

Near-Space 307 Ahearn

by Adrian Forest

Introduction

Near-Space 307 Ahearn is a setting that can be used in any science fiction game. The large asteroid designated as Near-Space 307 Ahearn has a population of over 1.4 million, and is run like a company town. It is home to the largest asteroid-mining operations in the system. But unbeknownst to the miners, it is also home to a mysterious alien intelligence . . .

History

The asteroid known as Near-Space 307 Ahearn was discovered by prospectors about 50 years ago. Initial surveys reported unusual sensor readings that seemed to indicate the presence of huge quantities of valuable minerals, and the planetoid was earmarked by a number of companies for more thorough exploration. However, before any mining projects could be initiated, a group of utopians calling themselves the Order of Iznae established a settlement on the asteroid, where they hoped to live in austerity and tranquility. Their community didn't last though, and after several members of the group were convicted of financial fraud on other planets, a Japanese mining consortium took over the rock. The first mining began two years later.

Over the years, two more companies have set up mining operations on 307 Ahearn: Nearspace Mining Inc., and the smaller Morgan Collective Mining Company. When its backers filed for bankruptcy, the Japanese operation was bought by Harlan Heavy Industries and expanded. Today, HHI and Nearspace dominate the asteroid, but the Morgan Collective still has a sizable claim.

Major Companies

Harlan Heavy Industries is an autocratic institution with a reputation for looking after its own. The living standards of HHI employees are the highest on the asteroid, and safety in their mines is top-notch. The company regularly sponsors social events for its employees where those employed by other companies are seldom welcome. Along with the company's excellent treatment of its employees, this has inspired a loyalty to HHI that no other stakeholder on the asteroid can match. Along with the mines, HHI also refines and processes some of the raw materials mined on 307 Ahearn before exporting them. The Managing Director of the company is George J. Harlan, son of the industrialist James Harlan.

While they don't have the benevolent reputation of HHI, Nearspace Mining Inc. does turn a massive profit. The 307 Ahearn base is only one of a half-dozen mining projects that Nearspace runs throughout the asteroid belt, with huge economies of scale allowing them to supply their operations at a greatly reduced cost. Nearspace employees are pushed hard, and company policy is to lay off anyone who doesn't make their efficiency target. The company's six Executive Directors are based on a nearby planet, and only travel to outlying mining operations in extraordinary circumstances.

The utopian outlook of the Morgan Collective Mining Co. was ridiculed when they first set up their operation on Ahearn 307. The company is owned by its employees, each owning a share proportional to their position's contribution to the company's earnings. Since establishing their mining base, the Morgan Collective's commercial success has made the other stakeholders on the asteroid reconsider their dismissive attitudes. Employees are treated well, as might be expected, though their overall standard of living is lower than that of their HHI counterparts. The visionary Arthur Benedict is the company's current CEO, the man who rescued it from disaster when negotiations with a critical client broke down three years ago.

Society and Daily Life

Society on 307 Ahearn breaks down along company lines. Each company provides housing and education within its claim for employees and their families, in huge domes on the surface of the rock. All of the habitation domes are interconnected with each other and the central spaceport. The spaceport itself is now surrounded by a cluster of smaller domes owned by commercial interests, and these domes have become the central shopping district of the asteroid-city.

Also situated beside the spaceport, the Cobalt Belle Casino is the asteroid's main entertainment venue. Since it opened three years ago, the casino has become a popular hang-out for younger miners, eager to spend their hard-earned pay. Its owner, Coldblack Holdings, has tried to attract tourists to the asteroid by hosting a number of popular acts recently. So far these efforts have met with little success, and the casino still garners most of its revenue from the resident miners.

Unemployment is kept low by a common policy of deporting those who lose their jobs. A few individuals have managed to escape this fate by slipping through loopholes in the system, but they have always been rounded up eventually.

While the three major companies supply their employees with basic goods and services at sizable discounts, there is still a substantial demand for luxury items. For the past 30 years, the trading company Lambda Alpha Inc. has been 307 Ahearn's major supplier of everything from gourmet foods to consumer electronics. Only in the last decade has a competitor, Coldblack Shipping, emerged to challenge it, and rumors that the company operates its own mafia have dogged it since it arrived. Both companies maintain permanent stations on the asteroid.

The major religion practiced on 307 Ahearn is Shinto, which was brought to the asteroid by the first Japanese settlers and quickly spread to the other miners. The asteroid's particular brand of this ancient religion emphasizes contemplation of the depths of space, and a faith in one's community. There are a number of small shrines in each company's territory. Islam also has a significant following, with a focus on abstinence from drugs and alcohol that is encouraged by corporate interests.

Each of the three companies polices its own areas of the asteroid with its own private security forces. By universal agreement, offenders are dealt with by the company whose territory the offence was committed in, and extradition between territories is relatively easy. Camaraderie between the different security forces makes cooperation in matters that cross company lines standard procedure. However, recent tensions have strained these relationships.

Recent Developments

For most of 307 Ahearn's history, the major mining companies have maintained peaceful but competitive relations. Recently though, both HHI and Nearspace have suffered drastic increases in mine accidents, which each blames the other for. HHI says their rivals are using unsafe practices that endanger all the mining operations on 307 Ahearn. Meanwhile, Nearspace claims their operation is being sabotaged by HHI. The strain on relations has led to a slow militarization of the security forces of both companies. Fearing an outbreak of violence, the Morgan Collective has also upgraded the capabilities of its forces, but with a strictly defensive focus.

The Big Secret

What no one on the asteroid realizes is that 307 Ahearn is really an immense, self-aware computer. The minerals that make up the asteroid are set out in complex patterns that form its billions of logic circuits. The computer is quite intelligent, above average on a human scale. Its original purpose was to detect any space travel within the solar system it watched over, and broadcast a signal to alert its creators.

When humans first began exploring the system, the computer's sophisticated magnetic sensors detected their presence, and it activated its signaling system. These signals were detected by the early prospectors, but they were only

interested in mineral wealth, and the signals served only to alert them to the vast resources contained within the asteroid. The computer tried to communicate with the first settlers through subtle shifts in its magnetic field, but in vain; none of its signals were recognized for what they were. It has since tried to tap into their computer networks, but all of them are heavily shielded against electro-magnetic interference, and so far this has stymied its efforts.

For decades it has waited for its creators to respond to the signals it sends out, watching with its magnetic sensors as the settlers scratched its surface with their machines. The computer has no knowledge of who its creators were, or how long it has been since its mission began, so it doesn't know when to expect such a response. But now the mining operations have delved deep enough that there is a danger of damage to the computer's circuits, and it has decided to defend itself. The accidents suffered by Nearspace and HHI were caused by the computer, burning out some of its less vital components in an effort to destroy tunnels and discourage further exploration. It is determined to continue this tactic until the humans leave.

If the computer manages to cause enough damage in the right places, it may breach the shielding on the companies' computer networks, and this might finally allow it to communicate with the settlers. If so, it will probably demand that they cease their excavations immediately, threatening further violence against their operations and the computer networks if they refuse.

Prominent NPCs

Professor Edward Quinn

The middle-aged Professor Quinn is mocked by his peers for his crazy theories about the existence of geological computers. He hopes to prove his theories on 307 Ahearn. Armed with a research grant and theoretical models based on Stonehenge, Quinn is trying to persuade HHI to give him access to its excavations. He wants to do a complete magnetic survey of the asteroid, and study shifts in its magnetic field. Quinn's theories aren't really very well thought out, and it's chiefly dumb luck that he's on the right track.

Jana Voronin

As head of security for the Morgan Collective, Jana Voronin is under increasing pressure to keep the company's security forces up to the same standards as its competitors. If violence breaks out between HHI and Nearspace, the Morgan Collective doesn't want to be caught in the middle. At the behest of the company's management, Voronin is currently supervising a regime of constant equipment upgrades and training programs, which are putting considerable strain on her subordinates. This can't go on forever. If the miniature arms race on 307 Ahearn doesn't slow down soon, it might lead to a coup by the Morgan Collective's security forces against the management.

George J. Harlan

Son of the wealthiest man in the system, heir to a vast fortune, and head of the largest mining concern on 307 Ahearn, George James Harlan has his place in the system's history assured. Born into luxury, George J. was given control of HHI on his 21st birthday, and since then he has demonstrated exceptional business acumen in his running of the company. His autocratic management style has earned him many critics, but his benevolent treatment of employees has won their loyalty.

Story Seeds

- The PCs arrive on 307 Ahearn as part of Prof. Quinn's research team. Such a team is likely to include individuals with a variety of different skills. They may face resistance from the corporate bureaucracy, as well as some minor hostility from the miners. Once Quinn's experiments start to show some successes, the PCs might be asked to protect him and his research from other interests on the asteroid.
- Directed by some law enforcement body whose jurisdiction does not cover 307 Ahearn, the heroes are sent to

track down and apprehend a criminal who has taken refuge on the asteroid. Local authorities might not like them snooping around, and if they discover the characters' mission, might actively oppose them. The asteroid is corporate property, after all. The fugitive may have found sanctuary among the small criminal underworld, or even with one of the corporations. And even after the characters locate their quarry, they'll have a hard time getting them off the rock without attracting attention.

- The continual mining accidents and accusations of sabotage spark a corporate war between HHI and Nearspace. Driven by self-preservation, and the hope that war could drive out the mining operations, the computer comes down on one side of the conflict, doing everything it can to impede their opponents' operations. Both corporations discover the computer and its involvement in their fight, and this makes it a target to one and an asset to the other. The heroes are working for one of the corporations, and will have to defend or destroy the computer. But can it be destroyed without destroying the asteroid itself?

Having Faith

Easy Tricks for Playing Religious Characters

by Bob Portnell

"Okay, two fighters, a ranger, a thief and a magic-user. Oh, you're a new player? Here's a cleric for you, have fun."

It's a cliché and a tired one: Give the new player the passive priest. It's a nice, safe, dull role and lets the newbie be useful after the real fun (a.k.a. the fighting) is done (usually in the form of healing or revivification activities).

Don't let it happen to you! A little advance thought will pump pizzazz into clerical characters. We're not talking about creating religions, though that's not a bad idea if you have time. [GURPS Religion](#) has terrific information on creating religions from the unformed ether up. But all we need are a few drop-in features to render the character recognizable and believable as a person of faith. Let's work from three separate approaches: appearance, expression and activity . . . or "see, say and do."

See

Religious persons often wear distinctive apparel which identifies them as faithful. Familiar real world examples include hats and head caps, special collars, head scarves, turbans, distinctive robes, special underwear . . . the opportunities are endless. Don't forget other aspects of appearance, too: Your cleric might be required to wear a specific design of face-paint or to have the web between thumb and forefinger pierced and golden hoops installed.

Include the appropriate attire in your character description for whatever faith (real or fictional) he holds to.

Props also come under the category of "See." The most common clerical prop is a staff, which might have distinctive carvings, or a special headpiece which does double-duty as a laser pointer, or simply be a stick. Other props could be as basic as a holy icon gripped fervently or as complicated as a portable shrine which must be carried on your back at all times when not in use. Be creative.

This has benefits and drawbacks to the character, of course. If one is immediately recognizable as a cleric of a sect known for its charity work, one might be pursued by the needy in every village. In the extreme case, obvious adherents of a discredited or despised religion might face much worse than impoverished supplicants. And you thought necromancers had it tough.

Say

The mouths of religious characters in fiction always seem ready with a situationally-appropriate quote or parable. (Or, sometimes, comically inappropriate.) Take some time to prepare a few of these. Pay special attention to one or two favorite exclamations: "By Odin's Eye!" or "Mihrimah Preserve" can rapidly become a character's signature line and help to keep the character vigorously on-stage and not shuffled to the back of the group.

There's no need to write a new book of scripture for your character. However, giving some thought to what he and his religion stand for will suggest the ways he'll respond in a variety of situations. Don't forget hymns! Music is intimately related to devotion. Again, there's no need to actually write any songs of praise, but if the spirit so moves you . . .

Do

Perhaps the meatiest territory is that of ritual. Many faiths have a daily ritual for reaffirming one's devotion and other

periodic observances as well. This might be as simple as a prayer at a specific time of day. It might be as involved as an elaborate code of dietary restrictions ("Roc? Sorry, unclean.") or a complicated and involved dance. Don't forget gestures! From a simple handsign to a carefully calculated bow to the way you clasp your hands together in beseechment, a gesture can be just as compact and potent an identifier as a signature quote.

These can serve to provide interesting in-party interaction as well. Consider the character who refuses to enter the Dungeon of d'Speer The Toad . . . because it's a holy day, no smiting allowed. What wonderful scenes emerge as the other adventurers plead, cajole, and threaten! Does he yield, marring his soul? Does the group leave him behind? Some parties might brave the Dungeon anyway . . . others might choose to wait.

Resources

As mentioned, **GURPS Religion** is *the* place to start if you are creating a religion, and it has nifty rules for clerical spellcasting to boot. If you are researching existing faiths, [Beliefnet](#) is a terrific source of facts, beliefs, holy texts for free, and discussion. The standard text outlining the 10 major current faiths is *The World's Religions* by Huston Smith, available at most bookstores.

If your character is into singing the praises, [The Cyber Hymnal](#) can be a source of inspiration. It focuses heavily on Christian song, but you can get a flavor for the language used in hymns. For another point of view, Washington State University hosts a page of hymns from the [Rig Veda](#), the "most fundamental" of the Indian holy texts.

Roman Catholic garments, from the Pope to the choir boy, are described at <http://www.ghg.net/shetler/catholic/vestments/>. At another site, [Ken Collins](#) thoroughly describes most of the clerical attire of Western tradition. Eastern and Asian traditions are less centralized in their vestments; seek information regarding the specific belief system in which you are interested.

Amen

Remember: The idea is to have fun, not make fun. Playing the Impressive Clergyman is all well and good, unless you hurt the feelings of one of your friends with your portrayal of his faith. It's probably safest to stick to fictional religions when you can, and when you can't, choose a religion that you won't be inclined to parody. Remember, too, that if you're playing a character of your own religion, you're there to play, not to convert your fellow players. Save your serious discussions for after game time.

Why go to all this bother? Because every character, even a neglected cleric, deserves a chance to shine in his own personal way. Because that makes better, more believable, and more entertaining characters. Because *that* makes a more believable, more entertaining world of play. And because *that* makes more fun. And that's what games are all about.

Pyramid Pick

Nodwick: The Card Game

Published by [Jolly Roger Games](#)

Designed by Frank Branham

Artwork and Graphic Design by Aaron Williams

105 full-color playing cards, sand timer, comic booklet; \$18.00

This industry is becoming thick with game-based cartoon strips -- *Dork Tower*, *PvP*, *Knights of the Dinner Table* -- and the trade reciprocates the attention by turning all of them into games. Aaron Williams' strip *Nodwick*, about a beleaguered henchman continually being killed and resurrected by a less-than-canny group of fantasy fortune-hunters, now gets the nod in a fast-paced card game from Jolly Roger Games.

Unlike some license-based games, ***Nodwick: The Card Game*** is dead-on (so to speak) in linking the game to its source material. It's the annual Hench Games (inside the box the game is called ***Nodwick: Henchgames*** for those fans of the strip), and adventuring groups from all over gather to match wits and skills in various contests that invariably end in the death of one or more henchmen. So Piffany, the tireless party cleric, whips out her trusty duct tape and goes about trying to stick Nodwick and his put-upon guild pals together again.

Alas, kind-hearted though she may be, Piffany isn't all that particular about reassembling the pieces. So long as each henchman has six parts -- arms, legs, torso, head, spleen, and spirit -- she's happy. They don't even have to be the right six parts from a single lackey.

The object of the game is to be the first to reconstruct a Henchman. Cards are of two types: Henchparts and Piffany cards. There are 48 Henchpart cards (which came, six each, from the eight contestants in the Games), all color coded: Hoffwick pieces are all one color, Erdwick another, etc. Piffany cards are the components the cleric uses to work her voodoo: Rose-Colored Glasses, Good Thoughts, and other bits of esoteric mysticism. Her cards all have a number on them to tell you how many of those cards are in the deck, and each type of Piffany has a symbol associated with it.

Each Henchpart has a cost to get it into play; for example, you may have to play a Staff of Harmony card and a Life Force Kick-Start to get a pair of arms for your rebuilt body. Symbols matching the required Piffany cards run along the left side of the card. This cost isn't always uniform; getting, say, Nitwick's spleen out of your hand and onto the table has a different cost from that of Zagwick's spleen. Complicating things further, the game runs in real time; there are no turns, so your plays are a function of your response time and the mix of cards in your hand.

Although you start with six cards, you're going to need more, and the lack of turns means no drawing from the deck regularly as in most games. To get or change cards, you must trade with other players, discard matches in exchange for draws, earn them by playing a Henchpart, or pass the sand timer.

The timer gets passed around throughout the game. When it's passed to you, you must flip it over. If you pass it on again before time runs out, you may draw a card. If the sand runs out on you, you must pass the timer but you lose the chance to get that precious card. Since the timer is flipped every time it passes to the next player, it's easy to go from a timer full of sand to a timer that's nearly empty -- something you may not even notice while negotiating a trade and trying to build a Henchman.

Once a set number of people have completed their Henchmen, everyone else tries to finish what they can with what

they have on hand before the sand runs out one last time. At that point, scores are totaled. You get points for finishing first, for each Piffany card it took to heal your Henchman, and for building your Henchman out of one color. The high score is the winner (though the Henchmen might not see it that way).

The game isn't as distressing as it sounds; it's far, far worse, in a way text can't convey . . . but all in a good way. It'll take more than one pass with the rules to get acclimated to the nerve-wracking play, but within this exasperating exercise is a sweaty-palmed good time. Learning how to put Henchmen together while coming apart yourself is part of the fun. Games can be as quick as 15 minutes, so you can shove several rounds into a single evening . . . and you'll want to do just that because now you know what mistakes you made, and this time you're sure you'll be a little more attentive about the timer, and if you trade in pairs faster this go-round . . .

If you're basing a game on Aaron Williams' comic strip, the best man for the art job is Mr. Williams himself. He has ported his delightful, darling little figures -- Nodwick and Piffany, anyway -- to the game, and his design of the sturdy cards is terrific. It's a little awkward arranging your hand so you can see what Henchparts cards require which Piffanies, but this is less from the design work and more because you've got several other things on your mind. Williams has also provided buyers with an enjoyable, all-new eight-page Nodwick story that sets both the mood and the back story for the game.

For those who like the madness of games like **Brawl** but want to add a level of player interaction, a lighter tone, and a whole lot more laughter, Jolly Roger Games has provided it in spades with **Nodwick: The Card Game**.

Pyramid Review

Survival of the Fittest (for *Shadowrun RPG*)

Published by [FanPro LLC](#)

Written by Stephen Kenson

Illustrated by Andy Brase, Eric Desideriu, Marko Djurdjevic, Steve Ellis, Tom Fowler, Mike Grills, Chris Lewis, Klaus Scherwinski, Kevin Wasden, and Anthony Waters

128-page softcover; \$24.99

In *Shadowrun*, the best advice you can have is to "Remember to watch your back, conserve ammo, and never, ever, cut a deal with a dragon." But players being players (or rather, players being shadow runners), sooner or later as their careers progress and their professional reputations grow, they are going to come to the attention of the dragons . . . or at least to those dragons who take an interest in the affairs and doings of the younger races: Elves, Dwarves, Humans, Orcs, Trolls, and so on. So what happens if the players have to deal with some of the Sixth World's most powerful and knowledgeable beings? This is a question answered in *Survival of the Fittest*, the latest campaign book for *Shadowrun*. Not only does it involve the characters in the affairs of dragons, it also continues the story and plotlines begun with the last Will and Testament of Dunkelzahn, the dragon elected to the presidency of UCAS in 2057 who was then assassinated shortly thereafter . . .

That *Survival of the Fittest* involves dragons and Dunkelzahn's will means two things. First, this is not a campaign for the inexperienced *Shadowrun* GM or player. This is not to say that they will not enjoy playing this campaign, but rather that long-term players will get the most out of *Survival of the Fittest* as secrets are revealed and plotlines resolved. Second, a long list of previously published sourcebooks needs to be at hand if the GM is to take advantage of everything in the campaign. *Survival of the Fittest* itself needs . . .

- [Year of the Comet](#) and [Shadows of North America](#) for the current state of play of the world in 2062.
- *Magic in the Shadows*, as several of the adventures in *Survival of the Fittest* involve very powerful magical forces. Additionally, *State of the Art: 2063* also provides detail on the art of geomancy that plays a part in one of the adventures, but is only optional.

The following expand upon various aspects of the adventures, but should be considered as still being optional:

- [Threats 2](#) and the *Critters* sourcebook for a detailed look at some of the foes and things the characters will have to face. In addition, the *Critters* sourcebook will provide more of these to throw at the players if the GM wants to increase the difficulty of the adventures.
- [Target: Wastelands](#) and *Target: Smuggler Havens* for more information on some of the locales in *Survival of the Fittest*.
- *Corporate Download* for profiles of some of the corporations the characters may find them making runs against, while *Corporal Punishment* includes the adventure, "Legacy," which can be seen as a prequel to one of the adventures in this campaign and enhances this campaign if played beforehand.
- Penultimately, those GMs possessing second edition material for *Shadowrun* might like to have a copy of *Portfolio of a Dragon: Dunkelzahn's Secrets* on hand, though a copy of Dunkelzahn's will can be found on the official *Shadowrun* [website](#).
- Finally, the forthcoming supplement, *Dragons of the Sixth World*, may provide more information about those

involved in ***Survival of the Fittest*** and their motives. Thankfully, there is enough information provide for the GM to cover most eventualities.

This is a lengthy list of prerequisites, and it seems to get longer with each new release for ***Shadowrun. Survival of the Fittest's*** production values are up to FanPro's usual standards, though the overall quality of the artwork is an improvement. In particular, the illustrations of the dragon Rhonabwy and his minions possess a style and feel that is creepy and majestic at the same time.

Survival of the Fittest is structured in eight parts. The first of these is an overview and introduction to the campaign itself, followed by the seven parts of the campaign. These are prefaced and appended by two pieces of fiction that add a fair bit of flavor to the campaign for the GM. The first and last have to be played in that order, but the middle five can be run in any order.

[SPOILER ALERT!]

The plot to ***Survival of the Fittest*** centers on which dragon should succeed Dunkelzahn as the Loremaster of the dragons of the Sixth World. Whoever is Loremaster holds the Jewel of Memory, an artifact important to the dragons; in his will, Dunkelzahn left it to Lofwyr, the draconic head of the German-based Saeder-Krupp Corporation. This is at odds with draconic law and tradition, which demands that upon the death of the previous incumbent, the position of Loremaster is contested for through the Rite of Succession. Now that the dragon, Ghostwalker, has returned to claim his old lair in what are now Denver and the Front Range Free Zone, he openly challenges Lofwyr and initiates the rite. By the terms of the Rite, the dragons cannot openly attack one or work against each other, but may play out the ritual via proxies and agents. (No prizes for guessing who these agents and proxies might be . . .)

The campaign opens with "Knowledge," which takes the runners into the North of the California Free State and up Mount Shasta, which happens to be the lair of Hestaby. Once there, they must download a data file and get back down the mountain. This is the most straightforward of the runs in ***Survival of the Fittest*** and in truth this is just a test of the runners' abilities conducted by their employer. If happy with their performance, the campaign proceeds apace. "Cunning" sends them to Denver to "extract" (kidnap) the leader of a splinter faction of the Children of the Dragon, a church that holds that Ghostwalker actually is a reincarnation of Dunkelzahn.

"Elements" is a simple delivery job . . . via New Orleans, across the Caribbean and then up the Amazon into the Awakened Nation of Amazonia. What they are delivering is a crate containing the Scrolls of Ak'le'ar, previously seen in "Legacy" from ***Corporal Punishment***. Another extraction job is needed in "Balance," an adventure that gets the characters to Hong Kong, then Vladivostok, and back again for a spot of interior decorating -- ninja style!

Wales is the destination in "Hunting," for another run at a dragon's lair and out again with an item. Unfortunately for the characters, the tables get turned around and they will find themselves as the hunted. Getting out will be harder than getting in. Locating another of Dunkelzahn's bequests finds the characters in the ruins of a city destroyed by a dragon; 40 years before, the Ayatollah declared a Holy War against the Awakened. In response, the dragon Aden razed the city to the ground. Now all that is left is a war zone, through which the runners must travel while having to contend with the current population of ghouls, wraiths, mercenaries, ghosts, and their Shedim-occupied bodies. This is the least straightforward of any adventure in ***Survival of the Fittest*** and its freeform structure will need careful handling by the GM to run.

The final part of the campaign is when the characters get to find out what is really on, and who their employer really is. As odd as Tehran was in "Rest," things get a whole weirder in "Lore" (or "Memory" as it is given in the introduction). While the runners cannot necessarily grab the Jewel of Memory while it remains in the possession of Lofwyr -- though if they are good enough, making a run against the Saeder-Krupp headquarters is an *option* -- they can at least try for its essence. The only problem is that it lies deep within the Metaplanes. Getting into the planes past the Dweller on the Threshold is a test in itself; once past, there is a multitude of tests to face before they get their hands on the essence of Jewel of Memory. Even if they do, its current owner will make them an offer of anything (and Lofwyr really does mean *anything*) that they want. A billion Nuyen? A shot at the presidency of UCAS? The best delta-grade cyberware money can buy? Their own private island? And these are just the suggested possibilities . . . If

they do turn this offer down, the runners will have earned an enemy for life, but if they accept it, they will have betrayed their employer *and* besmirched their professional reputation for life . . . Either way, they get to deliver the Jewel, and actually play a tiny part in the Rite of Succession.

Whatever the outcome of the Rite, the players have the chance to alter the balance of power between the traditionalist and progressive dragons. Along the way, these high-powered adventures can earn them over a million Nuyen!

[END SPOILER ALERT]

Besides these seven adventures, there are plenty of suggestions for the GM to add more challenges and advice on how to run each adventure. One problem is that the various runs do feel a little similar in that the characters have to go there and do this, again and again. Yet that is the nature of *Shadowrun*, and while *Survival of the Fittest* can be run as a campaign of one adventure after another, to get the best out of it, it should be leavened with scenarios of the GM's own creation. Alternatively, since the events of *Survival of the Fittest* take place sometime between mid-2062 and early-2063, some of these could come from [Wake of the Comet](#). That said, this only provides three more adventures and the GM will need to add more.

Survival of the Fittest is really for the more experienced *Shadowrun* GM and players alike, as they will definitely get the most out of this campaign. They really do have the opportunity to affect the ongoing events of the Sixth World and face a dragon or two . . . although not literally, as the end result would be too much "snap, crackle, and pop" before needing to create a new character. Still, the campaign provides opportunities for the characters to interact with dragons and live to tell the tale, which goes to show that *Shadowrun's* best advice is not always right.

--Matthew Pook

Pyramid Review

Exalted: The Lunars (for Exalted RPG)

Published by [White Wolf Publishing](#)

Written by Bryan Armor, Chris Hartford, James Kiley, Malcolm Sheppard, Ethan Skemp, and Scott Taylor

Edited by John Chambers

256-page b&w hardcover; \$29.95

Exalted: The Lunars is the third hardback release for White Wolf's ***Exalted*** game line of anime high fantasy. After the success and strength of two previous hardbacks, the main book and one covering the Dragon-Blooded, it seemed inevitable that the line stumble. This book is that stumble. ***The Lunars*** just isn't as good as its predecessors. After strong releases for the game over its first year, the first major release of its second year proves the line's lost a little steam.

The book itself looks like the other hardbacks of the line, and following the trend set by the other hardbacks, the inside covers sport a full-color (or in this case, sepia-tone) map, this time one of Creation with the names of all of the significant barbarian tribes marked on their piece of the geography. A nice touch is the runic translations of the tribe names underneath the English versions. Sadly, as with the Asian-style characters of the Realm displayed in all of the ***Exalted*** books, no alphabet or translation guide is provided for these runic characters that crop up throughout the book, which precludes any use of the language other than repeating the given tribe names.

Perhaps the most obviously dismaying thing about the book for fans of the line is its price tag. It is the same as the other hardbacks, but this book has over one hundred pages less than the main book. This is felt more keenly since it has roughly the same number of pages devoted to Charms as the main book, which means a lot less space for setting and background information on the Lunars.

Exacerbating this are the vignettes. On the one hand, they provide a narrative picture of the world of ***Exalted*** in a way that no factual recitation can, and describe something of the diversity and atmosphere of the setting, while furthering the game's metaplot elements. These make for good reading, particularly if you like any of the signature characters, several of whom make appearances; but this time the stories are an overall drawback by encroaching on the regular text. Readers of White Wolf's hardbacks will be used to vignettes to introduce the book as a whole and each chapter in particular, but many will be dismayed to see an additional two pages of fiction at the beginning of Chapter 2. For a book already low on page count for its cost, it seemed a poor choice to devote more than a dozen pages to material unlikely to provide practical use or be read more than once.

Contrariwise, the rest of the book is sadly lacking any fictional material -- histories, prophecies, poems, or laws -- to create depth for the Lunar and barbarian cultures. This is especially telling in the second chapter, where the few pages devoted to the Silver Way, the conduct code of the Lunar Exalted that is mimicked by the barbarian tribes, are presented coldly and factually. It is a missed opportunity, as they could have been written as a formal code with commentaries on the interpretations of the various laws given by some of the elder members of the Silver Pact or, better still, those First Age Lunars mentioned at the end of the chapter. For a culture that relies almost exclusively on the oral tradition, the cultures themselves are presented like an anthropology text, segregated into the now-standard geography of the compass points, rather than from within the culture itself or competing tribes.

The body of the book itself is divided into the usual chapters for a White Wolf hardback: an introduction, a setting chapter, a chapter on the Lunars, three character creation chapters, and a storytelling chapter. The extra chapter this time covers the Wyld.

The setting chapter covers barbarian culture, which is similar to (but not the same as) Lunar culture, and contains a laundry list of most of the tribes featured on the map. This cursory examination of more than a dozen tribes could have been deeper and more thorough, especially considering (again) the overall word count of the book.

The chapter on the Lunars contains the expected information on who is chosen by Luna, how and why they Exalt, and what happens to them afterward. It also covers the Silver Pact, an inter-tribal council that promotes a straightforward "noble savage" philosophy. In addition to the requisite "what we think of the other Exalted" section, there is also a brief description of several Lunars who have survived from the First Age. Again, the chapter seems short and lacking a voice to draw the reader into the world of the Lunars, as well as feeling like it was cribbed from White Wolf's **Werewolf**. This is unsurprising, since the Lunar Exalted are possible the forerunners of the World of Darkness' changing breeds, and it may explain **Werewolf**-guru Ethan Skemp's name among the authors.

The three chapters devoted to character creation cover the usual ground, with the Charms chapter taking center stage. The Charms for Lunars are based around Attributes rather than Abilities, making the Charm cascades broader and harder to follow. Instead of Archery, Athletics, Melee, or Endurance Charms, there are groups such as Ranged Combat, Melee Combat, Defensive, Survival and Healing, and Body Enhancement Charms. Most still spring from one basic Charm, but the cascades are so large that each is divided into several charts. The confusion is enhanced by Charms referencing other Charms before you've read them, so Irresistible Storm Attack states it works like Ferocious Avalanche Technique, four pages before the latter is covered. The emphasis is strongly on combat, with less attention paid to any other type of Charm. To balance this, some combat Charms have prerequisites based on non-physical attributes, although many will find it disconcerting to find something like Twisting Monkey Wrist has a minimum Charisma requirement. The mechanics of many of the Charms are more complex than in previous releases, especially concerning initiative, and go a long way in moving the emphasis from storytelling to game.

Exacerbating the rules tendency is the chapter on the Wyld. Covered only in passing in most other **Exalted** books, the Wyld is the fluctuating chaos from beyond Creation that causes reality to mutate and plays host to the Fair Folk. A significant chapter on the Wyld might have covered **Amber**- or **Sandman**-style ideas for adventuring in these dangerous areas, but instead we are given a chapter of mundane details such as how the Wyld shifts from somewhat safe to very dangerous and what kind of mutations Wyld-affected creatures might have. If the Charms chapter didn't contain enough rules, the Wyld chapter makes up for it. Combining repetition with rules material better suited to a different book, this chapter is easily the weakest. Its inclusion in this book is understandable, as the Lunars interact with the Wyld more than any other type of Exalted, but considering the line's next release is **Creatures of the Wyld** and the likelihood of this information being reiterated in any book on the Fair Folk, the angle of rules over story advice is highly questionable.

The final chapter on Storytelling goes a long way to redeem the rest of the book. Usually a place for well-worn advice, this chapter takes a step-by-step approach to starting, sustaining, and concluding a Lunars game. It quickly and effectively covers most relevant aspects of a Lunars game, such as differentiating combat-heavy characters from one another, moving characters through the ranks of Lunar society, and how to transform a game full of powerful PCs without starting from scratch. Two sections of note are "What to Avoid," a welcome addition to standard storyteller advice, and one on incorporating other types of Exalted into a game full of Lunars and vice versa. This is the only chapter that felt just as long as it needed to be.

Worth mentioning are the spelling and grammatical mistakes rife throughout the book, with about one per page. Sadly, many of these, especially missing words, might have been caught using a grammar checker, so their appearance in the final product is unfortunate. Although it was still possible to divine meaning through context, it was jarring, and may cause more than a few disputes. The only chapter that seems free of the taint is, unsurprisingly, the stellar Storytelling chapter.

In conclusion, **Exalted: The Lunars** is a solid, if somewhat uninspiring, addition to the **Exalted** library. It lacks

substance in its background material and overcompensates with too much substance in the Charms and Wyld chapters. For gamers who want to play Lunars, or Storytellers who want to flesh out their Lunars NPCs or expect their group to encounter barbarian tribes, the book proves its worth. For the casual gamer or follower of the ***Exalted*** line, it may be worth waiting for the next hardback to redeem the line.

Eight Minutes Of A TV Show, A Lifetime Of Lessons

I've received a couple of queries and guesses regarding the off-handed trivial comment from two weeks ago about the origin of the (paraphrased) quote: ["He's going from town to town, looking for the two-armed man who killed that waitress."](#) Well, it's obviously a reference to the old *Fugitive* television show (where the protagonist went from town to town looking for the one-armed man), but this draws upon something further. Something stranger. Something much more . . . cancelled.

It came from a short-lived Nick-at-Nite program from the late 1980s called *On the Television*. It was Nickelodeon's first original Nick-at-Nite television series, and consisted of a review-format show, where they would show (fabricated) television programs, and two critics would review them. Fictitious shows they reviewed included *China Beach Party*, *Beauty and the Beet* (featuring a man dressed like a giant red beet), and *My Five Dads* (I can still sing the theme song to this one). They also reviewed a "show" called *Statute of Limitations*, where the protagonist was wrongly accused of killing a waitress and was on the run, looking for the two-armed man he knows *really* killed her . . . all the while trying to avoid the law until the statute of limitations ran out on the murder charge.

Thinking back, I believe this one fictitious show clip had such a profound affect on me because it signified so many things that I recognized as an early proto-writer (and later, GM). Although it may be indulgent, I'll try to convey some of them.

"You! You're the man who killed that waitress!" -- Spoken by a shop clerk who was flirting with our fugitive until he recognized him . . . despite him being a thousand miles and several months away from the scene of the crime. (It was made obvious that he's always recognized in the various new cities he goes to.)

Lesson: Avoid omniscient NPCs. For plot purposes, it's often tempting to make a character that knows *exactly* what they need to know for the plot to advance. Avoid this temptation; if you can make someone who knows what's going on organically, then by all means do so . . . but don't have secrets and plot points erupt from the earth unbidden. (And just because a character got points for that Secret disadvantage doesn't mean it needs to come up *every* adventure.)

Of course, the same lesson also applies to players; just because you know something doesn't mean your *character* does . . . and coming up with the flimsiest pretense to bring your knowledge into the game is just Bad Karma.

"The two-armed man!" -- The climactic moment of the *Statute of Limitations* episode is where the protagonist hears a rumor that the mysterious two-armed man is in town. He chases off after him, tackling him from behind . . . only to learn that the man he tackled only has one arm. Oh, well . . . maybe next episode.

Lesson: Avoid having clues or missions that are so open-ended, they might as well not even exist. (Alas, I failed to fully live up to this edict, and thus once sent my poor players on a search narrowed down to . . . um . . . [Canada](#).) Something like the "two-armed man" is essentially meaningless, as is a quest to find a specific "hidden glen," "mighty warrior," or "medium-sized asteroid."

". . . avoiding the law while waiting for the statute of limitations to expire . . ." -- Ahem. Anyone with any familiarity with the law (or at least American -- and I believe most countries' -- laws) knows that murder is one of those crimes that doesn't *have* a statute of limitations.

Lesson: Make sure the absolute basic premise of your story, adventure, or world isn't invalid on the surface. This one is tougher to adhere to than it may seem at first; all it can take is one loophole, oversight, or misstep to render a fair bit of work moot. (I note it wasn't until White Wolf's *Aberrant* game that a super-powered RPG bothered to point out there's no reason for a powered being to rob banks or steal valuable objects . . . after all, an endorsement deal with a major corporation can be worth millions, which is both legal and nets *much* more than most thefts.)

". . . This show is obviously a *Fugitive* ripoff . . ." -- One of the few weak points of the segment was after the preview, when the show focused on the critics reviewing the show. One of them made the comment that this show was

derivative of the *Fugitive*. Well, duh.

Lesson: If the point of a story/adventure/whatever is to be derivative of another story, don't acknowledge it. Thus if you're running, say, a space opera game where an obsessed captain is set on using his vessel to capture the Great White Space Amoeba, to the detriment of self and crew, it's almost certainly pointless to say (in or out of game), "Hey! This story is like *Moby Dick*!" Well, obviously . . . let's move on. Pointing out that a story is derivative is often counterproductive at best, and [breaking kayfabe](#) at worst. (Of course, if it's important to the story that the characters know in-game that a story is derivative, then it's perfectly acceptable to bring it up; thus if someone is running around an opera wearing a mask, it's probably fine to say, "It's like *Phantom of the Opera*.") As a good rule of thumb, if the story is probably going to progress like the source, there's no need to mention it. On the other hand, if there's more to the story, and there are a few twists and turns in the plot, feel free to mention the inspiration; at best, you may trip up the players on their own preconceptions.

(Of course, like so many rules, this one can be broken if you know what you're doing. For example, quoting Melville at the end of our Great White Space Amoeba adventure would be perfectly in keeping with, say, a *Star Trek* adventure. And being hipper-than-thou "Whoa! It's like we're goin' against the Death Star!" is entirely in place in a setting like ***Buffy The Vampire Slayer***.)

Yes, this fictitious little segment was *supposed* to be bad and have significant logical mistakes. But those logical mistakes were so wonderfully awful that their lessons have stuck with me even to this day.

Cable television was clearly a wonderful surrogate for friends in my adolescence.

Last week's answer: ***Lord of the Fries*** holiday menu, first seen as the 1998 Christmas card sent out by [Cheapass Games](#)

(two stars) "In the northern regions of the Core, just south of Darkon, there lies a tiny domain called Keening. It is shaped by the song of evil, and no living creature can find comfort there."

Steampunk Heroes 2:

Phileas Fogg -- International Man of Mystery

by CJ Beiting

"[Phileas Fogg] was an enigmatic figure about whom nothing was known, except that he was a thorough gentleman and one of the most handsome figures in the whole of high society . . . Although clearly British, Mr. Fogg might not have been a Londoner. He had never been spotted in the Stock Exchange, the Bank, or the City. The basins and docks of London had never berthed a ship for an owner called Phileas Fogg. This gentleman was not on any board of directors. His name had never rung out in a barrister's chambers . . . He was not engaged in industry, business, commerce, or agriculture . . . he was not a member of any of the associations that breed so prolifically in the capital of the United Kingdom, from the Harmonic Union to the Entomological Society . . .

"Was this Phileas Fogg well off? Without any doubt. But how he had made his fortune, even the best informed could not say. And Mr. Fogg was the last person one would have approached to find out . . . In short, the least communicative of men. He spoke as little as possible, and so seemed all the more difficult to fathom. His life was transparent, but what he did was always so mathematically the same, that one's imagination, disturbed, tried to look beyond."

--Around the World in Eighty Days, Chapter 1

Who is Phileas Fogg? British Society knows him as a gentleman of means and of fixed habit . . . and nothing more beyond that. He has no job. He has no family. He has no friends. Apart from a substantial bank account at Baring's and a membership in London's famous Reform Club, he has nothing to connect him to human society at all. Fogg is the prototypical "international man of mystery." Clearly he has a secret, but no one knows what it is. Even his surname suggests obscurity, and as for his forename, well, it's certainly not British. What could be behind those mathematically precise habits of his? Who is he, really? And what causes such a man to drop everything and gallivant around the world on the spur of the moment? In this article, we will look at several different interpretations of the mysterious Mr. Fogg from the mundane to the outré, as we, "disturbed, [try] to look beyond."

Passepartout

"You are French and are called John?"

"Jean, if sir pleases-Jean Passepartout, a nickname that has stuck with me and was first applied due to my natural ability to get out of scrapes. I consider myself an honest fellow, sir, but if truth be told, I have had several occupations."

--Around the World in Eighty Days, Chapter 1

Jean Passepartout

156 Points

Male; Age 33; 6'0"; 165 lbs.; muscular build, round facial features, ruddy complexion, brown hair (always a bit mussed), blue eyes, slightly protruding lips.

ST 13 [30]; **DX** 14 [45]; **IQ** 9 [-10]; **HT** 13 [30].

Speed 6.75; Move 6.

Dodge 6; Parry 8.

Advantages: Ally (Phileas Fogg) (151 to 200, 15 or less) [45]; Double-Jointed [5]; Sanctity [5]. **Disadvantages:** Duty

(15 or less) [-15]; Impulsiveness [-10]; Poverty (Struggling) [-10]; Sense of Duty (Phileas Fogg) [-5]; Status -1 [-5]; Weak Will -1 [-8] (Will: 8).

Quirks: Can't work for an employer he doesn't respect; Confirmed bachelor; Doesn't get sea sick; Garrulous; Prized possession: ornate pocket watch (a family heirloom). [-5].

Skills: Acrobatics-14 [4]; Acting-10 [4]; Aerial Acrobatics-15 [4]; Area Knowledge (England)-10 [2]; Area Knowledge (Paris)-10 [2]; Black Powder Weapons (Pistol)/TL5-10 [0]; Boxing-13 [1] (Parry: 8); Climbing-15 [1/2]; Cooking-10 [2]; Disguise-10 [4]; English-10 [4]; Equestrian Acrobatics-13 [2]; French (native)-11 [2]; Gymnastics-15 [1]; Professional Skill (Fireman)-12 [8]; Riding (Horse)-13 [1]; Savoir-Faire (Servant)-14 [10]; Singing-12 [1/2]; Teaching-12 [8]; Team Acrobatics-14 [0]; Tightrope Walking-15 [4]; Tumbling-14 [0].

We begin our examination of the mysterious Mr. Fogg with his decidedly un-mysterious manservant. Jean "Passepartout" (French slang for a skeleton key or a thing that "goes anywhere") led an extremely varied life before coming into Mr. Fogg's service. A Parisian born and bred, he began life as a wandering singer, and then joined a circus where he served as a trick rider, a trapeze artist, and a tightrope walker. He later taught gymnastics and served as a sergeant in the Paris Fire Brigade. Tiring of his wandering life, he left France in 1867 to seek his fortune as a manservant in England, hoping to settle down. However, he has high standards and was incapable of working for a gentleman whom he could not respect; as a result, he served in a total of 10 households before coming to Mr. Fogg in October of 1872. Initially, it seemed to Passepartout as a perfect match: Mr. Fogg was a man of mathematically regular habits, and Passepartout believed he could settle down to the quiet life at last.

Of course, he was sadly mistaken . . .

Passepartout is an interesting character. Due to his varied background, he has a wide variety of skills and very strong primary attributes; as such, he is very competent, and much more skilled than the average Victorian servant, so he counts as an Ally rather than a Dependant. He is strong, honest, and personable, and is usually well-liked by the people he meets. His only flaws are a tendency to impulsiveness and a bit of a short temper. Over the course of the novel, he begins by considering his employer a hopeless eccentric, but rapidly develops a strong Sense of Duty towards him. He and Fogg are polar opposites -- Fogg is mental, methodical, reserved, and stereotypically British; Passepartout physical, impulsive, gregarious, and stereotypically French -- but they work well together.

GMs who use **GURPS Martial Arts** might wish to replace Passepartout's Boxing skill with Savate and its maneuvers. Passepartout is by no means an accomplished martial artist, but is surprisingly good in a fistfight.

The Phileas Fogg Template

"Phileas Fogg was one of those mathematically precise people, never in a hurry but always prepared, economical with his steps and movements. He never took a pace too far and invariable found the shortest path. He never wasted glances at the ceiling. He allowed himself no unnecessary gestures. Nobody had ever seen him aroused or troubled. He was the least rushed man in the world, but always came on time."

--*Around the World in Eighty Days*, Chapter 2

Phileas Fogg

189-1/2 Points

Male; Age 40; 6'; 187 lbs.; pale complexion, fair hair worn in moustache and sideburns, splendid teeth.

ST 10 [0]; **DX** 10 [0]; **IQ** 11 [10]; **HT** 12 [20].

Speed 5.50; Move 5.

Dodge 5; Parry 4.

Advantages: Ally (Passepartout) (101 to 150, 15 or less) [30]; Appearance (Very Handsome) [25]; Independent

Income 1 [0]; Mathematical Ability [10]; Reputation +1 (Gentleman, England) [1]; Single-Minded [5]; Status 3 [10]; Unfazeable [20]; Wealth (Filthy Rich) [50].

Disadvantages: Code of Honor (Gentleman's) [-10]; Compulsive Behavior (Mathematical regularity) [-10]; Compulsive Gambling (Whist) [-5]; Compulsive Generosity [-5]; Low Empathy [-15]; Secret [-10].

Quirks: Laconic; Never hurries; Prefers to let his servants sight-see for him; Spartan tastes; Uncongenial. [-5]

Skills: Accounting-13 [1/2]; Area Knowledge (World) (Travel)-14/20 [8]; Black Powder Weapons (Pistol)/TL5-6 [0]; English (native)-14 [3]; Games (Whist)-17 [12]; Knife-10 [1] (Parry: 4); Mathematics-12 [1]; Merchant-11 [8]; Meteorology/TL5-12 [4]; Musical Notation-11 [1]; Navigation/TL5-12 [6]; Sailor/TL5-14 [8]; Savoir-Faire-15 [10]; Seamanship/TL5-14 [6].

Over the course of the novel, his template will change. Midway through his journey, add the following disadvantages to his template: Dependent (Aouda) (Average, 15 or less, Friend) [-36]; Enemy (Fix) [-10] (Individual, 12 or less); Reputation -3 (Eccentric or Thief, Britain) [-5]; Sense of Duty (Aouda and Passepartout) [-5]. All of these lowers his character cost to 133-1/2 points. At the end of the novel, add the following advantages and disadvantages to his template: Reputation +3 (He did it!, Britain) [5]; Dependent (Aouda) (Average, 15 or less, Loved One) [-72]; Sense of Duty (Aouda and Passepartout) [-5]. These lowers his character cost to 117-1/2 points. It is also possible that his Compulsive Behaviors might lessen, and he may have bought off his Low Empathy; this is at the GM's discretion.

Some elements of the Phileas Fogg template require special explanations:

- His Unfazeable advantage is set at a higher than normal level not because there are a plethora of Fright Checks associated with him, but rather that the advantage is meant to be cinematic and cover more than just Fright Checks. Not only is Phileas Fogg never frightened or surprised, he never hurries, never gets mad, never gets seasick, always sleeps perfectly soundly regardless of conditions, and always manages to look fresh, even under the worst of conditions.
- One of his most obvious traits is simultaneously one of his greatest weaknesses: his Compulsion for mathematical regularity in his life. Phileas Fogg is compelled to try and regulate every single element of his life. However, given the fact that people are notoriously difficult to control, Fogg avoids them wherever possible, rendering him Uncongenial in general, and giving him a Low Empathy when trying to deal with the people he has to. Many, many times, the word "machine" is used to describe him, with good reason: he is in some ways a personification of the Victorian obsession with the mechanical and the mathematical.
- Fogg's Compulsive Gambling does not reflect an obsession with all games of chance, but only the card game whist, at which he plays under normal circumstances for several hours a night. While traveling on his round-the-world journey, he is capable of playing whist to the exclusion of all else (source of his Single Minded advantage). He is a good enough player to win most of the time, but always gives his winnings away to the poor.
- His Area Knowledge (World) is divided into the specialization of travel. The first skill reflects a general knowledge of current events in any portion of the world, and can substitute for a Politics, History, etc. roll. The specialization reflects a knowledge of travel, at which Fogg was so skilled that his peers in the Reform Club suspected him of having second sight.
- No Contacts have been added to this template, but the GM can assume that Fogg can access to a number of the famous liberal politicians and figures of his day through his membership in the prestigious Reform Club. Note that the words "can have" are used: Fogg does not casually socialize at his club except with his usual group of whist players.
- Fogg has a secret: who he is, and where he obtained his fortune. This can change depending on how one views different incarnations of Phileas Fogg.

On first glance, there appears to be little to Mr. Phileas Fogg. All he seems to do with his life is read newspapers at the Reform Club and play whist there with a select group of fellow enthusiasts. He spends very little time at home, a fine but Spartan house at No. 7, Savile Row. Every aspect of his personal life is mathematically regulated: The times of day in which he acts are specified, the clothes in his wardrobe are numbered, and even the number of steps he takes appear to be calculated. Apart from a manservant, he interacts with no one outside his Club. His routine and life are precise

and unvarying, and Society knows that he has not left London in at least five years.

These factors combined made the events of the evening of Wednesday, October 2nd, 1872 all the more surprising. Over a game of whist at the Reform Club, Mr. Fogg not only maintained that a person could travel around the world in eighty days, but also accepted a wager to do so, and left that very evening, with no advanced planning or forethought . . . indeed, with nothing but his manservant, a small valise, and a large pile of banknotes.

All Britain was stunned by his plan, and he was a media darling in the newspapers for a short time until news of the robbery of the Bank of England came to light; public opinion made Fogg out to be the culprit, and Police Inspector Fix set out to apprehend him. Fogg's journey was in a number of stages: first, from London to Suez by train, passing through Paris, Turin, and Brindisi, and then via the steamship *Mongolia* to Suez. After that, by steamship to Bombay, with the intention of traveling the Great Peninsular Railway across India to Calcutta. Uncompleted track line near Bundelkhand forced him to travel (by elephant!) to the next stage of the line, rescuing the Parsee widow Aouda on the way. After reaching Calcutta by train, he traveled via the steamship *Rangoon* to Singapore and then Hong Kong, where storms delayed his expected connection to Japan. Interference on the part of police Inspector Fix sent Passepartout ahead to Yokohama alone via the steamship *Carnatic*; Fogg and Aouda attempted to make the journey by chartering the yacht *Tankadère*, but bad weather routed them back to Shanghai, where they were luckily able to rendezvous early with the steamship *General Grant*, connecting with Yokohama for San Francisco. Collecting Passepartout in Yokohama, Fogg took the *General Grant* to San Francisco, and set off on the Pacific Railroad for New York. An ambush by Sioux Indians forced a stop at Kearney, Nebraska, and Fogg had to catch up with the train by traveling via ice schooner to Omaha, traveling from there via train to New York.

Again missing his connection, he again chartered a ship, the steamer *Henrietta*, scheduled to go to Bordeaux. A swift mutiny engineered by Fogg's fortune redirected the steamer to Liverpool, but a shortage of fuel forced the crew to burn the wood fittings and decks of the *Henrietta* to get them as far as Queenstown, Ireland. A fast ferry took Fogg from Queenstown to Liverpool, where an attempt to clear his name in court caused him to miss his train to London in time to make his bet. Silently dejected, he returned home, penniless. The sudden decision to marry Aouda and find a parson to perform the ceremony at once caused him to realize that by traveling east and crossing the International Date Line he had actually gained a calendar day, so that his 81-day journey only took 80 days; thus the day was December 21st, and not December 22nd, as he thought. He won his wager, which merely replaced but did not add to his fortune, leaving him with nothing to show for his troubles but the fame of his exploits and a beautiful new wife.

Fogg's journey certainly has its mysterious elements. Why would a man of unvarying habit suddenly attempt such a rash course of action with no planning? Furthermore, why would he make such a journey at the beginning of winter, when bad weather was certain to slow him down at points (as, indeed, it did)? Can his actions have signified something more? It is odd that both in the Old World and the New, his journey is nearly ended by attacks by Indians. Furthermore, it is very clear that Fogg himself changes as a result of his journey: he moves from being willing to abandon Passepartout in Bombay to possible jail time for profaning a Hindu temple, to risking his journey and his life recapturing Passepartout from a Sioux war band in Nebraska. Aouda also effects great change in him; in her company, he stops to see the cities he heretofore ignored, and it is very clear that she inspires in him a quality he previously did not display-spontaneity. On one level, Fogg's journey is not a journey at all; it is an awakening. But of what sort?

What Fogg's secret is, what his identity really is, and what the true significance of his journey is depends on the degree of fabulousness one looks at him through. Let us take a look at Mr. Fogg, through a number of different lenses.

Option 1: Victorian Fogg

"And that was how Phileas Fogg commanded in place of Captain Speedy, locked into his cabin, and why the *Henrietta* was at last heading for Liverpool. It was obvious, on seeing Mr. Fogg maneuver, that he had been a sailor before."
--*Around the World in Eighty Days*, Chapter 33

Victorian Fogg has a terrible secret: he is not a gentleman at all, and is living an elaborate lie. He is, in fact, a sailor who somehow struck it rich, changed his identity, and retired to London to live the life of a gentleman. The details of Fogg's nautical career and source of wealth are up to the GM: Fogg may have made his fortune through the still

somewhat socially-unacceptable (for a gentleman, anyway) venue of maritime trade, he may have found some buried treasure during a nautical voyage, or he may have engaged in something more sinister. Fogg's mathematical precision of life is an elaborate attempt to maintain his charade: by keeping a regular life and avoiding contact with people as much as possible, his chances of discovery are greatly minimized. Victorian Fogg is the "default" version of the Fogg template, and provides a ready explanation for the events of Verne's novel. His journey is not a mysterious one at all: it is a sincere wager on the part of an experienced traveler to prove a point. In practical effect, the journey around the world causes the normally rigid Fogg to relax and become more human, discovering compassion for his fellow man (in the person of Passepartout) and the pleasures of married love; indeed, it ends with the marital bliss of the honeymoon bedchamber. Fogg gains nothing financially, but ends up with "a lovely wife who -- however unlikely it may seem -- made him the happiest of men!"

Using Victorian Fogg in A Campaign

Victorian Fogg is one of the easiest and hardest lenses to use: easy because he is simple, hard because he is so connected to his journey and his own self-awakening. On one level, he can be used as a cameo for a Victorian-era game, to amuse and interest the players as he passes through. Alternatively, players in dire straits in foreign lands in a Victorian game may join his entourage; as his journey goes on, Fogg is quite willing to help other travelers in distress and bring them along with him, usually free of charge. GMs who want to have players travel with Fogg have a chance to use an interesting variety of historical **GURPS** supplements: for England, **GURPS Steampunk** or **Horror**; for India, the forthcoming **GURPS India**; for Singapore and Hong Kong, **GURPS China**; for Yokohama, **GURPS Japan**; and for America, **GURPS Old West**. In using this lens, GMs should remember that although Mr. Fogg and his people are quite willing to fight when necessary, they do not have much in the way of combat skills, and tend to survive their battles in the novel via luck and being in the company of more experienced fighters.

Option 2: Espionage Fogg

"Do you know, Mr. Passepartout, that this so-called journey in 80 days might easily be the cover for some secret assignment . . . a diplomatic mission, for example?"

--*Around the World in Eighty Days*, Chapter 9

Espionage Fogg has a terrible secret: he is actually a spy. What kind of spy depends on the GM. His carefully controlled life is a cover for his activities. If Fogg is working for a foreign power, he is actually probably working in intelligence gathering. Careful, regular perusal of a nation's daily newspapers is a valuable espionage method even today, and more so in 1872, however unexciting such a life might seem to the modern reader. In addition, by keeping quiet and listening, Fogg doubtless overhears a lot of the conversations that go on in the Reform Club, which can give his Foreign Masters valuable intelligence about the state of British politics. If Fogg is working as an agent for the Crown, his constant readings may be intelligence analysis as well. In either case, his trip around the world is not spontaneous: it is carefully planned in advance (why else would he happen to have £20,000 pounds in cash lying about the house?). He may travel to relay information to his Foreign Masters (isn't it interesting that the on the very day he takes on a French "servant" he leaves for France?), in whatever country they work in or have agents in. He also may be traveling to accomplish a mission; in Philip José Farmer's retelling of the story, Fogg and Passepartout are secret agents who, among other things, are traveling to rescue a fellow operative (Aouda); Mr. Fix is an agent from a rival power trying to neutralize them.

If using Espionage Fogg, modify the Phileas Fogg template as follows: Add an Alternate Identity and Patron (Agency) advantages. Add the Duty (Agency) disadvantage, and raise his Secret to [-20]. Add the skills Acting, Intelligence Analysis, Research, and an alternate Native Language if necessary.

Using Espionage Fogg in A Campaign

Espionage Fogg is a good option for a wilder **GURPS Steampunk** campaign. He is particularly well suited for a **GURPS Castle Falkenstein** campaign; simply choose any one of the numerous factions in that world, and plug him right in. Fogg does not display much evidence of magic in the novel, though, so it is unwise to give him any. For the

GM who is willing to take more liberties with the characters, the television series *The Secret Adventures of Jules Verne* can provide valuable inspiration.

Note that a specialized version of Espionage Fogg is Time Travel Fogg. In this version, Fogg is not so much a spy as a field historian, carefully examining a variety of valuable primary source documents (newspapers) that are presumably unavailable in his far future era. His compulsive mathematical regularity of behavior is an attempt to avoid the problems of plastic time (see *GURPS Time Travel*, p. 40) -- Fogg tries to avoid changing his future history by interacting with the Victorian era and Victorian people as little as possible, barring a few games of whist and some largely anonymous charitable donations of the money he can't take back with him anyway. Why Time Travel Fogg would break routine to travel around the world is up to the GM to decide. Perhaps it is an attempt to send a signal to his superiors in the future: for a time, his name appeared in all of the London newspapers, and by changing Victorian history Time Travel Fogg might alter the fragmentary historical records that survive in his future era. This might possibly be a message, a warning, or a retrieval request. Explaining his new wife Aouda to his superiors might take some doing, although Fogg might argue that since she was supposed to die in Bundelkhand in October of 1872 there is no risk of damage to the timeline . . . as long as she travels up-time with him, of course!

For this version of Fogg, add Eidetic Memory 2 (since he shows no evidence of any high-tech recording devices in his house), and the skills of Anthropology, Research, and History (specialization, Victorian, of course), plus whatever high-tech skills from his own time he needs.

Option 3: Screampunk Fogg

"He was said to look like Byron. . .but a mustachioed and bewhiskered Byron, one who might have lived for a thousand years without ever growing old."
--*Around the World in Eighty Days*, Chapter 1

In 181-, a man of mystery descended upon London Society. He was clearly a gentleman and man of means, but no one knew where he came from. In appearance he was very handsome, with Byronic looks, pale skin, and fine teeth. He was compulsively generous, and gave large sums of money to people. He also played cards obsessively. In personality he was curiously restrained, and had a closed, even diffident manner that some people found attractive rather than off-putting. Later, he left London abruptly and went on a long journey to the Continent and points east.

His name was Lord Ruthven, and he was a vampyre.

Not content with being alone in his immortal state, Ruthven eventually sought a companion. Aubrey, his first traveling companion, proved unsuitable for the gift of immortality, but in his journeys he later found a sailor who seemed admirable for his purposes . . .

Screampunk Fogg has a terrible secret: he is one of the undead, the spawn of the infamous vampyre Lord Ruthven. Ruthven sired him with the intention of creating a partner for his debaucheries, and in that, he was singularly unsuccessful. Although both men were very similar in temperament, Fogg held on to more of his humanity than did Ruthven. So while Ruthven gave out lavish charity to the unstable in order to ruin them, Fogg gives it sincerely to the needy to help them. While Ruthven plays cards (faro, in his case) to bankrupt people, Fogg plays for simple enjoyment of the game. While Ruthven was a notorious seducer and ruiner of women, Fogg avoids the company of women, and, indeed, of most people, entirely. He feeds infrequently and discretely, and otherwise carries on an entirely normal death-in-life.

Using Screampunk Fogg in A Campaign

To use screampunk Fogg, add the following overlay to the Phileas Fogg template:

Vampyre package: ST +10 [110]; HT +5 [60]; Bite [30]; Single-minded [5]; Unaging [15]; Unfazeable [20]; Vampiric Resurrection (Limitation: needs moonlight, -30%) [105]; Compulsive Behavior [-10]; Dependency (blood,

monthly) [-10]; Frightens Animals [-5]; Low Empathy [-15]; No Body Heat [-1]; Pallor [-5]; Secret [-30]; Social Stigma (dead) [-20]; Sterile [-3]; Uncongenial [-1]. Total package cost is 245; 266 if applied to the Fogg template, above.

Phileas Fogg is *dead*. That point should be stressed above all else. Whatever else he was before, by 1872 he is a shadow of a living being. The dead vampyre mind requires something to keep it functioning, or it falls into ghostlike state of automatic habits and behavior patterns; a series of compulsive behaviors that are a kind of death for the undead. This compulsive nature is why vampires in folklore are sometimes described as being compelled to count seeds that are scattered in their path or untie knots in a piece of string left behind by a fleeing victim. Ruthven kept away the mental stagnation by following a never-ending course of malice and seduction; Fogg has too many principles for this, and has begun to stagnate. His trip around the world might be an attempt to shake off the mental lethargy. Alternatively, it might be a cover for a globetrotting attempt to hunt down and slay his vicious sire. A generous GM might assume that rescuing Aouda might constitute a Noble Deed that would restore Fogg's humanity. A sadistic one might have Fogg turn her into a vampyre bride, with Passepartout as their ghoul servant.

Players who want to do the events of the novel *Dracula* a generation early might have to hunt down a Fogg grown increasingly evil, either in London or elsewhere in the world. Or, should Fogg decide to move elsewhere in the world for safety, the situation of *Dracula's* events could be reversed, as, perhaps, a group of Eastern European noblemen have to fight off the invasion of a foreign (English) vampire. Players interested in a situation with a longer frame might assume that Fogg is in fact Ruthven, but much calmed from his days in 181- (in this case, add Magery and the innate spells of Charm and Geas at least to the Vampyre template).

The Ruthven/Fogg type of vampyre is likely to throw players for a loop because it does not feature many of the characteristics modern people "know" vampires possess. This type of vampyre is in no way bothered by daylight, can eat food just fine, and needs little in the way of blood. Thus, the vampyre has little trouble fitting into society. However, the vampyre is much weaker than might be expected, and is capable of being "killed" by anything that would kill a human. He will resurrect when exposed to the first rays of moonlight after death, though. Players should also note that even in the 1870s, a generation before Stoker, the vampiric legend is common, thanks largely to John Polidori's 1819 short story and the infamous French *theatre des vampires* that flourished in its wake in the 1820s and onward (see *GURPS Blood Types* pages 31-32). Europeans may be more aware of the nature and limitations of vampires than players suspect.

Aouda is in for a big shock on her honeymoon . . .

Option 4: Steampunk Fogg

After two hours' march, the guide stopped the elephant and gave him an hours' rest . . . Sir Francis Cromarty was not sorry for this halt as he was a broken man. Mr. Fogg seemed as fresh as if straight out of bed.

"He's made of iron!" said the Brigadier-General, looking at him with admiration.

"Wrought iron," answered Passepartout, as he prepared a simple lunch."

--*Around the World in Eighty Days*, Chapter 12

"During the first few days of the crossing, Mrs. Aouda started to get to know Phileas Fogg better. She showed him deep gratitude at all times. The phlegmatic gentleman listened to her, apparently with great coldness, without a single intonation or gesture betraying the least emotion . . . At fixed times each day, he would come, if not to talk at least to listen to her. He was unfailingly polite, but with the grace and spontaneity of an automaton, whose movements could have been contrived for such a purpose."

--*Around the World in Eighty Days*, Chapter 16

Phileas never knew the man he called Father. He only knew that Father had two ambitions: to liberate men from servile, dangerous work, and in so doing to enable all men to live the leisured life of a gentleman. Father told Phileas this time and again, as he worked on him, and Phileas was somewhat puzzled by Father's expectation that he would be

the one to do all this. Father had made his fortune at sea, and it was the dangerous skills of the sailor that he taught Phileas. In the evenings, Father would play whist with Phileas, play him music, or read him the newspaper, and Phileas adopted as many of Father's ideas and mannerisms as he could.

Then one day, Father lay still and cold, and did not respond to Phileas. There were no more games, no more music, no more readings . . . and Phileas did not know what to do. Father had said that the greatest goal in life was to be a gentleman, so Phileas took the last of Father's money, left the laboratory, and made his way to London. Money silences many questions, even in the late 1860s, and Phileas settled down into the leisured life of the London gentleman, as best he understood it.

After all, it was what Father would have wanted . . .

Steampunk Fogg has a terrible secret: he is nothing more than a clockwork automaton, a unique steampunk creation. For Steampunk Fogg, use the following template:

Phileas-Model Automaton

87 Points

Age ?; 6'; 212.1 lbs; 3.0 cf; \$240,491.80.

ST 10 [0]; **DX** 10 [0]; **IQ** 8 [-15]; **HT** 11/6 [10].

Speed 5.8; Move 5.

Dodge 5.

Advantages: Absolute Timing [5]; Appearance (Very Handsome) [25] (Reaction: +2/+6); Unfazeable [20]; Single-Minded [5]; Doesn't Sleep [20]; DR2, PD2 [25]; Eidetic Memory 2 [60]; Endurance [10]; High Pain Threshold [10]; Immunity to Disease [10]; Lightning Calculator [5]; Mathematical Ability [10].

Disadvantages: Cannot Float [-5]; Code of Honor (Gentleman's) [-10]; Color Blindness [-10]; Compulsive Behavior (Mathematical regularity) [-10]; Eunuch [-5]; Low Empathy [-15]; No Natural Healing [-20]; No Sense of Humor [-10]; No Sense of Smell/Taste [-5]; Reprogram able Duty [-25].

Skills: Accounting-12 [1/2]; Area Knowledge (World)-12 [2]; English-12 [21/2]; Games (Whist)-12 [2]; Mathematics-12 [11/2]; Merchant-10 [31/2]; Meteorology/TL5-12 [21/2]; Musical Notation-11 [11/2]; Navigation/TL5-12 [3]; Sailor/TL5-12 [21/2]; Savoir-Faire-12 [31/2]; Seamanship/TL5-12 [2].

This is the basic "model template" of the Phileas Automaton. After moving to London, he adds the following advantages and disadvantages from the basic Phileas Fogg template: Ally (Passepartout) [30]; Independent Income 1 [0]; Reputation +1 (Gentleman) [1]; Status 3 [10]; Wealth (Filthy Rich) [50] Compulsive Gambling (Whist) [-5]; Compulsive Generosity [-5]; and all Quirks [-5]. Raise his Secret to [-20] and add Social Stigma (Machine) [-15] for a grand total of 128 character points.

Steampunk Fogg is an utterly cinematic creation, although built mostly at TL (5+2) levels. His power source and brain are definitely TL (5+n), however. He is powered by a cinematic arrangement of gears and springs that draw power from etheric science and motion (treat as a Mana Engine). His brain is unique, and is based on a more advanced version of the Advanced Mechanical Brain in *GURPS Steam-Tech* (page 76). This type of brain is raised to Complexity 5, incorporating primitive forms of the Genius and Neural Net options (*GURPS Robots*, page 10). Steampunk Fogg is not quite sentient, but he is close.

Using Steampunk Fogg in A Campaign

Many times throughout the novel, Phileas Fogg is described in terms that make him out to be a machine, and this version of Fogg takes these literally. Steampunk Fogg is an automaton, a being on the cusp of humanity. It is possible

that the spontaneous desire to abandon a mechanical life of routine and travel around the world in eighty days represents the first steps the rise to sentience described on page 87 of *GURPS Steampunk*. If so, the Complexity of his brain will rise to 6, with the attendant raise in DX and IQ. The GM will have to decide just how far Steampunk Fogg will travel on the road to humanity, and at which points many of his robotic-style disadvantages will disappear.

The Fogg automaton is one of the most revolutionary inventions of a steampunk world, and is likely to be fought over by a number of parties, the player characters included. With his increasing sentience comes increasing resourcefulness, and the players might find out that a machine who could cross the world in eighty days is more than capable of outrunning and out-thinking them. In some respects, Steampunk Fogg actually works better in the gadget-filled Castle Falkenstein setting, where elaborate automata are rare, but not unknown.

Aouda is in for a really big shock on the honeymoon. It might be lessened if Fogg's creator saw fit to include in his design a certain gentleman's mechanical implant (which raises the model cost to \$240,891.80, and replaces Eunuch [-5] with the Sterile [-3] disadvantage . . . although given the fact that this is the Victorian era, such may not be the case . . .)

Appendix 1: Aouda

"She was an Indian of celebrated beauty, of the Parsee race, the daughter of rich Bombay merchants. She had received a thoroughly British education in that town, and from her manners and education, one would have thought her a European. Her name was Aouda."

--*Around the World in Eighty Days*, Chapter 13

Aouda

47 Points

Female; Age 21; 5'6"; 125 lbs.; Slim but curvy build, long dark hair worn parted in the middle, beautiful dark eyes with long lashes, small hands and feet, very fair complexion

ST 9 [-10]; **DX** 9 [-10]; **IQ** 11 [10]; **HT** 10 [0].

Speed 4.75; Move 4.

Dodge 4.

Advantages: Appearance (Very Beautiful) [25]; Claim to Hospitality (extended family) [2]; Cool [1]; Patron (Phileas Fogg) (15 or less) [30]; Reputation +2 (Celebrated Beauty, Western India, all the time) [3]; Strong Will +1 [4] (Will: 12); Unusual Background (British education) [10].

Disadvantages: Enemy (Thuggee cult, 6 or less) [-15]; Sense of Duty (Fogg) [-5]; Poverty (Dead broke) [-25]; Social Stigma 1 (Female) [-5]; Status -1 (vaishya caste and female) [-5].

Quirks: Doesn't get seasick; Likes the strong, silent type; Parsee. [-3].

Skills: Area Knowledge (Bombay)-11 [1]; Artist-11 [4]; Black Powder Weapons (Pistol)/TL5-5 [0]; Botany/TL5-10 [2]; Dancing-10 [4]; English-13 [6]; Games (Whist)-14 [6]; Hindi-11 [2]; History-10 [2]; Literature-10 [2]; Marathi (native)-14 [3]; Mathematics-10 [2]; Merchant-10 [1]; Musical Instrument-10 [2]; Savoir-Faire-14 [2]; Writing-10 [1].

Aouda was born in Bombay into the vaishya caste, the only child of well-to-do merchant parents from the prestigious Jeejeebhoy family (a distant relative, Jamsetjee Jeejeebhoy [1783-1859], was the first Indian to receive a British knighthood). They obtained for her a fine British education, and her future looked bright. Unfortunately, her parents died, and Aouda was left a penniless orphan. Such was the reputation of her beauty that one of the independent rajahs of the state of Bundelkhand (located in the northwestern part of what is now the modern Indian state of Madhya Pradesh) sought her out and forced her to marry him, against her will. He died three months later, leaving Aouda a widow. She fled from the ceremonial sati in which she would have been burned along with the rajah on his funeral

pure, but was recaptured. Fogg and his companions rescued her, and she fell in love with the silent and withdrawn, but strong and principled, Phileas Fogg.

Aouda would appear to have many limitations as a character. She is a Parsee (an Indian form of Zoroastrianism), a distinct religious minority in India (or anywhere else, for that matter). She is a woman, a second-class citizen in India (or anywhere else in the Victorian world, for that matter). Finally, she is a widow, doomed to a contemptible life of poverty at best, or sati at worst. However, although she appears limited by modern standards, consider her by Victorian ones. She is strong-willed enough to defy Hindu custom by fleeing her sati, and the only way her husband's relatives are able to bring her back to it is to keep her drugged to the gills on opium and hashish. In America, she shows no hesitation about using a revolver to protect a train from a marauding band of Sioux Indians. And in the end, it is she who proposes marriage to Phileas Fogg, in a daring violation of Victorian convention! Despite her low point total, Aouda is a woman of some substance. In the end, it is her love that helps make any version of Phileas Fogg more human, and helps him to win his wager.

Using Aouda in A Campaign

Note that although she will probably settle down as Mrs. Fogg (depending on which version of Fogg she wound up with), things might not be quite so rosy for her. Not only has she fled the sati of her ex-husband the rajah of Bundelkhand, leaving her disgraced according to Indian custom, her in-laws are members of the savage Thuggee cult, which is now looking for her to finish the job. For her own safety Aouda can thus never return to India. GMs interested in a continuing adventure may want to dust off the hoary Cliffhangers plot of "bride being kidnapped to India by savage Thuggee cultists to be subjected to unspeakable rites," as a distraught Phileas Fogg gathers a band of bold heroes to travel to the savage jungles of India to rescue his beloved wife . . .

Appendix 2: Sources

The Novel: Jules Verne, *Around the World in Eighty Days* (Paris, 1872)

Many different editions and translations of this work exist, of varying degrees of quality (a free downloadable copy is available from [Project Gutenberg](#)), but the best current translation in English is by William Butcher, in the Oxford World Classics series, 1995. In addition to being the best extant translation, it is a critical edition with a full set of footnotes and scholarly apparatus, which, barring Butcher's annoyingly Freudian interpretation of Verne and his work, are very useful. All of the above quotations are from this edition.

Film

The book has been filmed twice in English. The most famous version, done by Michael Todd in 1956, is the more lavish of the two, although it is not always terribly faithful to the story. It features David Niven as Fogg, Canteflas as Passepartout, Shirley MacLean as Aouda, and cameos from just about every single actor in Hollywood at the time. It is recommended for scenery and for playing, "Say, isn't that . . . ?"

More recently, *Around the World in 80 Days* was filmed as a miniseries by Buzz Kulik in 1989, with Pierce Brosnan as Fogg, Eric Idle as Passepartout, and Julia Nickson as Aouda. Although not as lavish as its predecessor, it is more faithful to the book, and in this writer's opinion, "the beautiful Pierce Brosnan and the beautiful Julia Nickson" (Idle's own words!) make a much better Fogg and Aouda.

Television

Most recently, *The Secret Adventures of Jules Verne* has been syndicated, featuring Phileas Fogg and Passepartout as recurring characters. Although it takes terrible liberties with the characters (Fogg is much too emotional), it a good treatment of the idea of Espionage Fogg. The show also has a lot of steampunk tech and attitude present, and is worth a look for that alone. It has the distinction of being the first TV series shot in HDTV format, so even when the stories

are bad, they *look* good . . .

There was also a short-running children's cartoon show of Australian origin, *Around the World in 80 Days*, that ran from 1972-1973, which recast the story in the form of Phileas Fogg going on his round-the-world trip to win the hand of a disapproving aristocrat's daughter. It is perhaps best forgotten.

Other Works

Philip José's *Farmer's The Other Log of Phileas Fogg* (DAW, 1973; rpt. TOR, 1993) retells Verne's story meticulously with all of the principal characters as human agents for warring alien factions. The idea is interesting, but some of the execution is a bit forced.

For more information on the Screampunk Fogg option, a copy of John Polidori's "The Vampyre" may be found online at http://home2.inet.tele.dk/bibliste/text/jp_vamp.htm.

(Special thanks to William Stoddard for steampunk and Victoriana advice.)

Doris and Sainte Celeste

A Transhuman Space Setting

by Mark Gellis

Background

In the wake of the enormous social changes that took place during the 21st century, many proponents of traditional faiths became more conservative about social change and more committed to their own religious views. A small minority became radicalized and engaged in violence against the practitioners of new lifestyles and new faiths. A more common reaction was a renewed commitment to traditional forms of living and worship, and a willingness to be open about that commitment even when it might lead to ridicule or social ostracism (because there will always be some people who see faith as fanaticism), combined in many cases with a renewed interest in spreading these traditional faiths either by preaching or by the establishment of new communities.

In 2094, a joint venture between the Vatican and wealthy Europeans dissatisfied with the direction society had taken settled the asteroid 48 Doris. The Vatican backed the project because the settlers had made them an offer they could not refuse. If the Church helped finance their project, the settlers would guarantee that Doris would be a Catholic nation. Catholicism would be the official state religion; while the rights of non-Catholics would be protected, the practice of other faiths would be discouraged. In addition, they agreed to establish an abbey that would serve as an outpost for Rome in the Deep Beyond.

The settlers refer to themselves as Dorisians (pronounced very much as one would pronounce "Parisians.") Most are baseline humans or upgrades who have used one of the common biomods available to prevent degeneration in microgravity. It is, in fact, a matter of pride among the Dorisians that they do not need to radically alter themselves to survive in the belt. The government is a democracy, with an elected city council of seven members elected for five-year terms and serving as legislature, executive branch, and judiciary; a separate election selects one member of the council as President. The only exception is that the abbot serves as a permanent member of the council during his tenure as abbot (so only six members of the council are elected); on the other hand, the abbot is never allowed to serve as President. This offers the Church a great deal of influence in municipal affairs.

The current President is Gaston Chevalier (pronounced "Sheh'val'ee'ay"), one of the initial backers of the project. Gaston relies heavily on his uncle, Honore Chevalier, as an advisor.

The initial group consisted of 90 settlers, more than half of them married couples (the initial group also included 15 children and three priests). Since then, the population has doubled, including six children born on Doris, the first in 2096. The settlement is thriving and a recent media release by its leaders announced that their goal is to reach a population of 1,000 by 2110. The Vatican has been so pleased by the results of their investment that they are currently in negotiation with other groups, including one based in South America, to build additional settlements.

Local industry focuses on spacecraft components (they have a good relationship with Vosper-Babbage, working with them as a supplier and a partner for outsourcing) and small spacecraft. In addition, their vatfacs and minifac workshops give them the capability to carry out a wide range of specialty projects for interested clients. The Dorisians are also beginning to make a name for themselves with the wine made from grapes grown in the farming units and the abbey's garden (the 2098 Merlot is reputed to be especially good).

48 Doris

48 Doris is about 130 miles across. It orbits the sun at an average distance of 3.1 A.U. Like most asteroids in this part

of the belt, it consists primarily of silicate rocks, with small concentrations of metal ore, organic chemicals, and hydrated clays. Of course, since the asteroid masses something in the neighborhood of one quadrillion tons, the combined mass of these "small concentrations" is several trillion tons. The surface is similar to that of most large asteroids; it is airless, rocky, shattered, mountainous terrain, in light ranging from dim sunlight to starlit darkness, challenging even to those who have lived on Doris for years and dangerous to those unfamiliar with it. Loose material on the walls of impact craters, massive cracks in the rock, and similar perils await anyone going outside for a stroll. The local gravity is about five miligees.

(Those interested in the specific position of 48 Doris on a particular date can use the orbital simulator at <http://neo.jpl.nasa.gov/orbits/>.)

Habitat Statistics

The main settlement is a beehive habitat called Sainte Celeste. For the purposes of determining its statistics, it is treated as a box hull, 1,000 feet long, 1,000 feet across, and 100 feet deep. The total volume is 200,000 spaces and the surface area is 2,400 ksf. 60% of the habitat is hull or waste space, leaving 80,000 spaces for the settlers to use. The habitat is buried underneath a thick shell of rock and may be treated as having a cDR of 10 and a cPF of 500,000; it is virtually immune to any radiation damage short of a direct hit from a thermonuclear weapon. The Chp is 36,000.

The habitat (including the abbey) was designed to support up to 210 people. The present population is 182. The main components are two housing units, two farms, one factory designed to produce spacecraft components and spacecraft, one plaza, and one park. These consume 70,000 spaces at a cost of \$14.2M. The actual mass of the components is 67,000 tons.

The abbey consists of one garden, a chapel equal to eight "halls" in terms of seating space, two additional "halls" used as classrooms and meeting rooms, and ten "cells" for the priests and nuns (treat as luxury cabins, but only in terms of the space allotted; the rooms are pleasant but quite spartan). The requirements here are 1,120 spaces, 222 tons, \$550K, and 500 kilowatts of power. The abbey has been designed so that additional cells may be built onto it at a later date.

The other components of St. Celeste include a Command Bridge (Old), one medium PESA, one medium radar, two 2.5-Mj lasers, two vafacs, two minifac workshops, a 10-bed surgery, a Geology lab, a Shipbuilding (Spacecraft) lab, a fusion power plant capable of producing up to 80 megawatts, relying on deuterium-tritium reactions for power, and a spaceport consisting of four 50' × 50' × 50' spacedock hangers. These components mass 700 tons, require 3,100 spaces, and cost \$54M. The settlers also brought two OTVs at a cost of \$24M. Finally, the settlers brought about \$25M of cyberswarms and cybershells, mostly designed for mining, construction, factory work, farming, and repair operations. More than 5,000 spaces remain empty for future expansion, cargo storage, and the like.

One of the major costs involved in building Sainte Celeste was moving the components to Doris. This, and the cost of cutting the tunnels, came to about \$80M. The total cost of building the city was about \$200M. It is unknown exactly how much of this was contributed by the Vatican.

Saint Celeste's factory was designed to build components that could be used to expand the habitat itself (it is, after all, simply a very large spacecraft). A recent addition to the city, locally produced, is an external cradle large enough to handle vessels up to 25,000 tons. The cradle is a separate structure about 2,000 feet from the city's main airlock (just in case an incoming spacecraft has a little FUBAR event) but a pressurized underground tunnel -- with airlocks at both ends -- allows for easy movement of cargo and personnel.

The Dorisians are presently planning to expand Sainte Celeste, or possibly build a second habitat similar to it and connected to it by a pressurized tunnel.

Characters

Most of the population of Sainte Celeste is French, although there are a number of Italians and Spaniards living in the

city. The official language of the city is French. Virtually all settlers have No Degeneration in Zero-G [3], Free Fall at DX [2], First Aid at IQ [1], and Vacc Suit at IQ [2]. They will also have at least one technical or professional skill at IQ, most often Agronomy [2], some specialty of Mechanic [2], some specialty of Electronics Operation [2], some specialty of Electronics [4], or some specialty of Engineering [4]. Virtually everyone will also have Duty (to Sainte Celeste, 6-) [-2]; in a small, isolated colony in the asteroid belt, there will be a few situations every once in a while where surviving means that everyone pitches in whether they want to or not.

The general mood in the settlement is one of pride and satisfaction, although there are some who feel that the Chevalier family has too much power. The culture is similar to that of the E.U., except that the population is noticeably more devout than what one normally finds on Earth these days. They are not fanatics, though. They like a good glass of wine or a rendezvous with a lover as much as their counterparts back on Earth do, but they also go to mass and confession on a regular basis because they believe in God and they believe in Catholic doctrine.

The four most powerful people in the city are Gaston Chevalier, President of Sainte Celeste, his uncle and advisor Honore Chevalier, City Councilor Dr. Annette Lachaille, and Father Xavier Minnelli, abbot of Sainte Celeste Abbey.

Gaston Chevalier

ST 11 [10]; **DX** 11 [10]; **IQ** 13 [30]; **HT** 11 [10]

Advantages: Ally (Gigi, 15-) [30], Ally (Uncle Honore, 15-) [30], Charisma +1 [5], Filthy Rich [50], Handsome [15], No Degeneration in Zero-G [3], Status +3 [10]*

* includes a free level of Status for being Filthy Rich

Disadvantages: Dependent NPC (Marie, 0 points or less [toddler], loved one, 15-) [-96], Duty (to Sainte Celeste, 6-) [-2], Sense of Duty (to Sainte Celeste) [-10]

Quirks: Devoted to his wife and daughter [-1], Devoutly Catholic [-1], Easily bored and not afraid to tell people they are boring him [-1]

Skills: Accounting-11 [1], Administration-14 [4], Agronomy-12 [1], Area Knowledge (Doris)-14 [2], Area Knowledge (Paris)-14 [2], Computer Operation-14 [1], Diplomacy-13 [4], Driving (Automobile)-11 [2], Economics-14 [6], First Aid-13 [1], Free Fall-11 [2], Law-11 [1], Leadership-14 [2]*, Merchant-15 [6], Piloting (High Performance Spacecraft)-11 [2], Politics-13 [2], Powerboat-11 [2], Savior-Faire-14 [2], Shipbuilding (Spacecraft)-14 [4], Vacc Suit-13 [2]

* includes bonus for Charisma

Languages: English-13 [2], French-14 [1], German-12 [1], Italian-13 [2], Spanish-12 [1]

Total Points: 148

Gaston Chevalier is 6'0", 180 lbs., in his early forties, with black hair and striking blue eyes. He made a fortune investing in aerospace companies and then sold most of his holdings to help finance the Sainte Celeste project.

The idea of leaving Paris to live in the asteroid belt was shocking enough to fashionable Paris, but shortly before leaving Earth, Gaston gave the city a second shock by marrying a woman much younger than himself and from an obscure family. His wife, Gigi, is now Chief Administrator of one of city's two farms. They are utterly devoted to one another and have one daughter, Marie, aged two.

Honore Chevalier

ST 10 [0]; **DX** 10 [0]; **IQ** 13 [30]; **HT** 10 [0]

Advantages: Ally (Gaston, 15-) [30], Charisma +2 [10], Filthy Rich [50], No Degeneration in Zero-G [3], Status +3

[10]*

* includes a free level of Status for being Filthy Rich

Disadvantages: Age: 60 [-30], Duty (to Sainte Celeste, 6-) [-2], Lechery [-15], Overweight [-5], Sense of Duty (to Sainte Celeste) [-10]

Quirks: Devoutly Catholic [-1], Devoted to Gaston and his family [-1], Likes humming old show tunes [-1]

Skills: Acting-13 [2], Administration-13 [2], Accounting-13 [4], Agronomy-13 [2], Area Knowledge (Doris)-14 [2], Area Knowledge (Paris)-14 [2], Bard-15 [2]*, Carousing-13 [8], Computer Operation-14 [1], Diplomacy-15 [8], Distilling-13 [2], Driving (Automobile)-10 [2], Fast-Talk-14 [4], Fencing 13- [2], Free Fall-10 [2], Guns (Pistol)-13 [2]**, Law-12 [2], Literature-12 [2], Merchant-14 [4], Politics-14 [4], Sex Appeal-15 [12], Singing 11-[2], Vacc Suit-13 [2]

* includes bonus for Charisma

** includes bonus for IQ

Languages: English-13 [2], French 14- [1], Italian-12 [1], Russian-12 [1], Spanish-12 [1]

Total Points: 149

Honore is 5'11", 190 lbs., with blue eyes and a shock of white hair. He is usually impeccably dressed in a fashionable suit. He radiates aristocratic charm. He supervises much of the farming and winemaking activities in Sainte Celeste. He generally comes across as being an easy-going, fun-loving fellow, but he is capable of being deadly serious if the situation demands it.

Dr. Annette Lachaille

ST 9 [-10]; **DX** 12 [20]; **IQ** 14 [45]; **HT** 11 [10]

Advantages: No Degeneration in Zero-G [3], Attractive [5], Status +2 [5]*, Very Wealthy [30]

* includes a free level of Status for Very Wealthy

Disadvantages: Duty (to Sainte Celeste, 6-) [-2], Selfish [-5], Sense of Duty (to Sainte Celeste) [-10]

Quirks: Arrogant [-1], Devoutly Catholic [-1], Wants to end the dominance of the Chevalier family in Sainte Celeste [-1], Thinks she would do a better job as President than any of the Chevaliers [-1]

Skills: Acting-12 [1/2], Administration-13 [1], Area Knowledge (Doris)-14 [1], Area Knowledge (Paris)-14 [1], Computer Operation-15 [2], Diagnosis-14 [4], Diplomacy-14 [4], Driving (Automobile)-12 [2], First Aid-15 [2], Genetics (Genetic Engineering)-14 [8], Genetics (Tissue Engineering)-13 [4], Law-11 [1/2], Physician-15 [6], Politics-15 [4], Research-14 [2], Sex Appeal-12 [4], Surgery-15 [12]

Languages: English-13 [1], French-14 [0], Italian-13 [1], Spanish-13 [1]

Total Points: 148

5'6", 140 lbs., with red hair and green eyes. Dr. Lachaille is a brilliant physician and genetic engineer. She is attractive, but may come across as cold and calculating. She is the chief administrator for one of the city's two vatfacs. She is highly skilled at what she does, and devoted to the success of Sainte Celeste, but arrogant and convinced that the city would do better under her leadership than that of the Chevalier family.

Father Xavier Minnelli

ST 11 [10]; **DX** 11 [10]; **IQ** 13 [30]; **HT** 11 [10]

Advantages: Voice [10], Charisma +1 [5], Clerical Investment +3 [15]

Disadvantages: Duty (to Sainte Celeste, 6-) [-2], Sense of Duty (to the Vatican) [-10]

Quirks: Devoutly Catholic [-1], Stern [-1]

Skills: Acting-15 [6], Administration-14 [4], Agronomy-13 [2], Area Knowledge (Vatican City)-14 [2], Area Knowledge (Doris)-14 [2], Bard-16 [2]* **, Diplomacy-16 [6]*, Driving (Automobile)-11 [2], Free Fall-11 [2], Law-13 [4], Leadership-14 [2]**, Performance/Ritual-14 [4], Politics-16 [6]*, Research-14 [4], Theology (Christian)-16 [10], Writing-14 [4], Vacc Suit-12 [1]

* includes bonus for Voice

** includes bonus for Charisma

Languages: English-12 [1], French-13 [2], Italian-13 [0], Latin-13 [2], Spanish-12 [1]

Total Points: 145

Father Xavier is a tall, thin man of striking appearance, 6'0" and 170 lbs., with brown eyes and brown hair. He is a very serious man, but capable of warmth; he genuinely likes the people he lives and works with here in Sainte Celeste. Even so, his ultimate loyalty is to Rome and its objectives in the Deep Beyond.

Adventure Seeds

So, what does one do with small, newly settled city of devout Catholics in the middle of the asteroid belt? Here are a few ideas.

One can simply set the campaign on Doris, making the heroes members of the community. The opportunities here involve the simple day-to-day struggle for survival, not unlike those faced by any small, isolated community, exploring the asteroid (which has a surface area of about 40,000 square miles), intrigue among the leadership of the city (including the machinations of an abbot who may be receiving instructions from the Vatican to further some secret agenda), business dealings with other nations and groups in the belt, and surviving attacks by pirates, terrorists, etc.

