy firepower (on some smaller ship designs, the Main Laser Cannon represents virtually *all* the real firepower!). It is an array of laser weapons located in the front section of the main hull of the ship and is fixed forward.

The Main Laser Cannon has no apparent nozzle or opening, because it is not one large weapon, but rather many small ones firing simultaneously. The great number of laser lenses, combined with their small size, gives the illusion of laser beams erupting from the very hull of the ship.

|                           |                                    |
|---------------------------|------------------------------------|
| <u>Primary Purpose:</u>   | Assault                            |
| <u>Secondary Purpose:</u> | Anti-Warship/Anti-Planet           |
| <u>Mega-Damage:</u>       | 1D8 x 1000                         |
| <u>Range:</u>             | 200,000 miles (half in atmosphere) |
| <u>Rate of Fire:</u>      | Once every other melee             |
| <u>Payload:</u>           | Unlimited                          |

## **2. FORWARD LIGHT LASERS**

- The Forward Light Lasers are laser cannons mounted in batteries along the front and side of all alien vessels. They are slightly bigger individually than the lasers used for the Main Laser Cannon, but there are fewer in number. They are not very powerful, but if fired in large number they can be devastating.

|                           |  |
|---------------------------|--|
| <u>Primary Purpose:</u>   | Assault/Defense  |
| <u>Secondary Purpose:</u> | Anti-Warship   |
| <u>Mega-Damage:</u>       | 1D6 x 30 per Laser. ALWAYS fired in volleys of three or more (mega-damage is per volley: 3D6 x 30 for three beams, 6D6 x 30 for six beams, and so on). |
| <u>Range:</u>             | 60 miles (half in atmosphere)  |
| <u>Rate of Fire:</u>      | Each individual Laser can fire once per melee. Lasers can be combined in any volley combination, as long as each Laser fires only once per melee.      |
| <u>Payload:</u>           | Unlimited  |

### **3. RETRACTABLE LASER TURRET**

- The Laser Turret is a common weapon because of its firepower, versatility and resilience. It is composed of a battery of laser cannons firing together at one target, usually in conjunction with other turrets close by. The turrets are mounted under the primary hull, protected from enemy fire and ready to pop out from under sliding hatches to attack. Each turret is capable of 360 degree rotation with a 180 degree arc of fire.

|                           |   |
|---------------------------|---|
| <u>Primary Purpose:</u>   | Assault   |
| <u>Secondary Purpose:</u> | Anti-Warship  |
| <u>Mega-Damage:</u>       | 1D4 x 1000  |
| <u>Range:</u>             | 200,000 miles (half in atmosphere)  |
| <u>Rate of Fire:</u>      | Each individual turret can fire twice per melee. Turrets can be combined in any volley combination, as long as each fires only twice per melee. |
| <u>Payload:</u>           | Unlimited   |

## 4. RETRACTABLE MISSILE TURRET

- These are very similar to the Laser Turrets except that they fire missiles instead of laser beams. They can use several types of missiles according to the mission at hand, but they generally use HE warheads because they are easier to manufacture. Ammunition is brought directly from the armored magazine by automated drones to ensure a constant supply. Each turret is capable of 360 degree rotation with a 180 degree arc of fire.

Primary Purpose: .... Assault

Secondary Purpose: .... Anti-Warship

Mega-Damage: .... varies with warhead used:

### Medium Range Missiles

1. High Explosive: ....  $2D6 \times 10$  M.D.; range is 60 miles (80km)

2. Plasma: ....  $3D6 \times 10$  M.D.; range is 60 miles (80km)

### Long Range Missiles

1. High Explosive: ....  $3D6 \times 10$  M.D.; range is 1800 miles (2895km)

2. Plasma: ....  $4D6 \times 10$  M.D.; range is 1800 miles (2895km)

3. Smart Bomb: ....  $4D6 \times M.D.$ ; range is 2000 miles (3215km)

Blast Radius: .... medium — 50 ft (15.2m); long range — 80 ft (24.4m)

Range: .... See above (about half the given range if fired in atmosphere). Typical missile speed is around 1800 mph.

Rate of Fire: .... Each individual turret can fire once per melee. Turrets can be combined in any volley combination, as long as each fires only once per melee. Minimum number of missile per volley is 10. Missiles can also be launched as a randomly fired barrage (see *Missile Combat*, p. 9 of Macross II Deck Plans Volume 1), but NEVER individually.

Payload: .... Effectively unlimited due to the large supply available.

## 5. HEAVY PARTICLE CANNON

- The Heavy Particle Cannon is the most powerful weapon Marduk and Zentran ships possess. It can devastate entire fleets of enemy vessels given half a chance. Because of the power requirement, it is only mounted on the largest vessels. Only the humans, with the 488-meter Macross Cannon, have managed to miniaturize this awesome weapon.

The Cannon is hidden in the core of the ship along the main axis. It needs six full minutes (24 melees) to power up its enormous capacitors, then another two minutes (8 melees) to get ready to fire. During these last minutes, the ship's hull separates in half, with bolts of lightning jumping from top to bottom in an awesome display of power. At this point, the ship is committed to the firing of the gun and all of its energy is geared toward that purpose. Now would be a good time to get out of the line of fire!

Once the Particle Cannon is fully charged, the ship releases the mighty beam. The beam lasts for 15 seconds (one full melee round), destroying EVERYTHING in an area one-mile wide by 200,000 miles long. The only way to avoid destruction is to avoid the beam altogether!

Primary Purpose: .... Assault/Anti-Planet

Secondary Purpose: .... Anti-Warship

Mega-Damage: .... Destroys EVERYTHING in its path, regardless of M.D.C. and movement. If used against a planet, it causes  $2D6 \times \text{ONE MILLION M.D.}$  (!), leaving only a crater measuring  $1D6 \times 10^6$  miles round and  $3D6 \times 100$  feet deep. The resulting shockwave will probably cause a fair amount of damage, too.

Range: .... 200,000 miles (half in atmosphere)

Rate of Fire: .... Once every eight minutes (32 melees), but limited to 5 blasts per hour because of energy requirements.

Payload: .... Unlimited

# UN SPACY GUY

▶ ՅՍՎՐ ՅՍՎԻ  
▶ ԲՄՖՆՓ ՇՓՄԻ ՅՍՎԻ

Front View

VF-XX on Upper Hull

Lower View

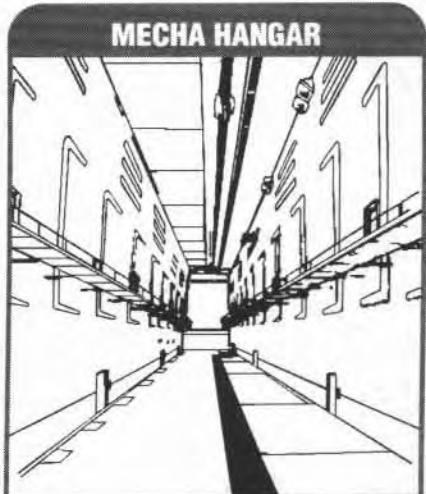

Marduk Attacking Bridge

**OVERVIEW:**

The third smallest ship in the UN Spacy arsenal (the smaller ones being the Command and the Escort Carriers), the Corvette's design was strongly influenced by both Zentran and Meltran ship design. Although it is not powerfully armed, the Corvette serves as ship of the line in the UN Spacy fleet, its Phalanx turrets giving it a better chance to survive a ship/mecha encounter. It also transports 38 Valkyrie VF-2SS as its normal complement of mecha, but Ground Mecha (up to ten) or Metal Sirens (up to three) can also be part of its mecha group.

The first deck contains the bridge and top armament while deck 2 is reserved to the crew. Decks 3 and 4 are mecha hangars and deck 5 is the shuttle bay. The Corvette does not usually transport ground mecha, but when it does, all are equipped with a space propulsion system.

**VEHICLE TYPE:**

Corvette

**CREW:**

# •UN SPACY CORVETTE•

TUΦQ6666

|                          |            |
|--------------------------|------------|
| Main engines***          | 3,000      |
| Auxiliary engines****(2) | 1,200 each |

- Destroying the sensor tower or the bridge will deprive the ship of all forms of long range communications, radar and targeting. The range and targeting capabilities are now equal to a Valkyrie. The ship can still operate, but is -3 on initiative, -3 to strike and the number of attacks per melee of the weapons is reduced by half.
- Depleting the M.D.C. of the main body will put the ship out of commission. It will explode in a fiery blast, causing 1D4 x 1000 M.D. to a 1000 (305m) ft area.
- Depleting the M.D.C. of the main engines will severely impair the ship, forcing it to rely on its auxiliary engines.
- If both main and auxiliary engines are put out of commission, the ship will be floating dead in space or will crash if the damage occurs in atmosphere. The loss of the auxiliary engines alone will not impair the ship in any way.

## SPEED:

Main engines are capable of sub-light speed: 10C or 16,000 miles per second (in space only). Typical speed is only Mach 12.6, though. Auxiliary engines can propel the ship at the relatively low speed of Mach 2.

Bonuses: +4 on initiative, +3 to strike, +4 to dodge

## DIMENSIONS:

|         |                |
|---------|----------------|
| Length: | 332 meters     |
| Height: | 116 meters     |
| Width:  | 103 meters     |
| Weight: | 3,200,000 tons |

**Power System:** Combination nuclear, with 25 year life, and solar power (infinite life)

**Gravity Control System:** internal

**Fold system:** none

## WEAPON SYSTEMS:

### 1. FORWARD LASERS (4, FRONT OF THE SHIP)

- These are four powerful laser cannons mounted in the front of the ship. The Forward Lasers are fixed and can only fire to the front.

|                    |   |
|--------------------|---|
| Primary Purpose:   | Assault   |
| Secondary Purpose: | Defense   |
| Mega-Damage:       | 1D4 x 100 M.D. or 2D4 x 100 if both cannons fire simultaneously at the same target. |
| Range:             | 80 miles (106.4km; half in atmosphere).   |
| Rate of fire:      | The lasers can fire five times per melee (15 seconds).                              |
| Payload:           | Unlimited   |

### 2. MISSILE LAUNCHERS (6, TOP OF THE SHIP)

- These launchers are lined up on top of the ship behind armored covers. They can use several types of missiles according to the mission at hand, but they generally use HE warheads. Each bay has a 90 degree arc of fire in all directions.

|                    |                           |
|--------------------|---------------------------|
| Primary Purpose:   | Anti-Fighter              |
| Secondary Purpose: | Defense                   |
| Mega-Damage:       | varies with warhead used. |
| 1. High Explosive: | 2D6 x 10 M.D.             |
| 2. Plasma:         | 3D6 x 10 M.D.             |
| Blast Radius:      | 50 ft (15.2m)             |

Range: 80 miles (106km; half in atmosphere). Typical missile speed is around 1800 mph.

Rate of Fire: Each individual launcher can fire twice per melee. Each launcher unleashes a volley of two or five missiles. Missiles can also be launched as a randomly fired barrage (see *Missile Combat*, p.9 of Macross II Deck Plans Volume I), but NEVER individually.

Payload: 200 missiles per launcher, for a total of 1200.

