INTRODUCTION

Within the Traveller universe there is a vast array of different ships that may be encountered in the spacelanes. Within this book are a wide variety of vessels with which to add variety to your Traveller game, expanding greatly the numbers of craft a Referee may choose from.

These are all designed using the ship design rules found in the *Traveller Core Rulebook* and *Traveller Book 2: High Guard*, combined with some anti-personnel weaponry found in *Traveller Supplement 4: Central Supply Catalogue*.

The ship sections are divided into the following:

Small Craft

A selection of smaller ships. These include fighters and shuttles. There are also more specialised craft designed for boarding actions or planetary assaults.

Military Craft

Larger warships these are mostly of a small displacement and are the kind of ships likely to be encountered commonly rather than the vast battleships that dwarf most other starships. Small patrol cruisers, support vessels and command ships are to be found here.

Scout Vessels

These ships are used by the Imperial Scout Service in their many different roles. Besides survey ships there are couriers and espionage craft.

Civilian Ships

A wide selection of mercantile ships to fill many a niche in the starlanes. Besides merchants there are liners and even an interstellar casino.

Aslan Ships

Ships of the Hierate, with both civilian and military vessels represented.

Darrian Ships

Ships of a more peaceful nature are detailed here, with research and medical ships detailed.

Vargr Ships

Ships of the Hierate, with both civilian and military vessels represented. Adapted to the unruly conditions of Vargr space there are many raiders and specialised merchant vessels.

SMALL CRAFT

ESCORT FIGHTER

This fighter is commonly used as a fighter screen around unarmoured ships to shoot down incoming missiles. Deployed from small carriers, this is used more by military units, mercenary companies usually favour other designs. The escort fighter is a Technology Level 12 design.

This is a standard design for which the 10% discount applies.

Escort Fighter			Tons	Price
Hull	10 tons	Hull 0	—	1,000,000

PASSENGER SHUTTLE

Designed to take passengers, in some comfort, up to a space station or orbiting ship. Some are also used for transport between space stations and other orbital facilities, or occasionally to transport passengers around on the same planet. The aerofins are retractable. This is a Technology Level 12 design.

The normal crew consists of a pilot and navigator/comms. A steward may also be carried.

This is a standard design for which the 10% discount applies.

Passenger Shuttle			Tons	Price
Hull	60 tons	Hull 1	—	1,600,000

Total Tonnage & Cost			60	23,796,000

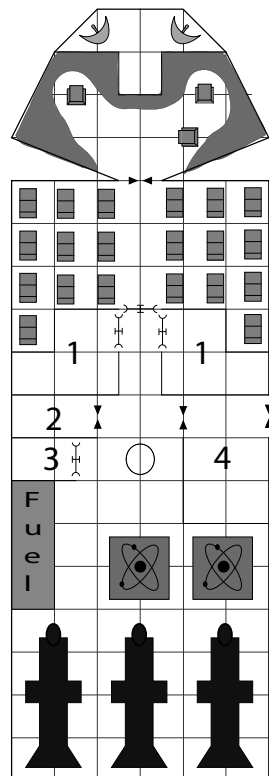

BOARDING SHUTTLE

Used to send marines over to board another spacecraft. The breaching tube will make short work of going through an airlock or even directly through the hull. Attacking an airlock is preferred as that will leave the rest of the hull intact but if it cannot be lined up then it can go directly through the hull. This is a Technology Level 12 design.

The normal crew consists of a pilot and navigator/comms.

This is a standard design for which the 10% discount applies.

DUAL USE FIGHTER

This fighter can be used to strafe targets on the ground or be part of a fighter screen against other ships. The gauss gun has a high rate of fire and has a magazine containing 12,000 rounds of ammunition. Fast and manoeuvrable, it can make short work of targets on the ground while being hard to hit. The dual use fighter is a Technology Level 12 design.

This is a standard design for which the 10% discount applies.

Dual Use Fighter			Tons	Price

MILITARY CARGO TRANSPORT

Unlike a civilian version, the military cargo transport is expected to go into hostile areas so it has some armour to protect it from enemy fire, though the preference is for these to be going into areas that are already secured this is not always possible. Used to transport vehicles and other supplies to those on the ground and sometimes personnel as well.

The normal crew consists of a pilot, navigator and a cargo master. The military cargo transport is a Technology Level 12 design.

This is a standard design for which the 10% discount applies.

Military Cargo Transport			Tons	Price

Total Tonnage & Cost			60	49,284,000

Puff

Designed for an air support role for ground operations, this fighter is not of much use in space but can be effective against ground targets. Can also use its jammers to disrupt enemy communications. Usually either anti-armour or anti-personnel missiles are carried depending on the intended role, multiple fighters may be deployed with some carrying the anti-personnel ones to assist in taking out enemy formations, while others carry the anti-armour version to take out tanks and other armoured vehicles. Four tac missiles can be mounted. The flamer uses a 40 round magazine and can be used against either personnel or vehicles. Puff is a Technology Level 12 design.

This is a standard design for which the 10% discount applies.

UTILITY POD

A general purpose craft designed to carry out a variety of duties. Can perform maintenance work and manipulate smaller cargoes with its grappling arm. The docking clamp can be used to transport cargo containers.

This craft is equally at home in space or in a planetary atmosphere. Commonly carried aboard freight haulers where non cargo space is at a premium this alleviates the need for multiple small craft to handle different tasks.

The utility pod is in common production and the price reflects the 10% discount.

Utility Pod			Tons	Price

HEAVY MODULAR CUTTER TYPE 1C

This heavy version of the standard cutter allows two standard modules to be carried. Often seen around space ports, this design fulfils many roles such as shuttle, cargo hauler and fuel tanker to name a few. With the ability to carry two different modules, this is a versatile craft.

Unlike the smaller version the Type 1C carries an engineer to keep an eye on the engines and to assist in removal and fitting of modules. Unlike the standard version, its aero-fins allow improved atmospheric capabilities and thus it makes an ideal planetary landing craft.

Any standard module may be fitted. Normal crew consists of a pilot, navigator and engineer. The Heavy Modular Cutter is a TL 11 Design.

Additional Modules:

Science Module

Equipped with Labs, Sensor Drones and an air raft bay, this module is primarily for planetary exploration and research. Cost: 4.6 Mcr.

Tanker Module

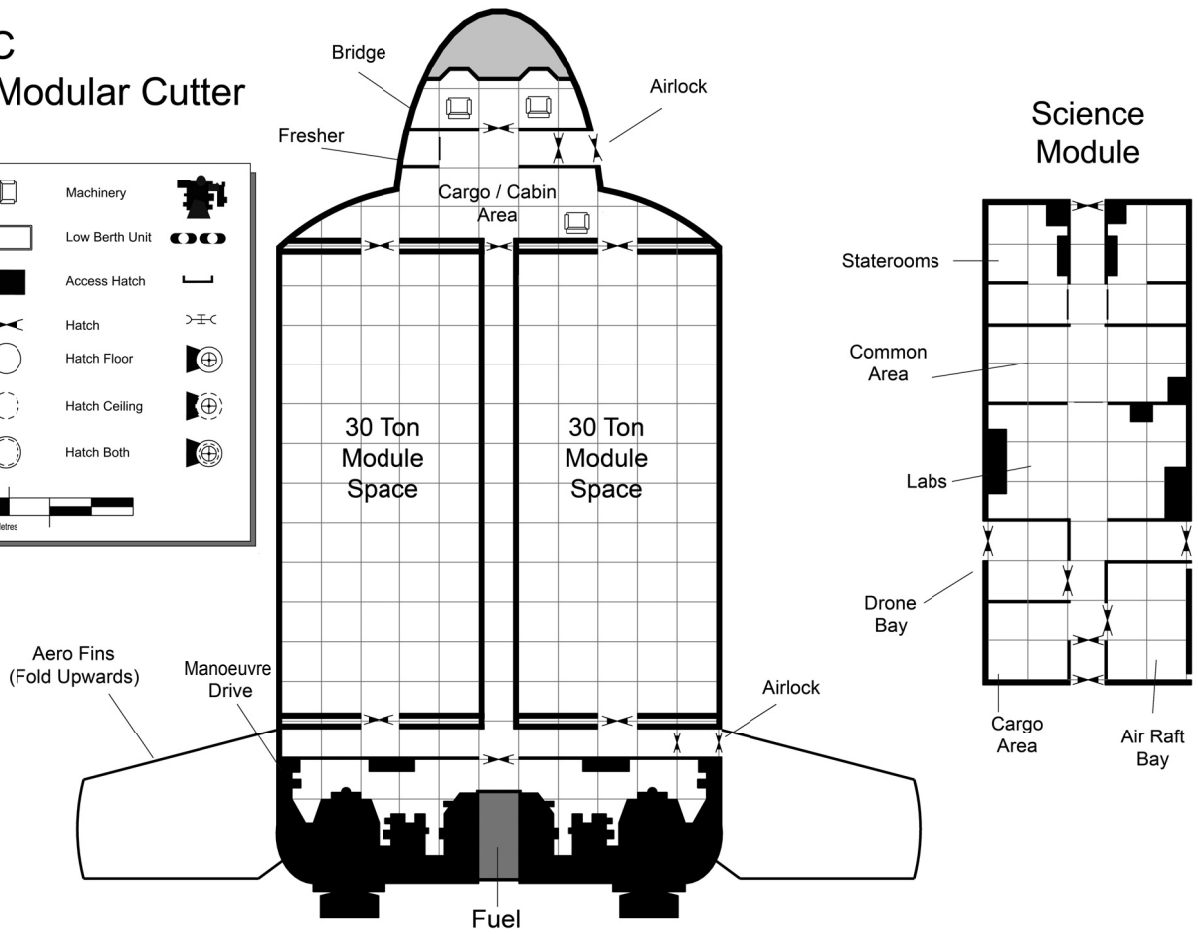

Can carry 29 Tons of fuel, which it can collect and refine it. One fuel purification plant is fitted which can be accessed from the Cutter. Cost: 1.4 Mcr.

Salvage/Recovery Module

Designed for salvage or recovery/repair operations. Cargo bay can hold up to 26 tons. Both grapple pods can move from underneath the module and up into the cargo area. Both pod access areas contain airlocks for EVA work.

Cost: 3.3 Mcr

Type 1C Heavy Modular Cutter

CIVILIAN HEAVY CUTTER

MILITARY HEAVY CUTTER

HEAVY MODULAR CUTTER TYPE 2M 'HEAVY LIFTER'

Unlike the Type One, this version of the Heavy Modular cutter carries a single 60 ton module. The version below is the Military version, equipped with slightly better electronics and weapons than the Civilian Type 1. This design is mainly used for landing operations and can defend itself to a certain degree.

Normal crew consists of a pilot and navigator/gunner. The Heavy Modular Type 2M Cutter is a TL 11 Design.

Heavy Modular Cutter Type 2M			Tons	Price (Mcr.)

Standard Module

A basic 60 ton module, usually fitted to carry 20 troops with their equipment and a single APC. The interior is so designed so it can be modified for other purposes such as a cargo carrier or vehicle lander. Cost: 2.2 Mcr

Type 2M
Heavy Modular Cutter
'Heavy Lifter'

DEPLOYMENT SHUTTLE

This is used to quickly deploy up to 40 marines to where they are needed and protect them while doing so. The anti-personal weapons are used to clear the landing zone of hostile forces or obstructions. There are also ports on the sides that can be opened so the marines can use their own weapons while remaining protected within the deployment shuttle. The aerofins can be retracted to fit into smaller landing zones and for easier storage. The deployment shuttle can be built at a Technology Level 12 shipyard with the anti-personal weapons supplied from elsewhere or added later.

The normal crew consists of a pilot and navigator/comms.

This is a standard design for which the 10% discount applies.

ISAZASE LUXURY SHUTTLE

Most passenger shuttles are pretty much utilitarian affairs, with little in the way of comfort. Not so with the Isazase, built with the rich in mind, this allows passengers to be carried in some comfort with the addition of a galley and entertainment area. The entertainment area allows passengers to dine, drink or have in flight entertainment such as live music and holo vids.

This ships are found onboard the Shakarkha Liner and elsewhere.

Normal crew consists of 2 pilots. Normal passenger capacity is 30. The Isazase is a TL 11 Design.

TRANSPORTER

This ship transports cargo modules to where they are required without any need to land, keeping to a higher altitude. It may be escorted by fighters if necessary.