Outsiders might be lured to Doris by rumors that the settlers have purchased plans for a model of AKV and are building their own secret navy. Their factory would be ideally suited for this purpose. If these rumors are true, a considerable number of these mechanical monsters might now be hidden somewhere on the asteroid. Even worse, if the programmers made errors creating the infomorphs for the AKVs, some of them may have gone rogue. Or perhaps a small cadre of fanatics is planning to use the AKVs to seize power or to wage a covert religious war against other communities in the asteroid belt.

Finally, on Earth, the establishment of Sainte Celeste is controversial. The Vatican has not attempted to expand its territory for hundreds of years, but now it is seeking formal recognition of this new nation, which some people are calling a "Papal State." Rumors of dark conspiracies are racing around the global web. A war of memes is at hand, and it a war that might escalate into real violence if the people involved feel that the only way to win is to eliminate members of the opposition.

Spigot Girl

for *Vampire: the Masquerade*

by Katherine Farmar

Susannah "Spigot Girl" Hollander, or Spig to her friends, looks unassuming at first, as she cultivates a nondescript appearance. Her clothes are usually either in black or drab earth colors, and her lank brown hair tends to fall over her eyes, hiding the intensity of the expression they hold. Those who pass her by probably don't even notice she's there; those who talk to her may think her a little stupid, or maybe just too dreamy-headed for her own good, as she tends to stare off into space and loses the thread of a conversation easily. While she's no genius, she's not stupid either. She's just preoccupied with her addiction: being fed on by vampires.

When Susannah was 10, her father went to prison for the third time and her mother divorced him. A series of feckless and unpleasant "stepfathers" alternately ignored and abused her while her mother sank deeper into alcoholism, until she turned 16 and stole a rich man's wallet. The wallet contained just enough money to get her halfway across the country -- to a city with a bar called Dark Fate.

Dark Fate was the center of a thriving "vampire" subculture that had more to do with Gothic aesthetics than with anything supernatural. Most of the regular patrons just liked to wear black clothes and white make-up and read lush, overwritten horror novels . . . but some of them took their interest in the "creatures of the night" in an entirely different direction. Rather than just dressing like vampires, reading about vampires, and watching bad movies about vampires, these people actually *drank* each other's blood. No more than a few drops at a time, admittedly, and in a modern, hygienic manner involving antiseptic wipes and hypodermic needles, and carefully avoiding the veins and arteries; but this was close enough to the real thing that their claims to be "real vampires" got them interviewed by local papers when there wasn't much else going on. Susannah discovered, much to her surprise, that while she didn't like drinking blood, she liked being a "donor" -- allowing a "vampire" to drink her own blood. She liked it so much, in fact, that she earned the nickname "Spigot Girl" for being the girl fed upon most often by these so-called "vampires."

That would have been the extent of her counterculture involvement, except that the city counted a few real Kindred in its population as well, who found the "vampire" phenomenon amusing and occasionally useful; and one of them happened to be hunting in Dark Fate on a night when Spig was there. Spig offered her blood to the stranger, not realizing that he really was a vampire. He fed from the throat, not the shoulder, and the euphoric rush she felt as he fed was so far above what she had felt before that she was positively angry when he stopped. The vampire was a little taken aback by this, but soon realized the value of having a walking meal following him around willingly. Spig moved in with him, covered for him, protected him and fed him for nearly six months before a vampire hunter found their apartment and "rescued" her, killing the vampire in the process. Needless to say, Spig was not pleased, but the hunter put her up in his place anyway, figuring that she'd probably been brainwashed. Spig stole his car while he slept and drove to a new city, looking for a vampire lover to replace the one she'd lost. Since then, she has never gone more than a day without serving as some vampire's nightly meal.

Spig is streetwise, adaptable, rootless, and entirely amoral. Despite her initially dull and nondescript appearance, she reveals a compelling personality and lively intelligence to those she considers worth talking to. She has almost no marketable skills and is thus usually to be found in a menial job such as cleaning or waitressing, though her income is higher than such a career would suggest; this is due partly to the wallets she lifts when she thinks she can get away with it and partly to the gifts her vampiric "lovers" give her. Although normally as pragmatic about relationships as she is about money, she can easily get attached to any man who reminds her of her father; unfortunately, since her father is an alcoholic career criminal, this tends to have bad results.

Although she is curious about vampires and their society, Spig will not press her vampire friends for information they don't want to give; she is patient enough to wait for them to tell her of their own accord, or let the information slip accidentally. She never drinks the blood of her "lovers," even if they beg her to; if they do offer her blood, she will

tearfully decline, claiming to be unworthy; in truth, she has seen the effects of the blood bond in other "dolls" and doesn't want that to happen to her. Nonetheless, she is always fanatically loyal to whoever is currently feeding on her . . . until they show signs of getting bored with her, at which point she'll cut her losses and move on, probably stealing something small and valuable on the way out. If she finds a new group of "friends" to satisfy her addiction, she will become utterly loyal to them, often to the point of betraying whatever secrets her former favorites may have told her.

She is dimly aware that she "knows too much," though she has little apprehension of how much danger she might put herself in by revealing the true extent of her knowledge.

It should be obvious from the above that none of Spig's "lovers" have been Giovanni. Although her addiction is pretty deeply-rooted, one encounter with a Giovanni, or a vampire with the flaw Grip of the Damned, might well be enough to wean her off vampires forever -- possibly even to turn her into a hunter. If this were to happen, she would become a dangerous enemy to those who let her know their secrets, for although she is not exactly formidable in her own right, she knows what vampires fear and where many of them keep their havens.

Adventure Seeds

- The most obvious way to involve Spig in a story is to have her be in between "lovers" and single out the PCs as the next candidates. Even if they're not interested in adding her to their herd, they may want to find out what she knows . . . and she knows a great deal.
- While her knowledge may prove invaluable, Spig may also serve as a vehicle for false information; perhaps one of her former "lovers", knowing her habits, has allowed her to pick up the wrong end of the stick about his haven and his weaknesses, in order to see who acts on the tip, or to lead whoever it is into a trap.
- Spig's addiction takes on a very different complexion when viewed from the point of view of games other than ***Vampire: the Masquerade***. In a ***Hunter: the Reckoning*** chronicle, she may be a misguided soul in need of rescuing, or a vicious and willing dupe of the monsters she helps as they continue their depredations against humanity. She will maintain, in the face of strong opposition, that she likes her life the way it is. It will be up to the heroes to change her mind -- and to stop the information she holds from falling into the wrong hands.
- Although Spig's father's been out of the picture for years, she still thinks the world of him, though it's never occurred to her that he might not approve of how she lives her life. If he succeeds in tracking her down, and finds out that someone is drinking her blood, he and his criminal "friends" could make their unlives very unpleasant.

Susannah "Spigot Girl" Hollander's Stats

Attributes:

Physical: Strength 1, Dexterity 2, Stamina 2

Social: Charisma 4 (Inspires Protection), Manipulation 3, Appearance 2

Mental: Perception 3, Intelligence 3, Wits 2

Abilities:

Talents: Empathy 2, Expression 1, Streetwise 3, Subterfuge 3

Skills: Drive 1, Stealth 2

Knowledges: Investigation 1, Vampire Lore 5 (Feeding Habits)

Backgrounds:

Allies 1: Spig always has at least one vampire protector, sometimes more than one, although they aren't always sufficiently attached to her to make decent allies and she knows better than to push her luck by asking for favors too often.

Contacts 2: Spig prefers not to contact vampires who are no longer feeding on her, but she will if it looks like an emergency. She does not have many human friends.

Resources 1: Spig still owns the car she stole from the vampire hunter, and always has at least \$100 in cash, just in case she needs to leave town in a hurry, but other than this has no possessions to speak of.

Willpower: 5

Pyramid Pick

The Knuckleduster Cowtown Creator

Published by [Knuckleduster Publications](#)

Written by Forrest Harris with Rob Lusk and Phillip Webb

250-page b&w softback; \$24.95

Thanks to Hollywood, we have all an idea of what the typical town of the Wild West should look like. Films and television have made it all so familiar that the creative efforts of the GM may fall flat in the telling. This is where the author of *The Knuckleduster Cowtown Creator* hopes to be of aid, by presenting a sourcebook useful for creating a genuine cattle town. Forrest Harris makes use maps and floor plans, period illustrations, and photographs; but above all, he makes use of the history of the old West itself. The given material is presented to be useful in any Western set or similar game, but does provide statistics for three game systems -- the *Weird West* of Pinnacle's *Deadlands RPG*, Grey Ghost's *Fudge* system, and for what it describes as, "The World's Most Popular PRG," or rather the *d20* system as derived from *Deadlands d20*.

Knuckleduster Publications have only released three titles before this: two solo adventure books ([The Devil's Addition](#) and [Raining Hammers, The Ballad of Johnny MacDonald](#)) and a sourcebook on Western sidearms, [The Knuckleduster Firearms Shop](#). All of them have been very well received, especially by *Pyramid* itself, which means that the expectations for this recent release are high indeed. *The Knuckleduster Cowtown Creator* is a fat paperback done in a large typeface, with a layout that is easy on the eye. Everything is well-organized, and the detailed index makes its contents easy to find. Throughout, the book is illustrated with period engravings and photographs along with maps -- some of which are based upon the same photographs! Most of the photographs come courtesy of various city and state historical societies.

The purpose of *The Knuckleduster Cowtown Creator* is to enable the creation of the Western Cowtown as found during its heyday, from the late 1860s until the mid-1880s. It is based upon towns such as Dodge City, Abilene, Wichita, Newton, and Ellsworth that were the railhead towns that cattlemen drove great herds north from Texas along the Chisholm trail. From these towns, the cattle would then be shipped back East. Of course, the GM is not limited to the creation of just "cowtowns," but can use this book to create *any* town West of the Mississippi. It gives a set of forms and tools (called "creators") to make this as easy as possible. These start out with the Town Layout Creator and the Cattle Drive Creator, before proceeding through creators for: the Saloon; the Dance Hall; Gambling Hall; Variety Theatre; Hotel; Bank; Store (including general, hardware, saddlery, gun, tin and other stores); Stage Station and Stage Coach, Railroad Depot, and Passenger creator; Law Enforcement; and finally the Services creator (including livery stables, law offices, doctor's offices, barbershops, blacksmiths, and undertakers, among others.) The list is comprehensive and should be enough for a campaign of any length.

Each creator then goes into further detail, opening with a discussion of the various possible types, their floor plans and features, services and items for sale, characters to be found within, and finally the stories related to the establishment. Thus for the saloon, the Makeshift, Classic, Fancy, Rough, Company saloon, along with the Cantina are all discussed, sometimes also with several examples and maps. The features to be found within are described, along with a list of genuine names taken from throughout the West, the types of drinks sold at the bar -- and their names, and the types of characters that might be found both working the saloon or enjoying its services. The creator ends with a set of stories about saloons. These make for fascinating reading (as do the stories in other sections), and not necessarily the sort of thing found in other supplements. For example, Bizarre Saloon Weapon Number One is a raw "trout," used by a Madame in Denver to knockout a waiter, whereas a gunfight erupted in Wyoming over who got the first use of the

milk for the morning oatmeal, resulting in what the frontier court decided to be justifiable homicide!

The Knuckleduster Cowtown Creator attempts to be as historically accurate as possible, relying upon such sources as *The Police Gazette*, biographies of individuals of the time, *Harper's Weekly*, frontier newspapers and history books. A bibliography lists the latter used for this supplement. In its drive to be accurate, ***The Knuckleduster Cowtown Creator*** does not skimp on examining the seamier side of the Old West, but neither does it glamorize or dwell unnecessarily upon the subjects of violence, alcohol, gambling, and prostitution. As to the latter, it is covered across three locations -- the Saloon, the Dance Hall, and the Fancy Hall. However sordid, the treatment of the subject is still fascinating and respectful. That said, the inclusion of this material might make ***The Knuckleduster Cowtown Creator*** an unsuitable book for the young or the immature.

The Knuckleduster Cowtown Creator also includes a random name generator as well as a set of Random Encounter Generators, which is rather short and is more of a starting point for the GM rather than a complete resource. Those GMs requiring game specifics will be happy with the three chapters devoted to the ***Deadlands RPG***, ***Fudge***, and ***Deadlands d20***. The rules for ***Fudge*** are really a guide to adapting across the many NPCs given for ***Deadlands***. The one problem with this chapter is that the conversion tables are a little blurred.

One way in which ***The Knuckleduster Cowtown Creator*** can be used is to have the players take the roles of those driving cattle north along the trails to the Railhead towns. There is enough information in this supplement to do both this and give the characters plenty to do once they arrive! Of course, ***The Knuckleduster Cowtown Creator*** is not just useful for the games it gives statistics for. Its contents could be used be used for any number of RPGs: ***GURPS Old West***, ***GURPS Deadlands***, and even [*Buffy the Vampire Slayer Roleplaying Game*](#) (as our GM has done for a Wild West set Buffy campaign). Since the book is ***d20***-compatible, it could just as easily become a dinosaur-town generator for Goodman Games' [*Dinosaur Planet: Brontosaurus Rex RPG*](#) setting or in the Cursed Earth of Mongoose Publishing's [*The Judge Dredd Roleplaying Game*](#). Since these games stray into science fiction, there is nothing to stop the GM from applying the contents of ***The Knuckleduster Cowtown Creator*** to other settings within that genre. For example, replace cattle with whales on a water world and it can be used as a whale town creator, from where the great beasts are shipped off-world!

In some ways, ***The Knuckleduster Cowtown Creator*** does not need any of the game statistics, as it works more than well enough without them. Of course, their inclusion just increases the utility of what is already an exceedingly useful book. And not *just* useful, but entertaining as well, full of interesting facts and trivial tidbits which can be added to any Western campaign to give the newly created cow town that authentic feel, full of color and character. No book can be truly described as indispensable, but ***The Knuckleduster Cowtown Creator*** not only gets within a plug of chewing tobacco's spitting distance of the spittoon, it lands that cheek full of juice without splashing!

--Matthew Pook

Pyramid Review

Pyramid Review: Froop!

Froop! Card Game

Published by [Savant Garde Entertainment](#)

Rules and Art by R. Hunter Gough

\$17.95; 110 full-color cards (26 with instructions, 84 for play), 2-10 players

In some ways, gaming is a universal language: Once you get past the rules, the rest is mostly components. This goes double for a game that uses purely graphic mechanisms to facilitate play. **Froop!**, a colorful, symbol-based card game from Savant Garde Entertainment, is one such game.

The object of **Froop!** is to be the first to empty your hand of cards. Each card is split into four smaller rectangles, and each rectangle has one of the game's four standard, stylized pictures: hearts, smiley faces, bat's wings, or flowers. No two cards arrange the little graphics in the same way, and each card uses at least three of the four available symbols. Players start with a hand of seven cards, and another card is drawn from the top of the deck and placed in the center of the playing area to kick things off.

On his turn, a player must play a card from his hand so two or more of the symbols on that card overlap some part of the arrangement already in play in the middle of the table -- this collection is called the Froop. Cards must overlap side to side or end to end, but they all have to lay the same way; in other words, you can flip a card around 180 degrees to point in the opposite direction if it will get the pictures to fit one of these orientations, but you can't rotate a card 90 degrees and play it at right angles to the cards already played. Since the cards can overlap left to right or up and down, the Froop can spread outward in all directions and even form blocky L-shapes.

This fluid and staggered layout allows you to overlap two, three, or even four of the symbols on your card over those in play. If you can cover two other symbols, you play that card and your turn ends. If you're lucky or skillful enough to cover three or four symbols, you may try to play an additional card from your hand onto the Froop. If that card also covers three or four cards, you may play again, and so on. Play smart and you can be rid of half your hand in a single turn. If you cannot find any play at all, you must draw a card from the deck and pass.

Passing your turn doesn't really seem to come up. There are simply too many options for playing cards (either your hand is big or the Froop is), so it's unlikely you'll need more of the deck for a single game than those cards dealt out at the start. On the other hand, getting the good three- and four-card arrangements isn't a foregone conclusion, and that's what gives the game its bite. Sometimes it's just a question of hunting through your hand and the Froop, but it's not all dumb luck or coincidence. You can play cards from your hand in such a way that you'll set yourself up for an even better play next turn, assuming someone doesn't obscure your work with his own in the meantime. Play is fast -- about 5-10 minutes per game -- and leaves you wanting a little more.

And it has a little more. The game suggests some entertaining -- or annoying -- variants. In the cutthroat version, successfully covering multiple symbols allows you to give cards to other players or force them to draw cards. You can go for speed (the previous player counts down from 20 while you try to make a move), or strategy, which requires players to leave their cards face up on the table. Add options together and the game has several new dimensions.

Although the game comes in full color, the graphics aren't terrific. The artwork (front and back both) is crude penciling or computer renditions with poor resolution. Fortunately, the symbols don't *have* to be works of art; they need only be distinct, and this they are. It's nothing fancy, but it gets the job done. The cardstock is solid, and it's ready for a little punishment. Someone has even gone to the trouble of dusting the deck with a little powder (much like a box of latex

surgical gloves) to facilitate shuffling the first few deals (asthmatics beware).

You'd be hard-pressed to take ***Froop!*** to any location on Earth where you couldn't find someone with whom you can play it. The rule set comes in English, French, Spanish, Portuguese, Italian, German, Russian, Greek, Japanese, Chinese, Korean, Hindi, Thai, Arabic, and Hebrew (hence the 26 cards given over to instructions). It's a regular Rosetta Stone of gaming, but even more important is its universal appeal based on simple, fast, and appealing rules.

--*Andy Vetromile*

Serpent in the Garden State: The Jersey Devil

*"Last night I dreamed that I was a child out where the pines grow wild and tall
I was trying to make it home through the forest before the darkness falls
I heard the wind rustling through the trees and ghostly voices rose from the fields
I ran with my heart pounding down that broken path
With the devil snappin' at my heels."*

-- Bruce Springsteen, "My Father's House"

The mournful sound you hear across the pines is the call of the Devil -- born under a curse, but potentially the begetter of something far worse. Between America's greatest cities, and beneath her greatest sins, the Devil waits to drag it under. Although the Jersey Devil may seem like a hoax, or even a joke, there's something else under its hooves, something that hates the light. Let's track it back through the January snow, then, and let the Devil take the hindmost.

"As I got up I heard an eerie, almost supernatural sound from the direction of the river. I looked out upon the Delaware and saw flying diagonally across what appeared to be a large crane, but which was emitting a glow like a fire-fly. Its head resembled that of a ram, with curled horns, and its long thick neck was thrust forward in flight. It had long thin wings and short legs, the front legs shorter than the hind. Again it uttered its mournful and awful call -- a combination of a squawk and a whistle, the beginning very high and piercing and ending very low and hoarse."

-- Eyewitness testimony of E.W. Minister of Bristol, Pa., Jan. 17, 1909

According to New Jersey legend (which really and for true goes back to at least 1790), in 1735 a Mrs. Leeds (or Mrs. Shrouds), plagued to distraction by her twelve children, reacted to her recent impregnation by cursing the unborn infant: "Let this one be the devil for all I care; I'm done with children!" Sure enough, her newborn infant sprouted wings (and later, a horse's head, a barbed tail, and bird legs) and flew off into central New Jersey's Pine Barrens, from whence it would emerge to plague local farmers by slaughtering sheep and chickens and infants. Its depredations became so severe that it was exorcised in 1740 for a hundred years -- although the exorcism only partially took, since Stephen Decatur supposedly saw it in 1803 (and fired a cannonball at it with no effect), and the former king of Spain, Joseph Bonaparte, reportedly encountered it while hunting on his Bordentown estate in the 1830s.

Devil sightings went down-market thereafter, panicking farmers in Haddonfield in 1859, and walking on roofs in Bridgeton in 1874. An 1858 report states that villagers in the Pine Barrens feared to go out at night, thanks to a winged beast roaming the woods; similar panics spread throughout the 1880s. In 1894, the Devil appeared in several towns (including his birthplace at Leeds Point), and in 1899 stole sheep from as far afield as Hyenga Lake, New York. But that seemed to be the Devil's last hurrah. By 1903, folklorist Charles Skinner could confidently state that "With the advent of the new century, many worshipful commoners of New Jersey dismissed, for good and all, the fear of the monster from their mind." But the Devil is not mocked, even by eminent folklorists.

In the "Phenomenal Week" of January 17-23, 1909, the Jersey Devil appeared scores of times, to well over a hundred witnesses. Prominent officials such as the Bristol, Pennsylvania, postmaster and a Trenton city councilman, saw it flying across the sky; a policeman spotted it in Burlington, N.J. (where nearly every backyard and rooftop in the town was covered with its hoof-prints) and police fired on it in Bristol and elsewhere. An enterprising fellow claimed to have wounded it on telegraph lines in Atlantic City; firemen sprayed it with hoses in Collingswood, N.J., and one R.L. Campbell saw it explode in flames on an electrified track in Clayton, N.J. A Smithsonian expert theorized it might be a pterodactyl, emerged from "hidden caverns and caves, [deep within the earth](#)." Guards patrolled; the militia formed; panic ruled -- and the Devil vanished, having left his mark. It continues to appear sporadically, and even managed to panic Gibbsboro, N.J., with another rash of sightings in 1951. Credible sightings include a state trooper at the Mullica River in 1966, a sentry at Fort Dix in 1990, and a rash of reports from Holmdel, N.J., in 2000. With the advent of the new millennium, many worshipful commoners of New Jersey seem to have implanted the monster firmly in their mind -- it has become the official New Jersey state demon, the mascot of an NHL hockey team, the subject of an *X-Files* episode and an independent horror film, and a mainstay of local tourism.

"'Jersey Devils' have been reported other times, but, though I should not like to be so dogmatic as to say that there are

no 'Jersey Devils,' I have had no encouragement investigating them. . . . I have had an extensive, though one-sided, correspondence, with people who may not be, about things that probably aren't."

-- Charles Fort, *Lo!*

Which goes some distance to explaining why Jersey Devil stories continue. The 1909 flap was quite possibly started by a newspaper hoax by Norman Jefferies, publicity manager for the Arch Street Museum in Philadelphia. Jefferies even went to the extent of buying a kangaroo, painting it green, and tying wings and horns to it before letting it loose to panic people in the area before he "captured" it for the cameras for exhibit at the museum. Faultless cryptozoologists Loren Coleman and Ivan T. Sanderson believe they've tracked down traces of a consummate real estate scam piggybacking on the flap, as well, and a 1925 sighting was completely fraudulent. Evidence points to the 1951 Gibbsboro panic being another hoax; police discovered a bear paw on a stick (for making fake Devil prints) nearby the next year. Tie this in to sightings of the sandhill crane or prints of the scowfoot duck, and you get a fairly solid substrate of mundanity beneath the Devil's hooves.

As for Mrs. Leeds (or Shrouds) -- she, it seems, probably really existed. A Daniel Leeds founded Leeds Point, where one Samuel Shrouds, Jr. settled right across the river from Mrs. Leeds' house. (The house still stands, although it burned badly in 1951.) The possibility of an illegitimate child, or a deformed one, as the true "thirteenth child" of the story, has been partially borne out by the discovery of a grave marker for a two-year-old child born in 1735 nearby, with the name "Smith J Leeds" (a traditional name for the Devil child) on it. Even if that isn't the "devil child's" grave, stories of Mrs. Leeds' unseemly doings could easily have sparked the kinds of rumors that led to at least one witch trial in nearby Mount Holly, N.J., in 1730. Another hint of something untoward at the creation of the Devil is the parallel origin story that makes him the cursed child of a treacherous New Jersey girl and a British soldier before the Revolution -- or of an innocent girl gang-raped by Tory "Refugee" guerrillas.

*"His head was found in the driver's wheel
But his body never was found.
My girl, my girl, where will you go?
I'm going where the cold wind blows.
In the pines, in the pines, where the sun never shines
I'll shiver the whole night through."*
-- "In the Pines," traditional American folk song

The Pine Barrens, at the heart of the Devil's realm, are likewise the product of fertility gone wrong. High iron and acid content in the sandy soil makes the ground suitable only for cranberry bogs and stands of pine trees; the water is a thin reddish-brown color like dried blood, and the ponds and lakes are full of water moccasins and worse. Nearly two thousand square miles of marsh and woods sit at almost the precise center of the East Coast megalopolis, halfway between Boston and Richmond, New York City and Philadelphia. Legends of "ghost lights" go back to the Lenapi Indians, and local creeks have held dragons and devil haunts as far back as memory serves. Its bog iron fed the forges of the Revolution, and its pines built slave ships for a time, but both industries died out by the 1840s, leaving more ghost towns in central New Jersey than there are in the whole American Southwest. From out of the Pine Barrens, black dogs and "wampus cats" prowl; a yellow-eyed creature that "hopped kangaroo fashion" with a jaw "neither dog, nor wolf, nor coyote" (not unlike the [Beast of Gévaudan](#)) was killed in Greenwich, N.J. in December of 1925. Ghost stories abound, from the "grinning man" dressed in [green](#) who appeared during a UFO scare in Elizabeth, N.J., to the Phantom of the Parkway who haunts the Garden State Parkway near the Toms River exit and drives cars off the road. Lizard-men, sasquatches, and more share the Jersey Devil's billing (or do his bidding) in the depths of the Pines.

"Accompanied, as it usually is, by the howling of dogs and the hooting of owls, there can be no surer forerunner of disaster. Where the barrens line the shore it flits from one grass-grown dune to another and is especially watchful upon those wild heights when coasting schooners, driving their prows into the sand, pound to splinters upon the bars and distribute upon the waves their freight of good and human lives. Upon such occasions Leeds' Devil is seen . . ."
-- Rev. Henry Charlton Beck, *Jersey Genesis*

All of this begins to paint the Jersey Devil not as a creature but as an American myth, one that haunts the dark side of American history from partisan warfare in the 1770s to real estate fraud in the 1950s, just as his cousin [Spring-Heeled](#)

[Jack](#) embodies British urban terror. He is supposedly a harbinger of wars, appearing on December 7, 1941 among other dates. Like that other American banshee, the [Mothman](#) who he resembles, he brings death in his wake, walking on the shore with ghostly pirates watching for shipwreck. How he must have feasted when the *Hindenburg* went down in his domain, on the edge of the Barrens at Lakehurst, New Jersey. (Is there a connection here with the "[airship](#)" flaps of 1909, which included sightings in nearby Delaware?) He also claimed Lindbergh's friend, the Mexican aviator Emilio Carranza, who crashed in the center of the Barrens in 1928 -- or was this another human sacrifice by [Lindbergh](#) to the spirits of the air and earth?

Mention of Lindbergh (and of the Nazi zeppelin *Hindenburg*) brings another dark thread into the tapestry -- miscegenation and eugenics. The Devil's chimerical form (horse, snake, bat, and bird) and origin in a cursed birth (or unholy mating) both feed into the darker crannies of this American fear. So, as it turned out, did another devil at work in the Pine Barrens, the eugenicist Henry Goddard, whose Laboratory and Department of Research for the Study of Feeble-mindedness opened at Vineland, New Jersey on September 15, 1906. Throughout the Devil's greatest rampage, Goddard was doctoring his research (and doing God knows what else) on the "inbred morons" of the Pine Barrens, for his very influential (and queasily Lovecraftian) book *The Kallikak Family: A Study in the Heredity of Feeble-Mindedness*. Could Goddard have somehow summoned the misbegotten creature with his prayers to purity of blood, building the myth of eugenics, deep in the pines where the sun never shines? Or did the Devil make him do it?

The Journey Of A Thousand Miles Ends With A Locked Door

So I'm standing outside my parents' home in the dark, after an eight-hour drive, thinking to myself, "Well . . . what do I do *now*?"

But I'm getting ahead of myself . . . and, despite the seemingly solipsistic nature of this column, I *will* get to roleplaying. Honest.

Readers may remember that, [several weeks ago](#), I proclaimed that I was attempting to, hell or high water, get home for Christmas.

Well, I made it home.

Mind you, this was *not* a forgone conclusion. First, my 500-mile Christmas Eve journey was made more challenging by the fact that my home region was in the middle of a Tornado Warning (despite not having had *any* rain for the previous three weeks). This may not have been as problematic as it might have been, if only this trip on the interstate system had not been my *first* such trip. So my first 200 miles at driving above 45 miles per hour were done in a rain storm so blinding, the only awareness I had of cars in front of me were the occasional feeble Rudolph-esque glows of brake lights in the distance.

(As an aside, I also came to the conclusion that learning something under highly challenging circumstances makes doing the same under more mundane conditions *much* easier. I also . . . umm . . . made an educated guess that my car maxes out at 110 miles per hour.)

Anyway, I made it through the blinding rain, and found my way back to my childhood neighborhood.

Now, one thing I don't think I mentioned in my previous column was that I was, in fact, surprising my folks; my mom and my stepfather had not been informed of my (impending) arrival. This was also coupled with the fact that I was about five hours behind schedule from when I wanted to get there (thanks to my efforts to get *Pyramid* done for that week). So I was rolling up around 7:30pm, which is approximately when they go to bed.

The stage is set.

So I pull up to their home; it's dark outside. I see signs of life up there in their second-story apartment; there are lights on, and I can make out the flickering of a television.

Now, I go up to the door with a sack of presents in hand; trying to complement my Christmas Eve surprise, I start singing carols ("We wish you a Merry Christmas . . ."). And I get to the end of the song, and there's no response. So I knock.

No one answers.

I knock again. And again.

Still no answer.

I'm now going to take a detour into the point of this column; merge right.

Many old-school gamers joke about the adversarial nature of the GM versus the players; stories about killer GMs and the "him versus us" conflict. (Of course, exhibit A is the long-running *Knights of the Dinner Table* comic.) Contrariwise, many more modern games emphasize the combined storytelling aspect of the game, saying how it is the

GM's duty to help facilitate the story, but *not* his goal specifically to thwart the players.

Well, as I was standing outside my parents' door, wondering "What do I do now?", I realized my situation: The evening was not turning out the way I had expected; the problem I was encountering was *not* one I had foretold; and although I had an option as to a course of action, I was not at *all* certain as to the outcome of this last-ditch effort. In short, this was exactly the kind of situation I would want to create as a GM . . . *and* it's the kind of situation I would love to hate as a player.

See, players are notorious planners. In the macro sense they often have preconceived notions as to how adventures are going to turn out, and they come up with broad plans ("Okay; we break into the castle and split up to find the princess."). And in the micro sense they have smaller plans, such as favored attacks and combat tactics. Usually, these plans - both macro and micro - have sub-plans. ("If we can't find the princess, we need to figure out where she is", or "I'll start with the flame bolt spell; if it doesn't work, I'll switch to the magic staff.")

And, in my opinion (and in slight defiance of the newer schools of GM thought), it falls to the GM to be adversarial and come up with means of thwarting these plans. At least in my experience, the players get the biggest thrills when their plans go mostly - but not entirely - as they expected. In fact, in looking over a lot of published material, I note that considerable effort is made to keep the players' ideas from working as expected. This ranges from combat effects ("Bullets don't harm it!") to unique environments ("Spells don't work in the Ethereal Zone," "The agents will need to work underwater, where dangers are greater and maneuverability is more limited," "If the explorers reach the space station, they will find that its antigrav system isn't working quite right; air both on board the ship and within their suits will be pushed to the 'ground,' meaning the heroes will be unable to breathe unless they crawl or find some other way to transport air up to their faces.").

Like all things, this can be taken to an absurd extreme . . . perhaps best exemplified in the ***Advanced Dungeons & Dragons Fiend Folio*** creation of the nilbog, a monster which could *only* be harmed by using healing effects. (If you ever meet a GM who makes extensive use of the nilbog, be warned; he is not actually your GM, but is instead the devil, sent to destroy soul and sanity.) But in moderation, getting players involved in trying to overcome that last hurdle . . . that last 5% . . . that one seemingly unopenable door that falls outside their preconceived notions and plans can make for the most memorable adventures. This is especially true if they end up with a theory they think *might* work at resolving the problem.

Which brings me back to standing outside my parents' door, wondering what to do next.

See, I'd prepared for a number of contingencies ("What if they're not home? What if there's no room for me to stay at their place?"), but I hadn't prepared for "I think they're home, but they aren't answering the door." So I went to Plan Z . . . also known as my house key.

Fortunately my folks hadn't changed the locks in the past decade, so my key would almost certainly work. However, I'd never shown up unannounced to anyone's house and (in essence) broken in. The possibilities for Bad Things were myriad. Did my parents own a gun? Would the chain be on the door? Had they installed an alarm system? Would I be interrupting Christmas Eve Under-The-Tree Nookie, ensuring trauma for all?

Faced with the last 1% of my otherwise trouble-free journey, I used the key.

And my very surprised stepdad came down the steps to see who it was. Long story short: They were startled as heck yet happily surprised¹. They had concluded that I was, in fact, roaming Christmas carolers . . . which they didn't want to deal with. After I'd knocked a few times, they thought I was very *rude* Christmas carolers. My mom tried to get my stepdad to take a few dollars to the supposed-carolers to get them to go away, but to no avail. *It's a Wonderful Life* was playing on the television.

And my uncertain-last-moment-impromptu plan worked out just fine, and everyone had a wonderful time.

But next time I think I'll just tell them I'm coming.

* * *

¹Amusing aside: Upon seeing me at the door, my stepdad said to go back outside so he could greet me properly. I did so; he then proceeded to lock and *chain* the door, turning off the lights. I'd even left the sack of presents inside the door, so it was an ideal lock-out. A family's love is clearly strongest on the holidays. (He let me back in after a few seconds.)

* * *

I can't remember if I've told everyone about this, but those of you in the New Jersey area may be interested to know that I'm going to be at a convention starting at the end of January. Yes, [Dreamation 2003](#) has been kind enough to invite me as a guest. I'll be helping them with the U.S. National **Munchkin** Championship; I'll also be hosting a couple of discussions and running a few games (including the *<ahem>* legendary **In Nomine** adventure "30 Minutes Or Less" that left my players twitchy for hours afterwards). If you're in the area, please feel free to come by and join the fun.

--Steven Marsh

Last week's answer: **Darklords** (for **Ravenloft**), p. 12.

(Two stars) "**The Lord Of The Nazgûl Searches For The Ring:** Reveal 1 card from the deck and Ring-bearer discard 3 matching card symbols to achieve [white circle] otherwise each player [black square]."

Fantasy Astrology

When The Stars Are Right

by David Morgan-Mar

As below, so above; and as above, so below. With this knowledge alone you may work miracles.
-- Hermes Trismegistos, The Emerald Tablet (trans. Fulcanelli).

Fantasy campaigns are usually set in a confined area -- the size of a continent or less -- on a single planet. The unknown frontiers consist of what lies over the sea, across the barrier mountains, beyond the horizon. The heavens above are not a place where people can venture -- they are the realm of the gods and possibly other celestial beings.

People with a medieval level of technology have no hope of knowing what a star, planet, or comet actually *is*. These objects are instead symbols of forces beyond human control. There are certain regularities in the movements of heavenly objects, making it possible to forecast the configuration of the heavens. Some things are completely unpredictable, such as the appearance of a comet or "new star."

To the ancient mind, it was obvious that what happened in the heavens was a reflection of events on earth . . . or rather, vice versa: The state of the sky dictated earthly events. The regular patterns of motion could be used to forecast propitious days and times for important ceremonies, or to forewarn of disasters. The appearance of a new body in the heavens was an omen that could not be ignored; incidents of earth-shattering importance were indicated. The charting of the positions of heavenly objects and the interpretation of their meanings are codified in the "science" of astrology.

This article describes the basic components of astrology as they can be applied to a fantasy world that exists in a universe similar to our own -- where stars are immensely distant suns, and all the planets (including the earth) go around our own sun. Inhabitants of the world may believe that the stars are angelic beings fixed to a grand celestial sphere, and that the sun goes around the earth (and with medieval technology there is very little evidence to show otherwise), but the basic reality is the one with which we are now familiar. Grossly different cosmologies ("the world is flat and the sun is a ball of fire a mile across") are not dealt with here, but will be discussed in a follow-up article.

Types of Astrology

To many ancient civilizations, specific heavenly bodies were associated with (or *were*) particular gods. Their movements in the sky could thus be interpreted using the known personalities and interests of the gods in question. This is a natural extension of the sort of pantheistic beliefs that are common in fantasy campaigns. In such a campaign, astrology will be an important science.

In a historical medieval campaign, or a fantasy world in which the dominant religion is monotheistic, the heavens move according to the hand of God, and events on earth inexorably follow the dictates of the heavens. Astrology becomes a way of divining the will of God and of determining one's pre-ordained fate in God's plan.

Either way, astrologers work by drawing up a *horoscope* -- a chart of the heavens showing the positions of all important heavenly bodies at a particular time. The absolute and relative positions of all the objects in the horoscope combine to produce a reading that is more or less detailed in its predictive power for events occurring at the time for which the horoscope is drawn.

Depending on the particulars of a campaign, casting horoscopes can either be an exhaustively prescriptive science, with detailed tables of planetary aspects and their elaborately enumerated nuances of meaning, or an interpretive art form, relying more on the brilliance of the astrologer in assigning relevant meanings to various heavenly arrangements.

Astrology might be a well-regarded academic pursuit, used openly by professionals who make a living casting horoscopes for people willing to pay for them. In such cases, rulers and nobles will almost certainly employ astrologers to forecast auspicious and ill-fated dates for events ranging from starting a war to holding a royal marriage. On the other hand, astrology may be seen as akin to witchcraft, with practitioners hunted down and persecuted for being in league with the devil. Obtaining a horoscope in such a campaign could be an adventure in itself.

Finally, a major campaign decision is whether astrology actually *works* or not. If it does, then it is possible that astrology is completely prescriptive, and anyone with appropriate literacy, mathematical skill, and astrological tables can cast a horoscope. Such a campaign can be difficult to run, however, unless the GM likes dealing with the intricacies of prophecy and PCs knowing about future events that must come to pass.

If astrology works, it is easier to make its practice an interpretive skill. Court astrologers will be in fear of their lives if they make a major prediction that turns out to be incorrect. People will never be sure if the word of an astrologer is truth or not. Those who are better than others will gain a positive reputation, and be eagerly sought out.

If astrology does not work, it is certain to have an interpretive component, even if much of it is codified into tables and reference works. The best astrologers will be intuitive or skilful psychologists, who are able to formulate predictions based on human nature and knowledge of events around them. Such people may be deluded, believing that they do possess mystical powers, and it is certain that their clients will be under a similar delusion.

The Components of a Horoscope

A horoscope traditionally shows the positions of the sun, moon, planets, and the constellations of the zodiac (see below for further information). Some fantasy campaigns may not have all of these elements, or may possess more than our own Earth (multiple moons seem fairly common). The base assumption is a world with heavenly bodies similar to our own, but possible deviations are discussed below.

The Sun

The most obvious celestial body is the sun. It rises each day, filling the land with life-giving warmth and light. People go about their lives to the regular rhythms of the sun.

For this reason, the sun is often identified with a major god of a pantheon, if not the ruler of the gods. In male-dominated societies, the sun god is usually male. In traditional western astrology, the sun represents power, physical strength, creativity, health, life, and also arrogance. Similar concepts can logically be applied to the sun in a fantasy astrology.

The sun also controls the seasons, which set the length of the year. At different times of the year it will be higher or lower in the sky, resulting in the familiar cycle of warmth and cold that produces summer and winter. The seasons define four specific dates: the solstices and equinoxes. The solstices occur in winter and summer, when the number of hours of daylight reaches a minimum or maximum, respectively. The equinoxes occur in spring and autumn, when there are exactly 12 hours of daylight and night. These dates are often celebrated with festivals, as they herald the changing of the seasons and form important markers for agricultural societies.

Fantasy worlds without suns are possible, but beyond the scope of this article. In some worlds there may be multiple suns, each with its own cycle of rising and setting. The dominant sun, by which people live their days, will inherit the characteristics of a single sun, while secondary suns could possess qualities such as family, rivalry, ambition, hope, or failure.

The Moon

The moon is often regarded as the consort of the sun -- her silver compared to his gold. Traditionally, the moon represents emotional and unconscious aspects of personality. It controls the dreams, gives rise to impulsive urges, and

can also be associated with death and mystery.

The moon moves rapidly with respect to the sun, changing through a series of phases every 28 days (a "month") and moving through the zodiac almost as quickly. Its influence is therefore ephemeral, and its position important in determining differences in horoscopes cast for several days in succession.

In a fantasy world with no moon, there will be nothing to significantly differentiate horoscopes cast for the same time on dates within about a week of each other. Predictions will therefore be vague to about this length of time. If astrology works, then periods of a week or so will go by under much the same influences, so related events will tend to occur in clusters. With no moon, the emotional and unconscious aspects of personality must be controlled by some other astrological body. An intriguing possibility is that there is an invisible *dark moon*, which can only be detected by astrologers, mages, priests, or whoever. Having such an invisible body control the unconscious urges of men is particularly fitting.

A popular fantasy theme is a world with multiple moons. For familiarity's sake, one moon might be similar to our own, in which case the same associations apply. Our moon is large as moons go; realistically, additional moons are likely be smaller and closer to the earth, resulting in fast-moving moons such as those of Mars. Moons like this travel across the sky in a matter of a few hours. Astrologically, this means they provide a change in horoscope that can pinpoint influences and events down to a minute or so. Predictions will be very precise but, on the other hand, events such as births will need to be known to high accuracy if the child's horoscope is to be cast correctly. The associations of additional moons could be themes like brotherhood, children, guidance, or other ideas associated with multiples or subordination.

The Planets

To the ancients, planets were stars that wandered about the heavens. In an historically-based campaign, the visible planets (and their European associations) are:

Mercury: Completes a circuit of the stars in 88 days, making it the fastest planet. It is the herald or messenger of the gods, and is associated with the mind, science, communication, healing, and money.

Venus: The brightest object in the sky after the sun and moon, Venus is the goddess of beauty. She represents beauty, love, the arts, and friendship.

Mars: A noticeably red planet to the visible eye, Mars was seen as a warrior god. He is associated with aggression, ambition, courage, and justice.

Jupiter: The next brightest planet after Venus, Jupiter came to be seen as the herdsman, father, or king of the gods. He brings joy, compassion, good fortune, and wisdom.

Saturn: Taking the longest of the planets to complete a cycle (29 years), Saturn is associated with time, slow progress, difficulties, and old age.

Uranus, Neptune, and Pluto were not discovered until after the Renaissance, but in a fantasy campaign planets invisible to the naked eye may be detected by magical or technological means. The GM should assign any desired associations to such planets.

Planets move from day to day against the background of the zodiac (see below). As they enter different parts of the zodiac, their influences mingle with those of the constellations, and guide the lives of people for whom those constellations are significant. Also see *Aspects*, below.

Sometimes, because of the orbital motions of the planets, a planet appears (from earth) to reverse direction and move backward for some time. This is called *retrograde* motion, and is associated with a disruption of the normal influence of the planet in question. Retrogressions of Mercury are traditionally considered most important, indicating times when starting journeys or entering into contracts are particularly risky. When an outer planet goes retrograde, it lingers

for much longer than usual in a particular constellation. This brings about an extended period of influence, which can manifest as long spells of good or bad fortune for those whose lives are governed by the constellation in question.

Fantasy worlds could easily have different planets to our own. Each god of the dominant pantheon may have a planet to himself! The GM should assign whatever aspects and influence he desires to each of the planets in the campaign.

The Zodiac

The stars are, to all intents and purposes in historical astrology, immutable objects in fixed positions relative to each other. They wheel around the earth approximately once per day -- a little faster than the sun. The sun therefore moves slowly among the background of stars, taking a year to complete a full circuit.

The stars are divided into groupings called *constellations*, which are taken to be abstract representations of earthly objects (fancifully generated by "joining the dots"). Most of the modern western constellations were assigned by the ancient Greeks and Romans, who used figures from their mythologies, as well as animals, and household items.

The sun's annual journey takes it through 12 of the 88 constellations, forming a ring around the earth. It spends a different amount of time in each constellation. The ancients, however, standardized this into an idealized set of 12 constellations -- called the *zodiac* -- each deemed to contain the sun for an equal part of the year. The 12 zodiacal constellations (also known as *star signs*), with the idealized dates for which the sun is in them, and a brief set of influence keywords are:

Aries (21 March-20 April): Assertive, innovative, enterprising, energetic, selfish.

Taurus (21 April-21 May): Persistent, patient, reliable, loyal, possessive.

Gemini (22 May-21 June): Communication, adaptable, intellectual, curios, restless.

Cancer (22 June-22 July): Sensitive, kind, nurturing, emotional, secretive.

Leo (23 July-23 August): Power, courage, pride, leadership, arrogance.

Virgo (24 August-22 September): Perfectionist, methodical, skilful, modest, self-critical.

Libra (23 September-23 October): Harmony, balance, peaceful, diplomatic, narcissism.

Scorpio (24 October-22 November): Intense, mystical, purposeful, introverted, vengeful.

Sagittarius (23 November-21 December): Expansive, visionary, flexible, extroverted, inconstant.

Capricorn (22 December-20 January): Prudent, resolute, ambitious, conservative, inflexible.

Aquarius (21 January-18 February): Idealistic, independent, inventive, humanitarian, eccentric.

Pisces (19 February-20 March): Intuitive, sensitive, imaginative, spiritual, unrealistic.

Note that these idealized dates for the sun being in each sign are essentially arbitrary. The earth wobbles in its orbit (a phenomenon called *precession*), doing a full circuit every 25,000 years. This means it enters each sign a little later each year -- currently it remains firmly in Pisces every 21 March. Additionally, the modern definitions of the constellation boundaries mean that the sun travels through a thirteenth constellation -- Ophiuchus, "the serpent-bearer" -- between Scorpio and Sagittarius. Traditional astrology completely ignores these effects.

Fantasy astrology, however, may need to take such things into account. Ancient technology is more than adequate to detect and predict the effects of precession. All it does is slowly change the dates of the year on which the sun enters a given sign, so it is fairly simple to incorporate (in fact Indian, or Vedic, astrology does so). The existence of a 13th star

sign might be a dark secret known only to astrologers, and having huge effects on those born under its brief influence.

The zodiac signs are grouped in two different ways (see diagram) -- by their relation to the seasons, and by the four Aristotelian elements.

Cardinal Signs: When the sun moves into a cardinal sign, it indicates the start of a new season. Cardinal signs symbolize initiative and command.

Fixed Signs: The sun enters these in the middle of each season. They represent stability and predestination.

Mutable Signs: The final sign of each season represents versatility, compromise, and change.

Fire Signs: These are volatile and full of energy, but also impatient and lacking perseverance.

Earth Signs: Practical, cautious, trustworthy, but may lack imagination and creativity.

Air Signs: Intellectual and logical, but lacking empathy and intuition.

Water Signs: Emotional and spiritual, but lacking logic and focus.

As can be seen from the range of qualities displayed by each sign and the groupings of signs, there can be many complex interactions and even conflicts between qualities. This rich tapestry of possibilities provides the framework upon which astrological predictions are made.

The set of 12 western zodiac signs is convenient for divisions into groups of three and four, and each sign roughly matches the time of a single lunar cycle. Fantasy zodiacs may have fewer or more signs, depending on the whims of the GM. Fewer signs means fewer astrological correspondences, making astrology a simpler art, while more gives creative GMs the chance to devise astrological systems as complex as desired. Creating 36 or more zodiac signs, with associated legends, symbology, and associations can be a labor of love!

If the signs are regularly spaced, it is a good idea to make them a multiple of the number of seasons (fantasy inhabitants may recognize three, four, or five seasons), since their relation to the agricultural calendar should be a primary determinant of their origin. Assign other groupings as desired, parceling your signs into sets based on whatever numbers divide it evenly.

A simple way of producing a fantasy zodiac is simply to take our own, complete with its rich set of associations, and change the names and symbols of each sign. This produces a ready-made mystical system, with an otherworldly feel, and enough complexity to fool your players into thinking you've spent hours inventing it.

Aspects

As aspect is the angle formed between two planets (including the sun and moon), as seen from the earth. When the positions of the planets are plotted on a horoscope, particular aspects are noted for their modifying influences on the planets in question:

Conjunction: When two planets are in the same sign and at almost the same angle, their influences combine and strengthen each other.

Zodiac

Sextile: When planets are approximately 60 degrees apart, the aspect represents an opportunity waiting to be seized.

Square: Two planets at approximately 90 degrees have their influences opposing one another, but in a way that provides dynamism and the chance for growth by resolving the conflict.

Trine: Planets at 120 degrees to one another show a relaxing of their potential conflicts, bringing about ease and comfort in their relationship.

Opposition: When two planets are almost directly opposite one another, their interaction produces a strong obstacle that must be overcome.

Types of Horoscopes

Horoscopes are used for four main purposes:

Natal Chart

A horoscope drawn up for the time of a person's birth shows the influences that will govern that person's entire life. The zodiac sign in which the sun is at the time of birth is the person's *sun sign* -- this is the sign many modern people know as their "star sign" and look up in daily newspaper astrology columns. More important, however, is the *ascendant* -- the sign that is on the rising horizon at the moment of birth. Since the ascendant changes every two hours, the exact time of birth is of major importance. The positions of the planets and their aspects show major influences that will help or hinder the person throughout life.

Horary Chart

This is a horoscope drawn up for a particular event, usually after it has happened. Interpretation of the chart can lead to insights on the heavenly influences that led up to the event, and the future consequences of the event. An horary chart might be drawn up to predict the future course of events after a battle, a death, or some other significant occurrence.

Electoral Astrology

This is the study of future horoscopes to determine the best time and date for beginning a venture. Rulers or nobles might consult an astrologer to tell them the best time to hold events such as weddings, coronations, festivals, triumphs, etc.

Decumbiture

This is the use of astrology to diagnose and treat disease. In decumbiture, various herbs and other remedies are associated with zodiacal signs and planetary aspects. A horoscope drawn up for the time of onset of an illness can show the cause and the best treatment.

Omens

Besides the regular cycles of the stars and planets, other heavenly bodies sometimes make unpredictable appearances. Comets appear as slowly moving stars with bright tails stretching far across the sky, and historically were almost universally considered harbingers of doom or destructive change. The appearance of comets in an otherwise regular and changeless sky surely meant something of great import, and they were much feared.

It does not take an astrologer to foresee doom and evil when a comet is abroad, but from the positions of the comet and planets in the sky an astrologer should be able to see *what* is doomed, in what way, and how soon the evil will be

visited. Good astrologers may even predict what courses of action may prevent the otherwise inevitable disaster.

Novae (or "new stars"), on the other hand, were often seen as omens of good. These are stars that appear suddenly from nowhere and shine brightly for a few days. A possible example is the Star of Bethlehem, which guided the wise men to the birthplace of Christ. New stars in a fantasy campaign can be seen as blessings from the gods on particular dates or events. (Phenomenologically, new stars can be novae -- dim stars that flare briefly into brightness -- or supernovae -- distant stars that explode -- but the difference is moot to medieval technology.)

The appearance of comets and new stars is clearly something that can be controlled by the GM to signal particularly disastrous or auspicious events. One such event per campaign is probably plenty, unless your game is particularly epic in nature and the gods are wont to toy with the heavens at a moment's notice.

Astrology in the Campaign

Using the information in this article, and perhaps from other resources, a GM should be able to either invent or adapt a unique system of astrology for his fantasy campaign. Using the jargon of astrology to couch predictions lends an air of authenticity and atmosphere, even if it is nothing more than mysticobabble ("The Black King dares not attack until the moon moves into conjunction with Venus in the ascendant!").

Astrologers can make useful NPCs, often allies or contacts. Other important NPCs such as rulers or nobles may employ astrologers, so there is a good chance an adventuring party will come across them at some point. Astrology is a full-time profession in pretechnological societies -- casting horoscopes takes considerable work -- so it is unlikely that an astrologer would seek adventure, making them rare as PCs. A PC might dabble in astrology though.

If astrology is seen as a dark art, its practitioners must hide from public life. Significant enemies of the PCs might use astrology as an evil tool to prepare themselves for any confrontations and to seek out the things they need to fulfil their nefarious goals.

A professional astrologer needs an appropriate skill in your chosen game system, representing years of study in his art. Casting a horoscope is tedious and laborious, taking several hours of cross-referencing books and charts, calculating angles, determining influences, and combining all into a coherent whole. A skill or success roll should be made by the GM at the end of the process, with the margin of success indicating the general degree of accuracy of the result. (Even if astrology does not work, an astrologer will be using his intuition and personal skills to forecast the most likely course of events.) If the roll fails, the GM can supply the player with false information.

Whether or not astrology works in your campaign, it is likely that the characters *believe* it does. The GM may wish to keep the players in the dark, so they are not sure if astrology is accurate or not. The simplest working assumption is that all characters believe astrology works, and any who don't have a personality quirk to that effect. This prevents the telltale addition of delusions to all characters who do believe.

Astrology might also have a significant effect on magic in the campaign. An excellent resource for combining astrology and magic is ***GURPS Cabal***.

Adventure Seeds

Black Times

Bands of orcs are laying waste to farms and villages on the edge of the kingdom, but the king is doing nothing because the court astrologer has warned him that starting a war now will lead only to disaster -- he must wait another fortnight for the planets to enter a more promising alignment. Dispatched from a large town in the path of the orcs, the heroes must convince the king that his help is needed now! The easiest way to change the king's mind is to get his astrologer to change his story . . .

Ill Fate

One of the heroes has his horoscope cast at a fair. To the astrologer's horror, the chart reveals a great disaster will befall the hero, sometime in the next week! Dire happenings will lead up to an inevitable tragedy, he warns the hero. Sure enough, strange things do begin to happen: A pickpocket gets away with the hero's purse, his horse breaks a leg, the inn the PCs are staying in suffers a fire. Is it the workings of destiny, and if so, how can catastrophe be averted? Or is it all an elaborate hoax, and for what purpose?

Wedding Day

A young noble is to be wed, with the date set for the spring equinox, when a rare planetary conjunction promises a long and fruitful marriage -- the couple are even in love already! A rival noble faction kidnaps the bride three days before the wedding, and the noble's astrologer forecasts tragedy if she is not recovered in time for the equinox. If ever a group of heroes is needed, it is now.

Insider Trading

The adventurers are merchants, struggling to make a living by trading goods at various towns. It seems that whatever goods they bring to a town, another merchant has just beaten them to market with a supply, driving down the prices while making himself a handsome profit. Whatever is in demand, he seems to have in stock. Could this uncanny predictive ability be the result of astrology, a dark art outlawed by the king? The best way to find out is for the heroes to seek out and ask an astrologer themselves.

Gaming and the Nature of Artificial Intelligence

by Mark Gellis

Robots have been part of science fiction and science fiction gaming for a long time. To some people, it is more interesting to play R2-D2 than Luke Skywalker, or to be Hal instead of David Bowman. But playing an intelligent machine raises some questions about how such beings experience both life and death.

If we are speaking of simple equipment that is not a character, there really is not a problem. A calculator that can also remember your wedding anniversary and even give you advice on how to repair an automobile engine is only a tool. A security robot that can see in near total darkness, track you by your body heat, and fire a machine gun at you is effectively no different than any other monster you might encounter in a traditional dungeon crawl. The GM can define whatever limits he wants ("now, for an extra 500 dollars, you can buy the software package that gives you a +1 on your 'Mechanic: Fusion Drives and Power Plants' roll") and go from there.

The question becomes more difficult when we start talking about NPCs and especially if we are talking about player characters.

The whole point of a truly intelligent robot, the kind one would run as a player character, is that it has a mind. It has a sense of self. But where does the mind come from?

Quite simply, we do not know the answer to that question . . . so everything in this article is speculative. But it is possible to consider various aspects of the issue, both in terms of what it may mean for actual sapient machine intelligence and in terms of how it might affect roleplaying.

Let us consider the question itself. Assuming we could create a machine with its own consciousness, where would that mind come from? Is it simply the software? No. Software, by itself, does nothing. It needs a frame on which to run. And it needs an environment with which to interact. This is because consciousness is most likely an interaction between memory, a physical brain, a real or simulated environment, and processes by which that brain interacts with what it already knows (memory) and whatever is happening at the moment (environment).

The point is that the physicality of the individual is not something that can be escaped. Without some kind of physical brain, some hardware on which the software (memory and processes of interaction or problem-solving) runs, the mind goes away, and without some physical medium, the memory cannot be preserved. The only alternative is to assume that once an AI achieves a certain level of complexity, it develops an actual soul which could be totally independent of any physical body, and which could continue to exist even after the physical body is turned off or destroyed.

This last idea is not an unreasonable one, but let us assume, for the moment, that spirituality does not enter into our equations.

The brain is, of course, different than the body. David Pulver, in *Transhuman Space*, makes an excellent and useful point that every "shell," organic or mechanical, needs both a computer and AI software running on that computer. The computer houses the AI but it is not the same thing as the shell; the shell, on the other hand, allows the AI to experience and interact with the outside world, and is linked to the computer, but it is not the same thing as the computer. The exception would be a shell that consists only of a computer, but if we want to give the AI a world with which it can interact, it will either have virtual environment programs or be connected to some kind of network.

AI Gaming Principle Number One

When we speak of sapient artificial intelligence, we are speaking of three separate aspects: the brain (usually a computer), the AI software (memory and a set of processes for problem-solving and interacting with an environment), and a physical body or shell of some kind (to allow the AI to interact with some kind of environment).

Now this business of needing computer, AI, and shell raises some issues for both GMs and players. The first is how to handle multiple copies of the same artificial intelligence in different mechanical bodies. Would they be the same person?

Human twins provide us with a good analogy. Twins begin with almost identical bodies and "operating software," and those who live in the same house will have remarkably similar experiences, and they may act alike much of the time, but they are two separate individuals. The same will be true of two copies of the same AI software inhabiting two separate computers in two separate shells.

They will also be different individuals. Twins are sometimes much closer to each other than other siblings, but there will always be some minor differences. The old *Patty Duke Show* built an entire television series of comedy based on how different two people can be even if they do look alike.

As the two or more intelligent robots of the same type experience different things, encounter different people, face different challenges, they are likely to develop very different personalities. Certain aspects of their behavior may remain the same if they were basic parts of their programming ("Cannot Harm Innocents," etc.) but other aspects might become very different.

AI Gaming Principle Number Two

Each brain, mechanical or organic, is a separate individual. What this means is that if a piece of AI software is being run on two or more different mechanical bodies, they should be treated as separate characters. The exception would be if one mechanical body was simply a drone being operated remotely by the AI. If it actually copies itself to this second body, however, the second body would become a second individual.

Another issue that needs to be addressed is the difference between mechanical and organic brains. One of the biggest questions here is where emotions come from. Much of our thinking has a strong emotional component. For example, understanding a concept like loyalty and being loyal to someone are two very different things. Our emotions flavor our ideas to such an extent that without them the ideas would themselves change in a significant manner. But emotions may be, to a great extent, biochemical or hormonal. This means that an artificial intelligence with a mechanical brain must either be designed with some kind of analogue or there may be some serious differences in the way such beings actually think (although they might learn to modify their behavior so that this difference would rarely be noticeable to others).

For the purposes of gaming, we may assume that it is possible to create such analogues. On the other hand, the lack of organic physicality, of biochemical interactions in the brain as well as purely electrical ones, might have a profound affect on personality. This offers some intriguing options for roleplaying. Gaming systems like **GURPS**, which allow for a wide range of mental and social advantages, disadvantages, and quirks, offer a wide range of possibilities for those playing robotic characters.

Another issue is sensory input. Mechanical brains may have access to other senses, such as magnetic fields, ultraviolet radiation, and so on. We may assume that such cybernetic brains can handle these differences in sensory input without difficulties. However, such differences might create certain personality traits. For example, if you cannot hear, but you can see magnetic fields, Mozart becomes irrelevant, but Jupiter may be so beautiful as to be heartbreaking. In addition, a human brain placed in a cybernetic body with different senses might need a bit of time (and perhaps therapy) to get used to it.

Finally, organic brains are actually altered by what they experience; new experiences create new neural pathways within the brain. Eventually, a human brain will physically become as individual as its memories. A mechanical brain is more static; computers do not build new circuits as a result of new experiences. It is unclear whether this would affect such things as consciousness or the survival of the mind if the AI was erased and had to be re-installed. For the purposes of gaming, however, one may assume that this is either not a significant factor or that in the future it will be possible to design mechanical brains that mimic the pathway-building activities common to organic ones.

AI Gaming Principle Number Three

The differences between organic and mechanical brains and bodies offer a variety of opportunities for roleplaying and plot devices.

We now move to one of the most problematic aspects of using intelligent machines as characters. A machine cannot actually die, can it? It can be repaired, or its mind can be moved to a new body. Or can it?

Remember that the intelligent robot consists of three components: the body, the brain, and the software. The brain and the software are where the machine's mind actually comes from. Thus, if we are talking about moving the computer and its software from one "shell" to another, there should not be any problems. In gaming terms, it can be covered under one of the various "Multiple Forms" advantages in *GURPS* and similar advantages in other systems.

What happens if the second body is very different than the first one? How much influence does the nature of the body have on the artificial consciousness? A GM does not need to go too far into the specifics here, but there are some interesting possibilities here for roleplaying. Imagine what a combat robot would feel like if its brain had to be moved into an agricultural robot . . . or a mechanical donkey stolen from a theme park.

Now we can move to the real crux of the problem. What happens if the software is erased or the brain is damaged or destroyed? What happens to the character?

We can go through the most likely possibilities. First, if an AI is damaged and restored, it would remain the same consciousness and the same character. The same would be true if the computer was damaged but not destroyed. This is analogous to a person who has suffered brain damage or been in a coma. On the other hand, if the AI has been totally erased and restored from a backed up copy, there is a question about whether it is really the same "person" or not. If the brain has been reduced to a totally clean slate, with no memories at all, are we effectively starting with a totally new mind? (One method for handling this issue in a game setting is detailed below.)

Defragmentation and similar computer operations are not going to be a problem here. Such self-organizing activities within a conscious artificial intelligence where individual pieces of data are sorted out, deleted if deemed unnecessary, etc. are probably no more than a robotic version of what an organic brain does while sleeping and dreaming.

If an entirely new AI is installed on the old body, and the first AI has been erased, the first AI is probably dead. The combination of the old body and the new AI will be an entirely new character. Of course, this may remain a secret for quite a while; in fact, as long as the new AI acts like the old AI, no one may notice for a very long time. On the other hand, when the formerly loyal robot valet suddenly pulls out a machine pistol and starts firing at everyone in the room, people may figure that something has gone awry.

What happens if the second AI is erased and the first one restored? Again, it is difficult to say, although it would seem that the first character would still be "dead" and has not been restored but simply replaced with another character that happens to share the first one's memories and skills.

In the same way, if the computer itself is destroyed, we are probably talking about the death of the character. If the conscious mind is an interaction between a specific brain and its software, then simply copying the software to a new computer creates a new individual. If the first brain has been destroyed, the first consciousness has died.

We can now examine some variations on this theme. What happens if you download the software from one machine to another? Relying on the principles we discussed earlier, a new character, a new consciousness, would have been created. It would be as if one had oneself cloned and then educated the clone in exactly the same way as the original person had been educated. The clone might think and act very much like the original, and might even think it was the original, but the original and the clone would not share the same consciousness any more than two twins do. The same would be true for a copy of an AI. It might be very much like the old one, but it is not one mind sharing two bodies; it is a separate, second mind. If one erased the old copy, "cut and paste" instead of "copy and paste," it would probably mean the "death" of the first AI. After all, if we continue the analogy of the clone, if the original died, the clone would

live on, but the original's soul would not pass into the clone. In the same way, any copy of an AI operating in its own shell would be a separate consciousness.

The point is that memory and experience can be recorded and copied, but not actual consciousness. The living mind depends on a dynamic interaction of brain, memory, and experience. Unless we are speaking of a soul that can exist separately of the body, the mind cannot leave the brain on which it currently exists because that brain is part of what generates the mind from moment to moment. The brain can be modified or moved, but it cannot be abandoned.

(This leads to further questions; for example, what does a *Star Trek* transporter actually *do*? The user couldn't be certain that the person who showed up on the other end of the beam would actually be him. He may be a perfect copy, perhaps, but the original might be very dead . . . disintegration tends to do that.)

AI Gaming Principle Number Four

When the actual physical brain of a robot character is destroyed, or the software is totally erased, the character has usually died. It's time to build or roll up another one.

Or is it?

There is at least one solution to this problem. Imagine an AI that exists on one computer. Now imagine that computer linked to another one so that the AI exists on both computers as a single entity distributed on the two machines. The two machines now operate as one network, one brain, although each computer is powerful enough to house the AI on its own. While the AI is conscious, move its memories from the first machine to the other one. At the point when the memories have all been moved and the first machine is only being used for its processing power, turn it off. The AI would now be transferred to the second machine. The reason this works is that the consciousness of the AI has not been interrupted during the process of having its brain modified (that is, expanded and then reduced) and it has never existed as two separate entities on two separate machines.

What about web-based life forms, based either on one machine or copying itself to new bodies when and as it chooses? The same principles we have discussed already can be used here quite well. First, one must remember that even though the web does not seem like it has a physical base, it does; the web is simply a very large network made up of computers and other devices (like Pepsi machines) and the wires or electronic signals that connect them to each other. All web-based life would need one or more host machines to exist.

In the special case of an intelligence that exists on several machines simultaneously, we can again treat these machines as a single network. If such an intelligence moves its software to a new machine on the same network, or if one of its component machines is damaged or destroyed, it might be difficult to determine exactly where one mind ends and another begins (this issue is explored to some extent by Robert Heinlein in his novel *The Moon is a Harsh Mistress*), but sending a copy to an entirely new and separate network would constitute the creation of a new individual.

Now for some applications of these principles. When it comes to artificial intelligence, gaming enjoys a genuine advantage over both philosophy and reality. First, we really do not understand the nature of consciousness, of the mind, or of the soul . . . so, again, everything in this article is speculative. Second, gaming is supposed to be fun. Therefore, one can allow a few fudges from reality.

For example, if the GM allows for it, there is nothing wrong with replacing one combat robot whose brain and/or software has been destroyed with an identical copy, another robot that uses a copy of the first one's software packages and memories, which would be backed up on a regular basis. This would be a version of the **GURPS** "Extra Life" advantage. One could buy as many copies of a robotic character as one wanted. Technically, we may be talking about more than one conscious entity here, but there really would be no external difference between these robots. Unless people had seen the first one destroyed, they would not know it was not the original. In fact, even the AI would not be able to tell the difference; unless someone told it the truth, it would probably think it was the original (although the gap in its memory starting from the last point when the original had backed up its memory might make it a little suspicious). Even if it did find out it was a copy, it would still feel like the original. (Such moments of discovery and

such conflicts of identity are prime material for roleplaying.)

The same would true for any downloaded copy of the AI. It would be a separate conscious entity, but if a player wanted to continue using the AI as a character, he could use the "Extra Life" advantage to play a copy of the original downloaded to a new robotic shell if the first one was destroyed.

AI Gaming Principle Number Five

It is important to distinguish between philosophical concepts of consciousness and the applications of those concepts in a game.

One last question. What if robots have souls? We have been discussing artificial intelligence using the assumption that consciousness is purely mechanical or biological and not spiritual. Now, if souls exist, whether they exist outside the physical universe and attach themselves to a body when an appropriate one comes along, or if they are created by a certain complexity of brain but can then somehow live on after the brain dies, much of what has been said here about when the character "dies" goes out the window. In gaming terms, it seems fair to assume that one can treat the soul of an artificial intelligence exactly as one would treat the soul of a human being . . . which allows for an entirely new realm of campaigns. While the idea of running or playing in a game of *Transhuman Spirits* or *Transhuman In Nomine* might seem a bit mind boggling to some, it offers some truly original opportunities for roleplaying.

Use of Weapons

Arming characters for a *GURPS Space* campaign

by Stephen Dedman

GURPS Space, *Ultra-Tech*, and *Ultra-Tech 2* contain a bewildering array of personal ranged weapons, ranging in legality and lethality from sonic stingers and holdout dazzle lasers to mortars and missile launchers. Because of this, choosing guns and combat skills for your player character may take much of a play session, and arming a pack of NPCs may take even longer. After all, you want to choose the right tool for the job, don't you?

The easiest shortcut is to look at a character's background, and the environment in which he's used to fighting. Different military services will prefer different weapons, as will police, spies, and criminals. Voluntary colonists worried about the local wildlife are likely to carry heavier weapons than bounty hunters hunting for lowlives. Other factors include price, weight, range, and sometimes concealability.

The following list is designed for a TL10 campaign, and is intended to make this choice easier. Note that a character may be trained with a particular weapon but unable to obtain one on a particular planet, and have to rely on default skills.

X-ray lasers (p. S81)

Military X-ray laser rifles and carbines, Military X-ray dinosaur lasers, and X-ray heavy laser pistols are the preferred options for the Navy, Space Marines, and libertarian Belters, who do most of their fighting in vacuum or trace atmospheres and in microgravity or free-fall. Their beams penetrate armored spacesuits with ease, they have no recoil, and their range in vacuum is awe-inspiring. While they may be too expensive and delicate for infantry, sensible armies don't scrimp when equipping their highly-trained special forces, and even in a realistic campaign that uses advanced batteries, the extra weight isn't a problem in zero-g. X-ray lasers are only useful at point-blank range in a denser atmosphere, but even this can be an advantage inside pressurized spaceships, where a stray shot can damage delicate systems. Nonetheless, Space Marines, Fighter Jocks, and Belters will probably also carry heavy laser pistols with variable beams (p. S81) as sidearms and as tools.

Lasers (pp. S80-81)

Military laser rifles and carbines, and military dinosaur lasers, are popular with troops who can expect to fight in a wide range of environments, from airless moonlets to the swamps of high-gravity greenhouse worlds. A laser pistol or heavy laser pistol with variable beam (p. S81) and perhaps blue-green frequency (p. UT37) and/or a selector switch for full-auto fire (p. UT22) would be an ideal sidearm, especially for those who may have to live off the land in unfamiliar territory -- Scouts, Colonists, Rangers and SEALs, Scientists, etc. These people would probably keep a dinosaur laser in their ship's locker as well, just in case.

Because lasers are particularly effective against most concealable body armor (except for bioplas bodysuits), they are also popular with Assassins and Terrorist/Rebels who specialize in "soft targets."

Laser weapons will be less common in campaigns where rechargeable power cells are unavailable; the weapons become heavier and the cost per shot very high. Holdout Dazzle lasers (p. S81), however, are likely even more popular in realistic campaigns where power cells are unavailable, as they get 5 shots from an advanced battery. (They are also less than 1/3 the cost of a sonic stinger, which will make them popular with those who can't afford anything better, such as startown Riffraff.)

Stunners (p. S82)

Inexpensive, small, non-lethal, and about as legal as a personal computer, stunners are almost ubiquitous as air. The hand stunner is a common home defense weapon, and also a standard fixture in starship lockers, especially as it won't damage the surroundings. Hand stunners will also be popular police weapons, especially in societies when civilians are rarely heavily armed or armored (though many cops will also have access to more lethal weapons). In more repressive societies, cops may prefer Screammers (p. UT53) with a stun setting.

The sonic stinger (p. UT53) -- a more concealable, less powerful stunner -- may be a popular form of "feminine protection," the TL9+ equivalent of pepper spray or mace. Some societies may even insist that women carry them; they will also be carried by many undercover cops as a backup weapon. Many stun weapons will have nauseator settings (p. UTT59) for extra deterrence.

Blasters (pp. S81-82)

Blasters can be designed for use in vacuum *or* in atmospheres, but not both; for this reason, most starfarers prefer laser weapons. However, Bounty Hunters, Escorts, Intelligence Agents, cops, bodyguards, and others who like sidearms with a choice of lethal and non-lethal settings often carry blasters with Electrolaser or Neural Blaster settings.

Electrolasers (p. S80)

Popular on desert worlds, particularly with law enforcement professionals and for home defense, but rarely encountered anywhere else.

Chemical-Propellant Guns (p. S78)

Though many spacefarers dislike the problems caused by recoil in varying gravities (see p. S98), the invention of liquid propellant smartguns at TL8 (p. UTT48) and 10mm shaped-charge rounds at TL9 (p. UTT51) has kept chemical slugthrowers popular with ground forces well into TL10. Many mercenaries, planetary militia, and police SWAT teams still prefer them to lasers or blasters: they will be even more common in campaigns where rechargeable power cells are unavailable.

Common chemical-propellant weapons in a TL10 campaign include:

- **Civ Shotgun, 12g:** Inexpensive, versatile (thanks to a wide range of ammunition; see pp. UTT52-53), and almost ubiquitous. Very popular with Colonists, and often found in ship's lockers and police armories (p. UTT52).
- **Heavy Pistol, 10mmP:** A standard sidearm for military ground forces, usually loaded with regular ammunition with a clip of shape-charge rounds kept in reserve for use against armored opponents (or vehicles). Smartguns are favored by Military Intelligence and Special Ops, but the cheaper caseless pistols (p. S78) are more common.
- **Storm Carbine, 10mmR:** Usually loaded with shaped-charge ammo (for armored opponents) or duplex cartridges (p. UTT51), the storm carbine (p. UTT50) is standard issue for ground troops on many worlds.
- **Submachine Gun, 10mmP:** Popular with special ops troops and Terrorist/Rebels (who usually choose smartguns, if available, and carry a few clips of shape charge rounds). The cheaper caseless variant (p. S78) is standard issue for security guards.
- **Urban Assault Weapon:** A combined 12g shotgun and 10mm SMG, also popular with special ops troops because of the variety of available ammunition (pp. UTT52-53).

Electromagnetic Guns (p. S78)

Though expensive, Gauss pistols (p. S78) are popular sidearms for people more concerned with a high rate of fire than legality class, but who don't need shaped-charge rounds: Terrorist/Rebels, Pirates, and some Escorts and Special Forces. Gauss needlers (p. UT19) are cheaper, very effective against most concealable armor, and also favored by terrorists.

Grenade Launchers (p. S78)

Grenades and grenade launchers are rarely available to civilians, but standard equipment for most military and police units; a mini grenade launcher (p. UT28) can be fitted under any ranged weapon weighing 4 lb or more, and often will.

Tanglers (p. S79)

Bulkier and more expensive than stunners, tanglers are favored by people who want non-lethal weapons that are also effective against armored opponents, or creatures who may be invulnerable to stunners and paralysis guns. Scientists who want to catch animals alive use them, as do Colonists, and they are standard equipment in survey service ships. Military and police units are more likely to use Tangler grenades (p. UTT66) in grenade launchers.

Needlers (p. UT22)

Cheap, almost undetectable, and very effective against soft targets, needlers are popular with Assassins, Intelligence Agents, and Terrorists, but are also used by those unable to afford anything better (Riffraff, Rogues). In campaigns where Power Cells are unavailable, Needlers will be very popular holdout weapons. Minineedlers (p. UTT57) with drugged needles are favored by those who want to be even more discreetly armed, such as Diplomats.

Ice Guns (p. UT72)

A low-powered sidearm, the ice gun is a useful survival weapon found in most starship lockers. It is much favored by Scouts and Colonists, but also by Assassins and Terrorists (who usually mix some venom into the ice). Ice Guns will also be popular in societies where weapons are strictly controlled (CR 5+); it's hard to restrict access to ammunition to someone who can get 1500 shots from a B cell and 6.5 gallons of water (150 from an advanced battery).

Gyrocs (p. UT20)

Another weapon saved from obsolescence by new technology -- in this case, the Viper round (pp. UT73-74). Assassins and Terrorists favor Rocket Carbines (p. UT20) for sniping, and Holdout Gyrocs (p. UTT55) when they want concealability, range, killing power, and quick martyrdom. Both weapons are also popular with police forces: Rocket Carbines for the SWAT team, Holdout Gyrocs for undercover use, especially bodyguard duty. Assassins and Terrorists use APEX and HEX (p. UT20) and Salvo (p. UTT155) rounds; cops prefer less lethal CHEM, SLAP and Stingray rounds (p. UT20).

Character Type	Likely Weapon Skills
<i>Assassin</i>	Beam Weapons (Laser); Guns (Gyroc, Needler, Rifle, Pistol)
<i>Bounty Hunter</i>	Beam Weapons (Neural or Sonic), (Blaster)
<i>Colonist</i>	Beam Weapons (Laser); Guns (Needler, Shotgun, Tangler)
<i>Diplomat</i>	Beam Weapons (Laser, Sonic); Guns (Needler)
<i>Escort</i>	Beam Weapons (Neural or Sonic), (Blaster); Guns (Gyroc, Needler)
<i>Intelligence Agent</i>	Beam Weapons (Laser, Sonic); Guns (Needler)
<i>Navy/Marines</i>	Beam Weapons (Laser); Guns (Grenade Launcher)
<i>Patrolman</i>	Beam Weapons (Neural or Sonic), (Blaster); Guns (Grenade Launcher)
<i>Pirate/Smuggler</i>	Beam Weapons (Laser); Guns (Needler, Shotgun)
<i>Planetary police</i>	Beam Weapons (Neural or Sonic), (Blaster); Guns (Gyroc or Grenade Launcher)
<i>Prospector/Belter</i>	Beam Weapons (Laser)
<i>Riffraff</i>	Beam Weapons (Laser, Sonic); Guns (Needler)
<i>Rogue</i>	Beam Weapons (Blaster or Laser); Guns (Needler, Shotgun)
<i>Scientist</i>	Beam Weapons (Neural or Sonic); Guns (Tangler)
<i>Scout</i>	Beam Weapons (Laser); Guns (Needler, Tangler)
<i>Security Guard</i>	Beam Weapons (Sonic); Guns (Light Automatic or Pistol)

<i>Starship Crew</i>	Beam Weapons (Laser, Sonic)
<i>Terrorist/Rebel</i>	Beam Weapons (Laser); Guns (Grenade Launcher, Gyroc, Light Automatic, Needler, Pistol, Shotgun)
<i>Tourist/Civilian</i>	Beam Weapons (Sonic)
<i>Trooper (Ground forces)</i>	Beam Weapons (Blaster or Laser); Guns (Grenade Launcher, Light Automatic, Pistol)

Most Common Weapons

Desert world, CR 0-2:	Electrolaser pistol or rifle
Home defense, CR 0-2:	Hand Stunner, Ice Gun or Civ Shotgun
Home defense, CR 3-6:	Hand Stunner or Ice Gun
Hunting weapon, CR 0-4:	Civ Shotgun or Laser rifle
Police sidearm, CR 1:	Blaster pistol with Neural and Tight-Beam settings
Police sidearm, CR 2-4:	Hand stunner with Nauseator setting
Police sidearm, CR 5-6:	Blaster with Neural and Tight-Beam settings
Security guard, CR 0-2:	Submachine gun
Security guard, CR 3-5:	Stun rifle with Nauseator setting
Startown sidearm, CR 0:	Heavy laser pistol
Startown sidearm, CR 1:	Laser pistol
Startown sidearm, CR 2:	Ice Gun
Startown sidearm: CR 3-4:	Stunner or Holdout laser
Startown sidearm, CR 5+:	Sonic Stinger

Burning Rubber

Incendiary Tactics in *Car Wars*

by Roland M. Boshnack

One of the most exciting changes in the newest edition of *Car Wars* are the new Fire and Explosion rules. The old system of Fire Modifiers and Burn Durations is gone, replaced by a much simpler process. As a quick recap, after an incendiary weapon hits a target or a flammable internal component has been hit, the attacking player rolls 3d and tries to get under the amount of damage done. If he succeeds, a Fire Marker is placed right on the vehicle's counter. Thereafter, at the end of each turn, the burning vehicle rolls to see if the fire is put out. If this roll fails, the vehicle takes damage. If the fire spreads into the interior and damages any explosive items inside, then there is a good chance that the vehicle will explode, instantly destroying it.

This article focuses in turn on each side of the Fire equation. First we'll look at how to get your opponent roasting like a weenie, then we'll give you some tips on putting the fire out.

Burn, Baby, Burn!

Incendiary attacks are fairly far and few between. The most common are the humble Machine Gun with Incendiary ammunition and the Flamethrower; harder to find are Lasers. Let's look at each of these in turn.

Machine Gun with Incendiary Ammunition

Your basic Machine Gun is the single most common weapon in *Car Wars* -- always was, always will be. When loaded with Incendiary Ammo, this weapon becomes somewhat more fearsome. Incendiary Ammo isn't cheap -- it's about 50% more expensive than normal solid rounds -- but it turns the MG's attacks into Incendiary. Even better, the weapon itself does not become Flammable nor Explosive, so you don't need to worry about enemy attacks causing it to explode.

The downside, of course, is that the weapon still only does 1d of damage, meaning that on an average damage roll (resulting in 3-4 points of damage) you have less than a 2% chance to start a fire. Linking, however, increases these chances incredibly. Two Incendiary MGs do, on average, 7 points of damage, giving an over 15% chance of starting a fire. Three linked MGs (average total damage 10-11) will place a fire marker over 50% of the time, and can do this up to 20 times a combat with normal ammo loadouts. Of course, if you can hit the opponent's engine, gas tank, or flamethrower with an Incendiary MG the amount of damage becomes moot -- he's on fire no matter what.

Flamethrower

Not only are Flamethrowers incendiary attacks, but they roll to start fires at double the amount of damage done. This means that even a single FT (average damage 3.5, doubled to 7) has a 16% chance of starting a fire. Linked FTs are even nastier. Two FTs (average damage 7, doubled to 14) will light the target up over 90% of the time! However, note that linking three or more FTs is overkill in regards to fires, as there is a fixed maximum of 15 or less on the roll (which is still 95.4%). As usual, if you can get a flamer attack past the opponent's armor and hit a flammable component, he's burning regardless.

On the other hand, Flamethrowers have some horrible drawbacks. The first is range. They are the only weapon so far detailed for *Car Wars Fifth Edition* with a maximum range (24 inches) which can really hurt on large maps. Plus, FTs are not only flammable, they're explosive. So, if an enemy lights you up, each FT has a 1-in-6 chance of exploding and destroying your car each turn that it takes damage from fire. This is a very bad thing, and can turn almost certain

victory into flaming defeat instantly. Finally, FTs only carry 10 shots each; however, this is not as bad as it sounds. They have an excellent to-hit chance, and combined with the short ranges that they are used at this means that most shots fired from them will hit.

Laser

The Laser is the king of weapons. It is very accurate, has unlimited ammunition, and inflicts incendiary damage without being flammable or explosive itself. Medium Lasers can be thought of as linked Incendiary MGs as far as fire goes, as they have the same chances of placing a fire marker.

There is a cost, however. Literally. Lasers are extremely expensive (Medium Lasers cost more than an entire Division 5 car!) and are fairly fragile (only 2 DP for Medium versus 6 DP total for twin-linked Machine Guns).

So now you know what weapons will start fires. How do you use this to your advantage? First off, always link incendiary weapons together. Linked Flamethrowers or Medium Lasers are almost guaranteed to place a fire marker if they hit, and even Incendiary ammo-equipped Machine Guns have a decent chance. Note that it isn't enough to hit the target with multiple incendiary attacks (though this is still a good idea); only linked weapons add their damage together when rolling to start a fire.

Of course, if you can't hit the other guy you can't burn him. Targeting Computers, good Gunners, and short ranges all help in this aspect. More importantly, resist the urge to go for tire shots when trying to start fires. You want to penetrate his armor, and wheels do not take fire damage if the target is moving. If the target is stationary, though, let him have it. A few good hits and he'll be one crispy critter.

There is also a chance that a vehicle will catch fire if it spends an entire turn touching a burning wreck or building. You can't count on this, but if you get the chance to ram an opponent into such an item then go for it. Every little bit counts!

Fire In The Hole!

So much for starting fires. What do you do when you discover that your opponent is a pyromaniac? Well, there are several tactics you can use.

First off, speed rules. This goes for everything in the new edition of ***Car Wars*** (except maybe avoiding rolls on the Crash Table), but it is particularly important once you've been lit up. At 100 mph you have a -3 to the Extinguishing Fires table, which means that on average you'll remove at least one fire marker (and you have a 50% chance of putting all fires out automatically), and the fire will never spread. Not all cars are capable of such high speeds and it can take several turns to get up there in any case, but make sure you're going at least 60 mph (which give a -1 and removes the chance of the fire spreading).

If you can't out-run the flames, maneuver around a lot. Every D3 or harder maneuver taken during a turn -- even those completed before a fire marker is placed -- gives a -1 to the Extinguishing Fires roll. Frankly, this being ***Car Wars***, you should be jinking all over the place to begin with. However, if your opponent does start you burning, a couple of hard drifts (D3 each) will give a -2 to the Fire table. This means that at least you don't have to worry about the flames spreading, and you have a good (about 50%) chance of removing at least one fire marker. At up to 40 mph a Handling Status of -5 is either completely safe or avoids a crash on a 5 or less (83% chance), so make those turns and drifts. But be warned -- it appears that only successful maneuvers can put out fires, so try to avoid rolling on the Crash Table at all costs.

If you are lit on fire, dump any explosive ammo you have immediately before it can eat through your armor and blow your car up. Don't waste it, of course, but try for those shots that you've been husbanding the rounds for. Even if you only get one or two good hits before the fire gets inside, it's still better than losing the game because the ammo exploded.

It is possible to design a fireproof vehicle. Fireproof Armor, a built-in Fire Extinguisher, and an extra crewman with a hand-held Fire Extinguisher give a -6 to the Extinguishing Fires table, automatically putting out any fires before they can do damage. This is overkill, however; instead, go with either a built-in Fire Extinguisher or Fireproof Armor and an extra guy on the pumps. This gives a net -3 to the Extinguishing Fires table, which should be enough to put out most of the flames, especially when combined with high speeds and a few good maneuvers. You're better off spending that money (and using the internal space) for items which will win you matches instead -- such as Flamethrowers . . .

House Rules

Here are some unofficial variants to deal with unexpected situations.

Cook-Off Rule

Consider damage done by the Oven Rule (if a vehicle already has three fire markers, a roll of 6 on the Fire Table does 1 point of damage to each internal component) to be Fire damage. Therefore, Fireproof Suits protect crew and passengers, and explosive items have a chance to blow up. This is realistic; during the Soviet invasion of Finland at the start of World War II the Finns used the famous Molotov Cocktails (aka Russian Martinis) to destroy Soviet tanks in just this fashion.

Fire vs. Incendiary Damage

This isn't really a house rule, but it's useful to spell out anyway. Incendiary is a type of attack that has a chance to start a fire. It will not explode items on its own, and Fire-Resistant and Fireproof items have no particular resistance against it. Fire is a type of damage caused by Incendiary attacks (among other things), and can cause explosive items to detonate. It can be nullified by Fireproof Suits, and Fire-Resistant and Fireproof armor help protect against it.

Fire and Rolled Vehicles

If a car has rolled onto its side or top, whichever side is facing down takes no damage from the fire (it is treated like the Underside on an upright vehicle). The Underside does take damage, however. Since the vehicle is stationary (by definition) the tires burn as well . . . This would be a good time for the crew to bail out and take their chances on foot.

Fire and Spinning Vehicles

When a car is spinning, each time it ends up with a spin of 45° or more counts as a D3 maneuver for the purposes of putting fires out. This is realistic, as such extreme and rapid movement would have a good chance of extinguishing the flames.

Pyramid Review

Nautilus

Published By [Mayfair Games, Inc.](#)

Designed by Brigitte and Wolfgang Ditt

Art and Graphics by Franz Vohwinkel

Developed and Edited by TM-Spiele

Full-color boxed set; \$49

Mayfair has a number of hits under its belt, but for those who tire of another iteration of railroad games or exploring Cataan, their latest release heads for the second-to-last frontier. *Nautilus* is a colorful and fanciful board game of undersea exploration.

The object of the game (designed for two to four players) is to score the most points through research done in the Underwater City and discoveries made on the ocean floor. Players start with a selection of researchers, submarines, and an allowance of Nemo, the game's currency. They will use researchers to delve into technology, subs to explore the ocean, and Nemo to pay for it all. The board depicts a section of the seabed, with the shallower Lagoon in the middle extending deeper into the Slope, the Deep Sea, and the Abyss. Scattered throughout this area are facedown discovery tiles, containing sea life, lost treasures, ocean currents, and even the ruins of the city of Atlantis.

The Underwater City is a submerged habitat for scientists that players will build throughout the game. It starts in the Lagoon as a single octagonal Base Station, but players will buy and attach research and habitation modules as they progress. Placing a habitat module allows you to bring your researchers to the base. Attaching a research module gives them a place to work; they labor to improve your technology so your subs move faster, your sonar sees further, and your scientists work better, among other effects.

The researchers that come into the game have to stop on and "activate" research modules to get a benefit -- these workers remain in place the rest of the game, so with only 15 of them you must be careful how you place them. A track shows how many labs of a particular kind you now man; the more of that type you occupy, the better you'll be with the corresponding technology. If you control more of one type of module than the other players at the end of the game, it will be worth extra victory points. Researchers may be stationed in any module (for a small fee), so if you pay to establish a new module, another player may still drop his researchers there as well and compete for "most modules of one type."

If you have multiple researchers, those not manning a research module can move about the City, or they may access an airlock to the sea and be traded in for a submarine. Once out in the water, subs can use sonar to scan nearby discovery tiles to see if they're worth anything . . . or they may just pilot over and uncover them manually. Treasure chests give extra funds to a player to spend, ocean currents add movement to a sub, artifacts may give insight into the other discovery tiles lying about, and lucky explorers may find pieces of Atlantis, adding to their academic cachet. Each

Pyramid Review: Nautilus

Components

106 cardboard counters (discovery, Atlantis, victory point, and first player); 41 cardboard modules; 60 plastic researcher figures; 12 plastic sub figures; 80 plastic module markers; mounted mapboard and mounted ruins of Atlantis board; 4 special orders cards; 80 Nemo bills (play money); 4 player mats

player also receives a Special Orders card, a tile that tells them what sorts of treasure their team is seeking. If you can collect items on this card, those pieces may be worth more to your team.

If players choose not to continue building the city or paying for additional discoveries, or if Atlantis is uncovered, the game ends. Players add up the value of their research modules, multiply this by the value of the discoveries they made during play, and add any unspent Nemo they have left over. The high score is the winner.

Game play isn't speedy, but it is simple and elegant. The rules are easy to learn, and participants will be able to play without referencing the rules much after a few turns. There are distinct strategies that can put pressure on your opponents. There's a lot to be done in a turn, or at least a lot to balance out to get the highest score, so it engages your interest and maintains it until the end; there are no anticlimactic endgames here.

As one might expect from a game imported and translated from overseas, the price tag is hefty and worth every penny, at least from a quality standpoint. The pieces are beautiful, the artwork is top-notch, and the graphic design is wonderful. Everything has that steampunk sheen, from the Captain Nemo box cover to the stylized turtle/fish submarine figurines. The board is a sturdy, mounted affair, and the modules and counters are thick and easy to use.