### 3. "PHALANX" TURRETS (12, HULL)

- The 55mm "Phalanx" tri-tube gatling cannon is directly derived from the one used by the first generation of Valkyrie fighters. "Phalanx" turrets get a +3 when firing on missiles.

Primary Purpose: Defense

Secondary Purpose: Anti-Missile

Mega-Damage: 1D6 x 10 per burst

Range: 10 miles (half in atmosphere)

Rate of Fire: Each individual turret can fire two bursts per melee. Turrets can be combined in any volley combination, as long as each fires only twice per melee. Minimum number of turrets per volley is 3.

Payload: Effectively unlimited due to the large ammo supply available.

### 4. LASER TURRETS (4, HULL)

- Scattered throughout the hull, the laser turrets stand ready to pop out from under their sliding hatches to attack any vessel which dares come too near. Each turret is capable of 360° rotation with a 180° arc of fire.

Primary Purpose: Assault

Secondary Purpose: Anti-Warship

Mega-Damage: 1D4 x 1000

Range: 200,000 miles (half in atmosphere)

Rate of Fire: Each individual turret can fire twice per melee. Turrets can be combined in any volley combination, as long as each fires only twice per melee. Minimum number of turrets per volley is 3.

Payload: Unlimited

## MOBILE WEAPON SYSTEMS:

|                                     |    |
|-------------------------------------|----|
| VF-2SS                              | 24 |
| VF-2SS SAP                          | 14 |
| VF-1MS Metal Siren (when available) | 3  |
| Space shuttle                       | 1  |

Up to 10 Ground Mecha (but no Monster III!) can also be transported if the current mission calls for it.

## DESIGN NOTES:

- The armory contains enough weapons and spacesuits to equip the crew.
- Passive sensors are not accessible from inside the ship.
- Service hall contains elevators, waste disposal, life support, etc.
- The missile bays are normally not accessible from inside the ship, except through locked maintenance panels.
- All ceilings are 82 feet (25 meters) high, with catwalks at 66 feet (20 meters), except Levels One and Two which are only 5 meters high.

Metal Siren

**OVERVIEW:**

The Battleship, although smaller than the Command Ship, is even more powerful in term of raw firepower. Since it is purely a combat vessel, with a small mecha complement, most of the hull's interior space is dedicated to weaponry and crew quarters, with machinery and power feeds running everywhere.

Battleships are more plentiful than Command Ships, but they are still a rare sight when compared to the hundreds of Zentran-built spacecraft in service with the UN Spacy. As part of the orbital defense network, the Battleships are placed at strategic locations around the Earth (60 ships), the Moon (12), and near the moons of Mars (4). They are rarely sent beyond Saturn to follow an enemy or away for space exploration.

**VEHICLE TYPE:**

SB-12

Class: Space Battleship (non-transformable)

**CREW:**

Officers: 14

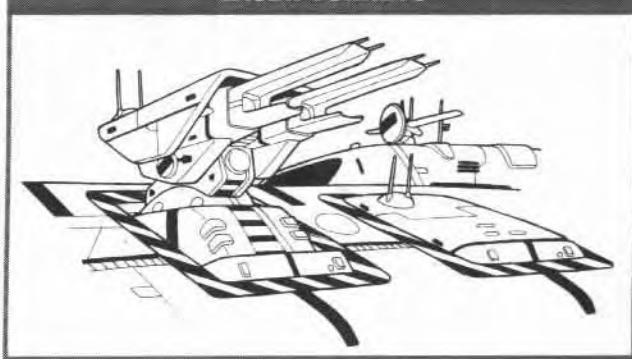

Crew (Ship and Flight): 58

Pilots and Combat Troops: 144

Total crew: 216, but can support an additional 48.

**M.D.C. PER LOCATION:**

|                                     |      |      |
|-------------------------------------|------|------|
| Communication antennae (3)          | 120  | each |
| Bridge bubble* (1, top)             | 2000 |      |
| Main thrusters (1)                  | 2000 |      |
| Secondary thrusters (3)             | 1000 | each |
| Small guidance thrusters (24)       | 100  | each |
| Main laser cannon (1, forward)      | 1000 |      |
| Main P-beam cannon (1, nose)        | 500  |      |
| Rear laser cannons (2)              | 500  | each |
| Exposed laser turrets** (12)        | 100  | each |
| Long range rocket launcher bays (4) | 500  | each |

**LASER TURRETS**

# • UN SPACY BATTLESHIP •

R&G&G&G&G&G&G

Medium range rocket launchers (6, bridge) ..... 200 each

Main body\*\*\* ..... 8900

- Destroying the bridge will deprive the ship of all forms of long range communications, radar and targeting. These are reduced to the equivalent of a Valkyrie's. The cannons can still operate, but are -3 on initiative, -3 to strike and the number of attacks per melee is reduced by half.

- The laser turrets are normally hidden in the hull under heavily armored plates. They can be damaged only when in their firing position.

- Depleting the M.D.C. of the main body will put the ship out of commission. It will explode in a fiery blast causing  $1D4 \times 1000$  M.D. to a 1000 ft (305m) area.

## SPEED:

Standard speed is Mach 12.6 in space. The Battleships are incapable of flight in an atmosphere. They are capable of deep space travel, although they have never been used for that purpose.

If used for deep space travel, the ship's engines are capable of continuous sub-light thrust, reaching a speed approaching 20 C or 37,200 miles per second (60,000 km/sec)

Bonuses: +3 on initiative, +4 to strike, +4 to dodge

## DIMENSIONS:

Length: 244 meters

Height: 40 meters including Bridge Tower

Width: 73.2 meters at maximum cross-section

Weight: 3,650,000 tons

Power System: Combination nuclear, with 25 year life, and solar power (infinite life)

Gravity Control System: Internal

Fold system: none

## WEAPON SYSTEMS:

Note: Total number of attacks per melee is 71 (including missile volleys and turret fire), 35 long range attacks (excluding close range turret fire), plus the deployment of Valkyries and other mechanized fighters.

### 1. MAIN LASER CANNON (1, FRONT OF THE SHIP)

- This powerful laser cannon forms most of the nose of the ship. It has very good range and power.

Primary Purpose: Anti-Spacecraft

Secondary Purpose: Defense

Mega-Damage: 2D6 x 1000 M.D.

Range: 30 miles (48 km)

Rate of Fire: The laser cannon can fire three times per melee (15 seconds), and can be directed at different targets.

Payload: Effectively unlimited

### 2. MAIN PARTICLE BEAM CANNON (1, NOSE OF THE SHIP)

- The particle beam cannon is mounted near the nose of the ship. It is very powerful, but has a short range. The cannon can be raised and lowered 90 degrees.

Primary Purpose: Assault

Secondary Purpose: Defense

Mega-Damage: 2D4 x 1000 M.D.

Range: 8 miles (12.8 km)

Rate of Fire: The cannon can fire six times per melee (15 seconds), and can be directed at different targets.

Payload: Effectively unlimited

### 3. REAR LASER CANNONS (2, TAIL SECTION)

- A pair of laser cannons is mounted on either side of the rear thrusters. Each can angle and rotate 180 degrees.

Primary Purpose: Assault

Secondary Purpose: Defense

Mega-Damage: 1D4 x 1000 M.D. or 2D4 x 1000 if both fire simultaneously at the same target (counts as one melee attack).

Range: 30 miles (48 km)

Rate of Fire: Each cannon can fire five times per melee (15 seconds), and can be directed at different targets.

Payload: Effectively unlimited

### 4. CLOSE RANGE LASER TURRETS (12, MAIN HULL)

- Anti-lighter turrets are mounted under the hull, hidden behind heavily armored blast doors. When needed, the turrets rise to fire. Each turret can rotate 360 degrees, with a 180 degree arc of fire.

Primary Purpose: Anti-Fighter

Secondary Purpose: Defense

Mega-Damage: 1D6 x 10 M.D. per blast

Range: 8000 ft (2.4 km)

Rate of Fire: Each turret can fire three times per melee (15 seconds), and can be directed at different targets.

Payload: Effectively unlimited

### 5. LONG RANGE MISSILE LAUNCHERS (4, SIDES OF THE SHIP)

- Missile Launchers are mounted in the sides of the ship. The long range of their missiles makes them extremely efficient for battlefield support.

Primary Purpose: Anti-Spaceship and Space Fighter

Secondary Purpose: Defense

Mega-Damage: varies with warhead used:

1. High Explosive: 3D6 x 10 M.D.

2. Plasma: 4D6 x 10 M.D.

Blast Radius: 50 ft (15.2m)

Range: 1000+ miles (1600+ km). Typical missile speed is around 1800 mph.

Rate of Fire: Each individual launcher can fire once per melee. Each launcher unleashes a volley of four, six, eight or twelve missiles (see *Missile Combat*, p. 9 of Macross II Deck Plans Volume 1, for more details).

Payload: 320 missiles per launcher, for a total of 1280.

### 6. MEDIUM RANGE MISSILE LAUNCHERS (6, BRIDGE)

- These launchers are lined up just below the bridge, behind armored covers. They are used primarily to defend the bridge against enemy fighters.

Primary Purpose: Anti-Spaceship and Space Fighter

Secondary Purpose: Defense

Mega-Damage: varies with warhead used:

1. High Explosive: 2D6 x 10 M.D.

2. Plasma: 3D6 x 10 M.D.

Blast Radius: 50 ft (15.2m)

Range: 80 miles (120 km). Typical missile speed is around 1800 mph.

Rate of Fire: Each individual launcher can fire twice per melee. Each launcher unleashes a volley of four or eight missiles (see *Missile Combat*, p. 9 of Macross II Deck Plans Volume 1).

Payload: 220 missiles per launcher, for a total of 1320.

Taking Heavy Damage

Bridge

Bridge Under Attack

## OVERVIEW:

The Command Ship is typical of the new generation of spacecraft built by the UN Spacy in the aftermath of the first Zentran invasion in the early 21st century. Although far smaller than the monstrous alien vessels, their advanced design enables them to perform just as admirably in battle.

The Command Ships combine the functions of a battleship and a fighter carrier. This makes them powerful, versatile vessels uniquely suited to the defense of the Earth. In addition to their cargo of Valkyries and other mecha, the Command Ships carry an impressive amount of firepower for a vessel of their size, especially when compared to the enormous Zentran spacecraft.

As part of the UN Spacy orbital defense forces, the Command Carriers are placed at strategic locations around the Earth (30 ships), the moon (4), and the moons of Mars (2). They are rarely sent beyond Saturn to follow an enemy or away for space exploration.