The cargo modules are specially outfitted with sensors and a small anti-grav generator powered by an internal battery. When the sensors indicate the cargo module is close enough to the ground the anti-grav generator is activated and the descent through the atmosphere slows until contact is made with the ground. These modules are reusable, the battery just needs recharging after each use.

Typical cargo would include vehicles, ammunition and other supplies for troops on the ground. Though there have been other uses as well. Explosives filled versions where the anti-grav generator has been deactivated have been used to drop on enemy fortifications, a gas version where it is set to release the gas at an altitude designed for maximum dispersal. Even one filled with leaflets that were released above a civilian population for propaganda purposes. There have been some experiments done with small manoeuvring jets attached and a radio link for control from the ground. The transporter is a Technology Level 12 design.

This is a standard design for which the 10% discount applies.

MILITARY CRAFT

CENTAUR CLASS MERCENARY CARRIER

Originally designed as a micro escort carrier for vulnerable convoys, the Centaur has found its way to becoming a sister vessel to the standard Mercenary Cruiser. Acting either as fighter support to other units or as a separate operating force in itself, with the ability to launch small ground operations with air support. Corporations or Governments often employ these in the role they were originally designed for, as escorts to freight convoys. In addition some have been used as anti raider forces and additional support to System Defence forces. For small scale actions the Centaur is a potent force, it never carried much favour with the Navy as they preferred the larger Carriers, hence its new role as a mercenary fighter carrier.

Typical load for the Centaur is 20 fighters, stacked into the full sized hangar. Cargo space usage is for fuel/spares for the embarked fighters and sometimes an additional module for the cutter. The cutter is often used for refuelling, ground operations and fighter crew retrieval. Two grapple arms under the hangar are used for retrieving damaged craft or ones that have run out of fuel.

Normal crew consists of a Captain, XO, Flight Officer, Medic, Chief Engineer, 2 Pilots, Astrogator, 20 Small Craft Pilots, 8 Gunners and 6 Engineers. The barracks space is for up to 20 troops or additional engineers/flight crew. The Centaur is a TL 12 Design.

COMMAND BOAT

Meant to serve as a command ship for task forces it carries a command craft but can still operate without this if one is not available. There are extra staterooms for the command staff and a couple of briefing rooms often used for planning fleet operations. The docked command craft is designed to drop right out of the hull and get away quickly if there is an emergency. This ship adds its own firepower to the battle as well as offering protection for the crew. Some lower tech systems that can afford to do so have purchased this vehicle for their own use, importing parts and technicians as needed to service the ship.

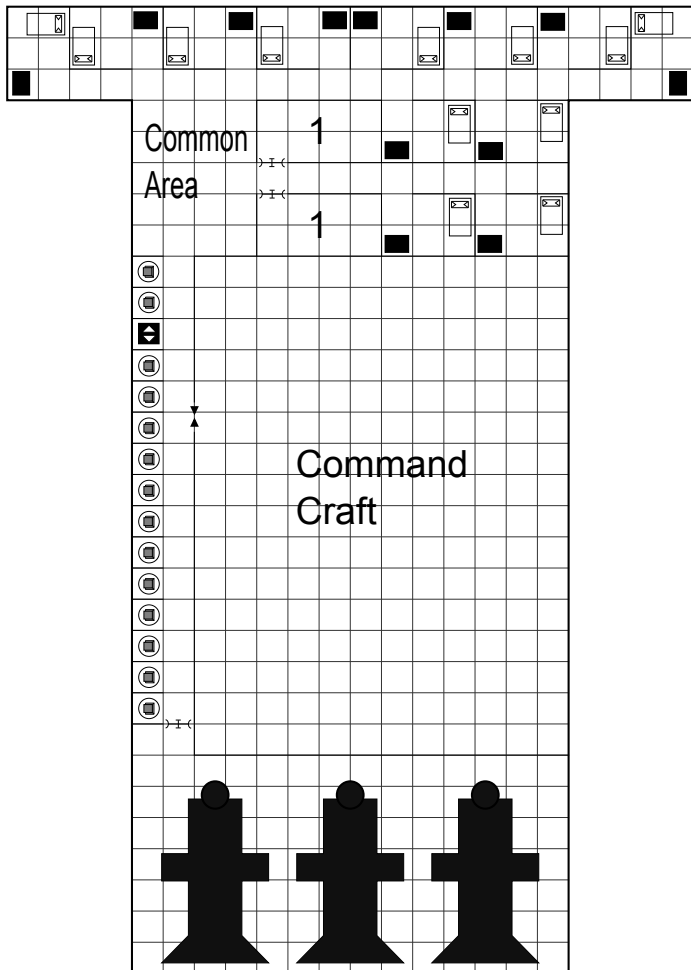

The normal crew compliment is 22 consisting of: captain, three pilots, navigator, medic, two engineers and 12 gunners. Plus five crew for small craft, 20 marines and various general officers depending on the command needs at the time. The command boat is a Technology Level 15 design.

This is a standard design for which the 10% discount applies.

COMMAND CRAFT

The command craft is designed as a mobile command bridge that can be linked up to other ships as needed. Also acts as a life boat protecting the command staff in case of an emergency. This is not designed to house the command staff or crew for an extended period of time.

The command craft uses a crew of three: pilot, navigator and engineer. The command craft is a technology level 12 design.

This is a standard design for which the 10% discount applies.

System Linkage: This allows connections between the various systems (sensors, bridge, power and so on) of two or more ships. Can be used between craft in a hangar or using docking clamps. With the link in place all data is shared between the two craft. This is a complete connection, one craft's bridge could be used as the bridge of the other craft for example, though this only allows limited control if the bridge is smaller than that required for the other craft. The connections are set up so they can be easily severed. This costs Cr. 50,000 and both ships must be equipped this way for the connection to be made.

DRAGON

The dragon class of ship is used for special operations. These are designed to carry heavy firepower behind enemy lines and disrupt lines of supply as much as possible. Besides the loss of the supplies from ships destroyed behind enemy lines, the intent is to also pull larger ships away from the front lines for patrol or escort duty to protect shipping.

Standard operating procedure calls for jumping in with the first priority being refuelling so as to be able to make another jump as soon as the need arises. Usually these ships do not stay in one place too long but jump out to another system once they have destroyed what they can, possibly deeper into enemy territory. Designed to operate alone in enemy territory for long periods of time without resupply they do not carry any expendable munitions, relying on a powerful array of energy weapons instead.

The normal crew compliment is 24 consisting of: captain, executive officer, communications officer, medic, two pilots, astrogator, three engineers and 14 gunners. Usually there is a complement of 20 marines on board. The pinnacle is usually crewed by the regular ship's crew or the marines.

Only a few of these ships have been built but the shipyard is practiced at it and this ship qualifies for the 10% discount for a standard design.

ESCORT CARRIER

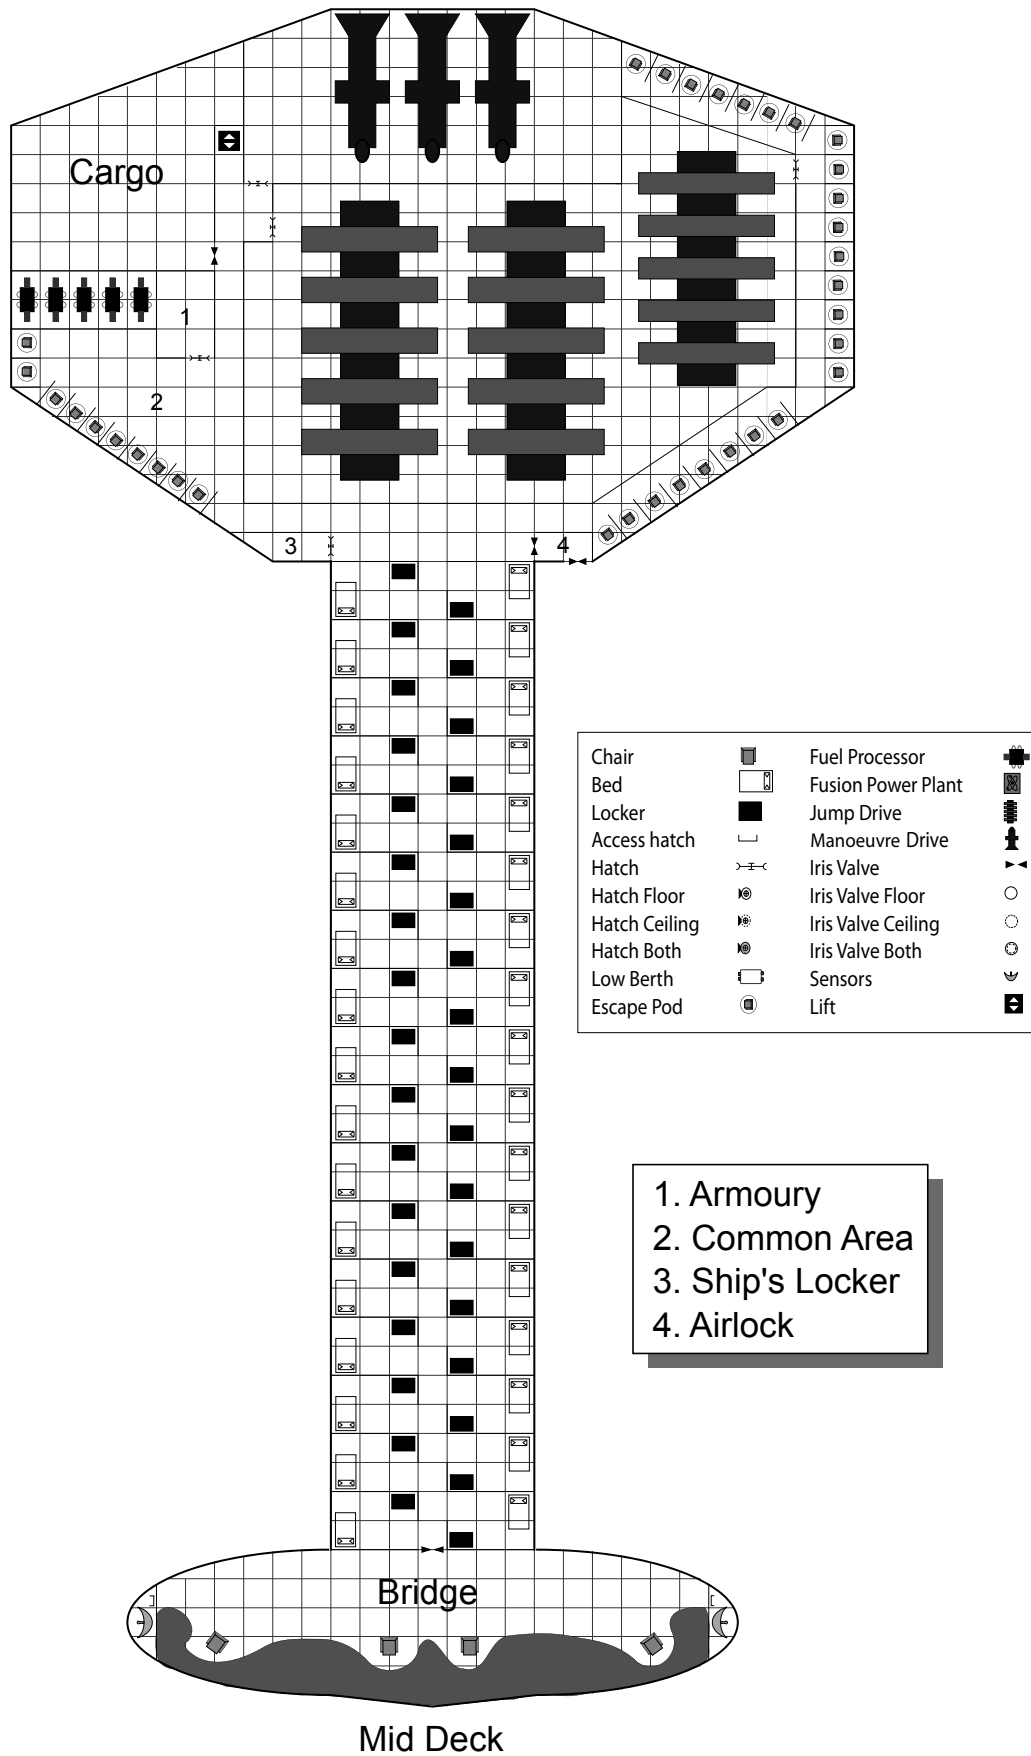

Used for escorting other ships, the fighter complement usually consists of escort fighters that can be deployed to help protect ships in a convoy from various points. The carrier itself can also aid in this effort using its own laser turrets. Sometimes used to carry other types of fighters for a particular mission where a larger carrier is not needed.