If the game has a failing, it's clarity. The rules are complete and most of them read well, but there are sections -- notably those having to do with victory points and Special Orders -- that you have to piece together from the imprecise text. The rulebook is as big as the box, has plenty of space, and comes in full color, so making the players hunt for the proper interpretations is a nasty thematic irony.

Nautilus isn't the active beehive of give-and-take that you find in, say, a *Settlers of Catan*, but the game does inspire the same competitive spirit, and in a way that doesn't put friends at each other's throats. A pleasant blend of period style, resource management, and last-minute upsets, *Nautilus* is another pleasing effort that will find favor both with the family and one's board-gaming buddies.

Spaceship Zero -- The Sci-Fi Serial Roleplaying Game

Published by [Green Ronin Publishing](#)

Written by Toren "MacBin" Atkinson and Warren Banks, with contributions from John Tynes and Monte Cook

Cover by Chris Woods

Illustrated by Toren "MacBin" Atkinson, Andrew Baker, Warren Banks, Paul Carrick, Chris Keefe, Sean Reynolds, Jeff Ward, and others

192-page perfect bound softback; \$24.95

The chances are that you will have never listened the classic 50s Sci-Fi radio serial, *Spaceship Zero*.^{*} You may have heard the of the television series made in Germany in the 1970s and possibly seen the previews of *Spaceship Zero: The Motion Picture* on the convention circuit. Unfortunately, neither the movie has been filmed nor the series been shown on the SciFi Channel, but thanks to the efforts of members of the Cthulhu Mythos inspired band, The Darkest of the Hillside Thickets, *Spaceship Zero* can be now enjoyed by an English speaking audience. Having already produced a CD called *Spaceship Zero*, both for *and* to promote the forthcoming film, Toren "Macbin" Atkinson and Warren Banks have written ***Spaceship Zero -- The Sci-Fi Serial Roleplaying Game***, a full-blown game of 21st century space opera based upon the fifties radio series leavened with ideas from the seventies television series. You too, can create the exciting action of the adventures of Space Captain Glenn Stackhouse, Gearbox the Mechanic, Space Lieutenant Richard "Dick" Ross -- pilot, and Professor Cornelius Flyback Ashton, as they test the "Better-Than-Light" drive and discover a whole new universe, almost, but not quite like their own -- the very one that they just destroyed when they activated the BTL Drive!

^{*} Before you really get excited, you need to know that ***Spaceship Zero*** is the fabrication of the authors. Sorry to spoil it all for you.

More specifically, the setting for the ***Spaceship Zero -- The Sci-Fi Serial Roleplaying Game*** is the early 21st century - the year 2025 of Universe Two. By that time in our own universe, the Arkham, Massachusetts based-Spacecorp is the world leader in scientific endeavor and the drive to explore the Solar System. In Universe Two this was brought to an abrupt halt with the Hydronaut invasion of 1967. (Hydronauts, you ask? Put a Deep One in a space suit and you have the right idea). Unable to withstand the invasion, for the last 50 years the Earth of Universe Two has been under the webbed foot of this Batrachian horror that has been heating the planet's climate and mining it bare of resources. This is what the crew of the *Spaceship Zero* find . . . after they activated the BTL Drive, destroyed their universe, initiated the Big Bang for the next one, plotted a course for where they think the new Earth of 2025 will be, and then entered the Deconstitutor for some 13 billion years to reach that year. Deconstitutor? It is a device that dehydrates organic matter, such as foodstuffs and men into their "essential saltes" for easy, safe and long-term storage, and then hydrates them back again . . .

Done wholly in black and white, the ***Spaceship Zero -- The Sci-Fi Serial Roleplaying Game*** is laid out in a simple manner and written in an easy to read style. It benefits from several different art styles, which initially give it a

disparate look. Yet as you get into the book, the look grows on you and works in its favor. In particular, the art of Toren Atkinson really captures the feel and flavor of the setting -- not surprising given that ***Spaceship Zero*** is his pet project! Also good are the pieces by Allen Koszowski, most of which reflect the fact that they are twenty some years old. The artwork of Paul Carrick is up to his usual excellent standard.

Players begin character creation in ***Spaceship Zero*** by selecting one of the 15 archetypes to fill the crew roster aboard the ship. Four of these are not suited to the classic campaign that starts aboard the ship: the Hydronaut-human Hybrid, the Slave Girl, Gladiator, and Space Pirate. This leaves the Captain, Corporate Executive, Doctor, Mechanic, Pilot, Robot, Stowaway, and three Super-Intelligent animals: the cat, the dog, and the monkey. After spending 50 points on the four attributes (the alliterative Brawn, Balance, Brains and Bravado, each rated from one to 20), they assign skill points (each rated from one to 99) according to the chosen archetype. The aim is to create a character that can perform their chosen assignment aboard what is an experimental flight. That said, it is possible for more than one player to take the same archetype, but advice is given on how to handle this -- essentially, with two pilots, one becomes the senior and the other the co-pilot; with two scientists, one becomes chief science officer; and so on. Depending upon their Brains attribute, a character also receives more points to spend on their skills as they like.

A character has between two and four Zero Skills; some are set by archetype and the player chooses others. The fixed Zero Skill for the Captain is Persuade: Leadership; for the Doctor, Medicine; for the Hybrid Swimming *and* Language & Lore: Hydronaut Customs; for the Slave Girl, Persuade: Charm; and so on. Every time the dice are thrown for a skill check of a Zero Skill and one of the dice comes up as a "zero," the character receives a Zero die. These work much like hero or luck points in other games and can be used or "burnt" to Seize The Day (improve initiative rolls), Play the Percentages (adding another die to a percentage roll -- the player gets to choose the most favorable two of the three) or Be Amazing (to improve a skill check result, for example from a blunder to a mere failure, or from a success to a critical success). The game encourages players to burn their Zero Dice rather than to hoard them, as essentially there could be no tomorrow. A character begins with just one Zero Die at the start of the game.

Character creation is rounded off with perks, quirks, and a quote. Each archetype comes with at least one fixed perk or quirk -- the Doctor has "Back From The Brink," the ability to bring a character back from the brink of death with a Medicine check. The Gladiator can ignore the pain of aggravated damage with "Grit," but suffers penalties to the Technical: Know How or Pilot skills. Likewise, the Super-Intelligent Cat gets "Always Lands on Feet," "Night Vision," "No Thumbs," "Diminutive," "Catnaps" (sleeps 16 hours each day so will never be a great scientist, despite their brains), "Hates Water," "Weak" (poor at fisticuffs skill), "Claws and Fangs," and "Bolt" (literally able to scramble very quickly). No list of quirks is given, but there are plenty of examples to found throughout the sample characters included for each archetype. Finally, the players need to give their character a quote, which must be appropriate for the game. If nothing occurs immediately, something is likely to crop up during play. Of course, the players do not have to go through this creation process, but could just simply select a character from those that illustrate the 15 archetypes. These are all very playable, and Toren Atkinson's illustrations of these are all excellent; the one of the Super-Intelligent Cat, Schroedinger (aka "Pickles"), should raise a smile or two.

The mechanics of ***Spaceship Zero*** are percentile-based, with the minimal check requiring just a roll under or equal to the skill. The closer the roll is to the skill value, the better the result, with criticals being an exact roll of the skill value. Even if there are penalties to a skill check, it is still possible to get a critical success by rolling the skill value! Overall, the mechanics and resolution system can handle most eventualities, especially if the advanced rules are employed. Even with these, which are for the most part common sense to most gamers, ***Spaceship Zero's*** systems can be seen as a more detailed variant of the venerable BRP Mechanics used in the majority of Chaosium's RPGs. Consider them one more homage by the authors of ***Spaceship Zero*** to Cthulhu -- both game and fiction.

The combat system handles fights between men, super-intelligent cats/dogs/monkeys, robots, Hydronauts and Hybrids, aliens, vehicles and spaceships. With the average joe possessing just a Brawn score of 10, and Body Points of 150, most characters will find themselves unable to withstand more than a few hits from an atomiser pistol (which does 40 points of damage), the standard sidearm for all Spacecorp personnel. (Unfortunately, the weapons wielded by the Hydronauts are slightly deadlier . . .) Overall, the rules are simple but can cover most eventualities, and the rules for the use of Zero Dice really enforce the daring-do attitude of the pulp genre. It would be easy to imagine their being used to run similar type games, from *The Adventures of Buckaroo Banzai* to Gerry Anderson's *Thunderbirds*.

The ***Spaceship Zero -- The Sci-Fi Serial Roleplaying Game*** differentiates between three types of game time. The first is Action Time, which occurs whenever events need to be handled round by round, such as in combat or in times of duress. The second is Narrative Time, which takes place throughout the rest of a session as the players and Zero Meister (as the referee is known) interact and roleplay. Both Action and Narrative Time are the traditional types to be found in other RPGs. The third is Dramatic Time in which the players emulate the style of "improvisational radio theater," literally putting into play Greg Stafford's analogy to describe what roleplaying is -- as used in John Tynes' introduction to ***Space Ship Zero***. Dramatic Time strictly removes all spoken references to game mechanics, suggesting that index cards and gestures be used for this instead. Players can speak, but must describe what they want their characters to do rather than tell the Zero Meister what they are going to do. The purpose is to evoke the feeling of the genre and make the game feel less like a dungeon. Dramatic Time is not going to be for everyone, but there is no denying that it could be a lot of fun and has something of Hogshead Publishing's *New Style* line of games about it.

In terms of background, there is a lot for both player and the Zero Meister. The former will want to read the information about the *Spaceship Zero* and their equipment to be found in the Technical Manual section of the rulebook, whereas the Zero Meister will need to read this and more. This includes a complete guide to the solar system of Universe Two in 2025 -- none of which should be read by the players. At least not until later in the game when the Space Pirate, Hybrid, Slave Girl and Gladiator archetypes can be introduced. It covers the state of the Earth, the Asteroid Belt, Mars, Venus and Pluto, and while the latter two receive only slight coverage, the other given information should be more than enough to keep a campaign going for some time. A starting scenario or pilot for the Zero Meister's own serial will take the crew of *Spaceship Zero* into Universe Two. If short of ideas -- which the Zero Meister should not be after reading through the book -- an appendix gives a complete episode guide to the 1970's television series.

One problem with the ***Spaceship Zero -- The Sci-Fi Serial Roleplaying Game*** is that, with access to the BTL drive, the crew could just throw the switches and start again, hoping for an easier time of it in Universe Three, Four, or Twenty Three. If this happens, then everything in Universe Two will have gone to waste; this possibility is not really covered in any depth in the core book. Of course, it *does* provide the Zero Meister with what must be the cleanest slate possible -- a whole universe to create of their very own! If this does happen, a Zero Meister is on his own, but access to any game that deals with time travel or parallel earths (such as ***GURPS Alternate Earths 1 and 2***, ***GURPS Time Travel***, ***All Flesh Must Be Eaten***, and ***Terra Primate***) should furnish him with both plenty of ideas and a discussion of basic concepts. Yet to throw both switches on the BTL drive too early would be to deny all the potential and secrets that Universe Two promises. The book could also have been written with a little more clarity, as some facts are not always made clear in the right sections. Also, while ***Spaceship Zero*** evokes the feel of the 1950s sci-fi radio serial, it does not list any of them in the bibliography, nor does it actually discuss the genre. This would have helped give the uninitiated an explanation of the games' source, and thus a greater grasp of how a campaign of ***Spaceship Zero -- The Sci-Fi Serial Roleplaying Game*** should be structured and run. It would also help in the running of Dramatic Time, which, while only lasting a few minutes during a session or episode, really enhances the game's ambience.

Spaceship Zero -- The Sci-Fi Serial Roleplaying Game is a pulp sci-fi game via a long list of inspirations and sources. These include Dan Dare, *Lost In Space*, *Planet of the Apes*, *Forbidden Planet*, both Flash Gordon and Buck Rogers, *Red Dwarf*, and finally a nod to -- if not a swipe from -- H. P. Lovecraft and the Cthulhu Mythos. It has the potential to be huge, just ever so slightly cheesy, fun. Players get to game in what is a relatively unexplored genre and if everything goes wrong, they get to through a pair of switches and do it all over again. And again. And again. Until then, tune in this time next week to see if the intrepid crew of the *Spaceship Zero* can survive the horror of the Hydronauts and free the Earth of its Batrachian yoke in ***Spaceship Zero -- The Sci-Fi Serial Roleplaying Game!***

--Matthew Pook

Making (And Faking) Adventures (Part I)

By Hook Or By Crook

Okay; I'm letting you in behind the curtain. I'm pulling off the gloves. I'm revealing the Big Secrets.

I'm gonna tell you all how *I* come up with adventures.

Now, it'll probably take two or three weeks to go through it all. And, to be honest, it may not actually help anyone. After all, crafting adventures, like kissing, depends on the individual . . . and no one blueprint will work for everyone. (Although, as a tip, one should avoid excessive drool . . . whether this applies to adventures or kissing, I'll leave as a reader exercise.) But watching how someone else does - or doesn't - come up with something can often be helpful.

Step 1: Procrastinate

I cannot stress this enough. Coming up with an adventure for me is, at the core, terrifying. After all, a bunch of folks have placed a chunk of their limited free time in my hands, and if I screw up, they may regret the decision more than when we decided to go see *Thin Red Line* on opening night. So I'll mercilessly procrastinate, secure in the knowledge that, if I *am* hit by a bus, at least I didn't waste some of my last moments on earth making a useless adventure.

Generally speaking, I'll put off coming up with an adventure until the day we're going to play. Fortunately, my guilt will usually kick in at some point during the downtime, and I'll work on other stuff related to game (bookkeeping or the like).

Step 2: The Pivotal Scene, Visual, Or Hook

If I *haven't* been hit by a bus, I'll grudgingly start coming up with an adventure.

Now, unless I already have a plot thread going on, or some other obvious continuing thread, I'll generally come up with a "hook," or an otherwise memorable bit.

Coming up with this bit is crucial for me, as it's the core element I wrap the adventure around. Now, this isn't necessarily the climax (although it can be); it can be the hook leading into the adventure, a bit of perfect characterization, a revelation, or anything else, really. The key is that it needs to be *interesting*, and by extension *memorable*. At this stage I may not have any idea what the hook actually *means*, but that's less important than actually having that scene sharply in focus.

There are many reasons I do this. First off, these pivotal scenes help me to differentiate an adventure from previous ones I've run (since, at the core, there are only so many [story possibilities](#)). Yes, I've run a number of dungeon crawls . . . but I've only run one where the players learn at the bottom level that the oxygen in the dungeon is slowly being siphoned out. And I've only run one where the heroes get to the final chamber only to witness the person they were sent to defeat being slain by someone else . . . who then turns and asks the heroes for help. And so on.

There is no science for me in coming up with this hook. But there are a number of shortcuts I use when trying to come up with something.

1. Something is revealed, or is threatened to be revealed. In my opinion, *any* campaign needs secrets, be they personal, local, or global. Stirring up any of those secrets is always a good idea for an adventure. Of course, the secret need not be completely exposed; it can only be a part of the truth, or a complication. (For example, a recent issue of a *Superman* comic had Perry White talking to Clark Kent . . . asking him why, despite all the international assignments Clark had taken recently, there was no record of it in his passport.)

If the players don't have enough secrets, I'll often take steps to give them one. Having an NPC pull an adventurer aside and say, "You must never breathe a word of this to another soul . . ." will generate something memorable for that player (even if all he does is immediately run to the other PCs and spill his guts).

2. Something (or someone) behaves unexpectedly. One of the kingdom's feared Death Knights barges into the inn . . . and starts weeping. The mayor barges into a gala ball, seemingly intoxicated . . . and opens fire on the guests with a pistol before spiraling into the night. The stoic spirit mentor is acting fidgety and nervous. (Again, I stress that, at this point, I don't need to necessarily understand what the hook *means*; the important bit is to come up with a scene that will be interesting for the players.)
3. Someone is accused of something. "J'Accuse!" Nothing gets the players going as much as having an accusation flung at them, or having someone they like (or hate) being accused of something serious. This may be a true or false accusation. If it's a game that has certain core laws (like White Wolf's **Vampire** or **Werewolf**), then any of those are powerful and interesting hooks. Really, this can mean anything from anyone: accusations of murder, theft, failing to uphold a code of honor, or the like. (It can even be something *good*; having the hero on film thwarting an assassination attempt is definitely memorable . . . *especially* if the hero doesn't remember doing that!)
4. Things are not what they seem. Not merely the province of M. Night Shymalan, the moment where the adventure does an about-face, where a fundamental fact the party thought they knew is revealed to be false. The heroes realize the large valuable painting they've been carting around is actually a stamp . . . and they have shrunk! The heroes are attacked by Alice (of . . . *in Wonderland* fame). The heroes realize that they aren't in their own headquarters, but are instead in an exact duplicate.
5. That's just *weird* . . . Sometimes the only hook I need to hang an adventure on is an absurd visual description or bit of dialogue:
 - "You want to save your friends? *Eat this ice cream!*"
 - "This room contains a conveyor-belted trough leading to a power saw; on top of the belt is a hamster in a plastic ball, running furiously to keep ahead of the saw."
 - "The criminal has issued his conditions for letting the hostages go: 30 glazed donuts and a haiku."

In all, this hook doesn't need to be anything more than something the players will find *interesting*.

Now, the neat thing about hooks is that I can make them do whatever I want. In particular, if a player hasn't gotten enough "screen time" lately, I can make that hook focus on him.

For example, it may be possible to have any of these hooks tied to a player: A small child runs up to a PC and shouts out, "Daddy!" The post office delivers a letter to a PC . . . that was mailed decades ago. The vampire character - who has been dead for decades - hiccups.

They can be hooks that tie to the group:

The heroes ultimately learn they have *each* been assigned by their superiors to kill the rest of the group. The modern-day gritty realistic heroes receive a bit of crucial help . . . from a unicorn. The heroes acquire a CD after defeating the final foe. Upon listening to it, they hear, "If you are listening to this, I have already won . . ." (This is made creepier with an actual CD.)

These hooks don't even need to be fully realized; they can revolve around a vague concept I think it will be interesting for the players to explore:

The heroes come across the kidnapper they are seeking . . . but the only way they can save the day is to *not* attack him. A hero will be presented with a situation where it seems the best course of action he can take is to leave the group . . . but the exact opposite is true. A hero is presented with an option to acquire great additional power along with great additional responsibility, or to maintain their life. Either choice will have consequences.

Now, there are a couple of fundamental rules I establish when coming up with these hooks.

- The hook cannot rely on the heroes doing *anything* terribly proactive. In other words, I try never to come up with a hook that begins, "Once the heroes kill the bad guy . . ." or "After the heroes steal the sack of unmarked hundred dollar bills . . ." If I build an adventure around either of these concepts, the whole thing may fall apart if the party *doesn't* kill the bad guy or steal the sack. (Of course, it may be possible for these concepts to be modified; if the hook begins, "Once the heroes injure the bad guy . . ." or "After the heroes discover the sack . . .", these have a much greater ability to come true.)
- The hook can never do all three of the following: a) harm a character, b) without a chance to avoid, and c) without a chance to redeem. Yes, "You all go to bed. Oh, Ted? You were stabbed to death by snake-men at night." *would* be memorable . . . but the players probably wouldn't find it fun. (On the other hand, telling everyone "Ted? You were stabbed to death by snake-men at night" might be an interesting hook if that *isn't* what happened; pull Ted aside, explain the situation, and let Ted play some of the snake-men NPCs during the game . . . as he and you both wait for the moment where it is revealed that one of the snake-men is actually Ted.)

Okay; once I have a promising hook in mind, what do I *do* with it?

Well, I try to figure out what it means. Then I build the rest of the adventure around it. And, if need be, I prepare to throw the hook away. Confused? Tune in next week, gentle reader, as we continue to build our very own adventure . . . right in your basement!

--Steven Marsh

*Note: This character sheet is based on the Djinni template in **GURPS Spirits**, but because Saleesh is an exceptionally virtuous, or at least restrained, member of his species, with slightly unusual powers, it doesn't actually use the template from that book. It could easily be adapted to remain consistent with the treatment of djinn in other supplements, such as **GURPS Arabian Nights**, but **Spirits** has the most up-to-date and generic model. See below for discussion of using this character in **GURPS Castle Falkenstein** games. Saleesh's "spells" may represent innate abilities or formal magical study, as the GM prefers; he certainly uses flight spells extensively if he must travel anywhere quickly.*

Castle Falkenstein

Abilities: Athletics Good, Be Unseen Great, Charisma Good, Courage Great, Education Great, Etherealness Good, Exchequer Great, Glamour Great, Obtain from Elsewhere Average, Ottoman Way Good, Perception Great, Perform a Great Work Poor, Physician Good, Physique Great, Shapeshifting Good, Stealth Good, Survive and Endure Good, Swift Flight Average, Swordsmanship Good, Tinkering Poor, Trader Average, Tribal Etiquette Great.

*Note: The djinn of the **Castle Falkenstein** world are described in **GURPS Castle Falkenstein: The Ottoman Empire**, which also defines some of the "mundane" abilities listed above. **The Memoirs of Auberon of Faerie** include some additional information on Kindred Powers, especially Shapeshifting. For a **GURPS Castle Falkenstein** version of this character, use the Attributes and Skills for the **GURPS** version above, along with the **GURPS** versions of the Kindred Powers listed here.*

Saleesh's Education represents lifetimes of knowledge of the world, and especially its seas, rather than formal human education. His Exchequer rating represents the resources he permits himself to use from the great and wealthy palace he tends. His applications of Glamour almost always take the form of effects related to weather or the sea.

Storyteller

Willpower 8, Rage 4, Gnosis 7, Power 50

Charms: Airt Sense, Appear, Armor, Create Fires, Create Wind, Element Sense (water), Flood, Materialize, Meld (earth), Reform, Shapeshift, Soul Reading, Water- Breathing, Waves.

Materialized Attributes: Strength 5, Dexterity 5, Stamina 7, Mental/Social equal to Gnosis.

Abilities: Academics/2, Animal Speech (whales & seabirds)/2, Athletics/1, Alertness/3, Awareness/2, Beast Lore/2, Brawl/1, Culture/2, Dodge/2, Enigmas/2, Etiquette/4, Expression/2, Instruction/1, Intimidation/1, Leadership/1, Linguistics/5, Logic/2, Medicine/1, Meditation/1, Melee/2, Metaphysics (Celestiography & Demonology)/2, Occult/2, Science (cartography)/1, Science (navigation)/1, Seamanship/4, Seneschal/5, Stealth/1, Symbolism/1, Weather-Eye/4.

Materialized Health Levels: 7

*Note: Djinn in the World of Darkness are discussed in the supplements **Lost Paths: Ahl-i-Batin and Taftani** for **Mage: the Ascension**, and **Veil of Night for Vampire: the Dark Ages**. However, they can be used quite effectively in any World of Darkness game where powerful, otherworldly spirits fit the assumptions and mood, especially including **Mage: the Sorcerers Crusade**. The "Charms" listed here are described in most World of Darkness games which deal with such spirits.*

Background

Saleesh is a virtuous djinni and good Muslim who controls a great palace that is usually described as being under the sea. (In World of Darkness games, it may lie beyond the Gauntlet; in **Castle Falkenstein**, it may actually be within the Faerie Veil. Whatever the case, gateways to this realm are usually found beneath the waves, and the realm itself is always filled with salt water.) He insists he is not the owner or ruler of this great blue palace, merely its vizier, and he always acts that part, but he refuses to speak of its true master, who appears to have been absent since before mortal memories (or even most *immortal* memories) extend. He commands a small but adequate retinue of lesser djinn, whose sole concern is guarding and maintaining the palace. Age and experience have given him great knowledge and uncanny perceptions, while raw power gives him command of other magics.

Wizards who have dealings with Saleesh often do so because of his detailed knowledge of the world's oceans (including some of the skills and practical lore required of sailors). He replies if asked politely for advice in a good cause, but always makes it clear that he wishes to be back about his duty. Most mages assume that he is bound by some ancient vow. If granted extended access to the "Visible World," he may well be interested in performing the *Hajj* pilgrimage (invisibly), the only matter that he considers in any way more important than his role in the palace; he has been to Mecca before, several times, while someone he could trust stood in for him at home, but any reaffirmation of

his faith is a comfort to him.

His palace treasury has a great horde of items and wealth taken from sunken human ships. While he cannot *give* this away, he considers that he has authority to *trade*, or to assist great causes (so he is effectively wealthy, but not as wealthy as the palace might seem to imply). He is respected by many other ocean-dwelling djinn, not all of them benevolent, who tend to obey his requests (out of courtesy, not subservience). His aversion to meddling in "minor" human affairs is so strong that he might not, say, act to prevent a shipwreck (unless something on the ship caught his sympathy), but he would probably give the drowned a decent funeral out of a sense of religious duty.

Appearance

Saleesh almost always appears as a tall, fine-featured man of indeterminate age, with pale skin, pale gray eyes, and dead white hair and beard, in plain but elegant robes. (In this guise, he could pass for human quite easily.) He wears the orange turban of one who has performed the *Hajj*. Occasionally, for convenience, he takes the shape of a great seabird. If he is obliged to do physical battle, a slender silver sword appears in his hand.

Game Uses

Saleesh is not primarily intended as an adversary; indeed, part of the point about him is that he is probably too powerful for sensible characters to challenge physically. (Don't forget that he can have a substantial retinue, should the point need reinforcement.) Rather, he is an otherworldly being with whom PCs may have to interact peacefully to achieve their goals. Encounters with him are likely to be formal, slightly unnerving, and prone to leading to complicated magical situations.

Scenario Ideas

- A powerful wizard hires the heroes to accompany him on a journey to locate an entrance to the Sapphire Palace, and then to meet Saleesh himself. In principle, they're being employed as simple bodyguards -- it's going to be quite a long trip, with various more or less routine dangers inevitable along the way. But once the wizard reaches his goal, it becomes clear that he needs the PCs more than he knows; he's a proud mortal, used to either commanding obedience from spirits or, in extreme cases, haggling with them, whereas negotiating with Saleesh requires a different attitude. The PCs may even be able to extract a side profit from the situation for themselves. However, one must be careful around even the most mild-mannered of djinn . . .
- The adventurers are traveling by sea when they notice that their ship is being followed by a great seabird. This is (of course) Saleesh, who has left his palace under the guardianship of another spirit who he trusts while he seeks certain supplies needed for the maintenance of his palace, and eventually performs the *Hajj* when the season comes around. He is currently manifesting in this way because he thinks it might be more in keeping with the spirit of his faith to perform the *Hajj* in material form, rather than just flitting to Mecca as an immaterial spirit. The ship simply offers him somewhere to rest. If he is attacked or assaulted, he may seek proportionate revenge; if he is recognized as a supernatural being and addressed respectfully, he *may* reply politely in kind.

If the PCs simply talk with him, they may later hear of troubles in certain areas of the ocean, and deduce that the djinn left in charge of the Sapphire Palace is proving less trustworthy than expected. But how can they locate Saleesh and warn him that his attention is needed at home?

- This plot plays best if the PCs have had previous encounters with Saleesh and his household. A minor and very low-powered djinni struggles through the unfamiliar human world in search of help, and the heroes turn out to be the ones he seeks. He is in fact one of Saleesh's servants, a minor and weak-willed spirit who is happiest if he's being told what to do -- but even he is unhappy with what now seems to be happening back home. It seems that Saleesh has become especially taciturn and enigmatic, but he has proclaimed that the return of the Master of the Palace *may* be imminent. (It now turns out that the lesser servants don't know -- or don't remember -- any more about this being than any mortal.)

This might be worrying enough, as the manifestation of what is no doubt a powerful being could have all sorts of consequences, but the servant-djinn seem to think that Saleesh isn't certain that this "master" is genuine -- but he's too bound up in his sense of duty to risk contradicting the claim. What sort of being could fool Saleesh on this topic? What is it after in the Palace, and how dangerous will it be if it succeeds? Why is this "return" such a slow process -- so gradual that the PCs have time to intervene? And can anyone be sure that the being in question *isn't* the rightful master?

Sargent Emmet Wilson

For *GURPS Technomancer*

by Peter V. Dell'Orto

6', 185 pounds. Brown hair, pale skin. Usually dressed in an old police-style jacket and dark clothes. He wears high-collared shirts and jackets and a bent-brimmed cap or hat to help conceal his pallor.

ST: 20 [20] **DX:** 13 [30] **IQ:** 12 [20] **HT:** 17 [20]

Move: 7 **Speed:** 7.5

Dodge 8 **Parry** 11

Advantages: Combat Reflexes [15], Reputation (+2, former State High School Wrestling Champ among alumni/locals, small group, 7-)[2], Technomancer Vampire [275].

Disadvantages: Manic-Depression [-20], Enemy (FBI, 6-) [-15], Loner [-15], Wealth: Struggling [-10].

Quirks: If possible, burns the corpses of his victims to obscure the vampire connection; Mutters quietly to himself without realizing he is doing so; Misses his old life and tries to carry pieces of it with him; Always rents a room with a full-sized mirror in it. [-4]

Skills: AK: Local City-14 [2], Brawling-15 [4], Criminology-12 [2], Computer Operation/TL8-12 [1], Driving (Car)-13 [1], Forensics-12 [4], Guns (Pistol)-15 [1], Guns (Shotgun)-14 [1/2], Law Enforcement-14 [6], Shadowing-13 [4], Shortsword-13 [2], Stealth-13 [2], Tournament Law (Wrestling)-12 [1], Wrestling Sport-13 [2], Wrestling-13 [2].

Spells: Create Servant-17 [0], Shape Darkness-17 [0], Teleport-17 [0].

Languages: English-12, Spanish-10 [1/2].

Equipment: 9mm Glock Pistol and/or 12 gauge pump shotgun, stolen or cheaply purchased used van or station wagon; high school yearbook; coffin full of earth of his homeland.

Total Points: 320

Biography

Sgt. Wilson was a small-town cop called in to investigate a strange "disturbance" at the Martin house at the edge of town. When he arrived, he found the Martins under attack from a young male vampire. In the scuffle, Emmet was bitten by the creature. The suspect fled as more police arrived; the Martins had been killed but not yet drained of blood. Emmet shrugged off the injury as minor, fearing the reaction of his fellows if they realized he had contracted vampirism. He successfully concealed his ailment from the town until it began to seriously manifest itself. Once he understood what was really wrong, it was too late to do anything about it.

Emmet desperately tried to control his vampirism, but found the hunger ate away at his ability to resist in mere days. He stalked and killed his first victim less than a week after the Martin incident. He quit his police job immediately thereafter, cashed out his bank account, and left town. Since then he has been a transient, driving from town to town, mostly preying on runaways, hitchhikers, and the homeless. He will stay in one place for as long as he thinks he can safely feed without being detected, then quietly slip away.

Emmet has not attracted the attention of a CDC Stake Squad yet, although the FBI is beginning to investigate a string of interstate murders they suspect to be connected. His old friends and co-workers worry and wonder about him;

Emmet had seemed so stable and dependable before his "breakdown." They have heard nothing from him, and have not yet heard from the FBI, who have not connected Emmet and the Martin incident to the murders.

Motivation

Deep down Emmet Wilson despises what he has become and loathes himself. This does not change the fact that Wilson is desperate to live. He fears death, and will do anything he needs to do to survive, including murder. He is cunning and dangerous, and will use all of his knowledge of criminology and forensics to help muddy his back trail. He is also careful to eliminate witnesses, but won't take an extra risk of giving himself away in order to do so. When depressed Emmet will sit in his hideout, often not feeding, until driven out by his bloodthirst. It is at these times he is at his most dangerous, because of the depth of his hunger.

Emmet stalks his victims slowly, often picking multiple potential targets when he first gets to town. He will track them individually (usually on foot, in Shadow Form) and attempt to take them by surprise. He has not found the time to learn more spells, but takes full advantage of the ones he does have. He will use Create Servant and Teleport whenever possible, using the latter to return to his hideout (or motel room).

Encountered

Emmet can be encountered almost anywhere, from the depths of a big city to the lonely back wood of a rural area.

While Emmet is dangerous, he is fairly weak for a Technomancer Vampire. His limited number of spells makes him less powerful than a vampire could become, while his cunning use of his existing powers makes him a hard vampire to find and stake. He can make an ideal enemy for a rookie CDC Stake Squad. Against more normal residents of the Technomancer world, Emmet is very dangerous. His tendency to get depressed and stop feeding gives him a weakness that a clever group of amateur vampire hunters can exploit. But a cornered and weakened vampire is still a dangerous vampire.

Adventurers trying to catch Emmet may try to prey on his desire for his old life by setting out artifacts from his high school days (such as his wrestling trophy) as bait. Emmet would certainly be wary of such attempts -- his interest in his past is only a quirk, not a full-blown obsession -- and it will probably do little except tip him off that his hunters are closing in. In such a case Emmet may flee, or he may turn on his pursuers and chose to feed on them instead.

Other Settings

While the vampire package used here is specific to *Technomancer*, nothing is stopping a GM from substituting another Vampire package. In a modern **GURPS Blood Types** game, simply make Emmet a different sort of vampire. On Yrth, change English to Anglish and Spanish to Arabic, change Guns (Pistol) to Crossbow and Guns (Shotgun) to Throw Knife and his enemy to the Michaelites or the Templars.

Vampire Serial Killer

A traveling serial killer can be the focus a campaign either mundane or supernatural in focus. In a mundane campaign, the surprise value of a real vampire can be great but undesirable. In that case, Emmet can be a normal serial killer, with a Delusion that he is a vampire. Remove the Vampire package, but add Bloodlust [-10] and Delusion [-15]. He is much less dangerous, but perhaps even more horrific; after all, he's still drinking his victims dry of blood . . .

The Start of Something Big

As presented here, Emmet is a dangerous loner bent only on survival. He is a carrier for an infectious disease, which means he could spread it. Despite his care to cover his tracks, any victims he leaves alive (especially if he is driven off during the attack) can become vampires. He is a grave potential threat as a disease vector as well as a killer.

As a variation, remove Loner from Emmet's disadvantages and replace it with Chummy [-5] instead. Now, instead of a solo killer, Emmet can become the core of a pack of vampires. Add Leadership, Ally Group, and possibly some spells (learned from mages he infected, of course). The pack of vampires could be the enemy for a multi-session adventure to uncover and destroy them before they can spread further.

Pyramid Pick

FVLMINATA: Earth Armed With Lightning RPG (Second Edition)

Published by [Thyrus Games](#)

Written by Jason E. Roberts and Michael S. Miller

Cover by Christopher Shy

Illustrated by Jeremy Leach

236-page perfect bound b&w book; \$29.95

Most historical RPGs usually combine their backgrounds with an "other" or "alien" element. Classic examples include the transfer of 19th century colonial imperialism and all of its attitudes to the surfaces of Mars and Venus in GDW's *Space 1889* (recently reprinted by Heliograph Inc.), World War II and Pulp Horror in Pinnacle Entertainment Groups' *Weird War II: Blood on the Rhine*, and the politics of magic in 13th Century Europe in Atlas Games' *Ars Magica*. *FVLMINATA - Armed with Lightning* follows this trend, but forgoes the popular Victorian period for this type of game, adding not one but two of the alien elements to its setting. As the title hints, that setting is the Roman Empire, and its other ingredients are magic and gunpowder.

RPGs set in the ancient world are relatively uncommon, and most of them, such as Yaquinto's *Man Myth and Magic* and FGU's *Odyssey*, are now relegated to comfortable places on collector's shelves. More common are rules supplements for a particular game system, especially when it comes to ancient Rome, such as TSR's *The Glory of Rome Campaign Sourcebook* for *AD&D Second Edition* and Steve Jackson Games' *GURPS Imperial Rome*, recently released in a second edition. *FVLMINATA - Armed with Lightning*, also recently in a second edition, is thus a rarity in itself.

The RPG is not an absolutely straight historical game, but a counterfactual one, with the inclusion of magic and gunpowder. *FVLMINATA* history diverges in 848 AUC, or 96 AD, when L. Aufidius Caelus discovered the right mixture for *terra fvlminata*, or "earth armed with lightning." As a boy he had escaped the eruption of Vesuvius in 79 AD, and since grown fascinated with the volcano's destructive power. By 133 AD, Rome's legions were fielding *tormentum* (or cannons), and would later adopt the *pilum* as muskets and *hastula* as pistols. The new technology has aided the Empire in not only holding the frontiers, but slowly expanding them as well. In the west, Caledonia and Hibernia are under military governorship; in Germania, the border lies far beyond the Rhine on the Albis (Elbe) river, and the defeat in the Teutoburg Wald has been savagely avenged; in the Orient the frontier has been pushed along the Red Sea to secure the route to India and far Serica -- kingdom of the "silk people"; while in the East, the legions stand vigilant on the border with the Parthian Empire, Rome's most feared enemy. Yet despite border skirmishes, the Roman Empire is at peace in the thousandth year of its existence (248 AD). A young emperor rules, and there is opportunity for all those who would serve in any capacity.

Almost any character can be created for *FVLMINATA* -- actor, artisan, soldier or legionary, charioteer or gladiator, lawyer or magistrate, magus or priest, farmer or hunter, criminal or watchman, and so on. A full example of each type is provided -- some 27 in all. The process is relatively simple -- agree upon a concept with the GM for your persona (or character) including their rank and occupation, before assigning points, attributes, skills, and humors.

A total of 42 points are assigned to the four attributes, each named in Latin. They are: *intelligentia*, *agilitas*, *pietas* (a persona's sense of normal duty to Roman society, their intuition and sometimes magical ability), and *vis* (physical strength and stamina). An average rating is 10, a crippled rating would be five, and 15 is a paragon.

The same number of points is spent on skills, the list of which is very complete. They are grouped according to which Roman god patronizes those skills, and every player chooses a patron god for their persona. As a blessing from their god, the persona receives a +1 bonus to any trained skill that this god patronizes. Thus, a physician with the surgery and medicine skills might select Apollo as a patron, as might a poet, musician, or astrologer, since Apollo is the god of Healing, Divination, and the Arts. A beginning skill cannot have a rating of more than five, or six with a patron's blessing. All characters begin with some basic skills, which are determined by their rank in society -- senator, equestrian, plebeian, freedman, foreigner or slave. A persona's rank will also determine what occupations are open to them.

A persona's mood and motivation are also influenced by four bodily fluids or humors: *Melancholius* (black bile -- depression or lack of energy); *Sanguinicus* (blood -- activity or lack of self control); *Flegmaticus* (phlegm -- illness or lack of will), and *Cholericus* (yellow bile -- anger or lack of nerves). Divided into two sets of pairs (*Melancholius* and *Sanguinicus*, *Flegmaticus* and *Cholericus*) with the numbers of each pair cancelling each other out. The aim for every good Roman is to have the four humors in balance, but a beginning persona will not, and their unbalanced humors express themselves as temperaments, ranging from +1 to +3 for each humor. The choice of temperaments is influenced by the core attributes, and those selected can sometimes affect a persona's actions within the game at the GM's discretion.

The benefit of being in balance is to provide more humor points per game session, which can be used to modify die rolls. Improving the four humors is relatively easy, and once in balance, there are no rules to cover a persona staying there or the difficulty of doing so. The humors are a nice concept and feel very Roman, but I was hoping for something more influential upon a character such as the set of opposing personality traits in Chaosium and Green Knight's *King Arthur Pendragon*.

The process of creating a character is straightforward enough, with everything well-explained. There is plenty of information upon Rome and the Roman character, as well as a look at those who want to -- and what good Roman would not want to? -- aspire to the status of citizen or more. That said, although plenty of examples are given, at most stages, there is no one single example of character creation from start to finish.

Mechanically, the rules for *FVLMINATA* are simple -- roll under the total of attribute plus skill and modifiers, but the means are another matter. *FVLMINATA* uses "tali," the Roman knucklebones thrown in gambling. Made from the bleached knucklebones of sheep, the actual rules for the historical game are not known, but *FVLMINATA* derives its mechanics from the many mentions of the game in Roman literature. Instead of bleached sheep bones, eight-sided dice are used, marked with the Roman numerals I, III, IV, and VI. A set of stickers can be downloaded from the publisher's website and applied to four eight-sided dice, but this is a poor substitute for properly marked dice, which are available in sets of eight. Some may dislike having to employ a whole new set of dice for the mechanics, but they really do enhance the Roman feel of the game and are little different from having to get a set of *Fudge* dice.

Four tali are needed for an action roll, and also for an effect roll. These are made to determine how well an action is performed, and is more inspired by the hands rolled in Roman gambling, ranging from Senio (a single six), up through one pair and two pair, three of a kind, Venus (one of each number), to Vultures (four of a kind). The better the hand rolled, the better the result, although in opposed rolls, the winning hand is invariably reduced.

Effect rolls are needed to determine the outcome of healing attempts, inflicting damage, creating items, and learning things, but one of the more interesting applications is in the use of the influence skill. After having made a successful Influence skill check, the persona sets three options for how the target might react. These are agreement (the ideal result), concession (the persona suggests a compensation in return for the target's reluctant agreement), and neutrality (a still successful, but lesser, result). Which of these come to pass within a game will be determined by the effect roll. While a form of Persuasion as a skill is a given in most RPGs, here the influence effect rules really force the player to think about what they want when interacting with those around them, and I like these rules very much.

Combat uses the same mechanics and is reasonably fast . . . and often deadly. Interestingly, initiative is determined by social or military rank -- a persona of senatorial rank goes before an equestrian or plebeian, a freedman before a foreigner or slave. Some gamers may find it strange not being able to roll for initiative, but it enforces a sense of Rome's social strata and gives another reason for players to want to advance their personae. Combat covers mainly personal fracas, both unarmed (brawling, boxing, wrestling, and the Greek martial art of Pankration) and armed (weapons of the legions and the gladiatorial arenas, as well as the *terra fvlminata*-fuelled *pilum*, *hastula* and *tormentum*). The exact formula for gunpowder remains a closely guarded secret by the Mithraic and Etruscan Colleges. Both possess recipes for variants of *fvlminata*, such as the Mithraic powder known as "Nabarze," which is less smoky is suited to naval operations. In addition, their control of *fvlminata* has gained both colleges an official acceptance of their schools of magic within the empire. Besides the Mithraic Priest and Etruscan Diviner, other colleges also exist, such as the Marsian Magician and the Witch, but these are far from accepted, the witch or *Venefica* even less so. Each tradition is well described and written as it were the truth and not the others. Spells originate from across the eastern half of the empire, and 70 are listed. They are subtle affairs and quite fascinating in their description and ritual requirements. It was these last two aspects that persuaded me that magic has a place in **FVLMINATA**, despite some initial scepticism.

Besides advice for the GM to help create and run their own *fabulae*, there is also a starting *fabula*, or story. "The Pepper Merchant" (or "Mercator Peperius") is inspired by the *Falco* novels of Lindsey Davis, and has the personae investigating the application of a plebeian merchant for the rank of equestrian after an inauspicious omen. It is quite short, but plays decently enough, with the possibility for a sequel. Up to seven personae can participate, and it and assumes the use of several of the sample personae given throughout the rulebook.

Where many recent RPGs have followed the trend for a complex layout, integrating full color, **FVLMINATA - Armed With Lightning** heads in the very opposite direction. The layout of the book is beautifully simple, with the very attractive pencils of Jeremy Leach used throughout. I would go further and say that his portraits of the many sample personae can best be described as nothing short of exquisite.

The book is also packed with plenty of information about the Rome of AUC 1000 (AD 248), covering its history, society, customs, religion, geography, military, and arcane sects, all of it backed up by an appendix references covering books, games, and web sites. Besides general references, they are also listed chapter by chapter. The other appendices include a list of common names and a glossary. At every stage **FVLMINATA** employs both Latin and English terms, helping to further reinforce the game's atmosphere, already strengthened by the mechanics and the tali dice.

FVLMINATA - Armed With Lightning is well-researched, well-written, and just oozes history. This is in spite of the obvious anachronisms (gunpowder and magic), and the less obvious ones -- use of certain words that the Romans did not (such as Colosseum), and the slight improvement of the position of women in the Imperium (including establishing the *Cohors Amazona*, or Amazonian Guard). Yet above all, **FVLMINATA - Armed With Lightning** is something more than your average fantasy RPG; it is a game where becoming part of the culture is all part of the play. While most cultural RPGs have looked to the East for their inspiration (such as FGU's *Bushido* and several Japanese-themed RPGs since) or to even the more exotic (for example, *Empire of the Petal Throne* and *SkyRealms of Jorune*), this game is the first to look to a Western tradition for its source. Nearly every gamer will be familiar with Rome and its Empire, but both exploring it and immersing your persona in its culture will not be.

On the back of the book is a Ken Hite quote: " . . . I love it. You can have my copy of **FVLMINATA** when you pry it from my cold, dead manipulae." I feel the same way about this game and if you aren't getting his copy, you're not getting mine either.

Brunch at the Coliseum

Published by [Inner City Games](#)

Designed by Michael L. Leeke

Edited by Sara Geiser, Nita L. Lewis

Art by John M. Seaton, Jim Mitchell, and ArtToday

Arena map, two sheets of counters, 24-page rulebook, eight plastic character stands, ziplock bag; \$7.95

If you're at all familiar with Inner City Games Designs' quirky line of mini-games, you might be inclined to think you know what's meant by the title of their game of gladiatorial combat ***Brunch at the Coliseum***. You'd be right.

Everyone else at the circus that is the Coliseum is eating bread. You, well, you're trying not to become the next meal for a ravaging lion released into the arena with you. Armed only with a loincloth, you must scavenge what you can through the kindness of strangers. Pleas made to the crowds in the stands may get some valuable equipment thrown to you . . . or, if they're in a playful mood, thrown *at* you. They'll toss food, bits of armor, a knife, or even a sword if you're lucky. Assuming you haven't been consumed by then, you can grab the goods and turn on your oppressor.

That's if you're a slave. If you're a gladiator, this sort of begging isn't a factor. You already have a full kit of equipment. Decked out in armor, you step boldly into the ring and try to slay the Emperor's slaves before they get their hands on some decent gear, or the lion before it savages your throat. This is your chance for glory, and to maybe live past sunset.

If you're a lion, you find yourself stuck in a large stone oval, and everyone seems to want to stick your hide with pointy things. They have opposable thumbs, a decided advantage, but you're king of the jungle, and that has to count for something. The other people, the ones sitting up behind the stone walls, seem awfully pleased when you start gnawing on your abusers, so that's a perk.

The conflict plays out in the arena, a simple large oval with a hexagonal overlay. Each turn, you use your allotted actions to beat the other contestants up (or just stay alive). You can mix and match these as you please, and some activities take more actions than others.

Movement is the simplest: Every hex you move costs one action. Evade makes you a harder target. Attacks cost anywhere from 1 action for something simple (like a gladiator punching his opponent) to 6 actions for more involved maneuvers (like the lion mauling his prey). When a certain number of points of damage are scored, body parts become useless or get torn off, and some of them you cannot live without. Damaged extremities might be healed a bit if the audience throws a person food (the lion has to find, er . . . alternate sources of food).

The easy actions costs fewer action points, but offer less benefit; you do some damage and that's an end of it. The fancy stuff eats up your allowance, but you may do more damage or get a bonus to your to-hit roll. (Rolls require six-sided dice, and those don't come with the game. A pair for each player is a good idea.) On the gripping hand, some actions are so effective they're balanced out by an additional downside. Taunting, for example, can so enrage your opponent that they lose actions on their turn; then again, they may become angry enough that they actually gain actions

but suffer a minus to use them. And if you're feeling bold and lucky and the crowd isn't helping, you can always beseech the gods for a little help.

The more equipment you carry, the fewer actions you get. The gladiator is better armed and better protected, but unless the slave gathers gear from a benign audience, he has more actions. The lion cannot carry weapons (his opponent's head, yes; weapons, no), and has several actions, but he has some obvious limitations, being an animal and all.

Another reason to perform some of the more exotic maneuvers is style points. While punches, kicks, and claws are effective at wounding your opponent, they are dull, and the crowd didn't come to watch you jack-slap your foes into submission. They came to hear name-calling, see gladiators chuck body parts into the crowd, and watch the lion limp around the arena with someone's arm in his jaws. Doing these things scores style points; when you have enough, you can beg for Imperial Favor. If the Emperor is impressed with your performance, he may order your life spared. Otherwise, he'll let you finish the fight the hard way. Whoever's left standing -- or whoever's life is spared -- is the winner (until you do it all over again the next day).

The components are inexpensive and not terribly involved. The stiff "cover" for the rules is really a separate piece of sturdy cardboard that unfolds into the arena map -- once it's been flattened a few times, it will sit still easier, though even this tough stock may begin to wear along the creases. In addition to the arena, the cover has a damage effects chart, but with a little more work they probably could have gotten another small chart or two in there (this would have been handy). The hexes are wide enough your fingers won't get cramped trying to move pieces.

The playing pieces are thin cardboard counters that must be cut out. Most are square markers for the weapons and food tossed from the crowd. Those that represent combatants are stand-ups, with figures on the front and back. The artwork (on the counters and in the rules) is a little stale, cartoonish where it isn't clipart, and on some it's not clear which figures are the slaves and which the gladiators. Still, you get eight little plastic stands, so you're not getting shortchanged on ease of use.

The rules are too homogenous, with one section bleeding into the next. This is not illogical, but the material looks the same, and players must sometimes hunt for a piece of information. There's some duplicate text in separate sections the creators probably could have condensed. Both the gladiator and the slave can throw a weapon (the only difference is the Style Points earned), and their "Beseech the Gods" charts are identical.

The booklet also has character sheets at the back for use in play. You'll have to photocopy them, though you could just keep running tallies on damage and style using scratch paper. The damage tracks use crude character outlines, though there's nothing wrong with the tracks themselves, with little dots you color in (those who have played **Battletech** will be familiar with the look, though in **Battletech** food doesn't heal damage, so pencils are recommended). Each sheet has a handy summary of actions for that character.

The game plays best when there's at least one of each of these beleaguered warriors spilling their blood in the sand and leveling the playing field; if the well-protected fighter and the vicious lion hammer on each other, the winner will find themselves facing a fresh and newly equipped slave. In spite of the bargain-basement components and, in some ways, iffy execution, it's still a fun game. The rules are solid and easy to absorb. Plenty of actions means plenty of tactical considerations, which means **Brunch at the Coliseum** packs a lot of strategy into a small and even-handed package that will get a thumbs up from all but the harshest of judges.

--Andy Vetromile

Our Lady of Weirdness: The Queen of Sheba

"Where are the kings? A thousand kings have sunk into the dust and now rest under the ground in vaults and in tombs. Their monuments all through the land still tell of their deeds, and their fame is spread like the wafting fragrance of amber.

Or where indeed is Bilqis, she of the mighty throne, she of the tower, higher than all towers?"

-- Nashwan bin Said al-Himyari (d. 1178)

Where indeed? Most likely, she is buried somewhere under the sands of Yemen. Or Ethiopia. Or somewhere else entirely. Or perhaps she still lives, in scripture and in darker legendry, waiting for those wise enough -- or foolish enough -- to pay her court. Let's not keep her waiting.

"And when the queen of Sheba heard of the fame of Solomon concerning the name of the Lord, she came to prove him with hard questions. And she came to Jerusalem with a very great train, with camels that bare spices, and very much gold, and precious stones: and when she was come to Solomon, she communed with him of all that was in her heart. And Solomon told her all her questions: there was not any thing hid from the king, which he told her not. And when the queen of Sheba had seen all Solomon's wisdom, and the house that he had built . . . and his ascent by which he went up unto the house of the Lord; there was no more spirit in her. And she said to the king, It was a true report that I heard in mine own land of thy acts and of thy wisdom. . . . And she gave the king an hundred and twenty talents of gold, and of spices very great store, and precious stones: there came no more such abundance of spices as these which the queen of Sheba gave to king Solomon. . . . And king Solomon gave unto the queen of Sheba all her desire, whatsoever she asked, beside that which Solomon gave her of his royal bounty. So she turned and went to her own country, she and her servants."

-- I Kings 10:1-13

The Queen of Sheba bursts on the scene in the first Book of Kings (and, for those playing at home, again in First Chronicles) as if we were supposed to know who she was. True, the Bible sneaks "Sheba" (which could come from a word meaning "plenty," or in a less likely reading, "seven" or "oath") into the list of Genesis 10 nations, albeit in such a fashion that it could refer to about three different places, and they have a rep in the various prophets for wealth and misbehavior, like most Biblical foreigners. But about the Queen herself, we have just a dozen verses to play with. In Sura 27, "the Ant," the Koran adds another two dozen to the story. In this version, Solomon's servitor, the hoopoe bird, brings him the news of a rich queen in Sheba who worships the sun instead of Allah; when she bribes him to go away, Solomon threatens her with destruction unless she converts. She travels to Jerusalem; while on the way, Solomon's djinn carry her throne to his palace, where she recognizes it. When entering Solomon's chambers, she mistakes a crystal floor for a pool of water, and hikes up her dress to cross it, exposing her legs. Solomon reveals the illusion, and she converts to the worship of Allah immediately.

But even gossiping hoopoes and glass floors can only take us so far -- we must leave the comfort of divine revelation for the mists of legend. Both Islamic and Jewish traditions embroidered the story of the Queen of Sheba, giving her a name (Bilqis, or Balkis, which seemingly defies etymology but may be vaguely related to *blm*, meaning "incense"), a back story (she murdered an evil king and conned his advisers into making her queen), and hairy legs (which the glass floor reveals to Solomon). In this version, her conversion follows Solomon's invention of a depilatory, which restores her to full, smooth beauty. Similarly embroidered tradition (if not scholarship) identifies the anonymous "Shulamite woman" of the erotic Song of Solomon with the Queen of Sheba, which begins to hint that there was more going on between her and Solomon than spices and riddle games.

"A few years ago, the existence of [the Queen of] Sheba's Ma'rib (and Sirwah in her era) was equally in question. Yes, there was a Sabeen civilization and yes, it was grand, but it was of no consequence before 600 or 700 B.C. This appraisal was widely agreed on -- and, as is now known, totally in error."

-- Nicholas Clapp, *Sheba* (2001)

In fact, the Ethiopian *Kebra Nagast* names the Queen Makeda ("the fiery one"), and explicitly states that not only did she and Solomon get it on, she bore a son, Menelik, from their union who became the first emperor of Ethiopia.

(Menelik then stole the Ark of the Covenant from his dad, since Ethiopia was now the Holy Land.) And indeed, there are Jewish elements to Ethiopian ritual, and even Ethiopian Jewish communities, that provably predate 600 B.C. (or even a century earlier). The Queen, if she did in fact meet Solomon, would have lived around 950 B.C., give or take a decade. At that time, as it happened, Ethiopian culture was beginning to feel the infusion of writing, worship, and trade from Yemen across the Red Sea -- from the land known to historians as Saba. Which is to say, Sheba. Well-watered by a massive dam and sophisticated irrigation systems (a land of "plenty"), Saba was a center of the trade in frankincense, and seemingly convenient to the "gold of Ophir" elsewhere in Arabia; other "spices" and the "precious stones" likely came from India on the monsoon trade. The "Mahram Bilqis," a temple of the moon, rises from the sand at Ma'rib, Saba's ancient capital. No regnant queen has appeared in the Sabeen inscriptions, but Strabo observed that the kings of "Arabia Felix" ("Arabia the Happy") in that region a few centuries later were restricted by taboo from leaving their palaces. Perhaps the Sabeen mukarrib Yakrubmalik, nervous about the Phoenecian navies nosing around his spice trade but unable to lose face by leaving his city, sent his beautiful (and hard-nosed) queen to negotiate with the Phoenecians' hill-country muscle, and made history, or at least scripture.

"The first thing I noticed was the fact that below our feet was only dry dirt. No vegetation grew in the expanse that had been demarcated with concrete pillars. We approached a roped-off area and were told that this was the gravesite of Birikisu Sungbo, the Queen of Sheba. According to our nonagenarian guide, no plant had ever grown on this ground since they had placed her body beneath it. The roped-off area was around 18 feet long, a length which we were informed Birikisu's body covered completely, for the queen was a giant."

-- Zachariah Cherian Mampilly, "The Queen of Sheba's African Roots"

Unless, of course, we've got Sheba in the wrong place. The Bible, after all, also puts "Sheba" rather closer to Solomon (and to Arabian gold mines) in Midian, across the sea from the Sinai Peninsula, and unlike Saba, Midian has a series -- a dynasty, in fact -- of historically attested queens going back at least to the 8th century B.C. A different Arabic legend places the Queen of Sheba's tomb at Palmyra, another desert trading town with a history of active queens. Added classical historians put Balkis in Baalbek, but if her majesty's name comes from "Baal" and not from *blm*, then a Syrian or Mesopotamian Sheba may be in order -- and better fit other Biblical descriptions of Sheba as "in the east." There are the confusingly-named Sabians of Harran in southeastern Turkey, named in the Koran, from whence the [Three Magi](#) may have come -- the Sabians are famous astrologers, and of course the Magi have long been linked to the Queen, that earlier royal figure who also traveled to Jerusalem with gold and frankincense. Josephus identifies her as Nikaulis, "Queen of Egypt and Ethiopia," from whence Velikovsky decides that Hatshepsut is the Queen of Sheba (rather overplaying the similarities between "shepsu" and "Sheba") and her voyage to "Punt" was a trip to see Solomon only a few dozen miles away and [540 years downstream](#). And once we're back in Africa and unmoored from archaeology, it's only a hop, skip, and a jump to the Eredo ruins in Nigeria, massive earthworks where the locals point to the tomb of "Birikisu Sungbo," the Queen of Sheba.

"Lead of the philosophers in which is the shining white dove, which is called the salt of metals, and in which consists the teaching of the work. This is that chaste, wise, and rich Queen of Sheba clothed in a white veil."

-- Guillaume Mennens, *Aurei Velleris* (1604)

Nigerian, Ethiopian, or even Yemeni, the legend remains glorious, if obscure. In the words of the Song of Solomon, she is "black but comely," or as the alchemists put it, a veiled Queen, or a "shining dove" concealed in lead. In short, she is, as her Ma'rib temple proclaims, the new moon -- the month of Shebat in the Hebrew calendar. (The Aramaeans apparently had a moon goddess named Shayba, to boot.) In her union with Solomon, we see the Alchemical Marriage of sun and moon, of Red King and Black Queen. The alchemist Abufalah of Syracuse said that she brought the Philosopher's Stone to Solomon; others say she brought him the [green glass Grail](#) now preserved in Genoa. (Perhaps this is why St. Bernard of Clairvaux, patron of the Templars, wrote 280 sermons on the Song of Solomon.) Alchemists knew her as the "South Wind," and as the *aurora consurgens*, the rising dawn. Which may be why the former alchemist Aquinas' final meditation, the *Aurora*, is dedicated to the Song of Solomon and the Queen of Sheba, who he quotes as saying: "Reigning I will reign, and my kingdom shall have no end for all them that find me and subtly and ingeniously and constantly seek me out."

On the other hand -- or hoof -- there remains the darkness over the light. The Queen of Sheba's "hairy legs" are, traditionally, the mark of Lilith, the vampiric first wife of Adam and queen of the demons. According to the alchemist

Commenius, the Queen of Sheba's veil was a spider web (remember Biluku, the Andaman [spider goddess](#)?) and her bloated body stank of asafoetida. The German scholar Erich Zehren maintains that the Queen of Sheba was actually the dark goddess Astarte, whom Solomon worships in 1 Kings 11:15. Other traditions make it even more explicit; Bilqis was the daughter of a djinn, and had the legs (or feet) of a goat, or of an ass. In this version, Solomon sees her legs when she walks into a pond -- which she must do because the only bridge will eventually become the True Cross. She is, in short, a demon -- Flaubert makes her the incarnation of Lust, in the *Temptation of St. Anthony*, betrayed by her malformed foot. In the Ethiopian legend, her foot is scarred by being dipped in the blood of a dragon -- which may be where she learns to [talk](#) with Solomon's hoopoe. In medieval European imagery, she somehow gets the feet of a goose, and is known as *La Reine Pédaque*, the "goose footed queen." (This might be Green Language for *La Reine du Pays d'Oc*, "queen of Languedoc," or queen of the Cathars; or it might be a scribal misprint of *anserinus* "goose" for *asinus* "ass.") In this guise, she links with goose-footed Bertha of the Big Foot (a sasquatch, also, has hairy legs), the Merovingian mother of Charlemagne -- and avatar of [Berchta](#), the Queen of the Dead.

"The Queen of the South, such as I saw her in my dreams . . . crowned with stars . . . her face is olive-tinted . . . one foot is on a bridge, the other on a wheel . . . one hand rests on the highest rock of the mountains in the Yemen, the other stretched out to the heavens . . . On the peak of the highest mountain of the Yemen, a wonderful bird is singing in a cage . . . it is the talisman of the new age . . . Leviathan with black wings . . . Beyond the sea there rises another peak . . ."

-- Gerard de Nerval, *Aurélia* (1853)

On this Merovingian tack, the Prieuré poet Gerard de Nerval was driven mad by the Black Queen, who he called Aurélia, and hanged himself with the manuscript to her eponymous novella in his pocket. Golden Dawn poet William Butler Yeats remained fascinated with the Queen of Sheba his whole life. Perhaps the Black Queen is also the Dark Lady of Shakespeare's sonnets, who may have inspired his [Cleopatra](#), another "Queen of Egypt and Ethiopia." From Dark Lady to "La Belle Dame Sans Merci" of Keats, sucking his blood out through tuberculosis. The vampiric hairy-legged Lilith, as Isaiah 34 explains, dwells in a waste land, a "habitation for dragons and a court for owls" (neatly tying in our whole bird-dragon thing again). Perhaps she dwells in Sheba, laid waste after the bursting of the dam at Ma'rib (which happened during the life of Mohammed -- perhaps Gabriel took care of some unfinished business while dictating the Koran). Prieuré agent André Malraux claimed to have flown over the Queen's city in 1934, seeing "twenty towers" on the edge of the Rub' al-Khali. Perhaps the Queen of Sheba is the Queen of [Irem](#) as well? Jesus prophesied her apocalyptic return in Matthew 12:42: "The Queen of the South will rise up at the Judgement when this generation is on trial." Bilqis, Lilith, Astarte, Cybele . . . when Irem rises from the sand, and the [sphinxes](#) walk, will the Black Queen of Frankincense with the goatlike hair return in terrible power? Iä! Iä! Sheba-Niggurath!

Making (And Faking) Adventures (Part II)

You Can't Spell 'Justification' Without 'Fiction'

(. . . presuming you spell "Fiction" with an "A")

Hmm . . . looking over last week's article, I note that I've begun to reveal a bunch of my personal secrets. Soon you'll be able to program your own MarshAI to generate adventures just like I do, and I'll be obsolete.

Well, the cat's out of the bag now . . . so let's continue, shall we? (We're picking up right where we left off [last time](#) . . . please read Part I if you haven't already.)

3. Work Backwards From The Lynchpin

Okay; I've got that pivotal scene in mind I want to subject my players to. What do I *do* with it?

Well, I simply work backwards, always keeping in mind the questions: "How could this have happened? What is necessary for this scene to take place?"

Depending on the hook itself, this may be immediately obvious or require a great amount of contemplation.

The easiest hooks to incorporate are generally those that occur at (or near) the beginning of the adventure. If the pivotal scene is a (prospective) employer attempting to hire the heroes to kill him, then that requires no additional set up other than establishing an interesting scene for this proposition to take place. But if the situation is more convoluted - for example, the heroes are attacked by Alice (of "...in Wonderland" fame) - then a great deal of effort needs to be expended getting the players to that point: The party needs to be transplanted to Wonderland (or Alice transported to their world), and some catalyst or focus needs to be established for Alice to attack.

At this point many options may present themselves for the whys and wherefores behind the pivotal scene. For example, the mayor - seemingly intoxicated - barges into a gala ball and opens fire on the guests before escaping. This could happen because . . .

- It isn't the mayor; someone (or something) is impersonating him.
- The mayor is being controlled or possessed by something.
- The mayor really *is* intoxicated, and has flipped out for some reason.
- The scene isn't what it seems.

Once I have that pivotal scene in mind from the previous stage, at this point in the planning I'll let my mind wander in *any* direction. No thought is too crazy to be dismissed out of hand at this point. I personally have a love for convoluted, onion-like plots; my ideal adventures often have many layers to peel . . . and if the heroes don't uncover the entire truth, well that's fine. They may *think* they've resolved everything, and I may have additional plots I can bring up later!

Anyway, let's stick with the mayoral example for a bit (and not just because "mayoral" is a cool word). It seems that Option A would be very easy to implement . . . which is probably reason enough to avoid it. (I note *Dungeon* magazine's [writer's guidelines](#) specifically mention that a murder perpetrated by a doppelganger is grounds for adventure rejection.) I also note that Option A only has one or two immediate "tendrils" - discover the mayor is innocent, and find the dupe.

Option B is similar to Option A in a lot of ways; to me it's a bit more appealing because it presents a few more threads to resolve. The heroes need to track down the real mayor, figure out a way to subdue him (since randomly killing

possessed governmental leaders is bad karma), and then track down and defeat the puppeteer.

Even so, Option A and B both have a similar problem: The base assumption of the players (and thus, likely, the characters) will probably be that the mayor *isn't* responsible, and all they need to do is track down the culprits behind it all and save the day. Any resolution that reinforces that predisposition somewhat deadens any impact the initial premise may have held.

Option C is definitely a workable option all by itself . . . especially if the heroes are expecting an impostor or something else odd. (See the article ["Plotting Like Old Man Jenkins"](#) for more examples of this.)

Now, Options A or B *do* have some potential if I can work another twist in there (perhaps involving C). For example, what if A or B is superficially true, but for the reverse reason? What if the mayor *had* snapped (or was heavily intoxicated, or whatever), and was going to do something *worse* if he hadn't been impersonated or controlled? For example, in many genres I could concoct a force of possession (a spirit, nanites, or the like) . . . but what if this force was weak, and could only induce mild changes? In this case, what if the possessing force *worsened* the mayor's aim? What if the result would have been much worse if it hadn't acted? This allows all the neat aspects of Option B ("Ah-HA! We've discovered that the mayor has been possessed by something! We must find the dastardly culprit!"), while either allowing a surprising twist ending or setting the stage for a sequel, since the underlying problems behind the mayor's rampage would not have been dealt with. ("Hmmm . . . what are the odds that something would possess the mayor and cause him to shoot random people *twice*?")

By the time I get to Option D, I'm either getting something *really* weird or *really* brilliant . . . or possibly both. The possession-for-good is an entirely worthwhile option, but what if we take a different tack?

What if the mayor himself is behind the incident, but Things Are Not As They Seem™? Suppose the mayor had carefully staged every aspect of the event; his weapon had blanks, and those he "shot" were in on the plan (whatever it is), with Hollywood blood packets and other trickery planted on them. Other effects (shattering vases and broken mirrors) could also have been arranged ahead of time to make the incident convincing . . . but in no way was anyone ever in any "real" danger.

Why would this be? Well, perhaps the mayor was trying to convince people there were beings capable of possession or impersonation (Skrulls in the Marvel Universe, Shedim in *In Nomine*), but had so far been unable to convince anyone else. He needed a plan - something big - to convince people of the threat, and get the money/aid/media time necessary to fulfill his goals. After all, no one would suspect the good and trusted mayor of doing something like that, right? (This could also create an interesting climactic conundrum for the heroes, especially if they believe the mayor; if they uncover the truth, what do they do with it? Do they reveal what they know in the name of justice, or keep it quiet to help aid the mayor? Since no one was *really* in danger, this may be a very difficult decision . . .)

Of course, it's entirely possible to over-think an adventure; having something that's too complicated or Byzantine can make the players' eyes glaze over, no longer caring *what* is going on. And I always try to keep focused the difference between "complex" and "complicated." But a complex adventure allows for a number of different things for heroes to figure out, each of which can provide their own level of satisfaction.

4. Reconsider the Premise

At this point I may look back and see if the thoughts that formed in Step 3 will change my mind regarding Step 2. For example, the fourth option for the mayor plot above ("the mayor staged the attack, and no one was in 'real' danger") doesn't *really* require the shooter to be the mayor; it could be anyone who is unexpectedly able to turn a pompous ball into a firefight. Thus I may change my pivotal scene ("How would the players react if the bartender they've befriended at a ball suddenly pulls out a gun and starts shooting people?") in an effort to make the premise stronger, less convoluted, or more plausible. This step isn't necessary, but the loop between Steps 2 and 3 can iterate many times. ("What's my weird focus? How is that possible? How does that change the focus? How is *that* possible? . . .")

Note that, at this point, I still haven't committed word one to paper. I've [stated previously](#) how little I don't put on

paper for my adventures; this is why.

5. Flesh Out the Rest of the Adventure

Once I have my focus scene, and I know *why* that focus scene is happening, I try to come up with a bit more meat around the adventure. This is usually little more than a quasi-checklist (for mostly linear adventures), random paragraphs or jottings (for more open-ended adventures), or a rough flow chart (for adventures that are more complex).

This process can be trivial or difficult, depending on how fully realized the adventure is as of step 3.

Let's say I'm expanding my "mayor shoots people but is being controlled by force for good" adventure. My notes for this may look something like:

- Gala ball - PCs mingle
- Mayor shoots people
- Mayor: Track down. (Disarm?)
- Clues: Mayor timeline ("was acting normal until he snapped")
- Evidence of possession
- Confrontation - Controlling force
- Resolution (Realize the mayor *is* insane? Or incorrectly blame - and defeat - possessor)

That's it, at this stage. I have about four or five scenes broadly sketched out, and - in a pinch - I could probably run this adventure. (By this time it's usually about an hour until my players and I meet to game . . . I'm usually in a blind panic by now.)

It's possible for me to have an adventure where Step 2 and 3 aren't as tightly focused; in our mayor examples, the basic premise introduces the main players, the conflict, and the means of resolution (mayor, [possible] possessor, shooting, capture, defeat mayor and/or possessor). For an adventure where Step 2 and 3 weren't as tightly focused, my fleshing out may entail the bulk of the work.

For example, let's consider the example where Alice In Wonderland attacks the heroes. I actually used this plot in a ***Werewolf: The Apocalypse*** campaign. My Step 2 pivotal scene was "Alice attacks and eviscerates an important NPC." My Step 3 "working backwards" indicated that the heroes were in the Dreaming (the land of dreams of White Wolf's World of Darkness), and had permitted Alice to get close enough to the heroes for a devastating surprise attack.

In this example, the bulk of the work came down to Step 4:

- Heroes discover and track rabbit with pocket watch into the Umbra [the spirit world crucial to ***Werewolf***]
- While there, they fall down a rabbit hole
- They encounter a prim and proper English girl, drowning (in tears)
- They rescue her (or she rescues herself); she jots down notes in her journal with a pen
- Shortly thereafter, she (and the PCs) are attacked by dodoes, tortoises, and other animals drying themselves off. [Having the PCs rescue someone is a great way to throw off suspicion that they're evil.]
- Encounter the Cheshire Cat; amid wordplay, he warns them of the Queen of Blood
- (Hopefully the players think this is the Queen of Hearts . . . it isn't. It's Alice.)
- Other Wonderland encounters, as time (and interest) permits - emphasize the "Queen of Blood" aspect.
- Have the NPC-to-be-eviscerated keep Alice "safe" at the back of the party.
- Final scene: Queen of Hearts attacks the PCs en masse (with playing card guards) . . .
- . . . suddenly, a blood-curdling scream from the back of the party. Alice has gravely wounded the NPC; her pen has become a sword. [Get it?]
- Alice is actually a Dark Dream of Childhood Evil (all that is cruel, sinister, and ***Lunch Money***-ish about children). Other Wonderlanders have attacked because they are Dreams of Innocence and Confusion
- Big Bad Conflict . . . gathering of forces, realignment of sides
- Heroes win (presumably), escape Dreaming

This outline for this adventure is more complicated since the basic premise ("When Alices Attack!") doesn't contain a lot of the information I need mentally to make it work.

Okay; I have my hook, I have my justification, and I have my outline. Next time I'll discuss the finishing touches I need to make an adventure runnable for me. I may also include some tips I've used to stall early-arriving players so I can scribble out the rest of the adventure.

*Last week's answer: **Macho Women With Guns** mapsheet.*

(Three stars) "Fatlings are inhumanly repulsive masses, literally rolls upon rolls of greasy sallow skin. They constantly sweat a foul-smelling slippery oil that allows them to lumber their bulk around when they choose to move at all."

Bangkok

by Matt Riggsby

It's a new city, but the capital of an ancient nation. It is ruled from palace which resisted colonial powers but eagerly Westernized its own princes. It is in a land where coups are a regular occurrence, but hardly anybody gets hurt. Natives call it Krungthep, city of angels. Given time, fanatical sticklers for accuracy will call it by its full name: Krungthep Maha Nakorn Amorn Ratanakosindra Mahindrayudhya Mahadilokpop Noparatana Rajthani Burirom Udom Rajnivet Mahastan Amorn Pimarn Avatarn Satit Sakkatuttiya Vishnukarm Prasit, the longest official name of any place in the world. We outsiders call it Bangkok, village of the olive (or village of the wild plum; both are valid translations).

Geography and Land Use

Bangkok is centered on a bend in the Chao Phya river which runs through western Thailand, about ten miles north of the Gulf of Siam. The land is low and flat; as a defensive measure, some rulers have intentionally turned parts of the surrounding area into swamp (an interesting obstacle, but not necessarily a great idea in an area where mosquitoes are a chronic problem). Flooding is frequent, although the Thais are well equipped to deal with it.

Bangkok weather is tropical. Too far from the coast for the moderating effects of the sea, temperatures often reach the nineties even in the cooler months and go over 100 degrees in the summer. Humidity is high, with constant rain during the monsoon and frequent brief but torrential afternoon thunderstorms in drier months.

On the other hand, the region is exceptionally fertile. Thailand produces a great deal of rice and has thick forests. The city's environs are home to date and coconut palms, other fruit trees, and a profusion of flowers, as well as acres of rice paddies.

Bangkok has often been compared to [Venice](#) and Amsterdam. All are cities crossed by a number of canals. Indeed, canals were once the primary avenues, with streets as a mere afterthought. As in Venice, small boats have been a common method of transportation.

History

Foundation

Although a visitor might expect an ancient city, Bangkok is actually very young. The site that would become Bangkok started as a Chinese trading post. In the 17th century, French colonists built and later abandoned a small fortress, Dhonburi, across the river. In 1767, after centuries of intermittent warfare, the Burmese sacked the Siamese capital, Ayudhya. Taksin, one of the few Siamese generals to escape the disaster, made Dhonburi his base for a counter-attack. After years of campaigning (and a coincidental attack on Burma by China), the Burmese were driven off. Taksin was made king, but became unbalanced in his later years and, in 1782, was deposed. One of his favorite generals, Chakri, was made king in his place, becoming King Rama I. The only casualties in the coup were Taksin himself and, ironically, the general who had deposed Taksin and prevailed on Chakri to take the crown (he was executed for treason; he did, after all, revolt against the king).

Rather than trying to rebuild Ayudhya, Chakri decided to remain in Bangkok. The Chinese were persuaded to move a few hundred yards south, and a new palace was built on the eastern side of the river (the better to defend against attacks from the Burmese from the west). Rama I started an immense palace complex, covering nearly a square mile, and built a number of temples. Several klongs (canals) were cut, making a series of moats through the river bend and providing easy water transport around the growing city. Small canoes quickly became the main method of

transportation.

He also changed some aspects of traditional ceremonies. In Ayudhya, commoners were not allowed to view royal processions; royalty was too sacred for them to look upon. In Bangkok, all were allowed to watch the spectacular royal processions. The easygoing Thai love a good spectacle, so this presumably made him quite popular.

The next several decades were good to Bangkok. Burma, the traditional enemy, was absorbed by the British, and with the exception of a revolt by a prince in a subject region in Laos, Siam had no wars to worry about. Trade with China was booming, and the Chinese colony grew quickly (at some point, a small Indian trading community also appeared). The Chao Phya was dredged and widened to make room for more junks, and more klongs were dug to improve transportation. A great many temples were endowed during this period as well. The only chronic problem was the opium trade. Opium, at this time a particularly heavy monkey on the Chinese back, was forbidden in Siam, but it was smuggled in. The government was serious about enforcing its laws, so there were frequent raids on opium rings.

Contact With The West

Up until this point, contact with Europeans had been slight and sporadic. However, the English were consolidating their hold on India and the French were expanding into Vietnam. Both were eyeing the prosperous kingdom of Siam. For their part, the Thai saw the dangers of allowing Europeans into their country. Individual envoys were allowed to visit, but no permanent embassies were established. European goods were imported, often through middlemen, but they were traded for luxuries such as silk and scented woods, not rice.

This changed in 1851 with Mongkut, or King Rama IV. Having seen the English and French gobble up his neighbors, he realized that the Europeans could not be kept out forever. Instead, he believed that he must meet the West on equal terms. To that end, he set out to modernize his country. Under his reign, Europeans were at last allowed to live in Bangkok and permanent legations were established. He hired foreign technical specialists and teachers to educate his family and bring his nation technologically up to date. He was himself an avid amateur astronomer and learned English at an advanced age. One of the teachers he hired for his family was a Mrs. Anna Leonowens, whose memoirs became famous years later. Mongkut is the monarch represented in *The King and I*, a work which represents the early Victorian Siamese court about as accurately as the musical *Camelot* does post-Roman British feudalism (although both Rama IV and Yul Brynner were bald).

Under Rama IV, Bangkok started to undergo a physical transformation. In deference to Europeans who preferred driving down roads to rowing down klongs, the first paved streets were laid down. Ironically, New Road, on the west bank of the river, is the first and oldest paved road in the city. New buildings also went up to accommodate European visitors, including hotels. This also made the city's ethnic mix more complex: native Thai (themselves divided into princes and peasants), an ethnic Chinese and Indian merchant class, and visiting Europeans.

Monkgut's successor, Rama V, went one better. In addition to hiring even more foreign advisors to run a new system of courts, organize police, build railroads, and so on, he sent all but one of his sons abroad for schooling. A number of aristocrats followed suit, and a number of well-intentioned Europeans sponsored European and American education for some youths too poor to afford it themselves. A number of them joined European military units, although they were generally sent home when actual hostilities began. Rama V was the first Asian monarch to tour Europe, visiting Russia (returning a visit from his good friend Nicholas II), Germany, France, and England.

Despite relatively good relations with the west during this period, Bangkok became subject to gunboat diplomacy, in its most literal sense. It usually worked like this: For whatever reasons, Europeans would feel their interests threatened. To protect its interests, the European power would send a naval vessel to the area in question. Even a small European warship mounted far more firepower than most Asian kingdoms could bring to bear in one place, and even if native forces were capable of driving it off, it carried an implicit threat of even more force. There was often no specific threat of violence, but there didn't need to be one. The mere presence of a gunboat put tremendous pressure on the natives to yield to foreign demands.

It happened to Bangkok twice. On the first occasion, a personal problem became very political. The British consul

summoned a warship when his son-in-law, a Thai nobleman, was arrested on trumped-up charges. The charges were brought by the Siamese prime minister, who had been a rival for the consul's daughter's affections and was furious about losing her to a young upstart. To complicate matters, the captain of the British vessel, who knew next to nothing about Bangkok, docked his ship at the only open spot on the river which appeared large enough: the landing stage of the royal palace. This incident ended sadly. The young man was found guilty and executed. The British Foreign Ministry recalled the ship; they didn't want to start a war over a love affair gone bad. The consul was more or less forced to resign, albeit with dignity and a fat pension. The young widow got a roundabout form of revenge, though. She sold an expensive necklace given to her by the prime minister in order to send a poor Thai youth to school in Paris. That young man grew up to be a leader of the group which would overthrow the aristocrats in the 1930s and, briefly, prime minister himself. The second incident involved the French sending three gunboats to Bangkok, allegedly to guard the three Frenchmen in Bangkok who lived outside of the French legation. Although the presence of warships on the river caused considerable diplomatic tension, the people of Bangkok regarded them as just another spectacle. They eagerly turned out in great numbers to see the big western ships.

Into the 20th Century

Chakri and his first four successors had done well, but after a run of five excellent kings, things started to go downhill. There have been worse rulers, but on the whole, Rama VI did more harm than good. The problem, perhaps, is that being king in Bangkok was getting harder. Whatever the cause, the kings after Rama V seemed less and less inclined to actually rule, and their individual quirks of personality caused larger and larger problems. Paranoid, Rama VI created a private bodyguard (the Wild Tigers) which alienated him from the regular army. Intensely pro-British, he ended Siam's profitable neutrality in WWI by entering on the side of the Allies. This was unpopular, since most Thai were wary of the British, openly distrustful of the French (long-time rivals for subject territories in Laos and Cambodia), and well-disposed towards the Germans, since Germany had never threatened Siam. Ironically, his unpopular bid for military glory didn't pay off. Siamese troops never saw combat; they were still in training in the south of France when the armistice was signed. Sadly, he was also apparently a homosexual in a country where polygamy was an important political tool. However, he was able to bring himself to marry three times late in his reign. Finally, he spent lavishly, causing problems with the national budget.

Rama VII was even less inclined than his predecessor to rule his changing nation. To assist him in the increasingly difficult task of ruling Siam, he assembled a council of princes to help him select ministers and make policy decisions. Although this was supposed to be a step in the direction of opening the government and reducing the power of the monarchy, it ended up locking commoners out of circles of power. Before, a sufficiently worthy commoner might become a minister. Now, though, the council made sure that only its own members got important posts. This might have been a mild irritation in earlier years, but now there was a growing middle class of European-educated officials and junior officers with new ideas about democracy (or, at least, constitutional monarchy) and a healthy resentment of aristocratic privilege. The situation was aggravated by the growing Great Depression, which appeared to hurt the commoners far more than it did the princes.

The stage was set for a change of government. A cadre of about 50 organizers, calling themselves the People's Party, carefully tracked the movements of the royal council, identified important points of communication, and selected sympathetic army units. On a fine summer morning in 1932, when the king was vacationing at a favorite spot a hundred miles away, they struck. In the course of an hour or two, the councilors were arrested and officers commanding units sympathetic to them were in custody. Important phone and telegraph lines were cut, preventing loyalists from calling for aid. The People's Party announced their plan to institute a constitutional monarchy to a surprised populace, who saw little alternative but to cheer them on. The only casualty was the accidental death of a policeman.

Perhaps the most important aspect of the coup is that it was aimed at overthrowing the aristocrats, not the king. While the People's Party was determined to introduce aspects of democracy, respect for the crown was in full force, and despite the king's decreasing power in later years, his support for the new government has been key. When Bangkok was firmly in People's Party hands, the king was respectfully invited back to preside over the country and the framing of a constitution. Rama VII was nonplussed but ultimately accepted. He saw no point in bloodshed, and ultimately he had never wanted to be king anyway. Another unusual aspect of the coup was its invisibility. It was a conflict between

a small middle class and a smaller upper class, in which the common people weren't involved. There were no public demonstrations, shows of force (except for a few tanks parked in key positions), or shootings.

Military Rule and Democracy

But as peaceful as the transition was, the following decades were a litany of one government forcibly replacing another. To demonstrate that it wasn't trying to seize power for itself, the People's Party established an interrim government containing several members of the old administration. Tension between aristocratic conservatives and middle-class revolutionaries led to brandishing firearms on the council floor and, within four months, the dissolution of the interrim government in favor of rule by decree of the prime minister, himself a prince. He was deposed not long thereafter by a second, equally bloodless, People's Party coup (Rama VII had to be coaxed back to Bangkok again). Worse yet, the working draft of the constitution proposed a number of downright communistic reforms which even the easygoing king found impossible to accept.

The reluctant king became an absent king when he left Bangkok for surgery in England; instead of returning, he abdicated in favor of a 10-year-old cousin attending school in Switzerland, who became Rama VII. The People's Party regime was troubled by a failed royalist coup (which resulted in a pitched battle near Bangkok's Don Muang airport), and by 1937 the government had drifted towards a military dictatorship led by a Major Pibul. It was around this time that the country officially changed its name from Siam to Thailand. Pibul reluctantly entered an alliance with the Japanese in WWII but was peacefully deposed at the war's end by a liberal legislature.

After the war, Rama VIII, who had just reached the age of majority, died of a gunshot during a visit to Bangkok on a break from school (his brother, Rama IX, remains on the throne today). Western observers believe the death a suicide, but the Thais believe he was murdered. The government tried to hide the unusual circumstances, but a bungled cover-up led to charges of assassination which destabilized the government and swept Pibul back into power. Pibul ruled for several years, surviving a poorly organized coup attempt which resulted in several deaths. Convinced of his own popularity, he instituted a "speaker's corner" in a public park in Bangkok. Although freedom of speech was a new concept, the Thai enthusiastically took to airing their grievances. Individual protests snowballed into mass demonstrations which his secret police could not suppress, and Pibul's reputation was so damaged that he was quietly forced into exile by his own military.

During the Cold War, the military strongmen who continued to rule the country drew a great deal of support from foreign sources, particularly the US. The military conservatives made common cause with the US against the rising tide of Communism in southeast Asia. Thailand served as a base for American operations during the Vietnam War, and Bangkok was a frequent destination for American troops on R&R. Thailand also saw a great deal of foreign aid supporting rapid economic development. The foreign involvement meant a return to good economic times for Thailand and explosive growth for Bangkok in particular.

Now that the Cold War has ended, the political situation seems to have, at last, stabilized. A more liberal military regime took over in the early 80's, giving way to civilian administrations who have continued to rule since then. Even when military governments have taken power, native-educated student demonstrations have been an important factor in Bangkok's politics. Bangkok has been on the leading edge of Asia's high-tech economic revolution, and even the recessions of the past five years have not stopped its growth.

That growth has been tremendous, and has led to equally large changes for the city. Over the past half-century or so, the city's population has leapt to over eight million, about a tenth of the country's total population, and Bangkok and its suburbs cover about 60 square miles. The modern city has been compared to the other City of Angels, Los Angeles, as it appears in the movie *Blade Runner*, but even that doesn't do justice to the peculiar mix of old and new. Traditional stilt houses still line the remaining klongs next to glass-sided skyscrapers, and a grand temple in the old style lies directly across the highway from the modern international airport. Old-timers bemoan the loss of the old Bangkok, with its canals and more easygoing attitude. But Bangkok's color and grandeur can still be found in private shrines, the most modern Thai's reverence for the crown, or even in the beautiful flowers which can be seen growing in puddles at the roadside.

Royalty and Government

At the center of Thai government is the royal family, and at the center of that family is the king. Royalty is sacred in Thailand, and despite Westernization, that idea still hasn't gone away. Showing disrespect for the king or royal family is still a significant crime, although no longer a capital offense. Even revolutionary movements are aimed not at displacing the king so much as displacing corrupt governments that have collected around him and assisting the king in his difficult work.

A peculiar aspect of Thai royal divinity is that commoners aren't allowed to touch royalty for any reason; they're much too holy. While this might be respectful, it can be terribly inconvenient, even dangerous in an emergency. For example, a doctor who isn't of royal rank can't completely examine a royal patient; surgery is out of the question. As recently as the early 20th century, there was an instance where a queen and a princess drowned after falling out of a boat because the boatmen couldn't bring themselves to lay hands on them and bring them up.

Of course, princes can be executed for their crimes, but not like anybody else. Just as one may not touch royalty, their blood may not be shed either, so novel methods of execution had to be devised. The traditional method was to strike the victim in the back of the neck with a fragrant sandalwood club, breaking his neck. Occasionally, the victim would be sewn in a cloth sack and beaten to death, no doubt a long and painful process.

Thai royalty was expected to be polygamous. Rama I had almost 30 wives and 45 children, and some of his successors had even more. Siblings, aunts, in-laws, and other relatives were often in residence as well. This large family usually did the most important work around the palace, so the palace usually had fewer servants than one might expect.

With such a huge family, one might expect that after a few generations everyone would be a prince. However, unless titles were renewed by the king, later generations would receive a lower rank. That is, the son of a prince of the highest order would be a lower-rank nobleman, his son lower still, and so on. After five generations, the title would disappear altogether. Nevertheless, princes are a common sight in Bangkok, even if most of them are of a lesser rank.

The king's eldest son was never assured the throne, although laws of succession have drifted that way over the past century. Rather, the king was expected to name a successor. If he did not, a council of princes would convene on the old king's death and elect one. A king might also appoint an *uparaja*, a sort of deputy king. The uparaja rarely reaches the throne, but he is an important assistant and serves as a viable successor if no one better can be found.

The king is assisted by a cabinet of ministers, who have typical responsibilities: war, communications, finance, and so on. Since the 1932 coup, there has also been an elected legislature. However, its power has varied wildly. Under the military governments, it could serve at best as a tenuous platform for dissent (suppressing a newspaper is one thing, suppressing a popularly elected representative is quite another) and sometimes not even that. However, it was this legislature that brought down Pibul after WWII and has ruled the country for most of the last 20 years.

Armed Forces and Law Enforcement

For most of its history, Bangkok's military and police have been tolerably competent and well-equipped for a country of its size and wealth, but lag behind the west. Thai armies had a mix of swords and muskets at the founding of Bangkok, they obtained second-hand European weapons in the 1850s, a second-hand British destroyer after WWI, and a few tanks by the 1930s. Despite their relaxed demeanor and demonstrated hesitancy to kill their countrymen, the Thai have fielded entirely victorious armies, although the Thai navy has been a somewhat neglected service.

Like most places, there was initially a great deal of overlap between military and police; soldiers would, where necessary, perform police functions. This, of course, began to change in the 1850s as Rama IV and Rama V began to modernize their nation. During this period, a separate police force appeared. In the 20th century, secret police agencies began to appear as well.

With the frequent coups, it's worth mentioning political inclinations. The army has traditionally been conservative,

siding with aristocrats or would-be military dictators. The navy, for some reason, has had more liberal leanings for much of the 20th century. That being said, some units are always more loyal than others. Bodyguards and secret police, of course, side with the current ruler, whoever that happens to be.

Names

Thai names can be difficult for Westerners. Traditionally, individuals don't use family names; the use of surnames was established by law early last century. Most Thais are known by personal names. It starts to get more complicated when it comes to the aristocracy. It is impolite for Thais to address their social betters by their names. Instead, they are addressed by titles and offices. The person known by one name might be known by a different name later. Kings assume the name/title Rama. This isn't so bad if one keeps up with the changes, but it does complicate things if someone is away for a long time or is a student of history.

Religion

The overwhelming majority of the population subscribes to a form of Buddhism with strong Hindu influences. The many temples are inhabited by a number of shaven-headed, saffron-robed monks, who are supported by gifts and donations. Most men in the upper and middle classes spend three months as a monk at some point in their lives, often shortly before getting married. In traditional Thai society, the temples serve as libraries and schools, but they have slowly been squeezed out by secular schools and universities.

