

Template Specifications

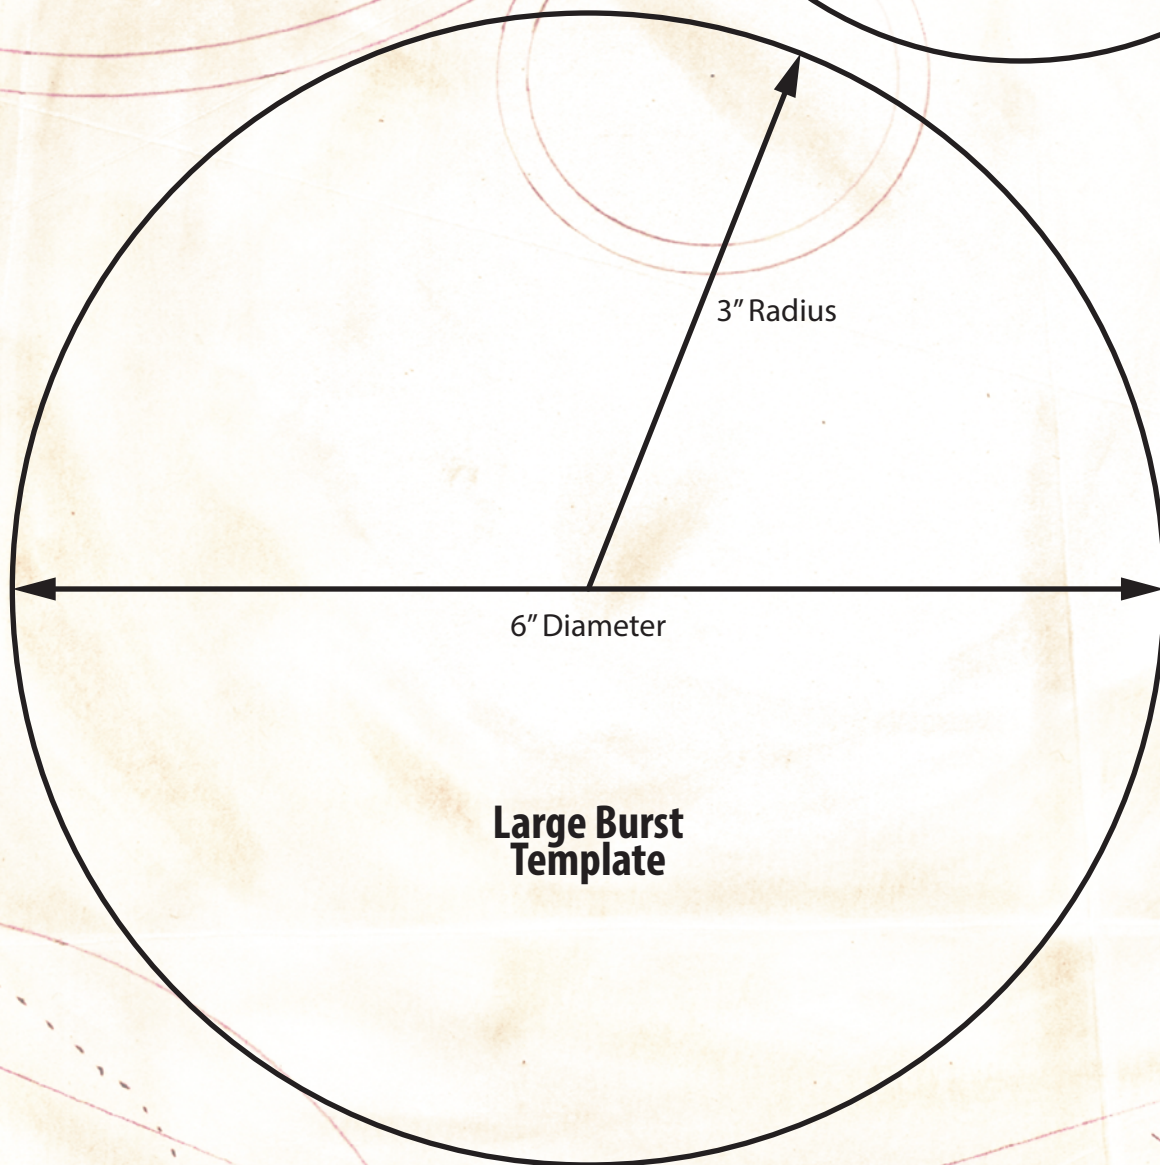

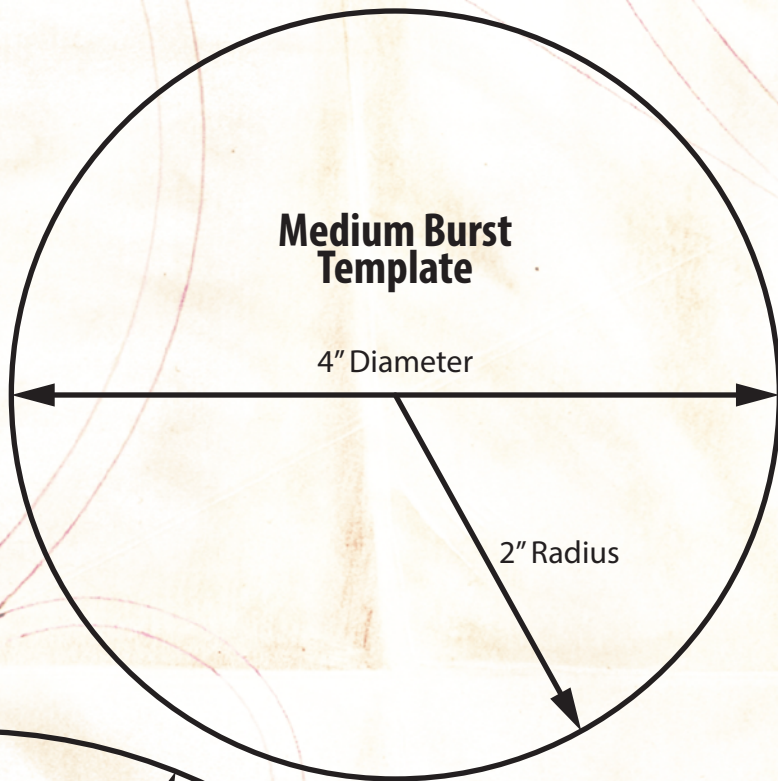

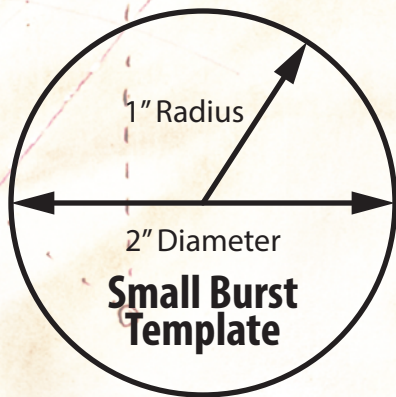

The basic dimensions of the burst and cone templates are described on the template pages in the *Savage Worlds Deluxe* books. This document is for those of you who want more precise mathematical details or who would like to create customized templates for use in your home games.

This document has a number of layers. If you don't want to see the names of the templates, turn off the Template Names layer. Don't need the arrows and specifications? Turn off the Template Dimensions layer.