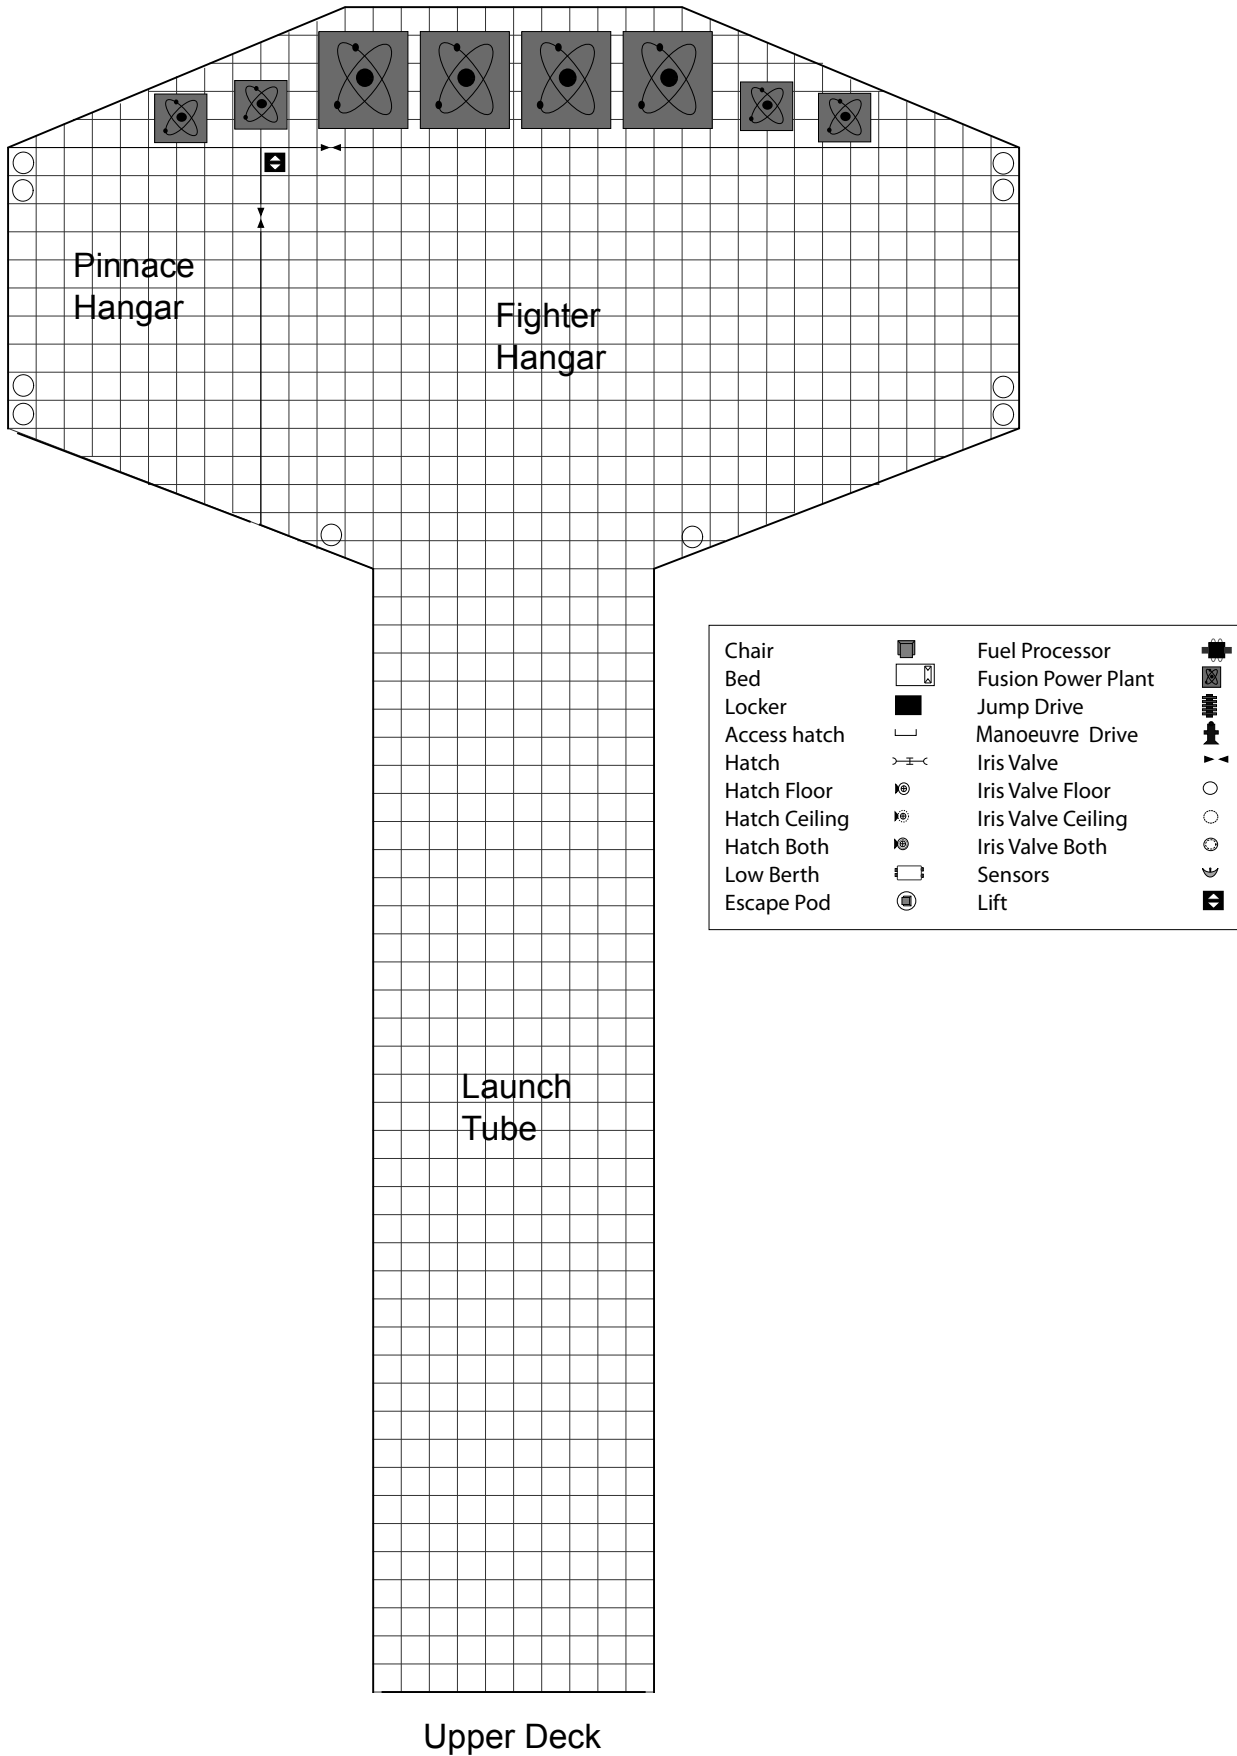

The normal crew compliment is 59 consisting of: captain, executive officer, three pilots, astrogator, four engineers, medic, 14 crew for small, 13 maintenance personnel for small craft, 11 flight support crew and 10 gunners. The escort carrier is a Technology Level 13 design.

This is a standard design for which the 10% discount applies.

NAVAL REPAIR VESSEL

Used by the Imperial Navy to repair ships without needing to pull them out of the line and send them back to a shipyard, keeping ships out on patrol out where they are needed, or to repair ships unable to make it back to the shipyard.

The normal ships crew is 14 consisting of: captain, pilot, astrogator, four engineers, three small craft pilots, six gunners and a medic. Additional specialists are carried to help in the repairs of other vehicles.

This is a standard design for which the 10% discount applies.

PLANETARY ASSAULT SHIP

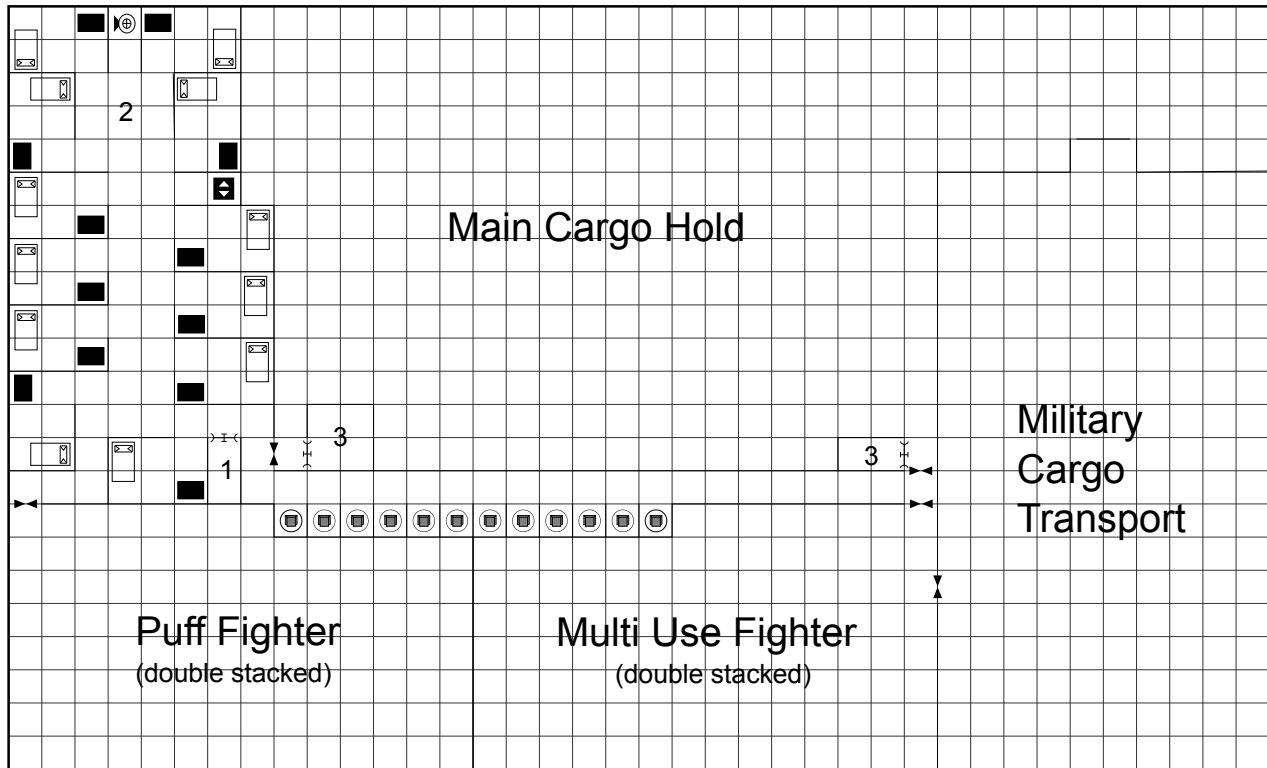

Used to support those on the ground with firepower, fighters and equipment. If operating in an area where hostile space forces are likely this ship usually operates with escorts. The cargo hold usually carries an assortment of vehicles such as tanks, APC's and other specialised vehicles depending on what might be needed for the situation.

The normal crew compliment is 46 consisting of: captain, executive officer, three pilots, astrogator, three engineers, medic, 12 gunners, 13 crew for small craft and 11 maintenance personnel for small craft. 20 marines are usually carried as well. The planetary assault ship is a technology level 12 design.

This is a standard design for which the 10% discount applies.

RITCHEY CLASS ESCORT

Escorts are used to help protect other ships in a fleet or convoy and are not meant to be going up against larger vessels on their own. The Ritchey class escort may be used to help mop up damaged ships or stand off and use their missiles to add to the firepower of larger vessels. The Ritchey class escort is a Technology Level 13 design.

This is a standard design for which the 10% discount applies.