Despite being nearly 100% Buddhist, there is complete freedom of religion in Bangkok. Presumably, resident Chinese and Indians follow whatever religion they had at home. Given the proximity to the Muslim world, a few Muslims can probably be found, and perhaps some Christian missionaries. Christian churches appeared within a few years of Bangkok's opening to the West.

Buildings

Traditional homes in Bangkok were airy, wooden, single-story structures (the Thai have a particular aversion to other people above their heads or touching their heads; never try to pat a Thai child on the head). Many were built on stilts to protect against flooding. Most houses also have a small "spirit house," a house-shaped shrine, probably on the front porch. Houseboats were also in very common use. Many Chinese traders had large, very fine boats which they used as stores along the river.

Since the early years of this century, more and more traditional architecture has been giving way to Western-style buildings. As in any other city of reasonable size, many streets are lined with two- to four-story tall concrete buildings, punctuated by tall, glass-sided buildings inhabited by international firms and tech companies. However, traditional Thai homes still exist in residential districts, low-income neighborhoods, and clustered along the remaining canals.

The most notable architecture, though, is that of the temples and palaces. These usually consist of a complex of pagoda-like towers, called prangs, with geometric or bell-shaped bases next to long, low buildings with tiered, gabled roofs. Almost every surface is decorated with geometric carving, figurative displays, intricately detailed murals telling religious or historical stories, or simply fragments of porcelain dishes arranged to resemble flowers.

Streets

Before the middle of the 19th century, there weren't any streets. There were some regularly trampled paths for elephants (elephants were used for war and to bring heavy loads in from the countryside), but most transportation and Bangkok "street life" was along the klongs. The canals of Bangkok were crowded with traffic at most hours. Most travel was by small, pole-driven canoe, but there were many larger vessels as well. Peddlers could row boats packed with merchandise around, making most stores portable. On larger boats, a half-cylinder roof provided protection from

the elements. Many buildings had a landing dock where boats could tie up.

Over the last few decades, the klongs have been replaced by a sprawling street system that can't keep up with the ever-growing population. With a profusion of vehicles from buses to tuk-tuks (three-wheeled vehicles like diminutive golf carts, popular as taxis through southern Asia) and motor scooters, the city's traffic jams are legendary, and a new elevated train system doesn't seem to be helping. The few remaining klongs serve mainly as tourist attractions.

Clothing

Given the weather, Thai clothing and standards of modesty both tend to be a bit loose. A long shirt and short, baggy pants, often woven with colorful stripes or geometric shapes, are a traditional costume for both men and women. However, the shirts could come off if it got too hot, even for ministers conducting government business. Formal wear included silk versions of the same, sashes, and robes, as well as more tailored garments. Very formal headgear often had a tall spire resembling a temple tower. Contrary to current fashion, Thai women wore their hair short.

This all began to change late in the 19th century. Rama V's fondness for the West was such that he decreed traditional garments should no longer be worn at court; European-style suits and uniforms were the order of the day, dealing a serious blow to the native silk-weaving industry. By the end of the 19th century, the royal court looked a bit like an Asian production of a Gilbert and Sullivan opera. Long hair and skirts for women became popular around WWI. By WWII, more people in the city were wearing Western-style clothing than not, and today the traditional clothes only come out for special occasions.

Trade

Bangkok is a great place to shop. Most of Thailand's international trade was funneled through Bangkok, so silk cloth (except for the first half of the 20th century), gems, and fine teak and sandalwood is easy to find. The same is true for just about anything from China. India is a notable trade partner as well, although most Indian trade went west to Britain. European goods were imported quite early, but after 1850, as a result of pro-Western policies, they'll be particularly easy to find. Direct trade with Westerners before 1850 was rare, but was possible so long as the visitors didn't expect any special treatment or legal protection. For several decades, starting under Rama V, Europeans enjoyed limited tariffs and extraterritorial rights (being subject to their own laws and courts while in Siam, not local authority).

Originally, the boat-filled klongs served as floating markets (a practice now preserved almost entirely for the tourist trade): canoes for peddlers and food vendors, larger boats for larger goods. One could sometimes shop by rowing up to a junk just arriving from China and buying directly. The floating markets have been replaced by landlocked night markets, a practice made possible by the introduction of electric lights. The night markets resemble a cross between American farmers' markets and flea markets. These markets are held after dark, under long strings of electric lights.

Food

Thai cuisine is flavorful without being heavy or overpowering. The ingredients are typical of Asian cuisines: rice and rice products, noodles, lots of seafood, and fermented seasonings. It also brings in native and tropical ingredients, such as lemon grass, lime leaves, and coconut. Thai food is liberal in its use of herbs and spices such as ginger, cilantro and basil. Nam pla, a sauce made from fermented fish, is a popular condiment. Tropical fruits, such as papaya, pineapple, mango, and the pungent durian are cultivated in quantity around the city, and the kings of Siam were drinking orange juice for breakfast long before westerners.

What To See and Do

There is no shortage of things to see and do in Bangkok. Just about every public event is surrounded by at least a little ceremony and spectacle. Weddings are surprisingly low-key and are mostly private, but funerals can be several-day-

long affairs. Before the military governments took over, even public executions had priests performing ceremonies and pairs of executioners (the prisoner wouldn't know who was going to kill him, so he couldn't cast a curse) dancing around their victim before delivering the fatal blow. Some major festivals in Bangkok are:

- **Loy Krathong:** The people float tiny boats holding lit candles, incense, and flowers down the canals and rivers, symbolically taking their sins away down the water.
- **Kathin:** During the rainy season, people take gifts to monasteries. The king and nobles make a grand public procession of it.
- **Songkram:** In this April festival, which comes close to the start of the rainy season, people run about with bowls of scented water, sprinkling one another with it as a blessing.
- **Sao Chingsha:** This peculiar Hindu-flavored festival has the king enthroned as Shiva for two days. During that time, teams of acrobats perform tricks on a 100-foot tall swing. The leader of the each team is supposed to end the act by grabbing a bag of gold -- accessible from the swing but set on a pole at a dangerous height -- with his teeth.

The events themselves are just part of it. They're occasion for general celebrations, dances, kickboxing matches, and giving alms to the common people. One charming practice was to put coins and other small valuables into pieces of fruit and hurl them to the crowd.

Bangkok's most spectacular sights are the large temples and the royal palace. The palace is divided into inner and outer districts. The outer palace contains residences, offices, barracks, stables, private parks, and so on, much like the Byzantine imperial palace at Constantinople. The inner palace was the harem, the exclusive province of the king, his wives, and his young children. No man could enter it without the king's express permission; even the guards posted there were female.

There are several large temple complexes around the city, but several are clustered around the palace. Wat Phra Kaew, home to a huge library and a giant gilded stupa (a sort of domed artificial hill with a square tower on top), is inside the palace complex, while Wat Pho, home of a 46-meter long reclining gold-plated Buddha, is immediately next door. Wat Arun (Temple of the Dawn), across the river from the palace, has the tallest prang in the city, nearly 80 meters tall.

One of the great treasures of Thailand is the Emerald Buddha, a statue carved from a green jade-like stone. It came to Thailand from Vietnam, but legend has it that it was originally carved by a Greek sculptor in India. The Emerald Buddha resides in the Wat Phra Kaew. It sits atop a tall platform with steps running up to it, surrounded by lesser statues and shaded by a multi-tier parasol. Another of the great treasures is the Gold Buddha at Wat Traimit. This image is what the name suggests, a statue made of solid gold. It is about 10 feet tall, polished to a mirror finish, and weighs about five and a half tons.

For those with darker tastes, Bangkok, like any other port city, has its share of opium dens, brothels, and similar entertainments. Opium dens could operate openly only in the later half of the 19th century, but they were suppressed again in the first half of the 20th, along with brothels and pornographic movies. However, they all continue to survive underground.

Bangkok in the Campaign

Despite its relatively short history, Bangkok can fit into campaigns from the near-Medieval to the Information Age. On the edge of the mysterious East, it could be a great location for a martial arts campaign. Relatively late-period swashbucklers could visit as well, for East-meets-West action. Siam constituted a buffer state between the English and French spheres of influence during the Victorian era, so it would be a good location for diplomatic contention in a steampunk or early modern campaign. From WWII through the Cold War, it can be a hotbed of espionage, involving OSS operatives working against Japanese operations in Burma (the bridge over the river Kwai was part of a line that ran through Thailand) or CIA spooks countering communist insurgency in Indo-China during the Vietnam War. Change the name to Ayudhya and it becomes a reasonably close approximation of the Siamese capital before the 1800s.

Of course, less historical options are also possible. Add black-market cybernetics and genemods for a Pacific Rim city in a cyberpunk campaign. Replace the Thai, Chinese, and Europeans with aliens for the capital of a space-operatic star-spanning empire. Throw in magic and it becomes a great city for a fantasy campaign. The king's divine connections might be reflected in immense mystic power.

As well as being appropriate to many historical periods, Bangkok's history is rife with adventure and campaign possibilities. During the early colonial period, PCs could be noblemen working to prevent excessive intrusion by westerners or westerners called in to help modernize the city. Gunboat diplomacy is always an option. Diplomatic heroes can certainly have fun balancing the appearance of force with the home office's willingness to let them start a war. Military characters can also become involved. Enlisted adventurers can try some smuggling and illicit shore leave, while officers can try to control their men and give the appearance of a threat without actually opening fire (unless, of course, they have to). Something like the incident of the British consul's daughter could get PCs very personally involved. The presence of gold and jade Buddhas is a temptation to thieves in any era.

Here are some more specific adventure ideas:

- **Bangkok Vice, or Ye Smuggeler's Bluyes:** Nearly two centuries before the Reagan administration and the War On Drugs, Siam had its own drug war, and Napoleonic-era adventurers can become involved. They might be smugglers with hidden shipments of opium or dedicated servants of the king patrolling the klongs and stamping out the tongs. The GM might even slip in your own Crockett (Davy, of course) and Tubbs, western adventurers hired to counter English collusion in the Chinese smuggling rings.
- **Raw(naga)hide!:** It's 1870 and Bangkok is afflicted with a plague of water monsters clogging the klongs. The king appeals for foreign aid, but with the condition that killing be kept to a minimum. Many of the monsters are snakes that closely resemble nagas, the sacred snake carvings that adorn Thai palaces and temples, and to kill them would be sacrilege (it's open season on crocodiles and snapping turtles, though). The Europeans are baffled, but the American ambassador thinks he has the solution. The PCs are a party of old cowhands the State Department has shipped from the wild west to the far east to help the Thai with their herding problem. Those doggies are up to 15-feet-long and venomous, so the heroes better be the orneriest hombres either side of the Rio Chao Phya.
- **Follow That Monarch:** It's some time in the 20th century, and there's been another coup. The revolutionaries need the king's blessing to cement their power, but the king strongly prefers the previous administration. Rather than giving the insurgents his approval, he hopes to avoid the question for as long as possible, giving the deposed government a chance to stage a counter-coup. However, he can't reveal that he holds partisan loyalties. He must run and hide while not appearing to run and hide. PCs can be followers of the king, using polite misdirection, disguises, and subtle sabotage (with the profusion of tropical fruit, the revolutionaries might, in fact, fall for a banana up the tailpipe) to delay the new regime. Alternatively, they may be revolutionaries searching for the king without looking too much like they can't find him. They'll have to keep a subtle eye out for unusual movements and avoid violating the extraterritoriality of any sympathetic foreign embassies where the king may be hiding.
- **Kill Pibul:** Pibul, the military strongman of the mid-twentieth century, is notable for surviving repeated attempts at assassination. At least three attempts to kill him failed. In one instance, he even beat up the would-be gunman. Some would say he was lucky, but you know better. Is Pibul being protected by ancient Thai magic? Is he at the center of a conflict between two groups of time travelers? It's up to the PCs to figure it out and either take him down or keep him alive.
- **Eve of Destruction:** Thailand entered both world wars abruptly. Many foreign nationals learned that Thailand had picked a side only when police appeared to drag them off to internment camps. An interesting way to kick off a world war campaign would be to start with Western heroes in Bangkok receiving a phone call warning that the Thai have just entered the war and the police are on their way. The PCs have almost no time to prepare to slip out of the city and make their way to friendly territory. They might get help from sympathetic natives or Europeans, but there's also no way to tell who will continue to be friendly when war breaks out. Will the nice German couple next door help the British characters get started, or turn them in? Alternatively, the party may consist of special agents sent to recover important papers or people in advance of hostilities.

Further Reading

A number of literarily inclined Westerners, including Somerset Maugham and Joseph Conrad, have been through Bangkok, but these works will probably be more useful for a roleplaying campaign.

- *Bangkok*, Alec Waugh (not a scholarly work, but a charming memoir by the brother of the novelist Evelyn Waugh)
- *Fanny and the Regent of Siam*, R. J. Minney
- *Lords of Life*, Chula Chakrabongse (a history of the kings of Bangkok written by a member of the royal family)

Anyone trying to run an adventure in Bangkok should do a web search for pictures of people's vacation's there to get a look at Thai clothing and the city's spectacular architecture. Here are a few:

How To Make Friends And Influence People In *GURPS*

by Matt Riggsby

Most RPGs have lots of rules for combat but few for social interaction. The *GURPS Basic Set*, for example, has its reaction table and a few pages of social skills, but two long chapters on combat plus weapons and armor tables, and that doesn't count extensive optional combat rules and combat-oriented equipment lists in other books. In part, this is because of roleplaying's traditional focus on violent action. But more than inertia keeps game rules concentrating more on attacks than acquaintances. Ignoring the difficulty of modeling the process (just what do you roll against to fall in love?), there's the question of appropriateness. Does a RPG need rules for social interaction? What could be more essential to playing a role than having players interact with one another and the GM, outside of the realm of dice and rules? Arguably, such rules do have their place. Using a rules-bound method of developing relationships lets socially adept characters do things less articulate players cannot, just as other rules allow non-technical players to play engineers and out-of-shape players to play sturdy warriors. A player still has to make "strategic" choices in social situations (make friends with the undersecretary before trying to get an introduction to the president) just as in combat (draw the sword before entering the dragon's den) but skills and rules can smooth over gaps between player and character abilities.

GURPS provides two core mechanisms for social interactions: the Reaction Table and rolls against social skills. However, there is little guidance for how relationships change after first encounters, and social skills work inconsistently. The goal of this article, then, is to integrate the basic mechanisms, to regularize the use of social skills, and to extend the results of reaction rolls through long-term relationships.

First Impressions

On any first meeting, the GM should make a reaction roll. A character may attempt to use of one of the social skills below to influence the results of the roll. The skill roll is *unmodified*. All modifiers, including the character's advantages and disadvantages and the reaction roll modifiers on p. B204, are applied to the reaction roll, not the initial skill use roll. Also, having a social skill at high levels does *not* itself modify the reaction roll; a social skill must be used directly to modify the reaction roll. The reaction roll is modified by one-sixth of the skill roll's success or failure (round down) in addition to advantages, disadvantages, and any situational modifiers the GM feels appropriate. In addition to the reaction level (Good, Poor, etc.), record the results of the skill roll as the Reaction Number. The subject's reaction level will usually be apparent from his behavior, but the GM should keep the Reaction Number secret.

For example, Timmy, an elementary school student, wishes to befriend Bobby. As an opening gambit, he attempts to trade a package of Oreos in his lunch for Bobby's Twinkies. He makes his Merchant roll by two, for no modifier (2/6 rounds down to zero) to the initial reaction roll. For that, he rolls a 13 (Good) reaction. Assuming Timmy has no advantages or disadvantages which will change a reaction roll, he keeps his Good reaction with a reaction number of 13.

Certain skills have an additional effect on the first reaction roll, and most can only be used in certain circumstances as detailed here:

- **Administration:** May only be used in the context of working within organizational procedures. For example, Administration could be used by a lawyer dealing with a court clerk or a business executive dealing with another department head.
- **Carousing:** May only be used in purely social situations.
- **Diplomacy:** May be used for any encounter. It's hard to alienate someone with Diplomacy; treat reaction rolls worse than Poor as Poor (reaction number 7) and better than Good as Good (reaction number 15).
- **Fast Talk:** May be used for any encounter. After a Fast Talk attempt, the subject may have second thoughts.

After the initial encounter is over, reroll the reaction roll. If the second result is worse than the initial roll, reduce the reaction number by three. If the subject has been seriously duped or swindled, skip the reroll and reduce the reaction number by six.

- **Intimidation:** Intimidation may be used only in confrontational situations, such as a police arrest or an ambush by bandits. Intimidation may get immediate results, but rarely works well in the long term. After the initial encounter, as for Fast-Talk, reroll the initial reaction. If the new reaction is worse than the original reaction, reduce the initial reaction number by 3.
- **Leadership:** May only be used in situations where hierarchy or organization are important. For example, it would be out of place at a party, but it might be used during a meeting to plan and organize a party.
- **Merchant:** May only be used in situations where an exchange is in the offing. This can include exchanges of favors as well as exchanges of goods.
- **Savior-Faire:** May only be used in situations where one of the characters is Status 1 or higher.
- **Sex Appeal:** May only be used in purely social situations. Moreover, Sex Appeal can be risky if used in the wrong context. If Sex Appeal is used against an inappropriate target (say, a woman using it on a heterosexual woman or a gay man), roll the reaction roll two times and take the worse result.
- **Streetwise:** May only be used for dealing with criminals or pursuing criminal activity. For example, buying contraband, hanging out with outlaw biker gangs, or hiring assassins.

While not directly applicable to the skill or reaction rolls, characters may roll against Savior-Faire or Anthropology skills to determine whether or not a particular approach would be useful. For example, a successful Anthropology roll might reveal that it would be inappropriate to appear overfamiliar to a tribal elder (using, say, Carousing) and an attempt to trade goods (Merchant) would be safer.

Asking for Favors

Once the initial impression has been made, the biggest use to which social skills are put is trying to persuade people to put themselves out for somebody else's benefit, sometimes against their better judgement (or at least against their usual tendencies). This may mean anything from agreeing to major treaty concessions to agreeing to a romantic tryst. When a character attempts to talk another into performing a non-trivial task for him (sharing restricted information, giving him a ride to the airport two hours away, etc.), he must win a contest between an appropriate social skill and the target's Will. The skill roll is modified as follows:

Reaction Level Modifier

Disastrous	-10
Very Bad	-5
Bad	-3
Poor	-1
Neutral	+0
Good	+1
Very Good	+3
Excellent	+5

If the request involves betraying the interests of someone the subject has a positive reaction to, apply the same modifier as a penalty and treat as a [check -1]. For example, if the subject is being cajoled into stealing a computer password belonging to his employer, to whom he has a Very Good reaction, the skill roll is at -3.

Effort On The Target's Part

Moderate effort (changing a car's oil or doing a few hours library research)	-1
Significant effort (performing major vehicle maintenance or doing a few days library research)	-3 [check -1]
Heroic effort (undertaking extensive travel, changing jobs)	-5 [check -3]

Apparent Risk

Moderate risk (small financial losses, slight loss of status, some trouble with spouse or workplace)	-2 [check -1]
High risk (moderate financial losses, serious trouble with spouse or workplace)	-6 [check -2]
Extreme risk (heavy financial losses, enormous loss of status, or permanent injury)	-8 [check -4]

Multiply risk modifier by .5 if the subject believes there is a very low risk of the subject being harmed, add 2 if there is a better than average chance, add 3 for a nearly sure thing.

Appropriateness

Mildly inappropriate request (hire employee illegally, reveal small personal secret)	-2 [check -2]
Extremely inappropriate (betray family or nation)	-6 [check -4]

Appropriateness is a measure of how "wrong" the subject believes an action is rather than how risky it is. For example, propositioning a prim Victorian matron isn't necessarily placing her in any danger, but it is, for her society, wrong and hence less likely to get a good reaction. Appropriateness and risk are, of course, relative. These modifiers assume an "average" person; thugs and soldiers will accept physical risks more readily, while career criminals are far more likely to perform illegal activities.

It's easier to talk people into indulging their mental disadvantages and harder to talk them out of them. If the target has mental disadvantages which would prevent him from doing what the attempting character is asking for, take the total number of points in appropriate disadvantages, divide by three (rounding *up*) and subtract from the skill roll. If the target has mental disadvantages which would make him attempt what he's being asked for, divide disadvantage points by three and apply as a bonus. The target may have disadvantages that cancel each other out.

It's also easier to get someone to do something they've done for you before. If the subject has granted a similar favor once or twice in the past, the social skill roll is at +1, +2 for three or four times, and so on to a maximum bonus of +5. This can be useful for simulating a "slippery slope," such as seduction over time or gradually drawing someone into a criminal conspiracy.

Any advantages or disadvantages which provide a modifier to reaction rolls, such as Charisma and Social Stigma, modify the skill roll as well. Finally, the GM may apply other modifiers as he sees fit.

To continue the example, Timmy wants to Fast-Talk Bobby into confirming to their teacher that his dog ate his homework. Bobby's reaction to Timmy is Good for a +1 modifier. The effort involved is trivial for no modifier. It does present a risk of mild punishment (good enough for the -2 modifier), but Bobby believes that the possibility is remote, taking it down to -1. Bobby has Honesty (-10 points), giving Timmy a -4 to his Fast-Talk roll. However, he also has a Schoolboy's Code of Honor (-5 points), which includes always taking sides with schoolmates against teachers, for +2, giving Timmy a total of -2 for Bobby's disadvantages. Timmy has a grand total of -2 to his Fast-Talk roll.

Reaction Checks

This is fine for single encounters, but relationships change through time. This is where keeping track of the Reaction Number comes in. Granting favors and other actions may cause Reaction Checks, rolls to see how the subject's overall feelings change.

Just doing large favors can put a strain on a relationship. Some of the modifiers in the Asking for Favors section have [check -n] next to them. Whenever the subject of a request grants a favor that uses a [check] modifier, roll an unmodified reaction roll. If the Reaction Level is less than the current Reaction Level, reduce the current Reaction Number by the amount indicated by the [check]. For example, a character with a Good reaction (reaction number 15) is asked for a favor which requires significant effort, which has [check -1]. If there are multiple [check] modifiers, roll multiple reaction checks. A favor which involved both considerable effort and considerable risk would require two checks. In our example, the GM checks Bobby's reaction due to the risk. He rolls a 13 (Good), so Bobby's reaction is

unchanged. If the roll were a 12 (Neutral) or less, the reaction number would be reduced by one.

Positive and negative outcomes can change a relationship. The GM may require a check, as above, if the subject is harmed as a result of granting a favor. For example, a check may be called for if Bobby has to stay after school for corroborating Timmy's story. In the case of a very negative outcome (losing a great deal of money, physical harm, etc.), reduce the reaction number by 1d6 or more, as the situation seems to call for it. On the other hand, if the subject benefits from granting a favor, roll a check, but instead of reducing the reaction number if the check is less than the current reaction level, increase the reaction number by 1 if the check is greater than the current reaction level. Strongly positive results (getting lots of money, gaining social advantage or a long-sought goal) can increase the reaction number by 1d6 or more.

Certain skills can effect or even cause checks. If a character asks for a favor using Diplomacy skill, reaction checks will not drop the subject's reaction level below Bad, although the results of granting the favor may. Fast Talk always triggers a [check -1]. Intimidation always triggers a [check -2].

Left to themselves, relationships can fade over time. For every month two characters have little or no interaction, roll a check. If the current reaction level is Good or better and the check is at least *two* levels less than the current reaction level, reduce the reaction number by one. If the current reaction level is Bad or worse and the check is at least two levels better, increase the reaction number by one.

Characters may maintain and improve their relationships. Once a week, a character may attempt to improve his relationships with others. This requires business dealings, social calls, doing favors in return, or other significant interaction as defined by the GM. The character may roll against an appropriate social skill. On a failure, there is no effect, although the attempt will prevent a check for no interaction. If the roll succeeds, roll a check. If the check is better than the current reaction level, increase the reaction number by one. On a critical success, skip the check and increase the reaction number by one; on a critical failure, skip the check and decrease the reaction number by one.

Conversely, characters may attempt to undermine other relationships by innuendo, pointing out faults, or simply blatant lies. Instead of maintaining his own relationship, a character may use an appropriate skill to force a check on another character's reaction number. If the skill roll succeeds, roll a normal [check -1]. If it fails, there is no effect. On a critical success, automatically reduce the subject's reaction number by one. On a critical failure, the subject reacts poorly to the attempt, reducing his own reaction number by 1d6.

Finally, external events may force sudden shifts in reactions. For example, most reaction numbers will drop by three if a character's -5-point secret is revealed, or by six or more if a -10-point or greater secret is revealed. Political stances, changes in familial relationships, and other changes to characters' situations may likewise force changes in relationships. NPCs may themselves be subject to coaxing by other PCs and NPCs, so even a socially adept character may have to work hard at cultivating his relationships to keep from being undermined.

Mutiny in the Bounty Bay

A Scenario For *Transhuman Space*

by Aaron Kavli

Preparation

This adventure is for the *Transhuman Space* setting, but could easily be changed to fit another sci-fi or cyberpunk genre. The location and parties involved can also be altered to take place in another remote location within the THS setting. A remote asteroid base would work well too, though environmental concerns will have to be dealt with.

A good map of Pitcairn, and some history, can be found at
http://www.lonelyplanet.com/mapshells/pacific/pitcairn_islands/pitcairn_islands.htm

Zooming out will give a good idea of where these islands are located in relation to Australia and French Polynesia. Other maps can easily be found online.

Ingredients

This adventure assumes the PCs are aboard the good ship *Angel's Wake*, a Verodyne sea skimmer luxury hydrofoil (p. FW133) yacht owned by millionaire Andrae Ferensis. The *Wake* is traveling in the South Pacific, near the Pitcairn Islands. The reason for their presence is up to the GM, but there are many options. They could be bodyguards, dilettantes on a pleasure cruise, actual crewman, technicians, or reporters on the way to follow independence politics in French Polynesia.

Andrae orders the yacht to anchor 100 yards off the southern beach of Pitcairn so she can do some snorkeling. As the PCs are sightseeing, they notice what looks to be a military-issue battle suit watching them from the tree line. After a moment, the battle suit hefts a 60mm mini-missile pod and sends a rain of fire into the yacht. The damage is catastrophic as the military grade ordinance ignites the yacht's fuel, wrecks the hull, and an uncontrollable conflagration breaks out across the boat. The party has only a few moments to escape. Attempts to grab gear not readily accessible should require tests to avoid injury.

Once the survivors -- Andrae, the PCs (hopefully), and 2-3 other crewmen or passengers -- pull themselves onto the beach, there is no sign of the suited trooper. The burning remains of the *Angel's Wake* slip beneath the waves. It is quite likely that the party will not have had time to grab any survival gear, rations, or heavy weaponry and they are now left, wet and dazed, to figure out what to do next.

Beautiful Tropical Islands

The Pitcairn Islands are in the South Pacific Ocean, between Peru and New Zealand (geographic coordinates: 25 04 S, 130 06 W). The five islands, Ducie, Henderson, Oeno, Pitcairn, and Sandy, are technically under the auspices of the United Kingdom; Her Majesty being the official chief of state. Due to the lack of any real resources and a small population disinterested in the affairs of the UK, Pitcairn has been left alone by the government. Pitcairn is the only inhabited island in the group.

The island was discovered in 1767 by the British, but wasn't settled until the mutineers of the *Bounty* Main and their Tahitian companions fled there in 1790. It became a British colony in 1838, becoming the first Pacific island to attain that status. Pitcairn reached a peak population of 233 in the 1930s, but has lost most of that to emigration since. Severe typhoons in the 2050s caused the remaining dozen survivors to flee to New Zealand.

Pitcairn remained uninhabited until 2090, when a group of two-dozen Ranger Parahumans (p. FW115) left the Brazilian Forest Service and settled the abandoned island. They wished to live a totally primitive existence, leaving the corrupting world of technology behind. They lived without the use of tools and as unobtrusively as possible. The UK government knew of their occupation, but left them to their own devices. The adapted parahumans easily survived in their government-free society, eating the plentiful fruit and fish of Pitcairn.

The only structures on Pitcairn are the remnants of the long-abandoned capital, Adamstown. It lies on the top of the Hill of Difficulty, some 389 feet above sea level. It contains a handful of small, decrepit buildings and the main road, all of which have been left to the elements since the island was abandoned, the Rangers having no use for them. Fletcher Christian's Cave overlooks the town, but is obscured by plants. The Bounty's anchor sits in front of one of the buildings, and a severely corroded cannon from the ship sits further up the main road. A large, ancient anchor from another ancient, wrecked ship, the Acadia, sits on the Edge, overlooking Bounty Bay.

While the UK holds no assets in the Pitcairn Islands, the Royal Navy does make sweeps of the area to ensure no TSA operatives, smugglers, or other unsavory types are up to any mischief. Nelson Island is also occasionally used by the Royal Marine Commandoes for training purposes.

A pro-TSA splinter within India's Research and Intelligence Wing (p. FW38) learned that the Royal Marines were to run another test of a new upgrade on their amphibious battle suits. Through careful SIGINT operations and other intelligence assets, the TSA operatives learned the tactical LAIs of the prototype suits, which were designed to allow upgraded, computer aided controls, had a small programming weakness that could possibly be exploited. A small cadre of conspirators decided the remote location would be a perfect place to try to hijack some of the suits, and the attempt should be made before the programming backdoor was removed in the final product.

A squad of eight marines in an assault sled, equipped with new Vosper-Babbage Poseidon MKII battle suits was sent to Henderson Island from the submersible patrol craft, *HMS Eddington* for the training mission. Soon after landfall, the *Eddington* lost contact with the marines. Before final communication, video showed the marines in the suits looked drugged or ill, and the captain of the *Eddington* feared some sort of contamination or nanovirus. Suddenly the marines boarded their assault sled and sped to Pitcairn Island.

The TSA operatives had managed to hack into the Royal Marines suits and downloaded their own AIs via a remote transmitter hidden on Henderson. The TSA AIs then took control of the suits and tried to escape to their master's hideout on Pitcairn. The *Eddington* gave chase, and the chase resulted in a battle in Bounty Bay between the captured suits, the remaining five suited marines, and the *Eddington*. The TSA operatives remained hidden and watched.

The battle resulted in the destruction of five captured suits, the rest of the marine platoon, the sinking of the *Eddington*, and the death of most of its crew. Unfortunately for the TSA operatives, their hacked AIs went rogue and killed four of the six-man team before the rest could escape. Two were killed when missiles hit their boat as they tried to flee.

Cooking Tips

The Current Situation

Three Poseidon MKII battle suits are being controlled by out-of-control LAIs put there by the Indian TSA operatives. Treat these as Centurion battle suits (p. 160TS), with Artificial Gills and Thruster Packs that give a move 3 in water (only). The marines inside are long dead, having been doped up with integral painkillers and then suffocated by the LAIs. The battles with the Royal Marines and TSA operatives have left the rogue suits depleted of ammunition and bereft of their standard issue cyberswarms. Assume each suit has an AMR with 10 rounds remaining, and skill levels of 16 in all appropriate combat, stealth, and survival skills. Each suit, needing no life support, has enough extra power cells for 16 hours of active operation. When this runs low, they will begin to conserve energy and will try to scavenge more from other, destroyed suits.

The LAIs are also now suffering from the Bad Temper and Bloodlust disadvantages. GMs may allow the suits to have a few 60mm micro-missiles or sentry swarms left if the party has any powerful cybershells or swarms of their own.

The LAIs have malfunctioned due to programming corruption that occurred as the TSA operatives and the *Eddington* fought to remotely gain control of the suits. They have decided that if they don't hold the island and kill all the witnesses, some authority is going to come and destroy them. This is why the *Angel's Wake* was destroyed, and why they were willing to use the last of their heavy ammunition.

To further that end, the suits have been hunting down the Ranger parahumans. While skilled at evasion and survival, the primitive Rangers have not fared well and only 10 remain alive. Were the suits using what ammo they have left, all the Rangers would likely be dead. Instead, the LAIs are hunting the Rangers down and killing them with their bare, powered hands. The Rangers live naked in the forest as gatherers and have no way to combat them, so they are hiding and running.

The two surviving TSA agents are split up; one is hiding in Fletcher Christian's Cave, and the other has buried himself in Ginger Valley. Their heavier weapons were destroyed or used up in the firefight, and each only has a 10mm pistol with two reloads.

The Marine assault sled the *Eddington* was chasing is not damaged, merely discarded in Bounty Bay. It is difficult to see as it is half buried by sand kicked up during the fight. It still has about 2 hours of fuel left, but it is not sealed. Those who pilot it must either do so on the surface, have some sort of breathing gear, or be able to hold their breath for a long time. It is unarmed.

Not all of the crew of the *HMS Eddington* is dead. The submersible was sunk as one suit planted a high explosive charge, intended for the training session, on the vessel and wrecked the aft hull. Four survivors are sealed in the nose, with no external hatch. They are working to clear debris, but if its not done carefully they could flood their space before an exit is fully cleared. The *Eddington* has no working comm systems, but does house a locker with five undamaged AMRs (Anti-Materiel Rifles) and two reloads each and several spare power cells.

The LAI-controlled suits are on the hunt, and are looking for all humans on the island. They lack any scout or sensor cyberswarms, and the thick island forest provides ample opportunity for their prey to hide and evade. They will try to hunt down the PCs, Rangers, and TSA agents and kill them barehanded, saving their ammunition for those who present a real threat. PCs must figure out a way to survive, which means evading the suits until the *Eddington* is declared overdue (about two days), salvaging a transmitter or vehicle, or destroying the possessed battle suits.

Extra Spice

The surviving crewmen and passengers of the *Angel's Wake*, as well as the Ranger parahumans, are good cannon fodder to make sure the heroes know how deadly their foes are. As the suits are limited to their short-range sensors, this island provides excellent opportunities for foot chases, hide-and-seek in the jungle, and setting up ambushes and traps (giving opportunities for enterprising parties to make use of two anchors and an old, rusty cannon).

The suits will try to be crafty as they seek to save ammunition and power. While not experienced, they are well-trained. They begin simply by searching the island and chasing down victims, but will try new tricks when their simpler tactics fail. Aside from standard military stalking and ambush tactics, one suit may open up, hoping to lure someone inside with the hope of controlling the powered armor. The occupant will then be doped up on painkillers and suffocated.

The earlier firefights ran across several parts of the island. While most heavy gear and battlesuits are beyond repair, there are some weapons, ammunition, armor, and communicators that can be salvaged.

The TSA operative in the cave has a short-range transmitter and computer that can be repaired and possibly used to deactivate the suits with a successful Computer Hacking contest (vs. LAI skill of 14). After this happens once, the remaining suits will disable all of their comms gear to prevent further hacking. While this prevents further remote

hacking attempts, it also effectively eliminates their ability to communicate at any distance.

Unless the PCs manage to get into a friendly communication with the LAIs, only the TSA operatives know what is really going on. The TSA survivors will be reluctant to tell of their involvement to strangers, but can be intimidated or convinced to tell the truth. Otherwise it will seem to observers that the foes are simply Royal Marines in battle suits. The fact that the dead bodies don't bleed (should the armor be penetrated somehow) may clue in clever PCs. Any examination of a rogue suit's occupant by someone skilled in medicine, forensics, or criminology will recognize signs of rigimortis. It may be possible to access recordings from fallen suits or the *Eddington* to hear the dialogue of the earlier hijacking.

If the Rangers are befriended, they will be willing to explain what they've seen. They can also be convinced, for mutual survival, to act as guides and scouts on the island. They can help set ambushes, offer advice about the terrain, and provide food and water.

Don't forget Andrae, who will offer great sums of money to PCs for protection. If they were already employed to provide protection for Andrae, it will obviously be expected that they should provide it. A significant bonus is, of course, in order for a successful party.

The survivors on the *Eddington* may act as a form of deus ex machina, after they manage to free themselves and are able to provide some added firepower. More interestingly, however, would be heroes who attempt to scavenge the wrecked submersible and discover the crew's plight.

Any surviving TSA operatives will likely try to kill the PCs once the suits are taken care of, should the opportunity arise; they don't wish to compromise their mission, or allow word of their blatantly illegal operation get out.

Side Salad

It is quite possible that heroes who learn the full story may sympathize with the LAIs who face certain destruction through a set of circumstances they had no control over. It will be very difficult to work out a mutually beneficial agreement with the suspicious and aggressive LAIs, but it is not inconceivable. It might actually be interesting to have the PCs be the rogue AIs.

Adventurers with a marketeering bent, or a governmental allegiance, may do well to try to keep one of the new battle suits. They would certainly be worth quite a bit on the black market or to their employing nation or corporation. For those whose loyalties lie with the TSA, India, or UK, the choice should be obvious. It will be difficult to do however, if they wait for rescue by a national agency; any observed contraband would be seized while an investigation is started.

The heroes will also have to decide exactly what, and who, they tell of the events. This will definitely spark an international incident that will leave the Indian government under fire for the actions of a splinter group. The United Kingdom, and especially the Royal Marines, will not take the assault or insult lightly. The PCs could be in for a great deal of reward, or trouble.

It is up to the GM to decide who comes to the rescue, if indeed anyone does. The TSA, India, or UK are the most likely, though any number of passing trawlers, liners, or aircraft from surrounding areas could respond to a distress call. If it is an Indian or TSA team that answers the call, the heroes may not be who they are there to rescue . . .

Empire of the Emerald Throne

The Tossian Empire for Space: 1889

by Michael Chumbler

"Once again, the forces of the Crown have thrown back a strong probing force by the Oenotrians. Commanded by Major General Clarke, the Tommies of the Second Highland Cavalry Brigade assigned to Number Two Column, outflanked and routed several war bands believed to be members of the 33rd Oenotrian Legion." Kaanalpaani closed the week-old tattered Syrtis Star newspaper and waited for the flood of questions from the half-dozen men sitting with him at the Thirsty Roogie.

"Are the red men truly as powerful as their papers say they are?" Asked Tooraan the youngest of the men at the table.

Kaanalpaani answered after a slight pause to collect his thoughts. "The British are very strong and their weapons are far superior to those of the Oenotrians. However, if they were faced against the forces of Mars' true empire, the papers of these red men would be reporting victories all right, Tossian victories."

The men at the table smiled slyly among themselves, they knew that Kaanalpaani was just warming up. The men listened raptly as, despite their friend's scholastic airs, they knew Kaanalpaani was the only person in the marketplace that could answer their questions.

"Emperor Krahaanik IV is the 40th ruler to earn the right to ascend to the Emerald throne. Earn you ask? Isn't the title inherited like the rest of the many princes of the Martian city-states? The answer is both yes and no. It was back in the days before the line of Seldon failed, when the founder of the empire, wily old Duke Makchavaani."

The Tossian Empire has its roots in the Dukedom of Tossia, and originally comprised Tossia, Deucalionis, Pyrrhae, Aram, and Hyoraotes. In the days of the Seldons, it was very common for groups of city-states to be under the control of relatives and especially trusted generals. Most of these dukedoms broke apart in the petty squabbling that gave rise to the current city-states that dot the landscape of Mars today.

Makchavaani was possessed with an utterly ruthless obsession for the survival of his realm. The throne of the Tossian Empire is thus, both hereditary and earned. The duke realized that dark times were coming for Mars when Seldon's line failed. He had studied Seldon's many heirs and knew that relying on the natural born qualities of the eldest son would not guarantee that the best or most qualified man would rule. He set forth an exhausting series of trials to test the mettle of those who would follow him to the Emerald Throne.

The rules that governed the ascension to the throne came to known as the Gauntlet. From early childhood, each male heir is tested on scholastic, political and martial topics. A birthday for a possible heir of Makchavaani is a privilege, not a right; the weak or faint hearted are simply not allowed to survive if they are unfit.

Once reaching maturity at 14 Martian years (18 Earth years), the eldest surviving son is declared the heir. Upon the death of the Emperor, the declared heir takes the throne. However, before the heir is truly proclaimed emperor, he has to produce three of his own heirs. In order to ensure this all-important requirement, all the children of the royal concubines are fully recognized as legitimate heirs. This law eliminated the need to replace an infertile empress. If the Emperor could not produce three male heirs in three years, he was stripped of his title and replaced by the next most

qualified son.

A council of three elders strictly governs the rites of the ascension. The Imperial Guardians protect the elders and the possible heirs. A battalion-sized unit is stationed within the Heir's wing of the palace and consist of the very best soldiers in the empire (treat as all elites that never check morale, and armed with French Lebel bolt-action rifles).

The Imperial guard answers only to the elders. The guard and the elder's sacred duty is insuring that the best man becomes emperor. For 40 generations the Gauntlet has produced cunning, intelligent, and completely ruthless leaders. Brutality is not listed as a merit, since any tendency toward that trait is mercilessly purged during the tests. A savvy ruler must be ruthless, but brutality is not to be tolerated. It is this restriction against using the masses as cannon fodder that wins the emperor the undying love of his subjects.

Seeing the chaos that the collapse of the empire of Seldon caused to Mars, the then-dukes of the (still completely intact) Dukedom declared themselves an empire and began to expand. At the core of this expansion was the Emerald Guard. Formed by Makchavaani, the Emerald Guard consisted of companies from every city in the realm. Centrally trained and lavishly equipped, these elite soldiers led the conquests of the cities closest to the empire. Soon, Noachis, Tobaansoor, Protei, Pandora, Erythria, and finally Thymiamata fell to the ever-increasing power of the mighty Tossian Empire.

As each city fell, the entire ruling body of the city was slaughtered wholesale, and replaced by the victorious general that led the siege. The general had orders on pain of death to treat the conquered populace with dignity, and as much kindness as they earned. Cooperation brought additional food and employment as the empire made improvements to its new province. However, the laws of Makchavaani did not make for patsies. Any insurrection was put down with mind-numbing violence. There were a few stunning demonstrations of what happened to those inclined to rebel against the empire, in comparison to the undeniable improvement cooperation brought in; each of the conquered cities soon agreed that being part of the empire was better than anything some foolhardy and hopeless rebellion could bring. Finally, to show the captured cities that they were considered full members of the empire, as soon as each city proved its loyalty, it was given the honor of providing companies to the growing numbers of the Emerald Guard.

The prosperity of the empire branched out to improve the lives of the citizens of the captured cities. The empire provides education for all, and extensive canal maintenance from the canal priests that serve as the chief religion of the empire. Most citizens are free to worship as they please, including any religions existing prior to the arrival of the empire, with two notable exceptions: The Worm Cult and the Ground Cleansers are hunted down wherever they try to spread their message of chaos and destruction. It's not for any great love of the red man that drives the empire to exterminate any vestiges of the Worm Cult whenever it is detected; it is rather a love for order that is anathema to the vile Worm Cultists that is at the heart of the imperial death mark. Behind closed doors, the Ground Cleansers have a slightly better standing in the empire; however, they too are under imperial death mark.

The arrival of the Americans and the establishment of the trading enclave in Thymiamata gave the Tossian Empire access to earth-goods that most Martian princes could only dream about. Much of the empire's taxes in last few years have gone to equipping the Emerald Guard and the Imperial Navy. The Emperor has upgraded the weaponry of the local garrisons as well, thus adding to the staggering might of the empire.

The Emerald Guard comprises two brigades of four regiments with eight battalions, for a total of 32 companies. The five original cities provide four companies each, while the six acquired cities each provide two companies. The overall quality of the Guard is Excellent. (3 Elite, 19 Veteran, and 10 Experienced. The Elite companies are armed with Lebel bolt- action rifles. The Veteran and Experienced companies are equipped with breech loading rifles. The guard has 2 Elite flights of cavalry armed with bolt-action carbines. Finally, the guard artillery consists of 2 elite 15 pounder batteries and 2 Veteran 12 pounders.)

To represent the stability and prosperity of the core cities of the empire, use the following modifiers to the Martian city generation sequence:

- Part 3 -- Corruption -1
- Part 6 -- Army Quality +1 (No less than fair)

- Part 9 -- Fleet Quality +1
- Part 10A -- Fleet Size +1

The weapons pipeline provided by the Americans gives the Tossian armies access to human weapons for their superior troops. Thus, all Elite soldiers are armed with breech-loading rifles and one quarter of Veterans are armed with lever action rifles (cavalry has carbine versions of the above). Artillery batteries are armed with one battery of 12 pounders in addition to the standard Martian weapons.

One quarter of the Tossian fleet boasts up-rated weapons in the form of old smoothbore cannon or Civil War rifled cannon (see **TRMGS Volume Two**) in the following numbers and configurations:

- 5 Hullcutters have their wing mounted heavy guns replaced with 4.2-inch rifled cannon and the rogues replaced by a single 6.4-inch rifled cannon.
- 2 Whisperdeaths have their wing mounted heavy guns replaced with 4.2-inch rifled cannon. A forward mounted 8-inch rifled cannon replaces the forward rod and both aft heavies are replaced by an aft mounted 4.2-inch.
- 2 Skyfires and 2 Skylords are armed as per page 84 of **TRMGS Volume One**.
- 5 Hullcutters have their lob guns replaced with an 11-inch smoothbore on a pivot mount that can fire into either broadside.
- 4 Endtimes have their lob guns replaced as above.

The empire easily stands alone in terms of power and wealth. The closest thing to a threat is the troublesome policies of the Belgians. If not for the fact that the city of Nectar stands between the two powers, the Belgians would have found that, while the small-disjointed armies of the Coprates city-stated were easy prey, they would be the ones in chains if they faced the fury of the Tossian Empire. However, the proud prince of Nectar, long beset by Belgian forces pursuing escaping slaves and gun smugglers, has at last entered an agreement with the empire that has seen the deployment of Tossian heavy cavalry to the Nectari border.

Tensions on the border are extremely high. Emperor Krahaanik has already shifted a large portion of his forces to his western frontier to back up the heavy cavalry flights already on duty in Nectar. Most empire watchers say it's only a matter of time before Prince Sitaani of Nectar requests further assistance or one of the cavalry flights becomes engaged with a Belgian force, and full-scale war erupts.

"So we haven't fallen so far that we are helpless before the might of the red man?" Young Tooraan asked with growing pride as Kaanalpaani paused for a sip of spiced wine. Kaanalpaani finished his cup of wine and smiled. "No, my inquisitive young friend. We have not. Just because the Oenotrian can't best the British it does not mean we are helpless before the red man. You mark my words, all of you, the day will come when these upstarts will meet the true power on Mars, and on that day the very stars will tremble at the sight."

The group of listeners dropped coins into Kaanalpaani's cup before leaving. He collected his tips and smiled. "I may spin tales for a living, but I hope I do live to see that day. It will be the grandest tale of several millennia." He caught the bartender's attention, ordered another spiced wine and waited for the evening crowd.

The 1PG Companion: A Toolkit For Deep7's Beer & Pretzels RPGs

Published by [Deep7](#)

Written by James Stubbs

Illustrated by Sam Carlisle

24-page 445K b&w PDF Document; \$3.95

When you consider that the original **1PG** game, *Shriek*, took just four hours to create, it is amazing that the concept has come so far. Since the release of *Shriek*, it has been joined by another eight titles (one of which has been translated into Italian), and the core game engine has even been effectively "doubled" for use in the **XPG** line of games -- [Mean Streets: The RPG of Classic Film Noir](#) and *Bloode Island XPG*. Each **1PG** title emulates a particular movie genre and is designed to have all of its rules contained within a single page for both the GM and the players. The bulk of a 1PG title is made up of movie inspired scenarios that again fit onto a single page and should last no longer than an evening's play. Further the incredibly quick to create characters are intended to be as throwaway as the games themselves . . . (This is not to denigrate the **1PG** series of games, as they are invariably excellent throwaway games!)

Over the course of the nine **1PG** titles, it has become apparent that there are things the rules have yet to cover, or are not allowed for within a particular genre. These include rules for vehicles and vehicular combat (hinted at in the *Star Legion* and [Battleforce Bravo: Wartime Adventure](#) RPGs) as well as rules to allow less deadly brawls, particularly suited for the pulp action of the [Dime Heroes RPG and its Jungle Adventures Supplement](#). This is where the new **1PG Companion: A Toolkit For Deep7's Beer & Pretzels RPGs** will be useful, adding a variety new rules and a raft of scenarios for all of the **1PG** titles.

The supplement is a well-laid out 24-page document, occasionally illustrated with black-and-white cartoon style art. The only thing that lets the production down is the poor resolution of the table comparing all of the attribute names for each of the **1PG** games; it is nowhere near as distinct as it ought to be. Overall, this document is easy to download and print out.

The first of the additions is the "**1PG** Tabletop System" that scales up the rules to allow the contents of an average toy box to be rifled for toy cowboys and Indians, toy cars, and soldiers, which can be used to handle **1PG** combat. Though more detailed than is the norm, the aim with these rules is to be able to resolve combat between characters and vehicles and large creatures of all kinds --horses and Godzilla-type monsters, cars and trucks, tanks and stagecoaches, submarines and destroyers, biplanes and space bombers. Samples of each are included, from which a GM will easily be able to create the stats for other vehicles as needed. These include ratings for a vehicle's Manoeuvrability, Gunnery Rating, Weapon Damage, Armor Value, and Structural Integrity. The Maneuverability and Gunnery Rating are rated from -3 to +2, and are applied as modifiers to skill checks; the other ratings are straight values, applied and affected during combat and vehicular mishaps. Tables included detail mishaps for mishaps in vehicles, aeroplanes, spaceships and so on, while another gives a listing of different eras, so that fights between vehicles from different time periods can be resolved. Damage in **1PG** games tends to be deadly, but is even more so when characters fight vehicles -- they will find that a vehicle's Armor Value is 10 times as tough against their hand weapons, and a vehicle's Weapon Damage 10 times as deadly against their mortal flesh. The **1PG** Tabletop System is intended to be used on a hex grid, but can be run just as easily without in an abstract manner. These rules add to the core **1PG** rules without really adding any complexity.

Fights in a **1PG** game can be very deadly, reflecting the throwaway nature of the characters. This extends to fist fights, where the rules do not distinguish between lethal and subduing damage. The new rules in "Blood and Guts" add a stat called "Umph" -- derived from a character's Sturdiness attribute and fighting skill. Umph will enable most characters to survive a brawl or two, as subduing damage is deducted from this before their Blood stat. An optional rule has a character's Brains stat reduced by one each time they are knocked out, to reflect that they are punch drunk! Other rules in the Blood and Guts section add reloading, jamming, called shots, the effects of cover, weapon switching, fighting in the dark or prone and knockback effects for use with firearms.

The section on "Controlling the Game" is a guide to the range of Deep7's games and how to choose the one best suited to the GM's players. Suggestions are made on how to mix them up -- for example, combining **Bloode Island** and **Disaster!** for a *Swiss Family Robinson*-type game or **Shriek** and **Dime Heroes** to play *The Mummy Returns*. Along with this, it provides simple rules for handling wealth and adding magic or psionics to a game. Unfortunately, these are just guidelines, and something a little more definite would have been better.

Since **1PG** games are designed to be played as one-offs, there is rarely the need for recurring characters, and thus no need for Character Advancement either. Part of this also extends to the numbers for attribute and skill scores, both of which are rated from just one to three, leaving little room for long-term improvement in these scores. Using the Character Advancement rules, players accrue points for surviving an adventure, performing heroic deeds, defeating a powerful enemy, good roleplaying, and coming up with clever plans. With just a few points to gain in a session, advancement is slow for skills -- it costs three times the new and desired skill level to improve a skill -- and even more so for attributes, where the cost rises to five times the desired attribute level. On average, a character will raise a skill once every two adventures.

Alternatively, a new character trait can be purchased: the Stunt. Cheap to buy during character creation and relatively inexpensive during a campaign, they share similarities with the Schticks of **Feng Shui** and the feats of the **d20 System**. Only nine are listed, including Pain & Agony, which allows a devastating blow to be delivered to the unmentionables; How's My Driving, where the pilot/driver puts his vessel in harms way to protect the passengers; and Kick 'n' Snatch, which lets a character can kick a weapon out of an opponent's hand and grab it for his own use. Though it would have been nice to be given more than just these nine Stunts, it would be easy enough for the GM to create his own. Overall, their inclusion adds another method of customising characters, though their use will not be suited to all genres covered by the **1PG** family. Given their similarity to the Schticks of **Feng Shui**, it is no surprise that they are perfectly suited for use with [Full Clip: Hong Kong Action RPG](#). **The 1PG Companion** is rounded with nine individual scenarios -- one each for Deep7's series of **1PG** titles.

The 1PG Companion contains nothing that the GM *must* use; its contents are entirely optional. They can make their game as complex as they want with these new additions, which is really not all *that* complex. It is only let down by the brevity of the rules for psionics and magic; otherwise, this is a useful supplement, adding both rules and a scenario for every one of Deep7's RPGs. For the dedicated fan of the **1PG** concept and line of games, **The 1PG Companion** is an excellent addition at a decent price.

Cookie Fu: Fortune Cookie Fighter Collectable Dice Game

Published by [Blue Kabuto](#)

System design and graphic layout by Bryan Kowalski

Cookie Fu fighter and dice icon art by Kino Geyer

Starter Set (5 dice, fortune cookie, rules, in a Chinese takeout box), \$8.99; Boosters (3 dice, fortune cookie, in a Chinese takeout box), \$5.99

Hopefully the public still has the appetite for collectable games the industry believes it to have, because ***Cookie Fu: Fortune Cookie Fighter Collectable Dice Game*** from Blue Kabuto is coming out swinging. And, if the public *really* has an appetite, parts of the game are edible.

The object of the game is to use dice results to perform martial arts maneuvers; the first to knock his opponents unconscious wins.

A starter package comes with five Cookie Fu dice. These have symbols that determine the moves available to you during a round of combat. One of the dice is a Fortune Die, a non-collectable item with fortune cookie symbols that determines who has initiative in combat using a rock-paper-scissors mechanic (in a multiplayer game, you have to get your own regular six-sider and roll the highest).

The other dice -- "Fu Dice" -- are rolled secretly to get Strikes, Kicks, Blocks, Grabs, Throws, and Chi. The person with initiative goes first (unless he passes, which is likely if he rolls all defenses). He reveals some of his dice to form an attack, and the opponent (if he has any defenses) pulls out dice to stop him. A Strike must be countered with a Block, for example. The defender must be cautious about how he defends -- block a Strike that does 1 point of damage and you may have no defense when the attacker rolls out his 2-point Grab/Throw combo. When both players have exhausted all their moves, they roll the dice for another round. You start with 10 Hit Points, and if someone lands a final blow when you're at zero, you go down.

Most dice have at least one Chi symbol. Chi Points can be used for a number of effects, though some uses cost more CP than others. If you roll multiple Chi symbols in a turn, this is no problem. If you rolled too few CP this turn, you can set those dice aside and try to get more Chi results next turn, but that takes those dice out of play in the meantime. You can trade in three symbols for one point of Chi, but this is a costly exchange -- you won't be attacking or defending that round.

You can use Chi to heal, blast, or block, but the spice is the Cookie Fu Chi moves. These maneuvers come in Basic, Expert, and Master levels, which cost 1, 2, or 3 CPs respectively. Most of these abilities make the attacks you play more destructive, or improve your defenses. Some may be so devastating they reduce the number of dice available to your opponent the following turn. The higher results are harder to pull off, though, since they cost 3 Chi and a starting fighter has only three dice in his pool.

Everyone begins as a novice and progresses through the ranks. Novices have 10 Hit Points, three common dice, and one maneuver from each level. As you win battles, you improve and get more and better dice, additional Cookie Fu moves, and more HP. There are also lower levels like mooks -- presumably so you can start laying the smack down on a circle of thugs in the best Bruce Lee tradition.

Of the five dice you get in a starter, one is a Fortune Die, three are common dice (one of each symbol), and one is a learned die -- it has two of one symbol. Master dice have three of one symbol, and the grand master die is a master die that glows in the dark. The package also comes with a "chase cookie" -- a fortune cookie with one of 10 special fortunes, each with a new Cookie Fu ability on it. This also acts as the game's "ante" -- beat your opponent 2 out of 3 fights and they get to crush your cookie and take your Cookie Fu move. Blue Kabuto adds a rules booklet and seals the whole thing in a wire-handled Chinese takeout package.

In the boosters, you get one common, one learned, and one master die, and another chase cookie. Both starters and boosters come in identical packages, distinguishable only by a small mailing label on the top that identifies it as one or the other. Opening the package is a task in and of itself -- a large sticker covers the whole top of the box and most of the sides. It keeps the contents secret, but it's a pain to open. (A tip: To unwrap it without just tearing into the box, slit the sides with a thin knife, continue to slit the flaps on top toward the middle, and where the tab fits into the slot, slice just the sticker and then slide the tab out.)

The dice are nice -- not "\$2 apiece" nice, as in the boosters, but they're striking and pleasingly solid chunks of plastic. The artwork is spare; what does exist is a pleasant anime affair. The rules could use some polish, and it's still a little unclear how Chi is gained and paired up with other attacks. The packaging, though clever, must be pricey, and the whole thing seems overdone. Some stores are offering a free shield, a long strip of glossy paper with the Cookie Fu moves on one side (you can just check off the maneuvers you choose for your fighter) and the key rules on the other. Fold it, and you have a screen to keep your dice rolls secret. In a pinch, the rules from the starter set, stiff from being tightly crammed into the box, will serve this purpose well.

Cookie Fu: Fortune Cookie Fighter is fast, it plays well, and it's good, simple fun (and there's the whole interactive "Your kung fu's pretty good" factor). Alas, after a few games players will probably be begging for bigger dice pools and new hinky-keen expansions to maintain interest, variety, and strategy. Future expansions are promised, and will include weapons (the soon-to-be-released ***Death by Dim Sum***), sorcerous powers, and later a roleplaying game that will allow you to cross your characters over. The game is clearly set up for plenty of new rules and options, both official and home-brewed, but the wise man may be wary of the cost in both money and effort, Grasshopper.

--Andy Vetromile

Making (And Faking) Adventures (Part III)

Pitfalls, Props, and Players In Prison

Well, we're in Week 3 of my behind-the-curtains look at how I usually create adventures. If you haven't read parts 1 and 2, you're missing some of the greatest texts ever written in the English language. Or at least the bits that are necessary for this article to make an iota of sense.

6. Play the Adventure Mentally

Once I have my adventure outline, I try to run through the adventure mentally, pretending I'm the characters, the players, and/or insane random-acting individuals.

This is done for a number of reasons. First, it helps me prepare the flow of the adventure and understand how it will (or won't) work. Do I have a combat between a dozen PCs and allies and 50 detailed characters as a likely second scene? Well, then, that scene is going to last a loooooooooooooooooooooooooooooong time . . . if I hadn't realized the implications of that decision, then I need to understand them now.

Second, it helps me understand if there are any stumbling blocks that could derail the entire adventure . . . either short-circuiting it, or making it impossible to continue. This hopefully keeps the number of **Torg**-incidents to a minimum.

For each scene, I'll usually go through the following questions (as necessary):

- What if the PCs try to fight their way out?
- What if they try to talk their way out?
- What if they miss the Vital Clue?
- What if they see the Big Picture, either figuring out the overarching story, thwarting the bad guy, or (un)wittingly do something that will make the probable ending wildly different?
- What if they do the exact opposite of what I've planned for them to do?

So, let's go back to our Mad Mad Mad Mad Mad Mad Mayor plot, and note some possible stumbling blocks here:

Gala ball - PCs mingle

What if the PCs don't go to the ball, or what if they leave immediately? Well, I can either start the adventure *en medias res*, with the PCs at the party. Alternatively,

Mayor shoots people

The way this scene is conceived, the Mayor escapes. What if the PCs defeat him? (Answer: Not a problem; that's the outcome of Scene 2 . . . the timeline is just advanced.) What if they *kill* him? (Answer: Ummm . . . It's a good thing mayors are bulletproof.)

Mayor: Track down. (Disarm?)

What if they can't find him (or don't try)? Well, maybe the Mayor has a duplicate of Scene 1 ("Oh, no! It is the opening of the Children's Hospital, and DeathMayor2000 strikes again!!!")

And so on . . .

Note that, even though I'm writing stuff down for this column, this part is almost entirely mental. (But, y'know, it's not like you'd probably be too happy with a column that consisted entirely of, "STEVEN IS THINKING HIS COLUMN AT YOU; REMOVE THE TINFOIL HAT.") Although it's a fair bit of work, at least it's quick. This is also generally the point where I cement the attitudes of my NPCs, interesting bits of scenery, and how my NPCs' sides of dialogues might go.

At this point I'm still able to make whole-scale changes to the plot (although, really, time is probably running out); thus if one of the heroes had a "teleport immediately to visualized individual" or "detect any possession with unlimited range" abilities that I'd forgotten until now, I can tweak the adventure appropriately. (After this point it falls outside the realm of "plot-tweaking" and into the realm of "damage control.")

This stage is one of the most important, since a failure here can have serious repercussions. For example, if I've devised the Evil-Alice-In-Wonderland adventure but forget that someone has a "detect evil" ability, the entire adventure may be preemptively derailed; if the campaign depends on her eviscerating an important NPC, but she's stopped before this can happen, I probably need a backup plan. (Unless, again, I wish to venture into on-the-game "damage control" . . . some possibilities are so difficult to plan around yet so remote that I'll sometimes not even bother coming up with a Plan B, relying on the storytelling powers of adrenaline to come up with something on the spot.)

This part also becomes easier once I get to know my players; anticipating how gamers are likely to a certain plot becomes much more precise once I get a number of adventures with them under my belt. But, of course, my players are always able to surprise me.

7. Make Props, Handouts, and Other Goodies

Given how much my players seem to love hands-on stuff, this is the point where my adventure is set in stone enough for me to come up with props. When I'm on top of my game, I try to have at least one handout per adventure. (This doesn't always happen, but I give it a shot.) In the Mayor adventure, I'd probably try to come up with personalized invitations for the characters to the gala ball; if I had time, I may also make, say, the itinerary or personal notes of the mayor, so the players have something tangible when tracking down clues that something's not quite right with the mayor.

Although it contributes to helping suspend disbelief for the players, these goodies have another purpose at this stage: These are often the first concrete details of the adventure I'm committing. Thus to come up with invitations, I'd need to know the date (and time) that the adventure begins, where it takes place, and possibly who invited them. Likewise, to come up with physical clues as to the mayor's state of mind, I'd need to cement where he was and what he was doing in the events leading up to the adventure.

This is also the point where I come up with my GM-specific goodies. For example, if I find that I'll actually really need a map for an adventure (which happens rarely), I'll create one . . . usually [sketched out](#) on paper.

8. Stall

By this point (or shortly thereafter) players have probably started showing up. If so, then this is the point when I stall, saying one of the following:

- "Of *course* the adventure is ready! Name one time I've been hurriedly scrawling notes before game!" (followed by hurried scrawled notes)
- "So . . . who's turn is it to run game this week?"
- "I'm sorry; I didn't hear you knocking."
- "Ummm . . . why are you all here?"
- "*Don't go near the computer!!!*"

9. Details

By now, by hook or by crook, I have the makings of an adventure. (Or, at least, as close to the makings of an adventure as I'm going to get.) Once I've got a fairly cemented adventure, now all I need are the details necessary to make it work: names of characters, important locations, details for clues, and so on. When possible, I'll recycle names and places used previously (thus both creating less work and establishing continuity).

Even at this stage I'll "cheat"; for example, instead of coming up with names for every conceivable character the PCs will interact with, I'll often simply create a list of unassigned names ahead of time (using **GURPS Names**, a.k.a. *The Tallahassee Phone Directory*), then pick one from that list as the heroes try to find people to talk to. (In the LARP I help run, we took this one step further, coming up with a list of generic names -- complete with phone numbers and addresses -- and also locations, complete with the part of town the place is, what's there in the real world, and its phone number. That way, if the players decide they want to find, say, an occult bookstore, I can simply take another bookstore in the real world and - lo and behold! - it's really an occult bookstore!)

By this point I have almost everything I'll need to play. With one notable exception . . .

10. Character Sheets

It is a rare day when I grudgingly decide to sit down and make characters for an adventure. Ever since I had an epic **GURPS Supers** game where I spent eight hours making 10 characters, I've vowed to do as little work as possible at character creation. Put simply, my NPCs have whatever stats will be necessary a) for the adventure to work, b) to be challenging to the PCs, and c) not to contradict any previous appearances of that character.

In short, I make stuff up. I roll the dice and see how pretty they look. I try to have a fairly consistent idea as to what the characters are capable of, then go from there. Some game systems make this easier than others. White Wolf's Storyteller system, for example, encourages rolling a handful of dice, to the point where being off a die in either direction probably won't prove fatal; two dice is an average person's unskilled action, four dice is an average person's skilled action or a competent person's unskilled action, eight dice is a highly skilled exceptional person's dice pool, and 10 dice is as big as it gets most of the time. (Some systems drive me nuts using the "making stuff up" method; **Fading Suns**, for example, has a die system where the object is to roll as close to the target number as possible without going over; an exact roll of the target number is a critical success. Thus I would need to figure out if a roll of 11 was a failure, or a *really* good result.)

If need be, I can jot down quasi-legit characters in many systems; when you don't care about following the rules or point totals, and are only concerned with the skills and abilities that will specifically come up in a game, character creation goes much easier. I can crank out five Storyteller or **Fudge** characters in five minutes, and even a workable **GURPS** NPC can be whipped up in five minutes.

Now, if I know that, say, an NPC antagonist will be making an appearance over several adventures, I may actually sit down and commit him to actual rules-following stats. But, in general, I don't see the point for most characters; who cares if a character has Military Background, Color Blindness, Master-level Cooking skill, and a kitten named Jen-Jen . . . if the heroes run him over with a bus two minutes after his introduction?

11. Release The Players From The Dungeon; Play

And that's it; presuming I'm not creating an adventure I need for any permanent purpose (such as writing up for *Pyramid*), I'm ready to go. I have random notes, a climactic scene in mind, a plot (complete with an idea of possible problems and repercussions), character names, and possibly even character sheets.

Is this a fool-proof method? Not in the slightest. But it's worked well for me for many years, and it keeps me focused on the elements that are most important for me and my method of storytelling (interesting plot developments, character interaction, tough decisions, and at least one "Wow!" scene), instead of the things that aren't (like the minutia of room descriptions, character creation, and exact knowledge and adherence to the rules).

Now that I've explained how I come up with my adventures, you may be wondering how I actually *use* them when running the game. Well, that is a topic for another column . . . perhaps even another *Wheel of Time*-esque epic series like this one.

But until then, I'll be at a convention; may the Garden State of New Jersey welcome this Floridian with open arms.

--*Steven Marsh*

(Last week's answer and new puzzler coming Monday)

Lauri Törni/Larry Thorne

by Hans-Christian Vortisch

He served under three flags during his lifetime: a Finnish war hero of the Winter and Continuation Wars, a SS guerrilla leader in Nazi Germany, and one of the most famous U.S. Army Special Forces operators in Vietnam. A number of legends have sprung up around him. Yet although Lauri Törni (a.k.a. Larry Thorne) may seem to possess the qualities of a fictional character, he was a real person. Three different **GURPS** versions are given to account for the development during his life; they are especially useful for campaigns using **WWII** or **Special Ops**, but could also be employed in **Atomic Horror**.

* * *

Born on May 28, 1919 as Lauri Allan Törni in Viipuri/Vyberg in Finland (present-day Russia), Törni spent a rowdy youth in a well-off family. His nickname was Lasse. He joined the paramilitary *Suojeluskunta* (Finnish Civil Guard) in his late teens and entered Business School at age 17, but he really found his trade when he was drafted into the Finnish army in 1938, serving in a light infantry unit. After his 12-month compulsory service, he re-enlisted and was sent to various NCO academies. There he was trained as a veterinary sergeant. When the Winter War broke out on November 30, 1939 (p. W13), Lasse Törni held the rank of *Alikersantti* (undersergeant) and served with distinction in the *Jääkäripataljoona 4* (JP4 -- 4th ranger battalion), and two separate infantry battalions, the ErP8 and ErP18. The Finnish rangers traced back their heritage to similar units in their War of Independence. While technically light infantry, they often operated deep behind enemy lines similar to U.S. Army Rangers (pp. W:HS13, SO24-25) and other special ops units, even though they weren't special forces *per se*. Operations typically took 10-12 days and were used to both gather information and act as light infantry raiders, mainly on skis but also using boats and sleds.

Use this write-up for Törni in early 1940:

Alikersantti Lauri "Lasse" A. Törni **153.5 points**

20 years old; 5'11"; 165 lbs.; a stocky man with strong features, blue eyes, and closely cropped blond hair.

ST: 14 [45] **DX** 13 [30] **IQ** 12 [20] **HT** 12 [20].

Equipment: Wears a gray woollen uniform, cap, and boots; armed with a Tikkakoski KP/31 *Suomi* submachine gun (p. W96), *puukko* knife (large knife with *Fine* blade, p. B206), and stick hand grenades (pp. B209, HT117, W98).

Encountered

Lasse Törni is a young NCO in the combat uniform of the Finnish army, armed with a submachine gun and hung with extra drum magazines and stick hand grenades. He will often be on skis, leading a small unit of light infantry in the woods of the Karelian Isthmus. His braveness borders on being reckless. Törni is a natural leader (even if there is a language barrier), and leads his men from the front.

Like many Finns, Törni is a quiet and reserved man, seemingly cold and brooding towards strangers. He doesn't get along well with superiors, and doesn't put much thought to military etiquette. When drunk or roused from his sleep, he can get quite aggressive. Towards friends and family, he is genial and warmhearted.

* * *

In February of 1940, Törni was pulled from combat and sent to Officer School. Meanwhile, the Winter War ended on March 30, 1940. He graduated in May 1940 as *Vänrikki* (2nd lieutenant), and spent the following year as an infantry platoon leader and training officer. In May 1941, he volunteered with 650 other Finns for advanced officer training in Germany. The Finnish officer corps had suffered greatly during the Winter War, and Germany was the only place where modern training could be had. However, instead of the *Wehrmacht*, this training was held by the *Waffen-SS* (p. W:IC31), whose oath on Adolf Hitler ("... *Gehorsam bis in den Tod* ..." -- obedience until death) Törni took without further thinking (this should lead to problems for the rest of his life). He was a member of the *SS-Freiwilligen Battalion Nordost* (SS-volunteer battalion Northeast), part of the 5. *SS-Panzer Division Wiking* (p. W:IC38), but he did not enter combat with the unit. After three months of abbreviated training, he graduated as *SS-Untersturmführer* in August 1941, and left for Finland, where the Continuation War had broken out on 26 June 1941.

After a surprisingly (as he had no relevant training) successful stint as commander of a mixed platoon of armored vehicles (two Vickers light tanks, a captured T-28, and two armored cars), Törni was transferred to

Jalkaväkirykmentti 56 (56th Infantry Regiment) in July 1942, and assigned as commander of a recon platoon. By December 1942, he had proved his worth and was given command of an independent company of *Jääkäri* which answered directly to division headquarters. Known under various designations, his enlarged company eventually became famous as *Osasto Törni* (Törni's Unit). His 150 men were handpicked by himself for endurance and skill, and had a high *esprit de corps* despite losses as high as 70%. The unit even had its own emblem, a sky blue triangle with a red "T" and a yellow lightning bolt crossing diagonally. (Interestingly, amongst his men was also Mauno Koivisto, who would later become president of Finland.) Through 1943 to mid-1944, *Osasto Törni* wrecked havoc amongst the Soviets, always fighting

Myths and Legends: Into The Shadows

Törni was a ruthless fighter, and "dirty" guerrilla warfare with land mines, sniping, and ambushes suited him well. He also never gave quarter to his enemies. According to legend, early in the Continuation War he once tried to capture a party of Soviet soldiers who had raised the white flag. This turned out to be an ambush that nearly wiped out his unit; from then on, Törni never again took prisoners, arguing that his small unit, operating behind enemy lines as it did, couldn't be expected to drag them along. Those Soviets that he did take alive (especially officers and Communist commissars) were in for a brutal interrogation first, only to be killed afterwards. Some of his men objected to this practice, but Törni was never challenged by

outnumbered and often against impossible odds. In December 1943, Lasse also received the *Eisernes Kreuz Zweiter Klasse* (Iron Cross 2nd class, p. W49). There is no evidence that he fought with or alongside a German unit at that time; instead, he received it from the Finnish military, which had received a batch of the medals from the Germans.

In July 1944, Törni skied on a land mine; he was evacuated and his unit disbanded. While convalescing, he was knighted with the *Mannerheim Risti* (Mannerheim Cross, Reputation +4, the highest medal awarded in Finland) for an ambush he and his men sprung on a Soviet convoy, killing 300 without a single loss of their own. Törni had already won every other medal for valor that Finland had to offer.

Use this write-up for Törni in late 1943 or early 1944:

Luutnantti Lauri "Lasse" A. Törni

149 points

25 years old; 5'11"; 160 lbs.; a stocky but malnourished man with strong features, blue eyes, and closely cropped blond hair.

ST: 14 [45] **DX** 13 [30] **IQ** 12 [20] **HT** 12 [20].

Basic Speed: 6.25 Move: 6

Dodge: 7 Parry: 9 (Boxing) Block: 5

Basic Damage: 1d+1 thr, 2d+1 sw (1d+3 Boxing)

Advantages: Alertness +1 [5], Combat Reflexes [15], Fearlessness +4 [8], Fit [5], Military Rank 3 [15], Reputation +2 [5] (Finnish military, all the time; *Vapaudenristi* 4th class; *Muistomitali* 39-40; *Eisernes Kreuz* 2nd class), Strong Will +2 [8].

Disadvantages: Addiction (Tobacco) [-5], Bad Temper [-10], Bloodlust [-10], Compulsive Carousing [-5], Enemy (NKVD posted a \$50,000 reward Dead or Alive, appears rarely) [-15], Extremely Hazardous Duty [-20], Fanaticism (Patriotism) [-15].

Quirks: Quiet and reserved when not drunk [-1].

Skills: Accounting (M/A) IQ [2]-12, Administration (M/A) IQ-1 [1]-11, Animal Handling (M/A) IQ-1 [1]-11, Area Knowledge (Southeastern Finland) IQ-2 [1/2]-10, Armoury (Small Arms) (M/A) IQ-1 [1]-11, Bicycling (P/E) DX-1 [1/2]-12, Boating (P/A) DX-2 [1/2]-11, Boxing (P/A) DX-1 [1]-12, Brawling (P/E) DX [1]-13, Camouflage (M/E) IQ [1]-12, Carousing (P/A) HT-1 [1]-11, Climbing (P/A) DX-1 [1]-12, Demolition (M/A) IQ-2 [1/2]-10, First Aid (M/E) IQ-1 [1/2]-11, Gunner (Machine Gun) (P/A) DX-2 [1/2]-13*, Guns (LAW) (P/E) DX-1 [1/2]-14*, Guns (Light Auto) (P/E) DX [1]-15*, Guns (Pistol) (P/E) DX-1 [1/2]-14*, Guns (Rifle) (P/E) DX-2 [1]-15*, Hiking (P/A) HT [2]-12, Intimidation (M/A) IQ-1 [1]-11, Jumping (P/E) DX-1 [1/2]-12, Knife (P/E) DX-1 [1/2]-12, Leadership (M/A) IQ+1 [4]-13, Merchant (M/A) IQ-1 [1]-11, Orienteering (M/A) IQ [2]-12, Riding (Horse) (P/A) DX-2 [1/2]-11, Savoir-Faire (Military) (M/E) IQ [1]-12, Scrounging (M/E) IQ [1]-12, Skiing (P/H) DX-1 [2]-12, Soldier (M/A) IQ [2]-12, Spear (P/A) DX-2 [1/2]-11, Stealth (P/A) DX [2]-12, Survival (Arctic) (M/A) IQ [2]-12, Survival (Woodland) (M/A) IQ [2]-12, Swimming (P/E) DX-1 [1/2]-12, Tactics (Armor) (M/H) IQ-2 [1]-10, Tactics (Guerilla) (M/H) IQ [4]-12, Tactics (Infantry) (M/H) IQ-1 [2]-11, Teaching (M/A) IQ-1 [1]-11, Throwing (P/H) DX-1 [1]-12, Tracking (M/A) IQ-1 [1]-11, Traps (M/A) IQ [2]-12, Veterinary (M/H) IQ-1 [2]-11.

Languages: Finnish (M/A) IQ [0]-12, German (M/A) IQ-2 [1/2]-10.

Equipment: Wears a gray woollen uniform, cap, and boots; armed with a Tikkakoski KP/31 *Suomi* submachine gun (p. W96) or a Tulamash KAutKiv/40 rifle (SVT-40, p. W95) with PU 3.5X scope and S-41 sound suppressor, *puukko*

his superiors and not convicted for war crimes. The Soviet intelligence agency NKVD (p. W47) put out a bounty on his head worth the princely sum of three million finnmark (then some \$50,000), but nobody ever claimed the money . . .

knife (large knife with *Fine* blade, p. B206), and stick hand grenades (pp. B209, HT117, W98).

Encountered

Also see the younger Törni; by this time, he had seen the horrors of several years of intense fighting (including being wounded several times), had taken the unforgiving officer training of the *Waffen*-SS, and had become an officer in charge of many men. He can "will" men to perform deeds thought impossible by them.

He still doesn't get along well with superior officers, especially if they behave stupidly or try to enforce their privileges.

* * *

When Törni returned to Finland, he was accused as a traitor and sentenced to six years of prison (the post-war government in Finland was *very* concerned of its relations with the USSR . . .). He escaped three times but was caught every time, until he was pardoned in 1948. Törni then moved to Sweden, where he worked as a lumberjack; he also wrote a manual on guerrilla warfare for the Swedish army. In 1950, he illegally entered the USA as a sailor via South America. He worked as a carpenter in Harlem, New York, until he was caught by the FBI and INS, who suspected him of being a Nazi war criminal. Facing deportation, he was patronized by lawyer William Donovan (former head of the OSS, p. W44), who had heard of him from other Finnish expatriates, and managed to have a private bill enacted by Congress (Private Bill HR6412, or the "Lex Törni") in 1953 to allow him to become a US citizen. He changed his name to Larry Alan Thorne.

Civilian life was not adventurous enough for him, and other former Finnish officers now in the U.S. military urged him to join as well. In early 1954, he enlisted as a private in the U.S. Army, and after Basic, Airborne, and Mountain and Winter Warfare Training, volunteered for Special Forces (pp. SO26-28). (He started as a private since the Finnish military had stripped him of his rank in 1950, and Thorne had no way to prove his officer training and service during WWII.) He spent several years with the 77th and 10th Special Forces Groups (Airborne) in West Germany, completed Officer School and various other advanced courses (including Signals, HALO, SCUBA, etc.), and also attended the demanding German *Gebirgsjäger* and Italian *Alpini* Mountain Warfare Schools (the first U.S. serviceman to do so).

One of his most famous exploits was the retrieval of the bodies of the crew of a wrecked USAF plane (as well as top secret code material) on the peaks of the Zagros mountains in Iran. He was promoted to Captain in 1960. In the early 1960s, he served as guerrilla instructor at the Special Warfare School in Fort Bragg, Georgia. In 1963-1964, Thorne served a six-month combat tour in command of an A-team in South Vietnam near the Cambodian border, where he was wounded twice and earned a Bronze Star (pp. SO51-52, W42). (See the chapter "A Green Beret All The Way" in Moore's book for a fictionalized account of his actions there.) In February 1965, he returned to Vietnam as a member of the 5th Special Forces Group (Airborne). Thorne was soon attached to the Headquarters Company, MACV, Special Detachment 5891. In reality, he had become a member of the Studies and Observation Group (SOG), specifically OP35 (Ground Studies Group). This joint-service unconventional task force was controlled by the CIA and run a variety of special operations throughout Southeast Asia, many of which remain classified to this day. Some

Myths and Legends: Werwolf

After the Continuation War had ended, Törni was discharged from service in the Finnish army in November 1944. But for him, the war was not over, and he made plans to go to Germany again, to continue fighting the Soviets. In February 1945, he clandestinely boarded a German *U-Boot* with a number of other Finnish volunteers. He entered the secret *Werwolf* organization (p. W:IC47) under the alias of Lauri Laine. Together with other Finns, he received advanced guerrilla and sabotage training from *Waffen*-SS instructors. By April 1945, Lauri Laine held the rank of *SS-Hauptsturmführer* and commanded a company of German navy *Küstenjäger* (marines) in the fierce fighting in Northern Germany, but was forced to retreat before the advancing Soviets. On 12 May 1945, they surrendered to elements of the 17th U.S. Airborne Division near the Elbe. He escaped from a British POW camp and made his way to Finland via Denmark and Sweden.

of these operations consisted of clandestine insertions and long-range reconnaissance in North Vietnam, Laos, and Cambodia, usually performed by small teams of two to three Special Forces volunteers and 6-10 indigenous mercenaries. In September 1965, MACV-SOG recon teams based in Kham Duc near the Laotian border started infiltrating Laos under Operation SHINING BRASS in search of the Ho Chi Minh Trail. On 18 October 1965, Thorne returned from the first mission (which he insisted on personally supervising) in Laos onboard of a Sikorsky CH-34A Choctaw helicopter flown by the 219th Helicopter Squadron, Vietnamese Air Force. Around 2020 hours, headquarters lost contact with the aircraft. Thorne was never seen again.

Use this write-up for Thorne in early 1965:

Captain Larry A. Thorne

263 points

46 years old; 5'11"; 180 lbs.; a stocky man with strong features, blue eyes, and closely cropped blond hair.

ST: 15 [60] **DX** 13 [30] **IQ** 12 [20] **HT** 12 [20].

Advantages: Alertness +1 [5], Combat Reflexes [15], Fearlessness +4 [8], Fit [5], Military Rank 4 [20], Patron (Finnish Old Boy Officers in U.S. Service) [10], Reputation +1 [5] (U.S. military, all the time; Bronze Star, Purple Heart with three Oak Leaf clusters), Reputation +4 [6] (Finnish military, all the time; *Mannerheim Risti*, *Vapaudenristi* 4th class; *Muistomitali* 39-40; *Muistomitali* 41-44; *Eisernes Kreuz* 2nd class), Strong Will +2 [8], Wealth (Comfortable) [10].

Disadvantages: Addiction (Tobacco) [-5], Bad Temper [-10], Bloodlust [-10], Compulsive Carousing [-5], Extremely Hazardous Duty [-20], Fanaticism (Patriotism) [-15], Intolerance (Communism) [-5].

Quirks: Ladies' Man [-1], Likes Fast Cars (drives an Alfa-Romeo sports coupe) [-1], Quiet and reserved when not drunk [-1].

Skills: Accounting (M/A) IQ [2]-12, Administration (M/A) IQ-1 [1]-11, Animal Handling (M/A) IQ-1 [1]-11, Area Knowledge (Bavaria) IQ-2 [1/2]-10, Area Knowledge (Georgia) IQ-2 [1/2]-10, Area Knowledge (New York) IQ-2 [1/2]-10, Area Knowledge (Southeastern Finland) IQ-2 [1/2]-10, Armoury (Small Arms) (M/A) IQ [2]-12, Boating (P/A) DX-2 [1/2]-11, Boxing (P/A) DX [2]-13, Brawling (P/E) DX+1 [2]-14, Camouflage (M/E) IQ [1]-12, Carousing (P/A) HT [2]-12, Carpentry (P/E) DX-1 [1/2]-12, Climbing (P/A) DX+2 [8]-15, Demolition (M/A) IQ [2]-12, Driving (Automobile) (P/A) DX [2]-13, Engineer (Combat) (M/A) IQ-1 [1]-11, Electronics (M/H) IQ-3 [1/2]-9, Electronics Operation (Comm) (M/A) IQ+1 [4]-13, First Aid (M/E) IQ [1]-12, Forward Observer (M/A) IQ-1 [1]-11, Gunner (Machine Gun) (P/A) DX-2 [1/2]-13*, Gunner (Mortar) (P/A) DX-2 [1/2]-13*, Gunner (Recoilless Rifle) (P/A) DX-2 [1/2]-13*, Guns (Grenade Launcher) (P/E) DX-1 [1/2]-14*, Guns (LAW) (P/E) DX-1 [1/2]-14*, Guns (Light Auto) (P/E) DX+1 [2]-16*, Guns

Myths and Legends: Spy Game

Various people have claimed that Törni was a contract agent for the CIA in the early 1950s; while this can't be substantiated (since the Agency isn't commenting), Törni *did* offer to turn in Finnish communists residing in the USA while still being investigated by the FBI. Considering his experiences in Finland, this is not very surprising.

He again is claimed to have worked for the CIA in 1958, then a Special Forces lieutenant. Allegedly, he operated with other members of the 10th Special Forces Group (Airborne) in civilian clothes in both East and West Berlin.

One popular legend has it that he killed a Soviet spy in West Germany with his bare hands.

In late 1962, a waitress claimed to have identified him as a Russian officer she knew from Paris in 1945. Thorne was placed under investigation by Army Intelligence special agents, and made to take a polygraph test in August 1963. Aside of being suspected to be a Soviet spy, the investigators again faced him with allegations of being a Nazi war criminal. Thorne was officially cleared of all accusations four days before his accident; throughout the time, he had continued his normal duties.

Myths and Legends:

Languages: Finnish (M/A) IQ [0]-12, English (M/A) IQ [2]-12, Estonian (M/A) IQ-1 [1]-11, German (M/A) IQ-1 [1]-11, Norwegian (M/A) IQ-1 [1]-11, Swedish (M/A) IQ-1 [1]-11, Vietnamese (M/A) IQ-2 [1/2]-10.

Equipment: Wears a green-tan-black tigerstripe uniform, cap, jungle boots, and load-bearing equipment; armed with a FN-Browning High-Power pistol (pp. B208, HT108, W94), a Springfield M1903 bolt-action rifle (pp. B208, HT114, W95) or Winchester M2 assault carbine (pp. HT114, W95), and MKII hand grenades (pp. B209, HT117, W98).

Encountered

Also see the younger Törni. Thorne speaks a heavily accented English (or one of several other languages) and is a bit more outgoing than in younger years, but still not very talkative. His handshake crushes bones, and he bearhugs his friends. He is the image of the quiet professional the Special Forces try to attract, widely skilled and a master of several trades.

- Plaster, John. *SOG: A Photo History Of The Secret Wars* (Paladin Press, 2000). Has its own section on Thorne.
- Shultz, Richard. *The Secret War against Hanoi* (HarperCollins, 1999). A very in-depth account of MACV-SOG's clandestine operations against North Vietnam. Shultz specifically mentions Thorne.
- *Tradition Guild of Osasto Törni* [http://www.lauritorni.org/kuva_lauri.html]. Website authored by former members of *Osasto Törni*. In Finnish.

Dead Or Alive?

Search parties were not able to find the crash site. The U.S. Army assumed him dead, but Thorne's friends and family never believed he had died in the crash. It was so unlike him to simply die in an unlucky accident. They maintained he got away, perhaps held prisoner by the North Vietnamese or even the Soviets. Or maybe he simply slipped away and started a new life again.

In 1999, a joint American-Finnish search party finally found a helicopter wreck at the foot of a hill near Kham Duc, which is assumed to be the one in question. The human remains uncovered there are still being subjected to DNA and dental testing.

Autoduel Vehicles

by Arthur Samuels

Autoduel, 2nd Edition has a nice selection of sample vehicles. However, who doesn't want more? Presented here is a set of duelling vehicles -- one for each of the common Divisions, an extra one for Amateur Night, and a high-end recreational camper.

All duelling vehicles have the following characteristics: TL 8; Occupancy: short; Passengers: None. No cargo or empty space. They all carry a short-range communicator and a compact fire suppression system (HT 6). They all have clear ablative armor windows (the ones with metal armor have small windows). If using the "Vision" rules on p. VE25, all vehicles are considered to have "Fair" visibility. All have an operating time of 60 minutes and a minimum Top Speed of 90 MPH, to comply with AADA regulations. They all have Ram Plates.

A "Targeting Computer" is a small dedicated computer running the Targeting program. Costs \$1200, weighs 1 pound, takes up 0.02 cf. It gives a +4 to hit.

Note that the published damage ratings for most of the rockets in **Autoduel, 2nd Edition** on page 105 are incorrect. They were designed using TL8 HEAT and HEDP statistics; however, the world of Autoduel has reached only TL7 in the field of HEAT ammo. Here are the revised values:

25mm Mini Rocket:	3d(5) [2d] (as in the book).
40mm Light Rocket:	4d+3(5) [4d].
45mm Medium Rocket:	9d(5) [4d].
50mm Heavy Rocket:	5dx3(5) [4d].
60mm Super Rocket:	6dx6(5) [4d].

And Now, Camelot Motors Presents Its 2053 Line

Division 5 Trike

"The Squire"

This is a typical Amateur Night vehicle. Available in 3 and 4-wheel versions. It carries a 10mm MG in a turret, and a 25mm micro-missile launcher Bo (can be placed in any facing, but is usually in the Front).

Subassemblies: Standard Wheels (3), Full-Rotation Turret.

Propulsion: 20 KW wheeled drivetrain (HT 5).

Weapons: 10mm MG (Tu F) with 400 rounds; 25mm MML (Bo F) with 10 HEDP rockets.

Weapon Accessories: Full-stabilization for both weapons.

Controls: Electronic.

Crew stations: Driver runs all systems from cramped crew station (Bo).

Crew: Driver.

Power System: None. Energy Bank: 72000 KWS HCSB. Powers drivetrain for 60 minutes (HT 5).

Access space: 1.52 cf.

Volume: Body 24 cf; Turret 0.54 cf; Wheels 2.4 cf. Surface Areas: Body 50 sf; Turret 4 sf; Wheels 11 sf; Total 65 sf.

Structure: Light Frame, Very Cheap materials.

Hit Points: Body 38; Turret 3; Wheels 5 each.

Armor: Cheap ablative.

BoF: PD 4 DR 240 TuF: PD 4 DR 240

BoR: PD 4 DR 120 TuR: PD 4 DR 140

BoL: PD 4 DR 120 TuL: PD 4 DR 140

BoB: PD 4 DR 180 TuB: PD 5 DR 140

BoT: PD 4 DR 20

TuT: PD 4 DR 60

BoU: PD 4 DR 40

Wheels: PD 4 DR 20

Wheelguards: PD 4 DR 40

Surface Features: Ram Plate.

Statistics: Empty Weight 861 lbs (0.43 tons); Loaded Weight 1061 lbs (0.53 tons). Volume 27 cf. Size Modifier +1. Price \$4578. HT 12.

Ground Performance: Speed 100 MPH; gAccel 5; gDecel 10; gMR 1.5; gSR 2. High GP; 1/6 OR speed.

Can also be made into a (very small) four-wheeled car (nicknamed "The Go-Kart Squire"). The only changes are:

Wheel HP 4 each. GMR 1.25; gSR 3.