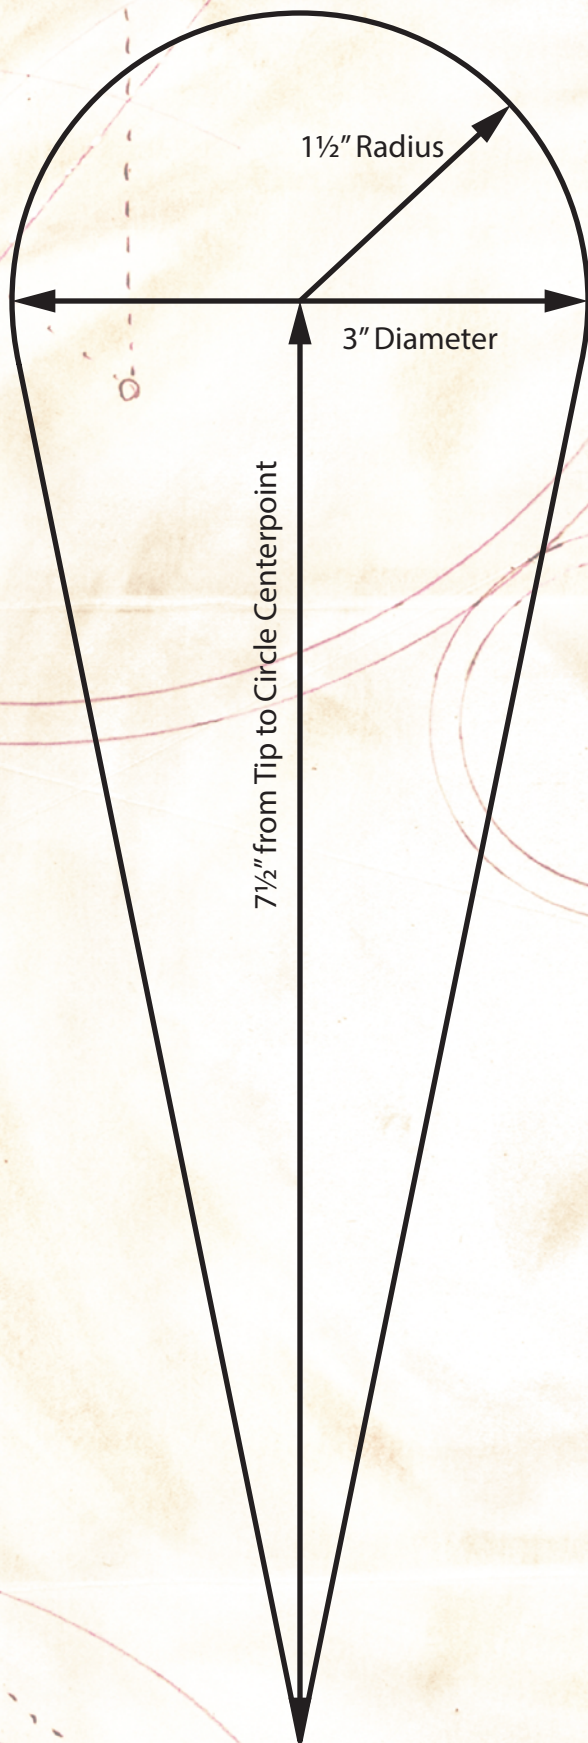

If you want to use the outlines to make your own custom templates, be sure to double-check the dimensions after the shapes are imported into your graphics programs.

If you want to print this document, be sure you select No Scaling (or the equivalent option) in your print dialog box so that the templates print at the correct size. If you're using a non-1" grid, be sure to scale your templates appropriately. For example, print at 150% for 1.5" grids.

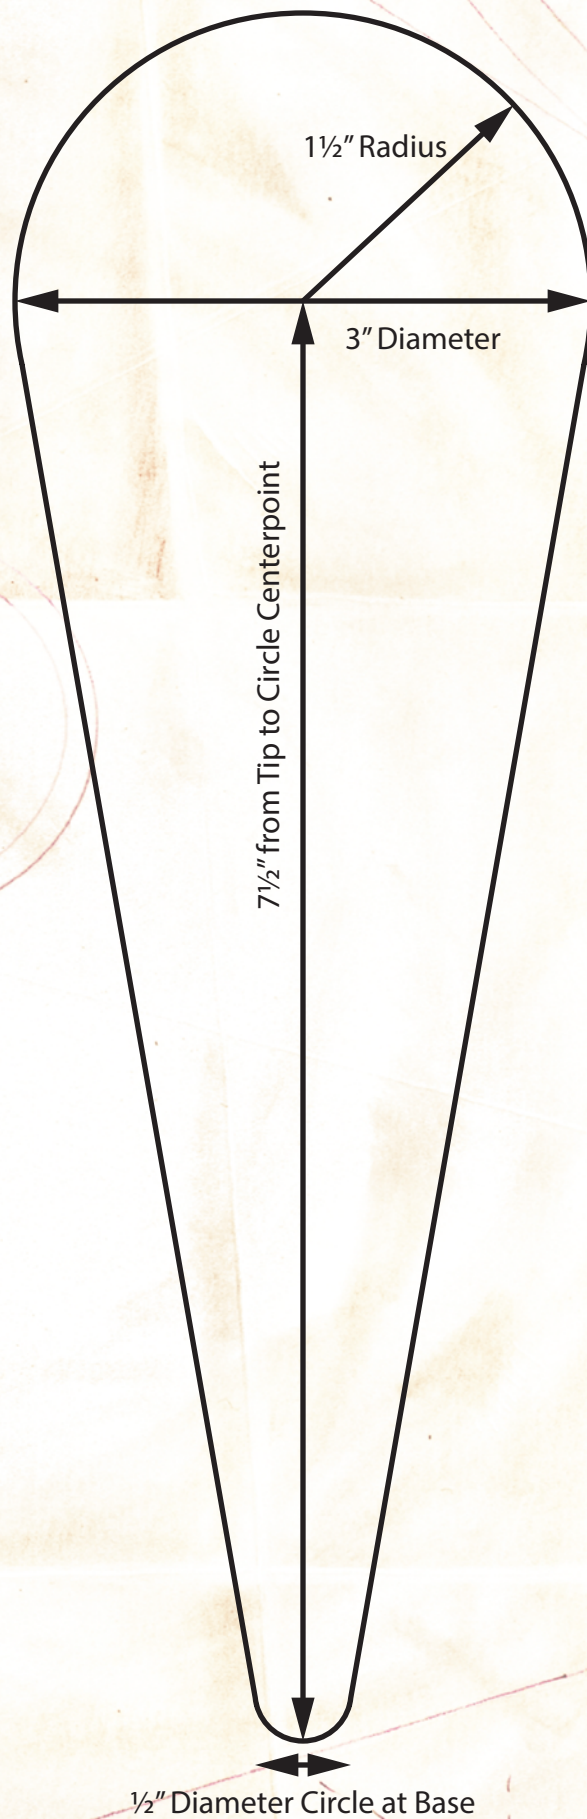

If you want to share your custom templates with other *Savage Worlds* fans, be sure to visit the Pinnacle forums at www.peginc.com/forum.

Precise Cone Template