TENDER

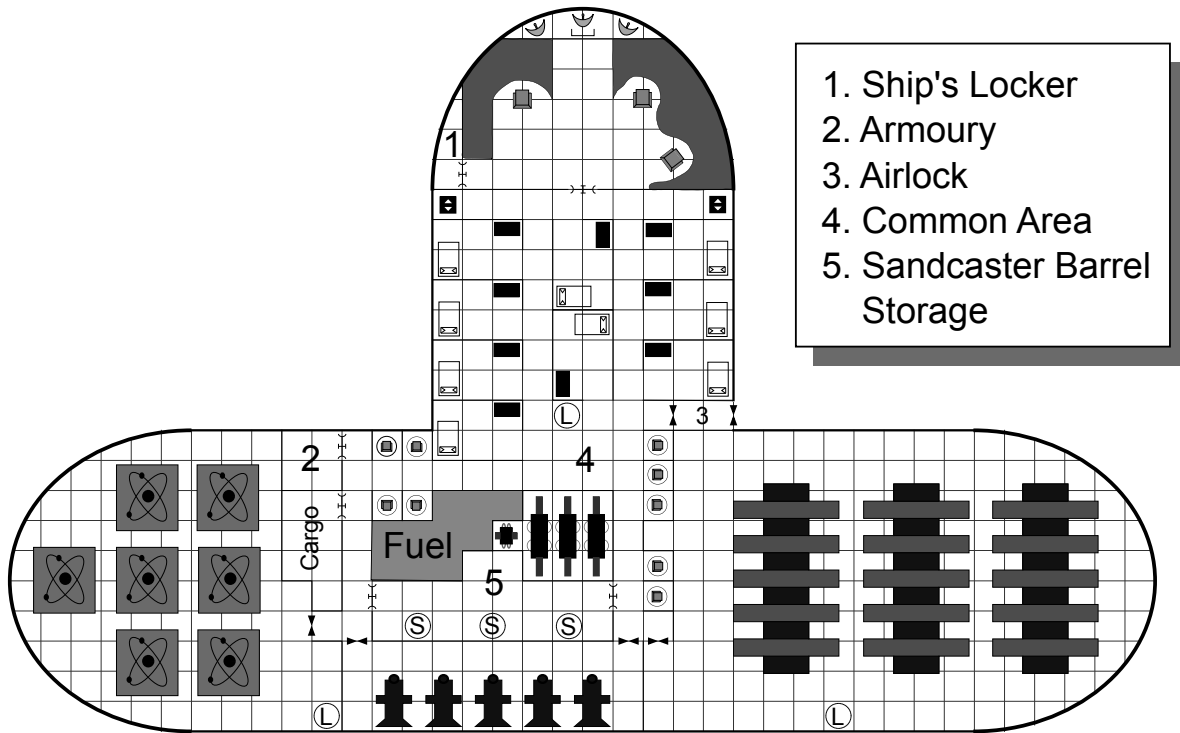

These are used by the Imperial Navy to resupply vessels on the front line or on patrol. The utility pod transports cargo containers over to the ship, which gets unloaded while the utility pod is fetching the next one, then it brings back the now empty one. Some decommissioned tenders have found their way into civilian service as trading vessels. There are a couple of extra cabins that can be used to bring replacement personnel out to the ship and others back.

The normal crew compliment is 13 consisting of: captain, pilot, astrologer, six gunners, three engineers and a small craft pilot. The Tender is a standard design and benefits from the 10% discount in cost.

TROOP TRANSPORT

The troop transport is not meant to engage in battle, though it has some defensive weapons. The usual procedure is for these to jump in after a system has been secured, or to stay in a rear area and use their small craft to send troops into the hostile zone for boarding or ground assault as needed. For larger operations several of these may work together, usually accompanied by escorts for protection.

The normal crew compliment is 32 consisting of: captain, executive officer, 10 gunners, four engineers, medic, three pilots, astrologator, seven crew for the small craft and 4 maintenance personnel for the small craft. The ship may also carry up to 220 marines. There are several extra cabins for any specialists who might be needed. The troop transport is a Technology Level 12 design, not including the deployment shuttle.

This is a standard design for which the 10% discount applies.

SCOUT VESSELS

FAR SCOUT

This ship can perform the same functions as the Type S but has increased jump range so can be used in some places where the Type S is not a viable option. Besides the jump 4 capability it also has upgraded scanner capabilities and advanced probe drones over the standard Type S. These are not as commonly encountered as the Type S and are mostly found in the Scout service.

The normal crew is two consisting of a pilot/navigator and an engineer. The far scout is a Technology Level 14 design.

This is a standard design for which the 10% discount applies.

SERPENT CLASS SCOUT

Typically given to scouts who have shown good initiative, this class is often preferred over the more common Type S for its more advanced sensors and probe drones. It also offers better atmospheric manoeuvrability. This ship is usually assigned to exploration or survey missions where the more advanced sensors can be utilised.

Like the Type S, this ship can be operated by one person.

At the Referee's discretion, a Serpent-class Scout may be substituted for a Type S Scout on the benefits table.

DONOSEV CLASS SURVEY SCOUT

The Donosev is common survey vessel in use with the Imperial Interstellar Scout Service. This vessel's primary mission is the continual re-survey of interior regions of Imperial space, continually updating charts, maintaining navigation beacons and replacing or placing hazard markers. These vessels are also able to conduct planet surveys, relying on the cutter and air-raft to carry survey crew to a world's service. Two modules are carried, one for refuelling and the other for planetary survey missions. Usually these vessels are unarmed, however tonnage has been set aside for weapons.

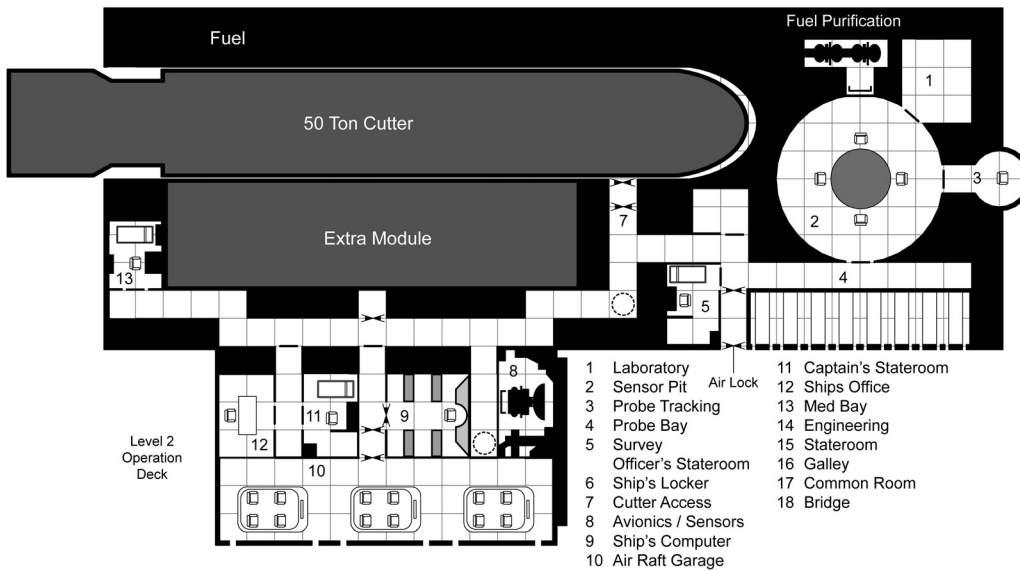

Normal crew consists of 1 Captain, 2 pilots, 1 Navigator, 2 Engineers and 8 Survey Crew.

This a TL 15 Design. This is a standard design which benefits from a 10% discount.

Donosev Class Survey Scout

GISHIASH STEALTH SCOUT

This ship is designed for missions requiring secrecy. With advanced electronics, stealth hull and jump, this ship is designed to see but to not be seen. Based on the standard S-Type, the main external difference is the large bulge housing the survey suite, an unusual piece of equipment to be on such a small ship. Additional crew facilities and comforts allow the crew to remain on station for long periods of time, without boredom and monotony becoming an issue.

Usual missions involve covert intelligence gathering or the insertion/retrieval of covert teams. The IIS will often use the Gishiash for observing new species where direct contact would be dangerous to the scout team or the race in question. After observing the species for a time, a decision will then be made to contact the species or not.

The Navy has some of these units also, employed as scouts or electronic warfare ships, often stripping some internal fittings for additional armour. Normal crew consists of a pilot, astrogator/sensor specialist, engineer, gunner and engineer with room for 4 passengers in cold berths. The Gishiash is a TL 13 Design.

QUETZACOATL CLASS SCOUT

The Quetzacoatl is a larger more specialised version of the ubiquitous Type S Scout. Designed for long range and atmospheric operations, this design is a popular ship in the scout service and is fitted with addition survey sensors, along with a laboratory.

Additional crew comforts have been fitted to allow the crew to function well on extended missions. The lab is manned by two scientists or survey specialists, though some ships double bunk the science crew, should the need arise. Though fitted with two hardpoints, the rear one is usually empty and is used as an stellar observation dome.

Normal crew consists of a pilot, astrologator, engineer, gunner and 2 scientists. The Quetzacoatl is a TL 12 Design.