CORRIDOR

## VEHICLE TYPE:

CC-10

Class: Space Command Carrier (non-transformable)

## CREW:

Officers: 36

Crew (Ship and Flight): 108

Pilots and Combat Troops: 288

Total crew: 432, but can support an additional 144

## M.D.C. PER LOCATION:

|                                    |           |
|------------------------------------|-----------|
| Observation bubble (1, bridge)     | 500       |
| Communication antennae (2, bridge) | 80 each   |
| Bridge tower* (1, top)             | 1500      |
| Main thrusters (2)                 | 5000 each |
| Secondary thrusters (6)            | 1200 each |
| Small guidance thrusters (24)      | 100 each  |

# • UN SPACY COMMAND CARRIER •

UN SPACY COMMAND CARRIER

|                                     |        |      |
|-------------------------------------|--------|------|
| Main cannons (2, forward)           | 3000   | each |
| Secondary cannon arms (2, small)    | 1500   | each |
| Long range rocket launcher bays (4) | 600    | each |
| Medium range rocket launchers (4)   | 250    | each |
| Main body**                         | 12,000 |      |

- Destroying the bridge tower will deprive the ship of all forms of long range communications, radar and targeting. These are reduced to the equivalent of a Valkyrie's. The cannons can still operate, but are -3 on initiative, -3 to strike and the number of attacks per melee is reduced by half.
- Depleting the M.D.C. of the main body will put the ship out of commission. It will explode in a fiery blast, causing  $1D4 \times 1000$  M.D. to a 1000 ft (305m) area.

## SPEED:

Standard speed is Mach 12.6 in space. The Command Ships are incapable of flight in an atmosphere. They are capable of deep space travel, although they have never been used for such.

If used for deep space travel, the ship's engines are capable of continuous sub-light thrust, reaching a speed approaching 20 C or 37,200 miles per second (60,000 km/sec).

**Bonuses:** +2 on initiative, +4 to strike, +3 to dodge

## DIMENSIONS:

|                                |   |
|--------------------------------|---|
| Length:                        | 305 meters  |
| Height:                        | 95.6 meters including Bridge Tower  |
| Width:                         | 102 meters at maximum cross-section                                       |
| Weight:                        | 4,830,000 tons  |
| <b>Power System:</b>           | Combination nuclear, with 25 year life, and solar power (indefinite life) |
| <b>Gravity Control System:</b> | internal  |
| <b>Foldsystem:</b>             | none  |

## WEAPON SYSTEMS:

**Note:** Total number of attacks per melee is 28 (including missile volleys), plus the deployment of Valkyries and other mechanized fighters.

### 1. MAIN CANNONS (2, FRONT OF THE SHIP)

- These are two powerful energy cannons mounted in the front of the ship. Each cannon can fire individually or simultaneously at the same target.
- |                           |  |
|---------------------------|--|
| <b>Primary Purpose:</b>   | Assault  |
| <b>Secondary Purpose:</b> | Defense  |
| <b>Mega-Damage:</b>       | 1D6 x 1000 M.D. or 2D6 x 1000 if both cannons fire simultaneously at the same target.              |
| <b>Range:</b>             | 16 miles (25.6 km)   |
| <b>Rate of Fire:</b>      | Each cannon can fire three times per melee (15 seconds), and can be directed at different targets. |
| <b>Payload:</b>           | Effectively unlimited  |

### 2. SECONDARY WEAPON ARMS (2, SIDES OF THE SHIP)

- A weapon arm is mounted on each side of the hull. Each arm can rotate 360 degrees and mounts powerful laser cannons.
- |                           |  |
|---------------------------|--|
| <b>Primary Purpose:</b>   | Assault  |
| <b>Secondary Purpose:</b> | Defense  |
| <b>Mega-Damage:</b>       | 1D6 x 100 M.D. or 2D6 x 100 if both arms fire simultaneously at the same target. |

**Range:** 8 miles (12.8 km)

**Rate of Fire:** Each cannon arm can fire five times per melee (15 seconds), and can be directed at different targets.

**Payload:** Effectively unlimited

### 3. LONG RANGE MISSILE LAUNCHERS (4, SIDES OF THE SHIP)

- Missile Launchers are mounted in the sides of the ship. The long range of their missiles makes them extremely efficient for battlefield support.

**Primary Purpose:** Anti-Spaceship and Space Fighter

**Secondary Purpose:** Defense

**Mega-Damage:** varies with warhead used:

**1. High Explosive:** 3D6 x 10 M.D.

**2. Plasma:** 4D6 x 10 M.D.:

**Blast Radius:** 50 ft (15.2m)

**Range:** 1000+ miles (1600+ km). Typical missile speed is around 1800 mph.

**Rate of Fire:** Each individual launcher can fire once per melee. Each launcher unleashes a volley of four, six, eight or twelve missiles (see *Missile Combat*, p. 9 of **Macross II Deck Plans Volume 1**, for more details).

**Payload:** 320 missiles per launcher, for a total of 1280.

### 4. MEDIUM RANGE MISSILE LAUNCHERS (4, TOP OF THE SHIP)

- These launchers are lined up on top of the ship, behind armored covers, just below the bridge. They are used primarily to defend the bridge against enemy fighters.

**Primary Purpose:** Anti-Spaceship and Space Fighter

**Secondary Purpose:** Defense

**Mega-Damage:** varies with warhead used:

**1. High Explosive:** 2D6 x 10 M.D.

**2. Plasma:** 3D6 x 10 M.D.:

**Blast Radius:** 50 ft (15.2m)

**Range:** 80 miles (120 km). Typical missile speed is around 1800 mph.

**Rate of Fire:** Each individual launcher can fire twice per melee. Each launcher unleashes a volley of four or eight missiles (see *Missile Combat*, p. 9 of **Macross II Deck Plans Volume 1**, for more details).

**Payload:** 220 missiles per launcher, for a total of 880.

## Firing Forward Lasers

## **Side Hull**

## **OVERVIEW:**

By far the biggest ship of the UN Spacy, the flagship-class Zentran vessel is — except for the SDF-1 Macross — one of the most powerful ships in the universe. A Zentran of 80 years ago walking inside the ship would still be able to recognize its layout and circulate without getting lost, but he would also notice some important modifications.

First of all, everybody now has a private room. Second, there are catwalks all over the place. And third, the atmosphere is fantastically more relaxed. Moreover, there are these small creatures everywhere. Of course, heavy modifications had to be done for the human-size crew to be able to roam the ship freely. The most important ones appear on decks 2, 3, 4, and 5, where all of the interior space has been redesigned for human-size people.

The crew complement reflects the terran community, with a mix of Humans, human-size Zentran and full-size Zentran, as well as mixed race people. The only place where there is still some segregation is with mecha designs. The Zentran prefer their own or the power-armor-influenced VF-XX while the humans prefer their own Valkyrie models.

The UN Spacy version of the flagship retains all the qualities of the first design plus some improvements, especially in armor and armament. Only three of them are left, and they are used as long range mobile bases.

**VEHICLE TYPE:**

### Combat/command flagship

**CREW:**

|                                 |               |
|---------------------------------|---------------|
| Human-size assigned personnel   | 3,100         |
| Human-size combat troops        | 4,750         |
| Zentran-size assigned personnel | 1,500         |
| Zentran-size combat personnel   | 6,700         |
| <b>Total crew:</b>              | <b>16,050</b> |

**M.D.C. PER LOCATION:**

|                                  |      |      |
|----------------------------------|------|------|
| Forward laser mounts (60)        | 40   | each |
| Laser turrets (110)              | 140  | each |
| Missile turrets (230)            | 100  | each |
| Main laser cannon (1)            | 2000 |      |
| Phalanx turrets (120)            | 50   | each |
| Airlocks/access hatches (160)    | 170  | each |
| Retractable weapon hatches (460) | 100  | each |

|   |         |
|---|---------|
| Hull per 40 ft area* (12.2 meters)            | 70      |
| Hull per 500 ft area* (152.5 meters)          | 750     |
| Forward 1/3 of the ship** (main body)         | 350,000 |
| Main engines*** (upper rear, main body)       | 90,000  |
| Auxiliary engines**** (lower rear, main body) | 18,000  |
| Special systems                               | 10,000  |

Punching a hole into a specific area of the hull — by completely depleting its M.D.C. — will only give access to the weapon turrets access corridor (approximately 200 ft/31 meters wide). To gain access to the inside of the ship, one must go through the second hull. On levels 1, 4, and 7, a third hull blocks the way! These interior hulls have the same strength as the exterior one. They do NOT count as interior bulkheads.

Depleting the incredible M.D.C. of the front third of the ship will put the command bridge and auxiliary command bridge out of commission. It will also shut down the entire ship, including the following systems: life support, gravity control, communications, weapons and engines.

Depleting the M.D.C. of the main engines will severely impair the ship, forcing it to rely on its auxiliary engines.

If both main and auxiliary engines are put out of commission, the ship will be floating dead in space or will crash if the damage occurs in atmosphere. The loss of the auxiliary engines alone will not impair the ship in any way. If both engines are shut down, all systems, except the fold drive, will continue to work.

#### SPEED:

The main engines are capable of sub-light speed: 20C or 32,000 miles per second. Auxiliary engines can only propel the ship at the relatively low speed of Mach 3.

#### DIMENSIONS:

|         |                  |
|---------|------------------|
| Length: | 4,000 meters     |
| Height: | 655 meters       |
| Width:  | 600 meters       |
| Weight: | 180,000,000 tons |

#### Main Engine:

Auto Heat Pile System

#### Auxiliary Engine:

Fusion reactor type

#### Gravity Control System:

Internal inertia drive

#### Fold System:

Auto Hyperspace Navigational System

#### WEAPON SYSTEMS:

|                            |     |
|----------------------------|-----|
| Heavy particle beam cannon | 1   |
| Main laser cannon          | 1   |
| Forward laser mounts       | 60  |
| Laser turrets              | 110 |
| Missile turrets            | 230 |
| Phalanx turrets            | 120 |

#### MOBILE WEAPON SYSTEMS:

|                             |       |
|-----------------------------|-------|
| Valkyrie VF-2SS             | 1,450 |
| Valkyrie VF-2SAP            | 260   |
| Valkyrie VF-2SS SAP special | 110   |
| Metal Siren VF-1MS          | 25    |
| VF-XX Zentran Fighter       | 1,000 |
| AGA Jet                     | 60    |
| Tomahawk MK-II              | 30    |
| Phalanx MK-IV               | 30    |

|                                  |       |
|----------------------------------|-------|
| Defender-EX MK-III               | 35    |
| Zentran powered armor (old type) | 1,500 |
| Meitran powered armor (old type) | 2,491 |
| Standard Battlepod (old type)    | 830   |
| Officer Battlepod (old type)     | 150   |
| Fighter pod (old type)           | 60    |

**Total number combat-ready Mecha:** 8,031

#### ADDITIONAL VEHICLES:

|                        |     |
|------------------------|-----|
| Human space shuttle    | 10  |
| VF-2JA (in storage)    | 20  |
| Zentran hover platform | 510 |
| Human hover platform   | 600 |
| Zentran space shuttle  | 5   |

#### OUTER HULL

All deck levels have two hulls, the space in between being used as access tunnels for mecha and housing for the turrets. The access tunnels can measure up to 40 meters tall and 20 meters wide.

