

Morjakar

The planetoid of Morjakar does not really belong to the Cularin system. Morjakar's origins could be traced (if possible) to a very old system half a galaxy away. The sun of that system turned into a red giant and destroyed the planets. Morjakar was the farthest terrestrial planet from the sun, and instead of being consumed it was somehow thrown from the system.

Homeless, it wandered for thousands of years, eventually passing the fledgling Cularin system. The heavy gravity of the planets and two suns attracted it into an eccentric orbit, and there it has remained. While the rest of the planets have orbits that all lie in a plane, more or less, Morjakar's orbit lies at an angle of about 50 degrees relative to that plane. It travels far from the suns, then comes back and passes through the system's plane somewhere between the orbits of Acilaris and Cularin.