CIVILIAN SHIPS

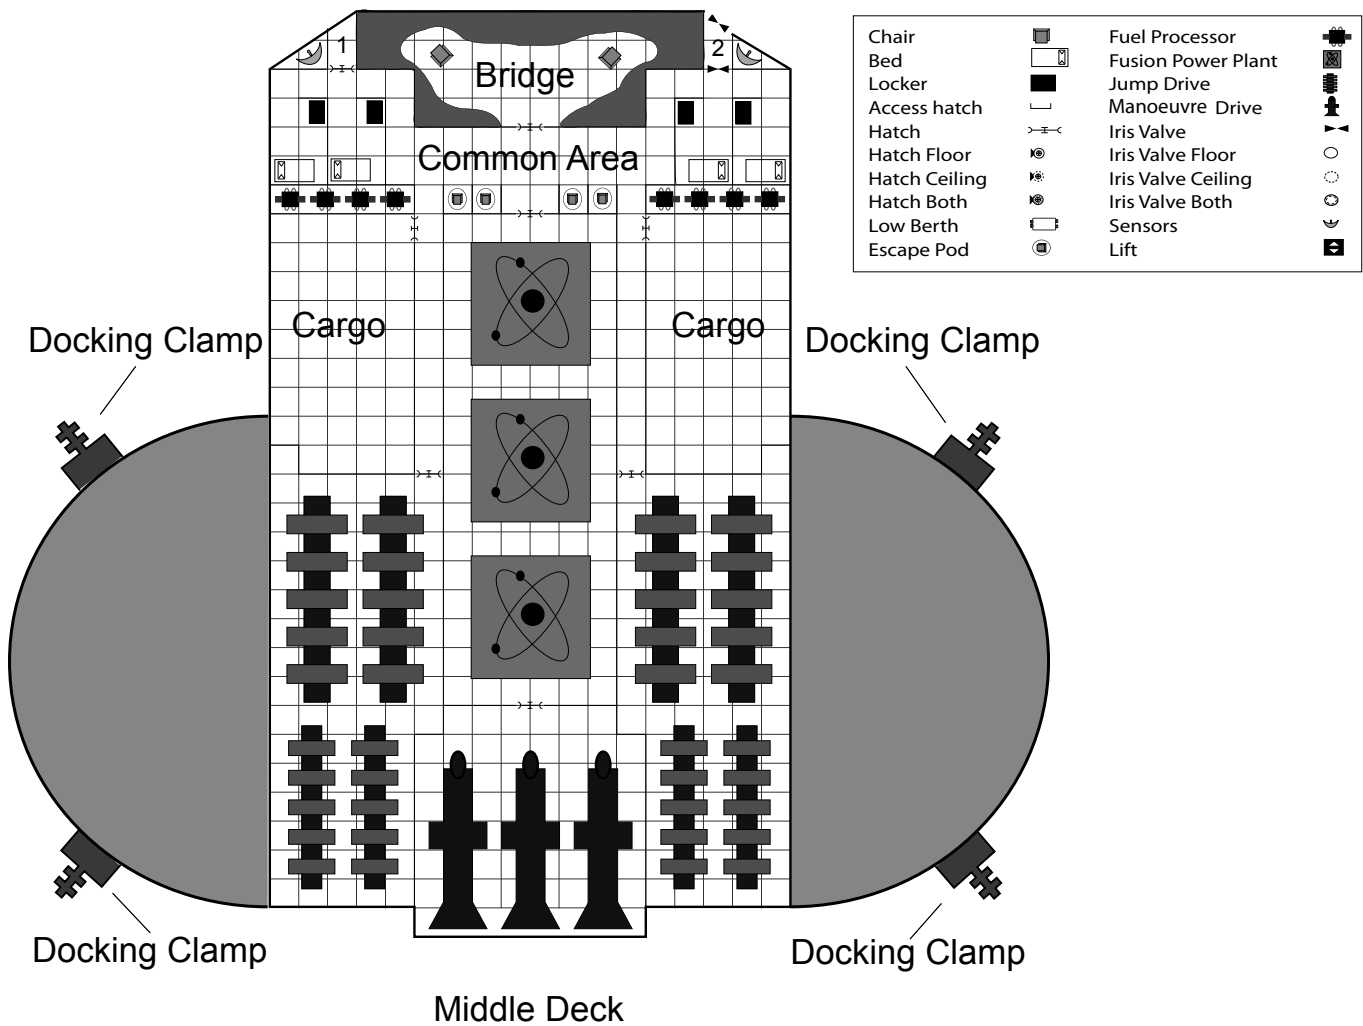

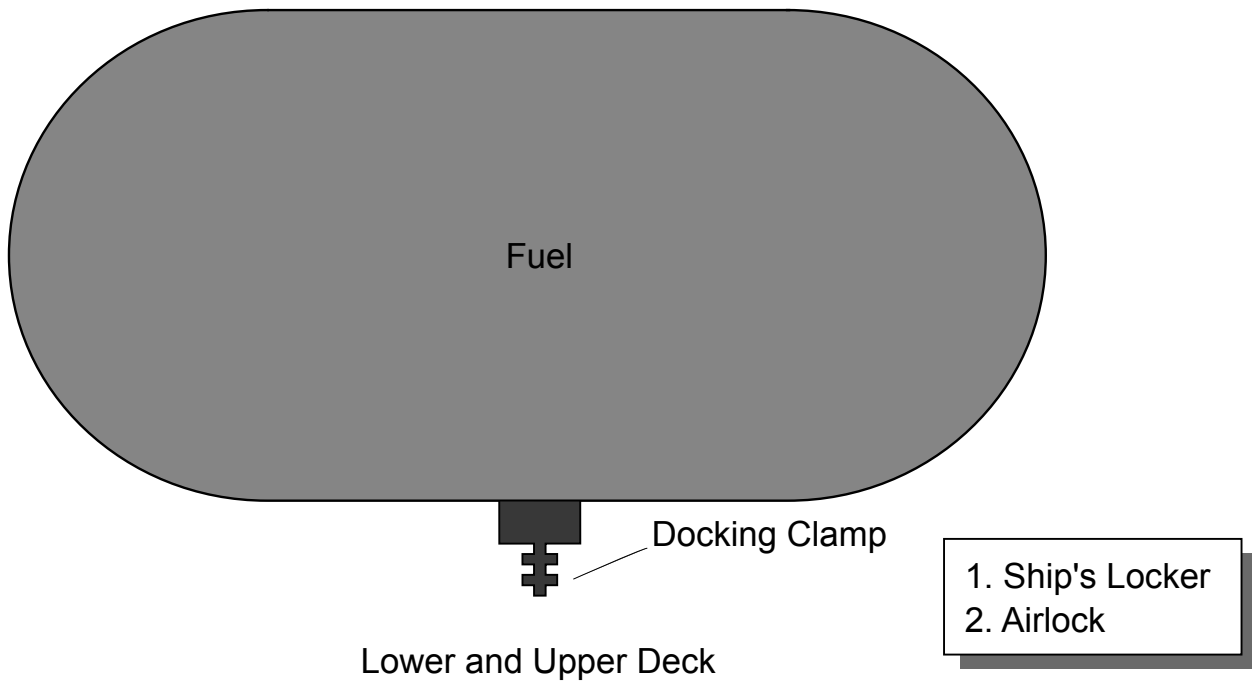

JUMP CARRIER

The jump carrier is used to ferry ships that lack their own jump drive or do not have the jump capacity to reach an isolated system. Up to 400 tons of ships can be attached to the docking clamps if making a jump-4, up to 1,000 tons can be ferried at a time if making a jump-3. Due to the positioning of the docking clamps there is no way to move through them between ships.

The normal crew is four consisting of a pilot/astrogator and three engineers.

This is a standard design for which the 10% discount applies.

ANTIQUE TRADER

This ship has been mostly replaced by more modern designs in most systems but some clusters of lower Tech Level systems have purchased these ships from more advanced systems as they phased them out as they can maintain these ships themselves. This is a Technology Level 9 design.

The normal crew is three consista of a pilot/astrogator, engineer and a steward.

This is a standard design for which the 10% discount applies.

GALILEO RESEARCH VESSEL

Normally used for stellar research, this ship separates the drives and power plants in order to reduce interference with the sensors, though the preference is to use the solar array and shut down the drives and power plant. One of the laboratory spaces is set up for holographic display for analysis, which can display data from the sensors in real time. As the ship commonly operates on the fringes or in hostile territory it carries some armament. Sometimes observation posts are setup within a system to provide full 360 degree coverage, these are usually assembled on airless bodies to eliminate atmospheric interference. The Galileo Research Vessel can support other mission types such as exploration, which may involve switching out the modules for the cutter and carrying other equipment including vehicles within the cargo hold. Due to the nature of the phenomenon studied the hull has been shielded against radiation, again reducing interference with the sensitive instruments.

Normal crew consists of: captain, pilot, astrogator, medic, two engineers, four gunners, two crew for the modular cutter and assorted researchers.

This is a standard design for which the 10% discount applies.

LADY LUCK

The Lady Luck travels from system-to-system, typically spending about a month in one place and then moving on. When arriving in a system it refuels, giving its limited fuel processing capability more than enough time to refine the fuel before it is time to move on again. The passenger staterooms are mostly used by those wishing to stay on board during its stay but are sometimes occupied for the jump to the next system and even an occasional traveller who wishes to stay on board through several jumps. This is a Technology Level 12 design.

The usual crew consists of: captain, purser, medic, three engineers and 20 crew for the gaming area. Also two pilots, two navigators and two stewards are carried for the small craft.

Gaming Space: Adding gaming space gives the crew and passengers a place to enjoy themselves and partake of games of chance. Every 1.5 tons of gaming space allows one person to utilise the area. For every 5 passengers supported by this space one crew member is needed. Gaming space costs Mcr 0.06 per ton.

LONG TRADER

Many of these are owned by planetary governments in more isolated systems who wish to foster trade, or on occasion to bypass a rival system and trade directly with a third party avoiding potential problems. Some are used by adventurers and small groups of mercenaries wishing for greater jump range. Some of these groups may convert some of the cargo space to hold a small craft.

The normal crew is 6 consisting of pilot, astrogator, two engineers, medic, steward. A couple of gunners may be carried as needed. The Long Trader is a Technology Level 13 design.

This is a standard design for which the 10% discount applies.

PROSPECTOR

Used by beltlers who want a bit more capacity than the smaller ships, these ships may stay out for long periods of time so a library has been added to keep the crew occupied. While only one gunner is normally carried the computer can operate the turrets if it becomes necessary. Some of these ships have had the mining drones removed and been used as traders. This is a Technology Level 12 design.

The standard crew complement is five consisting of: pilot, navigator, engineer, medic and gunner. More can be added with double occupancy. This is a standard design for which the 10% discount applies.

Mineral detection (TL 11): Upgrades the sensors to determine the types of minerals present and their quantities. Requires densitometer. Cr 50,000. Ship-Mounted as part of the standard sensor cluster.

QUEEN ELIZABETH

The Queen Elizabeth is a flying hotel, usually contracted out to planetary governments. The usual arrangement is a guarantee of a minimum number of rooms filled, any unfilled rooms up to the minimum is paid for by whoever contracted with the ship. Commonly used by newer colonies and less developed worlds hosting an event above their normal capacity to provide for the guests. The ship can either land on a clear spot on the ground and be used as a conventional hotel or, if no such berthing is available, can remain in orbit and ferry passengers with its shuttle. Occasionally a corporation will hire the ship for a jaunt out to a stellar phenomenon.

The normal crew compliment is nine consisting of: captain, medic, pilot, astrogator, three engineers plus two crew for the passenger shuttle. An additional 21 crew are carried for hotel operations (maids, clerks, chefs, manager and so on) and to act as stewards. The Queen Elizabeth is a Technology Level 12 design.

REPAIR SHIP

This ship is sent out to perform repairs on vessels that can not return to the shipyard. Smaller ships can be swallowed right up into the hangar space to be repaired in place or brought back for repairs. Larger vessels are repaired in place by the repair drones and specialists on board. The ship has some armour to protect it when moving through debris. The pulse lasers are used for protection and to vaporize larger pieces that could pose a danger to the ship, its personnel or the ship being repaired. The cargo bay has a supply of spare parts but parts can also be fabricated or repaired in the workshops. This is a Technology Level 12 design.

The normal crew compliment is 10 consisting of: captain, two pilots, astrogator, three engineers, gunners and a medic. Various repair personnel such as additional engineers and EVA specialists will be carried as needed.

Engineering Workshop: Space allocated to engineering workshops can be used to repair parts and fabricate new ones. Each 6 tons of workshop space allows someone with the appropriate skill, such as engineer or mechanic, to make repairs at a +2 DM. The cost for a workshop can vary with the type of equipment but is generally around MCr 1.0 per 6 tons.

RHAPSODY CLASS MERCHANT TRADER

Designed primarily as a cargo carrier, Rhapsodys are a common design in known space. Unlike most small traders this comes with weapons fitted on the standard hull. Without the passenger space of some other traders, some consider this to not be as flexible a design as the Free Trader, for example. However some see the extra speed and aerofins as a bonus.

Normal crew consists of a pilot, astrogator, engineer and 3 gunners (who usually act as cargo crew and additional maintenance crew).

The Rhapsody is a standard design and benefits from the -10% cost bonus. This a TL 11 Design.

ARMED FREE TRADER

ARMED FREE TRADER

This armed version of the standard Free Trader is a useful ship in the more lawless parts of space. Trading some low berth space from the original design, this packs armaments and improved electronics to deal with raiders.