#### TOP OUTER HULL:

|                             |    |
|-----------------------------|----|
| Retractable laser turrets   | 25 |
| Retractable missile turrets | 50 |
| Airlocks/access hatches     | 15 |
| Phalanx turrets             | 25 |

#### SIDE OUTER HULL:

|                             |                       |
|-----------------------------|-----------------------|
| Forward laser mounts        | 60 (30 on each side)  |
| Retractable laser turrets   | 60 (30 on each side)  |
| Retractable missile turrets | 130 (65 on each side) |
| Phalanx turrets             | 70 (35 on each side)  |
| Airlocks/access hatches     | 130 (65 on each side) |

#### BOTTOM OUTER HULL:

|                             |    |
|-----------------------------|----|
| Retractable laser turrets   | 25 |
| Retractable missile turrets | 50 |
| Phalanx turrets             | 25 |
| Airlocks/access hatches     | 15 |

#### FRONT:

|                                 |   |
|---------------------------------|---|
| Heavy particle beam cannon      | 1 |
| Main laser cannon (lower front) | 1 |

#### DESIGN NOTES

- The number of mecha aboard has drastically dropped compared to the old Zentran days for two reasons: one, reasonable living quarters had to be installed, and two, space for maintenance had to be taken into consideration.
- The 55mm "Phalanx" turrets are identical to the ones mounted on all UN Spacy Zentran ships.
- There are less mecha than actual combat personnel: this ensures the rotation of the flight crew.

Zentran Fleet

**OVERVIEW:**

Although its exterior appearance has not changed much, the Zentran carrier's interior was redesigned to accommodate human-size crew personnel, especially levels 2, 3, and 4. This was necessary in order to provide the usual comfort human beings (and micronized Zentrans) have been used to on Earth. Original-size Zentrans have much more luxurious living quarters than before.

All these changes left much less room for mecha compared to the old version, which carried more than 25,000 of them. The armor has been reinforced and although the heavy armament stayed the same, the anti-mecha armament have also been reinforced by the presence of the Phalanx Gatling Cannon turrets; a weapon now standard on all UN Spacy Zentran ships. The Zentran carrier usually serves as a flagship for small patrol/intervention fleets.

**VEHICLE TYPE:**

Carrier/landing ship

**CREW:**

|                                 |               |
|---------------------------------|---------------|
| Human-size assigned personnel   | 2,872         |
| Human-size combat troops        | 4,335         |
| Zentran-size assigned personnel | 1,182         |
| Zentran-size combat troops      | 5,384         |
| <b>Total crew:</b>              | <b>13,773</b> |

**M.D.C. PER LOCATION:**

|                                  |       |      |
|----------------------------------|-------|------|
| Forward laser mounts (30)        | 50    | each |
| Laser turrets (24)               | 130   | each |
| Missile turrets (80)             | 110   | each |
| Main laser cannon (1)            | 1,500 |      |
| Airlocks/access hatches (156)    | 200   | each |
| Rear hatches (9)                 | 400   | each |
| Retractable weapon hatches (122) | 95    | each |

|                                   |         |      |
|-----------------------------------|---------|------|
| Phalanx turrets (68)              | 50      | each |
| Communication antennae (5)        | 220     | each |
| Hull per 40 ft (12.2 meters)*     | 100     |      |
| Hull per 500 ft (152.5 meters)*   | 1,100   |      |
| Forward 1/3 of the ship**         | 200,000 |      |
| Main engines*** (main body)       | 55,000  |      |
| Auxiliary engines**** (main body) | 10,000  |      |

- \* Punching a hole into a specific area of the hull — by depleting its M.D.C. — will only give access to the access corridor (approx. 200 ft/31 meters wide). To gain access to the inside of the ship, one must go through the second hull. This interior hull has the same strength as the exterior one.
- \*\* Depleting the M.D.C. of the front third of the ship will put the command bridge and auxiliary command bridge out of commission. It will also shut down the entire ship, including the following systems: life support, gravity control, communications, weapons and engines.
- \*\*\* Depleting the M.D.C. of the main engines will force the ship to rely on its auxiliary engines.
- \*\*\*\* If both main and auxiliary engines are put out of commission, the ship will be floating dead in space or will crash if the damage occurs in atmosphere. The loss of the auxiliary engines alone will not impair the ship in any way. If both engines are shut down, all systems, except the fold drive, will continue to work.

#### SPEED:

The main engines are capable of sub-light speed: 16C. Auxiliary engines can only propel the ship at the relatively low speed of Mach 2.

#### DIMENSIONS:

|         |                  |
|---------|------------------|
| Length: | 3,000 meters     |
| Height: | 480 meters       |
| Width:  | 500 meters       |
| Weight: | 162,000,000 tons |

**Main Engine:** Auto Heat Pile System

**Auxiliary Engine:** Fusion reactor type

**Gravity Control System:** Internal inertia drive

**Fold system:** Hyperspace Navigational System

#### WEAPON SYSTEMS:

|                             |    |

| Zentran space shuttle  | 3   |
| Zentran hover platform | 320 |
| Human hover platform   | 470 |

#### OUTER HULL

The exterior of the Carrier is dotted with hatches. All deck levels have two hulls, the space in between being used as access tunnels for mecha and housing for the turrets. The access tunnels can measure up to 40 meters tall and 20 meters wide.

#### TOP OUTER HULL:

|                             |    |
|-----------------------------|----|
| Retractable laser turrets   | 6  |
| Retractable missile turrets | 15 |
| Phalanx turrets             | 14 |
| Airlocks/access hatches     | 6  |
| Communication antennae      | 3  |

#### SIDE OUTER HULL:

|                             |                       |
|-----------------------------|-----------------------|
| Forward laser mounts        | 30 (15 on each side)  |
| Retractable laser turrets   | 12 (6 on each side)   |
| Retractable missile turrets | 50 (25 on each side)  |
| Phalanx turrets             | 40 (20 on each side)  |
| Airlocks/access hatches     | 140 (70 on each side) |

#### BOTTOM OUTER HULL:

|                             |    |
|-----------------------------|----|
| Retractable laser turrets   | 6  |
| Retractable missile turrets | 15 |
| Phalanx turrets             | 14 |
| Airlocks/access hatches     | 10 |
| Communication antennae      | 2  |

#### FRONT:

|                      |    |
|----------------------|----|
| Forward laser mounts | 30 |
| Main laser cannon    | 1  |

#### DESIGN NOTES:

- Hyperspace communications: these powerful broadcast arrays are used to communicate with bases and flagships in far away solar systems. Range is unknown. Not widely used by the UN Spacy forces, but available nonetheless.
- Combat Drop Hangar: these two vast hangars are used for dropping supplies and mecha in atmosphere.
- Level Seven is equipped with a heavy lift which goes down to Level Eight.

Marduk Annihilator

Marduk Fleet

**OVERVIEW:**

The Marduk Destroyer-class ships form a large portion of the Marduk invasion fleet, much the same as their Zentran equivalents did with the original Zentran fleet. The vessel is of rugged and inexpensive design, and offers a good mix of weaponry and infantry. This makes it both an efficient and expendable craft, and explains its popularity with the Marduk commanders.

An eight-level Marduk control tower has been added to the standard Zentran version. This is where the Marduk soldiers are kept in stasis awaiting combat and where the primary bridge and combat bridge are located. Also, what was the first (upper) level of the Zentran Destroyer has been converted to Emulator stasis chambers, Emulator chambers, officers' quarters and mecha hangars. Marduk do not usually go below this level unless required to do so by their superiors for one duty or another.

The Destroyer, unlike many larger Marduk ships, does not have hyperspace communication, but does have Emulator chambers. These large rooms contain the ship's Emulators during battle. Heavily armored, they are also equipped with a large array of viewscreens.

**MARDUK CORRIDOR****VEHICLE TYPE:**

Destroyer

**CREW:**

|                               |              |
|-------------------------------|--------------|
| Zentran & Meltran (full size) | 4500         |
| Marduk                        | 1000         |
| Emulators                     | 10           |
| <b>Total crew:</b>            | <b>5,510</b> |

**M.D.C. PER LOCATION:**

|                                       |         |      |
|---------------------------------------|---------|------|
| Forward laser mounts (20)             | 50      | each |
| Laser turrets (116)                   | 150     | each |
| Missile turrets (112)                 | 110     | each |
| Main laser cannon                     | 800     |      |
| Airlocks/access hatches (86)          | 100     | each |
| Retractable weapon hatches (136)      | 80      | each |
| Hull per 40 ft area* (12.2 meters)    | 70      |      |
| Hull per 500 ft area* (152.5 meters)  | 875     |      |
| Forward 1/3 of the ship** (main body) | 105,000 |      |
| Control tower ***                     | 25,000  |      |

|   |        |
|---|--------|
| Main engines**** (2, upper rear)              | 15,000 |
| Auxiliary engines**** (lower rear, main body) | 7500   |

- Punching a hole into a specific area of the hull — by completely depleting its M.D.C. — will only give access to the weapon turrets (approximately 200 ft/31 meters wide). To gain access to the inside of the ship, one must go through the second hull.
- Depleting the M.D.C. of the front third of the ship will put only the auxiliary bridge out of commission. If the Control Tower has already been destroyed, then the entire ship will be shut down, including the following systems: life support, gravity control, communications, weapons and engines.
- Depleting the M.D.C. of the Control Tower will kill 95% of the ship's Marduk crew and 20% of its Marduk mecha complement.
- Depleting the M.D.C. of the main engines will severely impair the ship, forcing it to rely on its auxiliary engines.
- If both main and auxiliary engines are put out of commission, the ship will be floating dead in space or will crash if the damage occurs in atmosphere. The loss of the auxiliary engines alone will not impair the ship in any way. If both engines are shut down, all other systems, except the fold drive, will continue to work.

#### SPEED:

The main engines are capable of sublight speed: 0.16C. Auxiliary engines can only propel the ship at the speed of Mach 5.

#### DIMENSIONS:

|         |   |
|---------|---|
| Length: | 2000 meters                               |
| Height: | 560 meters at Control Tower cross-section |
| Width:  | 750 meters at maximum cross-section       |
| Weight: | 84,000,000 tons                           |

**Main Engines:** Auto Heat Pile System

**Auxiliary Engines:** Fusion reactor type

**Gravity Control System:** Internal inertia drive

**Fold system:** Auto Hyperspace Navigational System

#### WEAPON SYSTEMS:

|                            |     |
|----------------------------|-----|
| Heavy Particle Beam cannon | 1   |
| Main laser cannon          | 1   |
| Forward lasers             | 20  |
| Laser turrets              | 116 |
| Missile turrets            | 112 |

#### MOBILE WEAPON SYSTEMS:

|                        |      |
|------------------------|------|
| Zentran Battle Pods    | 4700 |
| Zentran Officer Pods   | 1900 |
| Zentran Powered Armors | 975  |
| Meltran Powered Armors | 800  |
| Gilgamesh Type I       | 750  |
| Gilgamesh Type II      | 200  |
| Annihilators           | 600  |

Total number of combat-ready mecha: 9925

#### ADDITIONAL VEHICLES:

|                        |    |
|------------------------|----|
| Marduk shuttle         | 5  |
| Zentran hover platform | 60 |
| Marduk hover platform  | 50 |

#### OUTER HULL:

The exterior of all Marduk destroyers is dotted with hatches for airlocks and weapon turrets. All deck levels have two hulls, the space in between being used as access tunnels for mecha and housing for the turrets. The access tunnels can measure up to 40 meters tall and 20 meters wide.