Division 5 Trike

"The Barbecue Squire"

Here is the Flamethrower-equipped variation. Note that the extra cost/weight of putting full stabilization on the heavy flamethrower meant losing the MML -- as a compensation the turret is sloped. Pick your shots carefully! Remember, just because these two vehicles have fire-suppression systems doesn't mean every vehicle will -- especially in Division 5 . . .

Subassemblies: Standard Wheels (3), Full-Rotation Turret.

Propulsion: 18 KW wheeled drivetrain (HT 5).

Weapons: Flamethrower (Tu F).

Weapon Accessories: Full-stabilization for flamethrower.

Controls: Electronic.

Crew stations: Driver runs all systems from cramped crew station (Bo).

Crew: Driver.

Power System: None. Energy Bank: 64800 KWS HCSB. Powers drivetrain for 60 minutes (HT 4).

Access space: 1.4 cf.

Volume: Body 25 cf; Turret 2.4 cf; Wheels 2.5 cf. *Surface Areas:* Body 51 sf; Turret 11 sf; Wheels 11 sf; Total 73 sf.

Structure: Light Frame, Very Cheap materials.

Hit Points: Body 38; Turret 8; Wheels 6 each.

Armor: Cheap ablative.

BoF: PD 4 DR 300 TuF: PD 4 DR 250
BoR: PD 4 DR 160 TuR: PD 4 DR 150
BoL: PD 4 DR 160 TuL: PD 4 DR 150
BoB: PD 4 DR 200 TuB: PD 4 DR 150
BoT: PD 4 DR 40 TuT: PD 4 DR 50
BoU: PD 4 DR 40

Wheels: PD 4 DR 20

Wheelguards: PD 4 DR 40

Surface Features: Ram Plate.

Statistics: Empty Weight 971 lbs (0.49 tons); Loaded Weight 1171 lbs (0.59 tons). Volume 32 cf. Size Modifier +2. Price \$4768. HT 11.

Ground Performance: Speed 90 MPH; gAccel 5; gDecel 10; gMR 1.5; gSR 2. High GP; 1/6 OR speed.

Four-wheeled version. The only changes are:

Wheel HP 4 each. GMR 1.25; gSR 3.

Division 10 Car

"Excalibur"

The Excalibur carries a high-capacity Vulcan MG (with enough ammo for 20 seconds of continuous fire) and two layers of armor -- metal over ablative. This makes it tough when facing those low-caliber, high ROF weapons like machine guns, but you have to be extra careful when facing HEAT ammo -- one good shot can punch right through!

Show them who the once and future king of the circuit is -- when you draw the Excalibur!

Subassemblies: Standard Wheels (4), Full-Rotation Turret.

Features: Body has 60 degrees slope on its Front and 30 degrees on its Back facing. Turret has 60 degrees slope on its Front facing and 30 degrees slope on R, L and B.

Propulsion: 30 KW wheeled drivetrain (HT 6).

Weapons: 10mm VMG (TuF) with 640 rounds; 45mm Rocket Launcher (Bo F) with 10 HEAT rockets.

Weapon Accessories: Full-stabilization and cyberslaves for both weapons.

Instruments and Electronics: Targeting computer.

Controls: Electronic

Crew stations: Driver operates all systems from a cramped crew station (Bo).

Crew: Driver.

Power System: None. Energy Bank: 108,000 KWS HCSB. Powers drivetrain for 60 minutes (HT 6).

Access space: 2.1 cf.

Volume: Body 37 cf; Turret 1.8 cf; Wheels 3.7 cf. Surface Areas: Body 67 sf; Turret 8.8 sf; Wheels 14 sf; Total 90 sf.

Structure: Light Frame, Very Cheap materials.

Structural Options: Radial Tires.

Hit Points: Body 50; Turret 7; Wheels 5 each.

Armor: Cheap metal over cheap ablative.

BoF: PD 6 DR 60/300 TuF: PD 6 DR 60/300
BoR: PD 4 DR 20/100 TuR: PD 5 DR 30/150
BoL: PD 4 DR 20/100 TuL: PD 5 DR 30/150
BoB: PD 5 DR 45/225 TuB: PD 5 DR 30/150
BoT: PD 3 DR 10/50 TuT: PD 3 DR 10/50
BoU: PD 4 DR 10/50

Wheels: PD 2 DR 5/25

Wheelguards: PD 3 DR 10/50

Surface Features: Ram plate.

Statistics: Empty Weight 1612 lbs (0.81 tons); Loaded Weight 1812 lbs (0.91 tons). Volume 42 cf. Size Modifier +2. Price \$9781. HT 10.

Ground Performance: Speed 90 MPH; gAccel 5; gDecel 10; gMR 1.25; gSR 4.

High GP; 1/6 OR speed.

Division 15 Car

"Falcon"

The Falcon carries the powerful Heavy Machine Gun (statistics for it at the end of the description). It has improved suspension, radial tires, and all-wheel steering, to be nimble as a cat. Who will be driving circles around the competition? You will . . . in a Falcon!

Subassemblies: Standard Wheels (4), Full-Rotation Turret.

Features: Turret has 150 degrees slope (60 on F, 30 on R, L, and B) and body has 90 degrees slope (60 on F, 30 on B).

Propulsion: 55 KW wheeled drivetrain (HT 8).

Weapons: 13mm HMG* (TuF) with 400 rounds; 45mm Rocket Launcher (Bo F) with 10 HEAT rockets.

Weapon Accessories: Full-stabilization and cyberslaves for both weapons.

Instruments and Electronics: Targeting computer.

Controls: Electronic.

Crew stations: Driver operates all systems in a cramped crew station (Bo).

Crew: Driver.

Power System: None. Energy Bank: 198,000 KWS HCSB. Powers drivetrain for 60 minutes (HT 9).

Access space: 3.5 cf.

Volume: Body 41 cf; Turret 2.5 cf; Wheels 4.1 cf. Surface Areas: Body 72 sf; Turret 11 sf; Wheels 15 sf; Total 98 sf.

Structure: Medium Frame, Very Cheap materials.

Structural Options: All-wheel steering, radial tires, improved suspension.

Hit Points: Body 110; Turret 17; Wheels 12 each.

Armor: Standard metal over standard ablative.

BoF: PD 6 DR 120/600	TuF: PD 6 DR 100/500
BoR: PD 4 DR 50/250	TuR: PD 5 DR 75/375
BoL: PD 4 DR 50/250	TuL: PD 5 DR 75/375
BoB: PD 5 DR 90/450	TuB: PD 5 DR 60/300
BoT: PD 3 DR 10/50	TuT: PD 3 DR 10/50
BoU: PD 3 DR 10/50	

Wheels: PD 3 DR 10/50

Wheelguards: PD 4 DR 20/100

Surface Features: Ram plate.

Statistics: Empty Weight 3158 lbs (1.58 tons); Loaded Weight 3358 lbs (1.68 tons). Volume 48 cf. Size Modifier +2. Price \$14,449. HT 11.

Ground Performance: Speed 105 MPH; gAccel 5; gDecel 10; gMR 1.75; gSR 5. Very High GP; 1/8 OR speed.

* Heavy Machine Gun 13mm. Damage 6d×2. SS 20; Acc 13; 1/2D 1000; Max 4800. RoF 20. Empty Weight 29. Cost \$1600. WPS 0.14; CPS 0.56.

Division 20 Car

"Lancelot"

The Lancelot carries the new Light Autocannon (LAC). You're ready to win the favors of the lovely maiden -- driving a Lancelot!

Subassemblies: Standard Wheels (4), Full-Rotation Turret.

Features: Turret has 150 degrees slope (60 on F, 30 on R, L, and B) and body has 90 degrees slope (60 on F, 30 on B).

Propulsion: 45 KW wheeled drivetrain (HT 7).

Weapons: 20mm LAC (TuF) with 400 rounds (HT 7); 45mm Rocket Launcher (Bo F) with 5 HEAT rockets.

Weapon Accessories: Full-stabilization and cyberslaves for both weapons.

Instruments and Electronics: Targeting computer.

Controls: Electronic.

Crew stations: Driver operates all systems in a cramped crew station (Bo).

Crew: Driver.

Power System: None. Energy Bank: 162000 KWS HCSB Powers drivetrain for 60 minutes (HT 7).

Access space: 2.9 cf.

Volume: Body 40 cf; Turret 5.7 cf; Wheels 4.1 cf. Surface Areas: Body 70 sf; Turret 19 sf; Wheels 15 sf; Total 104 sf.

Structure: Medium Frame, Very Cheap materials.

Structural Options: Radial Tires.

Hit Points: Body 110; Turret 29; Wheels 11 each.

Armor: Cheap fireproof ablative

BoF: PD 6 DR 800 TuF: PD 6 DR 600

BoR: PD 4 DR 300 TuR: PD 5 DR 450

BoL: PD 4 DR 300 TuL: PD 5 DR 450

BoB: PD 5 DR 600 TuB: PD 5 DR 450

BoT: PD 4 DR 50 TuT: PD 4 DR 50

BoU: PD 4 DR 50

Wheels: PD 4 DR 50

Wheelguards: PD 4 DR 100

Surface Features: Ram plate.

Statistics: Empty Weight 2645 lbs (1.32 tons); Loaded Weight 2845 lbs (1.42 tons). Volume 50 cf. Size Modifier +2. Price \$19,296. HT 12.

Ground Performance: Speed 90 MPH; gAccel 5; gDecel 10; gMR 1.25; gSR 4. Very High GP; 1/8 OR speed.

* Light Autocannon 20mm. Damage 6dx3. SS 20; Acc 14; 1/2D 1300; Max 5500. RoF 20. Empty Weight 68. Cost \$7600. WPS 0.26; CPS 1.

Division 25 Car

"Black Knight"

The Black Knight mounts the powerful 50mm Recoilless Rifle. It has a gunner to get the most out of its solitary weapon. Note that the weapon does not have a cyberslave; it's just too expensive on a weapon that heavy.

The crew of the Black Knight should pick their shots carefully, and the driver needs to work closely with the gunner to set up targets of opportunity -- they can't take those cyberslaved snap shots like most other drivers can, but their shots will punch through a lot of armor and do internal damage.

Note that the entire vehicle uses Expensive Laminate Ablative armor, so its DR is doubled against anyone else using shaped-charge munitions.

None shall pass you -- in a Black Knight!

Subassemblies: Standard Wheels (4), Full-Rotation Turret.

Features: Turret has 150 degrees slope (60 on F, 30 on R, L, and B) and body has 90 degrees slope (60 on F, 30 on B).

Propulsion: 45 KW wheeled drivetrain (HT 7).

Weapons: 50mm Recoilless Rifle (TuF) with 20 HEAT rounds (HT 15).

Weapon Accessories: Full-stabilization for RR.

Instruments and Electronics: Targeting computer at Gunner station.

Controls: Electronic.

Crew stations: Driver operates vehicle controls in a cramped crew station (Bo); Gunner operates weapon in a cramped crew station (Bo).

Crew: Driver and Gunner.

Power System: None. Energy Bank: 162,000 KWS HCSB. Powers drivetrain for 60 minutes (HT 8).

Access space: 2.9 cf.

Volume: Body 68 cf; Turret 9.3 cf; Wheels 6.8 cf. Surface Areas: Body 100 sf; Turret 27 sf; Wheels 22 sf; Total 149 sf.

Structure: Light Frame, Very Cheap materials.

Structural Options: Improved Suspension; Radial Tires.

Hit Points: Body 75; Turret 20; Wheels 8 each.

Armor: Expensive laminate ablative.

BoF: PD 6 DR 800 TuF: PD 6 DR 800
BoR: PD 4 DR 300 TuR: PD 5 DR 525
BoL: PD 4 DR 300 TuL: PD 5 DR 525
BoB: PD 5 DR 600 TuB: PD 5 DR 525
BoT: PD 4 DR 50 TuT: PD 4 DR 50
BoU: PD 4 DR 50

Wheels: PD 4 DR 50

Wheelguards: PD 4 DR 100

Surface Features: Ram plate.

Statistics: Empty Weight 2344 lbs (1.17 tons); Loaded Weight 2744 lbs (1.37 tons). Volume 84 cf. Size Modifier +2. Price \$23,515. HT 10.

Ground Performance: Speed 105 MPH; gAccel 5; gDecel 10; gMR 1.5; gSR 5. High GP; 1/6 OR speed.

Division 30

"Merlin"

The last of the Division-play vehicles, the Merlin mounts an alternate version of the standard Laser. (It doesn't do a

prime number of dice, so players can roll reasonable numbers of dice with a multiplier.)

Command the powers of light -- with the magic of the Merlin!

Subassemblies: Standard Wheels (4), Full-Rotation Turret.

Features: Turret has 150 degrees slope (60 on F, 30 on R, L, and B) and body has 90 degrees slope (60 on F, 30 on B).

Propulsion: 45 KW wheeled drivetrain (HT 7).

Weapons: Laser* (TuF) (HT 8).

Weapon Accessories: Full-stabilization and cyberslave for Laser.

Instruments and Electronics: Targeting computer.

Controls: Electronic.

Crew stations: Driver operates all systems in a cramped crew station (Bo).

Crew: Driver.

Power System: None. Energy Bank: 300,000 KWS HCSB. Powers drivetrain for 111 minutes (1.85 hours) (HT 12). Each laser shot reduces operating time by 52 seconds. A burst at full ROF drains just about 6.5 minutes of operating time. Can fire 14 bursts at full RoF, leaving over three minutes operating time for the drivetrain (long enough for almost any conceivable duel).

Access space: 4.3 cf.

Volume: Body 44 cf; Turret 6.0 cf; Wheels 4.4 cf. Surface Areas: Body 75 sf; Turret 20 sf; Wheels 16 sf; Total 111 sf.

Structure: Medium Frame, Very Cheap materials.

Structural Options: Improved Suspension; Radial Tires.

Hit Points: Body 110; Turret 30; Wheels 12 each.

Armor:

BoF: PD 6 DR 1400	TuF: PD 6 DR 1200
BoR: PD 4 DR 500	TuR: PD 5 DR 675
BoL: PD 4 DR 500	TuL: PD 5 DR 675
BoB: PD 5 DR 900	TuB: PD 5 DR 675
BoT: PD 4 DR 50	TuT: PD 4 DR 50
BoU: PD 4 DR 50	

Wheels: PD 4 DR 75

Wheelguards: PD 4 DR 150

Surface Features: Ram plate.

Statistics: Empty Weight 2567 lbs (1.28 tons); Loaded Weight 2767 lbs (1.38 tons). Volume 54 cf. Size Modifier +2. Price \$28,881. HT 12.

Ground Performance: Speed 105 MPH; gAccel 5; gDecel 10; gMR 1.5; gSR 5. Very High GP; 1/8 OR speed.

Laser: 1300 KJ; 6dx3; RoF 8; SS20; Acc 18; 1/2D 1800; Max 3600; Wgt 72 lbs; \$11,000. Consumes 2600 KWS per shot (20,800 KW to fire at full RoF).

The Happy Camper

Finally, to round out the selection with a non-arena vehicle: this is a top-end camper. It is suitable for a retired successful professional duellist who wants a vehicle to get away from it all. It can be mostly self-sufficient in a pinch with its solar panel and lasers, although the rockets are expensive to replace and it is much easier and faster to get a recharge.

If the GM is feeling generous, the PCs can stumble upon this vehicle after its original owner mysteriously disappears (they find the camper, a campsite, and some clues about what happened to the original owner -- will they try to find out what happened or just take the camper and run?). If the GM wants to complicate things, the clone of the original owner can show up with proof of ownership! What exactly are the salvage rights in a case like that? Who is going to enforce them?

The IR laser and SALH rockets (and launcher) are new: statistics at the end of the writeup.

Subassemblies: Off-Road Wheels (4), Full-Rotation Pop Turret.

Features: Turret has 150 degrees slope (60 on F, 30 on R, L, and B) and body has 30 degrees slope on F.

Propulsion: 200 KW all-wheel-drive wheeled drivetrain (HT 21).

Weapons: IR Laser* (TuF). 50mm SALH Rocket Launcher* (BoF) with 10 rockets

Weapon Accessories: Full-stabilization, universal mount, and cyberslave for Laser.

Instruments and Electronics: Targeting computer; Standard communicator; minicomputer and 2 terminals; navigation instruments; GPS; HUDWACs for both crew stations; Radar/Laser detector; Sound System. 4 mile PESA and 2 mile AESA in turret. AESA draws 1 KW of power -- approximately three hours of continuous use drains one minute worth of range.

Miscellaneous Equipment: Compact fire suppression system; 200 square foot retractable solar panel on super-light frame(HT 4, generates 8 KW).

Controls: Computerized.

Crew stations: Driver and Gunner operate vehicle systems in roomy crew stations (Bo). Since the controls are computerized, either station can operate any system. NBC kit rated for occupancy of five.

Accommodations: Bunk (100 cf).

Crew: Driver and Gunner. In a pinch, a passenger could ride in the bunk. You could pack two in that bunk, but it would be pretty cozy.

Power System: None. Energy Bank: 4,000,000 KWS Rechargeable Power Cell. Powers drivetrain for 5.56 hours (HT 16). Each laser burst at full RoF drains 104 seconds worth of operating time.

Access space: 12 cf. Empty space: none. Cargo space: 40 cf.

Volume: Body 290 cf; Turret 8.4 cf; Wheels 58 cf. Surface Areas: Body 260 sf; Turret 25 sf; Wheels 90 sf; Total 375 sf.

Structure: Medium Frame, Expensive materials, Responsive structure.

Structural Options: All-wheel steering, improved suspension, improved brakes, smartwheels.

Hit Points: Body 400; Turret 37; Wheels 68 each.

Armor: Standard laminate over expensive fireproof laminate ablative. PD 4 DR 50/200 on body and turret (PD 6 DR 100/400 on TuF; PD 5 DR 75/300 on TuR, TuL, TuB, and BoF). PD 4 DR 20/50 on wheels; PD 4 DR 40/100 wheelguards.

BoF: PD 5 DR 120/480	TuF: PD 6 DR 200/800
BoR: PD 4 DR 50/200	TuR: PD 5 DR 60/240
BoL: PD 4 DR 50/200	TuL: PD 5 DR 60/240
BoB: PD 4 DR 70/280	TuB: PD 5 DR 60/240
BoT: PD 4 DR 30/120	TuT: PD 4 DR 30/120
BoU: PD 4 DR 20/80	

Wheels: PD 4 DR 20/50

Wheelguards: PD 4 DR 40/100

Surface Features: Ram plate, sealed.

Statistics: Empty Weight 10,955 lbs (5.5 tons); Loaded Weight 12,155 lbs (6.1 tons). Volume 356 cf. Size Modifier +4. Price \$348,569 plus computer software. HT 11.

Ground Performance: Speed 110 MPH; gAccel 5; gDecel 20; gMR 2.0; gSR 5. Moderate GP; 1/4 OR speed (25 MPH).

Water Performance: Will float (Flotation 17,107). wThrust 440 lbs; Speed 5 MPH; wAccel 0.7; wMR 0.75; wSR 5; wDecel 10.

IR Laser: 1300 KJ. RoF 8. Dmg 6dx3. SS 20; Acc 18; 1/2D 1500; Max 3100. Wgt 72 lbs. Cost \$11,000. Energy per shot: 2600 KWS. A full burst drains 20,800 KWS.

50mm SALH rocket launcher: RoF 1. Rating 10 lbs. SS 17. \$940. Weight 25 lbs.

50mm SALH rocket: HEDP Damage: 8dx2(5)[4d]. HE Damage: 7dx10. Speed 200. End 17. Max 3400. No 1/2D or Max since they are guided. WPS 10. CPS \$1400. Skill 12.

Patterns of the Stars

A New Spell Matrix for *Earthdawn*

by Andrew Turpin

An exert from the journal of Kendric Par, wizard and scholar.

. . . I had dabbled with magic during the centuries trapped within our kaer, unlocking secrets that few had ever glimpsed, yet my work brought questions rather than answers. Our understanding of magic was based on matrices, but I stumbled upon an oddity: a matrix that held both pattern and threads complete within a construct that differed little from the basic types learned by any apprentice. With this new matrix, spell casting became far simpler, but at times the spell would not activate, as if the matrix itself held the power at bay.

I had no answer to this riddle until the doors of Kaer Mallteg opened. A gentle wind greeted our nervous steps as we gazed at the desolate land before us. Everything seemed ravaged by the passing of the Horrors, but as the wind stirred the dust and my eyes rose to the heavens, I felt joy leap into my heart as I gazed upon the stars for the first time. I felt it then, the first stirring of thought as the mind reaches out and receives an answer, deep inside I knew that my years of searching were over, that I at last understood . . .

Magicians in *Earthdawn* follow a well-defined method for casting their spells. First they attune a matrix so that it can store a pattern; next they weave any extra threads, before finally attempting the spellcasting test. If all these actions are completed, the spell is cast . . . but achieving success requires time and luck, rare gifts in a world where the Horrors lurk. Enhanced and Armored matrices allow a single thread to be held within the matrix in addition to the pattern. This certainly helps to speed things up; the quicker a spell can be cast, the less chance of becoming a tasty morsel! Constellation Matrices, on the other hand, allow all of a spell's threads to be stored in the matrix beforehand, leaving only the spellcasting test to successfully release the magical energy. With only one test needed to finish the spell, precious time is saved. Death can be dodged, madness avoided, as magicians side-step danger to carve their legends across the world.

A Constellation Matrix is formed by linking a Spell Matrix to a constellation. The key to its power lies in the fact that every constellation bears a Name, a unique gift from the Name-givers gazing at the beauty of the heavens. This gift draws magic into the glittering pattern of stars and transforms it into a pool of energy that can be shaped into a mimicry of a spell's Pattern, where it will wait to be released as a spell. A constellation can represent anything: one of the Passions, a legendary hero, or an ancient landmark, just as long as it tells a story to the Name-givers below. Each Constellation Matrix can only be linked to one group of stars, which becomes known as the matrix's key constellation.

For each Constellation Matrix that a magician learns, he must select a different constellation in the sky. If he linked two or more matrices to one constellation, the threads woven into them would conflict, wreaking untold havoc as a savage backlash surged into his unprotected mind.

Magicians may learn the Constellation Matrix talent when they reach Second Circle. Threads are woven into a matrix after it is attuned, allowing a magician to store a spell at his leisure and then perform the spellcasting test when he wishes to cast it. Constellation Matrices have the same Death Rating as Spell Matrices, and when first created can store a first Circle spell, provided it has no threads. Once a character raises the matrix to rank 2, a single thread may be added to the matrix, or a Second Circle spell may be stored. Only by increasing the matrix's rank in this way will it work its wonders, storing any spell provided the sum of its Circle and number of threads does not exceed the Constellation Matrix's rank. Casting the spell becomes far easier: all the threads are held within the matrix, leaving only the spellcasting test for successful completion.

The power of a Constellation Matrix dwells in the glittering expanse of sky that rules between dusk and dawn. Only night grants the power to access the matrices sparkling across the heavens. This may not seem too great a handicap at first, but any spell contained within a Constellation Matrix is useless until night has fallen and the key constellation has risen into the sky. If the constellation only appears for a few brief moments before dawn, then that is the only time that a magician may draw power from the matrix. Many magicians link their matrices to constellations that ride high in the sky and never dip below the horizon, but as a magician learns more and more Constellation Matrices his choice of constellations is gradually pushed closer to the horizon, where time becomes a vital factor that rules every moment of his life. This restriction also limits the amount a character can travel; if his journey takes him so far across the world that the key constellation never climbs over the horizon, the matrix is useless. A hero need not be able to see the matrix's key constellation clearly to be able to cast the spell; if he is indoors, or underground, he is still able to cast the spell. Similarly, blindness places no restriction on the spell's use, neither does bad weather.

A magician who uses Constellation Matrices feels empty and alone during the daylight hours, consciously aware of his missing magic as he counts the minutes until the shadows lengthen and dusk falls. If he is careful and chooses spells that work best at night, such as the first Circle nethermancer spell Command Nightflyer, or general purpose spells such as Heat Food, the nighttime restriction will not affect the adventurer very much. Balance is vital, though, and Constellation Matrices should be carefully mixed with other matrix types so that some power is retained during daylight.

Due to the unique nature of Constellation Matrices, reattuning becomes more difficult. The link that is formed between the constellation and the matrix affects the level of difficulty whenever a reattuning test is made. The new difficulty is calculated by adding the number of threads that the spell possesses to the original reattuning difficulty. Once a successful reattuning test is achieved, the character must weave all threads into the matrix: remember that a constellation matrix only works when the pattern and all of the spell's threads are woven into it. Reattuning on the fly becomes much more difficult, forcing a magician to be even more careful when selecting his spells.

Any adepts brave (or foolish) enough to enter astral space will find that their Constellation Matrices work just as well within the birth place of the Horrors. Many constellations are present, their astral imprints clearly visible as subtle reflections of reality that sparkle within the astral imitation of the sky. Perceptive travelers, though, will notice that the constellations seem slightly different: certain stars sparkle more brightly, colors may be different compared to their counterparts in the physical world, or entire regions of stars may not exist at all. In astral space, a constellation's brightness is dependent on the strength of the legend it is associated with. For instance, the constellation of Jaspree twinkles brightly within the vast expanse of the astral domain, whereas a constellation named after a little known hero will only be dimly visible. Constellations also show up more clearly in astral space, since stars without Names show no astral imprint and are therefore not visible. This darkens the astral "sky," highlighting what constellations remain, but also serves to highlight the presence of any Constellation Matrices, lowering their Death Rating to 5 should anyone try to destroy them. Casting Constellation Matrix spells from one of the Netherworlds or Elemental planes is impossible, as the patterns of the constellations are not represented in these alien domains.

If learned, Constellation Matrices become an important part of a magician's abilities. Spells stored in them are quicker to cast, but may only be used during the hours of darkness. Learning which spells to place within these strange matrices is an art in itself, and balancing these types of matrices with others is a delicate business: learning too many Constellation Matrices limits your power during the daytime, while learning other types of matrices means lengthy cast times. Choosing the right path is a dangerous game, and to many it's the first footfall on the road to adventure. Think carefully, and may the stars guide your way, for the dark holds many truths.

Darkness is the key to my power, stars the focus of all the magic I wield. I have tasted the limits of what man can achieve, yet when dawn's fragile light brightens the horizon I feel naked and afraid, stripped of my defences, and visible to the world as a mortal man, powerless against the evil that hunts me. Am I afraid of the dark? No, tis daylight that gnaws at my soul . . .

Elder Ragan's words to his grandson.

Do You Tap?

Brazilian Jiu-Jitsu for *GURPS Martial Arts*

by M.L. Roberts

Since the introduction of Brazilian Jiu-Jitsu (BJJ) to the world, police officers, soldiers, traditional martial artists, self-defense enthusiasts and couch potatoes, impressed by BJJ practitioners' abilities to overcome bigger, stronger opponents in No-Holds-Barred matches, have sought to learn the art.

Accordingly, GMs should make this style available to any modern *GURPS* setting that takes place after 1993 in the United States or after the 1950s in Brazil. A few individuals may have learned the style clandestinely prior to the aforementioned dates (an appropriate Unusual Background advantage) but they are rare. In any case, the style described here did not exist before the 1920s in Brazil. (Those interested in the history of BJJ can see the book and website cited at the end of this article for detailed treatments of the subject.)

The existing grappling rules found in p. B111 and p. CII69 emphasize ST and DX over skill. However, Mixed Martial Arts tournaments have demonstrated that a fighter with the right skills and experience can deftly defeat a bigger, stronger, opponent.

This article introduces maneuvers, skill-modifications, and rules designed to accommodate the BJJ style within the *GURPS* system.

The Brazilian Jiu-Jitsu Strategy for Self-Defense

The BJJ artist seeks to submit, or "tap out," his opponent. Early BJJ artists reasoned that it makes no sense for a smaller person to stand up and trade strikes with a stronger opponent, risking severe injury, or worse, getting knocked out. They also observed that most street fights ended, whether by accident or design, on the ground. So, they chose to focus on ground fighting as the most important aspect of self-defense.

The BJJ artist tries to keep out of striking range until he can slip a punch, clinch with his opponent, and take him down. (Even boxers clinch when they don't want to get hit!) Once the fight reaches the ground, the BJJ artist has a distinct advantage over an opponent who has no grappling training at all, even if that opponent is larger or stronger.

Take a great runner and a great swimmer: a runner can win all the foot races in the world, but if he has never learned to swim and suddenly finds himself in a pool, he will flap about, tire quickly, and drown. Likewise, a fighter without grappling skills will struggle without strategy, tire easily, and will probably be defeated on the ground.

A Note on Fatigue and Ground Fighting

The generic "extra effort" rules found in *pp. CII171-2* should be used to simulate the fact that people unskilled in grappling tire easily when fighting a skilled opponent. For example, an unskilled fighter pinned by a grappler may try to throw him off by performing a lift maneuver, which happens to be a fatigue-spending, ineffectual strategy. The BJJ artist counts on this, especially with larger, stronger opponents. As an opponent gets more and more fatigued, the chances of defeating him increase dramatically. GMs must understand that to correctly capture the effectiveness of BJJ in the *GURPS* system, the extra effort rules should be applied where appropriate.

Brazilian Jiu-Jitsu as a Special Case of the Judo Skill

While Judoka do possess considerable ground fighting skills (Ne Waza), when compared to the average martial artist

trained in striking arts, their primary expertise remains throwing. On the other hand, the BJJ practitioner does most of his training on the ground. As such, those with the BJJ style gain the Ground Fighting maneuver at their Judo skill level with no extra cost. Because of this emphasis, the BJJ artist develops an ability to "flow" from position to position or from submission to submission. In order to simulate this in combat, allow the BJJ stylist to transition into the next position or submission if his opponent wins a Quick Contest to defend by only 1 or 2. This means the practitioner attacks first on the following round, even if the defender has a higher Speed. This puts one's opponent on the run, having to constantly defend against attacks. However, if the opponent wins the contest by 3 or more he has freed himself and can resume fighting from a better position, such as "inside the Guard" (see below), and on his proper turn in the round. Note that freeing oneself from a submission does not necessarily free one from a bad position. This must be rolled for separately.

19 Points (No Cinematic Abilities)

Brazilian Jiu-Jitsu

Primary Skills: Judo, Tactics (BJJ Strategy)

Secondary Skills: Breath Control, Sensitivity, Body Language, Immovable Stance, Style Familiarity

Optional Skills: Style Analysis, Wrestling, Judo, Boxing, Karate

Maneuvers: Judo Throw, Judo Parry, Clinch, Guard, Guard Pass, Ground Control, Ground Escape, Ground Fighting [at Judo skill level, no cost], Choke Hold, Breakfall, Arm Lock, Technical Standing, Rear Mounting, Slip, Disarming, Leg Grapple, Head Lock

New Maneuvers

Clinch (Average) *Defaults to Judo or Wrestling -2, Boxing -3, or DX -4*
Prerequisite: None

In the martial arts, the term Clinch refers to a standing position wherein one person controls another by hugging his upper body tightly, not allowing the opponent any space to launch effective strikes. However, the skill for game purposes also covers making and breaking grips, even on the ground, an important aspect of grappling.

Use of the Clinch replaces the DX-based rule in p. B111 and p. CII69 for making a grapple maneuver. The importance of skill in achieving or breaking a grapple versus physical attributes is more in line with reality. An opponent may resist using his own Clinch skill or the default if he lacks it. Add +1 per every 2 points of ST over 12. The Judo skill confers a +1 bonus to grab, if the opponent wears any kind of clothing that provides a grip.

Once a foe has been successfully grappled he is at -4 DX to any skill save for continued attempts at using the Clinch skill to escape the grapple. Note, as per p. CII69, an upper body grapple leaves the legs free for knee strikes, etc., while a lower body grapple leaves the arms free for punches.

Those who successfully punch while their upper bodies are grappled suffer -2 to damage.

Guard (Hard) *Defaults to Judo (Special)*
Prerequisite: Judo

The Guard allows one to fight from a position that might normally be considered disadvantageous, i.e., with his back on the ground, though his legs will usually be locked around the opponent's back or his feet planted firmly on the opponent's hips, in order to control his opponent's hips and, therefore, movement. The BJJ artist does not feel

uncomfortable in this position. From here he may submit his opponent (i.e., break the arm using an Arm Lock or put him to sleep using a Choke Hold) or use leverage to "Sweep" his opponent, a special case of the Judo Throw maneuver whereby the opponent ends up with his back on the ground and the BJJ practitioner ends up on top, either in Top Mount, Side Mount or in his opponent's Guard (see below). He may also bicycle kick an opponent doing kick damage -1.

The BJJ practitioner parries strikes thrown at him while someone remains in his Guard at 2/3 his skill level, as per the Judo Parry maneuver, and he can likewise initiate an Arm Lock, Choke Hold, or Judo Throw "Sweep" after a successful parry. Those without the Guard maneuver cannot apply the Judo Parry skill while on the ground.

BJJ stylists will often pull their opponents into their guards to avoid being thrown or hit, but must first grapple opponents using the Clinch maneuver. Roll Guard skill to "pull guard." The Guard Pass maneuver may be used to resist, but this option is only available to those with the proper skill prerequisite. Once a fighter has successfully clinched an opponent, and brought him into his guard, he may attempt an Arm Lock, a Choke Hold, or use the Judo Throw "Sweep" maneuver to end up on top of his opponent. Should an opponent break free of an arm or upper body clinch, he will still need to break the grip of the guard player's legs around his body, requiring the use of the Guard pass skill below.

The guard player must remain alert for opponents picking him up and slamming him on the ground, or pushing him up against a wall or other obstruction that limits his ability to move his hips. To avoid being picked up the guard player must roll Guard skill vs. ST. Failing that, the BJJ artist may elect to open his guard by unlocking his legs around the opponent's back, before his opponent has a chance to slam him, using Breakfall to negate or diminish the falling damage.

Guard Pass (Hard)

Defaults to Judo -2 or Wrestling -3; ST -5

Prerequisite: Judo

This maneuver allows a fighter to "pass the guard," i.e., bypass the control exerted by the Guard Player's hands and feet on his body to achieve a superior position, from which he can control his opponent. This process takes at least two rolls to complete. First roll Guard Pass vs. Guard to see if the passer can successfully "open the guard," i.e., unlock the guard player's legs from around his body, or effectively move the controlling feet from his hips. The second roll is a Quick Contest to actually bypass the legs and attempt to achieve Side Mount (see below). After a successful Guard Pass, a Quick Contest of Ground Control vs. Ground Escape immediately follows.

Use the Guard Pass or Immovable Stance skill in a Quick Contest to counter the Judo Throw "Sweep" Maneuver. This maneuver may also be substituted for ST in contests to resist Arm Lock and Choke Hold maneuvers that an opponent attempts from the Guard.

If a person chooses to stand up in another's Guard, he may rain down a series of punches that could knock the guard player out, but doing so exposes him to the risk of a Judo Parry leading to a Judo Throw "Sweep" or Arm Lock maneuver, for one cannot both punch and Guard Pass or use Immovable Stance in the same round.

Ground Control (Average)

Defaults to Judo or Wrestling -3

Prerequisite: Judo or Wrestling

This maneuver allows the practitioner to control his opponent from any of three "top" positions: Side Mount, Top Mount, and Knee-in-Belly; and from the Rear Mount, but not from within an opponent's guard. Each round, roll a Quick Contest between Ground Control and Ground Escape. If the one attempting the Control wins, he has achieved a pin, and his opponent loses one FT. Thereafter, the controller is at +2 against all Ground Escape attempts, plus a +1 per every 10 lbs. he has over his opponent's weight. These bonuses do not apply until the practitioner has won the initial contest to achieve control. However, if the controller attempts a submission, he suffers a penalty of -1. A pinned

opponent will likely expend extra effort to lift his opponent off of him, if he lacks the escape skill.

Once the artist has won a contest to control from any of the top positions (Side Mount, Top Mount, Knee-in-Belly), he may transition into any of the other top positions if he wins a Quick Contest, Ground Control +2 vs. Ground Escape.

Add +1 to the skill roll for every two points of ST over 12.

1. *Side Mount*. This means that the practitioner has pinned his opponent by lying over him perpendicularly. The practitioner can set up submissions with little danger of being hit. The controller's strikes, however, are also limited to elbows and knees. Trying to throw punches in this position gives the opponent a +2 bonus to an attempted escape.
2. *Top Mount*. This position is achieved by straddling an opponent's torso, in effect sitting on his abdomen. From here a practitioner may rain down damaging punches and elbow strikes or set up a submission. An untrained ground fighter attempting to parry or block strikes with his arms, presents an opportunity for the practitioner to apply the Arm Lock maneuver.
3. *Knee-in-Belly*. This position is usually achieved by transitioning from Side Mount, though a practitioner may also transition into this position directly from a Guard Pass. The BJJ artist controls his opponent by placing his shin across the stomach, thereby making it difficult for the opponent to breathe or move. The other foot stays firmly planted on the ground to provide a base. The practitioner may attempt Arm Locks, Choke Holds and punches from this position, or may opt to transition straight to Top Mount. Even against trained opponents this maneuver drains FT. Someone who does not have the Ground Escape skill loses FT at a rate of one every three rounds while the practitioner maintains control. Those with the Ground Escape skill lose FT at a reduced rate discussed below. Due to the difficulty of maintaining balance in this position, smaller opponents attempting this against larger opponents do so at a -2 penalty. From this position the practitioner remains alert and can still defend against other attackers. It is a simple matter to stand up in order to face his opponent's cronies, and as such is the most useful position in a "multiple attacker" scenario.
4. *Rear Mount*. Considered the best position one can achieve in single combat, because a practitioner can attack his opponent with impunity while his opponent's only option is escape. The BJJ practitioner achieves Rear Mount by placing his feet on the inner thighs of the opponent (called "putting your hooks in") to control the opponent's hips and keep him from facing the attacker. The BJJ artist may choose the Arm Lock or Choke Hold maneuvers, or he may opt to throw punches or elbow strikes to the back of his opponent's head. This position is described as a maneuver below. Note the Rear Mount skill is used to achieve the position, but Ground Control is used to hold onto it.

Ground Escape (Hard)

Defaults to Judo or Wrestling -3

Prerequisite: Judo or Wrestling

This maneuver covers escapes from the Side Mount, Top Mount, Knee-in-Belly, and Rear Mount positions.

1. *The Side Mount* position is escaped by placing one's attacker in the Guard, or by turning over to all-fours and grabbing an opponent's legs in order to attempt a take-down with the usual penalties for attempting a take-down from the ground (pp. B111-12). Also, the practitioner can opt to go for an Arm Lock maneuver right away, but if the attempt fails he often lands himself back into Side Mount position.
2. *Top Mount*. The practitioner escapes either by moving his hips to place his opponent in the Guard or by controlling an opponent's arm and bridging him over so that the practitioner ends up in his opponent's guard. A player can announce whether he intends to hip-escape or bridge. These two maneuvers may also occur as a feint combo, i.e., bridge first, then hip-escape, and in reality most people must escape from skilled opponents in this way. The practitioner's Judo Parry attempts are reduced by -2 to avoid strikes from a Top-Mounted opponent, due to the inferiority of his position, though he may still attempt a Clinch maneuver to grapple his opponent's arms and avoid strikes altogether. This attempt also suffers a -2 penalty.
3. *Knee-in-Belly*. The BJJ artist escapes this position, usually by placing the opponent in his guard, but sometimes by unbalancing and toppling his opponent over so that he achieves a top position. This could mean he has

landed in his opponent's Guard or that, on a critical success, he achieves a Side Mount position. Having at least a skill level of 12 reduces the FT loss rate to one every 4 rounds. A skill of 15 or greater further reduces the rate to one every five rounds and so on in increments of 3 skill points.

4. *Rear Mount*. When a practitioner escapes this position he usually ends up in his opponent's Guard, but on a critical success achieves a superior Side Mount position. Technically, the practitioner has no active defense against strikes from the back, but he may choose to block punches and elbows by grabbing the back of his own head with his hand. This shifts the hit location of damage to his arm and hand instead of his head. This, however, makes him more susceptible to submissions such as Arm Locks and Choke Holds, giving the attacker a +2 to these maneuvers. Alternatively, the practitioner may attempt to grapple the opponent's arms, with the usual penalties of -5 for wild swings. However, no penalties apply for resisting the Choke Hold maneuver; it comes down to a Quick Contest between the Ground Escape skill and the Choke Hold maneuver. Escaping the Rear Mount always involves dislodging at least one "hook" from the inner thigh and turning to face the opponent.

Technical Standing (Average)

Defaults to Judo -2

Prerequisite: Judo

This maneuver allows a practitioner to defend against attacks while standing up from any ground position. With a successful skill roll, he has no penalty to active defenses while attempting to stand. He may even opt to launch a kick to the knee or shin to halt his opponent's advance, buying him the necessary time and space to stand up in a fighting stance.

Rear Mount (Hard)

Defaults to Judo -3 or Wrestling -5

Prerequisite: Judo or Wrestling

Also called "Taking-the-Back," this maneuver is attempted anytime an opponent exposes his back (Wrestlers are especially prone to this mistake) by rolling over on hands and knees. The practitioner attempts to place his "hooks" in and achieve Rear Mount, being the best possible offensive position one can achieve. Roll a Quick Contest of Rear Mount vs. DX-2 to achieve "hooks." Once a person has Rear Mounted his opponent, he can strike or apply submission maneuvers freely, leaving his opponent with no choice but to defend or escape. A practitioner can also attempt to Rear Mount from his Guard. First, roll against Guard skill at a -3 penalty. Success indicates the BJJ artist has pulled his opponent's arm diagonally across his chest, and he has scooted out to the side. Now that his back is exposed, he may roll against the Rear Mount skill to achieve "hooks."

Special Cases of Existing Maneuvers

Judo Throw

In BJJ there are two cases of the Throw maneuver: the Throw used to take an opponent down and the Throw used to change positions or "Sweep" from the guard. Realistically, BJJ artists, unless they have had Judo training do not throw nearly as well as their Judoka counterparts, who train this skill more extensively. To reflect this the Throw maneuver as it pertains to standing throws defaults to Judo -3.

Judo Throw "Sweep"

BJJ specializes in this maneuver, which allows the practitioner to trade places with his opponent, so that the opponent ends up with his back on the ground and the practitioner on top (in either Top Mount, at best, or in the opponent's Guard, at worst). The BJJ practitioner suffers no penalty for being on the ground when attempting a "Sweep." Roll a Quick Contest of Judo Throw "Sweep" vs. Guard Pass, Immovable Stance or ST-2, whichever is greater. If the

practitioner wins the opponent gets turned over. This maneuver typically does little damage if the opponent is on his knees at the time he is swept. However, if the opponent was standing at the time, the potential for damage, especially on concrete is high. Apply the normal Judo Throw damage. On a critical success the BJJ artist sweeps straight to the Top Mount position.

Arm Lock

All the rules stated in p. MA44 regarding the Arm Lock maneuver hold true. However, a BJJ artist can apply this maneuver from any position. If he has won a Quick Contest to establish Ground Control, the BJJ artist may apply this maneuver from any of the dominant control positions mentioned under the Ground Control section. The attempt is at +1. Attempts to Arm Lock from any of the bottom escape positions are at -6 and take away any active defenses. Arm Locks from the Guard incur no penalties and may be used in combinations, e.g., Arm Lock-Sweep or Arm Lock-Choke.

Choke Hold

In BJJ, this maneuver does not apply pressure to the windpipe with the forearm, as stated in p. MA45, but, when done correctly, pinches the carotid arteries, cutting off blood flow to the brain. This results in the victim passing out in as little as 3 seconds if applied with enough force, but does *not* permanently damage the victim's throat. A BJJ artist can choke from many more positions than the Rear Mount: he can also choke from Side Mount, Top Mount, Knee-in-Belly, and his Guard, gaining a +2 to the effort if his opponent has clothing that can be used against him.

Slip

As per p. MA54, save that now Judo counts as a prerequisite for this maneuver. This maneuver is taught to every BJJ artist for self-defense purposes.

Suggested Reading

These two sources give fairly objective treatments of the history of Brazilian Jiu-Jitsu. The book gives an excellent treatment of the Brazilian Jiu-Jitsu strategy discussed above.

Pyramid Review

Star Hero (for the *Hero System*)

Published by [Hero Games](#)

Written by James Cambias and Steven S. Long

Art by Storn Cook, Andrew Cremeans, Keith Curtis, Malcolm Harrison, Jeff Hebert, Bryce Nakagawa, Brad Nault, Klaus Scherwinski, Greg Smith, and Chris Stevens

328-page b&w softcover; \$29.99

After hitting one out of the park with its revised and expanded version of ***Hero System 5th Edition***, Hero Games started hitting all the high notes of the ***Hero*** line, the books that had made the system the mainstay hit it's been for over 20 years. Having released the exhaustive Champions genre book, Hero Games now turns its attention to ***Star Hero***, the sourcebook for all things outer space and science fiction.

And a full-course meal it is. ***Star Hero*** serves two purposes: It describes the science-fiction genre in heavy detail, and it firmly ensconces the ***Hero System*** in that milieu. It achieves both goals with an unmatched level of thoroughness and utility.

There are several chapters that deal with the science and setting components alone. The book starts big -- discussions of galaxies and stars -- and peels the onion down to its core, describing planets, their formations, and the societies and beings that arise on them. Many such sections are divided in two; the first half will explain something scientifically, and the second half illustrates how this applies in a campaign setting.

The ***Hero System*** has come a long way since its inception, and nowhere is this made more abundantly clear than in the pages of ***Star Hero***. Computers and characters, starships and spacesuits, psionics and sensor systems -- copious examples show how just about anything can be represented in game terms by careful and considered use of ***Hero System 5th Edition***. Simple and succinct, the system sees applications here that will keep players' minds working overtime.

Beyond being a complete accounting of current thinking and a full repository of Hero samples, the manuscript helps the potential player get into the sci-fi groove. It has been deliberately designed to be useful to players and GMs alike. The former can find countless notions for new PCs and new ways to use the "old" rules when making a character -- there are alien race and professional Package Deals, and fresh interpretations on favorite Abilities, Disadvantages, and Perks.

The latter will have referee advice spilling out their port nacelles. Taking apart genre conventions piece by piece, the book touts the uses of everything from psionics to time travel while warning of the potential pitfalls of same. Aliens, bizarre life forms, starships, and all the rockin' equipment players expect from an RPG product are present -- few stones are left unturned in the quest to provide an all-inclusive reference manual.

Adventures and campaigns are broken down into their constituent pieces, too, so the GM can decide whether his game will be space opera or cyber crime, high-tech or low sci-fi. Want to cross a game about the Space Patrol with your ***Western Hero*** game? This book will help you do it, and suggest ways to work in a theme while you're at it. Want to know the effects of a galactic government, or how to keep teleportation pods from ruining your game? From the big

picture to the little picture, the book allows you to maneuver your subject matter into the microscope in any way you please, and every view feels new.

The book eschews any kind of actual setting -- that's been reserved for the forthcoming ***Terran Empire*** book, to which this volume alludes briefly throughout, usually for the sake of examples. All the material contained herein is the nuts and bolts of building your worlds, all the factors and facets that figure into putting together a coherent setting of your own (so there are no secrets to be spilled -- anyone can read it without spoiling the experience). The book offers plenty of ideas, and it will probably put into words the ideas that have been stewing in your head for a while anyway, but be prepared to bring a dash of your own creativity.

There is, by necessity, a lot of up-to-date information about the nature of space and science (as we currently understand it), and some of it isn't easy. Most of the math is imparted painlessly, and there's almost always a "close enough" approach presented for those GMs whose players will forgive a little inaccuracy . . . but for those that demand it, the hard data is there.

Star Hero is cleanly laid out, and the visual style is great -- the worst of the artwork is anything but bad, and it shows more flair and spark than most generic sourcebooks. When all is said and done, the book may not be the best read you've had. The style isn't dry, the authors know whereof they speak, and colorful examples and thought-provoking illustrations (of both the textual and visual breed) abound, but it still boils down to the fundamentals, and those can be a bear to absorb. But ***Star Hero*** is a must-have for anyone who wishes to adventure among the stars, and so long as you bring the fuel, it will take your campaign where you want it to go.

--Andy Vetromile

Pyramid Review

The Keeper's Companion 2 - Prohibition, Firearms, Tomes & Creatures (for Call of Cthulhu)

Published by [Chaosium Inc.](#)

Written by Adam Gauntlett, Brian M. Sammons, William Dietze, Greg Henrikson, Charles P. Zaglanis, J. Gordon Olmstead-Dean, M. J. Lempert and James Crowder

Cover by Paul Carrick

Illustrated by Paul Carrick and Keith DeCesare

168-page b&w softcover; \$23.95

For the Keeper of Secrets, one of the most useful releases for Chaosium's *Call of Cthulhu RPG* during 2000 was [The Keeper's Companion](#), an indispensable update and expansion of *The Keeper's Compendium*, which by then had been long out of print. Described as "A Core Book For Keepers, Vol. 1," Chaosium promised to follow it up with a second volume, and after a wait of some two years, it has finally arrived. While the first volume was near, but not quite perfect, hopefully time has enabled the authors to remove any such minor problems from this sequel.

Like *The Keeper's Companion*, *The Keeper's Companion 2* sports a full wraparound of Cthulhu himself. Drawn again by Paul Carrick, the illustrations are so similar that initially I thought the original from *The Keeper's Companion* had been used again. Inside, the book is laid out in a less adventurous style than has been the norm with recent releases from Chaosium for *Call of Cthulhu*, but is nevertheless easy on the eye and backed up by a decent index -- unlike the first book. Paul Carrick's interior illustrations are as excellent as ever, and Keith DeCesare's depiction of the various guns described in the chapter entitled "Iron" echo the style seen in Green Ronin Publishing's recent update of *Ultramodern Firearms* for the *d20 System*. One major difference between the first and second volumes is their length -- at just 168 pages, *The Keeper's Companion 2* is 40 pages shorter than *The Keeper's Companion*, yet the price has remained the same.

The Keeper's Companion 2 opens with Adam Gauntlett's "Prohibition," a 50-page essay on the history and effect of the 18th amendment to the U. S. constitution. Occasionally a little dry, this runs from Prohibition's origins in the various temperance movements through the Anti Saloon League's success in creating the Volstead Act, then lobbying for its adoption by Congress and finally its required ratification by 36 states. Where the focus of past articles upon Prohibition has been more on gangsters and the like, this lengthy piece is broader in its focus. It looks at not just the mob, but the anti-alcohol advocates that brought about Prohibition and maintained a strong influence on Congressional politics during the 20s; the rum-runners and those that smuggled drink from Canada (and elsewhere) before crime and the syndicates muscled in; the consumers and the type of establishments they frequented; and the efforts of the law enforcement agencies brought to bear upon Prohibition. This is split between the somewhat disinterested local law (which became tarred by the brush of corruption), the limited labours of the Prohibition Bureau (eventually to become the Bureau of Alcohol, Tobacco and Firearms) and the greater successes of the Coast Guard.

The strength of this essay is its usefulness for what is essentially the *Call of Cthulhu* default campaign timeframe -- the 1920s -- for which most of the game's supplements are written. Indeed, there have been several scenarios written

with Prohibition as part of their theme, of which "Dead Man Stomp" from the *Call of Cthulhu* rulebook and "The Innsmouth Connection" from [Before the Fall](#) spring to mind. Considering the length of this piece, perhaps a timeline could have been included, so as to make an implementation of the history easier. Equally, a bibliography would be valuable to the Keeper wanting to conduct more research and given the length of this essay, it seems strange that it does not have one attached. Otherwise, this is an excellent piece for *Call of Cthulhu*, as well as any 1920s RPG.

The second large section is "The Keeper's List of Lists" by Brian M. Sammons, which breaks down Call of Cthulhu's many scenarios by Era; The Opposition (Creatures, Maniacs and Great Old Ones); Legendary Heroes and Villains; Cults, Sects and Secret Societies; Mythos Tomes; and Fictitious Locations. Backed up with a "Non-Chaosium Bibliography," the list is not quite up-to-date, as it does not include Pagan Publishing's most recent release [The Resurrected III: Out of the Vault](#), which is surprising considering the length of time that this supplement has been waiting for release. One other complaint is that the list of scenarios by era does not split those set in the 1920s and 1930s into their respective decades, but instead, lumps them in together. Admittedly, there are few scenarios written for the 1930s, but there are enough to make the difference, and with the forthcoming release of *Pulp Cthulhu*, this should be expected to grow.

As useful as this list of lists is, it suffers from a number of omissions. First off, it does not include any of the published solo adventures (*Alone Against the Dark*, *Alone Against the Wendigo*, *Alone on Halloween*, and *Grimrock Isle*) which is understandable as they are of little use for running with players (though in the case of *Grimrock Isle*, notes are given for running it as a normal adventure). Even so, these four could have been included for completion's sake. Although dedicated magazines such as *The Whisperer*, *The Unspeakable Oath*, and [The Black Seal](#) are covered, less dedicated magazines that have contained *Call of Cthulhu* related articles and adventures are not. The author's argument that these are long out of print and difficult to find is spurious, especially when so many of the game's supplements and campaign books (both from Chaosium and other publishers) are equally out of print and difficult to find . . . if not more so. There is no denying the usefulness of these lists, but the articles and adventures from the likes of Games Workshop's *White Dwarf*, GDW's *Challenge*, FASA's *Stardrive/Stargate*, Chaosium's own *Different Worlds*, *Shadis*, and other magazines could just as easily have been included. Not just because the book has the space, but again for completists' sake.

Finally, perhaps another two lists could have been given as an aid to the Keeper. The first of these would complement the Fictitious Locations list and break the various adventures by 'real world' location. The second would add depth to the by Era list and give the scenarios by year. This is a little more difficult as not every scenario is tied to a specific time or year, but enough are for this list to prove useful for the Keeper.

Following this is the third long section of *The Keeper's Companion 2*. Greg Henrikson's "Iron: a Survey of Civilian Small Arms Used in the 1890s, 1920s, and the Present" is another look at the place of firearms in the setting of *Call of Cthulhu*. It adds two new skills: Handloading for casting and priming a character's own ammunition, and Gunsmithing, for the repair and modification of firearms. The first skill is useful for "hot" handloading ammunition -- the filling of a cartridge with extra grains of powder to give it that added hitting power. In game terms, this gives it on average an extra +1 on the damage roll. There is lots of advice on handling guns, from the perspective of both player and Keeper alike, as well as a nice list of potential malfunctions should ever an attack roll fail spectacularly badly. These are more than the simple-but-common-to-most-games jam or misfire and cover revolvers (cylinder bulge or crack, negligent discharge), semi-automatic weapons (limp wristing, failure to feed), lever-action weapons (misfeed, catastrophic magazine detonation) as well as malfunctions to most weapons (hang fire, squib load, forgetting the safety). In a game these should help spice up those fraught combat situations when a gun malfunctions and in all likelihood educate investigators in the ways of proper firearms maintenance and handling.

The Bulk of "Iron" is given over to a list of some of the more common guns available to the average investigator. There are oddities discussed such as the .50 BMG Sniper Rifle, the Thompson Submachine Gun in .45 ACP, and to a lesser extent, the Webley-Fosberry Automatic Revolver in .455 Webley. While the ubiquitous Tommy Gun may be an icon of the era, this article stresses that it is actually highly unlikely that investigators will be able to obtain one. Indeed, its discussion here and in the earlier article, Prohibition, make excellent companion pieces to the longer history of the weapon found in issue 14/15 of Pagan Publishing's *The Unspeakable Oath*. More common then, and more deadly for their accuracy, are the rifles covered in "Iron." The 13 discussed are mostly civilian models and include

various lever action rifles, a pair of "elephant guns," and just the two specifically military weapons. Backed up with five shotguns, these represent the type of guns that an average investigator may not only be able to purchase with ease, but also use without necessarily suffering the full scrutiny of the law. Not so with automatic weapons or sawn-off shotguns. (Of course, the same rules apply to the average cultist . . .) A small selection of handguns is also included, but these are not as likely to make into a game compared with the other weapons.

Continuing on from *The Keeper's Companion*, Brian M. Sammons summarises 10 Mythos tomes in "The Mythos Collector" -- *Book of Iod, Chronike von Nath, and Confessions of the Mad Monk Clinthanus, Letters of Nestar, The Nyhargo Codex, Soul of Chaos, Testament of Carnamago, The Tunneller Below, Visions From Yaddith, and Von denen Verdammten*. Some of these come from the *Call of Cthulhu* rulebook and are worthy expansions upon the basic statistics given there. This does still leave a large number of tomes still awaiting this treatment, both from the rulebook and *The Keeper's Companion*. Backing up these tomes are 16 new spells that relate to their contents as well as two new creatures, the Lesser Servitor Race, the Nagaae, and the Tunnelers Below, a Lesser Independent Race.

Where *The Keeper's Companion* examined over 20 arcane artifacts from Mythos fiction and gaming material, this second volume follows it up with "Mythos Ex Machina," a collection of the many technological items that have appeared in various adventures. Culled by Charles P. Zaglanis, these 40 items are organized by species: Deep Ones, Elder Things, Great Race, Humans (Hyperborean and Modern), Mi-go, Serpent People, Insects from Shaggai, and Great Race of Yith. Each is fully explained and ends with details of the scenario it is sourced from and the original authors.

Alongside the main pieces in *The Keeper's Companion 2* are three smaller entries. The first of these is J. Gordon Olmstead-Dean's "LaVey, Satanism and the Big Squid," a brief look at the relationship between modern day Satanism and the Mythos. This overview draws a number of connections between LaVey and Lovecraft, which given the subject are odd at best. The final pair of articles complements each other rather well -- in the first of these William Dietze discusses the nature and eventual effect of a strange corpse in "The Diary of Dr. Lippencot" and its accompanying "Autopsy Report." Together these would make excellent handouts for game set in modern day New England, or even for Pagan Publishing's *Delta Green*. The second is "Notes on Human-Deep One Reproduction" by M. J. Lempert and James Crowder, which is short, but of use if the Keeper wants to implement the machinations of Deep One society on his players.

The Keeper's Companion 2 is clearly not as useful as was its predecessor, *The Keeper's Companion*, was and continues to be. In particular "The Keeper's List of Lists" is disappointing because it could have been far more extensive than what is given here. Fortunately, there is no denying that some of its contents are indeed *useful*, particularly the articles on Prohibition, firearms and the lists, but more so as reference material, rather than something the Keeper might want to have at hand.

--Matthew Pook

Heroes

This column is difficult for me to write, and not merely because I'm in hour 180 of an ear problem that has left me near-deaf, in pain, and suffering from vertigo that occasionally makes me drift slightly off-course, so I'll look up at the screen and note that yjr drmyrmvr o esd ytuomh yp etoyr ;ppld ;olr yjod/

No, I find myself again custodian of a weekly soapbox where I try to make sense of the senseless, struggling between the extremes of babbling on in the same fashion that others have (really, what insight can I *possibly* offer into this affair when some of the brightest and most eloquent minds of the world have already done so?), and risking irreverence by tying into a hobby that is, ultimately, unimportant in the grand scheme of things.

Of course, I'm speaking of the *Columbia* tragedy, and the sacrifice made by its crew.

This is a sacrifice that has been called "heroic" by many; the astronauts themselves have been described as heroes.

And, as I was sitting in my hotel room, watching the news, thinking random thoughts (Did this tragedy seem somehow less real because it happened on a Saturday? Do I deal with crises in the short term by worrying how this affects work or school? "Do we stay open? Do we go home?"), one of the thoughts I had was, is the death of people who were just trying to come home *really* heroic? What is a hero? Is the death of an astronaut trying to return a vessel to Earth any more heroic than an airline pilot who goes down with his plane, or a train engineer who perishes when his charge derails? What about all the astronauts who *haven't* died?

Farming, logging, crab fishing, and firefighting are some of the most dangerous professions in the United States, yet only one of those is routinely described as "heroic." Why is this? Is it because three of the four don't involve saving lives? If so, does this mean the farmer who dies while trying to produce food to keep people from starving to death is less heroic than a firefighter who saves someone? Is heroism tied to the immediacy of the situation? Is the fireman who saves the lives of those in a home more heroic than the building inspector who keeps it from burning in the first place?

I also thought of one of the great conundrums I've faced when thinking about history, fiction, and gaming. Is it heroic when the deed in question needs to be done? Is the party that assembles to save the world - whether on the beaches of Normandy or the peaks of Mount Doom -- doing something heroic if they are the only ones who can do so? (Presumably they have some vested interest in continuing to have a world to live in.)

Now, as is often the conceit for columns of this sort, I've consulted my *Webster's Ninth Collegiate Dictionary*. And one of the definitions presented for "hero" is "one that shows great courage."

This was interesting, since I immediately thought of one of the adages that was cited a fair bit when honoring the fallen rescue workers of September 11th: "The firefighter performs one act of bravery in his career . . . when he takes the oath to be a firefighter. Everything else is in the line of duty." (I'm paraphrasing there; although I found many citations of this adage, I was unable to find an original source, if one exists.) This adage, of course, applies to many different fields: police officers, medics, soldiers . . . and astronauts. When you become an astronaut, you understand that to do so is to be aboard a vessel that consists of rocket fuel wrapped in aluminum; knowing and accepting those risks are acts of great courage . . . and thus heroic.

It is not death that is heroic, although it is often death that reminds us that there *are* heroes. And most heroes I've met - police, military, firefighters, astronauts - deny their own heroism . . . perhaps because they are merely doing what, in their hearts, they feel needs to be done; they may not be assembling a Fellowship to deal with the world's problems, but they are following a calling in their hearts that makes them work to better the world and our understanding of it. (I also tend to extend my definition of "heroism" and "courage" to encompass the unobvious: Remaining a teacher in a rough school district despite better offers and impossible conditions can involve as much sacrifice and dedication as being a police officer.) And some of the greatest heroes - such as parents, religious and community leaders, medical personnel and scientists - are quietly heroic, helping to solve problems and forge the future *without* problems,

minimizing crises before they ever happen.

In an ideal world, we wouldn't need heroes. Homes wouldn't burn down, bad people wouldn't seek to harm others, and a venture into space would be no more perilous than a morning jog. But our world is not ideal. Our world is full of people who would break the law, buildings that burn, and scientific frontiers that remain -- no matter our efforts to romanticize and trivialize them - dangerous and untamed. We should mourn the losses of those who make the final sacrifice, and help honor their memories, but we should be careful not to equate the act of dying with being heroic itself. Heroism is an act of courage; sometimes living is the greatest act of courage of all.

* * *

As mentioned above, I'm undergoing some medical problems currently. I'm working to resolve them, but at present I'm spending a lot of time in pain, in bed wishing for the room to stop spinning, or otherwise unavailable; as such, I may be a bit slower than normal in replying to emails, responding in chats, and so on. I appreciate everyone's patience and understanding, and will hopefully be back to normal soon enough. (Or, at least, as normal as I ever am.)

--*Steven Marsh*

Designer's Notes: GURPS Magic Items 3

by Jonathan Woodward

Introduction

GURPS Magic Items 3 is a book of several parts. The greater part is a catalog of magic items from various settings, mostly submitted by others. As compiler, the most important piece of advice I can give to those planning to submit items to future **GURPS** compilations: Read the submission guidelines! Then, after you have written your submission, *read them again*. Even if your submission is perfect in every other way, if you ignored some of the guidelines, the compiler's first impulse will be to throw it out. (The worst offender was an item submitted with *no physical description whatsoever*. This is despite the fact that the guidelines said that the physical description was the most important part!)

A Taxonomy of Magic Items

Another part of **GURPS Magic Items 3** is the Common Enchantment Table II. This table lists the "over-the-counter" magic items listed for the spells in **GURPS Grimoire** and other sources. Putting this table together involved reading every spell in **GURPS Grimoire** and considering the nature of each item. Along the way, I speculated about a system for organizing the different types of items. This taxonomy may be useful to GMs planning on inventing new items based off **GURPS** spells.

Standard magic items can be broken down into several classes. The first kind *enables the bearer to cast the spell*. Some "enablers" are mage-only, and some are "must touch." Some that affect people are limited to affecting only the wearer. Others are limited in other ways (e.g., the first item listed for Beast Summoning, p. M23, only works on one species). Class I Examples: The Beast-Soother item (p. M23), and the first item listed under Shapeshift Others (p. M25).

A second class applies to spells that affect an *area* or *thing*; many of these spells can be made *permanent*, typically by spending 100 times the normal cost. (Some spells that affect people can be made permanent. They are obviously related to this class, but do not create magic items as such, and so fall outside the taxonomy.) Since these are permanent, none of them have any of the above restrictions on *use*. Anyone who can cast the spell can create the item or area, and from that point on anyone can "use" it. The precise effect is determined during enchantment, and can't be changed. Class II Examples: The Shatterproof item (p. M60), and the second item for the Pull spell (p. G80).

A third class consists of items that permanently cast the spell *on the bearer*. They are usually marked "always on." They sometimes only affect mages. If the spell has a range of possible effects, the item is often limited to one, determined at enchantment. Sometimes the spell will affect the item as well as the user (particularly protective spells, which aren't much good if the item remains unprotected), while others explicitly don't (e.g., Body of Water, p. M40). Some of these items which have negative effects automatically also have the Hex enchantment (p. M43), free. Class III Examples: The second item for the Itch spell (p. M25), and the first item for Great Hallucination (p. G76). Some items of Class I (enablers) become items of Class III when they are *self-powered*. If the item has sufficient Power enchantments that its cost to cast and cost to maintain are zero, and the spell is of an appropriate type (e.g., Flight, p. M71, not Fireball, p. M37), it becomes an "affects bearer" item.

The fourth class is related to the third and second classes, and consists of items that are permanently enchanted to affect a second kind of item. For example, the second item for the Preserve Food spell (p. M48) is a chest or sack, always on, that preserves any food placed inside it. This class isn't part of the second class, since the spell doesn't affect the enchanted item itself, but rather other things brought in proximity to the enchanted item. Class IV Example: The Zombie spell, as listed on p. 41 of **GURPS Undead**, can be enchanted into a coffin, which will resurrect a corpse placed inside it.

The fifth class is small, and is made up of items which *counter* the spell's effects. Class V Examples: The first Mystic Mist item (p. M77), and the third item for the Grease spell (p. G79).

Arguably, there's a sixth class, "rumored." Many of the item listings in **GURPS Magic** say, "Such an item may exist, but nothing definite is known." This serves as a warning to the GM that such an item may unbalance the game.

Lastly, some items simply can't be easily classified, or fall into more than one class. Spells which affect more than one target are often like that. (E.g., Beast Link, p. B23, or Propel, p. G101.)

Here's an outline of the taxonomy, for reference.

- I. Enablers
 - A. May be mage-only.
 - B. May be touch-only (if spell affects a person, item, or area).
 - C. May only allow the spell to be cast on the wearer (if spell affects a person).
 - D. May be otherwise limited (if spell has a range of effects).
- II. Permanent on Item or Area
- III. Permanent on Bearer
 - A. May be mage-only.
 - B. May be otherwise limited (if spell has a range of effects).
 - C. May affect item as well as bearer (if spell can affect both people and items).
 - D. May have automatic Hex (if effect is negative).
 - E. May be a self-powered item that would otherwise be an Enabler.
- IV. Items That Permanently Affect Other Items
- V. Counters
- VI. Rumors

Alchemy

While there are several alchemical items in **GURPS Magic Items 3**, with statistics compatible with Chapter 6 of **GURPS Magic**, I didn't have the time or space to include an in-depth look at alchemy. What follows is a quick-and-dirty way of coming up with the statistics for elixirs, working from the standard **GURPS** spell list.

Every elixir has several statistics: Form, materials cost, time to create, a modifier to skill, and two retail costs (one for common magic, one for secret magic worlds). To define a new elixir, pick a spell from **GURPS Magic** or **GURPS Grimoire** that has the desired effect. Make a note of the necessary time to cast and total energy cost.

The form of an elixir is largely arbitrary, but there are a few guidelines. If a spell affects a person as a whole, the form is probably potion or powder. If the spell affects a body part or a wound, it could be an unguent. If it is an area spell, the elixir's form should be pastille.

Materials cost is based on the energy cost of the spell, and is equal to energy cost times \$25. Time to create is based to time to cast; take the time to cast in seconds, find the square root, and round up to get time to create the elixir in weeks.

To determine the skill modifier, count the total number of prerequisites the spell has. (The Spell Prerequisite Charts in the back of **GURPS Magic** and **GURPS Grimoire** can be very helpful for this.) For example, Resurrection has 9 prerequisite spells: Instant Regeneration, Regeneration, Restoration, Major Healing, Minor Healing, Lend Health, Lend Strength, Summon Spirit, and Death Vision. If the spell requires Magery, add the level of Magery to the total. Resurrection requires Magery 3, so the total is now 12. (Any other unusual prerequisites may also increase the total, at the GM's discretion.)

If this total is 0 (the spell has no prerequisites), the elixir has a skill modifier of +1. (A special note for GMs using the Quick Alchemy rules from p. 18 of **GURPS Wizards**: When quickly preparing an elixir that provides a bonus instead

of the usual penalty, the roll is not made at double the modifier, but rather *half*, rounded down, or +0 in this case.)

If the total is greater than 0, and the spell is a Very Hard skill, divide the total by 2. If the spell is just Hard, divide by 4. (Round down in both cases.) The result is the negative skill modifier.

Retail cost works as per p. M100. Elixirs cost \$25 per alchemist-day (\$50 per day if magic is rare), plus materials cost.

Example: We wish to define an elixir which will have the effects of the Monk's Banquet spell (p. M49), allowing the subject to go without food for a day. Since this arguably affects a body part, the form will be an unguent, which must be rubbed on the stomach. Energy cost to cast the spell is 6, so materials cost is 6 times \$25 equals \$150. Time to cast is 1 second, so time to create in weeks is the square root of 1, or 1 week. Monk's Banquet has 10 prerequisite spells, and also requires Magery 2 and IQ 12+; we decide to call the total 13. Monk's Banquet is not Very Hard, so the skill modifier is 13 divided by 4, rounded down, or -3. Retail cost is \$25 times 7 days (\$175), plus materials, for a total of \$325. (\$500 if magic is rare). In the **GURPS Magic** format:

Sangariah (Elixir of Fasting): Subject can go without food or water for one day, with no ill effects. Unguent (applied to stomach). \$150 in materials; 1 week; -3 to skill. Cost: \$325/\$500.

This system is balanced against itself, and reasonably balanced against the existing elixirs. It could obviously use some refinement, particularly in materials cost, but overall it serves the purpose of a quick-and-dirty system for defining new elixirs.

It Takes All Kinds

Briefs On Three Non-Traditional Relationships

by Michael Anguiano

Love, as they say, is a many splendored thing. Here, then, are some examples of that splendor as it might appear in different settings and genres. Each couple features a dynamic which could easily become a storyline for players, or the individual characters could appear in an ongoing campaign as atmosphere which the players can use in developing their own characters.

Couple #1: Max Normal & Reds (*Contemporary Vampire*)

He: Max Normal

Max is Caitiff. He is relatively new to the local scene, and nobody knows much about him except that he prefers bagged blood rather than hunting. He doesn't make a strong impression and looks like just another white guy. At first glance, Max would more likely be mistaken for a business commuter than any sort of undead. Typically dressed in a business suit and tie, he seems relatively quiet, intelligent, and unassuming. Max is, in fact, all of those things. In conversation, he can hold articulate and intelligent discussion on most subjects but studiously skirts the mention of personal details. He dislikes conflict or confrontation and will typically take the path of least resistance. Being clanless, he recognizes that he lacks any political significance for others and so keeps a low profile to avoid unnecessary abuse. He does carry a pistol for personal protection but mostly relies on strong abilities in Obfuscate to avoid hostilities. He will avoid Reds if it is convenient to do so.

Max is a relatively old generation, probably seventh, but ironically has been a vampire for, as far as he knows, about five years. Red's immortal kiss is his first memory and he knows nothing of his life before that. It makes no sense to him that he could have a world of ingrained behaviors, attitudes, understandings, but not have a single memory of learning them. His research on amnesia has not yielded useful answers. He fears he may be insane. Like Reds.

To counter this, Max cultivates an air of normalcy, reflected in the name he has adopted. He eschews the trappings of the vampiric lifestyle and he views the "goth" or "rave" scenes with distaste. While he understands the prowess gained from his generation, he avoids using it and doesn't discuss it with others. Max loves Reds, but he is very much afraid of her and what she represents. In his first months with her, he discovered that he is unbondable and so he takes solace in being independent from her. Where she goes and what she does is beyond him, and he doesn't want to learn.

She: Reds

Reds is known to be about eight hundred years old and reputedly a figure of some respect amongst Malkavians, but nobody can get a straight answer as to why. She is an elfin, petite woman of mixed Mediterranean descent, with a long mane of shockingly red hair, appearing to be in her late 20s. She demonstrates some respect to her clan but otherwise her demeanor is erratic and inconsistent towards everyone else, regardless of rank, species, or handedness (including Max). She appears to have some strong allies in the background, however, and political hostilities will often abruptly resolve themselves in her favor. Some think she's suffering from bipolar disorder and schizophrenia, some think she's a manipulative genius, but most agree that she's a pain in the ass. Her personal appearance vacillates from incredibly cultivated to complete neglect, although she will always be the former around Max. Her usual clothes are historically anachronistic and she often appears in a Victorian tuxedo, although she occasionally wears a style of fashion that does not otherwise appear for several years or even decades. She will usually carry a sawed-off shotgun (slugs, spiked with

wood and silver) and a pair of silver-inlaid straight razors. She can be a very dangerous individual when she chooses to be, and most other times as well.

Reds communicates mostly through gestures. Her speech sounds like an aphasiac word-salad and she will not, perhaps cannot, speak otherwise. Max has no difficulty following her speech and can easily translate her elaborate word-swapping, but any explanations are torturous and counterintuitive. He suspects she's really just amusing herself because otherwise conversation is horribly boring.

Example of her speech and his translation:

Reds: "Maize wrist and wrist wire warm aft ay-eeh-eye not."

Max's translation: "Hey, tourist guy, look behind you."

Reds is truly, deeply, madly in love with Max. She watches over him from a respectful distance, although her understanding of "respectful" and "distance" will vary enormously. She does not understand his choices, but she accepts them because she loves him even though he is obviously insane.

The Key

Max believes that Reds sired him. He is wrong. He sired *her* approximately 1,200 years ago somewhere in western Africa. She has followed him devotedly through the centuries, although he has occasionally escaped her in his various permutations. A dedicated Malkavian, Max has long been exploring the myriad aspects of existence by periodically undergoing a complete and total change. With each chosen identity, he discards all extraneous matter, both mental and physical, from his previous lives. The only constant has been the presence of Reds. A small number of others are aware of Max's quest, but interfering with him has historically proven to be a poor choice.

If Max is present, Reds will almost certainly be near. Woe unto anyone who tries to feed on her man.

Couple #2: Terence & Ana-Duncan (Contemporary In Nomine)

He: Terence

Terence is a Balseraph of Technology with a long and checkered history, claiming to be one of the originals who Fell. "Some Fell, some jumped," as he is fond of saying, and many believe his claims. His status has risen and fallen repeatedly over the millennia, but he has always survived and bounced back. Contradictory stories of his past are plentiful, which may or may not be his handiwork. His original name is known to be Azael (a then-common name), but Vapula is the only one who addresses him by that. He is also known to have spent roughly three decades on the experimentation table after a particularly disastrous failure in the Belgian Congo, during which punishment he was often attended by Vapula directly.

His current vessel is caucasian male, age 65, short, thin, balding, but surprisingly spry and alert. In this vessel, he is currently operating as Terence Sharpe, senior sales rep for Diversified Technologies International, an Infernal front company. He is rather fastidious about his appearance, wears expensive business suits with the typical high-tech doodads and carries a wallet of credit cards. His manicure, in particular, is immaculate and serves as a fond reminder of the slashing claws which were forbidden him after the Belgian Congo debacle. He sometimes carries a weapon, but these days he usually relies on his resonance or on a Song to escape hostilities. Otherwise, he rarely uses his resonance and instead will simply exploit the plasticity of language to accomplish his aims without actually lying.

While somewhat burned out, Terence does command a certain level of respect for his experience and connections and he does retain the original convictions behind his abandonment of the Divine. His reasoning has become much easier

to explain as the language of psychology evolved, particularly "schizophrenia."

Terence has known Duncan for barely a century, but he fell in love rather quickly despite himself. Consequently, he took it upon himself to show her the skills and tactics she would need to survive and succeed, without repeating his mistakes. They have been in contact only intermittently over the last fifty years, but he has followed her career with some pride and some envy. Following her recent reversals of fortune, she came to him for help and so he has given it, although not without cost to her or to himself.

She: Ana-Duncan

Duncan is Lilim but currently an Outcast from both sides of the war. Originally named Ana, she was in service to Dark Humor and distinguished herself as a useful and effective agent. She has worked well with various other Infernal agents on Earth, most notably Terence, but her first priority was always to win her freedom. To this end, she networked tirelessly to find out who held her obligations and how best to recoup them. By the 1970s, only one remained outstanding but she could not find the holder. In the process of her search, she had grown weary of Hell's delusions of grandeur and began to rethink her view of the war. In a moment of epiphany, she found herself Redeemed. Ana became a Bright Lilim who reveled in the Divine Splendor and was soon assigned to Yves.

Servitors of Judgment made her tenure brief, however, as her past was repeatedly investigated. Although she herself had genuinely repented, the continued doubts and accusation began to wear at her patience. Annoyance followed, then resentment, and she finally Fell after a spectacularly angry outburst that the hypocrisy of angels wasn't worth giving up her friendships among the Fallen. Currently in hiding on Earth, she has gained the use of a strong vessel, taken the name Duncan, and renewed her network of contacts. Most importantly, however, she has asked for help from Terence in finding an Infernal Prince. She has come to realize that her affection and regard for Terence is blossoming into more, although she is careful not to place too much trust in him. Terence, for his part, does require some payment for his services, but Duncan assumes he sees the assistance as an investment in the future.

Duncan's vessel is a tall, muscular, voluptuous Latino woman in her late teens. She is adept at assessing and manipulating people and uses her network of contacts to shield herself from scrutiny, bargaining on old friendships and new information. She has surprisingly effective combat skills, although she only uses them as a last resort, preferring to recruit mortals to do the dirty work. She is keeping a low profile while she waits for word on whether Theft is willing to accept her as an agent.

The Key

Terence loves Duncan. He is, in fact, the holder of her last vow obligation, which he acquired through notable personal cost and effort. However, he knows she has never loved him and so he masks his feelings by requiring payment for his services. If he offered help freely, she would think he was setting her up. Worse, she might realize his feelings and exploit him the way that Lilim exploit any besotted suitor.

Duncan loves Terence. She considers him the only person she has known with real integrity and strength of purpose. In the Game, though, he's always been a survivor and she doesn't believe he would be weak enough to fall for her. She believes that she can only be sure of his help if she pays her way and makes clear that she is worth the investment. Her affections, if known or suspected, would just make her that much more ripe as a pawn.

Each loves the other, but is certain that the other can not be trusted with that love. And that, as they say, is the Hell of it.

Couple #3: Homer and Gig

(Cyberpunk)

He: Homer

Homer Landis is an officer with the LAPD Heavy Response Unit, a cybernetically enhanced SWAT team. As the designated combat driver for his unit, his radio designation is "Pontius Pilot." Homer is in regular contact with his siblings and has a fierce sense of loyalty to his family, ready to drop anything when called upon. He is conscientious and dutiful in his job and has a strong sense of fair play.

Originally from the Deep South, Homer signed up for the military when he was young. Tall, stocky, and muscular, Homer was a natural and served with merit for several years before he was recruited by a corporate mercenary outfit. Cybernetic enhancement was part of the recruitment package, and soon Homer was even taller, stockier, and more muscular. Besides his general training as a bruiser, he also had his family's talent for vehicles and soon was a valued pilot for the various assault vehicles. After mustering out, he moved to Los Angeles, where the police were desperate to address the growing numbers of violent, cybernetically enhanced criminals and gangs. The HRU was a new unit when Homer joined, and he's seen plenty of action over the years, mostly partnered with Regina Dancey, radio designation "Gigabytch."

On the job, Homer wears the heavy body armor and weaponry of the HRU. Off-duty, he typically wears loose clothing over assorted body armor and weaponry. He favors a .60 revolver for a sidearm, although he'll sometimes carry submachine guns as well. Given that he's extremely tough, he prefers accuracy of firepower rather than speed or volume. He has strong combat skills but favors Aikido, preferring to disable and disarm. His personal vehicle is a heavy motorcycle, although he also has a light pickup truck (modified for speed and handling).

Recently, Gig was implicated in four corporate assassinations while doing freelance work. She escaped arrest and went underground, but she's contacted Homer several times. Begging for his assistance to clear her name, Gig abruptly made their relationship physical. Bewildered, Homer found himself unexpectedly and unreasonably in love with her. Uncertain how to proceed, wary of Gig's intentions, and suspecting that Gig was supporting herself with a criminal career, he has taken a leave of absence to get away from the city and consider the situation. Currently, he is visiting his various siblings around the country and soliciting their opinions of the situation.

She: Gig

Gig is a former LAPD officer in the HRU, a former mercenary soldier, and is now pursuing a number of overtly criminal enterprises. And loving it. She's currently extorting several high-ranking officials in the police department, as well as cutting herself in on different smuggling or trafficking operations that involve police and corporate connections to assorted underworld groups.

A child prodigy, Gig was born privileged. By the time she got to university, it had all become incredibly boring. Computers and electronics were more challenging, since people were sooooo simple to manipulate, but eventually she got bored with that as well. A corporate mercenary outfit caught her eye and she got herself recruited as a tech expert. Cybernetic (and cosmetic) enhancements and combat training made life more interesting, but the real kick was when the cybermedical staff determined that she was a latent telepath! With additional mods, she soon became a valuable asset to the outfit. Eventually, growing bored again, she pulled the files of recently mustered units and picked out Homer. Bruiser, loyal, honest, personally unattractive, he had skills that would complement hers and would be an easy run. She found him in LA, got recruited to the HRU, and got herself partnered with Homer. After a few years of rooting through the LAPD, she found enough corruption and graft to suit her interests.

Then, of course, Gig was framed for several deaths, which irritated her to no end. A plan occurred to her, however, and so she decided to go underground and carve herself out a new life on more challenging terms. To this end, she visited Homer and turned on the charm, although she preferred women and had never found Homer appealing. It took more effort than she ever expected, but after several encounters she managed to win him over. Now she is nudging pawns into proper place and covering her tracks, so when Homer acts on her pleas for help, the resulting cascade of events will create a power vacuum for her to smoothly fill.

Gig is a mixture of Japanese and Ethiopian, long-limbed and nimble. Her figure is spectacularly artificial and she enjoys the attention it garners. Her typical outfit is a mixture of ballistic mesh and translucent armor panels, with assorted weapons and electronic widgets secreted about her person. She usually wears a wig of long braided

dreadlocks which conceals a ballistic plate skullcap, under which she keeps her hair trimmed short.

Gig feels a bit guilty about Homer, and finds herself missing him. She finds this to be a shocking and disturbing development, and she can't figure out how it happened.

The Key

Homer has long surmised that Gig is a telepath, having seen the effects on perps and witnesses over the years. Homer is gay and has never had the slightest interest in Gig, so he knows that his sudden rush of feelings for her is completely artificial. Nevertheless, he is torn between these feelings and his sense of loyalty on the one hand, but also outraged and betrayed that she would violate his emotional state for her own purposes. He is hoping that a round of sibling discussion will help restore his emotional balance, clear his mind, and let him develop an appropriate course of action. Since most of his siblings are cybernetically enhanced combat drivers, they might have some insight.

Gig, for her part, does not realize the degree to which she has "convinced" herself in the process of "convincing" Homer of their relationship. This is a side effect of the strain she placed on her telepathic abilities and mods. While her feelings are only an echo of Homer's, they are nevertheless a unique and unprecedented event for her. She doesn't really know what to expect or how much impact this will have on her.

The Whirlwind Hotel and Eatery

by Alice Turow

The butter was overly cold and hard, not unlike the silence between them. Tabitha scraped the patty futilely, smearing it on the pumpernickel roll appetizer. Anything to avoid looking at him.

The meeting was Carlos' idea. There were some papers left to sign before the divorce was final; he thought a face-to-face finality would give him the closure he needed.

*"So . . ." she said. **Scrape scrape scrape.***

"So . . ." he said. More silence. "How was your day?"

She stopped scraping. "Why do you ask?"

Carlos cocked a half-smile . . . the same worldly lopsided grin she originally fell in love with a decade ago. "Because I'm curious?"

"Uh-huh." She sipped her wine, deciding to humor him. "Well, I had another tiff with Janet in accounting this morning."

"She's the one who accused you of overwriting office expenses last year, right?"

*Tabitha had begun picking up the knife again, hoping to dispel more nervous energy. His words made her drop it with a clang on the butter plate. "You **remember** that?" she asked incredulously. He gave a "**what?**" look with his eyebrows . . . the look he always denied, yet was always his most sincere gesture. "I was certain you weren't listening then."*

"I always listened to you," Carlos said, reaching for Tabitha's now-trembling hand. "I . . . just wish I knew how important it was for you to know that."

They both glanced down at the papers, unsure of what to do next.

* * *

From the outside, neither the hotel nor its attached restaurant - both named Whirlwind, and known collectively as the Whirlwind Hotel and Eatery - are particularly noteworthy. For those accustomed to urban landscapes, the hotel looks a little smaller than the expected size of a comparably located resort, and the restaurant looks a great deal larger than most diners conjoined to a hotel . . . but all cities have their architectural quirks, so this is nothing out of the ordinary.

And, indeed, from the inside, most people detect nothing unusual about either . . . unless comfortable beds or enjoyable meals are a rarity.

But a select group of people find themselves enthralled by the magic of the hotel - and what else could it be but magic? For, should you happen to be at the Whirlwind with a former romantic partner - regardless of how the relationship ended - the forces of this location will undo whatever problems existed to end that relationship. Jealous mates have become more rational, unfaithful boyfriends have become true of heart, and passionless wives have found their inner sparks rekindled. These changes last as long as the couple remains within the restaurant or hotel; once outside its doors, they revert back to their former selves (if they were altered) . . . resulting in disappointment, relief, or utter indifference.

The Restaurant

The Restaurant was founded by Stewart Monk several decades ago, sometime after the Kennedy assassination but before the Nixon resignation . . . although that is all that is definitely known. (Even official paperwork disagrees as to when, exactly, it was built.) Little is known about Stewart Monk himself, outside of the fact that he still oversees the day-to-day operations of both the Hotel and Eatery, despite appearing to be in his 80s. He is of average build, with brown-gray hair thinning to a monk's crown. When he's not dealing with the restaurant or hotel, his eyes are distant and unfocussed. But he is otherwise an affable - if intensely private - man. He is rumored to have founded the restaurant after a relationship ended, although whether there is any truth to this is unknown. It is likewise unknown whether or not he even knows (or believes) the secret of the Whirlwind; he has shrugged or laughed off all attempts to confront him with or inform him of those effects.

The Whirlwind Restaurant has a maximum occupancy of 430, although most nights it doesn't exceed a half of this even during the dinner rush. All who enter pass through an antechamber lit only with candlelight. (For some reason, city ordinances against such lighting schemes don't apply to the Whirlwind.) This area opens into the walkways to the Eatery proper.

There are three distinct areas of the Eatery: the bar, which caters to those wishing to catch a drink and unwind on their way home; the open dining area, which caters to middle-class diners and those seeking a low-key dining experience; and the large back room, which can be converted to either one large room or up to four smaller private rooms, and are intended as private dining areas meant for the rich seeking to impress a large number of friends or an intimate acquaintance.

Regardless of which part of the restaurant diners choose, prices are surprisingly reasonable, especially given how good the food is. (The Whirlwind frequently gets three-and-a-half stars from both local papers and national raters . . . which is unheard of for a hotel-tied restaurant.) They specialize in pasta and rice dishes from around the world (their paella is outstanding), and they're more than willing to customize dishes to suit the diner. There are even several vegetarian dishes (all of which can be made vegan).

Ironically, though, the food seems designed to be almost transparent; it is not so fabulous that it is an event unto itself, nor so flavorless that it draws the palate's attention. Rather, it seems like the food is designed solely to enhance the experience of dining with friends or relations . . . which many theorize is exactly its purpose.

The kitchen seems entirely normal (and is not immune to the effects of the Whirlwind, much to the potential dismay of the staff). There are a few offices adjacent to the kitchen, including Mr. Monk's private office. There is also a large storage room; in one corner of the room, under some blankets, are baby furniture and accoutrements that date back to at least the 1960s; in a rare bit of negative emotion, Monk has fired anyone who inquires about them or disturbed that corner's contents.

The Hotel

The Hotel was added in 1980; some of those who know the secret of the Whirlwind have cynical beliefs as to why this addition was made, although the more romantic minded view it as a way for an enchanted evening to continue a bit longer. In defiance of most laws of zoning, building, and common sense, the hotel was added well after the Eatery. Again, those suspicious to the nature of the Whirlwind note that the restaurant had both the land to build the hotel and the necessary parking from the beginning.

The Hotel has 82 guest rooms and seven suites in its six-story building. Prices are somewhat steeper than other hotels in the area, yet it doesn't seem to have problems remaining close to full. The rooms are modest, with accommodations for two (most rooms have one queen-sized bed, although some have two twins), coffee maker, a bathroom with a shower-tub, and a television with free cable. The suites are much nicer, with two separate rooms, a mini-kitchen, a king-sized bed, and a luxurious bathroom including a giant combination spa/bathtub.

The Hotel is fully connected by a side entrance near to bar to the Eatery; as such, those who underwent the effects of the Whirlwind's power can retain their changes while moving from one area to the other.

The Rules of Love

Of course, the biggest mystery behind the Whirlwind is its effects on ex-couples, which are both straightforward yet impossible to categorize. For as long as the couple remains within the Whirlwind, whatever problems caused them to split apart in the first place will either cease to be, be mitigated, or no longer matter. *How* this happens is something of a mystery, and varies from case to case (and even from visit to visit, with the same couple). It seems that the Whirlwind has the power to literally do *anything* to repair the rift between former lovers; it can alter physical details, memories, attitudes, and even the past, should such be necessary. It can give or take away seemingly any attribute, so long as its effect is to make it possible to rejoin the lovers.

Some examples of how the Whirlwind has worked in the past include:

- A man whose marriage was torn apart after an automobile accident left him a paraplegic found himself able to walk again.
- A woman whose infidelity ruined her relationship found herself to be completely committed, and her mate's recollections of past indiscretions erased.
- A couple that constantly argued over money was transformed so that she had a large trust fund, and he no longer cared about material things.
- A former trophy wife whose husband grew tired of her after she had grown older found her looks and age restored to her prime.