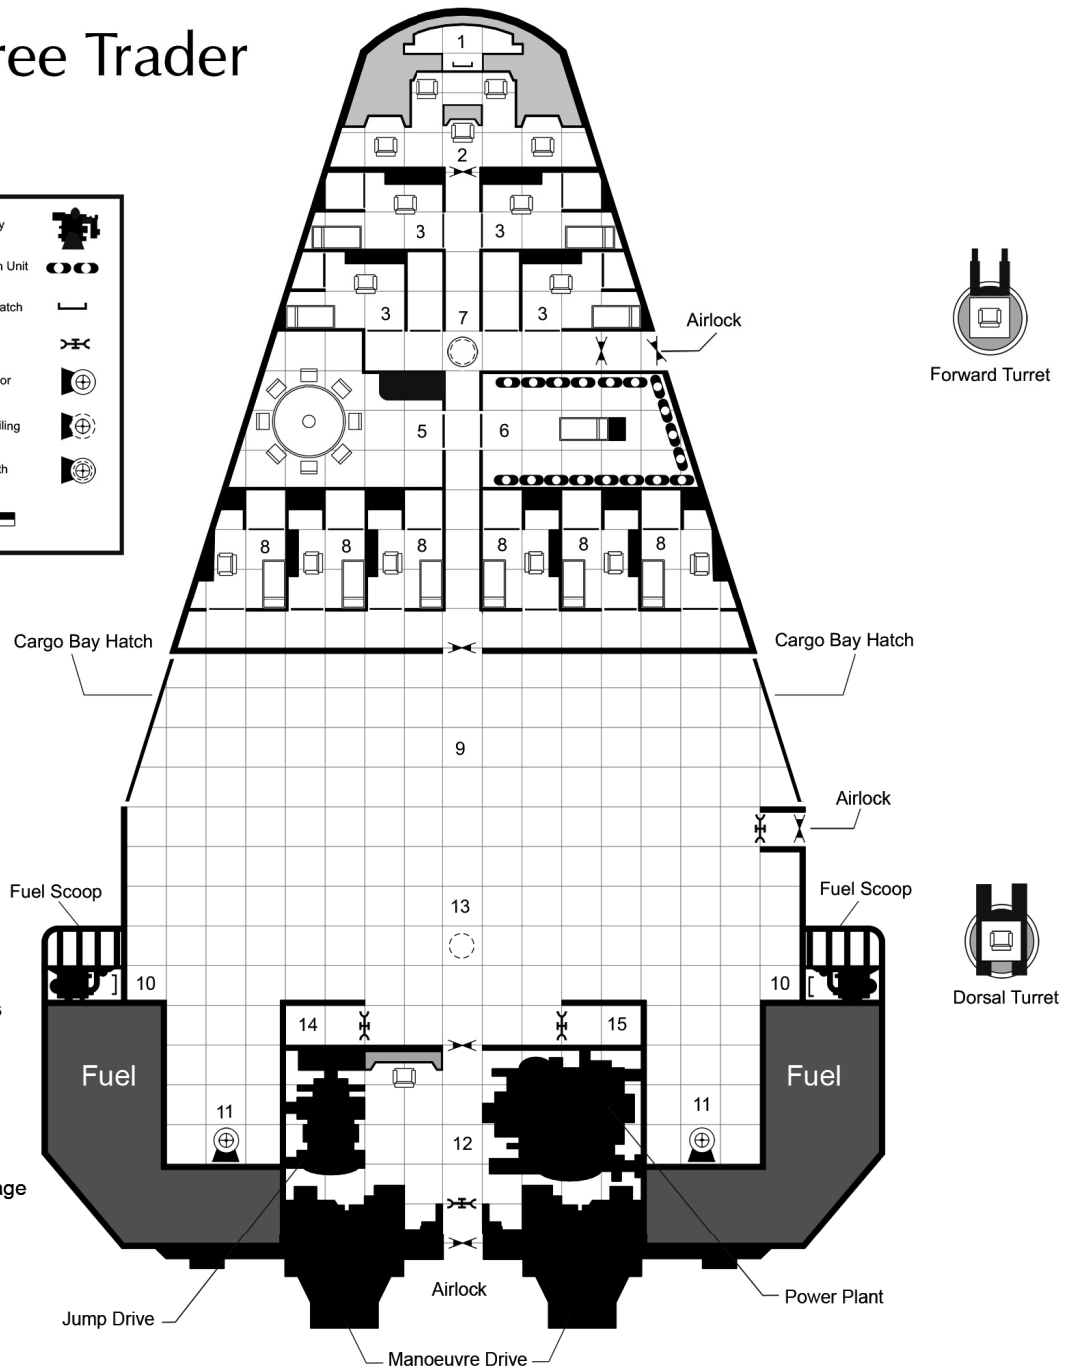

Normal crew consists of a pilot, astrogator, engineer and 2 stewards/gunners. The Armed Free Trader is a TL 12 Design.

HUNTRESS CLASS TYPE HT BOUNTY HUNTER

The Huntress is a popular ship amongst bounty hunters. Built from converted surplus Type SN ships, it is a well equipped design and generally no two are alike. With a dedicated workshop and med bay it allows the Bounty Hunter to be self sufficient on a mission.

Room is provided for 4 captives in cold berths and 4 in Cells. The other stateroom is usually used for extra crew or a low security risk bounty.

Normal crew consists of one Pilot. The Huntress is a TL 11 Design.

Workshop

Workshop space contains work benches, diagnostic equipment, welding gear and various mechanical or electrical tools. The workshop benefits ship or vehicle repairs, servicing and modifications. Also personnel equipment and weapons may be repaired/ serviced/modified in the workshop. The exact contents are up to the Referee. Like the ship's locker, its contents should be kept reasonable. Cost: 0.4 Mcr Weight: 4 Tons

Med bay

A basic ship's infirmary and often staffed by a medical officer. Each 4 tons of space can treat up to 2 persons. Like the Workshop its exact contents are up to the Referee. Usually contains 1 -2 beds, diagnostic gear and medical equipment/drugs. Cost: 0.8 Mcr Weight: 4 tons.

RX TRADER

MERCHANT TRADER TYPE RX

The RX is a larger version of the Type R. With the additional tonnage comes more capacity, a secure armoured vault and more comfort for the crew and passengers. Unlike the Type R the launch is replaced by a larger Ship's Boat with its own full hangar. Though the standard model is not fitted with armaments there is room for 5 turrets and ammunition.

Normal crew consists of the captain, 2 pilots, astrogator, 2 engineers and a steward/medic. Normal passenger capacity is 10, with 12 in Low Berths. Gunners are usually added or other crewmembers fill that role. The Type RX is a TL 12 design.

SHAKARKHA CLASS STAR LINER

The Shakarkha is a luxurious Star Liner, catering for the mega rich and famous. Costing the price of a small warship, only a few can afford to set foot on these, let alone build one. Nearly 200 tons of it is set aside for luxury fittings, a bar, dinning entertainment area, full sized kitchen and a Star Lounge. The Star Lounge is an area for entertaining that features a huge window, allowing an amazing view of space or whatever planet the ship has landed on.

Up to 100 passengers can be carried, though often less as the other space is more often than not filled with extra staff, entertainers and assorted flunkies the mega rich attract. Some staterooms will often be re-fitted to allow additional facilities such as saunas, massage parlours, offices and so forth.

Three Craft are carried on board allowing passengers, cargo and vehicles to be ferried to a planet's surface. The ship has a large cargo area for additional income from trade, though it does allow the ship to carry passenger's belongings such as vehicles.

With the rich often being the target of criminals (or being criminals themselves), the ship carries 10 security personnel for added protection. Although unarmed, space has been set aside for up to 12 hard points, allowing the paranoid or security conscious passenger to travel with less worry.

Normal crew consists of a captain, executive officer, purser, chief steward, 6 pilots, astrogator, ship's doctor, 2 nurses, 6 engineers and 22 other crew (including stewards, cooks, valets, drivers and entertainers). In addition the ship has room for 10 'security' staff. Normal passenger capacity is 100.

The Shakarkha is a TL 11 Design.

Med bay

A dedicated ship's infirmary and often staffed by a medical officer. Each 4 tons of space can treat up to 2 persons. Its exact contents are up to the Referee. Usually contains 1–2 beds, diagnostic gear and medical equipment/drugs and so on. Cost: 0.8 Mcr Weight: 4 tons.

FAST TRANSPORT

Designed to be operated by one person, this ship is used when you need something in a hurry. One job might be delivering rescue workers and equipment to a mining facility in an asteroid belt, the next could be delivering a vaccine to a research station located on one of the moons of a gas giant.

This is a standard design for which the 10% discount applies.