#### TOP OUTER HULL:

|                             |    |
|-----------------------------|----|
| Retractable laser turrets   | 25 |
| Retractable missile turrets | 6  |
| Airlocks/access hatches     | 20 |
| Communication antennae      | 5  |

#### SIDE OUTER HULL:

|                             |                       |
|-----------------------------|-----------------------|
| Forward light lasers        | 60 (30 on each side)  |
| Retractable laser turrets   | 56 (28 on each side)  |
| Retractable missile turrets | 100 (50 on each side) |
| Airlocks/access hatches     | 130 (65 on each side) |

#### BOTTOM OUTER HULL:

|                             |    |
|-----------------------------|----|
| Retractable laser turrets   | 25 |
| Retractable missile turrets | 6  |
| Airlocks/access hatches     | 30 |
| Communication antennae      | 6  |

#### FRONT:

|                            |                 |
|----------------------------|-----------------|
| Heavy particle beam cannon | 1               |
| Retractable laser turrets  | 10              |
| Retractable missile turret | None            |
| Main laser cannon          | 1 (lower front) |
| Airlocks/access hatches    | None            |

#### DESIGN NOTES:

- 1- The first level of the ship has been refitted for Marduk mecha hangars, Emulator chambers, Emulator stasis chambers and officers' living quarters.
- 2- The control tower has 8 levels. The first two levels are the ones listed as Level One and Level Two in the following pages. Level Three is a stack of six identical levels piled on top of each other and labelled 3a to 3f. Because they are identical, the floorplans are not repeated.
- 3- The "stand-by" room found aboard UN Spacy Zentran Destroyers does not exist aboard Marduk Destroyers. They are a human addition which the Marduk never introduced aboard their own ships.

Scout Cruiser Bridge

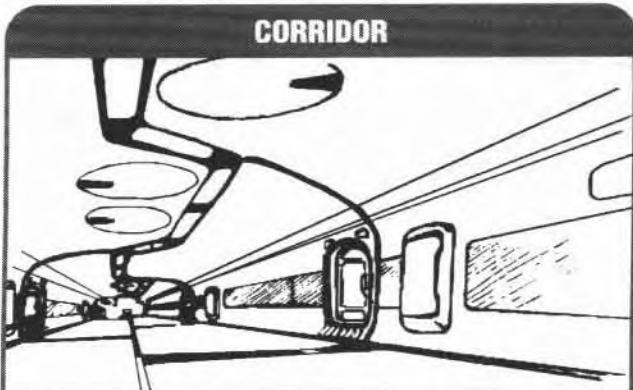

Firing Particle Beam

**OVERVIEW:**

The Marduk Scout Cruiser appears relatively unimpressive because of its small size and lack of a powerful gun array. It is, however, heavily armored and extremely mobile, and is reserved for Marduk crack troops and elite.

Unlike aboard most other ships, there are as many Marduk as there are Zentran and Meltran aboard the Scout Cruisers. It should be treated with great respect if only for that reason. Most Marduk warriors aboard such ships are the wilder, more "human" type which do not hesitate to pull (successfully) incredible stunts in order to win. Even their Emulators are somewhat unusual (see the scenario at the end of this book).

**VEHICLE TYPE:**

Scout Cruiser/Elite Transport

**CREW:**

|                    |             |
|--------------------|-------------|
| Marduk             | 1240        |
| Emulators          | 5           |
| Zentran            | 895         |

|----------------------------|-----------------|
| Heavy Particle Beam Cannon | 1               |
| Main Laser Cannon          | 1 (lower front) |

## DESIGN NOTES:

- The Scout Cruiser is not equipped with Hyperspace Communication, but it does have Emulator chambers.
- The Marduk Scout Cruiser was designed for speed and maneuverability, not for heavy face-to-face "no dodge" brutal combat like most other Marduk ships. Because of that, it can more easily avoid enemy attacks. It gets a +5 Dodge bonus against all attacks performed from at least 1 kilometer. It only gets a +3 Dodge bonus against attacks performed within this 1 kilometer radius.
- This Scout Cruiser also has better gunners, pilots and sensors than other Marduk ships. All weapons fired from the Scout Cruiser are at +2 to hit and will do 50% more damage than usual because they are specifically aimed at structurally weaker or more vital parts of the target.
- Although the Marduk aboard the Scout Cruisers are a superior breed of warriors, they usually are some type of misfits who were not immediately destroyed by the Marduk Lords because of their extraordinary combat skills. They unfortunately do not interact very well with other Marduk and that is why they are kept all together in small isolated ships. They require special treatment, special discipline and special missions.
- The Marduk Scout Cruiser is the smallest alien vessel to carry a Heavy Particle Cannon. Due to its small size, however, the beam only has half the range and width of the usual beam — but it is no less destructive! The ship separates between Level Two and Level Three to fire the cannon.

Defolding

Prepare to be punished

Punishment Delivered

**OVERVIEW:**

Even if it is slightly smaller than the Marduk Flagship, the Dreadnought is far superior in armament, speed and maneuverability. It also has a powerful fold system, allowing it to fold at a few seconds' notice!

Contrarily to usual Marduk ships, the Dreadnought does not contain a complement of Zentran/Meltran soldiers; its crew is solely composed of Marduk, with only Marduk mecha. There are two main reasons for this: the Dreadnought is usually employed to "punish" the Marduk and Zentran who have been contaminated by another race's culture or who have rebelled against Ingues' will. The second reason is adaptability: the Marduk soldiers can think by themselves, something which makes them much more dangerous than the usual Zentran/Meltran brain-washed soldiers.

There are very few Dreadnought-class ships and the simple mention of them strikes terror in any Marduk courageous (or crazy) enough to stand up against his master's will.

**VEHICLE TYPE:**

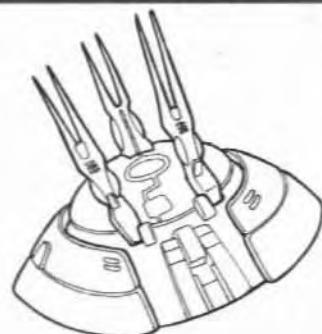

Dreadnought/terror weapon

**CREW:**

|  |       |
|--|-------|
| Officers .....                                   | 300   |
| Soldiers (includes crew + mecha personnel) ..... | 3,600 |
| Emulators (+ 2 in Stasis) .....                  | 2     |
| Total crew: .....                                | 3,904 |

**M.D.C. PER LOCATION:**

|                                      |         |      |
|--------------------------------------|---------|------|
| Forward laser mounts (80)            | 60      | each |
| Laser turrets (350)                  | 225     | each |
| Missile turrets (220)                | 50      | each |
| Main laser cannons (2)               | 3,200   | each |
| Heavy particle beam cannon (1)       | 10,000  |      |
| Retractable weapon hatches (570)     | 150     | each |
| Airlocks/access hatches (130)        | 300     | each |
| Hull per 40 ft area* (12.2 meters)   | 150     |      |
| Hull per 500 ft area* (152.5 meters) | 1,500   |      |
| Forward 1/3 of the ship**            | 100,000 |      |

**LASER TURRET**

|  |             |
|--|-------------|
| Main body** (middle body)                  | 350,000     |
| Main engines*** (rear, main body)          | 150,000     |
| Auxiliary engines**** (2, rear, main body) | 30,000 each |

- \* Punching a hole into a specific area of the hull — by completely depleting its M.D.C. — will only give access to the weapon turret access corridor (approximately 200 ft/31 meters wide). To gain access to the interior of the ship, one must go through the second hull. These interior hulls have the same strength as the exterior one. They do not count as interior bulkheads.
- \*\* Depleting the M.D.C. of the front 1/3 will wreck the main gun and the front laser cannons, but the other systems will still be able to function. Depleting the incredible M.D.C. of the main hull will put the command bridge and auxiliary command bridge out of commission. It will also shut down the entire ship, including the following systems: stasis, life support, gravity control, communications, weapons and engines. The Emulator chamber will also shut down.
- \*\*\* Depleting the M.D.C. of the main engines will severely impair the ship, forcing it to rely on its auxiliary engines.
- \*\*\*\* If both main and auxiliary engines are put out of commission, the ship will be floating dead in space or will crash if the damage occurs in atmosphere. The loss of the auxiliary engines alone will not impair the ship in any way. If both engines are shut down, all other systems, except the fold drive, will continue to work.

## SPEED:

Main engines are capable of sub-light speed: 20G or 32,000 miles per second. Auxiliary engines can only propel the ship at the relatively low speed of Mach 3.

## DIMENSIONS:

|         |  |
|---------|--|
| Length: | 3,000 meters   |
| Height: | 680 meters at maximum cross-section (without top antennae) |
| Width:  | 760 meters at maximum cross-section                        |
| Weight: | 150,000,000 tons   |

|                         |                                     |
|-------------------------|-------------------------------------|
| Main Engine:            | Auto Heat Pile System               |
| Auxiliary Engine:       | Fusion reactor type                 |
| Gravity Control System: | Internal inertia drive              |
| Fold system:            | Auto Hyperspace Navigational System |

## WEAPON SYSTEMS:

|                            |     |
|----------------------------|-----|
| Heavy Particle Beam Cannon | 1   |
| Main Laser Cannons         | 2   |
| Forward lasers             | 80  |
| Laser turrets              | 350 |
| Missile turrets            | 220 |

## MOBILE WEAPON SYSTEMS:

|  |              |
|--|--------------|
| Gilgamesh type I   | 1,500        |
| Gilgamesh type II  | 165          |
| Annihilator  | 700          |
| <b>Total number of combat ready mecha:</b>   | <b>2,365</b> |
| The ship also carries some spare mecha in storage, should they ever be needed to replace damaged or destroyed units. These are not combat-ready: they must be prepared and readied (6 hours) before use. |              |
| Gilgamesh type I   | 50           |
| Gilgamesh type II  | 8            |
| Annihilator  | 22           |
| <b>Total number of spare mecha:</b>  | <b>80</b>    |

## ADDITIONAL VEHICLES:

|                        |     |
|------------------------|-----|
| Marduk space shuttles  | 10  |
| Marduk hover platforms | 250 |

## OUTER HULL:

The exterior of the Dreadnought is dotted with hatches and airlocks. All levels have two hulls, the space in between being used as access tunnels for mecha and housing for the weapon system. These access tunnels, depending on their location, can measure up to 40 meters tall and 20 meters high.

