

# DOOMHAMMER SUPER-HEAVY TANK

POINTS: 450

The thousand-year Siege of Ordana saw a new super-heavy tank design pressed into Imperial service – the Doomhammer. Confronted by a renegade forge world and its associated Titan Legions, the Ordana battlezone commanders were crying out for Shadowwords and other Titan-hunting vehicles. As the campaign dragged on, the attrition rate of such war engines swiftly outstripped supply. In the end, only the retrofitting of Banehammer tanks, exchanging tremor cannons for magma cannons, allowed the Imperium to maintain the war effort.

A Doomhammer's magma cannon is closely modelled on the volcano cannon employed by the famous Shadowword design. While it has a reduced range and area of effect when compared to its larger cousin, the magma cannon is still able to marshal a Titan-killing blast of epic proportions. At the same time, the space saved due to the smaller number of capacitors accords the Doomhammer a modest transport capacity and thus a more flexible battlefield role. This combination was to prove its worth many times over in the Siege of Ordana, and in many other warzones.