ASLAN SHIPS

AIHAIYO CLASS HUNTING SHIP

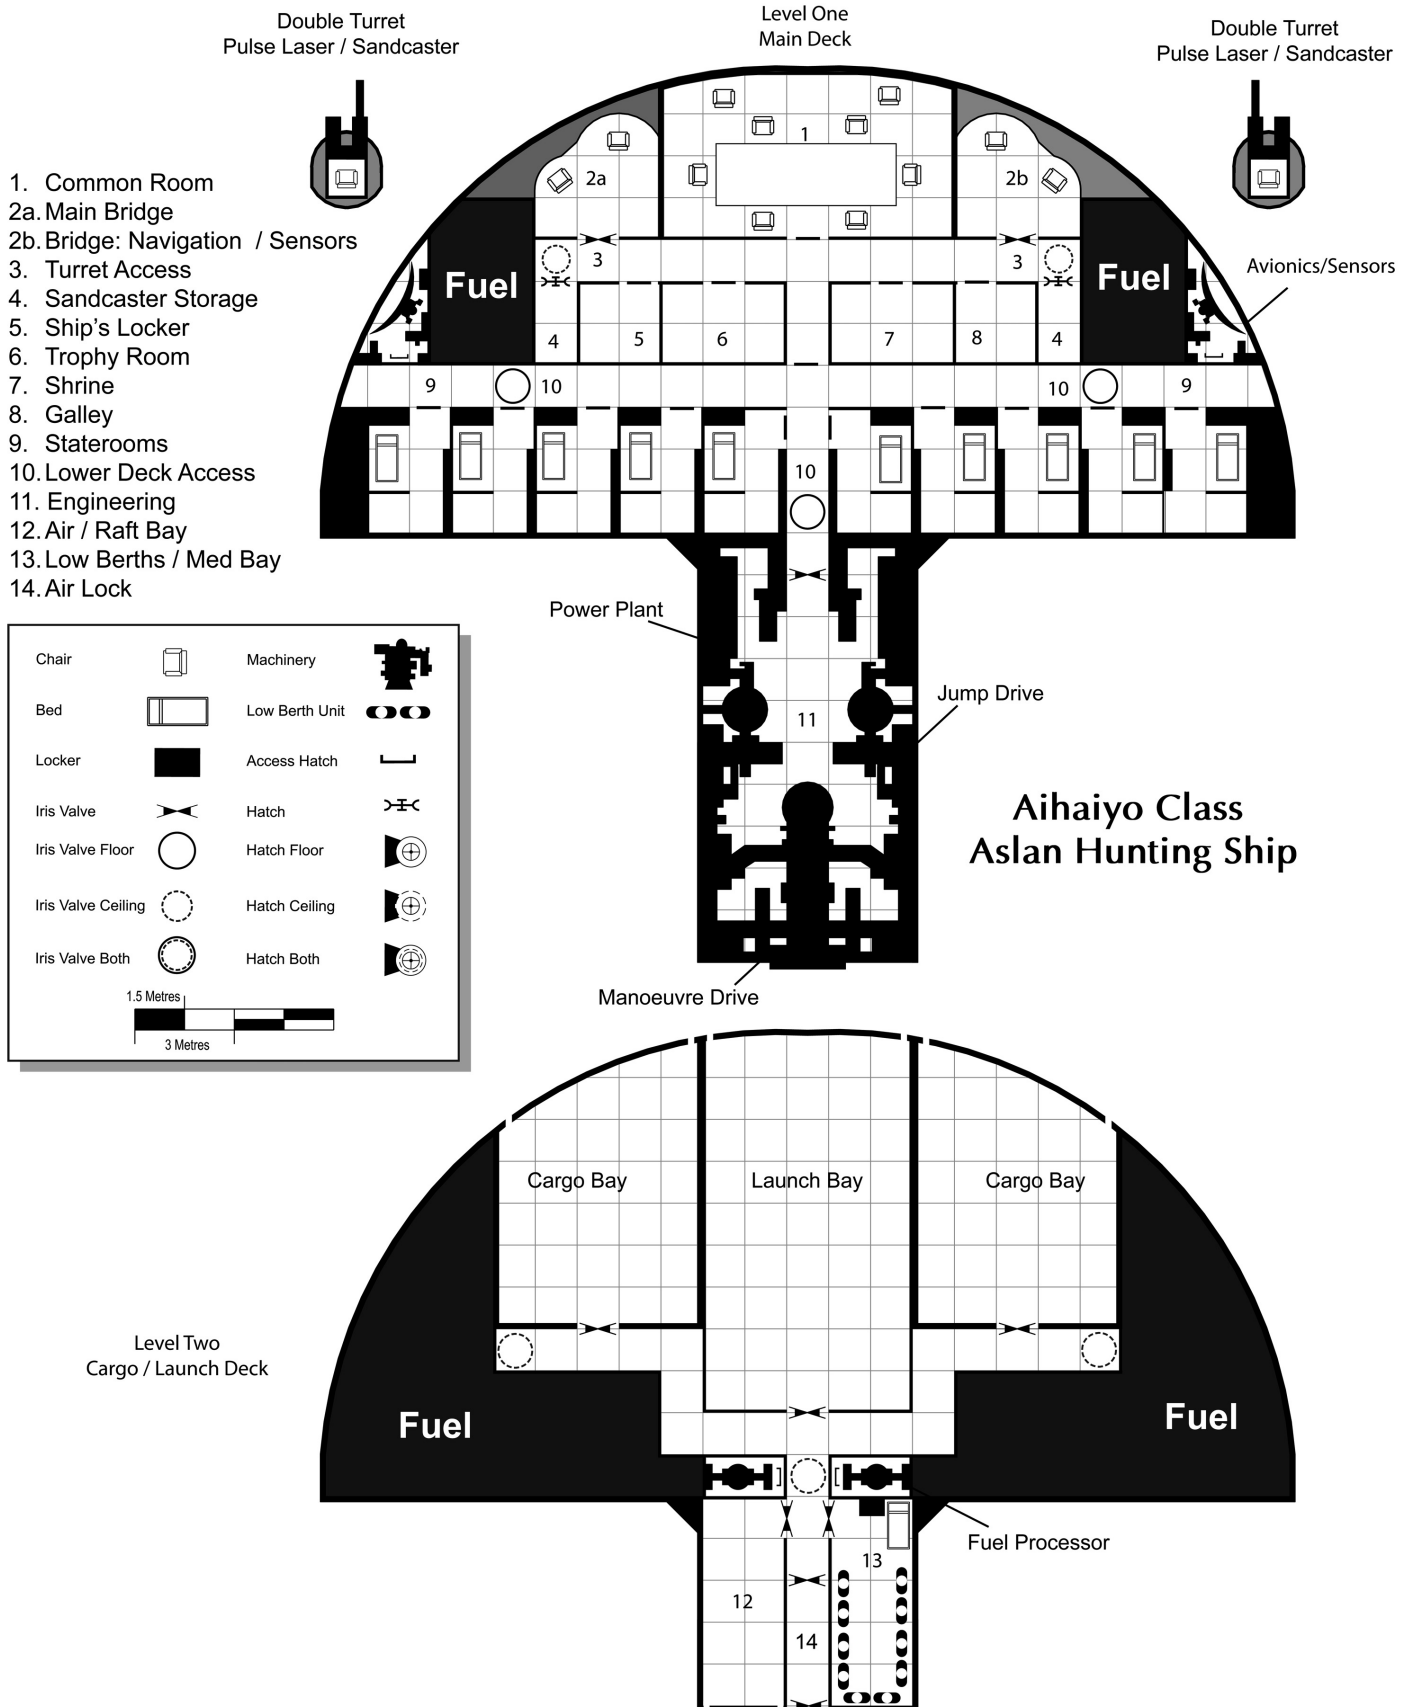

The Aihaiyo is a purpose built hunting vessel used by rich Aslan nobles in the pursuit of live prey. Designed to carry only a few passengers, this is a roomy luxurious vessel only the richest Aslan can afford. The main deck has a large feasting and observation room in the front, along with a galley and trophy room.

The Aihaiyo can land on a planet and act as a base for hunts or stay in orbit and ferry hunters down to the surface in the ship's launch. The lower deck contains cargo areas for extra equipment / vehicles and room for dead or live prey.

Some Aihaiyo ships will carry anti-personnel weapons in the turrets for shooting prey, though most Aslan prefer to hunt on a more personnel level with tooth and claw.

Normal crew consists of a pilot, astrologator, engineer, steward and 6 passengers. The Aihaiyo is a TL 11 Design.

AIHAIYO CLASS HUNTING SHIP

CLAW

This fighter is used for ground operations and assaults on other ships or space stations. Developed as a multi-role fighter to reduce the need to carry multiple types of fighters. Fast and highly manoeuvrable both in and out of the atmosphere it is capable of handling a variety of operations.

Some Khir's have been known to deliberately crash this fighter into their opponent as a last act of defiance. Though this practice is generally frowned upon due to the cost of the fighter.

While expensive its multi-role capability reduces the need for other more specialised fighters helping to offset the cost.

This design is in common usage in the Aslan Hierate and the price reflects the 10% discount for a standard design.

RAIDER

A raider is able to take on small settlements, space stations, smaller warships such as SDB's, or merchant ships on its own. They can also work within a larger fleet. With its complement of claw fighters and turrets it is a capable combatant. Due to the small cargo capacity it is not uncommon for this ship to work with another with a more space, especially when used for raiding merchant shipping.

The raider requires a crew of eight: captain/pilot, executive officer/astrogator and three engineers. Usually eight crew for the small craft, a medic, 20 troops and eight gunners are carried as well.

This design is in common usage in the Aslan Hierate and the price reflects the 10% discount for a standard design.

ASSAULT CRAFT (FAIYH CLASS)

Equally adept at transporting troops to targets located on the ground or in space, the Faiyh class is equipped with a good variety of anti-personnel weapons for clearing a landing site of hostile forces, and the ship can also be used in the air support role. Forces in a hostile landing zone can be deployed quickly through the large side cargo doors while the ship provides covering fire. The cargo area can be used to transport vehicles and other equipment needed by the troops.

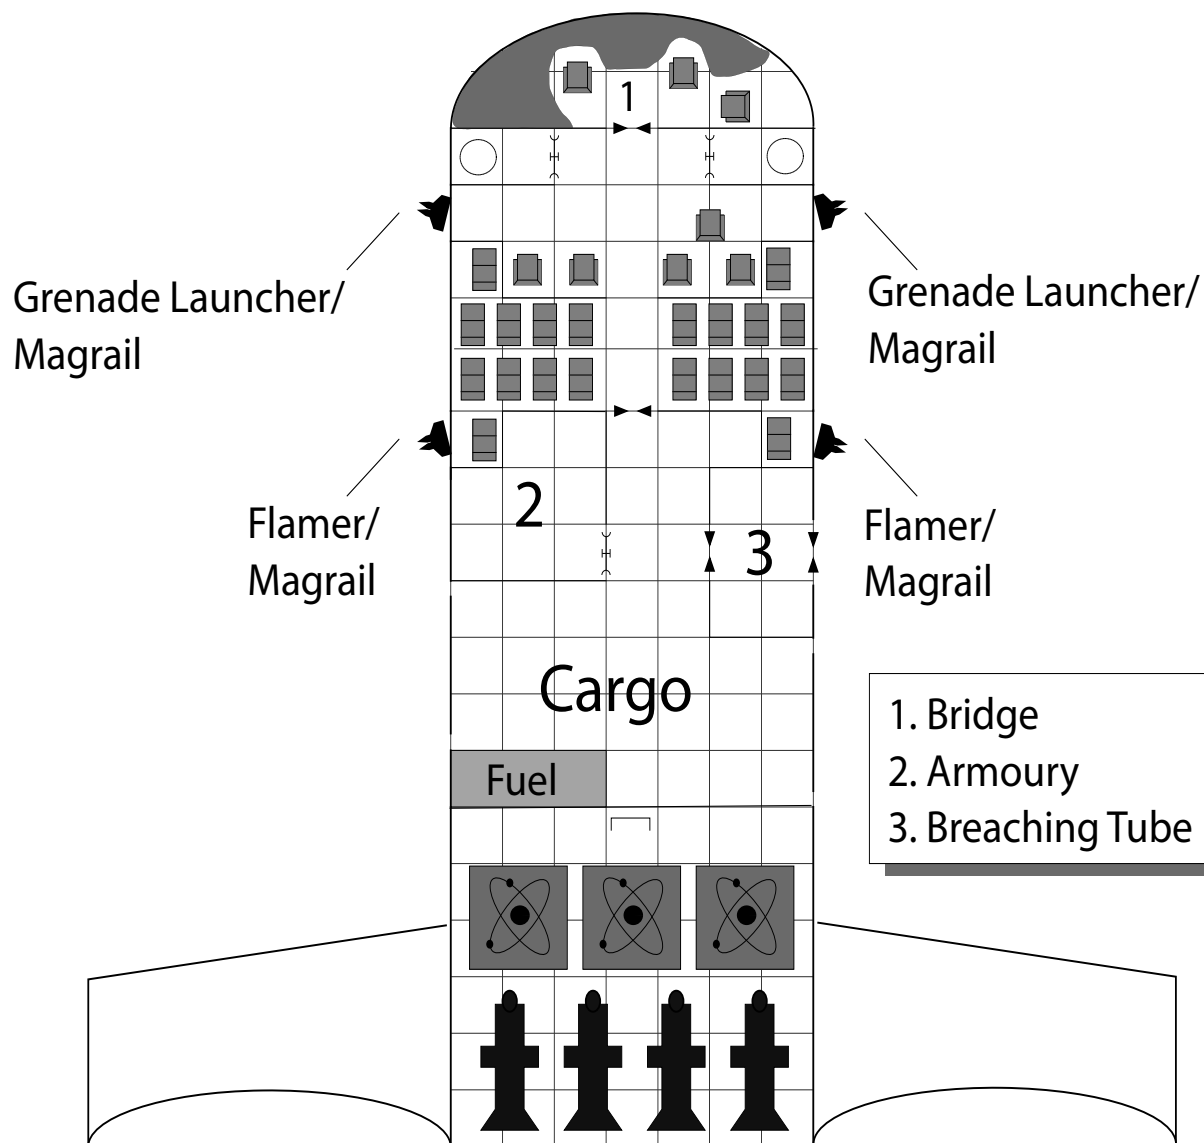

For the space assault role the breaching tube allows easy entry into other ships or space stations. Heavily armoured the assault craft is designed to keep the personnel alive to carry out their mission.

The aerofins can be retracted to fit into smaller landing zones and for easier storage.

The assault craft requires a crew of two: pilot, navigator/comms. Two gunners may also be carried. Additional gunners may be used to operate the anti-personnel weapons if used in the air support role.

This design is in common usage in the Aslan Hierate and the price reflects the 10% discount for a standard design.

DARRIAN SHIPS

BEHNIN DAK SCIENCE VESSEL

Companion ship to the Behnin Ru, this vessel is part jump tug and part fully functional research and exploration vessel. Together both ships are an extremely versatile team, able to increase the area they are investigating or concentrate on more than one system at the same time. The Dak will often leave the Ru in one system and visit another.

The Dak has less sensor equipment than the Ru but is designed more for planetary investigation. It has a large cargo bay where stores, shelters and additional vehicles can be kept.

Like the Ru, there are no turrets fitted, although tonnage has been set aside for armament

Normal crew consists of a captain, 2 pilots, astrogator, 3 engineers and 13 science/survey crew, although more often than not crew will double bunk to increase numbers. This a TL 13 Design.

BEHNIN RU SCIENCE VESSEL

An unusual Darrian design, in that it has no Jump drive, the Behnin Ru is a multipurpose science and exploration vessel. The ship's primary purpose is the research and study of stellar phenomena, in addition they are used as survey and exploration vessels also. Survey teams will often use these as orbital/ground bases while they survey a planet.

With the lack of a Jump Drive, it is reliant on its sister ship the Behnin Dak for Jump travel. Together both ships can extend the amount of space they can cover on a mission. Without a jump drive, the extra space is taken up with an impressive array of electronics, a large number of scientific/survey crew and two launches. Should the Behnin Ru travel to dangerous or remote sectors, tonnage has been set aside for armament.

Normal crew consists of 2 pilots, 1 navigator, 2 engineers and 15 science/survey crew, although more often than not crew will double bunk to increase crew numbers. This a TL 13 Design.

DONOSEDH CLASS MEDICAL SHIP

The Donosedh is a Darrian designed medical aid and rescue ship. Built to supplement to the Yehng Class Vessel, this ship features a large sick bay and operating theatre, in addition to this, the hull has additional protection against dangerous environments, allowing this ship to go where some other ships would be badly damaged.

Like the Yehng the vessel has fast engines for a rapid response in an emergency. Besides rescue operations, these vessels act as small hospital ships also, often for remote colonies and as support for military units.

Normal crew consists of 2 pilots, engineer and 5 medical staff. Usually the crew will double bunk to allow more space for patients. There is also room for 30 passengers in acceleration benches and room for 10 critically ill patients in cold berths.

The Donosedh is a standard design so the 10% discount applies. This a TL 13 Design.

VARGR SHIPS

Khoghue Armed Junker

Amongst Vargr traders dealing in junk is a common business, so ships like Khoghue help supply the trade. Junk can be a dangerous business so the Khoghue is armed with four beam lasers and two missile launcher turrets to deal with rivals, raiders and to perhaps make some 'junk' of its own.