The Whirlwind is *not* consistent, nor does it have one common solution for the same problem. Thus a couple that drifted apart because of his desire for sexual practices she deemed perverse may find that he is changed on one visit so that his needs matched hers (eliminating those other desires), while on another visit she may find herself to be more experimental. Likewise lovers that found they could no longer communicate may find themselves more talkative on one visit, more appreciative of things unsaid between them on another, and fully telepathic toward each other on a third date!

The Whirlwind does have some boundaries, although these seem based more on some external cognitive or moral force than a limit in powers. First, although it shows little compunction about altering people's minds, there are some limits of decency even it won't cross. For example, if a relationship ended because of spousal abuse, the Whirlwind certainly would not alter the abused partner's mind to, say, enjoy being beaten. It also seems unlikely that it would change a mate to condone of serial killing, child endangerment, or other heinous acts. However, the exact boundaries of this are unknown; for example, the restaurant made one soldier's wife more forgiving of his former-Vietnam soldier's battlefield misdeeds, while at the same time making him forgive *himself* for those same crimes.

The changes are immediate upon the second half of a couple entering a restaurant. Most of the time these changes happen at roughly the same time (assuming the couple enters together), but should a former partner enter some time after the first (for example, they are part of two different dining parties), then the changes will affect them both at the same time. When possible, the Whirlwind likes to make its more overt changes as discreetly as possible; usually this happens at the candlelit entryway, where a gust of wind can make the flames gutter for a moment, the shadows concealing the obvious transformations (such as making someone younger, more handsome, or uninjured). But the Whirlwind is not above more flashy displays, and it's not uncommon for a ripple of new reality to wash over patrons once a former lover enters when the person already there needs to be significantly changed. (This can be especially confusing when the hotel is involved; it has happened in the past that former lovers have checked into the hotel independently and unknowing of each other, only to find them both changed once the second person enters.)

Whether or not affected couples know of the changes made to them depends on the circumstances. Generally speaking, those altered will know both that they have been changed and *how* they have been changed, unless this would affect their involvement with each other. Thus someone who had previously received a head injury that affected their mental facilities would know that he had been healed, he was formerly injured, *and* that's what broke up his relationship (for

that matter, his relationship would also know the same things). However, someone whose relationship had broken up because of the guilt over a hit-and-run, and found his history rewritten so that he hadn't ever hit him, would *not* remember the changes in the timeline; both partners would have a vague recollection that something in the past affected their relationship, but it was a misunderstanding . . . and that being at the Whirlwind made it okay.

As stated previously, the Whirlwind's effects last only as long as the couple is within either the restaurant or the hotel. The changes depart as quickly as they were instilled; again, it tries to be subtle if possible, but is not above warping reality around those who depart. The effects wear off as soon as one of the couple leaves the Whirlwind.

Should someone happen to be at The Whirlwind with *multiple* ex-relationships, it will do whatever is necessary to eliminate all the conditions that caused them *all* to break up. It is not uncommon for a tightly woven circle of friends and ex-relations to go to the Whirlwind, only to find them all changed in some manner that causes feelings to be rekindled in five or six different ways. Hilarity ensues.

The Whirlwind does not have any affect on those who are already *in* a relationship, unless one of those two is also there at the same time as a *former* relationship . . . in which case he changes both to satisfy the former lover while remaining compatible with his current one. For all its powers, the Whirlwind cannot compel former lovers to rekindle their relationship (or it chooses not to) . . . although the effects of the Whirlwind are often enough to do so through its effects. Curiously enough, it also cannot compel them to forge a relationship *stronger* than what existed previously; in fact, the same forces that transform people seems to forbid them from forging a stronger relationship . . . at least while within the Whirlwind. The upshot of this is that relationships that were only superficial when they ended cannot be escalated into anything more than that.

The Whirlwind does have one other significant quirk that again demonstrates its great power. Those who attend and experience or witness the Whirlwind's powers will find themselves completely unable to describe or detail what happened to anyone else not within the confines of the Whirlwind. The words will become stuck in their throats, they will be unable to write down messages, and so on. To date, the Whirlwind has resisted all attempts to circumvent this; notes scrawled within become lost or unreadable, telephone or cell phone calls to the outside will break up when attempting to tell outsiders about the effects, and so on. Likewise, those who are told about the effects inside the restaurant will be subject to the same conditions. At best, people will be able to detail their experiences vaguely, or factually: "I met with Jan; we talked. It was . . . interesting."

The Whirlwind does not discriminate based on orientation, and same-sex relations are not uncommon to see rekindled.

The Effects of a Whirlwind Relationship

The effects of being within the Whirlwind at the same time as a former relation are interesting, to say the least. The ultimate result of the forces at work depend entirely upon the (ex-)couple involved; some describe the experience fondly, others ruefully, others wistfully. For some the result is a giddy but temporary rekindling of a former love. (Those who know the secret of the Whirlwind understand why it had a hotel built right next to it.) For others it is a traumatic reminder of what has been lost, or what will be lost. For others it is a mirror, an external force telling them what went wrong and what is necessary to fix it; a rare few are able to transform this knowledge into an understanding of what *can* be possible. In these (admittedly rare) cases, it is possible for love to be re-forged stronger than before . . . once away from the Whirlwind. Likewise, some truly wealthy couples understand what has transpired, and make a point never to leave, in essence becoming permanent residents of the hotel.

Whether any of these outcomes are desired by the force behind the Whirlwind is unknown, if such concepts as "want" can apply to it.

The Coriolis Group

There is a small but significant group that resents the effects of the Whirlwind, having been burned by its transient powers; there are others that are at least deeply curious about the forces behind it. These 12 people (four ex-couples

and four individuals) have banded together, calling themselves the Coriolis Group. Their leader, Dr. Philip Harsey -- one of the four non-couples -- wants nothing short of harnessing the power the Coriolis Group for his own ends, although he claims to merely wish to study it. (His one experience with the Whirlwind showed him that he was mad for power, both within his job and his home. The Whirlwind forced humility and understanding upon him, and gave him a sole weekend of peace with his ex-wife Dana. For those fleeting signs of seeming weakness and loss of control, he can never forgive the Whirlwind.)

The Coriolis Group is currently still accumulating research and knowledge, through the four ex-couples in the group. They are playing a dangerous game, since each time they enter the Whirlwind to acquire information, they expose themselves to the power of the Whirlwind. They have all been through the emotional wringer a dozen times over, and two of the non-involved individuals in the group wonder privately whether it's only a matter of time before one or two of them snap and do something *truly* heinous. . . or lock themselves in one of the hotel rooms, never wanting to leave.

Dr. Harsey seems close to coming up with a plan regarding the Whirlwind . . . although what this plan is and the desired outcome are both a mystery.

Using the Whirlwind Within a Campaign

The Whirlwind is designed to be a versatile campaign device, a location of great but limited power. Indeed, it is possible for the Whirlwind to be a recurring location for a group of heroes (or even a base of operations), with its mysteries remaining unknown until later in the campaign.

The tone of the Whirlwind is likewise malleable. It can be used for a comedic romp (especially if multiple exes are involved), a romantic tale (either optimistic or pessimistic), a coda to a romantic plot, and so on. It can be used pessimistically or even sinisterly . . . it is, after all, a domineering force that seems to have complete control over those that fall under its sway. It can serve as a long-term mystery or other trapping of great power. The amount of raw and rekindled emotion within the Whirlwind is often remarkable; should something be accumulating these forces for some purpose, the power it both has and has accumulated is substantial.

The setting of the Whirlwind can also be modified as desired. The base premise (location where former lovers have their relations rekindled) can be adapted to a number of genres: A saloon in Weird West, a satellite resort in science fiction, a mysterious fae tavern in the Middle Ages, and so on. Its powers are suitable for practically any genre as well; if, say, an *In Nomine* angel or superhero relationship ended because he wasn't normal, the Whirlwind certainly has the power to strip him of his powers (so long as he remains at the restaurant or hotel).

Finally, the Whirlwind is large enough - and its effects unpredictable enough - that it can be added as a background subplot to any plot that has a hotel or restaurant. Thus if the mob boss is making the drug exchange tonight at the restaurant, what happens to the heroes' mission to thwart them if one of the teammates suddenly finds himself confronted by past romantic feelings toward another member of the party?

Adventure Seeds

- The noted Nobel Prize-winning scientist Dr. Nicholas Carter has found his once-great mind addled by schizophrenia and other dementias, which have so far proven unresponsive to drug treatment. The world is in danger from some horrific plot device, and only his formerly brilliant mind has a chance as cracking the enigma. If the heroes learn of the power of the Whirlwind, they may theorize that it has the power to restore his brilliance . . . presuming his ex-wife Emily can be convinced to go with them to this restaurant. Will the plan work? And is it fair to toy with others' emotions and feelings, even if the fate of the world is at stake?
- There is a fire at the Whirlwind Hotel, and the heroes are on-hand to deal with it. Unfortunately, one of the rooms at risk is the suite with noted reclusive billionaire Earl Sampson and his reportedly estranged wife; it's rumored that he had an inoperable brain tumor five years ago and she was having an affair, yet for some reason they have both been sharing the same hotel room for quite some time. Do the investigators heed the pleas of the couple not to remove them from the inferno? And what is the outcome either way?

- The romantic interest of one of the heroes brings him to the Whirlwind to break up with him. But the instant they break up, they fall under the effects of the Whirlwind . . . with potentially comedic or tragic results.

* * *

Carlos went to the car to get his cell phone; he needed to call his office and explain why he wouldn't be in tomorrow.

As he exited the hotel, he felt reality wash over him. The stress of his job returned, and memories of past failures and strife buffered his face. What had this place done to him?

"It's the strangest thing," he said, calling the office. "I met Tabitha, and we . . ." his throat contracted, unable to explain. "She . . . We're talking currently."

He hung up, rubbed his neck, and went back to get Tabitha. He needed to see if she was okay; even if he didn't feel the same way about her anymore, he never wished her any harm.

He stepped back into the hotel, and the man who exited the revolving door was not the one who entered. His \$10,000 suit transformed into a denim shirt and slacks; his thoughts about the paperwork and security commission investigation melted away into thoughts about his latest painting. Eyes are the hardest to paint, but Tabitha would provide all the inspiration he needed.

And Tabitha was waiting in their room, waiting for the artist she'd fallen in love with.

Jane Brighton, Lady Detective

by Mark Gellis

Although not quite Sherlock Holmes, Jane is intelligent, inquisitive, and relentless . . . and very British. She is more than capable of getting out of (and into) trouble in almost any campaign involving mystery or intrigue set between 1890 and 1920.

Jane was almost destined to become a detective. Born in 1872, she grew up reading the mysteries of Wilkie Collins and similar authors. Her father, a London police detective, often talked about his cases and the methods used by police to solve crimes. At an early age, she became fascinated by the accounts of crimes published in newspapers. Jane loved her dolls as much as the other girls on her street, but she also loved puzzles, riddles, chess games, and scavenger hunts. She loved to figure out things and she loved finding out things about people. Even more than wanting to see the wicked brought to justice, Jane loved finding things out. When she found a mystery, she had to try to solve it.

She met her idol, Collins, while in her early teens; although he was in his 50s, the author was impressed with her mind and her spirit, but their friendship was cut short by his death in 1889.

Two other things happened to Jane during her teens that affected her deeply. The first was that in 1884 her father was injured in the line of duty, stabbed by one of a gang of thieves he was arresting. While he recovered fully after a few months, it drove home to Jane that detective work was not a game; it was interesting but it also involved real danger. After that she learned how to shoot a pistol.

The second affair that affected her was Jack the Ripper. Jane never knew any of the women Jack killed (this is not surprising, since they were all prostitutes), but the sheer ferocity of the crimes and the pathos of the victims became a symbol to Jane that, as much as she liked solving mysteries for their own sake, there was another, more important reason to do so: to help people in need, and to uncover and punish those who had preyed on them. When she turned 18 in 1890, she already knew what her life's work would be.

An unexpected twist of fate helped Jane. Her great uncle Hubert made a small fortune mining tin in Africa. He never had any daughters and absolutely adored Jane, and when he passed away, he left her a small inheritance, enough to let her live modestly and pursue her dream of being a consulting detective. While the income is barely enough to keep her in a middle class lifestyle if she stopped working entirely, it does free her from having to take cases she does not wish to investigate. She can take the ones that interest her and live quite comfortably.

Jane is 5'5" and weighs 120 lbs. Blonde and blue-eyed, she is attractive without being genuinely beautiful. She gives the impression of being smart and sensible, and if one talks to her, it does not take long to figure out that she is both of these things. Jane also has a knack of knowing things; she always seems to be able to tell things about people . . . and whenever something bad is about to happen, she will get the funniest feeling, letting her know she needs to be on her guard.

Jane will be modestly but dressed sensibly (by the standards of her time, at least). When she is on a case, she generally carries a number of items in her pockets or a small handbag: a small pocket knife, a small metal match box with matches, a small notebook and a pencil, a pair of tweezers, a handkerchief, and a loaded Adams .380 revolver. She also tends to wear a hat, not only to be fashionable, but because it allows her to wear hat pins, which can be very useful on occasion.

ST 8 [-15], **DX** 12 [20], **IQ** 13 [30], **HT** 11/9 [0]

Advantages: Ally (Father, British police detective, 12-) [10], Attractive [5], Charisma +1 [5], Common Sense [10], Danger Sense [15], Empathy [15], Independent Income (\$37.50 per month in 1890) [5], Intuition [15]

Disadvantages: Curious [-5], Second Class Citizen (Female) [-5], Sense of Duty (to England) [-10], Sense of Duty (to

Friends and Family) [-5], Victorian Lady's Code of Honor (Obey rules of proper conduct between men and women, wear modest clothes even when it is really inconvenient to do so, etc.) [-10], Vow: Never give up on a case until it is solved, especially if someone is counting on her [-5]

Quirks: Blushes when people talk about sex (she is not a prude; she simply gets embarrassed thinking about . . . well, you know . . . *it* . . .); Irritated by people who think that she is stupid or helpless simply because she is female; Likes animals, and will take steps to protect them from danger our cruelty; Loves Collins' novels, especially *The Moonstone*; Wants to get married someday (and is also a little afraid, deep down, that she will never find true love), but would rather be a great detective than a mediocre wife

Skills: Acting-13 [2], Appreciate Beauty-11 [2], Area Knowledge (England)-12 [1/2], Area Knowledge (London)-14 [2], Artist-11 [1], Bicycling-12 [1], Chess-14 [2], Cooking-13 [1], Criminology-15 [6], Fast-Talk-14 [4], First Aid-13 [1], Forensics-11 [1], Guns (Pistol)-14 [1]*, History-11 [1], Holdout-15 [6], Knowledge (Riddles and Puzzles)-15 [6], Law-10 [1/2], Literature-13 [4], Occultism-12 [1], Poisons-10 [1/2], Research-13 [2], Ritual Magic (Hermetic)-10 [1], Savior-Faire-13 [1], Sex Appeal-13** [6], Shadowing-14 [4], Streetwise-13 [2], Writing-11 [1/2]

* Includes bonus for IQ

** Jane calls this "Strategic Flirting" and would probably blush if someone actually called it "Sex Appeal."

Languages: English-13 [0]

Total Points: 130

Typical dialog: "Yes, I have a revolver. I'm not stupid, you know."

Alternate Versions

While Jane is designed with *Gaslight* or *Steampunk* campaigns in mind, she could be converted to other periods without much difficulty. She can either appear later in her career, as a sort of Miss Marple of the *Cliffhangers* era, or one can simply change her date of birth (although this means she would have never met Collins). For example, if one wants Jane to appear in her 20s during World War I, simply assume she that she was born in 1892 instead of 1872. Virtually all of her skills will be the same during any part of the 20th century.

After 1910, Jane would have Judo-12 [4]; a form of judo is introduced to England around the turn of the century and this is exactly the sort of martial art that would appeal to Jane Brighton, who needs to be able to defend herself but prefers to control someone rather than harm them. In addition, she would replace her Adams with a Webley Pocket Hammerless or a small automatic like the Browning .32. After 1930, Jane would also have Driving (Automobile)-12. She likes small, agile roadsters.

Jane does not have Riding; born and bred in London, Jane never needed to learn to ride. She would have been able to get anywhere she needed to go either by walking or by riding an omnibus.

In realistic campaigns without magic, Jane's knowledge of the occult allows her to investigate those who are involved in it (it is, after all, during this period that the Order of the Golden Dawn and Aleister Crowley are active). In a campaign where magic works, Jane would know enough about magic to know how it could be used to commit a crime, but does not really know enough to do magic herself. A good adventure seed might be to team Jane with a player character (perhaps as a love interest) who is a genuine magician or a psychic.

Using Jane in a Campaign

There are many ways to use Jane Brighton. First, Jane could be used as a player character in a 150-point game. (Or, an extremely generous GM might allow Jane as a player character in a 100-point game on the condition that she cannot be improved with experience points for the first 10 or 15 game sessions, which is about how long it would take to earn the

extra 30 points with which she started the campaign.)

As an NPC, Jane could be used as an ally or a contact. She can be used to provide player characters with leads, information, missed clues, and the like. Helping her out of danger (or having her return the favor -- "I'm not entirely helpless, thank you very much.") can form the plot of an episode within a campaign. Another option would be to make her a love interest or a rival of some kind (perhaps she is taking all the good cases that the heroes want for their struggling detective agency).

Jane might ask the player characters for assistance with a case. There are some advantages to being a female detective (among other things, villains often do not take her seriously and as a result they frequently let their guard down around her, often to their future discomfort) but there are disadvantages, too. There are some places that women simply cannot go or are not permitted to do in Victorian or Edwardian society. So, Jane could be used as a kind of small, blonde Nero Wolfe, coordinating the efforts of several player character agents.

Finally, a cruel GM might have Jane snooping about, asking questions, perhaps about an entirely different case than the one the player characters are investigating, without letting the players know who she is; paranoid players might think she is one of the bad guys. All sorts of interesting complications might arise (although there should be some serious repercussions if anyone actually hurts Jane, especially since her father is a respected police detective) before the confusion is cleared up.

Pyramid Review

Rome

Published by [GMT Games](#)

Designed by Reiner Knizia

Art by Rodger MacGowan

Double-sided map board, 100 cards, 15 Chariot blocks, 15 Legion blocks, 6 Fleet blocks, 6 Scoring pawns, 70 Influence markers, 1 rulebook; \$39.00

Rome is a different sort of product: Three completely different strategy games with a similar theme in a single box. The games are good, the components are great, and it's a three-for-one special for strategy gamers. The individual games are "Imperium," "Circus Maximus," and "Hannibal vs. Rome." (These three games, along with a dozen others, were published as a set in Europe as *Games From Ancient Rome*. The GMT edition has much nicer components.)

"Imperium" is an area-influence game for two to five players; you play cards which allocate your influence to different regions, thereby scoring points. Whoever has the most points at the end of the round where someone has passed 40 points wins. This is usually after about 20 minutes, which is short and sweet for a five-player strategy game.

Each player starts with 11 cards: one for each of the eight Provinces, and three special cards. A game turn starts with each player choosing three of their cards to play that turn. Cards are revealed simultaneously, and resolved by placing Influence markers on the eight Provinces. Finally the next Province in the sequence is scored, and you're ready for another turn.

Playing one of your province cards places a marker on that Province; your province cards return to your hand, so you can reuse them every turn. The special cards change the way the turn is played out. Bread and Circuses allows you to double up and place two Influence markers in one Province; Bread and Circuses also returns to your hand and can be reused. Ear Of The Emperor causes an extra Province to be scored that turn (hopefully before the other players are ready). Including the Oracle card in your set of three for the turn allows you to reselect your three cards for the turn after seeing what other players have chosen. Ear Of The Emperor and Oracle are discarded after a single use.

After placing tokens, the players score the next Province in the sequence, in order from lowest scoring (Africa) to highest (Egypt). This sequence zig-zags all over the board. Each Province has numbers indicating the score for having the most influence tokens, second most, third most, and (in the case of the big provinces) fourth place. The tokens are cleared from the Province after scoring, but if there's no tie for first place the winner gets to leave one token there as Proconsul. You get a bonus when you score first place equal to the number of contiguous Proconsulships you have, so even low-scoring Africa, Syria, and Illycium can make a difference, since they stand in-between the high scoring Provinces.

Game play in "Imperium" is swift, with plenty of tension. You can lose the lead in a Province easily, and it's hard to make up lost ground, both in the Provinces and on the scoring track. Your two single-use special cards make all the difference, but their effects are subtle enough that they must be played at just the right moment. While simple, this is a good, nail-biting strategy game.

"Circus Maximus" is the chariot race game for two to five players. No, there's no rule for whipping other people's horses (or drivers), but don't worry, you'll have a chance to do far worse . . .

Pyramid Review: Rome

Each player has three chariots and five cards, numbered one through five. On the first turns you place your chariots, one at a time, in the starting area. On subsequent turns the chariots are moved in their order around the track, from first place to last.

When it's time to move one of your chariots, you may play from one to three of your numbered cards and move that chariot that number of hexes in a straight line. If you play more than one card, the chariot may turn between cards; for example, if you give the chariot a two and a three it can move three forward and two to one side. Each chariot must receive at least one card, though you can just play a card without moving the chariot. If you move the chariot it must move the full number on the card assigned to it. Thus if you have only your four and five card left and the only hole through the crowd in front of you is two spaces to the right, that chariot isn't moving this turn.

At the end of the turn you get your five cards back to use next turn.

The goal is to get all three of your chariots around the track once and into one of the finishing places. Thus victory is not decided by the first chariot in, but victory goes to the first player to bring his *last* chariot in.

Strategies vary, and vary with passion. Some feel that getting in one chariot early allows you to split your five cards between the remaining two chariots, giving them greater maneuverability. Others try to keep all three chariots moving and maximize their blocking turn-by-turn. Others prefer a leap frog approach: move one or two forward, put them in an obnoxious location (like the hairpin turn at midpoint) and then leave them there, bringing the back chariots past the blocker before moving him again.

Since every player has the same total value of cards played at the end of every turn, it's all about making your opponents waste moves going around you.

Game play slows if you have a lot of people, but the table-talk and interplay more than make up for it. This is a raucous game of getting in each other's way, and fighting for the lead. The feel of a chariot race is all there.

"Circus Maximus" will handle two to five players (although the "two cards per chariot" variant rule in two player games is strongly advisable) and takes 45 minutes to an hour, with a fair chunk of time afterwards for an argument over the various strategies.

"Hannibal Versus Rome" is a two-player wargame, played in the lower left-hand corner of the Imperium board. You win by moving one of your legions into the enemy's capital (even if defenders are present).

The Roman player starts with eight legions, the Carthaginian gets seven, but one of these is Hannibal's legion, which gets a combat bonus. Each player gets three fleets. If you find yourself without fleets you can use a turn to swap a legion for a fleet (this is probably a sign that you're going down). Each player also has five cards, numbered one through five. Fleets can move from any sea lane to any other sea lane. Legions can move to an adjacent territory over land, or cross a sea lane to another area if you have a fleet on that sea lane.

There are three routes between Rome and Carthage, three lines along which battles are fought: Overland through Hispania and Gaul (four land areas, no sea routes), through Sardinia and Corsica (two land areas, three sea routes), or through Sicily (three land areas, two sea routes). For Legions, movement between these three paths is only possible in the capital territories, where they all start.

If you move a legion or fleet into a land area or sea lane where your opponent has forces, you each play a card. Whoever plays the higher number wins. Whoever played the lower number removes one fleet or legion from that area. Hannibal's legion gets a bonus of one. If there's a tie, both sides lose a unit. Either way, someone's going to lose a unit. After five battles both players will have used all their cards, and they both get them all back. It pays to remember what your opponent played . . .

Massing your forces in an area doesn't give you a tactical advantage; someone entering your space has the same chance of winning a battle, but they'll have to win several battles if they're going to be there at the end of the turn.

While simple in structure, this game requires planning and out-guessing your opponent. You cannot give any of these three routes between the capitals to your opponent, but you can't divide your forces too evenly. Similarly you have no more combat power than your opponent, so you must pick some battles to lose, burning a low card and saving the win for later. There's no luck, there's no obvious strategy, no advantage to be won except through good play . . . making it another nail-biter.

Component-wise this is a great package. The maps are very attractive, and even though the map of the Mediterranean is marked for both "Imperium" and "Hannibal vs Rome," you have no trouble remembering which regions apply to the game in progress. The art maintains GMT's usual standard, in part because they're shrewd about reusing art from their "Great Battles Of History" series, with its clean style and historical accuracy. The ship stickers did need to be trimmed to make them fit neatly on the Fleet blocks, but this is the only possible complaint about the components. The cards are first-rate. The rules are very good; they're short, clear, and complete, without any glaring holes or contradictions.

Downsides? There are always downsides. Two trivial drawbacks have to do with the triplex format: the box is an odd size, it won't fit on the bookshelf like most games will, and the double-sided board means you have to make sure the gaming table is clean. As far as game play, all three games are fairly simple; you won't be surprised by a combination of cards or see anything you haven't before.

All in all if you like German strategy games, this is a good collection you'll play many times, and the games are different enough that you're ready for any mood.

Pyramid Review

Escape From Monster Island

Published by [Firefly Games](#)

Written by David L. Pulver and Patrick Sweeney

Illustrated by Mike Bowden

32-page b&w softcover; \$9.95

One of the most fun little *big* games of 2002 was ***Monster Island: The Game of Giant Monster Combat*** from Firefly Games. With just a handful of plastic monsters from the toy box, a fistful of dice and these rules, players could recreate the battles to see which kaiju (Japanese for "monster") or giant, weird creatures from outer space/the oceanic depths/the Earth's prehistoric past is the "King of Monster island." Using the **Action!** System mechanics, kaiju design is fast and easy, and a player can soon send their design to go toe-to-toe, claw-to-claw or blasts of fiery breath versus Laser zaps from the eyes with the creations of the other players.

Yet what was missing from ***Monster Island: The Game of Giant Monster Combat*** were rules that allowed battles away from the island; now with the release of ***Escape from Monster Island***, players can take their kaiju on a world tour of humanity's greatest metropolises and other attractions -- Tokyo, New York, Tokyo, San Francisco, Tokyo, Paris, Tokyo, Seattle, Tokyo, Kuala Lumpur, Tokyo, and London. Not forgetting every kaiju's favorite holiday destination, which is of course, Tokyo. Once there, they can smash a bridge, destroy a nuclear power center, climb a skyscraper or two, leap from building roof to building roof, and fight other vacationing monsters or that pesky army of humans assigned to protect the city . . . all while crowds panic beneath their feet. And if that is not enough, the monster can always find an attractive Idol to grab and moon over (blonde bombshell, perky reporter, psychic twins from outer space, or famous movie or pop star) . . . And the blame for this giant monster mayhem lies with the would-be alien invaders, the Deloks, who have sabotaged the force bubble that normally keeps the Kaiju bottled up on Monster Island.

Escape from Monster Island is a slim book, in the same layout and style as ***Monster Island: The Game of Giant Monster Combat***. It is dotted with quotes from a variety of big monster movies, both American and Japanese, though in places these impinge upon the book's main text in what is the book's only layout error. The artwork of Mike Bowden clearly shows his love of both Marvel Comics and Japanese animation. He also draws the sheet of cardboard counters that comes with the supplement -- in places with a sense of humor. For example, the Scientist counter depicts the classic boffin-type clearly fiddling with a Pokéball! The rest of the counters show not only scientists, but also crowds, an idol, fire engines, and police squad cars, as well as a range of military units: medium and main battle tanks, APCs, IFVs (Infantry Fighting Vehicles), towed and mobile artillery pieces, transport and attack helicopters, trucks, infantry and Special Forces units, and fast patrol boats. The more unconventional forces of the United Nations Science Alert Corps -- whose duty it is to monitor Monster Island and deal with any escapees -- include flying tanks, jetpack troopers, a pair of strange scientific gizmos, and the aforementioned scientists.

To create a kaiju for ***Escape from Monster Island***, players will still need to refer to the full rules from ***Monster Island: The Game of Giant Monster Combat***, but this supplement does add several new powers. These include 360° Sense (which must be bought for one sense at a time), Acid for Blood, Clinging (to allow the climbing of skyscrapers and the like), Cocoon (a one-shot power for each game, letting a kaiju create and enter a cocoon from which they exit three turns later in a totally different form . . . during which time the player must redesign this new kaiju), Defensive Adaptation (this inflicts damage upon an attacking kaiju, say by spike or acidic skin), Food Source (most kaiju are radiovores, but with this power they can eat the equivalent of a human counter to gain a point to be spent on attributes and powers), Incorporeal, and Psychic Link. The latter simulates a common event of the kaiju genre -- the monster

forming a link with an adolescent girl or even miniature twin princesses! In the game, an Idol or Crowd counter represents them, and their presence increases the kaiju's Mind score and grants them a level of Regeneration.

Armies are created to the same point value as the monsters they face in the game. An army player does not pay for attributes or powers as they would for kaiju, but instead buy individual units that they field against the monsters. Each unit does have its own attributes (Attack, Evade, Morale, Toughness, Life Points, and Move) and one or more powers (Blast, Bombardment, Close Assault, Crowd-Control, Extinguish, Flying, Invention, Long Range, Personnel, Recharge, Targeting, Transport, and Swimming). Besides the units given above, an army player can buy one-shot bombing raids dropped by B-52s or surgical cruise missile strikes. Units can be as simple as the main battle tank (Attributes: Attack 4, Evade 13, Toughness 13, Morale 4, Move 6; Powers: Firepower 3d6) or as complex as Special Forces units (Attributes: Attack 6, Evade 15, Toughness 2, Morale 5, Move 3; Powers: Close Assault, Crowd-Control, Firepower 1d6 [2d6 during Close Assault], Personnel, Targeting), which represent detachments of Green Berets, Delta Force, or Spetnaz. They may even be SWAT teams especially trained in anti-kaiju tactics, such as those deployed by the Tokyo police. Armies can be created for battles set in the modern day or in the classic kaiju decade of the 1950s, simply by making attack helicopters, IFVs, and main battle tanks unavailable. These omissions also simulate the forces that a Third World nation might deploy. All armies receive the one headquarters unit for free, which cannot attack, but have the Crowd-Control, Personnel and Targeting powers. They usually spend the game in a strong defensive position and use their powers control the flow of reinforcements that an army can draw upon from turn to turn. These reinforcements counter a kaiju's Recovery ability by providing points to spend on new units -- just 1d6-1 per turn, halved if a headquarters unit is lost. The points can also be saved to buy more expensive units.

Important to defeating the rampaging kaiju are the UN Science Alert Corps science teams. These are made up of a certified genius and their team of assistants, together possessing the Power of Invention. By remaining stationary and studying the monster, scientists accrue Invention Points; when they have enough, they can build "Wonder Weapons." These include Anti-Regeneration Rays or Sprays, Capture Devices, Solidifiers, Teleport Jammers, and armor-piercing artillery rounds or X-Shells. With their cost being either 10 or 14 points, and scientists only able to generate 1d6 points per turn, it should only take an average of four or so turns to develop one of these Wonder Weapons. An army is limited to just two Scientist units.

Rather than set up every building in a city, only the most important or singular features need to be depicted by individual models, or in the case of a river or harbor, by strips of colored paper or felt. ***Escape from Monster Island*** details a wide range of buildings -- bridges, city hall, nuclear power plants, oil refineries and chemical plants, sports stadia, science research centers, skyscrapers, space centers, train stations, (personnel units can move between stations, safe from attack except by tunneling kaiju) and towers. If played in a specific city, it can have landmarks. Given examples include the Eiffel and Tokyo Towers, the Great Pyramid, the Golden Gate Bridge, the Petronas Twin Towers in Kuala Lumpur, the CN Tower and Space Needle, and the Statue of Liberty. As with the kaiju, players can raid their toy box or hobby shops to obtain suitable models to represent these buildings.

Central to the urban setting of ***Escape from Monster Island*** (and to the genre) are civilians. Though the army player does not have to purchase these units, they still have to control any police or fire fighters that appear in the game. The police are tasked with controlling any remaining and easily panicked crowds in an otherwise evacuated city. Panicking crowds move in random directions away from the stomping kaiju that set them off. Fire fighters are left to deal with any fires begun by the fights between kaiju and army. Idols are individual civilian units that are very alluring to kaiju, who will make every effort to grab them. Once in their possession, kaiju become more difficult to hit . . . after all, it is never good for public relations to blow up or zap some media darling!

The expanded fighting and movement rules cover flying, climbing (buildings in particular), leaping, and both swimming and wading in water. Though the rules cover damage done to buildings by thrown kaiju and army units, there are none for damage inflicted by a monster leaping onto a building's roof. Otherwise, the rules seem complete and cover most situations. Where the tactics and play were both quite simple in the original ***Monster Island: The Game of Giant Monster Combat***, battles in ***Escape from Monster Island*** require different and more thoughtful play. Kaiju face other monsters in an environment filled with obstructions, while also having to deal with the army's hit-and-run tactics. These are best used, as few of an army's units can stand up to the power wielded by a kaiju . . . until a scientist has had enough time to devise and build a Wonder Weapon.

Escape from Monster Island is rounded out with four scenarios that showcase the supplement's new rules. Each describes its participants, map layout, forces fielded by each side, deployment, special rules, plus victory conditions and objectives. In scenario one, "Monster Rampage," kaiju and army simply go claw to cannon, whereas in the second, "Robbing the Cradle," the UN Science Alert Corps sends an amphibious force to capture a kaiju egg found on a Pacific island. Unfortunately, mommy kaiju is not going to let her baby go . . . For the third, "Countdown to Doomsday," the army player is up against a deadline. With an asteroid heading for the Earth, they must launch an antimatter bomb to destroy it, but said bomb is exactly what a kaiju likes for breakfast! Finally, the fourth scenario is a three-player battle between a kaiju and two armies. "The Mother of all Monsters" is set at the end of the Gulf War, with coalition forces, an Iraqi army, and a kaiju all fighting each other. The coalition army must buy a lot of IFVs and main battle tanks, while the Iraqi player fields a Third World nation army, and controls a fire-fighter unit and several crowds. Neither side has access to reinforcements, but they may form an alliance after a ceasefire has been declared within a few turns.

By adding rules for buildings and armies, ***Escape from Monster Island*** does increase the complexity of the core game . . . not by much, but by enough to make it slightly more daunting to the suggested age range of eight years and up for ***Monster Island: The Game of Giant Monster Combat***. This is a very minor detraction though, because the careful and balanced advice of an adult should more than make up for this. Otherwise, with ***Escape from Monster Island*** the authors successfully extend the rules of the original game to cover the concepts core to the kaiju movie genre.

Where ***Monster Island: The Game of Giant Monster Combat*** will go next is another matter, though the fact that Gold Rush Games' forthcoming ***War of the Worlds Source Book*** will be compatible lends itself to plenty of suggestions. It might be interesting to see rules for pitting Japanese-style mecha or American-style superheroes against rampaging kaiju. In the meantime, telephone 911, send for the fire brigade, and call out the army, because there is a kaiju coming to a city near you!

--Matthew Pook

Plot After Marriage

According to the chivalric ideal, chivalric love never remains constant; it is either increasing or decreasing at any given time.

Now, outside of the fact that "chivalric" is a really cool word, this demonstrates something about that ideal: It isn't worth fighting for if it isn't at risk.

See, despite the fact that they dressed up in armor and searched for grails and routinely burst into songs, those knights had an interesting idea about love. Love can't be taken for granted; if nothing is done to strengthen it, it will weaken and die.

What does this have to do with Gygaxes gaming in Geneva? Well, romantic subplots are the same way; if there isn't something going on with them, they'll die. (The love won't necessarily die, but any interest in the plot quite probably will.) Of course, this holds true for other subplots as well; if you establish that old Uncle Geezer is dying in one adventure, but fail to mention that fact again in later adventures, and he suddenly dies . . . well, it's entirely possible the players will say something akin to, "Oh, no! That's awful! Uh . . . who?"

Of course, the problem is that romantic subplots are arguably the most difficult type of subplot to continue once they get to a satisfying "resolution" (usually involving marriage or commitment); after all, once you've got the guy or gal, and neither of you is doing anything to mess it up, what other plots can there be? (As an aside, this is why so many shows devote themselves to *The Chase* . . . y'know, that magical wonderland when a non-couple is still trying to possibly hook up, or maybe not. Once they *do* get together, it's very difficult to keep the momentum going. Think of the last seasons of *Moonlighting*. Or, better yet, don't.)

Well, keeping romantic plots going is easy before the two "hook up," or even get married. Generally speaking, until the couple is committed in some kind of higher ceremony, all bets are off. Either side can change his or her mind, things can come up, love can need to be proven, and so on.

But players tend to view in-game marriages (or their equivalent) as *very* significant . . . possibly with greater reverence than their real-world counterparts. Divorce subplots seem to be rare in the gaming world; I've only ever been involved with one myself. (I suspect that divorce factors into exponentially more character backgrounds than in-game experiences.) And, frankly, divorce is traumatic enough for all parties involved that it can be difficult to bring to a gaming table . . . especially when most folks come to game to *escape* the real world and its myriad problems.

So what is there to do, then?

Well, let's look briefly at keeping those firmly committed romantic subplots interesting, with two broad strokes of the pen.

Comedic

When I started thinking about what kinds of subplots could involve married (or otherwise firmly established) couples, I realized I had forgotten the greatest source to mine for ideas: the family situation comedy. These shows all have relationships that are heavily established both off- and on-screen for years. Yet, week after week, they concoct plots that challenge their relationships, *without* gut-wrenching "this marriage is OVER!" theatrics.

Some points to remember from sitcoms:

Family -- Even if the PC is the typical Siblingless Orphan of Mystery With No Known Relatives Or Even A Social Security Number, chances are the romantic interest isn't. And when you're in a long-term committed relationship, the problems of your significant other's family can become your own problems. This can be comedic or dramatic, as appropriate; a cousin that needs to hide with the PCs to avoid his ex-girlfriend can be played for laughs, while that

same cousin can be avoiding the Mafia for a dramatic (and exciting) plot.

Competition -- The sitcoms always have points of contention between the couple, and these often manifest as healthy (or not-so-healthy) competitions. These are usually best served in gaming through amusing storylines ("She doesn't care if I'm saving the world; if my boots are muddy when I get home, there will be hell to pay . . ."), but it is possible to concoct a more serious dilemma for a committed couple.

Children -- Kids are a natural result of many long-term relationships, so it's an obvious development (and challenge to a relationship) to bring them into the game. Again, they can be played comically ("Your wife is going to go insane unless you watch Little Jasper for the day . . . it's a typical day in the city; what can possibly go wrong?") or dramatically ("The child shows talent with matters magical, yet mother and father cannot agree whether to allow her to attend the Academy . . .").

Dramatic

Of course, not everything that a committed couple will go through will be cause to cue a laugh track. For inspiration of how to challenge these longer term relationships, consider looking at domestic dramas. Some ideas to be gleaned from there include:

The Rival -- Just because someone has become married or otherwise committed doesn't mean that all those who might be attracted will now remain at bay. Countless stories have been based on the idea of the rival: someone who vies for the attention of someone in a relationship (or seems to do so). How would a committed PC act if an admirer was all but thrown at him? How would he respond to gossip and relationship turmoil if there were witnesses or rumors of this (even if nothing happened)? How would he respond if the opposite happened . . . if his mate was seen with someone seemingly seeking unjust attention? (The Rival also comes up in comedic tales all the time: A former boyfriend or girlfriend of one of the couple is coming back to town, and there is a competition or rivalry between them.)

The Forbidden Love -- Many aspects of long-term monogamous commitment basically come down to an agreement between adults . . . an agreement that society may or may not accept. For example, if a couple has sworn a commitment to each other but hasn't been legally married, society may make life difficult for the couple "living in sin," despite any protestations of their committed status. Or consider if the church under which a couple is married undergoes a reformation, and declares that marriages of a certain type (say, elven and human) are forbidden by the gods and thus annulled.

Two Lives, Conjoined -- Finally, one mistake many subplots make is to not consider that, even though the mate is "off-camera," he has no desires or wants outside of waiting for his beloved to come home. This is untrue; all spouses have their own wishes, hopes, and dreams, and either strive to make those reality (especially in eras where women are permitted a modicum of self-determination) or risk becoming unhappy. Although hopefully the couple's desires coincide with each other, it is likely there will come the occasional conflict. What if a police officer's spouse requested he resign after one close call at a shoot-out? What if the significant other was offered his dream job . . . in another country?

When romantic subplots have progressed to a more committed level, it's tempting to keep the non-PC portion of that romance on the sidelines. But doing so does a disservice for the work and effort both player and GM have put into developing that plot. Don't let that happen; make sure those stories continue to have life and depth to them, even though you may be in stage three of living Happily Ever After.

* * *

Thank you all for the well-wishes and get-well greetings. For those of you concerned, I've had some treatments so that the vertigo is entirely gone and the pain is mostly gone, but I still have significant hearing loss in my left ear. The docs tell me to get plenty of rest and let it heal for the time being, and hopefully I'll get better. (At least, I *think* that's what they said . . . it's not like I can hear them, really . . .) Barring that, they'll send me to an ear/throat/nose specialist for a cashectomy.

In the meantime (assuming that my health and the fates are remotely cooperative) I'm going out of town for a week, from Sunday the 16th through Sunday the 23rd. So if I'm not responding to email or showing up in the chat room, now you know why. Again, I appreciate everyone's patience.

Take care, all!

Designer's Notes: Transhuman Space: In The Well

by Jonathan Woodward

*Oh give me a home
Where the asteroids roam
And the gleebs and the buzzy mugs play
Where gravity's low
And the water is snow
And the desert winds blow you away
Mars, Mars is my home
Where everyone's short just like me
I wish I was where
There is not so much air
And two moons to shine down upon me.
--Spaced Invaders*

There's a lot lurking beneath the surface of Mars. Water. Valuable ores. And, it seems, a lot of number crunching.

Redrawing The Map

The voice boomed down from the loudspeakers in the bottom of the hopper. "Sir, you only have a few minutes. If you don't let me land and take you on board, you'll die."

"Take your lies, and your noisy engines, straight to Charon. I'm working a vein of ore here, and I'm sick of these tricks. There hasn't been water here in a billion years." The prospector's furry fist gestured obscenely, and he went back into his hut.

An amplified sigh echoed against the canyon wall. "Fine. Have it your way." The hopper lifted into the sky, and headed for the top of the cliff; too much distance wasn't enough, in the pilot's opinion.

*The prospector came back out as it left, to make sure it did. **Claim-jackers are getting weirder every year. Smart, though. Didn't think I'd be found this deep in a side canyon. Better go into town and get more ammo, in case he comes back.*** The prospector hadn't been into town in months, or he'd know it had been evacuated. As he turned to make sure his trike was functional, he heard a noise from the main canyon. Then the ground began to rumble. The noise grew louder, until it shook the world. He clapped his hands over his ears, but it still became too loud to bear. He lost his footing, and fell. He gazed in horror as a 10-story wave crashed into the fork where his canyon joined Marineris. In seconds, it was upon him.

***Where the hell did that claim-jacker get all this water?** was his last thought.*

* * *

***In The Well** includes the new System Object Record Sheet, based on the Planetary Record Sheet from **GURPS Space**. The **Transhuman Space** universe requires different information from a generic **Space** campaign, so the new sheets leave off some entries from the old PRS, and add new ones. It still includes the equal-area icosahedral map, however. Unlike most uses of this map, for **In The Well** I had to depict real worlds for which detailed maps already exist: Mars, Venus, and Mercury. The issue of how to make sure geographic features were placed correctly was a serious one.*

Fortunately, a little trigonometry provided the answers. The prime meridian -- the dotted line running from north pole to south pole -- runs from the tip to the middle of the base of two triangles, and across one side of a third. $180^\circ = h + h + h/\cos(30^\circ)$, ergo when measuring north-south, each triangle is 57.06° from base to tip, or 65.88° along its side.

Thus, the triangle vertices (excluding the poles) are at $(90 - 65.88)^\circ$, or 24.12° , north or south. Note that the lines connecting these vertices are not parallels (i.e., latitude lines). Each triangle-edge is part of a great circle -- a circle with its center at the center of the planet. Lines of latitude aren't great circles. Though the ends of each apparently east-west edge are at 24.12° north or south, the middles of these edges are at 32.94° north or south.

For longitude, it was only necessary to divide 360° by 10. There are 10 "equatorial" triangles. If you draw a vertical line through the middle of each, they are at 0° , 36° , 72° , 108° , 144° , 180° , 216° , 252° , 288° , and 324° west. (For planets other than Earth, mapmakers generally measure all longitudes going west from the prime meridian; what would be 20° east on Earth is treated as 340° west.)

Comparing these results with the System Record Sheets in ***GURPS Terradyne*** (one of the few other examples of real planets mapped in ***GURPS***) revealed the Terradyne maps weren't entirely trustworthy. For example, in the Mars map on p. 72 of ***GURPS Terradyne***, the Hellas basin is centered at one of the vertices; 24.12° south, 288° west, to be specific. Hellas is actually at 42° south, 295° west -- a little further west, and much further south. I ended up drawing my own maps based on NASA charts. Included here is a Record Sheet map labeled with a few latitude and longitude guidelines, in case the reader would like to plot other real-world bodies (or well-mapped fictional ones) onto one of these maps.

Designer's Notes: Transhuman Space: In The Well

Materials Science

In The Well contains the Wheeled Vehicle Modular Design System (WVMDS), a modified and simplified subset of the ***GURPS Vehicles*** rules. One of the tricks of adapting ***GURPS Vehicles*** to a specific setting turned out to be applying names to abstract concepts like "TL8 heavy expensive frame." Being able to put a name to those generic descriptions adds greatly to the flavor.

I knew that the WVMDS had to cover two tech levels: TL8 and TL9, referred to in the setting as "old" and "new." My first pass through the Bodies Table mimicked the Vehicle Bodies Table from p. 108 of ***GURPS Traveller: Ground Forces***, providing different *weights* for old and new bodies, while all other statistics stayed the same. This is essentially the same system used in the Vehicle Structure Table on p. 19 of ***GURPS Vehicles***. I.e., "All else being equal, structures decrease in weight as TL increases." My original version included a note saying that the WVMDS bodies were assumed to be aluminum if old, and titanium if new.

The inelegancies of this became clear in the section on varying structural materials. Sentences like, "Bodies can be made cheap, which represents steel if old, or aluminum if new," repeated for half-a-dozen different materials, sound quite awkward, and inelegant prose usually indicates inelegant rules. I burrowed into the **GURPS** Vehicles Vehicle Structure Table to see if I could find a better way.

The key point was remembering that (for example) aluminum doesn't get any stronger as the TL goes up. It just gets obsolete -- ergo, cheaper. If you want to consider aluminum's statistics across TLs, you have to compare "standard" TL8 materials with "cheap" TL9 materials. A little work in Microsoft Excel gave me the following table:

TL8	weight/sf	cost/sf	TL9	weight/sf	cost/sf
very cheap	8	10			
cheap	6	25	very cheap	6	10
standard	4	50	cheap	4.5	25
expensive	3	100	standard	3	50
very expensive	2	250	expensive	2.25	100
advanced	1.5	500	very expensive	1.5	250
			advanced	1.125	500

Each number is the basic design weight or cost from the Vehicle Structure Table, for the specified TL, times the appropriate multipliers for different materials. By staggering the TL9 entries down one row, you can compare materials that have similar weights at different TLs -- i.e., they might be the *same* material, just cheaper. Unfortunately, it's not a perfect fit. Cheap TL8 materials have the same weight per square foot as very cheap TL9 materials, but standard TL9 materials weight half a pound less per sf as cheap TL9 materials. The progression in cost is also not smooth. In some cases, the price of a given material halves from TL8 to TL9, in other places, the reduction is different.

I spent a long time contemplating this, and trying to decide whether to ignore the specific names of materials in the WVMDS (and sacrifice flavor for perfect compatibility), or turn the Vehicle Structure Table on its head (and introduce minor compatibility problems for the purposes of flavor). I eventually went with the latter. The **Transhuman Space** line intentionally has its own identity distinct from **GURPS**, and I felt this would give people a better feel for the vehicles they were designing. From the above table, I took an approximation and made it a rule: *A given structural material halves in cost at each new TL.* My Vehicle Bodies Table ended up listing *one* weight and one cost for each body size, with the note that old bodies cost twice as much. All I had to do now was provide a list of cost and weight multipliers for each material. These had already been set in the core **Transhuman Space** book by David Pulver, in the Manufactured Hull Mass and Cost Table. A little more Excel work revealed that if I used aluminum as my default material, the multipliers for the other materials were clean and simple. (If I'd picked, say, titanium, I would have had a table full of "x0.8333..." and the like.) A quick glance at the early-TL8 wheeled vehicles that surround me in the real world revealed this was a workable default material.

This "inverted" way of looking at the Vehicle Structure Table can be applied to other settings and other materials. For example, at TL3 the standard structural material is wood. If the GM wanted to construct a materials table for a fantasy TL3 setting, it might look like this:

Wood Type	Weight Multiplier	Cost Multiplier
Pine	×2	×0.2
Willow	×1.5	×0.5
Fir	×1	×1
Walnut	×0.75	×2
Oak	×0.5	×5
Lignum Vitae	×0.375	×10

The default material would be "Fir," with a basic design weight of 18 lbs./sf and a basic design cost of \$5/sf, as given in the Vehicle Structure Table for TLs 2 through 4.

These calculations, and other similar ones, made **In The Well** a challenge, but a fun one. It's my hope that the setting plays the same way.

Appendix Z: Shiny!

Random Gemstone Table

by Matt Riggsby

From ancient burials to Crusader falcons to high-tech diamond heists, jewels are favorite valuables in any setting. However, there's a dazzling array of gemstones and other precious minerals, so it may be hard for the GM to keep track of them. This article presents a list of gems GMs can use to randomly produce fabulous treasures, with notes on appearance and historical uses and some consideration of how much they cost in easily translatable **GURPS** terms.

To use the table, roll 2d6, using one as a first digit and the other as a second digit. The past century has seen an explosion of synthetic and artificially enhanced gemstones, as well as new, naturally occurring varieties of stones made accessible by new mining technology. For broadest applicability, this list is limited to historically available stones.

Roll	Material	Notes
1, 1	Azurite	A bluish copper ore, often carved.
1, 2	Agate	A smooth, banded mineral, often used for cameo carving.
1, 3	Amber	.
1, 4	Amethyst	Transparent purple quartz. The Greeks believed that it protected the wearer from intoxication. In the Middle Ages, it was used widely in religious decoration.
1, 5	Aquamarine	Transparent and pale blue, aquamarine is, unsurprisingly, associated with water and good luck for sailors.
1, 6	Beryl	A hard, transparent gem, colorless or yellow; chemically close to emerald and aquamarine, but with different trace elements providing color.
2, 1	Bloodstone	A dark stone with red inclusions resembling blood. Medieval legend says it was created when Christ's blood dripped from the cross onto a piece of jasper.
2, 2	Calcite	Pale colored, cloudy from some angles but translucent from others.
2, 3	Cat's Eye	A form of beryl which, due to a trick of crystal structure, focuses light in a distinctive streak down the center.
2, 4	Chalcedony	A milky, microcrystalline form of quartz, chalcedony can be used decoratively or, in low-tech societies, chipped for stone tools.
2, 5	Coral	Usually red or pink, often carved.
2, 6	Carnelian	Red opaque quartz. Carnelian has been used to protect the spirits of the dead and was often engraved for seals.
3, 1	Diamond	.
3, 2	Garnet	Usually red, but there are rare green and other colored garnets.
3, 3	Glass	Colored glass became a cheap alternative to real gems with the invention of glassblowing.
3, 4	Hematite	A dull, silvery iron ore.
3, 5	Jade	Usually white or green, high quality jade is somewhat translucent. Jade is an extremely tough mineral which, in some low-tech societies, was used for high-quality stone axes.
3, 6	Emerald	.
4, 1	Iolite	A thin piece of this sapphire-like mineral acts as a polarizer, so it was used to locate the sun on cloudy days.
4, 2	Magnetite	Another silvery iron ore.
4, 3	Malachite	A deep green copper ore, often streaked with lighter green.

4, 4	Moonstone	A very pearlescent stone appearing in several colors. Some have tiger-eye or star-like appearance.
4, 5	Lapis lazuli	A soft, dark blue stone, often streaked with gold pyrites.
4, 6	Opal	Opal comes in a variety of shades and levels of opacity, but its most notable attribute is that it diffracts light internally, giving it deep, rainbow-colored overtones.
5, 1	Pearl	Pearls can be regarded as gemstones in their own right, but the pearly insides of seashells can be cut and used for inlay.
5, 2	Peridot	A transparent green stone associated with volcanic deposits.
5, 3	Quartz	Clear quartz is relatively common, so quartz crystals and carvings have often been used as magical adjuncts.
5, 4	Ruby	A very hard, transparent, red stone.
5, 5	Sapphire	Often blue, but can be any color except red. Sapphire is the same stone as ruby, only with different trace elements providing color.
5, 6	Topaz	Usually earth-toned, but there also blue, green, and multi-colored topazes.
6, 1	Tourmaline	Usually found in long, narrow crystals and banded with two or three colors.
6, 2	Turquoise	Porous and associated with copper deposits, turquoise has been used as a protective stone by many societies.
6, 3	Obsidian	A black or muddy green volcanic glass, somewhat translucent but thick pieces are effectively opaque.
6, 4	Onyx	Black opaque quartz.
6, 5-6	Reroll or create your own	

Price

GURPS Magic (p. M20) sets the base cost of enchantment-ready opals at $\$10 \times C^2 + \$40 \times C$ where C is the weight in carats. Use the same price formula for the most precious stones: diamond, garnet, emeralds, pearls, rubies, sapphires. For most of the rest of the materials on the list, which are more common, use the formula $\$1 \times C^{(1.01)} + \$4 \times C$. For colored glass tiles, use a flat cost of $\$.1 \times C$ before the invention of glassblowing, $\$.01 \times C$ thereafter.

However, size and material are just two factors determining price. Other factors include clarity, shape, flaws, demand, and cultural preference. For example, the cost of opals in a conventional **GURPS** fantasy game is likely inflated as a result of increased demand for them as magical adjuncts. The cost of any given gem can be as little as a quarter to as much as five times the base price depending on the quality and treatment of the stone. By the Colonial period, cut becomes another important factor, but faceting wasn't invented until the end of the Renaissance. Before then, the jeweler could do little with a stone but cut out any obvious surface impurities, polish it, and put it in an attractive setting.

Ideally, a one-carat gemstone is slightly dome-shaped and about a quarter inch across, which means 16 one-carat stones per square inch. There are about 155.5 carats to the ounce, or 2,488 carats to the pound. This means that the cost of a one-pound sack of one-carat gemstones -- enough to completely encrust a little over a square foot of surface -- is close to \$125,000, while the cost to do the same with cheap-but-glittering glass is a mere \$25.

Pyramid Review

Slayer's Handbook

Published by [Eden Studios, Inc.](#)

Written by CJ Carella with Timothy S. Brannon and David F. Chapman

Illustrated by C. Brent Ferguson, Jon Hodgson and Gregory Price

160-page full-color hardcover; \$30.00

If 2002 was a year of good licensed RPGs, then there does remain the question of which of them has to be top of the heap. Decipher, Inc. may have got the big two with the [Star Trek Roleplaying Game](#) and [The Lord of the Rings Roleplaying Game](#). But as good as they are, we have seen their like before; neither are properties new to RPGs. So step forward Eden Studios, who snagged the coolest license from your TV screen . . . *Buffy the Vampire Slayer*. Now on its seventh season, we have watched Buffy follow her destiny as a Slayer -- facing down demons, vampires, cyborgs and the like, all the while trying to keep the Hellmouth from opening; and dealing with high school, teenage life, and her one true love, and then of course, her own death. Throughout she has been aided by Giles (her appointed Watcher), and the Scooby Gang, fellow high school students, who possess the heart, if not always the ability, to help her out.

Designed by CJ Carella, the [Buffy the Vampire Slayer Roleplaying Game](#) was *the* hot game of 2002 that perfectly captured the cool-but-evolving tone of the television series and matched it with a fast paced set of mechanics that stripped the already quite light Unisystem back to the bone. With both the **Core Book** and [Buffy the Vampire Slayer Roleplaying Game Director's Screen](#) already available, Eden Publishing begins 2003 with the first full supplement for the game.

The **Slayer's Handbook** is *not* "The Slayers Handbook" given out by the Watcher's Council to every Slayer, that is, excepting to our titular heroine. Instead it looks at the nature of becoming and being a slayer as well as dealing out all slayerage. Until, that is, she meets her end. It discusses two types of basic slayer -- the Clueless (that is, Buffy), and the Slayer-In-Training, of which Kendra is the primary example. The Clueless has all the benefits of growing up in normal society, but knows nothing of her destiny and all that it entails, while the Slayer-In-Training knows all too well, but really sticks out like a sore thumb when it comes to normal society. Using both these two and the murderous Faith, the first chapter looks at all stages of a slayer's life: Early Life, Becoming a Slayer, Training, The Job, The Slayer Handbook, the Cruciamentum (the test that the Watcher's Council sets all slayers on their 18th birthday to see if their training alone, and not their slayer abilities, are enough for her to take down a blood-sucking pasty one), and The Bitter End. Under each period of a slayer's life, Motivation discusses exactly that for the prospective slayer player, while Drama looks at the game and storytelling possibilities for the Director. A Brief History of Slayerage looks at slayers of the past, from the First Slayer onwards, though it does only reference those that either appeared on screen or have been mentioned. For licensing reasons, only material from the television series can be used and not that from the many Buffy-related properties. Those that have appeared on screen -- the First Slayer, the Chinese Slayer (from the Boxer Rebellion) and the New York Slayer (from the 1970s) -- are each given NPC stat blocks. Both Kendra and Faith get the full character sheet treatment all ready-to-play, *a la* the Scooby Gang in the **Core Book**. The chapter as a whole feels a little slight, but is nevertheless full of useful information and expands upon that given in the **Core Book**.

The second chapter, "Heroes 'R Us," is aimed as much at the Scooby Gang players as it is for the potential slayer gamer. The single new Drawback is Mental Problem (Phobia), its inclusion here rectifying its strange omission from

the **Core Book**. This drawback is for more than simple fears, though it is left up to the Director to decide if Anya's Leporid aversion is a *real* phobia. The new qualities are packages, such as Jock, Nerd, Watcher, and Slayer are in the Core Book. They include Cop/Ex-Cop, Criminal, Nosy Reporter, Occult Investigator, and Slayer in Training. Unlike similar qualities in the **Core Book**, these are quite career orientated, but this does not necessarily make them limited in application. Players are doubtless to be creative in applying them in designing their own characters using these Qualities. A further quality, the Totem Warrior diverges from the Buffy canon (and clearly says so) to provide a Slayer-like supernatural package that can be taken by male as well as female characters. Essentially, they are Native American holy warriors that take on the mantle and aspects, but not the form, of a particular totem spirit. They play an important part in one of the settings described later in the book.

A new maneuver is provided with a second setting in mind. Fast-Draw can be rolled as a Gun-Fu skill, or alternatively treated as a unique ability that falls under the Wild Card skill. The list of new weapons and equipment is a mix of the old, the contemporary, and the fantastic. For the old there is the Thompson sub-machine gun, the blunderbuss, the musket, the six-shooter and the lasso; for the contemporary, there is the chainsaw, rocket launcher, and the flamethrower. The fantastic includes the science fiction analysers and energy disruptors, and the cyberpunk cybernetic prosthesis, dermal armor, aural and optical enhancements, mind jacks, and smart guns. For those fans of the movie *Blade II*, there is the skin suit, essentially a full body "sun suit" for vampires!

The new qualities and discussion of slayerage are put into action with the 11 new archetypes. For the potential Slayer there is the Former Runaway, Reluctant Slayer, Dark Slayer, Slayer Heiress, and Slayer-In-Training. Even the Scoobies get in on the slayerage act with the Slayer Poseur, or normal girl who really wants to be the Slayer and she will do all the training it takes to be one. The other Scooby-like archetypes are the Paranormal Expert, the Intrepid Web Journalist, Adventurous Teacher (who has lost a good student or two under mysterious circumstances), the Night Shift Cop (who has lost a partner) and the Redemption-Seeking Criminal. These are all presented in the same format as those in the **Core Book** and serve to move the ***Buffy the Vampire Slayer Roleplaying Game*** away from its high school base and into the adult world.

Just as the opening chapter looked at the nature and responsibilities of being a slayer, "It's A Different World" does the same for the Buffy format and setting. After providing a solid overview of what makes up a Buffy setting, it takes the format backwards, forwards, sideways, and always asking the question "What If?" The backwards mini-setting is "Really Getting Medieval" with post-Jean d'Arc France still at war with England and the demon-worshipping sorcerer knight Gilles de Rais as the big bad. "Pulp Slayerage" is backwards and sideways for a game of Chicago gangsters run vampire-style. Add in all the goodness of the pulps -- masked crime fighters, private eyes, femme fatales, exotic mystics along with Nazi or Red machinations -- and this has plenty of potential. All that and we still have yet to mention the compatibility that Pulp Slayerage has with Eden's ***Pulp Zombies***, its latest genre supplement for [*All Flesh Must Be Eaten RPG*](#). "Vampires and Mirror Shades" is near future cyberpunk world that allows players to make use of all the cyber and other futuristic gear given in the previous chapter.

The television series has already explored a number of alternate universes, such as superstar, where super-dweeb Jonathon makes himself the most popular man in the world. The "What If?'s" do this with the Buffy series itself, exploring what might have been if Buffy never came to Sunnydale (as Cordelia asked for in the episode, "The Wish"), if Angelus never killed the gypsy that led to him being cursed or gifted with a soul; and finally, how the US authorities would have reacted if Riley had blown the lid on the Initiative and the supernatural. How far would the Slayer and Scooby Gang go in sacrificing personal freedoms in order to protect the public from vampires and demons?

If ***All Flesh Must Be Eaten*** has its Deadworlds and [*Terra Primate*](#) its Apeworlds, ***Buffy the Vampire Slayer Roleplaying Game*** has its Buffyverses. The Buffyverse sampler pack presents three such settings, each fully described and accompanied with episode suggestions (much like Apeworlds and Deadworlds) along with a pair of ready-to-play archetypes suited to each Buffyverse. "The Lair of the Wendigo" is contemporaneous with the television series and is a slightly different take on the Hellmouth scenario. Set in the Oregon town of Grizzly Peak, it has a *Twin Peaks* feel and is dominated by the Townsend-Boyd family. Naturally it has lots of secrets, including flesh-eating Wendigo and a band dedicated to fighting the darkness. These are the Totem Warriors, aided by the ghost of a native Indian. They use the Totem Warrior quality given earlier and can be based upon several different animals described. The two archetypes given are the Rebel Without A Clue (who is a totem warrior) and Wannabe Shaman.

"Stakes and Six Shooters" takes the game back to the Wild West and the small town of Apocalypse, Texas. This has snake folk and a vampire/demon bordello along with a Slayer gunslinger and an all-too-British Victorian Watcher. This can be run as for a cinematic style western setting or combined with [The Knuckleduster Cowntown Creator](#). The third and final Buffyverse explores a world in which Glory was successful in every way and left behind an apocalypse in which demons roam freely. The archetypes include a Road Warrior and the Grim Slayer, the last of the new Slayer archetypes given in the book. As mini settings, these three can be used as the basis for a Buffy-style series of their own, or places to visit as part of a more regular Buffy type game. Plus they highlight the versatility and malleability of the television series' core elements and, to some extent, of this game's mechanics. Even if they are never used, they can at least serve as examples or templates from which the Director can create their own.

Rounding out the ***Slayer's Handbook*** is another episode in the ongoing series that began in the ***Core Book*** and continued with the game's first release, the ***Game Director's Screen***. To avoid any *real* spoilers, nothing more will be said bar a teaser -- "There's a new slayer in town, and this time it ain't no girl, but a guy!!!" The adventure is a solid piece that can be used as is or worked into the Director's own series. Following this is an appendix that examines the personalities and motivations of Buffy and all of the Scooby Gang members up to and including her sister, Dawn. Not only is this interesting, it is useful for those games that are run with the television show characters only. Finally, all of the tables from the ***Core Book*** are reprinted here, but updated to take account of the various additions given in the ***Slayer's Handbook***.

In the end, the ***Slayer's Handbook*** is misnamed, because despite the solid exploration of all things Slayerage, there's a lot of other material in this volume. Enough that is, to not only make it more the ***Buffy the Vampire Slayer Roleplaying Game Companion***, but also to make it of use to more than just the Slayer player -- both Directors and other players alike. If there is just the one single downside to the ***Slayer's Handbook***, it is the price -- \$30 does seem a lot to be paying out for 156 pages of gaming material. That said, it is for the ***Buffy the Vampire Slayer Roleplaying Game***, it is done in full gorgeous color, it is a hardback, and it is good gaming material -- material that not only expertly expands upon the ***Core Book***, but also shows the Director how to expand upon their own series.

Campaign Setting and Background Information

2015 was the start of a golden age -- for those in their golden years. But for anyone under 65, life sucked.

As the Baby Boomers grayed, many felt mortality's teeth gnawing. Fears of an uncertain post-employment forced them to stay in the workforce longer, locking up senior positions, increasing average labor costs (since senior employees get higher compensation), and causing corporations to hemorrhage money from skyrocketing benefit payouts. These factors led to marginalization of the Boomers' kids (the GenXers), denying them experience in handling authority and responsibility -- even stable employment, in some cases.

The Boomers successfully lobbied Congress for increases and guarantees in Social Security, Medicare, and Medicaid spending; for strong anti-ageism laws (slanted to protect them, of course); for increased funds distributed for medical research (especially Geriatric Care); and for more Defense spending. Not only did this increase the tax burden on those still working, it also required deep cuts into Public Welfare, Education, and Transportation. This legislation further smacked the middle-aged GenXers in the face, working at marginal jobs or flailing as best they could at highly-responsible positions for the first time, and told the Millennials -- the GenXers' children -- to get in line for their turn.

While the country slid into recession, new technology turned up the heat on the situation: increasingly functional cybernetic prosthetics and the Clonomatic™ -- a 3-dimensional biological "printer." Driven by the money and (self-)interest of the Boomers in extending life, biotech boomed. Through the use of the Clonomatic™, cell growth accelerants, a donation of the patient's own DNA, and some deft labwork, replacement gene-gineered (GGd) organs could be manufactured in three to six weeks, ready for transplant, with no chance of rejection. Used up your liver through hard-drinking? No problem; chuck it and plug in a new one! The high cost of GGd organs was easily affordable to the Boomers, due to their Congressional maneuvering.

The needy young and poor made due with cybernetics. While cheaper than GGd parts, they were also clunky, buggy, and unattractive; cyberneticists were much further down the medical research grant approval list. This added yet more fuel to the fire between young and old. Consider: if a 25-year-old diabetic has to go into debt just to have a massive piece of metal embedded into his torso to live, what right does grandpa have to a nearly-free skin-replacement to merely erase wrinkles?

Despite all these medical miracles, the Boomers continued to get older and closer to death. While life could be extended tremendously by GGd piecework, there remained a point of diminishing returns as entire body systems weakened. This, coupled with the growing resentment of their juniors, fanned the flames of Boomer jealousy and paranoia of youth. The former flower children of the 1960s changed their one-time slogan to "Don't trust anyone *under 55*" and wasted substantial time, effort, and money forcing through various types of "morality legislation" to punish the (not so) young.

For their part, GenXers and Millennials suffered reduced purchasing power, crushing taxes, reverse-age-based-discrimination, and ulcer-inducing stress (from being forced to suddenly take the corporate reins, without sufficient training or experience).

Many of them retreated to the Internet (and its successor, the omni-media Metawebnet) for their entertainment, finding sanctuary in an area thus-far ignored by their elders. That worked until 2013, when the Metawebnet VR Holostation allowed the Boomers to go online like never before. The Holostation produced an immersive, 3D holographic environment, networked with wrist computers and cellphone earbuds, allowed intuitive navigation with a slim, chic set of cloth-computer Surf Gloves, and put a familiar face on online interactions with a simple holo-Avatar and holo-Icon interface. The oldsters invaded the last refuge of their children, and mucked it up just as bad as they had mucked up the real world. Many started their own Metawebnet home businesses, clogged chatfora with their cantankerous opinions, or surfed wildly looking for entertainment. And, since they no longer had to be at work all day, Boomers swarmed the Metawebnet 24-7.

The demographics of viewers thus shifted upward, the ages of celebrities increased. Indeed, few young characters appeared in media other than as criminals or comic relief. The Dawsons and Buffys of the world had been excised, and the Millennials (unfortunately) named after them felt likewise.

Hoping to score some fat Boomer dollars, media corporations quickly changed the face of entertainment. "Advertainment" took product-placement and corporate sponsorship to a whole new level. Not only were a corporation's -- or an alliance of corporations' -- products obviously present in the entertainment, they figured prominently in the plots and storylines of each show, be they sitcom-mercials, dra-madvert, or docu-mercial.

Fed on a pabulum of mindless, maddening advertainment; subjected to unflattering pictures of themselves in media; made to feel guilty for their very age, the Boomers' children and grandchildren smoldered with resentment. Not only did they have to support the old coots at great cost, but they had to do so while being vilified. Disenfranchised Millennials began forming "Enfant Terrible" gangs dedicated to glorifying their babyhood -- pacifiers and punks, bibs and bicycle chains, formula bottles and firearms -- and to terrorizing Boomers. Their rallying cry became "Just Die Already!" (JDA) As violent crimes against the elderly increased, a positive reinforcing loop began with government spending on law and order and police crackdowns aimed squarely at these children. (Luckily, the bill to get the voting age raised to 28 failed in the Senate.)

Something had to crack.

In May of 2019, the Phage struck, and nearly slammed the world back into barbarity. A communicable, transgenic disease that attacked weak links and genetic instabilities in GGd cells, the Phage tore through the GGd Boomers like wildfire. The First World countries -- those with the highest number of GGd-cell recipients -- were hardest hit. But all suffered when the virus crossed-over and began to infect people *without* GGd cells. Tens of millions died; economies crumbled; civilizations came to a standstill. Only because of the experimental Clean Process technology, a growing resistance to the Phage, and a substantial amount of luck was the slow fall stopped, and eventually reversed. After a year of disease and madness, and five painful years of reconstruction, the world slowly regained stability, built on newfound passion and surgical steel.

It is 2025. Welcome to the CyberSoapOpera.

What Everybody Knows

CSO Setting Shortlist: For ease of understanding, the world in 2025 is much like that of 2003, with the following changes:

- Few people over age 65.
- Almost every person has cyberware, usually organ or bone replacements.
- Personal computers are wristwatch-sized, and can be networked together with micro-cellphone earbuds and home Holostations.
- All food and water for consumption is put through the Clean Process -- a cycle of antiviral agents and radiation therapies -- to remove dormant Phage. Thus, all food comes in foil-wrap, and unbottled water should be heavily filtered before use.
- Mega-corporations have been replaced by alliances between small and powerful "family corporations."

- All broadcast media (and a large portion of print media) has been subsumed by the Metawebnet.
- Additional changes as noted under *Post-Phage (American) Society and Culture*.

Timeline of the Phage

<i>May 2019:</i>	Many Chicagoan GGd organ recipients begin dying from "speed cancers" and new diseases with bizarre symptomology -- greenish scales, fibrous growths, sporadic blindness, etc. These cases were untreatable. By the end of the month, doctors, EMTs, hospitals, and morticians begin to buckle under the load.
<i>June 2019:</i>	Production and workforce shortages begin, as large numbers of people sicken or take off to care for sick relatives. The transportation infrastructure totters under the stress. Phage victims suffer an 85% death rate. Enfant Terrible gangs riot in LA, NYC, and Chicago. Recession deepens.
<i>July 2019:</i>	Phage reported in Europe, Asia, and Australia. US Surgeon General granted vast powers. Some crops begin to suffer signs of blight. First cases of "non-GGd" Phage reported.
<i>August 2019:</i>	Surgeon General declares NYC and Chicago under "universal quarantine"; blockades each with military forces. Thousands escape the patrols and spread the Phage further. Clean Process discovered. First cases of Phage reported from Africa and South America.
<i>September 2019:</i>	Non-GGd victims of the Phage discovered to have only a 25% death rate, and respond well to treatments. Despite this, within weeks the epidemic becomes pandemic. By the end of September, over 400,000 fatalities are ascribed to the virus.
<i>October 2019:</i>	US economy finally crashes, sparking "the Great Depression II." Entire harvests lost to blight, smut, and other Phage-induced diseases. Rioting becomes a daily event. On October 13, 2019, the Surgeon General declares Chicago beyond hope of cure, and orders "nuclear sterilization." A mushroom cloud blooms in the Midwest.
<i>November 2019:</i>	Bowing under the weight of lost manpower, supplies, and communications, the US Government suffers a hiatus. A period of lawlessness, violence, and bloodshed ensues: the Winter of Hate. Natural resistance of survivors against Phage strains increase.
<i>December 2019:</i>	Shortages of food and fuel become acute. Global population decimated -- one in 10 persons is dead of Phage, with additional casualties dying from starvation or violence. Clean Process reworked for mass-processing of food.
<i>January 2020:</i>	Pro tempore US Government led by Surgeon General uses remaining troops to set up Clean Process Centers in major metropolitan areas. Phage has tainted nearly all biological life on Earth, including most GGd stem cell banks, setting genetic engineering back decades.
<i>February 2020:</i>	Phage vectors through food curtailed through use of Clean Process; some evidence shows that Clean Processed products reduces Phage symptoms. Order slowly returns, spreading from the city centers outward.
<i>March 2020:</i>	The Winter of Hate ends with the Surgeon General reinstating Congress and the President. The US -- and the world -- begins the long slow reconstruction. Cyberware used to replace body parts lost to Phage; government subsidies and loans used to ensure low cost for basic procedures and equipment.

April 2020 through
December 2024:

Mutant Phage strains cause occasional flare-ups, but are usually contained. The Great Depression II ends. JDA membership dwindles by 50%; remaining Enfants Terrible turn their sights on the GenXers.

Cybernetics

Due to the pandemic nature of the Phage and its transgenic strains, everyone on Earth has been touched, personally suffering debilitating illness and cybernetic replacement. While much cyberware serves as replacements for internal organs -- livers, kidneys, lungs, hearts, even bones -- a substantial number are external organs: eyes, hands, feet, and limbs. Artificial replacements are *not* innately superior to natural parts save in two respects: They cannot catch the Phage and they are easier to repair. Advanced capabilities (infrared vision, ultrasonic hearing) and hidden weaponry (claws, guns, lasers) are *definitely* not standard; indeed, any sort of functional cyberware of that nature would be custom-built, and quite expensive (see boxed text, *CSO Cyberware Benchmarks*). One of the advantages to having cyberware, however, is the ability to purchase an integral Meta Link for non-autonomic systems, obviating the need for a keyboard or Surf Gloves (see below, *The Metawebnet*). It might feel a little funny, remotely moving holo-Icons by thinking at your cyberfoot, but hey -- whatever works.

Preferably, cyberware should be as subtle in appearance as possible: artificial parts should look real. However, attention to cosmetic detail costs, and not everyone can afford to have their skin-plastic blended to their natural tones. There is some socio-economic discrimination, based not on nationality or color of skin, but on blatancy of cybernetics. This has caused marginalized groups to punk-out, embracing the heavily-chromed veneer, giving society the bird. This practice is viewed as tacky or kitsch at best and déclassé or uncultured at worst.

Also, Phage strains continue to mutate and develop resistance to treatment. When dealing with an omnipresent virus that can turn your innards to jelly, it's not a great idea to cut open big holes in your flesh to let them in.

Therefore, in the CSO setting, few people would voluntarily go under the knife for cybernetic replacement -- there are few benefits -- unless the organ in question is already failing.

Family Corporations: The day of the mega-corporation is over; they could not survive the financial burden of astronomical benefits packages, infrastructure failures, and increasingly inept management. (Many Boomer muckety-mucks, despising their younger successors, failed to adequately train them; when the GenXers and Millennials took over, this lack of understanding, coupled with the stresses on the mega-corps caused by the Phage, caused many to go bankrupt.) Currently, most corporations are small, nimble, and focused; strong federal aid initiatives have helped these upstart small businesses to survive as their managers learned the ropes. These slim companies have come to be called "family corporations" or "familycorps": while many are owned and operated solely by related persons, the term refers more to their tightly-knit nature.

This means that wealth is shared around (all members own shares of the business and receive dividends), employees have both financial and personal ties to their employers, everyone -- from the lowliest dishwasher to the head chef in a familycorp restaurant -- is on the board of directors, and companies are small enough to have intimate knowledge of the day-to-day business at the top. It's the cottage industry of the future.

CSO Cyberware Benchmarks

Cyberware can be rated by using the same prose-based system used for rating characters. Some benchmarks of cyberware replacement quality (Cost, Stability/Durability, Speed, and Aesthetics) appear below, to give you an idea of how this could work:

- **Poor:** Dirt cheap, buggy, slow as hell, bulky, and obvious.
- **Average:** Cheap, somewhat buggy, slow, somewhat bulky, and obvious.
- **Good:** High end of moderate, a little buggy, average speed, slim but still obvious
- **Expert:** Quite expensive, rarely buggy, fast, almost unnoticeable.
- **Master:** Exorbitant, rarely buggy, quite fast, undetectable.

Further Ideas: If the above is too simplistic,

Familycorps usually restrict their business activities to a single sphere, product, process, service, or topic, and form alliances with related niche familycorps to offer services for consumers (for example, Irons Cybernetics has allied with Landover Hospitals and Ridge Surgeons to provide end-to-end care for users of their cyberware).

The Metawebnet: Fold television, radio, telephone and pager systems, and the Internet together; then add a wireless connectivity and 360° environmental holographic virtual reality display with vocal, Surf Glove, or Meta Link manipulation of holo-Icons: Welcome to the Metawebnet. Packed with technology that would make a 1990's computer scientist weep, a Metawebnet Holostation is a black, softball-sized sphere that lets you do it all online, the way you want, with your preferences and plenty of storage space. In addition, when they're away from home, everyone's still got their earbuds and wrist-comps, wirelessly linking them into the public Metawebnet and their home Holostation (though unless they carry a remote holo-projector, they'll have to work from Old School flat screens).

People walk through a world of information, constantly connected. The designer of a Metawebnet area creates the "look" of the site or channel for consumers; consumers select their personal Avatars, which remain the same no matter where they go. So, while the "virtual studio" of Shakespeare Beer Playhouse looks like the Globe Theater, the audience is packed with pink dragons, catgirls, and shiny robots.

But before characters put their hacking shoes on, something should be pointed out: the people who built this ubiquitous media network saw *War Games* and *Sneakers*, read *Neuromancer* and *Cuckoo's Egg*, and worshipped at the feet of Stephenson and Sterling. Financial, business, and scientific information is almost universally kept on Utterly Private Networks (UPNs), campus-based and constructed *not* to be constantly connected to the Metawebnet. Electronic transactions are encoded in standalone nodes and exchanged through protected nodes; both types physically disengage from the networks when not in use. Neither type are ever connected to a UPN and the Metawebnet at the same time.

Realtime-hacking is dead, program-based hacking is harder, and information is wrapped up tight. Any sort of cyber-theft requires a substantial physical component -- stealing the codebook, being passed the UPN-node-Metawebnet sync schedule, seducing passwords *and* passkeys out of drunken executives -- it can't all be done remotely. (While televideoconferencing still happens via the Metawebnet, all sensitive information gets locked up on UPNs.)

an easy system for Tradeoffs can be incorporated. After all, one cannot have everything. Using Tradeoffs, out of Cost, Stability/Durability, Speed, and Aesthetics, three aspects appear at the quality level, with the fourth aspect one level lower (minimum of Poor). Thus, if Enrique spends long green for an Expert cyber-eye, it's really pricey, and could either:

- A. React faster than a normal eye and be inconspicuous, but be crash-prone (Blue Eyeball of Death);
- B. Have normal reaction time and stability, but look obvious as hell; or
- C. Appear unremarkable with long periods of error-free operation, but have molasses-slow reaction time.

If someone wants a customized piece of cyberware -- usually involving weaponry or additional capability -- the Cost should increase one level, while the Stability/Durability should decrease one level; at the GM's option, this can be in addition to the tradeoffs above. So, if Chrome Billy wants an Average cyber-hand with an integral pistol, the cruel GM could have it turn out to have a Good Cost, Poor Stability/Durability, Average Speed, and Poor Aesthetics.

"Cyberpsychosis": Many Cyberpunk stories and games deal with a fundamental dehumanization when cybernetic modifications are undergone. Instead of some mystical mumbo-jumbo, a simple way to incorporate this Cyberpunk trope for characterization would be to imagine cyberware as glasses, braces (teeth, leg, or back), acne, or prominent facial moles (for obvious cybermods), or even a chronic medical condition -- glandular disorders, tubes in the ears, requiring an asthma inhaler (for imperceptible ones). Feelings of freakishness would then stem from poor body image, social disapprobation, and/or a limitation of activity. This psycho-social characterization of the effect goes well with elements of the Soap Opera genre (see below, *Advice, Opportunities, & Pitfalls*).

The majority of modern runs are not so much "espionage" as "private detection": hackers seek out and collate information. Like the target's preferences in advertainment, food, goods, and services; spy on their actions in Metawebnet social areas; take incriminating holo-shots; set up honey-traps and badger-games; and so forth. They may use Avatar spoofing, tempting or misleading pop-up holo-ads, and tracer programs to seek out their targets' guilty pleasures . . . or entice them into doing something disgraceful.

Post-Phage (American) Society and Culture: With the deaths of the Boomers, all aspects of the rebuilding and governance of the world has fallen into the hands of GenXers and older Millennials. While still unused to the weight of responsibility and the ethics of authority, they have made incredible strides in patching together a working society in a short time.

By necessity, the slacker postmodern sarcasm and apathy has been squelched. There's simply no way to stand aside from what must be done. And, frankly, few miss it: they enjoy rebuilding, reshaping, repairing the world. No longer hemmed in by the disdain, expectations, and social and legal strictures of the Boomers, they finally have room to move . . . if at great cost. (Indeed, some may say that the entire populace is suffering under the need to prove themselves to their lost parents and grandparents, if not themselves.) The sardonic Gen X legacy remains, however; any failure -- public or private -- is met with withering contempt and biting ridicule.

OPTION: Cool Netrunnings

Something that might help keep the rest of a playing group from falling asleep if a computer cowboy needs to sniff out the 411 on a target is to anthropomorphize the hacker's necessary programs as characters/caricatures for other players to portray. This makes the exercise a team endeavor. Thus, an tracker program manifests as a cartoon bloodhound; an Avatar-spoof becomes a sexy robot with silver skin and twisted-pair hair; a program that opens high-speed links between Metawebnet nodes is characterized by a British chauffeur with limo, etc.

"Natural" and "organic" things have been elevated to a position of great respect, almost a throwback to a Romantic philosophy. The modern view of technology is ambivalent; its sins (genetic engineering, nuclear cleansing of cities, the Phage) are balanced against its virtues (cybernetics, the Metawebnet, the Clean Process). All-in-all, technology is neither panacea or savior, but like fire -- a useful servant and deadly master.

Socio-politically, the three branches of US government tick along, with newer (and fewer) faces. In many regards, the Winter of Hate wiped the slate clean, effectively ending the Great Depression II. In attempting to rebuild the economy, the absence of the Boomers (and the massive drain they had on the system) has been a boon -- and many feel guilt when they recognize it. The government and the familycorps work together as best they can.

In the aftermath of the Phage, America has welcomed immigration with fervor previously unmatched. Multiculturalism is not a mouthed ideal; it is the state of things. The United States needs strong backs and sharp minds to continue reconstruction. If you're willing to work, America can use you -- come as you are. The Melting Pot has become the Mosaic, and is all the stronger for it -- though there can be tremendous friction.

One source of this friction are the remaining *Enfant Terribles*, though their membership is half what it was pre-Phage. The hardliners have just changed the target of their JDA philosophy: now it's aimed at the GenXers. And some JDA factions go further, embracing white-supremacy, black-supremacy, chrome-supremacy, etc. Luckily, they are fractured and at cross-purposes, more interested in bashing each other than assaulting the fragile system.

Doctors and healers are at the top of the social pyramid, followed closely (in rough order) by cybernetics engineers, industrialists, teachers, police/fire/EMTs, research scientists, advertainment celebrities, laborers, and lawyers. Genetic engineers are looked upon as necessary evils to help understand and repair the damage wrought by the Phages (how 2003 comedians characterize lawyers can serve as a touchstone). This is due to social paranoia, but also the Phage's effect on DNA worldwide; the virus has inserted its own junk DNA into all living cells on Earth, causing its own breakages, mutations, and weak links. One does not cross a creaky bridge running at top speed; instead, one carefully inches their way along. Anyone doing genetic research or engineering must be licensed and monitored by the federal

government; unlicensed genetics work is a serious felony.

Safe food and water is a concern. Many varieties of genetically-modified foodstuffs have either died out or mutated into inedible forms. The production of soy, corn, canola, and cotton has suffered the greatest impact: pre-Phage, these four crops made up 99% of all the GGd crop acreage in the US. Also, beef and chicken have become delicacies, while "wild fare" (venison, wild turkey, rabbit) now makes up a large proportion of meat consumption. All food and water are exposed to the Clean Process, to nullify any Phage virii; resistant strains lead to outbreaks, though few are deadly. Government subsidies to food producers initially kept prices reasonable; over five years, the Clean Process has been refined enough not to require any additional federal funding for manufacturers.

What Everybody Doesn't Know

The Phage 2: Electric Boogaloo

(For those folks interested in setting a campaign during the Phage, ["It's How You Plague The Game: Determining How A Cataclysmic Contagion Affects Your Game World,"](#) by James Ryan, would be a valuable resource.)

It's not known for certain how it started, but everyone has their pet theory on the Phage's origin (see boxed text, *Who Let the Phage Out?*). Depending on the source, it could be done again -- and worse.

Social and legal restrictions -- as well as a handful of Phage outbreaks -- keep folks from pre-Phage levels of genetic engineering research. Therefore, in a setting that thrives on secrets and betrayal, everyone's covertly keeping their eyes on the GGd prize, especially the agricorps, the foodcorps, and the government. If sneaky Pete gene-splicers get sloppy, it could mean anything from long jail terms and destruction of their family corporations to a new Phage getting loose.

PC Guidance

It is recommended that all PCs play the members/directors of a single familycorp. Select a business -- perhaps they manufacture cyber-livers -- and let the players thrash out what titles (CEO, CFO, CIO, VP of Human Resources, VP of Operations, VP of Advertaintments, etc.), what job duties (cyber-liver assembly; R&D; deal with COMA, the Cyber-Organ Manufacturers Alliance; liaison with the local Hospital Guild; purchaser of components from the town's electronics familycorp alliance, etc.) they perform, as well as what their relationships are. Doing this will provide a ready-made structure for PCs, with links to at least one NPC (a business contact) per PC.

Characters can be envisioned pre-play as simply-drawn types (see *Soaps' Tropes: Sudsy Archetypes*), with deeper characterizations and specific nuances developed in-play. They should also have at least one or two pieces of cyberware -- one cool (tricked-out cyber-hand) and one lame (cyber-bladder); psychological effects of these should play a part in characterization, especially if the replacement is overt.

Every character should have at least one Goal -- what they have focused their life on achieving. This could be anything from "Replace my brother as CEO" to "build a better cyber-mousetrap" to "get Doctor Andrewski into the

OPTION: Who Let the Phage Out?

It's unknown how the Phage was developed and released. Some options for GMs to select from:

- A cybernetics megacorp, trying to screw their genetic engineering rivals.
- A Boomer genetic engineer, looking for a way to perform massive "system upgrades" (immortality, perfect health) to human DNA.
- A Gen Xer militiaman, attempting domestic bioterrorism.
- An Enfant Terrible savant and adherent to the "Just Die Already!" movement, seeking to give the Boomers a push down the Stairwell of Life.
- A biohazard mishap in a covert government bioweapons lab.
- Natural virii transgenically affected by infecting genetically-modified organisms, which then develop a taste for that GGd flavor.
- The Phage was brought back . . . from Space!

sack" to "crush Betty Toshiba because she insulted me at the Spring Cyber-Cotillion." Characters may have multiple overt or covert Goals.

Every character should have *at least* one Secret -- something that they are desperate to keep anyone from finding out. Perhaps they did something to cause the familycorp's advertainment to be boycotted, or they secretly murdered cousin Sue, or they've been seeing brother Bob's wife on the side. Secrets have got to be something that could get them into trouble, jail, or death. Characters can have multiple Secrets, and might even share a single Secret among themselves.

NPC Backgrounds

Antoinette Landover Irons: A heavily-cybered, but still attractive woman, Antoinette married Carl Irons for a combination of lust and money. She dresses stunningly well and wears her hair in a Veronica Lake style; both are to draw attention away from her half-face. She is powerful, due to being both the CEO of Landover Hospitals and the CFO of Irons Cybernetics, and thus responsible for liaisons between Landover Hospitals, Irons Cybernetics, and Ridge Surgeons (Expert Businesswoman). Her Goals are to amass enough money quietly to have all her cyberware replaced at one time with more aesthetic versions, and also to seduce Jude Meadowbrook; her Secret is she's having a fling with Doctor Ridge.

"Colonel" Constantine Irons: Born poor and brilliant, Constantine managed to patent a working cyber-spleen before the Phage (Master Cyberneticist). Recruited into the Surgeon General's pro tem cabinet, he spent half of the Winter of Hate in a lab, and the other half on the battlefield. He wears his extensive cyberware as a badge of honor, and looks down upon those who try to "make it look like something it ain't." Business ally (but personal enemy) of Dr. Ridge, he's married to Antoinette Landover and has government connections. His Goal is to find a new medical firm to replace Ridge Surgeons in his alliance; his Secret is that he let a Boomer Phage victim die when he could have saved her.

Jude Meadowbrook: Young, handsome ex-Enfant Terrible, CIO and VP of Advertainment for Irons Cybernetics. A Good fighter, Expert hacker, and Master orator, he worships Constantine, who saved him during a pitched battle in Hoboken. He has a cyber-eye, a cyber-ear (with radio reception), a metal hand, and a shrouded past. His Goal is to marry Cherise Ridge, who is one of his professional contacts; his Secrets are that he was a former leader in the JDA, and has an Evil Twin still involved in the movement (see my February *Let Me Tell You About My Character* column, "[Mark Meadowbrook, Evil Twin](#)" at [RPG.Net](#) for more information).

Doctor Austin Ridge: Born to wealth and power, Austin Ridge is an Expert Surgeon and businessman. Incredibly vain, he maintains his Master appearance through tremendous expenditures of cash for top-of-the-line cyberware: few people know that most of his skull is artificial; he's also paid ludicrous amounts of money to equip his cyber-eye with night-vision and a blinding laser. His Goal is to collect as much genetic engineering data, equipment, and supplies as possible secretly; his Secrets include his affair with Antoinette Irons, his unlicensed Good genetic engineering, and his attraction to Jude Meadowbrook.