## TOP OUTER HULL:

|                             |    |
|-----------------------------|----|
| Retractable laser turrets   | 75 |
| Retractable missile turrets | 60 |
| Airlocks/access hatches     | 15 |
| Communication antennae      | 8  |

## SIDE OUTER HULL:

|                             |                       |
|-----------------------------|-----------------------|
| Forward light lasers        | 80 (40 on each side)  |
| Retractable laser turrets   | 120 (60 on each side) |
| Retractable missile turrets | 100 (50 on each side) |
| Airlocks/access hatches     | 100 (50 on each side) |

## BOTTOM OUTER HULL:

|                             |     |
|-----------------------------|-----|
| Retractable laser turrets   | 155 |
| Retractable missile turrets | 60  |
| Airlocks/access hatches     | 15  |
| Communication antennae      | 4   |

## FRONT:

|                             |      |
|-----------------------------|------|
| Heavy particle beam cannon  | 1    |
| Retractable laser turrets   | none |
| Retractable missile turrets | none |
| Main laser cannons          | 2    |

## DESIGN NOTES:

The Dreadnought is equipped with special systems not present on most other Marduk ships:

- 1- Hyperspace communication: these powerful broadcast arrays are used to contact bases and flagships in far away solar systems. Range is unknown, though it must be rated in light-years.
- 2- Mecha navigational override: this system serves to instantly abort a mission if the fleet commander so wishes. All mecha are automatically returned to their respective bays.
- 3- Bio-scan chamber: a special laboratory equipped with a multitude of analysis apparatus to study alien lifeforms. It provides all relevant data on physiology, chemical and genetic structure. Only Marduk Science Officers, Interrogators and High Officers are allowed in this room.
- 4- Emulator chambers: these large rooms contain the ship's Emulators during battle. The walls are covered by special sensors which pick-up and amplify the emulators voices. Heavily armored, they are also equipped with a large array of viewscreens.

# CHAPTER FIVE

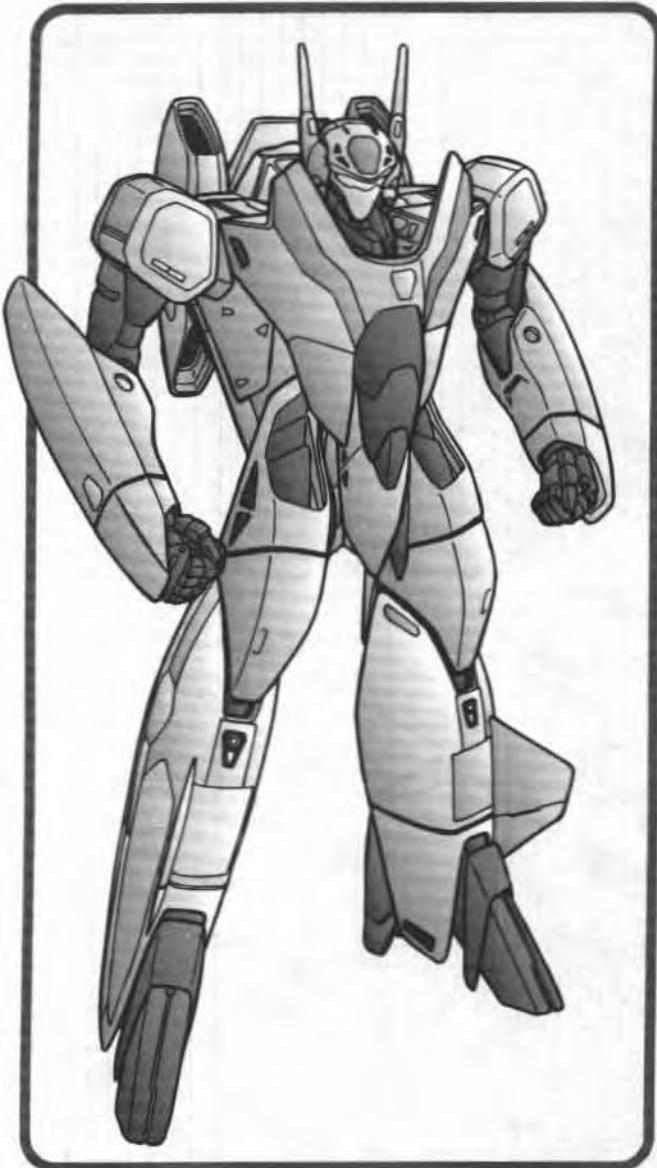

# ALL THAT GLITTERS

## INTRODUCTION

In this roleplaying scenario, the players find themselves inside a Marduk Scout Cruiser, lose their mecha and must survive aboard an enemy ship on wits alone! They gather some important information about the Marduk and must come back to Earth to deliver it to the UN Spacy.

This is a story for four to eight players, preferably Valkyrie pilots. It is possible to adapt the adventure for characters of other O.C.C.s, providing the GM finds a way to justify their presence. In the *Hooks* section below, we suggest a few plot devices the GM can use to get his players into the story.

**It may be wise to advise the players that they cannot hope to survive this scenario if they shoot at everything they encounter. The *Epilogues* section will help the GM to deal with those players who may do so.**

## • THE STORY BEHIND THE STORY

This story occurs right after Hibiki has brought Ishtar back on Earth. Lord Ingues has been notified and desperately wants to recapture her. After all, she does represent one of the Marduk's most powerful weapons and is the invasion fleet's Achilles heel. Should humans figure out what the Emulators do, it would be disastrous for the Marduk.

Lord Ingues' plan is to have a Scout Cruiser enter deep into UN Spacy territory, lure some fighter pilots into the ship and plant a loyal spy among them: He knows of Ishtar's relative psychological weakness and reluctance to violence, and wants someone to either get her back, or kill her! That is Mishalla's mission. She too is an Emulator, but one Lord Ingues is confident will not fall prey to the humans' way of life and who is devious enough to charm and seduce her way through naive pilots who fight for the UN Spacy. If Ishtar's disappearance has not yet occurred or has been solved already, then Mishalla's mission may simply be to learn more about these humans or to find out what they did to Ishtar that changed her so.

This plot is the perfect way for the GM to trick those players who have watched the anime series twenty times to ensure they knew everything about it and were prepared for everything the GM would throw at them. While everything in this module appears to follow the series (UN Spacy pilots finding and bringing back a beautiful and gentle Emulator), it is in fact quite the reverse which is happening. Mishalla's presence on Earth is planned and her pacifistic demeanor is but an illusion meant to fool the players into trusting her. Even Sherak, the Marduk officer, is nearly the total opposite of Feff: he is brutal, merciless and not particularly caring. The elements look the same, but they really are not.

## • HOOKS

Getting the players inside the ship should not be too difficult if they are Valkyrie pilots. It is their job to be in there and that is where they are expected to be. Other character classes, however, may pose more of a problem, so we provide a few potential hooks below.

*Let's Take Minmei for a Ride* hook: A Valkyrie pilot (possibly Lt. Michael Goldwing—see *Non-Player Characters*, p. 59) decides to take his girlfriend or would-be romantic interest (the PC) for a night flight while nothing is happening near the base, and ends up involved in an unexpected battle against the Marduk Scout Cruiser.

*This Kitten Must not Die* hook: Characters in trouble (the PCs) need to be rescued, but there is no time to get them back to safety. The person performing the rescuing can be any pilot or combat-worthy type (such as Lt. Michael Goldwing).

*Where Do YOU Think You're Going???* hook: Some character the player characters like or feel loyal to (regardless of whether the said character is competent or not) decides to leap recklessly into action (someone very much like Michael Goldwing) and hopes to stop an unexpected incoming Scout Cruiser all by himself. It's up to the PCs to go after him and to ensure he makes it out alive!

*Today's Feature Story Is...* hook: Some nosy (PC) character sneaks aboard a Valkyrie Fighter (Michael Goldwing's, for instance) right before that particular squadron is ordered to take off and intercept an incoming Marduk Scout Cruiser. The clandestine passenger gets lucky

and suffers minimal wounds when the Valkyrie is destroyed and he or she gets out of the Valkyrie's tiny cargo compartment.

*I'm not Going and You Can't Make Me!* hook: The UN Spacy selects this particular specialist (a PC) to do some field investigation and studies of the opponent because it's important to learn more about the enemy. No matter how reluctant the Valkyrie squadron leader or the specialist may be, this is where the character's going and that's that. And where he's going is inside an incoming Scout Cruiser to learn more about who — or what — lurks inside.

Whether or not the GM wishes to use these hooks for player characters or NPCs, he is encouraged to make sure there are enough players to accomplish the mission as well as a few non-player characters to help the heroes along the way — or to die horrible deaths as an example of what awaits the characters if they are not careful.

## THE SCENES

Instead of describing the story in sequence and railroad the characters without flexibility, we provide the GM here with a series of scenes, each containing the basic details necessary to get through it and to see how it leads to the next scene. What really counts is not so much how long each scene lasts (that can vary anywhere from 10 minutes to 2 hours), but that each scene must be played in sequence. It is perfectly all right for the players to get out of the track as long as the GM remembers to nudge the story forward whenever the occasion arises.

### SCENE 1: HOOK 'EM UP!

GM: Read the boxed section below to the players. The basic scenario assumes it is to be read to Valkyrie pilots. You can use the *Hooks* section above to introduce non-pilot characters into the scenario. If you happen to have noticed that some of the players do not like a particular NPC, try and see if you can use the provided hooks to get that character into the story as well. It can even work better if the NPC is not combat oriented and has difficulty coping with the situation. At the end of the scene, the players' mecha should crash, be shot down or somehow rendered unusable.

**GOAL:** The players, at the end of this scene, should end up inside the Marduk Scout Cruiser. They enter the ship on Level One, in the forward section of the mecha hangar (location 2 on the map — see p. 48).

**PLAYERS:** *You have been fighting hard and long, and the few hours of rest you get while on stand-by are always welcome. Unfortunately, when you are awakened by the blaring alarms calling you to duty, you realize that there is no rest for the wicked and you quickly run off to your Valkyrie. You are rapidly briefed about an unexpected incoming Marduk Scout Cruiser, those small yet much-dreaded enemy ships, and are given clearance to take off and intercept, along with three other squadrons.*

### SCENE 2: INTO THE WHALE!

GM: Have a few typical Marduk Officers chase the players on foot for a few exciting minutes. If an incompetent NPC is present, make him or her a general annoyance or, preferably, just vulnerable enough that the players will offer to help at the risk of losing precious time (and much-cherished body parts). Since the players do not really know where they are going, discreetly steer their escape toward the midship human-sized elevators (the ones close to the mecha-sized elevator). When they come near it, two or three armed Marduk should come out of the elevator, providing the players with a way out. Once the players are in, read the boxed section below.

**GOAL:** The players should end up in the elevator, which will be deactivated from afar and will automatically stop around Level Two.

**PLAYERS:** *Once inside the godsent elevator, you immediately push the lowest button on its control panel and thank the Heavens for your good fortune when you see the doors close. You have escaped! The elevator accelerates downward and you sigh with relief. According to UN Spacy files, most of the personnel aboard these alien ships are in cryogenic stasis and you don't expect to have too much trouble hiding. Suddenly, unexpectedly, the elevator stops dead in its tracks and everybody is thrown to the ground. You are stuck in a closed place, and you'd better escape before whoever stopped the elevator comes to get you.*

### SCENE 3: WOLF IN THE FOLD

GM: Use enough incoming Marduk patrols heading toward the elevator from the sides and from the back to "hint" at the players that the best escape route would be to head for those tall multi-leveled edifice-like structures that lay in front of them. Those are the Emulators quarters (#6 on the Level Two floor plan p. 48). In there, they are expected to find some sort of cover or disguise for themselves. Once that is done, either have them stumble upon Mishalla by mistake, or have her seemingly find them by luck and feign surprise. Read the players the boxed section below. Remember that the only way for players to communicate with her is to provide her with the little language translator earrings that they are (conveniently) carrying with them at all time in their uniform.