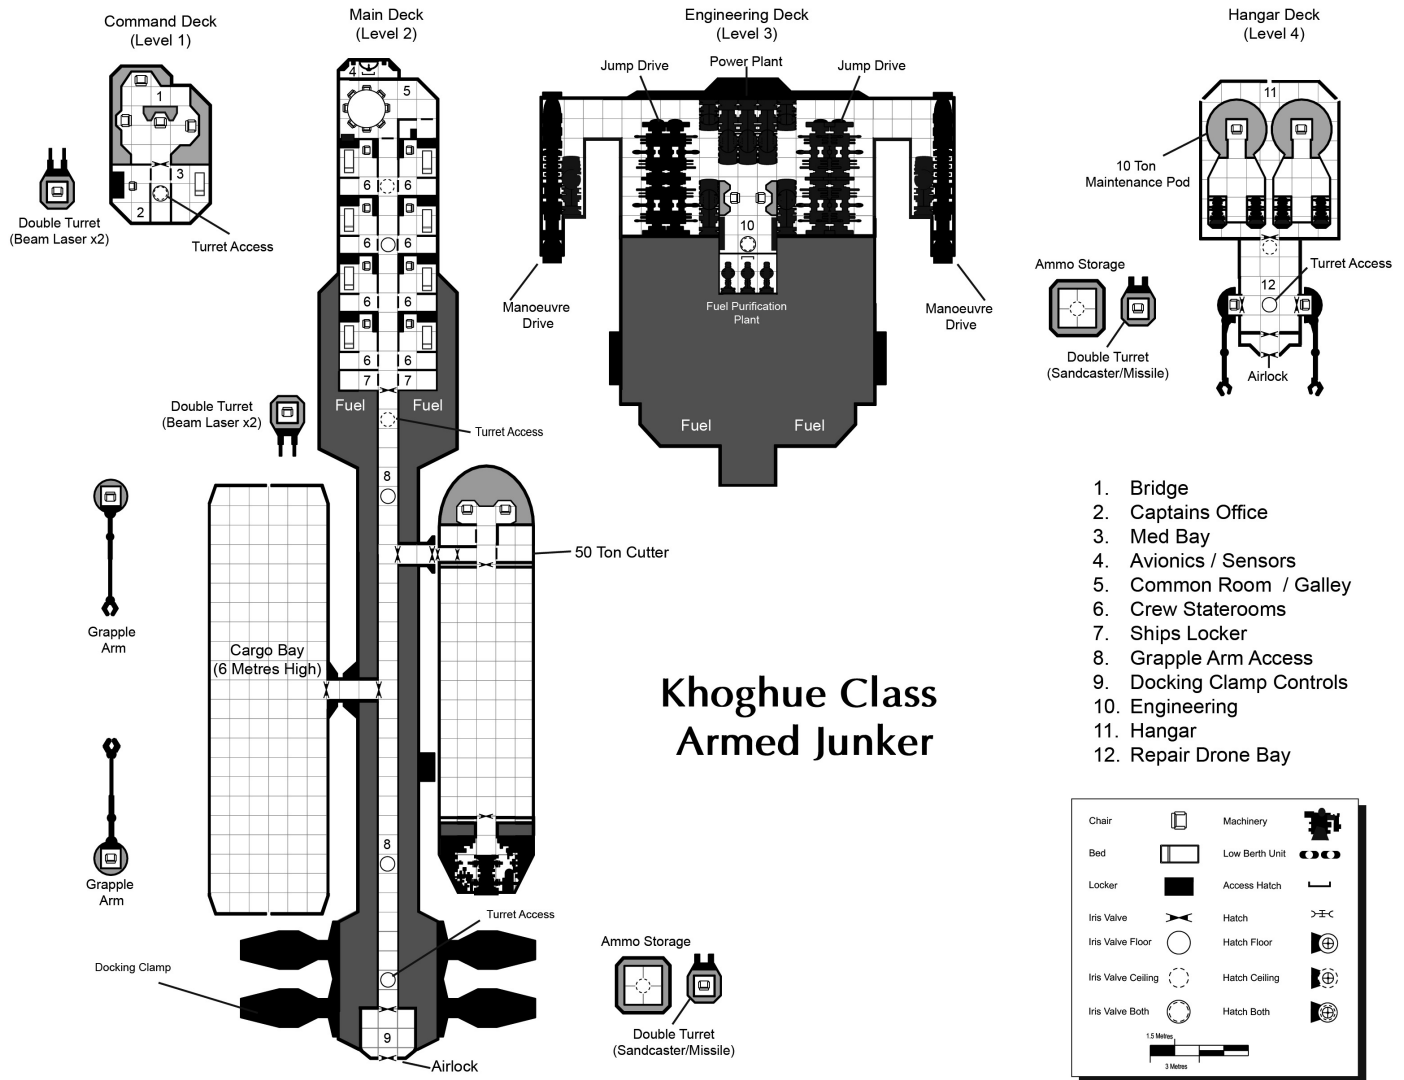

Endurance extending panels and additional crew comforts allow this ship to engage in long Salvage operations, especially in remote areas of space. Two maintenance pods are carried in a full sized hangar to assist in salvage operations. The distributed design is there to allow the ship to survive in the event of an explosion from dangerous salvage, like unexploded ordnance for example.

The large rear clamp has docking access ports for any hulk it pulls.

Normal crew consists of a paptain, 3 pilots, astrogator, 3 engineers and 4 gunners. The Khoghue is a TL 12 Design.

NOLRRGARRAI VARGR STRIKE FIGHTER

The Nolrrgarrai is a common fighter amongst Vargr corsairs and mercenaries. With a fast engine and heavy armour, it is an ideal design for fast raids and ground strikes.

The Nolrrgarrai Vargr Strike Fighter is a TL 12 Design. This is a standard design for which a 10% discount applies.

Nolrrgarrai Vargr Strike Fighter

ROKGHIOK CLASS STEALTH RUNNER

The Rokghiok or 'Blade' is a Vargr designed ship. Built for stealth and speed, this is used by corsairs, governments and adventurers alike throughout Vargr space and beyond. With an impressive electronics suite, stealth hull and stealth jump drive, this will get illegal or 'no questions' asked cargoes through most local law enforcement patrols but should things go wrong, Roghioks have a massive 6gs of thrust and a double beam laser turret to defend themselves with.

Besides it is a blockade runner role, some well equipped corsair bands use these as stealth raiders in packs or 2 or more vessels, with other vessels as support.

Internally, it is a cramped and uncomfortable design and is not great for long haul missions. Usually the single stateroom is shared between the two crew, though it can be piloted by a single well experienced pilot who can cope with the cramped bridge.

Normal crew consists of a pilot and astrogator. The Rokghiok is a TL 12 Design. This is a standard design for which a 10% discount applies.

SORRGHEG CLASS VARGR REAVER

Packing more firepower and troops than the standard Vargr corsair, this is a powerful ship favoured by some Vargr corsair bands and a terror on the shipping lanes. Unlike the corsair this has no onboard craft but packs a single missile bay instead; usual payload is a combination of standard, smart, jump breaker missiles and the occasional nuclear missile.

The Sorrgheg is designed to grind and pound target ships then board with its compliments of 'marines'. They also raid ground targets, carrying two G-carriers for the troops and an additional pair of speeders used for scouting or escorts for the G-carriers.

Normal crew consists of a captain, troop leader, pilot, astrogator, medic, 3 engineers and 5 gunners. The barracks space is for 24 'troops'. The Sorrgheg is a TL 11 design.

Cargo / Missile Bay Deck Level 2

NGUKSU ARMoured FAST TRADER

The Nguksu is a Vargr built craft designed to carry valuable cargo fast and secure across the Vargr Extents and beyond. Built to take a pounding, this level of armour is more often seen on military vessels rather than merchants. It has also seen use as a courier in dangerous sectors of space as well and a mini escort ship for less well protected vessels. The downside of this design is the small cargo area compared with most other trading ships of this size but this is partly offset with the ability to carry expensive freight in greater security.

Usually the ship carries 2 gunners who also double as security for the ship. A few variants of this design exist, some trade cargo space for armoured vaults or passengers rooms and one version adds military grade electronic and particle guns.

Despite a streamlined hull, some pilots complain that this handles more like a flying 'ksikh' or brick in atmospheric operations.

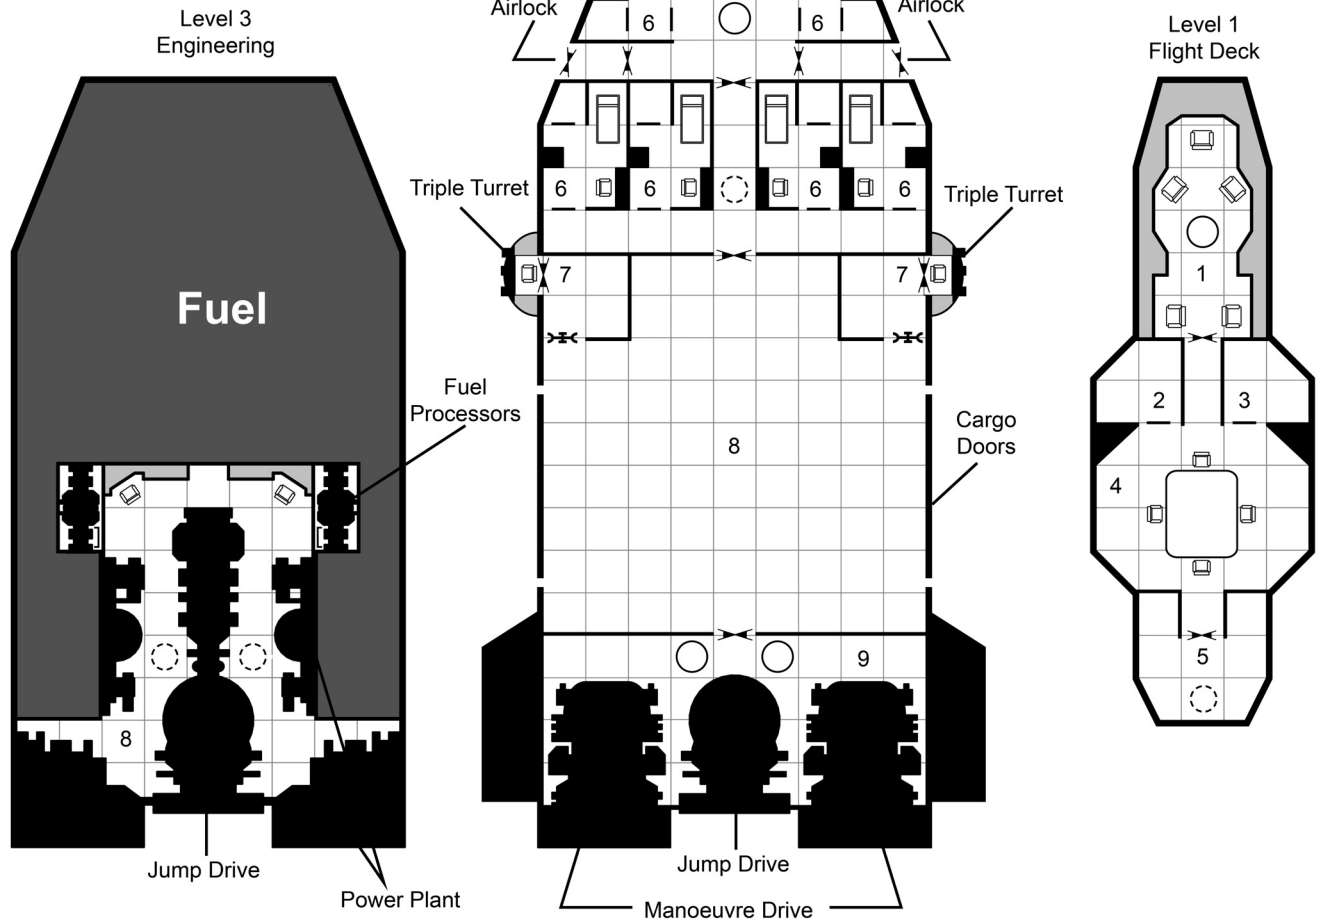

Normal crew consists of a pilot, astrogator, engineer, 2 gunners/security and 2 passengers. The Nguksu is a TL 11 design.

Supplement 10: Merchants and Cruisers

Merchants and Cruisers, the tenth book in the highly successful Traveller supplement line, is a giant resource for referee's looking to populate space between the stars with new ships, and players looking for a new ride. Every ship in this hardback book is individually illustrated and presented with a vector-format deck plan.

From the tiniest of fighters to powerful cruisers, this book provides not just new ships but also new variations on existing themes to ensure no ship encounter need ever be the same as another throughout an entire campaign.