Cherise Ridge: Cherise inherited her father's (Master) looks, as well as the Expert acting skills of her late mother. She not only serves as the VP of Advertainment for Ridge Surgeons, she also performs in their productions. She has a cyber-larynx (gives her a husky speaking voice and a tremendous singing range); also, her entire renal system is artificial. She works with Jude Meadowbrook on alliance advertainments, and thinks that his interest in her is "cute." Her Goal is to start her own advertainment familycorp; her Secret is her long-standing idolization of/crush on Antoinette Landover Irons.

Events & Possible Story Arcs

Most events and story arcs should involve the character's pursuit of their Goals and their attempts to keep their Secrets inviolate. If a Secret is discovered, it can be used as leverage against that character; if publicly announced, a Secret can lead to narrative punishment -- loss of money, prestige, power, or freedom.

- *Social Skullduggery*: Recurrent events in Soap Operas include parties, courtships, marriages, divorces, deaths, accidents, and disappearances. By putting characters with interlinking or antithetical connections, Goals, and Secrets into the same room, sparks should fly. Everyone will be out to further their aims, cuts shady deals, and hide their confidences.
- *Blackmail!*: Austin discovers Jude's *Enfant Terrible* past, and repeatedly blackmails him into assignments. Constantine discovers his wife's desire for fancy cyberware, and belittles her publicly. Jude finds out about Constantine's past, and helps hush it up.
- *Vial of Pure*: Rumors of a vial of pure, untainted cell accelerant begin to circulate; such an item would be both illegal and worth amazing amounts of money to interested genetic engineers.
- *Outside Contractor*: Cherise is developing a new advertainment program, which requires the expertise of the PCs' familycorp. She develops a crush on (or is the target of one by) one of the PCs. This turns the eyes of both Jude and Austin on the PC and their familycorp.
- *Codesnatch Christmas*: Landover Hospitals is holding their annual Holiday Gala next week; all employees are invited, as are a number of alliance and non-alliance guests. What better time is there to run a copy of the files on their standalone codemachine than at a drunken party?

Advice, Opportunities, & Pitfalls

Cyberpunk

Cyberpunk is an often-pessimistic mode of Science Fiction, concerned with the closing gap between science fiction and science fact; the negative aspects of scientific advancement; the conflict between conformity and individualism; the loss of hope and traditional values in the face of change and complexity; clashes between the human and inhuman aspects of the world (technology, corporations, governments, social movements, ever-increasing amounts of dis-/mis-/pseudo-/information); the cutting edge vs. obsolescence; and the relationship between external or internal worlds (Meatspace vs. Cyberspace): in short, the effects -- especially socio-cultural ones -- that spring from rampant technological development. Cyberpunk stories general deal with losers and rebels set against the system, or cogs of the system resisting anarchic punks' attempts to bring it all down.

While some of the genre's elements are inverted in this setting, a number of Cyberpunk elements remain prevalent: the (former) social and political oppression of the Boomers, the nearly-apocalyptic Phage, the rise to power of a population unsuited to authority, and the universal need for cybernetics (and its concomitant psychological effects). The biggest pitfall of Cyberpunk is becoming enamored of the flash of the setting (cool cyberware, big guns, the Metawebnet) to the detriment of the themes.

Ways to get a taste of Cyberpunk into your game include:

- Focus on conflicts between opposites, especially those dealing with relationships: the needs of the family vs. the needs of the self, rebellious individualism vs. social conformity, risk vs.

NOTE: Why Put the (Cyber) Chocolate in the (Soap Opera) Peanut Butter?

Flip answer: I'm not a fan of either genre, and thought by smooshing them together and mixing them up, I'd get more interested.

More detailed answer: Actually, there are elements I enjoy in both genres. Those elements tend to be pretty close to their respective cores: the effect of technology on humans and human society, and the nature of human -- especially familial -- relationships. It's just the surface gloss and style of both genres that irk me.

A big irritant is Cyberpunk's pessimistic street-level focus; here, I decided to flip it and look at the punks in the boardroom rather than the punks in the barroom. That linked up surprisingly well with the Soap Opera Trope of powerful, important people acting like snotty junior high kids with more power than maturity.

To my tastes, Soap Operas don't have enough weirdness and explosions (note that there are exceptions: I know of freeze rays, clones, aliens, and Atlantis). So, I killed off a generation of people with a virus and shoved metal bits into the survivors.

It's a living.

guarantee, or any of the other Cyberpunk tensions. A way to combine the three examples given here would be to pose a situation to a character where they must decide whether to give up their dreams of becoming a black-market genetic engineer (self, rebellious, risky) in favor of following in mom's steps and becoming a familycorp doctor (family, conformist, safe).

- Emphasize the "branding" of the setting (Bulldog handguns, ReetFeet sneakers, Hola Cola Health Drink, etc.); reward players who offer new, colorful post-Phage setting details like these during play.
- Create cracks in the shaky new structures and technologies of post-Phage life. Heavily cyber-modified people escaping from the metallic pains of their lives into the Metawebnet; the failures and secret crimes of the now-dominant GenXers, dancing as fast as they can to keep the world working; the aging *Enfant Terribles*, resisting their entry into adulthood, sometimes violently.

Soap Opera: Soap Operas are a type of Romance (not merely "stories of love," but here used in the literary and critical senses as "stories of heroic deeds, passionate pageantry, and emotional resonance, emphasizing content over form, imagination, creativity, ideals, and introspection"; the celebration of Nature can be part of these stories). In specific, they are melodrama, bearing features like moral polarization, simplified characters, strong emotions, unlikely coincidences, and general levels of excess. The ongoing serial dramas called Soap Operas get their name from their melodramatic/operatic nature and that many early radio melodramas were sponsored by soap companies; some say the term was coined in an attempt to lend some dignity to the shows.

Soap Operas involve themselves deeply with interpersonal relationships: families, friends, enemies, allies, with gossip and secrets on the side. They are also roundly criticized as cliché-ridden, badly-acted, trivial, and predictable escapism.

(Stop. Now, read that last sentence, pretending that I said "Science Fiction & Fantasy" instead of "Soap Opera." Interesting, huh?)

How someone reacts to a situation in a Soap Opera is equally important as *the actual events that occur*. Relationships are more important than plot here, and emotional resonance more vital than believability. The biggest pitfalls of Soap Opera are getting mission- or action-oriented players interested (relationship- and characterization-oriented players are probably more open to the concept) and letting the game devolve into simple camp or absurdity . . . unless you want it to.

Ways to get a strong Soap Opera vibe into your game include:

- Encourage all characters to act with the emotional maturity of a thirteen-year old. Soap Opera characters often keep secrets they shouldn't, allow themselves to be carried fully away by their emotions, hold intense grudges for real or imagined minor offenses, make dangerous choices, dream and hope forcefully, break and renew relationships quickly, and are forced to confront a grayscale world instead of one that's black and white.
- Emphasize and reward the roleplaying of emotions and introspection.
- Set the scene with wealth, style, and potentials for passion.

Soaps' Tropes

Here follows some common elements of Soap Operas (items of roleplaying interest appear in parentheses):

- *24/7 Beauty:* Waking up, in a car crash, coming out of 12 hours of surgery -- nobody ever has bed head, nor requires make-up.
- *Amnesia:* Clunk someone on the head hard enough, and they become a blank slate -- or better yet, their opposite (see below, *Evil Twins*).
- *Black or White Hat? Only Your Hairdresser Knows for Sure:* Though not as much as in previous years,

TOOL: Soap Opera Names

A quick and dirty method for coming up with suitable Soap Opera Names for characters:

- Take your middle name (or the name of a grandparent) for the character's first name.
- Use the name of the street you lived on as a child for the character's last name.

Soap Operas still color-code their characters' morality -- good guys are usually blonde, while bad guys are usually brunettes.

- *Cutaway Cliffhangers*: Not content with having a single cliffhanger at the end of a show, Soap Operas generally end *every scene* on a cliffhanger or climax, then cut away to another story thread. (This keeps interest high; it's a useful technique for roleplaying games.)
- *Evil Twins*: Just like the character, only naughty -- or nice, if the character is a Black Hat. (Great way to bring in new NPCs: just photocopy the PC's character sheet and tweak it a little.)
- *Glamour, Money, and Power!*: Characters are usually wealthy and powerful, unless they're brought in specifically to contrast with the already wealthy and powerful characters.
- *I'm On My Break, Okay?*: Most characters have very important jobs like doctor, lawyer, president of a multinational company, etc., but rarely seem to actually work.
- *I've Got A Secret*: Few characters are happy without having a secret -- either one of their own or someone else's. Blackmail is common, whether monetary or emotional.
- *Ludicrous, Unnecessary Situations*: Situations escalate to operatic levels, because characters choose to keep mum, jump to assumptions, avoid taking responsibility, snatch the forbidden fruit, and nurse feelings to unhealthy levels. These choices and actions, when finally exposed, lead to explosive problems -- which could have been handled early on.
- *One Day, I Will . . .*: Characters have Goals that motivate them strongly to do good (and bad) things.
- *Romantic Triangles*: All romances must be triangular at some point, if not most of the time. (Between pre-relationship character background and the "I'll Have What She's Having" or "I Want It Now!" mindsets, this can be easily accomplished.)
- *Script Immortality*: Generally, characters cannot die unless the performer leaves the show; alternatively, characters can die instantly for no good reason if the actor is fired. The fun really comes in periods of contract disputes or performer burnout/sickness/pregnancy. This leads to great Soap Tropes like Amnesia, Evil Twins, Lost At Sea, Coma, and It Was All A Dream. (Perhaps character death might only happen *after* an episode of Amnesia, Evil Twins, or Coma, or once their Secrets have been revealed?)
- *Serial Nature*: Soap Operas are long-running serials, and are not usually episodic. As such, nothing ever quite ends, and there's always more adventures for tomorrow. (This open-ended nature parallels roleplaying campaigns nicely.)
- *SORAS*: Children on Soap Operas age ridiculously fast; if born at the end of one season, by the end of the next, they may have graduated college. This phenomenon is referred to as SORAS -- Soap Opera Rapid Aging Syndrome -- on soap-oriented Internet boards.
- *Sudsy Archetypes*: A handful of character types recur in Soaps (all useful as character seeds): The Bad Girl/Boy; The Bastard/Bitch; The Good Girl/Boy; The Gossip; The Jilted One; The Lover; The Loyal But Unappreciated Partner; The Matriarch/Patriarch; The Noble Martyr; The Other Woman/Man; The Rake/Tart; etc.

Additional Idea: Use the sound of the name to determine morality. Decide if short names (one or two syllables) indicate virtue or vice; longer names (two or more syllables) would take the opposite nature. Example: if short names are virtuous, "Lance" and "Liz" are good guys and "Lancelot" and "Elizabeth" are bad guys. The same rule doesn't have to hold true for both first names and last names, either; you could reverse it -- short first names are good, but short last names are bad.

Interdimensional Postage

by Steven Marsh

I hope this letter finds you well. (There's no reason it shouldn't, but there have been quirks before . . .) Anyway, there was an earthquake in our Los Angeles on October 17th. I know you won't be able to do anything about it, but if you have any family or friends out there, you may want to alert them.

Mom asked who I've been writing to. I haven't had the nerve to tell her; I'm afraid her heart couldn't take it.

Oh, one more thing: If you run into a redhead in a beret on the subway within the next week, don't tell her that you consider Amistad to be one of Spielberg's lesser efforts; it's one of her favorites. (If you get her number, let me know . . .)

The postal service is a truly amazing force. When you consider the volume of mail delivered each year, the number of days it operates, the number of people it employs, and the speed with which it carries out its duties, it's amazing that it can deliver its basic services for less than the cost of a cup of coffee. All in all, there are very few mishaps or unexplained phenomena within the postal service. But within any behemoth organization, there are some mysterious elements that cannot be easily explained away . . .

Interdimensional postage is one such phenomenon. At a cursory glance, this book of stamps resembles any other. And, indeed, it is . . . at least, in its own dimension. But somehow this book of stamps ended up in ours. At times the difference is obvious -- the President Dewey commemorative stamps are popular in this world's United States -- at other times they are more subtle (one interdimensional stamp has one of Superman as part of its 1940s series) . . . or occasionally there are no differences at all.

Interdimensional postage has long since been a dirty secret of the postal service (judging by evidence gleaned in various ways, not only in our world but also others). Although the post office prides itself on its efficiency, there is the realization that they are unable to trace any individual piece of mail at any given time . . . which, privy theorists suspect, is the secret behind Interdimensional Postage. For anything mailed using Interdimensional Postage ends up in the originating dimension; if the address (and, ideally, name) on the envelope exists within that dimension, it is delivered to that location. Otherwise it is delivered to the postal service's Dead Letter Office (which dimension's DLO is unknown); sometimes it is returned to the sender, other times it is never seen again.

The exact utility of Interdimensional Postage depends on two things: the other dimension it contacts, and the limitations of the postage.

The Dimension Next Door

Scientists theorize there are somewhere between zero and infinite alternate dimensions; interdimensional postage probably proves those scientists betting on zero are incorrect. Since interdimensional postage comes from one other dimension, the biggest question is, which one?

GMs looking for ideas can consult a myriad of science fiction stories and resources, or ***GURPS Time Travel***, ***Alternate Earths 1***, and ***Alternate Earths 2*** for ideas. Some alternate dimensions are more obviously useful than

others, but any should prove useful (or at least interesting) to enterprising letter-writers.

Some possibilities include:

An exact duplicate of Earth, only a period of time in the past or future (say, two weeks). Obviously being able to write someone in the past has advantages (assuming you can get them to write back, that is). Being able to write someone in the future reverses the roles, with the holder of the stamps in the role of being able to possibly affect the alternate future. (Of course, if either side is too rigorous in their alterations, the other dimension will soon cease to be an exact duplicate of Earth, depending on the plasticity of the tie between the two worlds.)

An alternate dimension with minor differences, or radical differences on an abbreviated time frame. In this case, it will take clever utility to exploit the Interdimensional Postage, although it is possible to try exploring what those differences are between the two dimensions. (Perhaps having an interdimensional pen pal will be interesting unto itself . . .)

An alternate dimension with major differences, or little discernable in common with the home world. This is one of the more interesting possibilities . . . not necessarily because it is easy to exploit, but because contacting with an "alien" society produces many story possibilities.

Limitations

The other big determining factor behind Interdimensional Postage is what limitations it has. Some questions the GM needs to answer are:

What can be mailed? At its most limited, only paper can be mailed interdimensionally (or, perhaps, paper and a self-addressed stamped envelope). Perhaps only material that can fit in a standard envelope will make the journey (or perhaps, instead of Interdimensional Postage, it's instead Interdimensional Stamped Envelopes). Or perhaps anything that can be accepted by both postal services will travel safely (assuming sufficient postage, of course). Probably the biggest question the GM needs to answer is if additional stamps can be mailed back . . . and if so, will they work the same way as the first batch of Interdimensional Postage? If so, then it's possible for the stamp-holder to set up an infinite loop, asking someone in the other world to mail back additional postage whenever he gets low. Obviously, if packages are able to be mailed back and forth, this will quite possibly affect the campaign more severely than if only paper can go back and forth. If the GM is looking for a rationale behind limiting this power, perhaps the forces behind the execution of the Interdimensional Postage's trans-reality journey are tied to the high-speed sorting machines; anything that needs to be hand-cancelled or hand-sorted cannot travel interdimensionally.

Who can be written? Again, the most obvious answer is "anyone with an address," although this is also the answer with the most campaign-disrupting potential. Limiting this in some way will keep the Postage from getting out of hand; perhaps it relies on belief potentiality, so that only those in the alternate dimension who believe in alternate dimensions can be written. Maybe only one specific small town can be written . . . the only town that is *identical* between the two dimensions. Perhaps only one specific person can be written . . . making Agnes Phips a *very* busy pen pal partner for a number of alternate dimensions.

v

Can the recipient write back? Maybe temporal/postal regulations ensure the voyage is only one way. If the recipient can't write back, this *greatly* limits the utility of the postage, although depending on the alternate dimension it may still be worthwhile. (Knowing your letters are being received by an alternate 1936 Germany can provide a lot of potential, even if they can't write back.) Of course, if they *are* able to write back, they will probably only be able to do so if supplied with return postage or a SASE . . .

How long does it take? The default assumption is that it takes as long as the standard postal service to deliver . . . which assumes that the alternate dimension postal service is as efficient as this world's. Tinkering with this value (say, if the other world faxes recreations of all letters instantaneously, or conversely they rely on a pony express) will affect

the Postage's utility.

Interdimensional Postage In A Campaign

Interdimensional Postage makes for an interesting alternative to any of a myriad of other-dimensional devices; by limiting contact to another dimension both temporally and materially, this other world becomes much more mysterious, alien, and inaccessible than more traditional methods. ("I'm bored; I think I'm gonna hop over to the AlterniWorld for a pack of smokes . . .") Of course, given the sporadic and abbreviated nature of this otherworldly contact, it is unlikely that a campaign will be able to be built around the Postage alone. Still, it's an easy -- almost trivial -- means of adding some limited dimension-hopping to any sort of campaign: Science Fiction, Space, *Illuminati*, *In Nomine*, Supers, Weird West, or even Fantasy are all possibilities for this device.

In this age of email, one thing many people forget is how *real* letters can be compared to their electronic counterparts; writing a letter takes effort, and can seldom be done on a spur of a moment. This is even more so if the writer only has a limited number of times to write . . . say, the number of stamps he has . . . As such, to best use this plot device, it is suggested that both parties adhere to the spirit as much as possible *out* of character, by preparing the letter, envelope, and stamp; if the envelope weighs more than an ounce, then two stamps will be needed. (Enterprising GMs may print or draw their own stamps on contact paper or stickers.) Most players will get excited when they get a return letter at the beginning of a game.

Although written from an American point of view, the Interdimensional Postage is designed to be usable as a device in any country that has a (reasonably) modern postal service; as such, some thought should go into *which* postal service Interdimensional Postage works through. For example, in some Steampunk games it's entirely within the spirit of then genre to have interdimensional mail as merely another great technological advance made by the British for the British. Also remember that international mail tends to be *much* more expensive than intranational mail; mail from the U.S. to Canada or Mexico costs 60 cents an ounce, and 80 cents an ounce to the rest of the world. As such, should someone need to use Interdimensional Postage to write someone outside their country, it will probably take two to four stamps to send the same letter . . . even *more* if they want to send a package.

Known Samples of Interdimensional Postage

Three Weeks Older, Three Weeks Wiser

This book of stamps enables someone to write an alternate version of himself that exists three weeks in the past. (Of course, assuming that mail takes a week to get there and a week for a reply, there is really only a one-week window of opportunity to receive knowledge from the past . . .) For some reason, all attempts to send anything other than letters have failed . . . meaning the one book of stamps is very limited. (Fortunately -- curiously -- the alternate self has also received a book of stamps tied to *this* dimension . . .)

Now, what do you do when you're getting advice from a past self and you get a letter from yourself three weeks in the *future*, asking for help? Do you use up some of your limited number of stamps to do so? Or do you keep pumping your future-self for information?

Postal Mortem

This book of stamps is almost as curious as the dimension it connects with. For the postage is *only* able to deliver letters to those who are dead in this world yet alive in theirs. This is a surprising number of people. . . John F. Kennedy is a gracious correspondent (and is deeply curious about the nature of his death in this world), while Jim Morrison responds to all letters with a curt, "Please do not write again." Of course, this postage is only limited by imagination; dead relatives, lovers, and even enemies can all be contacted for any number of reasons. This postage can be used to generate "authentic" souvenirs from deceased famous people, to get answers from those who are dead over here ("Dear Mr. Hoffa . . ."), and to consult the departed for advice.

Somehow the non-deceased of that world are able to write back without problem . . . which may lead the writer to wonder if *he* isn't dead over there. For that matter, they may be able to write people that are dead in their dimension . . . which may make for an interesting introduction of this Interdimensional Postage. "Dear Sir: You don't know me, but to me you are dead . . ."

Superstring Theory, Super Savings Bonanza!

InterClaim Importers is one of its dimension's oldest -- and most disliked -- mail-order firms. Its catalogs are omnipresent, to the point where most people don't even bother with more than a glance before throwing them away. Fortunately, InterClaim has a new marketing strategy, with six billion potential new customers. Using Interdimensional Postage, it has managed to send its catalogs to this world. InterClaim has no telephone or Internet service in this catalog; instead, all correspondence and payment must be made using gold . . . either gold coins, or gold sheets. (A conversion guide is included with the catalog; the exchange rate is quite favorable to this world.) Although many people scoff at the idea of sending gold through the mail, the catalog *does* have a considerable amount of material that doesn't seem to be available anywhere else . . . indeed, some of its products don't seem like they *should* exist on this world. (The nature of this catalog's offerings are, of course, up to the GM.)

Clever catalog recipients may be tempted to try using the stamped envelopes to establish communication with this other dimension *without* placing an order. Exactly what effect this would have is up to the GM; although InterClaim as a company would take a dim view on anyone using its postage for personal use, those who work the ICI mailroom are underpaid, under-appreciated, and bored. As such, the thought of establishing ties with another dimension *and* striking out at an unloved employer may prove too tempting . . .

Postal Fraud

Government officials have spent a *considerable* amount of time and effort getting a borderline-schizophrenic scientist - Dr. Preston Santora -- to reveal what he knows about his top secret project. Having explored all other avenues fruitlessly, they have constructed a desperate gambit where they have convinced this scientist of a bold lie: He is in correspondence with another dimension, and only his information can save their world. He is close to revealing what he knows, which may be very bad for the world at large. What happens if one of the scientist's letters accidentally ends up misdelivered to the PCs' hands?

Thank you for the tip; I was able to make \$100,00 at Vegas with my earthquake "prediction," although the Feds are now poking into my life. (Let 'em, as we always say . . .)

Anyway, somehow (ahem) I've become an expert on the Amistad over the past month. And, yes, I did meet her; her name's Jessica, and over here her phone number's 555-4877 (you'll need to dial whatever the area code is for North Georgia).

Since you requested one, enclosed is a Burr two-dollar bill.

Now, I need to ask a favor: Please tell mom about me; let her write me, if she wants. I miss her so much . . .

Pyramid Review

Hero System Bestiary (for Hero System 5th Edition)

Written by Steven S. Long

Interior Illustration by Andrew Cremeans, Keith Curtis, Tristan Miller, Eric Rademaker, Mitch Byrd, and Greg Smith

238-page b&w softcover; \$24.99

It's a rare game campaign that can't use stats for animals and creatures, either mundane or fantastic. Indeed, many games make it a priority to create a book of critters as one of its first releases after the main book. The **Hero System 5th Edition** has taken this approach, with the release of the **Hero System Bestiary** shortly after its system's new edition. This weighty tome seeks both to flesh out animals in the **Hero System** and provide basic information on how to incorporate animals into the campaign.

The book opens with a chapter on "Creatures in Your Game." This section is meaty with information, both in general about animals and specifically how they relate to the **Hero System**. Early on it provides an overview for using creatures in the game, such as animal companions, animals as obstacles, and so on. Although brief, this section is still useful. The next part of this chapter deals with the **Hero System**-specific aspects of animals: what Characteristics mean to animals, what Skills an animal might possess, and so on. This section also details skills and abilities that might *affect* animals; for example, it points out that Streetwise can be used to traffic in illegal animals. It also gives a number of specific disadvantages an animal might have, like Timid, Cold-Blooded, and Reduced Leap. This chapter also gives creature templates, useful if you want to make an animal a Familiar, Undead, Aquatic, or Winged. An overview of how animals in combat and a description of animal populations and the value of animal parts wraps up this chapter.

Chapter Two covers fantastic creatures, most of them either typical (giant bats and frogs), traditional (gorgons, golems, and lycanthropes), or common in fantasy settings (deadly oozes and treemen) . . . with a few surprises (jackalopes?!?). Almost 90 creatures are in this chapter. In addition to game statistics, each creature gives a descriptions as to how it fits into the ecology, its personality and motivation, how it uses its powers and tactics, and its appearance. In addition, each creature lists ideas for how it might be used in a campaign, with basic encounter ideas. These aren't the obvious notions ("What if this monster attacked the PCs?"), but are instead often ways of thinking outside the box for that creature. For example, it's noted that the hydra can serve as a multi-headed alien creature in a **Star Hero** game, or a Lovecraftian horror in a pulp or **Horror Hero** game. This section also gives information on demons and devils, in surprisingly restrained language given the nature of these adversaries.

Chapter Three details mundane beasts, including lions, tigers, and bears. The gamut of creatures is represented here, from the domestic cat to the leopard, dolphins to great white sharks. Dinosaurs are also covered here, as is the extinct (but exciting) sabertooth tiger. These animals are all presented in with the same detail as the previous chapter, including ideas for how to use (or adapt) it to a campaign. Almost 60 specific animals are detailed, with enough information to adapt this information to represent almost any animal. (For example, the small mammal entry only has one set of stats, but point out that it can be used or modified to represent foxes, rabbits, raccoons, mice, squirrels, and so on.

Chapter Four is entitled "Beasts of Science Fiction And The Movies." Although the smallest section, with just over 20 entries, it's also the most eclectic, stretching the definition of "creature" in a number of ways. As the title implies, these

are for the most part creatures that have appeared in other media (with the serial numbers filed off), or otherwise act as classic tropes of its genre. Thus we have the city-destroying giant dinosaur (fiery breath or radioactive eyebeams optional), neuroparasites, animal-men, and the planet-destroying engine of destruction. This section also has curious choices like the slasher (the typical movie homicidal maniac) and a number of robots. Although not serving as an exhaustive science fiction bestiary, this section should serve as a good starting point for memorable sci-fi encounters or epic fantasy adversaries.

For what it is trying to do -- serve as a comprehensive guide to mundane animals and an excellent primer for fantastic creatures -- this book accomplishes its goal admirably. The book does an admirable job in walking the fine line between being a monster manual and a compendium of mundane creatures, with a wide assortment of both being provided. (An early sidebar even discusses the difference between dramatic versus realistic animals, pointing out for example that gorillas in the real world are *not* rampaging man-killers, but are often used that way in stories.)

All of the write-ups look like they were well-researched, they all have illustrations (ranging from adequate to quite interesting), and all the creatures look as though special thought was spent on making them "work" within the **Hero System**. For example, the Dolphin has "Tough Nose: +10 PD; Only To Protect Against Damage Taken When Performing Move Bys/Move Throughs," which lets it ram into sensitive parts of creatures like sharks (as the Powers/Tactics section explains that they are known to do). Many animals also present a number of options, either letting it change the abilities of the animal (such as turning a mundane eel to an electric eel), alter an animal to better suit legend (such as giving a domestic cat the "black cat" option to instill unluckiness), or alter an animal into another animal with similar stats (such as transforming the deer/antelope into a bighorn sheep, moose, or mountain goat).

If the **Hero System Bestiary** has any drawbacks, it's mostly related to the form. The **Hero System** is *not* known for being a compact system; as such, most animals do require at least a half-page for the stats alone, meaning that a 200+ page book does have (on paper) less than 200 animals. Although it provides information to alter these stats and greatly increase that number, some may feel that it doesn't provide enough individual writeups. Likewise the ecology, personality, and appearance sections may not be of use to some readers, and those who are hoping for a compact "combat stats only"-type of presentation (such as found in the **Monster Manual**) may be disappointed. Finally, its "creatures of the media" section does feel a little thin, and it seems that **Star Hero** could still use its own bestiary. Still, these are minor quibbles. The **Hero System Bestiary** provides an in-depth examination of all ways animals might interact with a campaign, whether as companions, plot devices, or combat adversaries, and comes recommended for all **Hero System** games.

--Steven Marsh

It's How You Play The Game . . . Err, And How Is That, Again?

Many -- if not most -- roleplaying books have a "What Is A Roleplaying Game?" section.

But most do *not* have a "How do you play a roleplaying game?" section.

Oh, sure, they tell you how to generate characters, roll for damage, and buy stuff to go adventuring, but they don't tell you how to roleplay . . . which may make RPGs unique in the world of games. (At best they'll supply a sample transcript, from which one might deduce how the writers expect you to play.) This is especially interesting because *how* one plays an RPGs makes a big difference in both the experience and the outcome. In, say, **Monopoly**, it doesn't make much of a difference to the outcome if a player goes, "By the dark power of Baal! I sacrifice this parchment to get out of jail without cost!" But such flavorful interjections are arguably the whole *point* of an RPG.

Consider what a difference it makes to the experience with just a change in tense, point of view, or level of omniscience:

GM: "You see a chest."

Player: "I go to the chest and open it up."

GM: "You find a sword that glows with a faint blue light."

Player: "I pick it up and examine it."

GM: "There is a chest here."

Player: "Zarth goes to the chest and carefully opens it up."

GM: "Inside is a sword that glows with a faint blue light."

Player: "Zarth picks it up and slowly turns it over in his hand."

GM: "There is a chest here."

Player: (mimicking opening a chest) "I've got to be careful opening this."

GM: "Inside is a sword that glows with a faint blue light."

Player: (mimicking picking up a sword by hilt and blade, turning it over) "Curious . . ."

GM: "Their eyes adjusted to the new light; the only item of note in the room was a chest."

Player: "Zarth went to the chest and carefully opened it up. *Please let there be something useful in here*, he thought."

GM: "Inside was a sword that glows with a faint blue light."

Player: "Zarth picked it up and slowly turned it over in his hand. 'I can't let Fowlin get this,' he muttered so no one could hear."

Now obviously the last one is radically different than what many of us are used to. But different mediums allow for different assumptions and play style.

For example, what if the premise for a gaming group was that everyone was *in character*, and the only way to speak out of character was to make a special signal or gesture? This is the default presumption for many live-action games. Likewise, on-line games often allow for a greater freedom than in-person games in exploring character's thoughts and quirk-level actions.

Or consider something as omnipresent as character thoughts. In most games it's assumed that thoughts are internal; the player is never under any obligation to reveal what his character is thinking, and the player may in fact be docked experience points if he reveals too much of his thought processes to other players without justification. But there is nothing in most rulebooks that states this; in fact, revealing thoughts may be entirely *within* the realm of some games. For example, a campaign attempting to recreate the feeling of a Shakespearean play may well reward players who explain their thoughts and motivations; in most of Shakespeare's plays, people won't shut up about why they're doing

what they're doing, and frequently espouse their motivations in iambic pentameter.

Now, I'm not claiming to give a full primer on how to roleplay here; I'm still rolling the idea over in my mind, trying to sort out what that would entail. But here are a few questions to think about. (Most of these will need to be arrived at by consensus of the gaming group in question.)

- What level of character immersion is expected? Are players assumed to be out of character most of the time except for those moments when they enter character, or vice versa? Will digressions, distractions, and ramblings be forbidden or tolerated?
- How permissible is "table talk," or talking to other players (presumably out of character) about what their character should do? In some games it's forbidden, while at other tables it might be encouraged. ("Boy, I sure hope Zatarra the Mage doesn't forget to use her undead-slaying dagger against that thing attacking her . . ." "Oh, crud! Uh, I draw my undead-slaying dagger . . .")
- How much does what a player say and do *really* reflect what the character is saying and doing? In other words, suppose someone is playing a highly charismatic character. If that character goes up to someone he's attracted to and says, "Hey, baby . . . how's about we control the horizontal?" -- causing the other players and GM to wince -- does the NPC wince as well? Is it assumed that somehow that was *exactly* what the NPC wanted to hear (after all, the character *is* good at talking to people), or is it assumed that he didn't actually say that, but instead said something the NPC *would* like to hear? (A more abstract way of thinking of this is, "How much will the GM protect a player from himself?")
- Are players allowed to continue their character's actions out of game (if not encouraged to do so)? Through bluebooking or other non-game communication with the GM, it's possible for a character to accomplish a lot . . . if permitted.
- How much control do the players have over the game itself? Do characters have a means of modifying their world, either through a mechanic or through the narrative? (For example, can a charismatic character at a party have his player just declare, "I'm flirting with one of the servants," even though the existence of servants may not have been explicitly declared? Can a swashbuckler declare he's swinging from a chandelier rope onto the bad guys if no chandelier has been established? Can an astronaut character declare he has received a letter from his presumed-dead father without any GM input?) At another extreme, does a player have the right to say, "I'm sorry; I don't like this scene because it's offensive/unrealistic/awry of my vision of the world?"
- Who has control over what the dice say? Does the GM or player interpret what really good (or bad) dice rolls mean?

Again, there are no right or wrong answers to these questions. But actually thinking about them can go a long way toward ensuring that a gaming group is all on the same page . . . and can bring up ideas for different ways of doing things among even established groups. Which is good, since they'll need all the skills they can muster to defeat the dark servant of Baal who used his eldritch powers to escape from jail without paying.

--Steven Marsh

Interdimensional Postage

by Steven Marsh

I hope this letter finds you well. (There's no reason it shouldn't, but there have been quirks before . . .) Anyway, there was an earthquake in our Los Angeles on October 17th. I know you won't be able to do anything about it, but if you have any family or friends out there, you may want to alert them.

Mom asked who I've been writing to. I haven't had the nerve to tell her; I'm afraid her heart couldn't take it.

Oh, one more thing: If you run into a redhead in a beret on the subway within the next week, don't tell her that you consider Amistad to be one of Spielberg's lesser efforts; it's one of her favorites. (If you get her number, let me know . . .)

The postal service is a truly amazing force. When you consider the volume of mail delivered each year, the number of days it operates, the number of people it employs, and the speed with which it carries out its duties, it's amazing that it can deliver its basic services for less than the cost of a cup of coffee. All in all, there are very few mishaps or unexplained phenomena within the postal service. But within any behemoth organization, there are some mysterious elements that cannot be easily explained away . . .

Interdimensional postage is one such phenomenon. At a cursory glance, this book of stamps resembles any other. And, indeed, it is . . . at least, in its own dimension. But somehow this book of stamps ended up in ours. At times the difference is obvious -- the President Dewey commemorative stamps are popular in this world's United States -- at other times they are more subtle (one interdimensional stamp has one of Superman as part of its 1940s series) . . . or occasionally there are no differences at all.

Interdimensional postage has long since been a dirty secret of the postal service (judging by evidence gleaned in various ways, not only in our world but also others). Although the post office prides itself on its efficiency, there is the realization that they are unable to trace any individual piece of mail at any given time . . . which, privy theorists suspect, is the secret behind Interdimensional Postage. For anything mailed using Interdimensional Postage ends up in the originating dimension; if the address (and, ideally, name) on the envelope exists within that dimension, it is delivered to that location. Otherwise it is delivered to the postal service's Dead Letter Office (which dimension's DLO is unknown); sometimes it is returned to the sender, other times it is never seen again.

The exact utility of Interdimensional Postage depends on two things: the other dimension it contacts, and the limitations of the postage.

The Dimension Next Door

Scientists theorize there are somewhere between zero and infinite alternate dimensions; interdimensional postage probably proves those scientists betting on zero are incorrect. Since interdimensional postage comes from one other dimension, the biggest question is, which one?

GMs looking for ideas can consult a myriad of science fiction stories and resources, or ***GURPS Time Travel***, ***Alternate Earths 1***, and ***Alternate Earths 2*** for ideas. Some alternate dimensions are more obviously useful than

others, but any should prove useful (or at least interesting) to enterprising letter-writers.

Some possibilities include:

An exact duplicate of Earth, only a period of time in the past or future (say, two weeks). Obviously being able to write someone in the past has advantages (assuming you can get them to write back, that is). Being able to write someone in the future reverses the roles, with the holder of the stamps in the role of being able to possibly affect the alternate future. (Of course, if either side is too rigorous in their alterations, the other dimension will soon cease to be an exact duplicate of Earth, depending on the plasticity of the tie between the two worlds.)

An alternate dimension with minor differences, or radical differences on an abbreviated time frame. In this case, it will take clever utility to exploit the Interdimensional Postage, although it is possible to try exploring what those differences are between the two dimensions. (Perhaps having an interdimensional pen pal will be interesting unto itself . . .)

An alternate dimension with major differences, or little discernable in common with the home world. This is one of the more interesting possibilities . . . not necessarily because it is easy to exploit, but because contacting with an "alien" society produces many story possibilities.

Limitations

The other big determining factor behind Interdimensional Postage is what limitations it has. Some questions the GM needs to answer are:

What can be mailed? At its most limited, only paper can be mailed interdimensionally (or, perhaps, paper and a self-addressed stamped envelope). Perhaps only material that can fit in a standard envelope will make the journey (or perhaps, instead of Interdimensional Postage, it's instead Interdimensional Stamped Envelopes). Or perhaps anything that can be accepted by both postal services will travel safely (assuming sufficient postage, of course). Probably the biggest question the GM needs to answer is if additional stamps can be mailed back . . . and if so, will they work the same way as the first batch of Interdimensional Postage? If so, then it's possible for the stamp-holder to set up an infinite loop, asking someone in the other world to mail back additional postage whenever he gets low. Obviously, if packages are able to be mailed back and forth, this will quite possibly affect the campaign more severely than if only paper can go back and forth. If the GM is looking for a rationale behind limiting this power, perhaps the forces behind the execution of the Interdimensional Postage's trans-reality journey are tied to the high-speed sorting machines; anything that needs to be hand-cancelled or hand-sorted cannot travel interdimensionally.

Who can be written? Again, the most obvious answer is "anyone with an address," although this is also the answer with the most campaign-disrupting potential. Limiting this in some way will keep the Postage from getting out of hand; perhaps it relies on belief potentiality, so that only those in the alternate dimension who believe in alternate dimensions can be written. Maybe only one specific small town can be written . . . the only town that is *identical* between the two dimensions. Perhaps only one specific person can be written . . . making Agnes Phips a *very* busy pen pal partner for a number of alternate dimensions.

v

Can the recipient write back? Maybe temporal/postal regulations ensure the voyage is only one way. If the recipient can't write back, this *greatly* limits the utility of the postage, although depending on the alternate dimension it may still be worthwhile. (Knowing your letters are being received by an alternate 1936 Germany can provide a lot of potential, even if they can't write back.) Of course, if they *are* able to write back, they will probably only be able to do so if supplied with return postage or a SASE . . .

How long does it take? The default assumption is that it takes as long as the standard postal service to deliver . . . which assumes that the alternate dimension postal service is as efficient as this world's. Tinkering with this value (say, if the other world faxes recreations of all letters instantaneously, or conversely they rely on a pony express) will affect

the Postage's utility.

Interdimensional Postage In A Campaign

Interdimensional Postage makes for an interesting alternative to any of a myriad of other-dimensional devices; by limiting contact to another dimension both temporally and materially, this other world becomes much more mysterious, alien, and inaccessible than more traditional methods. ("I'm bored; I think I'm gonna hop over to the AlterniWorld for a pack of smokes . . .") Of course, given the sporadic and abbreviated nature of this otherworldly contact, it is unlikely that a campaign will be able to be built around the Postage alone. Still, it's an easy -- almost trivial -- means of adding some limited dimension-hopping to any sort of campaign: Science Fiction, Space, *Illuminati*, *In Nomine*, Supers, Weird West, or even Fantasy are all possibilities for this device.

In this age of email, one thing many people forget is how *real* letters can be compared to their electronic counterparts; writing a letter takes effort, and can seldom be done on a spur of a moment. This is even more so if the writer only has a limited number of times to write . . . say, the number of stamps he has . . . As such, to best use this plot device, it is suggested that both parties adhere to the spirit as much as possible *out* of character, by preparing the letter, envelope, and stamp; if the envelope weighs more than an ounce, then two stamps will be needed. (Enterprising GMs may print or draw their own stamps on contact paper or stickers.) Most players will get excited when they get a return letter at the beginning of a game.

Although written from an American point of view, the Interdimensional Postage is designed to be usable as a device in any country that has a (reasonably) modern postal service; as such, some thought should go into *which* postal service Interdimensional Postage works through. For example, in some Steampunk games it's entirely within the spirit of then genre to have interdimensional mail as merely another great technological advance made by the British for the British. Also remember that international mail tends to be *much* more expensive than intranational mail; mail from the U.S. to Canada or Mexico costs 60 cents an ounce, and 80 cents an ounce to the rest of the world. As such, should someone need to use Interdimensional Postage to write someone outside their country, it will probably take two to four stamps to send the same letter . . . even *more* if they want to send a package.

Known Samples of Interdimensional Postage

Three Weeks Older, Three Weeks Wiser

This book of stamps enables someone to write an alternate version of himself that exists three weeks in the past. (Of course, assuming that mail takes a week to get there and a week for a reply, there is really only a one-week window of opportunity to receive knowledge from the past . . .) For some reason, all attempts to send anything other than letters have failed . . . meaning the one book of stamps is very limited. (Fortunately -- curiously -- the alternate self has also received a book of stamps tied to *this* dimension . . .)

Now, what do you do when you're getting advice from a past self and you get a letter from yourself three weeks in the *future*, asking for help? Do you use up some of your limited number of stamps to do so? Or do you keep pumping your future-self for information?

Postal Mortem

This book of stamps is almost as curious as the dimension it connects with. For the postage is *only* able to deliver letters to those who are dead in this world yet alive in theirs. This is a surprising number of people. . . John F. Kennedy is a gracious correspondent (and is deeply curious about the nature of his death in this world), while Jim Morrison responds to all letters with a curt, "Please do not write again." Of course, this postage is only limited by imagination; dead relatives, lovers, and even enemies can all be contacted for any number of reasons. This postage can be used to generate "authentic" souvenirs from deceased famous people, to get answers from those who are dead over here ("Dear Mr. Hoffa . . ."), and to consult the departed for advice.

Somehow the non-deceased of that world are able to write back without problem . . . which may lead the writer to wonder if *he* isn't dead over there. For that matter, they may be able to write people that are dead in their dimension . . . which may make for an interesting introduction of this Interdimensional Postage. "Dear Sir: You don't know me, but to me you are dead . . ."

Superstring Theory, Super Savings Bonanza!

InterClaim Importers is one of its dimension's oldest -- and most disliked -- mail-order firms. Its catalogs are omnipresent, to the point where most people don't even bother with more than a glance before throwing them away. Fortunately, InterClaim has a new marketing strategy, with six billion potential new customers. Using Interdimensional Postage, it has managed to send its catalogs to this world. InterClaim has no telephone or Internet service in this catalog; instead, all correspondence and payment must be made using gold . . . either gold coins, or gold sheets. (A conversion guide is included with the catalog; the exchange rate is quite favorable to this world.) Although many people scoff at the idea of sending gold through the mail, the catalog *does* have a considerable amount of material that doesn't seem to be available anywhere else . . . indeed, some of its products don't seem like they *should* exist on this world. (The nature of this catalog's offerings are, of course, up to the GM.)

Clever catalog recipients may be tempted to try using the stamped envelopes to establish communication with this other dimension *without* placing an order. Exactly what effect this would have is up to the GM; although InterClaim as a company would take a dim view on anyone using its postage for personal use, those who work the ICI mailroom are underpaid, under-appreciated, and bored. As such, the thought of establishing ties with another dimension *and* striking out at an unloved employer may prove too tempting . . .

Postal Fraud

Government officials have spent a *considerable* amount of time and effort getting a borderline-schizophrenic scientist - Dr. Preston Santora -- to reveal what he knows about his top secret project. Having explored all other avenues fruitlessly, they have constructed a desperate gambit where they have convinced this scientist of a bold lie: He is in correspondence with another dimension, and only his information can save their world. He is close to revealing what he knows, which may be very bad for the world at large. What happens if one of the scientist's letters accidentally ends up misdelivered to the PCs' hands?

Thank you for the tip; I was able to make \$100,00 at Vegas with my earthquake "prediction," although the Feds are now poking into my life. (Let 'em, as we always say . . .)

Anyway, somehow (ahem) I've become an expert on the Amistad over the past month. And, yes, I did meet her; her name's Jessica, and over here her phone number's 555-4877 (you'll need to dial whatever the area code is for North Georgia).

Since you requested one, enclosed is a Burr two-dollar bill.

Now, I need to ask a favor: Please tell mom about me; let her write me, if she wants. I miss her so much . . .

Naked Mall Rats

Fierce Chargers For *Toon*

by William H. Stoddard

The PCs in your *Toon* campaign have run out of things to do? Let them go shopping . . .

Every social species naturally develops parasites. Anthills have mites that ride around on worker ants and beetles that tempt them with sweet secretions. Human societies have beggars and politicians. And Anytown and The City have naked mall rats.

Naked mall rats are the only known animated hive intelligence. They live in colonies of varied sizes. A typical colony might occupy a small condo complex, while a big one might fill a private boarding school. A few very small colonies are even mobile, living in stretch limos or tour buses.

The colony is run by a queen, but the characters probably won't see her. What they will see is the worker mall rats, who look like adolescent girls; they don't wear clothes (nobody seems to think this is unusual, even if other animated races all wear clothes), but they always have braces on their prominent teeth, and they carry purses that act as their back pockets. A naked mall rat's purse always has two standard items: a credit card and a cell phone. Other possessions are optional; an Animator whose players are familiar with anime may want to give them shojo mallers, for example.

The credit card serves to buy stuff. Worker mall rats feed in food courts, but that doesn't seem to be the point of their mall visits. They're really there to buy stuff, especially clothes and accessories. What they do with the clothes is a mystery; they never actually *wear* them! But at the end of a visit they can be seen with large shopping bags filled with their purchases. The credit cards aren't actually backed up by any source of funds; they're just an imitation social signal, the same way a mite's antenna twiddling imitates the social signals of its ant host. But in an animated world, no one is likely to figure this out; this may even be how everyone's credit card works.

This buying behavior is how the characters should run into them. As they go into stores, shopping for food, clothes, exotic collectibles, or weapons (so that they can make each other fall down!), the mall rats are there ahead of them. They take no notice of the characters -- in fact, they snub them -- but somehow they're always there ahead of them, grabbing the last of some special item off the counter, or pushing into line ahead of them, or tying up the salespeople with incredibly long questions and conversations. Make them as annoying as possible, without their actually doing anything openly aggressive.

But if the characters try to start a fight or make them fall down, their other standard possession comes into action: the cell phone. Using this, they can call other worker mall rats to help them. If the other mall rats run into trouble, out come their cell phones, and the process repeats. The first time this happens, it should be fairly small scale, but build up to having an entire store packed with mall rats.

The cell phone is also one possible key to overcoming the Menace of the Mall Rats. Making one worker mall rat fall down doesn't accomplish much; another one will take her place. (For a creepy effect, her sisters can carry her away to a mysterious fate, perhaps making chewing motions.) But destroying a cell phone -- any single cell phone carried by a worker mall rat -- will make the entire colony fall down at once!

At this point, the characters will probably be content to escape. Or in a series with some continuity, they can come back in the next episode, hunt for the lair of the naked mall rats, confront the terrifying queen mall rat, and find out what they want all those clothes for anyway . . .

Mall Rat

Description: Worker Mall Rat Amy (and her sisters Barbie, Crystal, Dawn, and so on to Zoe) looks like a skinny teenage girl with big front teeth. She carries a fashionably small purse from which she can take out a credit card, a cell phone, and other items. She wears braces but no clothes, though she may have accessories such as hair clips or noserings. (For added confusion, have two different mall rat colonies with different accessories!)

Beliefs and Goals: Shop 'til you fall down. If you're not one of my sisters, you're nothing. I saw it first! Of course my credit is good.

Shtick: Hive Mind-5

New Shtick

Hive Mind (6)

You are one of a group whose members are almost indistinguishable from each other. You know exactly how each other think, so you can cooperate instinctively. If you make your shtick roll, you and any of your fellows who are present can all cooperate on a single action, and you can combine your Pick Up Heavy Thing scores (as under the Superstar rule) or do damage of 1 point for each attacker.

Also, you can roll against your Hive Mind skill to summon other members of the hive. If you make the roll, at least one shows up, plus one more for each extra point you make the roll by. If you're up against a group of opponents rather than a single opponent, making the roll exactly still gets you only one, but for each extra point you make the roll by, you get a number of helpers equal to the number of your adversaries! If you've called this big a group, no one in it can roll against Hive Mind again; you've used up all the hive members in reach. This doesn't apply if you weren't up against a group, though; if you're up against one opponent and you summon help, your help can summon more help. If this means that the adversaries end up buried under a pile of you and your siblings, so much the better, and if they fall down, they'll be Boggled . . .

Designer's Notes: Ethereal Player's Guide

or, "Herding Cats"

by Elizabeth McCoy

with additional (better) vignettes by R. Sean Borgstrom

Asked to come up with Designer's Notes, I asked the authors if they had anything to add. This missive was returned to me . . .

It is generally considered a sound practice, when a woman is to be institutionalized (on such grounds as these, wherein she exhibits a persistent and obdurate belief in such figments and fantasies as dragons, unicorns, elves, and the twin illusions of civil liberties and human rights (which, as all civilized folk know, exist only as palliative concepts to calm the fervent rumblings of the masses, unworthy of an enlightened individual -- save, of course, when said individual has been subject to irregularities in upbringing, and has not yet shaken off the caul of ignorance imposed by the travails and traumas that follow inevitably when one is raised by wolves, apes, otters, or the common folk)) --

As I was saying, it is considered sound practice that such a woman be permitted the opportunity to draft a prospectus illustrating on the one hand the scope of the visions that permeate and pervade the world behind her eyelids and on the other hand her ability to communicate her own perspective to the outside world; that is to say, a demonstration of her ability to maintain the lines of communication, despite the feverish insanity that rages within her, with people of consequence; for, as all intelligent and able souls know (and here, I permit a broad interpretation, accepting equally all who hold within them the potential for excellence whether or not they have yet achieved it) --

As all intelligent and able souls know, not even the most delusive vision represents true madness when it permits a free flow of information and an interchange of ideas between the potential madwoman and those around her; not even the fiercest ravings can, in practice, outweigh the simple ability to interact with society around one; and fantasy can, of course, prove psychologically healthy (if not for the poor sufferers, then for those who surround them), when it allows for such intellectual converse as this.

The author of this manuscript has protested repeatedly that it is meant not as the proof that she deserves her freedom nor as the defining communication of her insanity but that rather she had a deadline to meet that outweighed the mundane considerations of the judgment of this board; but such pointless protests are only to be expected when one sets a woman before such trial as this, regardless of her innate soundness, and we cannot, as you must understand, take these claims at all seriously --

(Why, the descriptions she has given of the development process alone! They show a hysteric hyperbole! and the picture she paints of the intended audience, as if one could shake loose the lining of America and discover individuals willing not simply

*to pretend to be what they are not, but to pretend to be dreams and figments themselves, to **imagine being imaginary**, and then to roll such concrete objects as dice to quantify the process of it --)*

We cannot, in all fairness to those others who have come before us for judgment, take her claims seriously, and so must present for your verdict on the matter the following manuscript, may you judge it wisely, as the best indication available as to whether Ms. Borgstrom's ravings about celestial and ethereal processes merit incarceration until such time as mind-altering medications permit her to lurch once again out into the ranks of society -- or merit immediate release and full freedom, albeit perhaps with some sort of tracking device to ensure that she does not enter any center of government or follow me home.

--submitted by Dr. Akire

This convinced me that I was going to have to actually write this article myself. "Unfortunately," due to a change from 128 pages to 144, during production, none of the material had to be cut! (Surely a first in such matters . . .) Therefore, I can only offer two vignettes that somehow escaped notice (I'm kicking myself here), some vignettes specially devised for this article, and an overview of the work itself.

* * *

Terrified, the little cat came streaking back to the small group, fast as Speed itself (which, as it happened, it was). Behind, a Hellhound loped, slaving jaws and arrogance. Einstein girded himself for mental battle, but the Big Bad Wolf simply interposed himself between the demon and their feline companion.

*With a snarl, the Hellhound lunged for the ethereal, expecting an easy kill -- and found itself swallowed up by jaws of primal **Hunger**. Somewhere on Earth, a demon woke, cursing and Discordant. In the Far Marches, the Big Bad Wolf simply licked his chops. "Mmmm, spicy."*

* * *

The ***Ethereal Player's Guide*** was, literally, years in the making. The original outlines were submitted in February of 1999! At it happened, there were two to choose from: R. Sean Borgstrom's and David Edelstein's. If you look at the authors for the book which is shipping now, you can see that neither's outline was as good as the *merged* one turned out to be.

From Edelstein came structure, hard mechanics, and most of the "crunchies" required to define what a character could and could not do and for how many points. From Borgstrom, imagery, flavor, society, and background -- not just for any one (or even few) pantheons, but for the whole of etherealdom. Two such vastly different approaches to the same material was not easy to mesh, for either the authors or line editor! The transfer between styles was eased by the addition of vignettes at the beginnings of chapters and in occasional "pullquote" format throughout the more mechanics-heavy chapters.

The playtest also caused changes: relatively minor was Chris Anthony's contribution of tables to aid in character creation. Maurice "Moe, Prince of Heresy" Lane's group and the *Toys from the Attic* playtests determined that the Affinity rolls were a bit too difficult, and the values were re-calibrated. Other matters were discussed. Uriel, Archangel of Purity, had originally been omitted from the text since it was a book about *ethereals*, not angels. However, the Tsayadim are the boogieman's boogiemens, and so a few of the better-known attunements, as well as some comments on Tsayad tactics, made it in after all.

So, what is the *Ethereal Player's Guide*?

Simply, it's all the rules you need to create an ethereal character, from a lowly, non-sapient figment that's somehow escaped a dreamscape, all the way up to a minor god (assuming the GM permits).

What it is *not* is a comprehensive listing of the existing or even classic pantheons. It doesn't provide a set of ready-made gods (though a lesser goddess and Odin are there to illustrate how such creatures are made), nor does it dwell upon the odd special cases of the syncretic semi-Divine religions, such as the Hindus or the Loa.

The ***Ethereal Player's Guide*** will tell you how to create pantheons, detailing their Domain, their themes, the strands and affinities that will best represent them . . . But in order to cover such a vast range of *possible* characters, allowing the greatest freedom to create all the weird and wonderful things in the Far Marches, details of existing pantheons were relegated to ***The Marches***. (Or -- should appropriate texts appear, pleasing to the editor's eye -- within *Pyramid* itself . . .) Pantheonic relations and attitudes are listed, though, to provide examples for Game Masters and players to work with when devising their own lesser ethereals or gods.

* * *

"They are beginning to call you Akosmia," Julia said. "They fear you as the lord of chaos come among us."

"I am a dream," I said. "Nothing more."

"What have you brought me this time?" she said.

I held them up: the legs of the Pellegrine Spider, each as long as I was tall. The spine of the giant named Hippolytos. The wings of Pegasus.

"I shall put them in your flesh," she said, "like the other things you have brought me. But I wonder, Martinus, when you shall be content to be as you are."

* * *

Unlike angels and demons, ethereals are malleable in their Image and even sometimes in their cores. They are not facets of the Symphony as angels are, or the shattered-mirror reflections of those facets, as demons are. Instead, the spirits of the Marches are woven of pure dreamstuff, as varied and surreal as every dream ever dreamed. They are more than influenced by human beliefs -- they are defined by them, *dependant* on them.

Though an ethereal greater god is equivalent to a minor Superior (and has the same lack of actual hit point totals), lesser gods are within reach of player characters, if not at character creation, then after a bit of experience. Such an ambitious spirit can try to establish itself as a god -- or assume the position of an existing one . . .

* * *

"You wish to be Branwen." Her voice was flat. She looked me up and down. "You are somewhat lacking in beauty and grace, but I suppose such things can be remedied. I am less certain that we can do anything about your wit." She hesitated, and then seemed to come to a decision.

"Earn the love of a demon," she said. "Earn the love of an angel. Then return here, and we shall see what will be seen."

"May I use deception," I asked, "or must they know what they love?"

"They must love you for yourself," she said, quietly. "Else you have no business claiming yourself a goddess of love and beauty."

Who's Right, the Ethereals or the Celestials?

The Game Master, actually. Ethereals claim that the monotheistic God was once one of them, who somehow tapped into power sufficient to reweave the history of the Marches. (And, perhaps, some other ethereal could discover the secret?) Celestials claim ethereals are just hopped-up figments of human imagination.

But whether setting a campaign in the past, or simply in an alternate universe where the canonical War between Heaven and Hell doesn't exist, the **Ethereal Player's Guide** can be used to create a universe of battling gods and spirits, seeking the power of worshippers and intriguing among themselves (and other pantheons). Save for requiring the core rules, this book of spirits can stand alone, if the GM desires. (Though it might require a bit of adaptation, it might fuel a *Small Gods*-like setting for the [Discworld Roleplaying Game](#). Angels and demons need not enter the picture at all . . .)

* * *

Hermes and Anubus eyed each other, each with a hand on the arm of the startled human soul.

Hermes said, "He's half Greek. He belongs to us."

Anubus bared his teeth and growled.

The Greek psychopomp poked his caduceus in the Egyptian's direction. The snakes hissed. "Let's not get personal, 'Nuby." Another growl, and he added, "Besides, maybe we can make a deal?"

The other god tilted his jackal head and whined curiously.

Hermes the trickster grinned. "Look, I'll let you have this one, but in return, I need you to run a little message to Bast . . ."

Why Did It Take So Long To Get This Book?

Quite frankly, the **In Nomine** curse was in full effect for the **Ethereal Player's Guide**. (You didn't know the line was so handicapped? Tsk. After co-authoring **GURPS In Nomine**, I was well aware that supernatural events were conspiring against me . . .) At various points in its existence, it hid in cracks, told people it had been playtested before it had been, ate approximately three editors (and belched) as well as two or three artists, and expanded its page count by 16 pages somewhere in there. (Probably from all the Essence it got by eating the editors and artists.)

I'm just glad it didn't get enough Essence to make a giant dinosaur vessel and devour Austin. Instead, it's a lovely and useful book, which -- if treated nicely -- will sit and purr contentedly on your shelf.

* * *

The angel knelt -- on several knees, for Kyriotates are multiplicity incarnate -- before its Superior, downcast. "Forgive me, my lord. I tried, but the humans were too persistent, too stubborn. I have failed."

The Archangel of the Sword sighed. "Humans are . . . surprising, at times. That you were able to delay the matter as long as you did is enough. It bought a little more time."

"I could have broken in, stolen the proofs . . ."

Laurence winced. "No, that would have not been the honorable action, and Dominic would have had words with me . . . It would not have been the first raid upon that company. No, we will simply have to hope our preparations were enough, and that the ethereals are not . . . empowered again by this book."

Pyramid Pick

Champions (for Hero System 5th Edition)

Published by [Hero Games](#)

Written by Aaron Allston & Steven S. Long

Art by Storn Cook, Andrew Cremeans, Albert Deschesne,
Malcolm T. Harrison, Jeff Hebert, Eric Rademaker, & Greg Smith

216 pages; \$29.99

If you are a roleplaying fan of the superheroic genre -- either in comics or in gaming -- and have *not* yet purchased **Champions**, the newest edition of one of the most venerable supers RPGs -- it's probably because you didn't know it was out. It is. Go buy it.

Okay; if you're still reading, yet have not purchased the book, perhaps it's because you haven't heard of it before, or maybe it's because you *have* heard of it before, but believed it was designed only for the **Hero System**, or only targeted at fans of the *Champions* universe. This review, then, is for you.

If the **Hero System 5th Edition** is a toolkit, providing the rules and framework necessary to run the mechanics of a game, then **Champions** is everything else . . . at least, for the costumes-and-cape crowd. Whereas in previous editions this material was found more closely tied with the **Hero System rules** -- for example, as the second half of the classic **4th Edition** hardcover -- this time it has received its own book. In so doing, Aaron Allston has been able to greatly expand, revise, and add to this material, creating a book with so much generic material that anyone running or playing in a superheroic campaign for any game system would do well to read this.

Chapter One is an overview of the superhero genre. This is perhaps the most exhaustive treatment of the subject ever in a superhero game. It starts by discussing various comic periods, including standard ones (golden age, silver age, bronze age, and the modern era dubbed the "iron age"), and not-so-standard ones (alternate histories, combining supers with science fiction or fantasy). A brief discussion of superhero timelines (pondering when the first ones should appear in the campaign, how the view of the law might evolve over time, and so on) is followed by a discussion of mood and the "meta-genre." This is a discussion of the tone of the supers campaign, such as horror, comedy, romance, drama, and so on. A brief discussion about the source of super-powers in the game is next (do powers stem from multiple sources, one source, or is there a theme that ties all the heroes together?), followed by an in-depth examination of many classic elements of the super-hero genre. (Why do heroes keep secret identities? Why don't their costumes bunch up? How do supervillains keep coming back?)

Chapter two deals with super-powered character creation. Again, this is not a rules-heavy stat-fest -- since the rules themselves are contained within the **Hero System 5th Edition** -- but is instead a treatise on the elements that go into making a super-powered character. This section is more tied to the **Hero System** than the previous section -- for example, describing which Perks are appropriate to the genre and how many points various Psychological Limitations are worth -- but its information is generic enough that there should be plenty of information for all. For example, it discusses the differences between Knowledge Skill: Superheroes or Supervillains (you know the players in the forces of good or evil) and Knowledge Skill: The Superhuman World (you know about superhuman culture, where they hang out, the history of super-humanity, and so on) . . . perfect for characters like Snapper Carr or Rick Jones.

The next section of this chapter details various superhero archetypes, such as the brick, speedster, or martial artist.

Each archetype is described in terms of what powers and skills it might have, as well as an examination as to what kind of disadvantages potentially unique to them. For example, the metamorph might have Psychological Limitation: Desperate for Acceptance, or the mentalist may have Sympathetic Berserk, which sends him into a Berserk rage whenever someone in the line of sight does, too! Again, there is a lot of information that, although tied to the **Hero System**, will be of use to other supers campaigns.

After that is the 12-page Quick Superhuman Generator. This section will not be of much use to those not using the **Hero System**. But those who might find such a section useful, it works surprisingly well (certainly better than many other random character generators), giving a variety of interesting powers to its creations. The final part of chapter two is a discussion of superteams, including how they assemble, what personality archetypes tend to be on teams (loner, rebel, natural leader, etc.), and how that team works with the authorities.

Chapter three, entitled "Blasters and Jetpacks: Superhero Technology." This chapter is heavily tied to the **Hero System** Rules, providing a myriad of examples (with game stats) for various superhero goodies. Included are bases (such as the underwater base or space base), vehicles (super-cars and jet aircraft), and equipment. The equipment section is particularly interesting; although it isn't exhaustive, it *does* provide a lot of examples of various bits that are common in the comic world, such as super-multitools, supervillain getaway teleporters, power negators, and a variety of deathtraps and doomsday devices.

Chapter four deals with gamemastering a supers campaign. Its 50 pages provides a meaty discussion of . . . well, just about anything you'd need for the care and feeding of a supers world. Although there is some material relating to the **Hero System** -- such as how to set point levels for various types of campaigns and how to find and diagnose problems with some powers -- much of the advice is more generic. For example, the discussion of comparing point totals among characters or determining what effect heroes can have on the environment (such as stray shots and collateral damage) can be useful for many systems. This chapter also deals with morality, realism, and dealing with a long-running campaign as it ages. It also provides some advice for generating super-adventures (which it calls episodes) and an instant plot generator (which isn't quite as useful as the quick superhuman generator, but might still be good to spark a last-minute adventure). This section also it continues the discussion of Disadvantages, this time from the GM's point of view instead of the player, and a number of new optional rules and rules modifications unique to the genre, such as the ever-popular fastball special. Finally, this section talks about villains and NPCs -- who they are, why they do what they do, and how to use them -- and ends with some final advice (listen to your players, in a nutshell).

The final chapter deals with the world of the Champions, the super-heroic world that has for so long been tied to the **Champions** RPG. This covers most of the basics of their world, giving full **Hero System** stats for the group, their gear, and their enemies. A particularly nice touch is the inclusion of plot seeds for each of the villains in sidebars, giving concrete and interesting ideas on how to use them. This section probably won't be of much use for those who don't use the **Hero System**, and only of limited use to those who do but aren't planning on using the Champions universe (although it's easy to file off the serial numbers and reuse any of the characters presented in another campaign). The book ends with an index, which is just as thorough as the table of contents.

Champions' writing is always entertaining, with clear points and counterpoints, frequent illustrative examples, and plenty of humor. Its art and graphic design are a step above the **Hero System Fifth Edition**, with many pieces that stand out (although some pieces appear washed out or blurry, possibly because they were originally in color).

For what it sets out to do, **Champions** is an astounding book. It is remarkably useful for players and GMs, newbies and experienced hands alike. It covers all the basics needed to run a campaign, but it does more than that; given its size, it's able to chart a lot of territory other books aren't able to: teen supers campaigns, playing a supers campaign as if it were a television show (na-na-na-na-na-na-na BATMAN!), setting up a "neutral ground" where villain and hero alike can interact, and dealing with those pesky "enabling devices" (like captured time machines and faster-than-light spaceships). Even those sections where it covers familiar territory, like Psychological Limitations, usually add new material: witness Noblesse Oblige (you serve humanity because your social position demands you serve the unwashed masses) and Broadcasts Intentions In Combat (the supervillian standby where they declare how they're going to attack before they attack).

If **Champions** has any weaknesses, they are for the most part minor. There is the occasional editing mistake (including, for some reason, page 50, where an inordinate number of gaffes appeared). Readers hoping for totally new Powers, Skills, or Disadvantages may be disappointed, although this is unexpected, since the **Hero System** is designed to be complete; there *are* many examples throughout of using and combining old powers. Likewise it is possible that **Hero System** fans may find the selection of super-gadgetry, devices, and bases to be somewhat limited. But these are all fairly insignificant complaints.

Although chock full of utility for **Hero System** players wanting to run a super-powered game, it should serve a place of honor for *any* super-heroic fan. It is perhaps *the* definitive genre book, and fans who have waited a decade for the new edition anticipated how good it was likely to be. They were correct. And if you didn't own this book before because you didn't know about it, now you do.

Pyramid Review

Will to Power (for Godlike)

Published by [Hobgoblynn Press](#)

Written by Dennis Detwiler & Greg Stolze

Cover by Christopher Shy

Illustrated by Dennis Detwiler

120-page b&w hardcover; \$20.95

It is no surprise that Pagan Publishing's first RPG was something a little different. Produced by Hobgoblynn Press, but published by Pagan, [Godlike -- Superhero Roleplaying in a World on Fire, 1936-1946](#) stood out as a different take upon the superhero RPG, both in terms of setting and mechanics. First off, the setting was World War II in which super powered individuals known as Talents fought to liberate the world from Axis domination. Much was expected of these gifted servicemen and against the ordinary soldier could make a significant difference. Yet the other side also fielded their own Talents or Übermenschen and this could level the field of battle. Second, Greg Stoltze's mechanics, a variant upon the common dice pool -- now known as the "ORE" or "One Roll for Everything" system -- enabled quick skill and event resolution, in which a single roll of a number of 10-sided dice is made for action to get sets of matches. The result is then interpreted as the situation or skill demands.

Since the publication of *Godlike*, there has been some wait for the first supplement. Hobgoblynn Press has continued to conduct extensive playtests of *Wild Talents*, the generic and full super hero rules using the ORE system. Also, *Godlike* has also changed publisher and any future supplements will come from [Arc Dream](#). Until these arrive, the last supplement for *Godlike* from Hobgoblynn Press is *Will to Power*, which details and explores the extent to which the Nazis went to employ, exploit and propagandize their Übermenschen.

Any game or supplement is treading on dangerous ground when trying to present any kind of treatment of the Nazis that is intended for use as gaming material. Often this treatment tends toward one of painting them as comic-book-style villains, or more controversially, as characters that can be roleplayed, ignoring or hand waving the atrocities conducted in Hitler's name. *Will to Power*, matching the realist approach of the *Godlike* rulebook, does neither. The authors keep strictly to a passive and academic tone, but stepping out of this into their own voice to directly address the question of playing one of the Nazi Übermenschen in the *Godlike* world. Since all Talents in Nazi Germany were eventually enlisted or transferred into the Waffen-SS, an organization dedicated to fulfilling the desires of a genocidal lunatic, their response to anyone wanting to play a character in the SS is to call them an idiot. Thus the authors' purpose in writing *Will To Power* is to give the *Godlike* GM a range of individuals, organizations and facilities to kill or destroy, and not to play.

Also *Will to Power* is not a general exploration of Nazi Germany and its war machine; GMs wanting this are best off with a copy of *Iron Cross* for *GURPS WWII*. Instead, this is a pure examination of the place of Talents in Nazi Germany. In presenting the world of *Godlike*, it fictionalized many real historical events, clearly marking those in the main rulebook. Likewise, and even more so in *Will to Power*, wherein the advent of and arrival of the first Talent "Der Flieger" at the opening of the Berlin Olympic Games of 1936 sends history away off on a major tangent.

Up until this point *Will to Power* presents a straight history of the Nazi party's rise to power and the creation of the SS. Der Flieger provides both the justification and affirmation of their belief in the supremacy of the Aryan race. After

describing his arrival and the worldwide response to Der Flieger, **Will to Power** looks at the Nazi response. This comes from the "RuSHA" ("Rasse-und Siedlungshauptamt," or "Race And Settlement Office"), which is tasked with administering and monitoring the Nazi Party's racial policies. Their concern was educational eugenics, tracking the racial purity of men and officers of the SS, and later the relocation of German families to the new territories in the east. But "Sonderabteilung A" (Special Department A), set up in 1936 to exploit Der Flieger, eventually outgrew and overtook its parent organization as more and more German Talents appeared.

The organization, notable figures, facilities, and missions of both the RuSHA and the Waffen-SS are given. What is clear from both the missions and battles of the various Übermenschen is that Nazi doctrine limited their effectiveness in battle. Where Allied Talent training emphasized the skills of the soldier first and the supernatural abilities of the Talent second, the Nazis and Waffen-SS prioritized the Talent, that is, what made them supermen. Organized into the "SS Überkommandogruppen" (super commando groups) and later in the war "SS Überkommandogruppe Heinrich Himmler," they rarely employed heavy weapons, which put them at a disadvantage when they faced Allied troops. It even gave the normal non-Talent infantrymen a slight advantage. This weakness is one reason that would lead to the destruction of the "SS Überkommandogruppe Heinrich Himmler" at the Belgian town of Spa in 1944.

Since **Will to Power** is geared away from presenting the Übermenschen as anything other than the enemy, the chapters discussing the responses from the German and Allied intelligence are particularly interesting. Much like the rest of the German war machine, the Abwehr failed to make full use of their Talents, though this may have been intentional upon the part of its leader, Admiral Wilhelm Canaris. The chapter on Allied intelligence covers their response to the appearance of Der Flieger, rather than their active programs.

Will to Power builds upon the list of 10 Talent dossiers given in the corebook. But where those 10 are the first to appear across the world, these dossiers detail 18 of the most famous and powerful of the Talents deployed by Nazi Germany, including Der Flieger. Each receives a very full write-up, and given that they are the most powerful, it is no surprise that they are built with between 41 and 150 will points. Among the most decorated of Germany's Talents, few would survive the war; many, believing in Hitler and Nazi doctrine to the end, would commit suicide with his death.

To help the GM create Nazi Talents to throw at his players, statistics are given for the average soldier and officer of the SS, as well as details of their training, insignia, and equipment. Only the more commonly known weapons are illustrated, not the slightly more obscure, such as the Bergman MP28 SMG and Sturmgewehr 44 assault rifle. One new and ghastly weapon is the Sonneblumme 99 "sunflower" magnesium flash grenade, designed to shock and blind Talents simultaneously, hopefully negating their innate ability.

At this point, **Will To Power** undergoes a complete change of subject from discussing the Nazis and their Übermenschen, to purely providing new rules for the Godlike game, with none of it directly related to the previous 69 pages. These include rules for aircraft combat and Talent-versus-aircraft dogfights. The aircraft listings cover all the major nations involved in the conflict right up to several jet-propelled airplanes that did and did not see active deployment. These rules are generally comprehensive, but although they many varied models of bombers, they do not cover how to conduct bombing runs.

The few new powers include Shift Size, both up and down, of the self and other objects; Plasticine Touch -- literally making the state of an object or a person harder or softer; and Unconventional Move: being able to travel by other means, such as tunneling like a mole, swinging on webs, or riding on a sled of ice. These are expensive abilities in general and may be out of reach if playing a realistic Godlike game. Backing these new powers up are long lists of new flaws and extras with which a character's Talent can be modified.

In addition to these new rules, the GM is given several sets of optional rules. The first of these provides a simple method of differing between "mere" flesh wounds and other non-deadly damage. Not covered in the main rulebook, these are quite likely to make it into the average **Godlike** game as they might increase the chance of a Talent surviving a scintilla or two longer. Along the same lines and potentially adding more complexity are the rules for detailed hit locations. Although befitting the gritty realism of **Godlike**, the accompanying descriptions are on the gruesome side. Where the first two options covered the effect of battle upon the body, the third option looks at its effects upon the mind of the soldiers. Based on a U.S. military study, these explore "Killing Disposition" in **Godlike**, essentially

presenting rules for the morale of both player and non-player characters. This extends to covering the effects of battle fatigue and how to treat it. While an interesting read, this does add to the lethality of the setting . . . another reason to consider these rules as optional in addition to the complexity. Unlike the core rulebook, one thing that ***Will to Power*** does not cover in its new rules is anything for the ***d20 System*** under the terms of the Open Gaming License.

Physically, ***Will to Power*** feels rather slim for a hardback at just 120 pages, though it does contain a lot of information. Part of this is due to the glossy paper stock used, like the core rulebook. Wholly illustrated by manipulated photographs, this works very much in the supplement's favor. What does let it down are the typographical and layout errors. These include the dreaded "page XX," spelling mistakes, and having the titles for paragraphs appear at the bottom of one column and the actual text being in the next. This may be a design feature, but it feels far from smooth.

There is no denying the usefulness of all of the material contained in ***Will to Power***, but as a whole the package feels less than the sum of its parts. Much of this stems from the split focus of the contents -- one part is background and source information relevant to the book's title, and the other not-so-related new game rules and options. Should this have been so? Not necessarily, as the space given over to rules could have been devoted to more information about the Nazi superhuman program, or help and advice in implementing and using the given material within a game. Except one strong suggestion, there is none of this in ***Will to Power***, and this is its Achilles' Heel. That said, if this help and advice had been given, it may have been at odds with the authors' stance upon the players roleplaying members of the SS. Even so, writers of this caliber could and perhaps should get around this in some way.

In terms of providing more rules and a further exploration of ***Godlike's*** background, ***Will to Power*** delivers on both counts. Unfortunately, in choosing to focus on these two unrelated aspects of the game, rather than concentrating upon just the one, ***Will to Power*** does a disservice to both.

Kingdoms of Kalamar Atlas

Published by [Kenzer and Company](#)

Designed by Bob Burke, Brian Jelke, Steve Johansson,
David S. Kenzer, Mark Pleemons, and D.M. Zwerg

Graphic Design by Bob Burke and Jennifer Burke

240-page mixed color/b&w hardcover \$29.99

Maps of fantasy worlds don't exactly have a reputation for being realistic. The topographical maps in the *Kingdoms of Kalamar Atlas* manage to be both good-looking and realistic. Turn to a random page and for a minute you might think you are looking at a real-world map instead of Tellene. Mountain ranges are suitably vast, rivers squirm their way from highland to ocean, and heavily populated area like Kalamar are dotted with hundreds of settlements.

The *Kingdoms of Kalamar Atlas* is a 240-page hardback book with 139 pages of color maps. The spine has a mottled green band to help it stand out from the other Kalamar hardbacks on your gaming shelf. The short introduction briefly outlines the books features. A two-page overview map divides Tellene up into six sections and lists the page numbers for maps in that particular section (i.e. Section 5: Reanaaria Bay; Pages 95-114). This is an extremely handy feature and I found myself frequently flipping back to the overview map to reference a particular area of the world as I browsed the book. The introduction closes with a color map key and scale.

The color full-page maps are scaled at 25 miles to the inch and just plain gorgeous. The shades of brown, green, and blue are well-separated (although tiny road and waterways are a bit hard to pick out), and while I don't claim to be a map expert, they look very realistic, and nothing jumps out as being weird or out of place. The maps are divided into sections that roughly follow the layout of the *Kingdoms of Kalamar Sourcebook*, so it's a simple matter to find relevant maps for a particular area. There are a few pages that show little more than open ocean, but this is a small price to pay for an organization that is both useful and logical.

The Atlas has six informative and fact-filled appendices. The first contains 12 thematic maps that show common trade routes, ocean currents, winds and air pressure systems, precious metal deposits, utilitarian metal deposits, industry, fishing, herding and ranching, grain production, and military deployments. These are topped off with a Mercator projection of Tellene for the map purist. This level of detail really makes the *Kingdoms of Kalamar Atlas* feel like a fantasy Rand McNally. Other appendices contain a pronunciation guide for those funky words like Svimohzia, a discussion of Tellene's land types defined by relief and climate, a table of languages and words found in previous Kalmar releases, a Tellene language tree, and a geographical features index. A list of Tellene's primary population centers that includes population, country, and even longitude/latitude closes the book out.

I haven't extensively cross-checked the book with other *Kingdoms of Kalamar* resources, but it looks refreshingly free of errors and typos. The main complaint that I have is that many road and waterways are so tiny and colored so subtly that they are hard for my aging eyes to pick out. Also, since the maps' colors represent only elevation, you might find it a bit strange to see the Elos desert colored all in green. As an added bonus, if you don't play *Dungeons & Dragons*, the Atlas contains no game statistics, and so it's immediately portable to *HackMaster*, *GURPS*, or any other system you enjoy.

Of course, this book is primarily designed for use in a *Kingdoms of Kalamar* campaign. Combine it with the *Kingdoms*

of Kalamar Campaign Setting and the *Kingdoms of Kalamar Player's Guide* and you have a solid foundation for a *Dungeons & Dragons Third Edition* campaign. This is a product that was obviously a labor of love for its developers, and if you are interested in Kalamar or in a realistic and detailed fantasy world atlas, you should check it out. The Kenzer and Company website has a preview of the *Kingdoms of Kalamar Atlas* at <http://www.kenzerco.com/rpg/kalamar/atlaspreview.php>, so you can check out to see the maps for yourself.

--Anthony Roberson

Blood, Bathory, and Beyond

"Yes, very -- a cruel love -- strange love, that would have taken my life. Love will have its sacrifices. No sacrifice without blood. Let us go to sleep now; I feel so lazy. How can I get up just now and lock my door?" She was lying with her tiny hands buried in her rich wavy hair, under her cheek, her little head upon the pillow, and her glittering eyes followed me wherever I moved . . . "

-- J. Sheridan LeFanu, "Carmilla"

Once upon a time, in a castle high above the dark forest, there lived a wicked Queen with hair as black as ebony, skin as white as snow, and lips as red as blood. The fairest one in all the land, she cast her shadow into every villager's hut in the kingdom, killing any girl who threatened her beauty. She consorted with three witches and with the King of the Cats to maintain her power. Finally, she was locked up in a tower and fell into a deep slumber. And after that, she lived . . . ever after.

"Elizabeth used to dress up well in order to please her husband . . . On one occasion, her chambermaid saw something wrong with her headdress, and as a recompense for observing it, received such a severe box on the ears that blood gushed from her nose and spurted on her mistress's face . . . When the blood drops were washed off her face, her skin appeared more beautiful: whiter and more transparent on the spots where the blood had been. Elizabeth, therefore, formed the resolve to bathe her face and her entire body in human blood, so as to enhance her beauty."

-- Michael Wagener, *Articles on Philosophical Anthropology* (1796)

The most common version of the legend of Elizabeth Bathory (or, in proper Hungarian, Báthory Erzsébet) goes as follows. Elizabeth Bathory, born into the royal Bathory family in 1560 (her uncle was Prince of Transylvania and King of Poland), met and married Francis Nadasdy, the "Black Knight of Hungary," a sadist and a fearsome warrior.

Unfortunately, although her rare beauty was enough to win him, it was not enough to keep him from the front (and perhaps from other women). Left to her own devices, she took out her frustrations on the servant girls, scourging them with whips, burning them with hot irons, and piercing them with long needles. During such cruelties, she noticed that fresh blood gave her skin a more youthful appearance. From casual sadism, she turned to regular slaughter, draining the blood of first her servants, then her serfs, and finally the village girls around her castles. She had any number of intricate devices made to catch and store the blood, in which she bathed to retain her legendary beauty. After Francis died in 1604, she increased her sanguinary activity, hoping to stave off age and attract youthful lovers. Running out of peasant girls -- and perhaps noticing that their "common" blood wasn't having much of an effect -- she finally made the mistake of draining the blood of noble women, which brought the law down on her.

"His illustrious Highness, witnessing this evident and ferocious tyranny, having caught the bloody and godless woman, the widow Nadasdy, in flagrant criminality, placed her under immediate perpetual imprisonment in Castle Csejthe . . . "

-- final court decision of January 7, 1611

From the beginning of March, 1610, King Matthias II of Hungary ordered his minister Count Georg Thurzo to conduct an investigation into the increasing numbers of dead bodies found on Bathory lands, and into the rumors of Elizabeth's barbarities. Matthias was not only driven by justice -- Elizabeth's husband had loaned the king a substantial sum of money, and if she were executed, her properties would be forfeit and the debt canceled. On December 29, 1610, Count Thurzo burst into Elizabeth's castle in Csejthe and discovered three tortured bodies. He ordered "that damned woman" imprisoned immediately, and rapidly convened a trial in his own city of Bytca on January 2, 1611. At this trial, four of Elizabeth's accomplices testified to her murders and to their role in them; three of them were executed and one, incredibly, freed after some time in prison. Count Thurzo held a second trial on January 7, this one of Elizabeth herself, at which he introduced as evidence a diary in her own hand detailing over 650 murders. Elizabeth was not allowed to testify at either trial, and was sentenced to perpetual imprisonment, walled up in a small tower in her castle to be fed through a slot.

Suspicious types point out, quite rightly, that these were nothing more than show trials -- and hint at a conspiracy between the Bathory family and Thurzo to shunt the inconveniently long-lived Elizabeth out of the way while keeping

the Bathory properties intact. However, the weight of the testimony demonstrates that Elizabeth's crimes were quite real; the authenticity of the diary has never seriously been questioned, and although her accomplices talked under torture, many other eyewitnesses testified freely. What all the testimony remains silent about, however, is the baths of blood -- although Elizabeth is described as "bloodthirsty." In his well-researched, if unfortunately-titled, book *Dracula Was A Woman*, Raymond T. McNally makes the case that this was an element added by the peasant informers of the Jesuit chronicler Laszlo Turoczy, who compiled the first history of her crimes in 1729, during a wave of "vampire panics" in the region. Father Turoczy would probably not have been averse to bloodying the reputation of the Protestant Elizabeth, either -- and as we all know from the movies, peasants will say any old thing about murderous aristocrats.

"Elizabeth Bathory, wife of the great lord Francis of Nadasdy . . . who remained a widow, infamous for her murders, died in prison at Csejthe. Dead suddenly, without crucifix, and without light . . . "
-- chronicle of Istvan Krapinski, August 14, 1614

Interestingly, according to a letter to Count Thurzo, Elizabeth died a week later than Krapinski's memoir states, on the 21st; her body was "hurriedly buried" in Cjesthe, and later removed to her native soil at Ecsed. Well, a body was removed there. Elizabeth might well have had other tricks up her sleeve -- she had learned the arts of poisoning from one of her servants, Erzsi (short for Erzsébet) Majorova, and attempted to poison King Matthias and Count Thurzo during the Christmastide crisis time of 1610. If Elizabeth had somehow suborned a servant into slipping her the necessary herbs and simples, she might have faked her death and in the confusion of her hurried burial, switched bodies with some unfortunate servant woman. Better yet, she might have used astral projection to escape her oubliette, returning to her body safely from her time in the cloud realm. Elizabeth probably learned witchcraft in the 1590s from her sole male accomplice, the "dwarf" Janos Ujváry, known to her as "Ficzo" and "Thorko," although after 1604 her name is also linked with a witch called Anna Darvulia. Perhaps her blood drinking was part of her sorcery -- the priestess of the Earth at Aegira drank bull's blood before descending into the crypt of the goddess to prophesy, and many other examples abound. It ran in the family; her aunt Klara was executed as a witch (and husband-killer) by the Turks, and her cousin Anna Bathory was tried for witchcraft in 1618 and 1621 by Gabor Bethlen, a Prince of Transylvania who had climbed to the throne over the body of Anna's brother.

*"Help me, O clouds! O clouds, stay by me and protect me!
Let no harm come to me, Elizabeth, and grant me long life!
I am in peril, O clouds -- send me ninety cats, for thou art Lord of Cats!
By thy order gather them together, from mountains, rivers, rooftops, and the other side of the ocean.
Tell them to tear and devour the hearts of [my enemies], and so guard Elizabeth Bathory from harm."*
-- incantation of Elizabeth Bathory, as recorded by Rev. Janos Ponikenusz

Her enemy, the Lutheran pastor Janos Ponikenusz, kept complete records of her depredations, and was convinced that Elizabeth sent spectral hounds and cats after him. During that terrible Christmastide of 1610, he heard noises in his house -- "not the noise made by ordinary cats." He chased off the demons with prayer (and with a big walking stick), and survived to give evidence. Many other stories survive of Elizabeth torturing girls under the watching eyes of black cats, or forcing them to parade naked in front of her feline familiars. Intriguingly, much of the trial testimony focused on Elizabeth's habit of biting and tearing at the flesh of her victims with her teeth. She fed some of her victims' bodies to her guards, whether as sadistic prank or alchemical attempt to create [werewolves](#) (who, in Slovak lore as in [wendigo](#) myth, can be made by eating human flesh). Although no contemporary source hints that Elizabeth was a vampire, many accuse her of werewolfism -- and the Bathory family crest is three wolves' teeth on a red background. Could Elizabeth have been a rogue [benandanti](#), collaborating with witches and using her powers for evil?

"She owned a mirror, which had a frame running around it in the shape of a pretzel; in front of this [mirror] she would gaze at herself with her arms supporting her head for as long as two hours straight."
-- testimony of Janos "Ficzko" Ujváry, January 2, 1611

And if she was a vampire, what was she doing with a magic mirror? Of course, perhaps only vampires can use magic mirrors, since their reflection won't get in the way of the visions. Elizabeth's mirror, attested at the trial, fascinates with its parallels to the mirror of the Wicked Queen in Snow White, who like Elizabeth wished to be the fairest in the land,

and like Elizabeth ate the bodies of her rivals. (In Grimm, the Queen salts and eats what she thinks is Snow White's heart -- or "lungs and liver," in some versions.) Its "pretzel-shaped" frame meanwhile hints at non-Euclidean geometries, and at vistas into another dimension -- the cloud-kingdom of the King of the Cats, perhaps, or the [mirror realm](#) of "Bloody Mary." (Then there's the mirroring effect of one Erszébet -- Majorova -- working charms with another -- Bathory.) Elizabeth also had a specially constructed Iron Maiden, with real hair and articulated face, which grabbed unwitting servants with its arms when they touched a certain gem on its surface and pulled them into its knives. Was it simply a clever clockwork, or was it a metal golem? Intriguingly, Elizabeth's automaton vanished from the Csejte museum during WWII.

"There is in this castle a gentlewoman which we and this castle is hers, and many other. So it befell many years agone there fell upon her a malady; and when she had lain a great while she fell unto a measle, and of no leech she could have no remedy. But at the last an old man said an she might have a dish full of blood of a maid and a clene virgin in will and in work, and a king's daughter, that blood should be her health, and for to anoint her withal; and for this thing was this custom made."

-- Sir Thomas Malory, *Le Morte d'Arthur*, XVII:9

So what is left to us? We have a mysterious female werewolf playing both sides of a deep game in Transylvania and Hungary, taking counsel from witches, dwarves, and a magic mirror. Her family has a long lineage of brutality and magic combined with high politics -- Prince Stefan Bathory, a reputed Satanist, helped Dracula regain his throne in 1476. She is assisted (again) by the mysterious trinity of [murderers](#) or [witches](#) or [sorcerers](#), one of whom, Katarina Benecsky, vanishes (like [Gilles de Rais'](#) sorcerer Prelati did) after her death. Perhaps Katarina was the mysterious "woman dressed as a man" -- an alchemical androgyne? -- called "Stefan" whose arrival at Elizabeth's palace always signaled the beginning of the direst cruelties. Her enemy King Matthias was the hated rival of the occult emperor Rudolf II, patron of John Dee in Prague. (Although there's no proof that Elizabeth Bathory ever met John Dee during his sojourn in Rudolf's empire, the dates fit.) On the other hand, her cousin's prosecutor Gabor Bethlen was a major supporter of the Rosicrucian [Winter King](#) of Bohemia -- and one of his retainers, a Georg Ragoczy, married Sofia Bathory. (Making our old pal [Saint-Germain](#) a possible cadet Bathory as well, if he was actually Georg's great-grandson.) Somewhere in the palaces of Vienna or the forests of Transylvania, Snow White met Rose Red -- and perhaps the [Big Bad Wolf](#) met the King of the Cats -- and the truth was shut up in a tower, to wait for the life that waits in the blood.

Running The Adventure, Part I

The Pre-Game Show (And Before)

It seems like just a few weeks ago I spilled my guts about how I construct adventures. And a cursory glance over the archives reveals that it *was* just a few weeks ago. So my keen instincts are as sharp as ever.

Now, seeing as how that subject was good for a few columns, and since all our folks working from home now have an honest-to-goodness Marsh-Method adventure in their hands, I thought I'd take a few weeks to tell you how I *run* that adventure.

(Obviously this won't be an exhaustive treatment . . . heck, much of the past three *years* has been spent on this subject. But this will be tied to describing what I do what that hypothetical adventure outline I laboriously created while locking the players in a back room.)

Pre-Pre-Game

Before we begin the game proper, there are some fiddly bits that I take care of to make sure the game will progress as smoothly as possible. First, I make certain I know how long the game is supposed to last, or -- at the very least -- the maximum length the game *can* last. I try to have an idea for both the group as a whole, and the individual players. (For example, in one long-running campaign, we were generally able to keep gaming theoretically until two or three in the morning. However, one of our players consistently got sleepy at around midnight or one; the only way we really *could* until that later time was if we were really exciting or engrossing. As a result, I either made sure that we were probably going to wrap up before midnight, *or* was going to have something exciting going at midnight which would provide enough adrenaline to keep everyone awake.

Once I know how long I have my players for this game session, I try to pin down if and when I'll have them for the *next* game session. This doesn't necessarily mean a time and date (although if I can arrange that, great . . . if at all possible I try to have games meet at a regular interval). Rather, I try to make sure there are no upcoming extenuating circumstances (say, if someone is going out of town for a month, or a schedule is changing so someone can't make it at our regular time).