**GOAL:** Get Mishalla to leave in the company (forced or willing) of the players.

**PLAYERS:** *The woman — who, you cannot help but notice, has radiant pools of gold in stead of eyes — appears surprised and frightened, and looks rapidly right, left and around for a quick escape route. If any of you wish to overtake her, you are likely to succeed. She does not appear to be a fast runner. Dare you take the chance that she warns someone of your presence here?*

**SCENE 4: ONE MORE CHASE!**

**GM:** The players must somehow convince Mishalla (either by force or by verbal persuasion) to come with them and help them get out of the ship. She will appear reluctant at first, but will comply because she wants to earn their trust and come with them on Earth. Her mission is indeed to investigate what happened to Ishtar and find as much as possible about Earthlings, so she will find an excuse to go along with the players' plan. To ensure that Lord Ingues can find her whenever he wants, she carries, hidden in her Marduk flute, a small long-range transmitter. Once they come out of the building, Sherak is there, waiting for them with a dozen human-size Zentran warriors carrying Marduk laser pistols, and gives them chase. This is, of course, all part of the plan.

**GOAL:** Get the players down to level Level Four through the forward elevators and into room #2, the mecha maintenance hangar, where (next scene) they can attempt to steal a Gilgamesh to leave.

**PLAYERS:** *These tenacious Marduk and Zentran give you chase throughout the ship. <GM: Insert breathtaking and exciting chase sequence here.> When you finally emerge out of the elevator, you are inside what appears to be a hangar full of mecha surrounded by high catwalks. Most of them are somewhat in a state of disrepair, but a few others seem ready to be piloted.*

**SCENE 5: STOP THIEF!**

**GM:** The players now have the option of stealing a few Gilgamesh type I which appear to be ready for combat (and yes, the weapons are reloaded!) This is a straight out combat scene, with no subtlety. Of course, the Marduk will give the players quite a fight, but they are not expected to win. It is altogether possible, however, that Sherak might get carried away (25%, or GM's judgement) and will try his best to blow them up anyway, regardless of whether he kills Mishalla or not (he will only later realize what he has done, and shrug it off as a necessary casualty of war).

**GOAL:** Get the players out of the Scout Cruiser and back into UN Spacy territory.

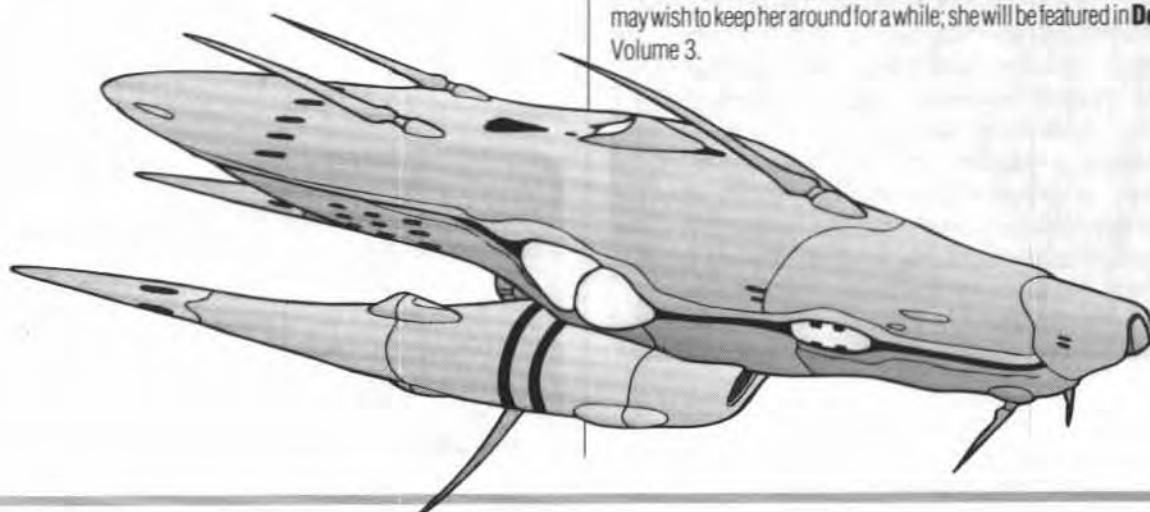

**PLAYERS:** *It has been difficult, and you thought you would never make it out alive, but it looks like Lady Luck smiled upon you and led you safely away from your enemy. Better yet, she put in your hands a lovely lady who appears to be very important to the Marduk. You cannot for the life of you figure out why such an innocent-looking girl would be so important to a warlike people as the Marduk. Unless, of course, there is some social aspect of your enemy's life which you have yet to learn about. You quickly forget about this, however, as you enter UN Spacy territory and discover that the Valkyrie fighters which are heading your way are shooting missiles at you...*

**SCENE 6: HOME SWEET HOME**

The characters will rather easily convince the UN Spacy fighters that they really are on their side and the combat will be aborted fairly rapidly. The characters are escorted back home. It is up to them to try and hide Mishalla (if they wish to) or hand her to the authorities (from which she'll escape within a day — security was a little lax after her dazzling smile and childlike candor charmed every soldier in a one kilometer radius). Whatever happens to Mishalla, the characters are warmly welcomed home and debriefed to collect all the information they may have gathered during their stay aboard the Marduk ship.

**• EPILOGUE**

If the players have befriended Mishalla (or so they think), you can have her stay with them (if they hid her) or return to them (after she escapes the military). She will try to find out (through them) what has happened to Ishtar and perhaps even fake a romance with one of the player characters in hopes of further gaining the humans' trust. From this point on, there are two things that can happen (long term-wise, that is): either she becomes the players' nemesis, or she too falls prey to the humans' powerfully addictive culture and turns coat the same way Ishtar did. That is left entirely to the GM's discretion. Do not forget that Mishalla is a very tough woman under all that soft exterior and can become a strong ally or a vicious opponent. She is by far a stronger character than Ishtar herself, and no matter what happens, she will be an interesting person to have around in the campaign. (Hint: You may wish to keep her around for awhile; she will be featured in **Deck Plans** Volume 3.)

## NON-PLAYER CHARACTERS

### • MICHAEL GOLDWING (III)

The grandson of a Valkyrie pilot of the first war against the Zentran, this newest generation of the Goldwing family proudly follows in the footsteps of his father and his father's father. Just as they both were, he is carefree, optimistic and somewhat reckless (the latter being a trait he received from his Meltran grandmother).

During this scenario, Michael will act like his usual self and will either get the PCs in trouble or will fly to their rescue, depending on whether things are going too well or not. Because he only half-listens to orders and takes action on a whim, he is a somewhat dangerous character to be with. He is, however, rather skilled and always tries to improve himself, difficult as it may be.

Michael Goldwing is provided in this scenario for the GM to use as a hook to get non-combat characters into the adventure or to get those who are already in it into some sort of trouble aboard the ship. He will definitely be attracted to Mishalla, but she will always appear completely uninterested by him. In the long run, he may become suspicious of her, but no one should take him too seriously. After all, he may be only jealous of another guy's fortune...

**Name:** Michael Goldwing

**Alignment:** Principled (optimistic)

**Attributes:** I.Q.: 14, M.E.: 13, M.A.: 12, P.S.: 22, P.P.: 15, P.E.: 19, P.B.: 13, Spd: 20.

**Hit Points:** 37

**S.D.C.:** 57

**O.C.C.:** Valkyrie Pilot

**Level of Experience:** 4th level Valkyrie pilot

**Disposition:** Good guy, tries to behave seriously, happy, curious about Marduk.

**Combat Abilities:** Hand to Hand: Martial Arts, Boxing

**Combat/Attacks Per Melee Round:** 4

**Bonuses:** +2 to strike, +6 to roll with punch or fall, +5 to parry and dodge, +7 to damage, +8% to save vs. coma/death, +2 to save vs. poison & magic

**Skills of Note:** Sense of Balance 75%, Climb Rope 80%, Climbing 25%, Backflip 95%, Prowl 55%, Dance 55%, Radio Basic 70%, Pilot Valkyrie 75%, Automotive Mechanics 50%, First Aid 70%, Pilot Automobile 70%, Pilot Motorcycle 80%, Basic Mathematics 70%, Navigation (Space) 65%, W.P. Sub-Machine Gun.

**Appearance:** Human male, 19 years of age, 6'5", 200 lbs, black eyes and red hair.

**Special Vehicle:** Michael Goldwing has access to his assigned Valkyrie, a VF-2SS that is covered with a gold paint scheme.

**Valkyrie Combat Bonuses:** +2 attacks per melee, +2 on initiative, +2 to strike, +2 to parry, +2/+4/+6 to dodge in soldier/gerwalk/jet modes, +3 to roll with punch, fall, or impact, +1 to leap dodge.

**Equipment of Note:** All standard military issue and personal items.

**Weapons:** Standard for VF pilots.

**Money:** Michael is currently earning \$1575 per month and has \$5400 in savings.

**Quote:** (seeing a Marduk Emulator) "Lookit her! Lookit her! She's gorgeous!!! Hey! Lady! Wait up!"

**Note:** Michael is one-quarter Meltran (from his grand mother).

## • MISHALLA

Not all Emulators are as vulnerable as Ishtar was to Earth's culture and music. The truth of the matter is, most are actually stronger-willed and more stubbornly dedicated to the Marduk way of life.

Mishalla is one of them. She may look kind and gentle, as all Emulators do, but she is in fact devious and malignant, and will not hesitate to turn any intruder in as soon as she gets the chance. She secretly wishes she had been born a man so she could take a more active part in the fighting, but understands her role as an Emulator all the better for that. Her Song of War is thus a little more powerful and motivating than many of her sisters' (an additional +1 to all bonuses listed).

If (when) she meets the characters, she will "play along" with them, making them believe she is on their side if they want her to be. She is a very good actress in that respect and will do a flawless performance for their benefit. They should not realize that she is going to betray them unless they are extremely sensitive to emotions and body language.

**Name:** Mishalla

**Alignment:** Aberrant, fanatically loyal to Lord Emperor Ingues

**Attributes:** I.Q.: 14, M.E.: 15, M.A.: 24, P.S.: 12, P.P.: 17, P.E.: 15, P.B.: 18, Spd: 14.

**Hit Points:** 34

**S.D.C.:** 47

**O.C.C.:** Emulator/scholar

**Level of Experience:** 4th level Emulator

**Disposition:** Schemer, devious, suspicious and feels superior to others (non-Marduk), but courteous and hospitable in appearance.

**Combat Abilities:** HTH: Basic

**Combat/Attacks Per Melee Round:** 3

**Bonuses:** 40% to charm/impress, 80% to trust or intimidate, +7 to roll with punch or fall, +4 to parry and dodge, +1 to strike.

**Skills of Note:** Radio: Basic 75%, Radio: Scrambler 65%, Computer Operation 70%, Read Sensory Equipment 60%, Navigation (Space) 75%, Land Navigation 64%, Maths: Basic 85%, Math: Advanced 85%, Singing, 75%, Lore: Zentran & Meltran 70%, Pilot Marduk Power Armor (basic) 68%, W.P. Energy Pistol, W.P. Knife, Play Instrument: Marduk Flute 60%, Acrobatics (Sense of Balance 80%, Walk Tightrope 72%, Climb Rope 88%, Climbing 40%, Prowl 30%), Gymnastics (Work Parallel Bars & Rings 72%, Back Flip 90%), Athletics, Art: Painting (war-related only) 65%, Language Zentran/Meltran 80%, Intelligence 48%, Astronomy 50%, Biology 50%.

**Appearance:** Mishalla has long white hair and large, saucer-like golden eyes. She is tall (5'7") and slender (125 lbs) and very attractive. Her facial features are fine and delicate, and she is dressed in standard Emulator garb and cloak. She walks with grace, as if she were floating on a cloud.

**Special Vehicle:** Gilgamesh Type I Marduk Power Armor

**Gilgamesh Combat Bonuses:** +1 attack, +2 to initiative, +2 to strike, +3 to parry, +3 to dodge, +3 to roll with punch or fall, +2 to leap dodge.

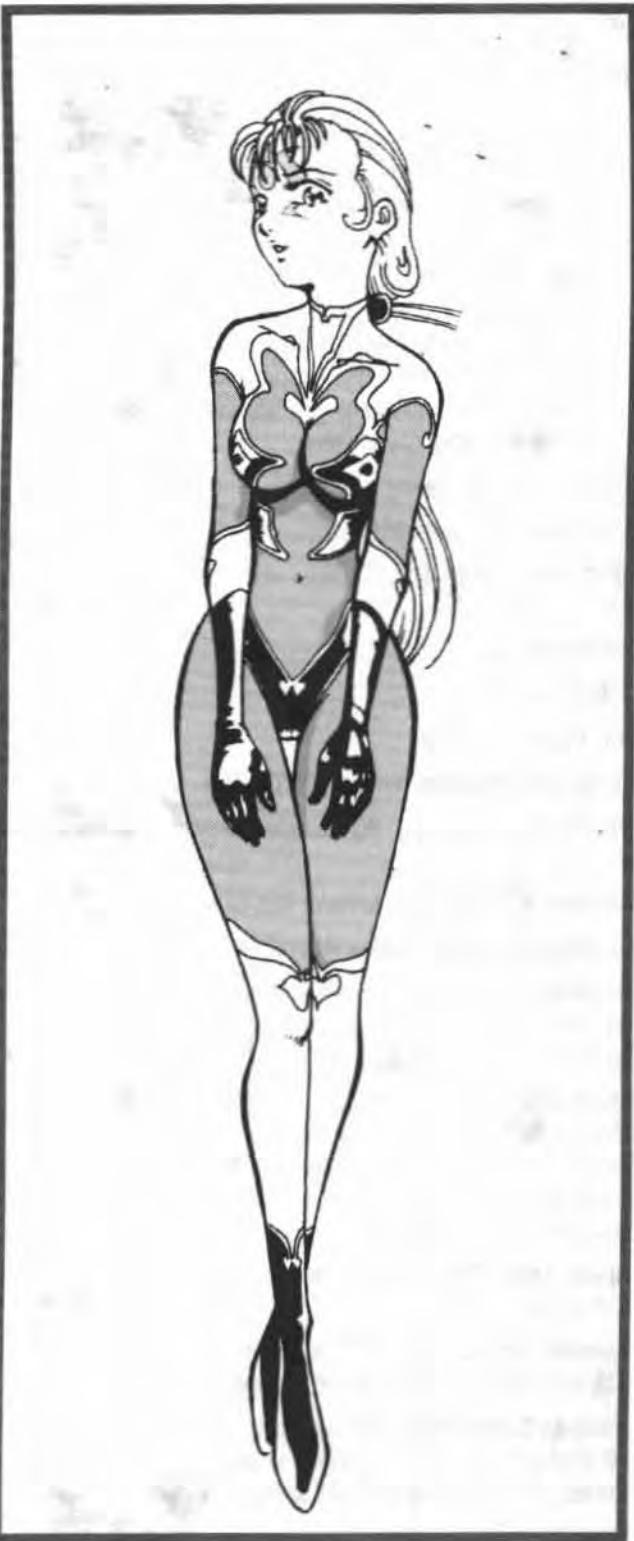

**Equipment of Note:** Variable upon assignment. Two long hairpins (10", treat as knife for combat purposes) and a Marduk flute.

**Weapons:** None visible.

**Money:** N/A

**Quote:** "Please, tell me about your culture. I've wanted so much to learn about you."

**Note:** Mishalla has a slight preference for the company of women over men.

**• SHERAK**

A Marduk officer directly under the command of Mishalla, Sherak is considered by many of his brothers-in-arms to be a little on the crazy side (which is why he has been assigned to this Marduk Scout Cruiser). While he acts normally most of the time, he has been known to have unexpected bouts of violence which, when he lacked a victim, led to self-mutilation. So far, Mishalla has had nothing to fear from him because he appears to be infatuated with her (as most males are), but who knows how long that will last?

Aside from this psychological quirk, Sherak is quite an outstanding Marduk pilot and is a brilliant tactician. He has been known to tackles odds of 1 to 10 and come out without a scratch. Although these are probably exaggerated rumors, the fact remains that he has come out alive of fights when no one else did. Overall, Sherak is a casual killer and will never hesitate to solve a situation by shooting at it.

**Name:** Sherak

**Alignment:** Miscreant, prone to free violence

**Attributes:** I.Q.: 26, M.E.: 25, M.A.: 23, P.S.: 21, P.P.: 24, P.E.: 16, P.B.: 11, Spd: 28.

**Hit Points:** 44

**S.D.C.:** 82

**O.C.C.:** Marduk Officer

**Level of Experience:** 6th level Marduk Officer

**Disposition:** Tough man, a little cocky, definitely on the wild side and very enthusiastic in combat. He enjoys taking incredible risks, lives for the thrill of facing increasingly difficult challenges and is recklessly gung ho.

**Combat Abilities:** HTH Expert, Boxing, Wrestling

**Combat/Attacks Per Melee Round:** 4

**Bonuses:** +2 to pull punch, +5 to roll with punch or fall, +11 to parry or dodge, +7 to strike, Critical on unmodified 18/19/20, +5 save vs psionic attack/insanity, 65% to charm/impress, +6 to HTH damage.

**Skills of Note:** Radio: Basic 102%, Radio: Scrambler 92%, Land Navigation 87%, Navigation (Space) 102%, Wilderness Survival 87%, Pilot Marduk Power Armor (all types) 86%, Pilot Spaceships (all) 96%, Maths: Basic 97%, Maths: Advanced 97%, Climbing 82%, Running, W.P. Automatic Rifle, W.P. Energy Pistol, W.P. Energy Rifle, W.P. Energy Heavy (rail guns & beam cannons), Athletics, Body Building, Boxing, Wrestling, First Aid 92%, Detect Ambush 82%, Escape Artist 82%, Demolitions 105%, Prowl 72%, Pilot Tanks and APCs 72%, Weapon Systems 82%, Demolitions Disposal 90%, Surveillance Systems 72%.

**Appearance:** Under long, raven black hair, a reddish gaze speaks of wild combats and unbridled violence. He is extremely tall (6'5"), sturdy (275 lbs) and has a V-shape that would make Mr. Olympia pale in embarrassment. He is always dressed in personal Marduk armor and walks with the grace of a panther.

**Special Vehicle:** He pilots a Gilgamesh Type I power armor and has access to military vehicles and power armor and spacecraft.

**Gilgamesh Combat Bonuses:** +2 attacks, +2 to initiative, +3 to strike,

+3 to parry, +3 to dodge, +3 to roll with punch or fall, +2 to leap dodge.

**Equipment of Note:** Hard spacesuit (50 M.D.C.)

**Weapons:** Marduk Laser Rifle (2D6 M.D. per shot)

**Money:** N/A

**Quote:** "Die, human, die! DIE DIE DIE DIE DIE DIE! MUA HA HA HA HA HA!!"

### • TYPICAL MARDUK SOLDIER

The Marduk are not all officers, obviously. Some of them have to be warriors, and although the typical Marduk soldier aboard other ships is of lower fighting value, those who staff the Marduk Scout Cruisers are just about as competent and deadly in combat as the standard officer aboard a non-Scout ship.

In this scenario, all the Marduk soldiers have an unbending loyalty to their Lord Emperor Ingues and usually obey their superiors blindly. However, these Marduk soldiers have a mind of their own as well, a trait which comes from interacting with a group of unusual soldiers, officers and Emulators. They are different, more aggressive and more skilled in combat, but they obey some strange code of honor among themselves. Some of the soldiers have developed an *esprit de corps* very uncharacteristic of non-human warriors. They do not think of each other as expendable and will sometimes disobey an order (even a direct one) to save one of their comrades.

Much of this can be explained by the fact that the Marduk Scout Cruiser is almost like a prison to them. Once they end up in a Marduk Scout Cruiser, they will never again interact with the normal Marduk people (officers or Emulators). This is the last stop before death. Many of them resent that to a certain extent, and only the extreme discipline maintained aboard the Scout Cruisers prevents them from starting a rebellion.

**Name:** Typical Marduk Soldier

**Alignment:** Various

**Attributes:** I.Q.: 14, M.E.: 14, M.A.: 13, P.S.: 22, P.P.: 17, P.E.: 16, P.B.: 12, Spd: 34.

**Hit Points:** 28

**S.D.C.:** 82

**O.C.C.:** Marduk Soldier

**Level of Experience:** 3rd level Marduk Soldier

**Disposition:** Usually mildly insane and unpredictable, and very loyal to Lord Ingues.

**Combat Abilities:** HTH Expert, Boxing, Wrestling

**Combat/Attacks Per Melee Round:** 3

**Bonuses:** +5 to roll w/punch, fall or impact, +7 to parry and dodge, +3 to strike, pin on 18-19-20, +7 to damage.

**Skills of Note:** Cryptography 55%, Radio (Basic) 80%, Radio (Scrambler) 70%, Surveillance Systems 55%, Read Sensory Equipment 65%, Navigation (Space) 75%, Computer Operation 65%, Pilot Marduk Power Armor (All Types), Pilot Spaceships (all) 72%, Basic Math 65%, Advanced Math 65%, Climbing 55%, Running, W.P. Energy Rifle, W.P. Energy Heavy, W.P. Energy Pistol, W.P. Heavy Weapons, Athletics, Body Building & Weight Lifting, First Aid 60%, Demolition 69%.

**Appearance:** Various

**Special Vehicle:** Marduk Soldiers usually pilot a Gilgamesh Type I, although they can be assigned other vehicles upon assignment.

**Gilgamesh Combat Bonuses:** +1 attack, +3 on initiative, +2 to strike, +3 to parry, +4 to dodge, +4 to roll w/punch, fall or impact, +3 to leap dodge

**Equipment of Note:** Standard Marduk EVA, Marduk Type I officer power armor, energy rifle, compass, two uniforms, two dress uniforms and personal items.

**Weapons:** Marduk Laser Rifle (2D6 M.D. per shot)

**Money:** N/A

**Quote:** "I hear and obey... usually."