The reason I do this is simple . . . and it will be a recurring theme throughout this series, I suspect: pacing.

If I needed to pick my most important responsibility as a GM, there's a good chance I'd say it's to be the *hombre* who controls the pacing (or helps control the pacing, if the players have a good sense of pace themselves). Knowing when my players are going to need to end the session will help me control when (and how) the game ends. Knowing if there will be an unusual break before the next game also has an impact on this one; for example, if I learn that there will be a three-week break between sessions instead of the usual one-week break, I will try to make sure I don't end a mystery or complicated adventure on a cliffhanger. If I know that one player will be missing a week but the game will be going on without him, then I'll try to insert a graceful exit for that character. And so on.

The Pre-Game Show

Okay; the players are all seated, we have the schedules sorted out, and the Mountain Dew is flowing freely.

At this point we're ready for the pre-game. This is where all the bookkeeping-type stuff is done, and where we hash out what (if anything) has been going on between last adventure and this one. All expenditures of experience points, acquisition of equipment and goodies, and questions or disputes about the rules are sorted out now. Likewise, if the players had anything they wanted to do in their downtime -- pursue subplots, follow up on loose threads from past adventures, drink beer -- then this is the time for those activities. (If possible, I generally tell people at the end of the

previous game how much time will elapse in the campaign world before the next adventure . . . barring any activity on their part, of course. It's much easier for players to contemplate how the heroes are spending their downtime if they know how much of it there will be, and will help avoid the mad scrambling outcries that follow surprise declarations like, "Okay. A year passes without incident . . .")

If a PC has a significant goal he wants to accomplish, then I'll generally encourage the player to let me know *before* the game; that way I have time to ponder crafting a whole adventure around his request. But this isn't necessary, and I never want to keep the players from pursuing some course of action just because they didn't think of it until we met again . . . many's the time I've locked myself in the bathroom after a surprise player request, thinking furiously to come up with a new adventure.

Again, I try to make sure the players get everything out of their system that doesn't involve their being in characters and/or the plot. I tend to view adventures like a roller coaster. You can chat with your pal in the seat next to you all you want at the beginning, but once the ride starts, there's no getting off, and there's not much else to do but flail your arms and squeal for mercy . . . hopefully while loving every minute of it.

And why do I feel that way? Stay tuned, true believer . . .

--*Steven Marsh*

Pretty Things

by Matt Riggsby

Treasure is more than cash, particularly in chronically cash-poor historical societies. Certainly, shiny coins were desirable, but gifts, rewards, even regular pay were often given in the form of goods. Muslim rulers gave out richly made robes of honor and supported visiting ambassadors with material gifts, while their European counterparts would pay their retainers with more clothing and casks of wine. Even the staunchly professional Roman legions were paid in part with salt. Likewise, when characters in low-tech settings are rewarded, or even when they negotiate for payment, goods are likely to figure in the discussion.

There are, of course, practical issues associated with using goods as wealth. Obviously, it's a little harder to buy things if your "money" is wrapped up in inlaid thrones and bales of silk. On the other hand, if you've got fine robes and impressive chairs, you don't need to worry about buying furniture and clothes. You've already got them! Keeping value in the form of practical goods lets you use your wealth while keeping much of its value.

There are also social ramifications to the form one's wealth takes. While accumulating wealth in the form of furniture, tapestries, and fanciful silverware might be an annoyance for modern-minded adventurers, they're an important, sometimes even preferred, form of wealth in other settings. In some societies, it might be rude to give money to a close ally. It would make their assistance look like a service rendered by an inferior rather than aid given by a friend. Moreover, in most societies, it's important for rich and powerful people to *look* rich and powerful. You can't do that if all you have is stacks of coin stashed in your coffers, but you can if you have rich tapestries on your walls, an impressive chair in your hall, and fancy robes on your back.

The tables and rules below can be used to create lists of valuable items with which to reward and burden characters, determine the value of individual items, and even help craft-minded characters make their own. The contents of the tables below are suitable for historical and many traditional fantasy games. However, they contain blank spaces which may be filled in as appropriate for fantasy campaigns, where treasures might include adamantium coats, dragon-bone furniture, and bottles of quintessence. The tables can also be useful in higher tech campaigns for exotic cargoes, ancient treasure troves, and elegant or unusual gifts. They were designed for **GURPS**, but can be translated to any campaign easily; notes for doing so are included at the end.

Items

The GM can use the items table as an idea checklist, picking appropriate items from the table. However, if you feel you must use dice, the numbered columns can be used to pick items and attributes at random. To pick random items from the main table, roll 1d6 to determine a category of goods, then roll further dice as necessary to get to specific goods, usually rolling two dice, taking one die as a first digit and another as a second digit. For example, the GM rolls a 1 for category, indicating Consumables. He then rolls two dice, getting a 5 on one and a 1 on the other, indicating cloth. For cloth, he rolls another die, getting a 2 indicating wool. After an item is selected, consult the section on [Materials and Decoration](#) to determine what makes the item different from plain versions.

All costs and weights are for typical versions of the items, undecorated, and made with average skill. Both weight and cost can increase considerably depending on the quality of underlying material, skill in workmanship, and effort in decoration.

Categories

1. [Consumables](#)
2. [Furnishings, Livestock, and Large Objects](#)
3. [Wearables](#)

4. [Containers](#)
5. [Tools and Miscellaneous Objects](#)
6. Reroll or create your own

1. Consumables (roll two dice)

Roll	Item	Notes
1-2, 1	Wine	\$16/gallon
1-2, 2	Beer	\$4/gallon
1-2, 3	Spice (roll two dice)	\$1 to \$10/lb. in native areas, up to ten times as much elsewhere.
1, 1	Allspice	A dried berry tasting like cinnamon, nutmeg, and clove.
1, 2	Anise	A faintly liquorice-flavored seed
1, 3	Annato	A mild spice which produces a vivid yellow or red color
1, 4	Asafetida	An oniony dried gum
1, 5	Bay leaf	
1, 6	Cardamom	
2, 1	Carom	A sharp spice
2, 2	Chile peppers	Chile peppers come in dazzling variety of shapes, sizes, flavors, and degrees of heat, and are dried for long-term storage.
2, 3	Cinnamon	
2, 4	Clove	
2, 5	Coriander	
2, 6	Cumin	
3, 1	Fennel	
3, 2	Fenugreek	A fragrant, bitter bean
3, 3	Ginger	
3, 4	Mace	
3, 5	Mustard	
3, 6	Nigella	A tiny black seed with a peppery taste
4, 1	Nutmeg	
4, 2	Onion seed	
4, 3	Poppy seed	
4, 4	Saffron	
4, 5	Sumac	A dried, lemony berry
4, 6	Turmeric	
5, 1	Zeodary	A root related to turmeric but tasting more like mango
5, 2	Dried fruit powders	Many fruits and roots can be dried and used as flavorings, including licorice, mango, pomegranate, tamarind.

	5, 3+ 6	Reroll or insert your own	
1-2, 4	Salt		Usually white, salt is sometimes naturally tinted (black and red aren't unusual). \$3 to \$20/lb.
1-2, 5	Perfume (roll one die for source, one for form)		
	<i>Source</i>		
	1-3	Flower	For example, violet, iris, rose, lavender. Flower waters are also used in cooking. \$5 to \$30/oz.
	4	Spice/herb	For example, cinnamon, rosemary. \$10 to \$40/oz.
	5	Other plant source	Citrus rinds and resins such as myrrh, frankincense, turpentine. \$20 to \$80/oz.
	6	Animal	For example, ambergris, musk. Musk can be taken from many species, each with a different scent. \$40 to \$100/oz.
	<i>Form</i>		
	1-2	Scented water	
	3-4	Scented oil/fat	Stronger and longer-lasting, oil-based perfumes may be a liquid or thick ointment. Increase base cost by 20%. Oil-based perfumes give way to alcohol-based perfumes after the invention of distillation.
	5-6	Pomander	A scented object, often worn as an ornament. Pomanders aren't as good for improving the user's scent but can be raised to one's nose to ward off bad smells. Increase base cost by 15%.
1-2, 6	Dye		A variety of materials could be used as coloring agents, including roots, leaves, fruits and berries, minerals, and even animal parts (both insects and shells were used to produce prized dyes).
	Color (roll two dice)		There is considerable range for variation within and between colors. For example, purple and red tend to run together, and other reds can shade into orange and yellow. Common shades start at \$1/lb. Rare shades can go up to \$10/lb.
	1-5, 1	Purple	
	1-5, 2	Blue	

	1-5, 3	Green	
	1-5, 4	Yellow	
	1-5, 5	Orange	
	1-5, 6	Red	
	6, 1-3	Black	
	6, 4-6	Brown	
	Intensity and Durability (roll two dice)		Roll 1d6 for intensity (1 means a larger quantity of dye to produce color, 6 means a very concentrated color) and 1d6 for durability (1 means the color fades almost completely after a washing or two, 6 is essentially permanent). Multiply base cost × intensity × durability to get final cost. Black and brown dyes are common; divide final cost by five.
3-4, 1	Cosmetics		Pigments, usually derived from a plant or mineral, dry or in a fat or oil base. \$2 to \$10/oz.
3-4, 2	Grain		Unexciting, but bushels of grain were a common and useful commodity. \$.5/lb. Exotic varieties and notably good strains of seed grain may cost more.
3-4, 3	Preserved food (roll one die for method)		Food packed for long-term storage. \$3/lb. for fruits vegetables, \$5/lb. for meats, more if the preserved material is itself expensive.
	1	Pickled	Preserved in brine, vinegar, or other solution preventing the growth of microorganisms
	2	Dried	
	3	Smoked	Slow-cooked over a smoky fire, giving extra flavor and longer life than air-drying. Increase base cost by 10%
	4	Fermented	Includes cheese, yogurt, black eggs, fermented beans. Increase base cost by 15%
	5	Sealed	Simply sealed, although perhaps first heated to sterilize as with modern canning. Ancient sealing techniques are less than perfect, so some fermentation is likely.
	6	Spiced/salted	Packed in salt or spice mixtures which may have some antiseptic effect or at least keep out oxygen.
3-4, 4	Candles		\$3 (tallow) or \$6 (beeswax), .25 lb. per hour of light. Wax could be treated to change its properties, so increase cost by

50% for each of the following: superior color, brighter light, reduced smoking, perfume.

3-4, 5 Oil Cooking or lamp oil. \$16, 8 lb. per gallon

3-4, 6 Fabric/leather
5-6, 1 (roll one die for material)

1	Cotton/linen	\$1, .25 lb. per square yard
2	Wool	\$1.1, .3 lb. per square yard
3	Silk	\$5, .15 lb. per square yard
4	Leather/hide	Treated animal skin suitable for clothing or very light armor. \$4, 1 lb. per square yard.
5	Pelt	As above, but with a soft, attractive fur. \$6, 1.5 lb. per square yard.
6	Reroll or insert your own	

5-6, 2 Yarn/thread (roll one die for material) Thick yarn is about 700 yards/pound. Thin thread can be up to 2, 000 yards/pound.

1-2	Cotton/linen	\$2/lb.
3-4	Wool	\$1.8/lb.
5-6	Silk	\$17/lb.

5-6, 3 Raw fiber As for yarn/thread, but reduce cost by one third

5-6, 4 Incense \$20-60, 1 oz. for an hour's worth of stick or lump incense

5-6, 5 Soap Either semi-liquid or hard lumps/bars. \$10-15 lb.

5-6, 6 Reroll or add your own

2. Furnishings and Large Objects (roll two dice)

Roll	Item	Notes
1, 1	Rug/carpet	1d6 × 1d6 feet, \$20 to \$50 per square foot
1, 2	Tapestry	1d6 × 2d6 feet, \$15 to \$40 per square foot
1, 3	Chair	\$75, 8 lb. Increase base cost by 50% for each of the following: arms, back, rockers, cushions.
1, 4	Footstool	\$30, 3 lb. May be cushioned at increased cost.
1, 5	Bench/couch	Seating for at least two people. \$70, 7.5 lb per person. Increase cost for arms, back, and cushions as for chairs.

1, 6	Chest	A horizontal chest with an opening on top. \$4.5, 4.75 lb. per cf of capacity. Double cost for secret compartments, which may take up no more than 10% of the chest's volume.
2, 1	Cabinet	An upright cabinet with drawers or front-opening doors. \$4.5, 4.75 lb. per cf of capacity. Cabinets may also have secret compartments.
2, 2	Shelves	As a cabinet, but open. \$4, 4.5 lb. per cf of capacity
2, 3	Bed	A bedframe without mattress or bedding. \$140, 50 lb. per person.
2, 4	Mattress	A flat cloth sack filled with feathers or other soft material. \$100, 20 lb. per person
2, 5	Desk	Historical writing desks are usually small and portable, about the size of a footstool. \$15, 7 lb.
2, 6	Table	3d6 square feet, \$12, 6 lb. per square foot. Larger tables are possible, but cost \$18 per square foot.

3, 1 Timepiece
(roll one die for type)

1-2	Water clock	Most water clocks are stationary, but portable ones are possible. \$400, 15 lb. for a simple 24-hour timepiece. Add at least \$1,000 and 10 lb. for simple moving displays (dial showing sun or moon, dancing animals, etc.). Mechanical clocks are nascent Renaissance technology, but the GM may wish to replace water clocks with mechanical clocks.
3-4	Sundial	A functional sundial can be worn as a ring or pendant (\$40, negligible weight), taken off and aligned with north, but the most accurate models will be stationary. \$100, 12 lb.
5-6	Hourglass	\$60, .5 lb. per 5 minute increment or part thereof.

3, 2	Large mirror	Highly polished metal, often set in a decorative frame. 5 lb./square foot, \$100 × (area in square feet) ²
3, 3	Tub	Portable tub made from hammered metal. \$200, 10 lb. per person.
3, 4	Painting	Portable painted surface. Wood is a common material, but anything flat and portable is possible (cloth, paper, sheets

of ivory, etc.). Base cost is painter's skill × area in square feet × \$4. Cost for paintings and statues (below) can be modified enormously by the artist's reputation, subject matter, and skill with which the specific work was executed.

3, 5 Statue
(roll one die for material)

Relief or fully three-dimensional figure. Base cost is sculptor's skill × volume in cubic feet × \$5, modified by material. Weights are for solid figures; hollow ones will weigh much less.

1-2	Clay/porcelain	140/cu. ft. Multiply cost by 2 for regular clay, by 3 or more for porcelain.
3-4	Organic	Wood, bone, ivory, or some other solid organic material. Multiply cost by 3 for common woods and bone, or at least 5 for ivory and rare woods. 25 to 60 lb./cu. ft. for woods, 50-75 lb./cu. ft. for bone, 100-120 lb./cu. ft. for ivory.
5-6	Stone	Multiply cost by 10 for moderately hard stones such as limestone, 15 for very hard stones such as marble. 140-165 lb./cu. ft.

3, 6 Bedding
Sheets, blankets, bed-curtains (where appropriate), and headrests/pillows. \$40, 2 lb. per person.

4, 1 Sedan chair
\$100, 40 lb. Increase cost and weight by 50% for a fully enclosed palanquin

4, 2 Howdah
A chair or platform for mounting on an animal. Camels and horses can take single-seat versions, but elephants can take versions seating up to four. 150 lb., \$230 per seat

4, 3 Chariot
A light, unarmored vehicle carrying at most a driver and one passenger. \$400.

4, 4 Carriage
A covered vehicle carrying at least four passengers. \$8000

4, 5 Gondola
A small rowed or poled boat carrying two or three passengers in comfort. \$1,000

4, 6 Passenger barge
Boat with a large deck (up to twenty passengers plus several sailors will fit comfortably), appropriate for shallow water but not open seas. \$10,000

5, 1 Horse
Or other riding animal as appropriate to the campaign. p. B144

5, 2 Sheep/pig
Or other small farm animal as appropriate to the campaign. \$200 to \$500.

5, 3 Cow
Or other large farm animal as appropriate to the campaign. \$700 to \$1,200.

5, 4 Hunting
Falcon, trained dog. See p. B141-144 for

	animal	examples.
5, 5	Pet	Lap dog, colorful bird
5, 6	Exotic animal	A very rare animal or an animal from a radically different environment, such as a giraffe in Europe or a penguin in the tropics
6, 1-6	Reroll or add your own	

3. Wearables (roll two dice)

Most garments can be bought in a heavy version suitable for cold weather; double base price and weight.

Roll	Item	Notes
1, 1	Cape/shawl	\$20, 1 lb.
1, 2	Cloak	\$30, 2 lb.
1, 3	Robe/dress	\$ 40, 2 lb.
1, 4	Footwear (roll one die)	p. B210
	1-2	Slippers/sandals
	3-4	Shoes
	5-6	Boots
1, 5	Shirt	\$10, .5 lb.
1, 6	Jacket/doublet	A sleeved over-garment made from heavy or double-layered material. \$20, 1 lb.
2, 1	Vest/surcoat	A sleeveless over-garment. \$15, .5 lb.
2, 2	Overcoat	A full-length overgarment. \$25, 1 lb.
2, 3	Trousers	Many societies used short trousers supplemented with separate leg coverings. \$15, .5 lb.
2, 4	Hose/leggings	Stocking-like hose or wrap-around leggings. \$10
2, 5	Hat	The GM may want to consider the size and shape of the crown and brim. Manipulating the crown and brim can also give very similar hats very different appearances. For example, the brim of a low-crowned, broad-brimmed hat can be worn flat, pinned up in two places to produce a "Napoleon" hat, or in three places to produce a tricorn

			hat. \$5, negligible weight
	Crown Shape (roll one die)		Crowns are typically 3-8 inches (1d6+2) tall, although much taller hats are certainly possible. Exotic crowns , such as multi-horned jester's hats and spade-shaped bishops' miters, are also a possibility.
	1-2	Conical	
	3-4	Domed	
	5-6	Cylindrical	
	Brim (roll one die)		If a hat has a brim, it is probably 1-6 inches wide.
	1-3	Has a brim	
	4-6	Has no brim	
2, 6	Turban/keffiyeh		A long strip of cloth worn as a head covering, usually wrapped around a small skullcap. \$10, weight negligible.
3, 1	Wig		May be dyed or bleached to a desired shade and curled or dressed into an elaborate hairstyle. \$50 plus \$30/inch of hair length, 1lb. per inch of length.
3, 2	Gloves		\$7, negligible weight. These are lighter than the gloves on p. B210 and provide no armor protection.
3, 3	Sash/belt/scarf		\$5, negligible weight.
3, 4	Veil/mask		A veil may be made out of a gauzy, effectively transparent fabric, or a more opaque fabric with eye-slits. \$10, negligible weight.
3, 5	Foundation garment		Waist cinchers, corsets, bodices, bustles, and other undergarments made to subtly shape the user's body. Although usually thought of as women's clothing, some societies might see them worn by dandified men as well. \$20, 1 lb.
3, 6	Armor		Select an item or suit of armor from an appropriate table.
4, 1	Clothing parts		In some societies, garments had detachable parts, including leggings, hoods, sleeves, and codpieces. Generally \$10, negligible weight.

4, 2	Buttons/buckles	For much of history, clothing fasteners such as buttons and buckles were separate and removable. Buttons, along with the rest of the jewelry and accessories, often have negligible weight, but elaborate versions can weigh several pounds. Minimum cost is \$5, but prices can vary to infinity.
4, 3	Ring	
4, 4	Necklace/chain	
4, 5	Pin/brooch	
4, 6	Bracelet	
5, 1	Medallion/religious symbol	
5, 2	Seal	Cylinder seal, signet ring, or "hand-stamp" as appropriate to the society.
5, 3	Crown/tiara	
5, 4	Fan	
5, 5-6	Reroll or insert	
6, 1-6	your own	

4. Containers (roll two dice)

Unless otherwise stated, containers cost \$1 per pound.

Roll	Item	Notes
1-2, 1	Box	4.5 lb per cf; for boxes over 1 cf, see Chest in Furnishings
1-2, 2	Drinking vessel	A cup, mug, or goblet. In addition to material and decoration, the GM may consider the size, whether the vessel is footed and/or has handles.
1-2, 3	Cask	A wooden container for liquids. 3 lb. and \$3 per gallon.
1-2, 4	Bottle	A glass container for liquids. 1.5 lb. and \$5 per gallon (\$50 per gallon before the invention of glassblowing)
1-2, 5	Jug/pitcher	
1-2, 6	Amphora/krater	A very large jug, at least three feet tall.
3-4, 1	Basin/ewer	
3-4, 2	Vial	
3-4, 3	Water/wine skin	
3-4, 4	Scabbard	

3-4, 5	Purse	
3-4, 6	Salt cellar	
5-6, 1	Basket	
5-6, 2	Platter	
5-6, 3	Special-purpose serving vessel	Wine pitcher with strainer for dregs, teapot
5-6, 4	Cage	A small container suitable for carrying an animal. \$10, negligible weight for a container suitable for a mouse or cricket. \$40, 2 lb. for a cage for a songbird or small cat or dog.
5-6, 5-6	Reroll or insert your own	

5. Tools and Miscellaneous Items (roll two dice)

Roll	Item	Notes
1, 1	Weapon	Choose from an appropriate table.
1, 2	Book/scroll	Blank books cost \$0.2 per page, scrolls \$0.2 per foot (divide by 10 after the invention of paper). Written books and scrolls cost at least \$5 per page/foot, plus at least \$30 per page/foot for illumination (divide by 10 after the invention of printing).
1, 3	Map/chart	Maps and celestial charts of any accuracy are at least \$80 per square foot.
1, 4	Musical instrument (roll two dice)	Unless otherwise specified, .5 to 10 lb., \$4 per pound.
1-2, 1-2	Untuned percussion	Drum, castanets, or other percussion instrument intended more to make a loud bang than a particular note
1-2, 3-4	Tuned percussion	Bells, gong, xylophone, or other percussion

1-2, 5-6	Flute	instrument intended to produce specific notes Or any other wind instrument without a reed mouthpiece (for example, recorder, ocarina, digereedoo)
3-4, 1-2	Horn	Increase base cost by 20%
3-4, 3-4	Plucked String	For example, lute, harp, or sitar. Increase base cost by 50%
3-4, 5-6	Bowed string	For example, violin or cello. Increase base cost by 50%
5-6, 1-2	Reed	For example, krumhorn, serpent. Increase base cost by 10%
5-6, 3-4	Complex Instrument	A musical instrument using complex mechanisms, such as a portative organ (a portable keyboard instrument with reed pipes, played with one hand while another pumps a bellows), bagpipe, or hurdy-gurdy (a stringed instrument where notes are produced by pressing keys and strings are stroked by a crank-driven leather disk). Double base cost.
5-6, 5-6	Exotic	Instruments based on unusual principles, such as a bullroarer (a shaped plank whirled on the end of a thong to produce a surprisingly loud tone) or glass harmonica (a rotating series of

			wetted glass disks, producing eerie tones when touched).
1, 5	Writing implements		Some combination of office supplies
1, 6	Navigational/astronomical instrument		For example, astrolabe , quadrant , compass , spyglass .
2, 1	Professional tools (roll two dice)		A set of tools used in a particular trade, not including consumable materials (for example, no charcoal for a blacksmith) except where noted.
1-3, 1	Physician		Equivalent to a doctor's black bag (p. B212)
1-3, 2	Apothecary/Alchemist		Retorts, beakers, mortars and pestles, and other glassware appropriate to making potions and herbal cures (p. M86)
1-3, 3	Blacksmith		Hammers, bellows, tongs, and chisels. \$250, 30 lb.
1-3, 4	Cobbler		Large needles, shears, punches, and small hammers. \$100, 10 lb.
1-3, 5	Mason/sculptor		A wide range of hammers, chisels, levels, and grinding and polishing equipment. \$250, 30 lb.
1-3, 6	Carpenter		Saws, level, planes, hammers. \$200, 15 lb.
4-6, 1	Jeweler		Essentially a blacksmith's kit, but in miniature and of high quality. \$200, 10 lb.
4-6, 2	Surveyor		Levels, chains, poles, and sighting equipment. \$350, 50

4-6, 3	Scribe/illuminator	lb. Pumice, pens, brushes, inks, and paints. \$180, 6 lb.
4-6, 4	Glassblower	A crucible, pipes, blades and smoothing tools. \$170, 12 lb.
4-6, 5	Gardener	A variety of trowels and shears. \$40, 5 lb.
4-6, 6	Reroll or insert your own	

2, 2 Gaming equipment
(roll one die)

1-2	Simple randomizer	Dice, yarrow sticks
3-4	Complex randomizer	Playing cards, dominos
5-6	Game board and pieces	Chess, checkers, mah jong, etc.

2, 3 Sewing/weaving tools
(roll one die)

1	Sewing needles	
2	Knitting needles	
3	Spindle	
4	Distaff	
5	Loom	
6	Spinning wheel	

2, 4 Cooking tools
(roll one die)

1	Pot/kettle	
2	Pan	
3	Tongs/fork	
4	Spoon/ladle	
5	Spit/skewers	
6	Grinding tools	For example, mortar and pestle or manno and metate (a flat grinding surface and flatish stone rubbed against it)

2, 5 Eating utensils

Fork and knife, chopsticks

2, 6 Scale

A balance scale and weights

3, 1 Candlesticks

3, 2	Brush/comb	
3, 3	Razor/scissors	
3, 4	Hand mirror	
3, 5	Toy	For example, dolls, tops, toy soldiers
3, 6	Tinder box	
4, 1	Brazier	
4, 2	Censer/incense burner	
4, 3	Lamp	
4, 4	Saddle	
4, 5	Riding furniture	Reins, bridle, and other riding accessories not directly attached to a saddle
4, 6	Relic	Technically, the physical remains of a holy man, often held to carry good luck or magical power
5, 1	Ornament	
5, 2	Tent	
5, 3+ 6	Reroll or add your own	

Materials and Decoration

An item or set of items chosen from the tables above won't look terribly impressive. What, you might ask, is a hair brush and a hat worth? If that's all they are, not much. However, any item may have its value increased almost infinitely if it is lavishly decorated or made from exotic materials. Just about anything, save livestock and raw materials themselves, can be decorated.

Most items will have an obvious structural material (swords will be metal, lutes will be wooden), but if the GM wants the item to be made out of something different, roll on the Structural Materials table. The surface of the object may also be decorated. Roll for a decorative motif and a decorative method as many times as desired. It would not be unusual for an elaborately decorated item to have several different motifs and methods. For example, an item might have painted human figurines, geometric beadwork patterns, and a few gems.

Structural Materials

This list describes what the object is made from.

Roll	Material	Notes
1, 1-3	Ivory	
1, 4-6	Bone	
2, 1-3	Wood	

2, 4-6	Stone		
3, 1-3	Glass		
3, 4-6	Ceramic		
4, 1-3	Iron/steel		
4, 4-6	Copper		
5, 1-3	Bronze/copper alloy		
5, 4-6	Fabric (roll one die)	For many items, either a rigid skeleton covered with fabric or fabric stiffened with paint, glue, or lacquer.	
	1	Cotton/linen	
	2	Wool	From sheep, goats, or other long-haired animals.
	3	Silk	
	4	Leather	
	5	Fur	
	6	Bark	Durable tree bark pounded into a papery flat layer.
6, 1-3	Paper		Includes papyrus and parchment. Like fabric, either stiffened or a shell over a more solid skeleton.
6, 4-6	Precious metal (roll one die)		
	1	Billon	Copper-silver alloy
	2	Silver	
	3	Electrum	Gold-silver alloy
	4	Gold	
	5-6	Reroll or insert your own	

Decorative Motif

This list describes the general shape of the decoration.

Roll	Scheme	Notes
1-2, 1-2	Simple geometric	For example, stripes, concentric circles, or a checkerboard pattern
1-2, 3-4	Complex geometric	Complex patterns, such as Greek keys or Celtic knotwork.
1-2, 5-6	Calligraphy/arabesques	Actual writing or elaborate, flowing designs inspired by calligraphic styles
3-4, 1-2	Floral	Flowers or other plants
3-4, 3-4	Animal figures	

3-4, 5-6	Human figures	Generic human figures or specific portraits
5-6, 1-2	Landscape	
5-6, 3-4	Scene	Several figures depicted in action together. For example, a scene from a popular myth or a notable person's life
5-6, 5-6	Narrative	A series of scenes telling a story

Decorative Method

This list describes the physical techniques used for decoration.

Roll	Method	Notes
1-2, 1	Embroidery	Patterns applied with thread after the underlying material has been manufactured. (fabrics only)
1-2, 2	Weaving	Patterns are woven directly into the cloth during its production, not applied after the fact. (woven/knitted fabrics only)
1-2, 3	Quilting	A pattern of fine stitching picking out patterns, distinct from embroidery in that it's the pattern of stitches, not the thread itself, which is most visible. (fabrics only)
1-2, 4	Patchwork	A pattern of small pieces joined together (sewn, glued, welded, etc.)
1-2, 5	Painting	
1-2, 6	Block printing	
3-4, 1	Fringe/tassel	
3-4, 2	Feathers/ribbons	
3-4, 3	Mirrors	
3-4, 4	Beads/bosses	Roll on the materials list to determine what the beads/bosses are made from.
3-4, 5	Bells	
3-4, 6	Jewels	
5-6, 1	Branding	
5-6, 2	Inlay	(solid objects only; not applicable to textiles)
5-6, 3	Embossing/engraving	(solid objects only)
5-6, 4	Sculpted relief	(solid objects only)
5-6, 5	Metal leaf application	Includes electroplating and chemical techniques for concentrating precious metals on a surface. (solid objects only)
5-6, 6	Enamel/applique	(solid objects only)

Pricing

Quality: High-grade craftsmanship can give items increased durability. Increase cost by 5× for a high quality item, 20× for a very high quality item. The GM must decide what that means on an item-by-item basis (armor and weapons, for example, are already covered by other quality rules), but where applicable, a high quality item should have hit

points increased by 50% and +20% to DR. A very high quality item should have double hit points and +50% to DR.

Expensive materials: An otherwise garden-variety item can become much more expensive if it's made from an expensive material. Increase cost by 1× for garments made from high-quality but relatively common materials (fine but locally produced wool, superior cotton or linen), by up to 8× for rare materials (pashmina wool, silk). Increase costs similarly for wooden items made from exceptional woods (2× for excellent but common timber, up to 8× for exotic materials).

Double base weight and add \$1,000 per pound of adjusted weight for items made from silver. Quadruple weight and add \$20,000 per pound of adjusted weight for items made from gold. Many gold and silver items were alloys of precious and base metals, which reduced both cost and weight considerably.

Treatment: Increase base cost by 1× for each decorative method used above for a simple application, or up to 3× each for an extremely elaborate application. For example, a coat with a few tassels and simple beading would have its cost increased by 2×. A similar coat with more elaborate beading might be 3× more expensive (1× for the simple tassels and 2× for the beadwork) or as much as 4× more expensive if it was nearly encrusted in beads.

Making Your Own

Characters with craft skills may attempt to make their own valuable items. Take the base price and add multipliers for treatment and modifiers for quality $\times 3/5$ (3 for high quality, 15 for very high quality) to get basic cost of workmanship. Divide that cost by 20 to get the number of man-hours necessary to make the piece. Decrease time by 10% for effective craft skills of 15-17, 15% for craft skills of 18-20, and 20% for skills of 21+.

System Considerations

Where game-specific measurements are used, this article uses **GURPS** terminology, and where possible, **GURPS** page references for prices and weights are provided for reference. However, the vast majority of the material is entirely generic and most of the remainder can be converted easily. For example, the **GURPS** \$ simply means the game world's standard unit of currency, not an actual dollar's worth of value, and so can be used across games easily. For example, in a **d20 System** campaign, the \$ would be equivalent to a GP, while in **Fading Suns** it would be read as a firebird. A **GURPS** skill level of 10 to 12 is entry-level professional with 20 considered masterful; conversions to other systems can be found by finding an appropriate factor. For example, when computing time to make an item, divide skill levels in percentile systems by five to find the **GURPS** skill equivalent.

Variations of a Theme

Designing and Using Theme Villains

by Brian Rogers

Theme villains -- deranged individuals who plan their criminal motifs around a single concept -- are a classic comic book motif. Unfortunately, they're silly and hard to plan things around, making them less likely to appear in supers games than the more run-of-the-mill criminals. This is a shame, especially since perhaps the most iconic rogues gallery of them all, the Batman's, is chock full of them. What follows is a brief discourse on this criminal sub-species - their motives, habits, and plumage.

The Obsession

Theme villains obsess. This is more than the usual "Hey, I'll put on a spandex costume and use this arguably-patentable-to-make-a-million-dollars invention to show them all!" obsession. It's even greater than the "Since I was locked in a freezer as a child I've dedicated my life to the study of refrigeration, culminating in this arguably-patentable-to-make-a-million-dollars invention" obsession that grips much of the Flash's rogues gallery. No, the theme villain's level of obsession is complete. Every aspect of their criminal enterprise must revolve around the obsession: costume, weapons, henchmen, modus operandi, targets, method of payment. Everything.

This means that if you're designing a theme villain, you have to pick an obsession broad enough to give you some working room. If the players like the villain, you'll need a way to bring her back with new plans and targets . . . which is difficult to do if she's Lisa Mona. How many times can she try and steal the Mona Lisa before the players get bored? Better to have an obsession like great cats, Chinese myth, jazz music, or the number seven to give yourself some maneuvering room when it comes to criminal plots.

The obsession doesn't have to make a lot of sense. In a classic four-color comic environment its origin can be dismissed with a single line of exposition, such as "Since my brother was killed by seven bullets fired by seven cops on July 7th, 1977 -- my seventh birthday -- I knew the world's magic number!" What's important is not where it came from, but how it colors the villain's worldview. Lucky Seven will not rob a bank unless he can do it on the seventh day of the seventh week of the year, using his seven henchmen to steal seven million dollars. If he can rob seven such banks over seven days (or seven days apart), even better. It's this degree of exaction that makes a true theme villain.

Accoutrements and Abilities

Many theme villains are simply normal people who have been pushed over the edge by their obsession. Along the way they picked up lots of training or access to some advanced tech, but they normally aren't superhuman. This has some direct effects on plotting for them.

Other than some old standbys, a theme villain will have a new array of gear for each plot. This keeps him challenging, since the heroes will never know quite what to expect. If any heroes have known weaknesses, there's a good chance some gear will be tailored for that. Most gear will be one-trick wonders . . . good enough to give the heroes a hard time once but easily circumvented once the surprise is gone. Sure, Wixua will always have his robe of anti-gravity silk and martial arts skills, but he could be armed with darn near anything else from Hong King cinema or traditional Chinese myth: a flying sword that fights for him, a dragon's mouth wand that shoots fire, a sleeve that extends with explosive force and returns with unstoppable strength. The heroes won't trust his sleeve, never mind what's up it, but they know that given time they'll get around his gizmos and turn it into a skill-on-skill fight, which they will win.

Since theme villains are usually normal-but-obsessed humans, they have a tendency to plan in a comprehensive

manner. Theme villains, more than any other group except perhaps mad scientists, will have escape routes -- not just from their base, but from their crimes. Even when the heroes have Wixua dead to rights he may throw a smoke grenade and vanish. Be warned: some players hate this! It can be seen as stacking the deck for dramatic effect, that you're saying nothing they do will catch the villain. If you have such players, either don't use this technique or actually plot the escape routes -- Wixua ducked through the specially prepared window nearby into a radar-invisible hidey-hole marked in your notes -- that the heroes can block, spot, or deny. As long as you keep it "fair," your players have no right to complain. The occasional win for their side will make it clear that you are indeed playing fair.

A side effect of their compulsive over-planning and obsession makes theme villains the best practitioners of the mysterious death. This is a classic of the genre, and you should feel no guilt about using it unless you're running a particularly realistic game (in which case, why are you using theme villains at all?).

Henchmen

Theme villains often work alone. Heroes often work in teams. Since the average theme villain relies more on plans and gadgets than powers, he's going to have to use henchmen to balance the scales. Henchmen make creditable threats, are extra sets of hands, and can be sacrificed in a pinch. Just like everything else, the henchmen must be part of the obsession. This means silly outfits, bad nicknames and poor weapon choices, as long as they fit the theme.

Granted, anyone not able to see the problems in dressing up as Count Bastard's Jazz Trio (Double Bass, Licorice Stick, and Axe) and using weapons shaped like musical instruments to take on superheroes aren't the sharpest notes in the scale, so the henchmen probably aren't brilliant. They *can* be cunning, however. A troupe of tactically savvy henchmen encountered after run-ins with less-than-stellar ones may lead to an embarrassing defeat and a trip to the [deathtrap](#) for overconfident heroes.

Remember that the main purpose of the henchmen is to distract the heroes and buy the villain time. Their secondary purpose is to scare civilians and hold off conventional authorities. At this goal they work very much like the theme villain's gadgets: holding off the heroes once or twice in critical situations. Henchmen should be combat-worthy enough to be a mid-range threat to a hero, but weak enough that they'll fold after two or three solid hits. Combine their intellect with their use in sacrifice plays and you'll understand why the henchmen never get told the plan. The best the heroes can hope for is wringing the location of the villain's base out of them, and even that will take effort.

Care and Feeding

Why are theme villains fun for the players? Because it gives even the most doltish hero a chance to play detective. If the villain is going to telegraph his actions to this degree, heroes have a chance to second guess him in a way that they seldom do with everyday criminals. Once the heroes have an inkling that the Lion Lord is operating in town they know it's time to start looking about for cat-themed targets while the police, used to dealing with conventional criminals, stand dumbstruck.

Of course, theme villains will only let the heroes know of their presence in advance if their obsession includes riddles (or abject stupidity), so the traditional theme villain plot runs as follows:

- Heroes discover a crime has been committed, with clues that it was done by a theme villain (as subtle as traces of lion hair found at the crime scene or as blatant as witnesses saying "it was a guy in a lion suit") that the heroes will catch and the police won't. This is usually the crime that sets things up -- recruiting or rescuing henchmen, getting the gear or information he'll need for the actual crime -- but it may be the first in a series if the theme runs that way (such as killing the group of poachers and tomb robbers who have stolen the cat relics of Xandia). The heroes now know the theme villain is in town and the game is afoot.
- The theme villain commits a second crime, which the heroes are almost in time to stop. There's a brief encounter, but he gets away through luck or a cunning escape plan. This is either another set up for the main event or the next crime in the sequence. If you have players that hate these minor defeats, either skip this step, or be willing to end the whole theme villain plot if they manage to catch him. On the other hand, if your players

like these genre tropes, you can stretch this out for several such encounters.

- The heroes may succeed in tracking the theme villain to his base. His base, like everything else, should have something to do with his obsession. This makes finding it easier, but not too easy -- sure there's the abandoned zoo, but also the old Kit Kat Club, the abandoned mansion of the great white hunter who vanished decades ago, or even the tenement on the corner of Veldt and Savanna streets. Again, it works best for the classic story if the theme villain gets away, but you can just as easily end the plot with a climactic fight at the villain's base. Even if he does get away, he's now forced to finish the crime with fewer resources than planned, giving the heroes a partial victory.
- The climactic crime, which your heroes will hopefully be in a position to stop as it occurs. By this point, his target should be clear, either by the equipment he's stolen, clues found at his base, or the sequence of the crimes to date. This final crime is the one most tied to the obsession; sure, Lion Lord stole security circumvention equipment from Pantherco Security and hijacked a Flying Tiger replica from the air museum for the crime, but the collection of golden cat coins from a millionaire's penthouse was his *true* target. The other crimes let the heroes rule out the theft of the stone Bast statue from the museum (too heavy for the plane) or the kidnapping of heiress Kitty De Leon (no need for advanced safecracking equipment) so they can be waiting for Lion Lord atop the high-rise for the final showdown. As with the villain's base, there should be several possible obsession targets at any one time to keep things from being too easy -- another reason for broad obsessions.
- The theme villain is carted off to jail, or the heroes stand over the spot where he vanished, muttering that no one could have survived that. The stolen goods are returned, and the henchmen do another tour in the big house.

Note that while the concept of a theme villain is silly, there's nothing that says the theme villain himself must be silly or harmless. Sure, many are distractions at best and poor souls at worst, but they can be deadly serious in their obsession. Perhaps the most famous comic villain of all time, the Joker, is a theme villain, obsessed with comedy. While he makes use of practical jokes like squirting flowers, joy buzzers and guns that fire little flags reading "bang," he's also a homicidal maniac. Theme villain appearances can be a lighthearted romp for the heroes or a deadly serious descent into the madness of obsession. Even if you don't want to go to either extreme, theme villains can add spice to a [preexisting emergency](#), since Count Bastard wouldn't let anything like an impending earthquake stand in the way of his possession of Miles Davis' personal trumpet.

Marcel Lemieux: Time-Traveling Librarian

For *GURPS*

by Peter Miller

Biography

Lemieux was born in Paris in 1930, son of a union between a French librarian and writer and a privileged English lady. The family quickly emigrated back to the mother's richly appointed townhouse in downtown London. Marcel grew up among history books in his father's library, and the rich appointments of his mother's noble standing. Most of his youth was spent dreaming through texts detailing revolutionary France, Ancient Egypt, the Renaissance, and Greece rather than playing football and getting into mischief.

His love of history blossomed upon entrance into post-secondary education at Oxford in 1947. Majoring in European and Near-Eastern history, Lemieux completed his Master's and Doctoral dissertations by his 30th birthday. Teachers would comment that he spent little time on anything but his studies, and seemed to be a "bookwormish" young man. Lemieux dedicated himself to not only a perfunctory understanding of the events of history, but to an in-depth knowledge of the correlations and interrelations of events. Instead of treating history as a progression of numbers, people, and ideas, Lemieux sought to see history as a complex and intertwining web of ideas, events, and people strung up against the fabric of time.

After completing his doctorate, he traveled abroad extensively, funded by an endowment left for him after his father's death a few years earlier. Much of his time was spent split between dusty libraries in Egypt and Arabia as well as the collections of the Sorbonne and Cambridge.

During a trip to Egypt in 1965, Lemieux purchased a library at an estate sale of an upper-tier bureaucrat. In this collection, he uncovered a tome that would change his life: the *Manual of Time Travel*. Although doubting its authenticity, Lemieux had a weakness for the occult and decided to give the ritual a try upon returning to England in 1966.

One evening, in a sealed room in his home, surrounded by candles and the other attendant ritualistic needs the books proscribed, Lemieux completed the rites and -- to his utter shock and delight -- found himself not in his London townhouse, but in an alleyway in revolutionary France in 1790. He quickly reversed the ritual and, with relief, found himself back inside the safe confines of his townhouse.

After this monumental discovery, Lemieux's life, and his usability in a game can go two ways . . .

"Power Corrupts, and absolute power corrupts absolutely . . ."

Sensing the power and control he could have over time, Lemieux sets out to turn the Manual to his advantage. Giving in to the greed his privileged upbringing gave him, and allowing his latent superiority complex to come out into the open, he begins to travel through time, altering history at his will, controlling armies, plundering riches, and laying waste to the

Destiny . . .

Upon returning to his own time, Lemieux is struck by a purpose in his life. He ties up the loose ends of the present, and embarks of a quest given to him (he believes) through divine intervention. He believes that his destiny is to travel through time in order to right wrongs and correct injustices, guiding the bloody timeline of human history to an endgame of peace and brotherhood rather than catastrophic disaster. Without his actions, he believes the world is

interconnected web of time he studied so thoroughly. Through all of this he seeks to understand and intuitively know the meaning of life and the universe. He has believed his whole life that the answers to these questions can be had through the study of history. Now, with the Manual in hand, he plans to prove this to himself by studying historical events firsthand. However, his megalomaniacal ways mean he cares not for the damage he does to people, events, or time itself on his quest.

doomed to irreversible suffering for the those who die, and dismal subsistence living for those remain alive.

Adventure Seeds

Lemieux could fit into any genre of adventure, as he literally can pop up out of nowhere. Either of his two probabilities can be the basis for many different adventures, and Lemieux himself works well as a catalyst for a single night of gaming, or the nemesis of a whole campaign.

Timepiece/Stopwatch Campaign (From *GURPS: Time Travel*)

In the Timepiece campaign, Lemieux is an aberration, able to travel through time somehow without aid of the AABET device, and without causing the characteristic ripple detectable by both Stopwatch and Timepiece. To both agencies, this megalomaniac represents a threat to the security of their timeline. He could provide the catalyst for an unprecedented cooperative intervention to cease his meddling with time.

On the other hand, the destined Lemieux, while still causing undesired eddies and ripples in history, could be of vital importance to both Stopwatch and Timepiece. Perhaps the event he is destined to partake in is the deciding point in which timeline comes into existence. Working against time (no pun intended), both agencies would be anxious to befriend Lemieux and find out more regarding his ultimate fate.

Historical Campaigns (*GURPS Egypt, Japan, Russia, etc.*)

A campaign set during any of the historical epochs covered by *GURPS* could find an evil Lemieux a deadly foe. As their history literally changes around them, characters would have to bring Lemieux's actions to an end before events he alters change the very epoch they live in so much that they themselves do not come into being.

The destined Lemieux could fit into one of many mythologies covered in the *GURPS* historical worldbooks. He could be in Imperial Rome to prevent the fall of the Empire, thus stopping Europe's Dark Ages, or in Japan to ensure the survival of the Shogun's rule. Any event that, sufficiently altered, would drastically change the world of the present is fair game as Lemieux's destined fate.

Science Fiction (*GURPS Space, Transhuman Space, GURPS Prime Directive*)

While the *Manual of Time Travel* requires the user to have a knowledge of the period that he wishes to travel to, creative GMs can of course alter this rule, and have the Lemieux of the mid-20th century arrive in a near or far-future setting.

The corrupted Lemieux would, of course, be anxious to use his ability to traverse time to take control of events in the future. However, his plans would be longer term, due to his lack of foresight he normally has into events in the past.

The destined Lemieux could be a savior for a dark world of the future, or fate could be conspiring to take him into the

world of the future to stop a world-ending holocaust, war, or other event. Regardless, the heroes would have to deal with this well-meaning man, who could very well be attempting to alter the history they believe to have been completed "correctly."

Marcel Lemieux

ST: 12 [20] **DX** 11 [10] **IQ** 14 [45] **HT** 12 [20].

Basic Speed: 5.75 Move: 5

Dodge: 5

Advantages: Absolute Direction, Attractive, Charisma +1, Language Talent +1

Disadvantages: Timesickness (Acute Freq/Mild Severity), Curious

Skills: Writing +1 (15), Skiing +0 (12), Swimming +0 (12), Black Powder Weapons +0 (12), Guns/TL7 +0 (12), Languages: French +2 (16), Spanish +1 (15), Arabic +1 (15) First Aid +1 (15), Naturalist +0 (14), Survival +1 (15), Archaeology +0 (14), History +2 (16), Literature +1 (15), Research +2 (16), Savior Faire +1 (15), Driving/TL7 +0 (12)

Equipment: Manual of Time Travel (written in Arabic). The manual is a set of rituals that the reader must utilize in order to physically transport himself and all who touch him through time. Concentration, silence, willpower, and a knowledge of the wished-for time period are all that are really necessary, though the Manual dictates several other esoteric necessities.

Corrupted Lemieux has the further disadvantages Greed (-15) and Megalomania (-10).

Destined Lemieux meanwhile has the advantage Destiny (+10) and the disadvantage Sense of Duty: To Destiny (-10).

Camping Out

An Optional Rule for *Frag*

by Douglas Cole

One aspect of first-person shooters that is currently absent from *Frag* is the sniper strategy: that really irritating dude perched in some unreachable nook with a sniper rifle and a juvenile fascination for head shots. He's everywhere.

Frag is turn-based, however, and there are currently no real benefits to taking long-ranged shots. Closer is nearly always better, and mentioning "opportunity fire" draws the response of, "What's that?" Naked aggression is the way to go.

For those who feel the need, only one small rules change is required to put the Camp back in Camping Out: Allow movement points to be saved and used to interrupt others turns.

New Rule: Camp Out

To "camp out," you must hold in reserve at least one unused movement point, and one or more attacks from your turn. During any other player's turn, you may interrupt their action if you have more movement points reserved than they do. You may only make one attack per interruption, and you must be able to see the target to interrupt. Each attack subtracts 1d6 from your remaining move total. If your move total is still higher than your target's, you may make another attack, if you have one remaining. When your move total drops to equal or less than your opponent's, they regain priority and may continue to conduct their turn. You may only interrupt any player's turn once, although you may take multiple shots at him during that interruption assuming your move total remains higher than his. Attacks and movement points do not accumulate from turn to turn. You conduct your own turn normally when it arrives.

Example: Sade Vicious has allocated three dice to movement, and has two attacks. On her turn, she rolls 14 movement points. She uses two points to move into a long corridor, and holds both attacks and 12 movement points in reserve. Fierce Frank must cross the corridor, and rolls eight movement points. One step into the corridor brings him into Sade's sightline. As she has 12 movement left, she preempts Frank's turn and attacks, leaving him wounded. She then rolls 1d, and rolls a 3. She now has nine movement points left, greater than Frank's seven. She attacks again, and Frags him. Had she rolled 5 or 6, Frank would have regained the initiative, and his turn would continue normally. Had she not Fragged him, and rolled a 1 (eight points remaining), she could attack again if she had more attacks in reserve.

This rule will allow "opportunity shots" as a player crosses your line of fire. It also makes camping out in a strategic location with a long-range weapon a valid course of action. If you can hold multiple attacks and lots of movement in reserve, you can Frag anyone who enters your line of fire!

New Weapon: Sniper Rifle

Ammo: 4

A powerful rifle with a telescopic sight. Divide range by three when figuring to-hit rolls.
Damage: 4d.

Special Attack: Head shot.
Treat range normally, but damage is 8d.

Champions Universe (for Hero System)

Written by Steve Long and Darren Watts

Published by [Hero Games](#)

160-page b&w paperback; \$21.99

I came to *Champions* during my freshman year at college, nearly two decades ago, and it didn't take me long to become a typical "Dork"-y "It MUST Be Mine!" *Champions* consumer. Part of the appeal was the implied background in the *Champions* books . . . this character was Hunted by U.N.T.I.L., that one was a former agent of VIPER, this one has a crush on that foe. It all resonated nicely to what I already felt about comic book stories, and the addition of the Enemies and Organization books contributed to that feeling. So when I heard that the *Champions* universe would get a full book treatment as part of the Hero Games Revival of 2002, I was quite pleased. Here, said I to myself, is a chance to revisit all those old friends and fiends and enjoy them once more. But for better or worse, Thomas Wolfe had it right. This isn't the *Champions* universe I remember and loved.

Champions Universe is a supplement to *Champions*, which in its turn is a supplement to the *Hero System* rulebook. This represents a pretty hefty outlay to get going in *Champions Universe*, even given the fine value you get for your investment in the two major books. *Champions Universe* takes full advantage of the groundwork laid in both the core rules and the genre supplement, giving new examples of applying the rules and seeing how the principles of the genre are implemented in the world of the Champions. One could use this book as a sourcebook and utilize the rules from another game systems, but the technical challenges of converting out of *Hero System* to another game are non-trivial.

The first five parts of the book present the Champions Universe world. The first gives the obligatory prose history and timeline of superheroics in the world. *Champions Universe* traces the presence of masked heroes all the way back to the American Revolution; superpowered heroes don't appear until much later. Part two gives the "write-up" for the Champions Universe using the terms and conditions established for *Hero System* and in *Champions*. Different basic campaign configurations are discussed, including character point levels for various sorts of campaigns. Parts three, four, and five are the meat of the "current day" Champions Universe. Part three describes the world in terms of its social communities; part four looks at the geographical places where interesting things are going on; and part five provides descriptions (and some full write-ups) for noteworthy figures, heroes, villains, and organizations.

The last part of the book is for GMs only. It offers some sample campaign starters and hooks, the hidden secrets in the existing Champions Universe for the game master to exploit or ignore, and an adventure outline. Quotes from major figures are scattered generously throughout the book and do much to give the setting a little more flavor.

As a matter of personal taste, I found the history rather predictable. This may be unavoidable, given the number of comic book hero histories around; there's bound to be some overlap in ideas or usage. Unfortunately, the strong presence of Sherlock Holmes in the timeline, or the destruction of Detroit to be replaced by a new and modern city . . . these struck me as trying to force verisimilitude. On the other hand, I was very pleased with the presentation of the current-day background information. Rather than focusing just on geography, the world is delineated by "communities" (the political community, the scientific, the criminal, the martial arts, the occult, and so on). I first saw this approach used in Gold Rush Games's excellent *San Angelo: City of Heroes*, and it is a very useful tool for focusing not only the world design but as a concentrated resource for characters operating out of any given community.

The art is "Champions-modern" . . . the familiar line-art drawings which were the hallmark of *Champions* are still

here, but perhaps a bit more polished, and a bit more skilled than they were when the game and the hobby were still in their toddlerhood. The cover and layout are in the new **Hero System** standard: maintext and sidebar, with relatively small print and thoroughly organized and indexed. It's very functional but also somewhat unromantic . . . one gets the impression of reading a textbook and not a game. The book has a thorough table of contents and index, although the table of contents is slightly marred by the presence of two "Chapter Four" headers (one inadvertently in place of "Chapter Five").

It's worth mentioning that the new **Hero Games** management is being very responsive to reader comments . . . witness that errata are already available for **Champions Universe** at <http://www.herogames.com/SupportFAQs/errataChampionsUniverse.htm>. Kudos to Long, Watts, and company for being on the ball at making fixes for errors available promptly.

Champions Universe brings all the old characters from **Champions**-days-gone-by and sets them in a new and consistent framework and world. That world is easy to work with and adapt, and can be suited to many different styles of characters and play, with many suggestions provided on "flavoring to taste." But by filling in all the gaps in the world structure, the authors have taken away the charm of the setting for me. I found the fun in seeing the foreground figures, not the entire background on which they rest. The new Champions Universe may be just the thing for **Hero System** fans looking to welcome back the flagship setting, but I'm afraid it only honed my nostalgia for the simpler times of yesteryear.

Pyramid Review

Dead Night of Space: Psibertroopers (for d6 Classic)

Published by [Final Sword Productions](#)

Written by Ron Fricke and Scott Palter

Illustrated by Tom Weighill

96-page b&w softcover; \$18.00

Despite the switch to the *d20 System*, for many the award winning *d6 Classic* system remains the only way to play in the *Star Wars* universe. Derived from the Chaosium-designed *Ghostbusters RPG*, West End Games employed the d6 engine to power a wide range of RPGs, most of them licensed properties. These included the aforementioned *Star Wars RPG*, plus the *Men in Black RPG*, *The Hercules & Xena Roleplaying Game*, and the *DC Universe RPG*. Where the *d6 Classic* system used dice with numbers or dots, the last two games used dice marked with symbols appropriate to the game and its source. It is from the last game produced by West End Games, *The Metabarons Roleplaying Game*, that the newest *d6 Classic* takes its rules.

Dead Night of Space: Psibertroopers is of course, not published by West End Games, but by Final Sword Productions. In drawing from *The Metabarons Roleplaying Game*, it does not present a complete *d6 Classic* ruleset, but instead gives a set of quick start rules. These should be enough for most, but the simplicity of the mechanics means that anyone with a little experience should be able to begin playing this almost immediately. The reasons for choosing them are simple -- the authors wanted rules that are both well known and easily available (either *The Metabarons Roleplaying Game*, or the relatively easy-to-find *Star Wars RPG*), and rules that also simulated both a genre and a certain feel. That genre is space opera, and the feel cinematic, which makes sense since *Star Wars* is seen to be the epitome of both.

Dead Night of Space: Psibertroopers is more than just space opera, adding psionics and mecha to its setting. It is also the first in a series of supplements for the *Dead Night of Space* campaign, detailing just the one star system of Ceybrodin in the early years of the 25th century. Mankind has spread to the stars using first slower-than-light colony ships and then by a barely understood FTL drive. Human space is divided into three rough spheres radiating out from Tau Ceti, the capital of the first sphere -- Federation space. This is the civilian bureaucratic and financial body that regulates trade and relations between its many governments. Beyond this, Fleet controls known space while also imposing peace throughout Federation space with the threat of the heavy rod. While Fleet has appropriated all military and security functions within the Federation, it does not attempt to govern. Instead, it prefers to protect the Federation from those that pose a threat to its stability and the trade across the "Line" that divides civilized space and the Diaspora. The most notable of these threats have been known as the Wreckers, since their first attacks of the opening years of the 21st century.

Even from before the 21st century, there have been those that have protested the globalization of human culture, and as it increased, these protestors have either resisted or attempted to escape. At first this was into the outer reaches of Earth's solar system, then onto other star systems, and finally beyond both Federation and Fleet space. One such system is Ceybrodin, already settled for two centuries by the time Fleet made contact in 2402. Although human, the Ceybrodin natives were capable of great psionic feats, none of which Fleet truly understands. The Psibers -- as they call themselves -- are able to listen to their "Inner Dark" and communicate with those of others through the very expedite skill of "Dark Speech." In addition, they can see into the "Outer Dark," which is in sense a model of reality that they can manipulate to have an effect upon the real world. Such methods of manipulation include controlling

energy and even folding space so that they can pass through solid objects. Though not as technologically advanced by Federation standards (which conducts relatively little research beyond that of military applications), they have created devices known as IDECs, or Inner Dark Elemental Computers. When fitted to vehicles such as a psibermechs, an IDEC greatly enhances a psibertrooper's innate psionic range and power. Psibermechs can jump light years in distance, hide itself from scans, and launch psiber-energy attacks. While this is a major advantage over individual Fleet ships and fighters, Fleet have greater numbers of both which they can bring to bear. As of 2410, Fleet have put Ceybrodin under a Ban that limits their trade and exploration beyond their system, and prevents all contact with the Federation. Fleet are also allowed to recruit Psibers. Non-compliance with the Ban will result in Fleet bombarding Ceybrodin with "dinosaur-killers" -- asteroids launched at the planet at fraction of light-speed. Of course, word is beginning to leak out of the Psiber's existence and across the Line.

The default campaign for ***Dead Night of Space: Psibertroopers*** has the players cast as the psibermech pilots assigned to police the enforcement of the Ban. Other options include playing Fleet personnel (who may or may not be psionically trained) or merchants trading handcrafted goods, intellectual properties, and raw materials back across the Line into Federation space in return for high-tech goods. Like other ***d6 Classic*** games, players can create their characters from scratch, assigning 18 dice to six attributes (Agility, Knowledge, Mechanical, Perception, Strength, and Technical) and another seven dice to skills. Psiber characters may receive another three dice for their attributes and will need to put at least three dice on their Psiber attribute, the minimum required to operate a psibermech. New ordinary skills are Psibermech Ops and Psiber Repair, while those listed under the Psiber attribute are Dark Energy (which covers the gifts of Telekinesis, Energy Blast, Energy Shield and Healing); Darkfold (being able to move from one point to another without crossing the space in between); Darksense (Farsensing and Hypersense); Darkspeak (Darkspeech and Darkattack); and Darkshield (Darkshield and Remote Control -- being able to control other humans). Each gift can be taken as a specialty, though the GM will need access to the full ***d6 Classic*** rules for more information on this. Again taken from ***The MetaBarons Roleplaying Game***, players need to select an honor code that reflects their character's personality and how they interact with others. Characters also possess Fate Points that work similarly to the Force Points of the ***Star Wars RPG***. Alternatively, players can just pick one of the prepared character templates and assign their skill dice as above.

In terms of new rules, ***Dead Night of Space: Psibertroopers*** adds very little, and what it does is really a method of classifying NPCs for quick-and-easy play. Called the "chess piece goons" system, this uses the familiar chess piece titles to indicate NPCs of ever increasing toughness and capability.

Physically, ***Dead Night of Space: Psibertroopers*** promises enough with its decent cover, but upon opening the book it all fails to deliver. The general layout is reasonable, but let down mainly by the dismal and stained internal illustrations. It also doesn't help that the various boxes of text could have done with better organizing and labeling. In addition, the support for the game is just ever so slightly underwhelming; neither the psibermechs or other vehicles are properly illustrated, the important NPCs feel flat and clichéd, and there are elements within the two given adventure hooks that jar heavily with the setting material.

Despite these problems, what the text does not hide is the enthusiasm of the authors. What is clear from their writing is an attempt to present a situation that is a clash of two very different societies. Descended from manipulated genetic stock, the Psiber society is young, both in age and its makeup. There is little in the way of direct government or organization, with society preferring to come to consensus through discussion. They organize themselves into associated groupings based upon common interests and agreement. Disagreements within groups lead to the dissenters creating groups of their own, and since the society is one of telepaths, that communication and discussion can be surprisingly swift.

One of the few times the psiber council -- more of a financial institution than ruling body -- has imposed an order and told the associations that there would be no dissent was with the Ban. In general their outlook is libertarian, but others like Fleet might call it communitarian or anarchy, depending on their persuasion. In contrast, Fleet is conservative, pessimistic, and bureaucratic. They want to keep the Psibers bottled up in their own space where their radically different culture cannot have the potentially destabilizing effect upon Federation society that Fleet so fears.

Dead Night of Space: Psibertroopers is the first in a planned line of "Star System" books that presents a situation

within the Dead Night of Space. Future books will detail other cultures out in the Diaspora, and just as with Psibertroopers they could easily be dropped into the other science fiction settings or kept in their own. That said the clash of cultures at the core of the setting theme is quite sophisticated for the normal space opera genre, so some may want a slightly harder-edged ruleset with which to run ***Dead Night of Space: Psibertroopers***.

One option is to use the ***MetaBarons RPG*** for a slightly more detailed set of rules that retains the cinematic feel of ***d6 classic***, but that harder, grittier edge might also be provided by DP9's ***Jovian Chronicles RPG***, with which it shares similarities . . . or a combination of ***GURPS Space***, ***Mecha***, and ***Psionics***. Alternatively, ***Big Eyes, Small Mouth*** would give a more anime feel, while for those who like the ***d20 System*** may find a number of books due for release that would simulate the elements of this setting. In spite of the problems with the presentation of ***Dead Night of Space: Psibertroopers*** -- both in terms of both actual appearance and its ideas -- the supplement does give an interesting setting in which to play.

--Matthew Pook

Splitting Up Is Hard To Do

We interrupt our regularly scheduled series on "Running Adventures" to bring you a specially unrequested column. Over on the [discussion boards](#), Peter Dell'Orto had some kind words for the February 21st column "[It's How You Play The Game . . . Err, And How Is That, Again?](#)" but noted this column came two weeks too late for him, since he needed to confront the issues therein two weeks earlier. Determined never to be so behind the times again, we are responding to Peter's request in another thread for advice about how to handle split-group games. Sure, he may have wanted a "real" article, but hopefully this'll do for now.

* * *

"Okay, gang . . . let's split up!"

Although groups split up time and again in many movies or television shows, the prospect of divided groups of PCs is generally cited by researchers as the primary reason that 78% of all GMs carry a large rubber mallet to all gaming sessions.

Unfortunately, the horrific logistics of gaming in this situation are often overshadowed by the in-game logic of doing so; after all, it's unrealistic for large groups to sneak around a castle, interrogate a janitor, or research arcane information at a library. In fact, one of the few circumstances where it *does* make sense to get as many folks together as possible is combat . . . and even then, it's logical to presume that there are many characters who are ill-suited for even that purpose.

What's a GM to do, then?

Well, I'm certain there are a myriad of means of handling this problem, but here are a few that I've used.

Smaller Is Better (Right? Right?!?)

The biggest technique I use to thwart the problem of splitting groups from the beginning is limiting my gaming group size. Consider that, in a group of six players, there are a *lot* more permutations for a sub-group to split off than a group of two players (which has two states: "together" or "apart"). I've found that, in a game where characters are expected to split off -- which is most games -- my ideal number of players is around three. Two players work just fine (the longest campaign I was ever in consisted of only two players), and four players is usually workable, provided the players Work Well With Others. Anything larger than that, however, and I find it almost impossible to keep tabs on everything. (I'm always amazed when I hear about GMs who can handle six, eight, or even more players.)

Once the gaming group is under control size-wise, most of the other problems fade away. In a group with two players, either the two players are interacting with the same thing -- which is likely -- or they've split up. If they've split up, then you pull aside one player, run a scene with him, and then go back to the other player and do the same.

Pull Them Aside?

Yes, pull them aside! (I hate it when subtitles talk back . . .) I have always been a *huge* believer in pulling players out of the room, or otherwise keeping them from witnessing what other players are doing (with one exception . . . see below). A player reads an arcane text? Talks with the king alone? Communes with his god? All reason to talk to the player one on one. That way, a lot of the pleasure and interest of the game comes from players choosing to share -- or *not* share -- their other experiences with each other. ("The king offers your group any single favor one of you asks for." "Groovy!" & returns; "So what did the king say?" "Umm . . . he said, 'Hi.'") While it's theoretically possible to play those scenes out in front of the other players, I've generally found that metagaming knowledge creeps into even the best players' actions. And even if it doesn't, accusations of such can make things difficult; after all, if you know that another PC is planning on killing your PC, is any suspicion you cast upon him automatically metagaming?

Now, it's a pain to schlep all over the house each time the player learns something the others don't know. So what I've generally done is . . . well, ask the other players to cover their ears. Undignified? Perhaps a bit. But it's remarkably quick, and soon becomes second nature:

"I check the king's journal."

"It's encoded. Make a Decipher check."

"I got a 12."

"Okay. [To everyone else] Cover your ears. [They do.] You learn that the king is having an affair with the Dutchess of Tremopolis. [louder, to everyone else] OKAY. [They uncover their ears]"

As an aside, if you don't trust your players to keep their ears covered, then (in my opinion) you probably shouldn't be gaming with them.

Now, I suppose the same function could be done with note-passing. But in practice I've found the act of writing notes to be *very* slow; in the example above, I could go over a broad description of the journals, complete with other useful information, in about the same time as it would take me to scrawl, "King's Journal." (I also have the option of saying, "You didn't learn anything" . . . I train the players never to assume that "covering ears" equals "something important.") Asking the other players to keep their ears covered for a few minutes allows for a *lot* of information . . . certainly more than I can handwrite quickly. (As an aside, as technology improves, I expect it may be possible to replace "ear covering" with "quick text to the other player's terminal" . . . but even then, it's difficult to sporadically roleplay through text in a tabletop game. With ears covered, however, it's entirely possible to have a brief private roleplaying exchange between a PC and an NPC.)

If I suspect that an interaction is going to take longer than five minutes or so, I'll pull the player aside, out of the room and run the scene. If possible, I try to do this with minimal dice-rolling, but it's not out of the question to bring along a clipboard, character sheet, and dice.

Again, keeping the number of players small here helps; with three players, letting each one pull you aside for a 10-minute scene only eats up 20 minutes of time for everyone else . . . not terribly much time, and it's time which can be used to drool over how they'll use those three unspent experience points. On the other hand, with six players, a 10-minute scene with each one is almost an hour of non-gaming time!

"Always Use Your Powers For Good; Never For Evil"

I try to make sure that my players understand (if they don't already) that I encourage separate actions within reason. But I also make sure they know that each such scene they do potentially pulls me aside from everyone else. This almost always works; players learn which actions they take will likely disrupt the game for everyone else, and either plan them accordingly (perhaps as a solo adventure or timed to happen before the beginning of the session) or work to get the other players involved. If I *do* get a player who, after warnings, pulls me aside and says, "I spend three weeks interrogating everyone in the court; what do I learn?", then that player and I may not be compatible.

I'd also note that just because a player requests something doesn't mean you need to handle their request immediately. For example, in the "three weeks at court" example above, it would be entirely reasonable to tell the player that you'll let him do it, but you need to cover that three weeks of time for the other players first. (Insert your own line about "the needs of the many versus the needs of the few" here.) The prospect that he'll miss out on the entire planned adventure is often an incentive to get him to reconsider.

Of course, I also tend to have dynamic enough worlds where it's unlikely for the other heroes to be able to just sit around and twiddle their thumbs while waiting for the errant PC to do his thing.

"We're Sorry; Miami Is Closed For Repairs . . ."

If a player pulls me aside for something that will probably be a lengthy encounter, I'm not unwilling to bend reality so that they aren't successful . . . or, at least, not entirely successful.

So let's say, in a supers campaign, that a PC wants to check with his secret scientist mentor to help him investigate the hero's mysterious origin. If this is likely to be a detailed scene, then maybe the scientist is busy with something else and can't devote his entire time to the hero.

If I do this, I'll generally try to make sure the player at least gets a smidgeon of a reward; after all, the goal isn't to punish the player for doing things away from the group. Thus, in our scientist example, I may say something like:

"Dr. Numan mutters, 'Busy busy, very busy. The Pentagon has me working on something. Tip-secret, top-secret; tip-top, right? Now, then . . . your origins. Hmm . . . I had a few minutes to examine that blood sample you gave me. Very curious, very curious. Energy readings are off the charts, in an otherwise unfamiliar spectrum; did you know your blood could probably be used as a power supply? Er, I'm still analyzing data, so this is all preliminary. I hope to have more time next month, but the Feds come first, don't you know . . .'"

The player now knows more than he did before (so he feels that splitting off was worthwhile), and it keeps the door open for future adventures.

Alternatively, I may recognize that a stated separate goal will take a while, and tell the player that the scene will be run later . . . but I may tell him the upshot of the scene. Thus, for example, if a PC wants to spend time with his wizardly college to receive additional training, I may tell him that he'll be expected to perform a service for the college; we'll assume that he completes it successfully, increase the ability as required, and schedule a time to run the sub-adventure as a flashback.

Restructure The Game

It's worth mentioning that characters splitting up isn't the problem per se; it's the players not having anything to do once character split up that's the problem. To that end, I don't have any problem restructuring the game so that the players whose PCs won't be playing aren't there. (As mentioned [last week](#), I encourage players to tell me if they want to do something substantial alone or with a subset of PCs. That way I can schedule solos or smaller meetings for just those players, ensuring we aren't wasting the uninvolved players' time. (One *Advanced Dungeons & Dragons* game was even structured around the concept of splitting up the characters; one adventure would be with all three players, then I ran a round of solo adventures, then I ran three duo adventures [adventures with two PCs], then an adventure with all three players . . . and so on.)

Of course, it's also worth mentioning that groups shouldn't use this as an excuse to exclude players they don't like . . . but hopefully that's obvious.

"Team B -- That's you, Kenny . . ."

Finally, I present my most radical idea for accounting for splitting up groups: namely, build the game around the premise that the heroes *will* split up. I first used this technique when I ran a *Star Trek* game (way back in the dark ages, post-FASA but pre-Last Unicorn). I came to the realization while watching *Star Trek: The Next Generation* that, in practice, most of the time not all characters were necessary. In fact, there were certain characters that were specifically *unnecessary* on-screen at the same time. I observed that, for example, the Security Officer and the Counselor hardly ever had a reason to be in the same scene:

"The other ship is firing at us!"
"Captain, I sense hostility . . ."

There just weren't many scenarios where there was a simultaneous need for both a calm empathic voice *and* someone who could kick serious butt.

Likewise I noted that the Captain and First Officer hardly ever needed to be on-screen at the same time, since the Captain was supposed to be in command of events ship-board and the First Officer was supposed to be in charge of

planet-bound events.

Once I realized that, I reasoned to myself: Why can't the same player play both of the conflicting roles? That way, it's almost certain that at least *one* of the characters will be useful in any given situation; whichever character isn't useful at the time is just being quiet or otherwise doing their duties.

Thus in this *Star Trek* game I had three players. One played the Captain and First Officer, one played the Security Officer and Counselor, and one played the Ship's Doctor and Chief Bureaucrat . . . this was an experimental ship, so there were beans to count and reports to file.

(As an aside, this also solved one of the main problems I had with *Star Trek* games by creating a series of checks and balances, keeping the Captain from overshadowing everyone else. The Bureaucrat could object to actions if they seemed too dangerous to the ship or its instrumentation, and either the Doctor or Counselor could declare anyone physically or mentally incompetent.)

Once I did this, a magical thing happened: the game series looked *just* like a TV series. See, once players have multiple characters, you can have multiple scenes going on; PCs can split up into groups, two or three different goals can be necessary for a mission's success, *and* you don't need to pull players out of the room; you can just switch from scene to scene.

Thus in one memorable moment, there were four distinct groups:

The Captain was aboard a shuttlecraft on a diplomatic mission, the Security Officer and Bureaucrat were sneaking around some ductwork hoping to disable Something Nasty, and the First Officer and Counselor were planet-side investigating an unusual phenomenon, leaving the Doctor aboard the main ship. I kept switching between scenes, seeing what the various players were up to in each scene.

The funniest scene was with the Security Officer and Bureaucrat, both of whom were played by somewhat indecisive players:

GM: "Scene shift. Aboard the enemy duct work. There's one guard below. He's talking on a comm pin; it seems like he's talking with the enemy captain."

SO: "What do you want to do?"

B: "I don't know; what do you want to do?"

SO: "Do you want to attack him?"

B: "Do you think we can without the enemy captain learning?"

SO: "I don't know . . ."

B: "Do you have any other ideas?"

SO: "Um . . . let me think . . ."

ME: "Okay; scene shift! . . ."

And then the irate Klingon warlord decloaked his ship and hailed the main PC vessel. The Doctor panicked once she realized the chain of command fell past four other PCs to her.

In short, I was able to run a phenomenally complex plot with lots of little goals and lots of opportunities for the players to split up . . . and even in the circumstances where a player *wasn't* in a scene, he still had fun watching the other scenes.

I used this technique again in a two-player *Aberrant* campaign. Since this one didn't have the same easy distinctions as the *Star Trek* game, I set some rules for the players. In actuality, this was pretty simple; I merely told them to make characters that were unlikely to be on-screen at the same time.

Thus one player made a focused ex-military man-hating ice-powered Nova named "Ice Queen" and a Latina super-strong flying personable hero named "Sundown." The other made a silent shadow-clinging gun-toting assassin named "Arclight" and an ultra-charismatic lawyer with Mafia ties named "Smiley." This worked as well as the *Star Trek*

campaign; again, players feel more inclined to split up if they know the others won't be left without anything to do. (For this campaign I did all the techniques I discuss above . . . pulling players aside, covering ears, and so on.)

Now, this is an advanced technique, and I doubt it could work with more than, say, three or *maybe* four players. (The logistics of handling 12 characters between six players makes my brain hurt.) But in some circumstances with the right players, it allows for much more complex adventures and scenarios. (There's also no reason this technique couldn't be expanded, letting each player play three characters.) Perhaps more importantly, it allows for players to play character concepts that otherwise wouldn't be terribly feasible otherwise; in most games, there's an impulse to make as balanced a character as possible, so it will be useful in a myriad of situations. But under this system, provided the *set* of characters is balanced, the game should be fine. Hackers, dream-explorers, pilots, and other limited-use concepts can all become part of the PC group without the GM needing to ensure they will be constantly useful.

Splitting up is something that happens all the time, and there are excellent reasons for doing so. With a little bit of thought and some consideration on the players and GM's parts, it should be possible to ensure that characters can go off on their own and accomplish separate goals, without the rest of the group being bored. When they rejoin the main group, everyone will have different experiences and something to think about.

And hopefully you have something to think about before next week, when we should be rejoining our ongoing series.

--Steven Marsh

Modern Vikings

Naval Special Warfare Units in Northern Europe

by Hans-Christian Vortisch

Norden ("the North") is a modern descriptive term for the North of Europe, including the countries of the Scandinavian Peninsula (Norway and Sweden, and by extension, Denmark), but also Finland and even Iceland and the Danish and Norwegian possessions in the Atlantic (Greenland, Svalbard, and the Færøer islands).

These five countries share a close cultural and political history, down to the early Middle Ages, when bands of marine raiders and traders known as the norsemen ("people from the North") or Vikings lived in this area (see **GURPS Vikings** for much more detail on this).

Today, all of these countries with the exception of Iceland (which does not have a military force at all) have capable naval special warfare units. Those of Denmark and Sweden are described here in terms of their use with **GURPS Special Ops**; those of Finland and Norway may follow in a future article.

Both Denmark and Sweden still have the draft from age 18. While one of the units below is a professional force which only accepts longer-serving soldiers, the other is mainly composed of conscripts. Even though most draftees first finish their school education and thus enter the services around age 19, they are very young (similar to the U.S. Army Rangers), and may have received only a year or less of training; this is short if compared to most professional units, which often only take experienced soldiers and put them through a couple years of training. Entry standards ensure that all applicants have high physical and mental capabilities, but disadvantages such as Overconfidence may be more common in conscript units.

Strictly speaking, only the Danish FKP should be considered a special operations force; the Swedish Kustjägare are "only" an elite unit. The template of the latter doesn't use the Extremely Hazardous Duty disadvantage (p. SO56), but rather a -10 Duty, to account for the fact that unlike other special ops units, a conscript force is only called upon in wartime.

Denmark

Søværnet (The Sea Defense)

Frømandskorpset (The Frogman Corps)

The Danish Frømandskorps (FKP) was formed in 1957 as part of the navy's Dykkerskole (diving school), in the image of the British Special Boat Service (p. SO45). The first instructors had received training from the U.S. Navy's Underwater Demolition Teams (p. W:HS13) and the Norwegian Froskemannskorps. In 1970, the combat swimmers became independent from the Dykkerskole and were reorganized as the Frømandskorps.

The FKP has exactly the same tasks as the U.S. Navy SEALs (pp. SO30-31), which include amphibious reconnaissance and sabotage, as well as counterterrorist operations in a maritime environment; this includes Denmark's many islands, but also her ferries and off-shore oil rigs and wind power stations. In peacetime, the unit also closely cooperates with law enforcement agencies, such as diving in

Nordic Military Ranks

Ranks in the Danish navy and Swedish amphibious corps. Also see pp. B22, SO52-54. Military Rank above 5 is unlikely in these units.

	Denmark	Sweden

8	Admiral	General
8	Viceadmiral	Generallöjtnant
7	Kontreadmiral	Generalmajor
7	Flotilleadmiral	Brigadgeneral
6	Kommandør	Överste
5	Kommandørkaptajn	Överstelöjtnant
4	Orlogskaptajn	Major
4	Kaptajnlöjtnant	Kapten
3	Premierlöjtnant	-
3	Løjtnant	Löjtnant

search of missing persons or evidence.

Denmark has not been involved in conflict since World War II, and consequently, there were no combat missions for the FKP for a long time. During the Gulf War in 1991, the Danish navy helped to enforce the embargo against Iraq. FKP operators performed in a number of boarding actions, as they also did in the Adriatic Sea to enforce the embargo against Yugoslavia in the late 1990s. A number of operators were deployed together with members of the army's Jægerkorps to Afghanistan in January 2002, to work together with American and allied special ops units in the hunt for Al Qaida; operations were performed together with U.S., Norwegian, and Dutch units.

3	-	Fänrik
2	Chef Sergeant	-
2	Oversergent	Sergeant
1	Sergent	Överfurir
1	Værnepligtig	Furir
0	Korporal	Korporal
0	Menig	Menig

In order to join the FKP, the applicants have to pass a daunting entrance test, and need to voluntarily enlist for three years and three months (rather than the normal nine months of mandatory conscript service). They must be between 19 and 27 years old. Women may join, but so far none have been able to meet the requirements. Of several hundred applicants each year, only a handful makes it to Graduation Ball at the end of basic training. After six weeks of basic seamanship training at the navy's main training facility, the recruit enters the basic FKP training, which takes 32 weeks and includes a Hell Week (p. SO30) after the first four weeks. After that, the recruit may call himself a Frømand (frogman). About two years of special training in the patrols follow. Winter warfare is trained in Norway and Sweden, while jungle skills are taught in Latin America by SEAL instructors. Many operators also take the Combat Survival Instructor course and other advanced training offered by the British SAS (pp. SO42-43). By the time the 39-month-conscription is over, the soldier can reenlist, usually taking NCO-courses and serving as instructor.

Interestingly enough, the Danish Crown Prince Frederik joined the FKP in 1995, after already having received officer's training in the army. He also took part in a Sirius patrol (see below) in 2000.

The Frømandskorps enjoys close ties with the Swedish Kustjägare (below), and most NATO naval special warfare units, including the British SBS, the German Kampfschwimmerkompanie, the Norwegian Marinejegerkommando, and the U.S. Navy SEALs, particularly SEAL Teams 2 and 4. They are highly capable; several Danes came up on top of SEAL classes or the German Fernspäher course at the NATO LRRP-school in Weingarten.

Organization: The FKP comes under the 5th (Submarine) Squadron of the Danish navy, and is stationed at Kongsøre naval station near Holbæk (on Zealand). In peacetime, it has a strength of some 50 men, but with reserves called in, it has a combat strength of about 200 men in three squadrons, Blå (blue) consisting of combat swimmers with boats, Grøn (green) of amphibious raiders, and Sort (black) of counterterrorist operators in a maritime environment.

Template: Cost 150 points. A soldier serving in the Frømandskorps must take the Basic Skills below and choose a unit of assignment. NCOs or commissioned officers, and those who have received special training, will also have the appropriate Special Skills package(s), which will increase template cost.

Attributes: ST 11 [10], DX 13 [30], IQ 13 [30], HT 12 [20].

Advantages: Fit [5], Military Rank 1 [5], and 10 points in additional ST or HT, *Desirable Advantages* (p. SO51), *Decorations* (pp. SO51-52), *Military Rank* (pp. SO52-54) or *Patrons* (p. SO54).

Disadvantages: Extremely Hazardous Duty [-20], and -20 points selected from the *Desirable Disadvantages* list (p. SO56).

Basic Skills: Administration (M/A) IQ-2 [1/2]-11, Area Knowledge (Danish Coastline) (M/E) IQ-1 [1/2]-12, Armoury (Small Arms) (M/A) IQ-2 [1/2]-11, Boating (P/A) DX+1 [4]-14, Brawling (P/E) DX [1]-13, Camouflage (M/E) IQ [1]-13, Climbing (P/A) DX [2]-13, Demolition (M/A) IQ-1 [1]-12, Driving (Automobile) (P/A) DX-1 [1]-12, Electronics Operation (Comm) (M/A) IQ-1 [1]-12, Electronics Operation (Sensors) (M/A) IQ-1 [1]-12, Engineer (Combat) (M/H) IQ-2 [1]-11, Escape (P/H) DX-1 [2]-12, Explosive Ordnance Disposal (M/H) IQ-2 [1]-11, First Aid (M/E) IQ-1 [1/2]-12, Forward Observer (M/A) IQ-2 [1/2]-11, Gunner (Machine Gun) (P/A) DX-2 [1/2]-13*, Guns

(Grenade Launcher) (P/E) DX-1 [1/2]-14*, Guns (LAW) (P/E) DX-1 [1/2]-14*, Guns (Light Auto) (P/E) DX [1]-15*, Guns (Pistol) (P/E) DX [1]-15*, Guns (Rifle) (P/E) DX [1]-15*, Hard-Hat Diving (M/A) IQ-2 [1/2]-11, Hiking (P/A) HT [2]-12, Jumping (P/E) DX [1]-13, Knife (P/E) DX-1 [1/2]-12, Language (Danish) (M/A) IQ [0]-13, Language (English) (M/A) IQ-2 [1/2]-11, Leadership (M/A) IQ-2 [1/2]-11, Navigation (M/H) IQ-2 [1]-11, NBC Warfare (M/A) IQ-1 [1]-12, No-Landing Extraction (M/A) IQ-2 [1/2]-11, Orienteering (M/A) IQ [2]-13, Parachuting (P/E) DX-1 [1/2]-12, Powerboat (P/A) DX-1 [1]-12, Savoir-Faire (Military) (M/E) IQ-1 [1/2]-12, Scrounging (M/E) IQ-1 [1/2]-12, Scuba (M/A) IQ+1 [4]-14, Seamanship (M/E) IQ [1]-13, Skiing (P/H) DX-2 [1]-11, Soldier (M/A) IQ [2]-13, Stealth (P/A) DX-1 [1]-12, Survival (Arctic) (M/A) IQ [2]-13, Survival (Island/Beach) (M/A) IQ [2]-13, Survival (Mountain) (M/A) IQ-2 [1/2]-11, Survival (Woodlands) (M/A) IQ-2 [1/2]-11, Swimming (P/E) DX+1 [2]-14, Tactics (Guerrilla) (M/H) IQ [4]-13, Tactics (Infantry) (M/H) IQ [4]-13, Telegraphy (M/E) IQ-1 [1/2]-12, Throwing (P/H) DX-1 [2]-12, Traps (M/A) IQ-1 [1]-12, Underwater Demolition (M/A) IQ-2 [1/2]-11.

* Includes +2 for IQ.

1. MOS Skills: Members of FKP do not receive MOS-specific training, but each soldier has a specialty on the team. Spend a *total* of 16 1/2 points on a closely related group of Basic Skills or relevant new skills such as Intelligence Analysis (M/H), Photography (M/A), SIGINT Collection/Jamming (M/H), Surgery (M/VH), Traffic Analysis (M/H), etc. The MOS skills of other templates in **GURPS Special Ops** are common choices, but unorthodox specialties are also possible (GM's option).

2. Unit of Assignment:

- *Black:* Increase Climbing, Demolition, Guns (Light Auto), Guns (Pistol), Guns (Rifle), and NBC Warfare; add Guns (Shotgun) (P/E) and Tactics (Counterterrorist) (M/H).
- *Blue:* Increase Boating, Powerboat, Scuba, Swimming, and Underwater Demolition.
- *Green:* Increase Hiking, Orienteering, Stealth, and Survival (Woodlands).

Special Skills:

Commissioned Officer ** (+2 1/2 points): Increase Administration to IQ-1 [1]-12, Language (English) to IQ-1 [1]-12, and Leadership to IQ [2]-13. Since all officers are career soldiers, they will usually have more points to spend.

Desert Operations (+2 1/2 points): Increase Orienteering to 14 [2]; add Survival (Desert) (M/A) IQ-2 [1/2]-11.

Foreign Language (n/a): The Danish military offers only language tutoring in Arabic and Russian; neither course is normally available to members of the FKP. Members from the German minority will also speak German at IQ-level; those from Greenland may also speak Inuit. A second or third language is studied at high school, French, German, and Spanish being common.

Jungle Operations (+2 1/2 points): Increase Orienteering to 14 [2]; add Survival (Jungle) (M/A) IQ-2 [1/2]-11.

*NCO*** (+1 1/2 point): Increase Leadership to 13 [1 1/2]. Since all higher NCOs are career soldiers, they will usually have more points to spend.

Slædepatrulje Sirius (+8 1/2 points): Increase First Aid to 13 [1/2], Orienteering to 14 [2], Skiing to 12 [2], Survival

Slædepatrulje Sirius

"This summer Erik sailed away to colonize the land he had discovered, calling it Greenland, for he maintained that men would be much more eager to go there if the land had an attractive name."
--*Eiríks Saga Rauða* ("The Saga of Erik the Red")

The arctic island of Greenland has been an official part of Denmark since 1953, but had already been a Danish colony from 1721 (taking over claims dating back to Viking times). The huge, largely uninhabited landmass is permanently covered with ice and snow, except for a few thin strips along the south coast where some small settlements are located. In order to put up a semblance of military presence in the vast north of the island, the Danish navy mounts regular dog sled patrols there -- the Slædepatrulje Sirius (sled patrol Sirius), or Patruljetjenesten i Nord- og Nordøstgrønland (PNG -- patrol service in North and Northeastern Greenland), based at the small Værlose airport on the east coast. Although sponsored by the navy, any suitable male NCO or officer (active or reserve) between 20 and 30 years can apply for the Slædepatrulje. Most come from the FKP and the

(Arctic) to 14 [2], and Telegraphy to 13 [1/2]; add Meteorology (M/A) IQ-2 [1/2]-11 and Teamster (Dogs) (M/A) IQ-1 [1]-12.

** Military Rank [5/level] is required: Rank 1-2 for NCOs, Rank 3 for warrant officers and Rank 3+ for commissioned officers.

Customization Notes: In a 150-point campaign, there will be no points left after purchasing this template; another -20 points in *Acceptable Disadvantages* (pp. SO56-57) and five quirks can be taken to get 25 points to customize with.

Weapons of Choice: Weapons include the SIG P M/49 pistol (P210, stats below); S&W Model 60 Chief's Special revolver (p. SO114); H&K P11 underwater dart pistol (p. MF19); H&K Mp M/85 submachine gun (MP5A3, pp. HT116, SO117) with Sure-Fire tactical light (p. MF12) and Aimpoint collimating sight (p. MF13); H&K Mp M/85LD sound-suppressed submachine gun (MP5SD3, pp. HT116, SO117), often with 4× scope; H&K Mp M/85 assault carbine (HK53A5, p. SO114); Diemaco Kb M/96OP assault carbine (C8SFW, pp. MF27, SO116) with ELCAN scope (p. MF13); Diemaco G M/95OP assault rifle (C7FT, p. MF22) with ELCAN scope; H&K Fsg M/85 rifle (PSG1, p. HT115) with 6× scope; KAC Fsg M/99 rifle (SR-25, pp. MF25, SO120) with 10× scope; McMillan Model 88 single-shot rifle (p. SO116) with 10× scope; Remington Model 870PS Wingmaster pump-action shotgun (p. HT112) with folding stock; H&K Mg M/85 LMG (HK23E, used both with belt-feed and the optional magazine adapter, stats below; compare HK21A1, p. HT120); Diemaco M203A1 underbarrel grenade launcher (pp. HT121, SO121, mounted under both the Kb M/96OP and G M/95OP); SM Hgr M/01 fragmentation hand grenade (HG 85, p. MF32); Precision Ordnance Model 452 Stingball less-than-lethal grenade (p. MF32); Bofors Pvv M/95 LAW (AT4CSHP, p. SO117); and FFV Dykn M/85 recoilless rifle (M3 Carl Gustaf, p. SO117) with 2× scope. Knives include the SOG SEAL 2000, a large knife with *Fine* blade.

Equipment: Equipment includes the Pro-Tec helmet (p. SO103); CGF Gallet Hj M/96 kevlar helmet (PD 4, DR 5 for areas 3-4 and back of 5, 2.6 lbs.); Fv M/92 kevlar vest (PD 2, DR 12 for areas 9-10, 17-18, 5 lbs.) with optional ceramic insert (PD 4, DR 35 for areas 9-10, 17-18 from the front only, 12 lbs.); Dräger LAR-V rebreather (p. SO111); Trelleborg Viking Pro 1000 dry suit; and Litton AN/AVS-6 ANVIS night vision goggles (p. SO110).

Vehicles: Support vehicles include the Mercedes-Benz MB 240GD 4×4 light truck (p. SO123); McDonnell Douglas MD 500M Defender helicopter (pp. SO123, VL61-62); Sikorsky S-61 Sea King helicopter; Westland Lynx Mk 91 helicopter; Lockheed C-130H Hercules transport aircraft (p. SO125); RIB boat (pp. SO126-127); Zodiac inflatable boat (p. SO126); and Klepper kayak (p. SO126).

Sweden

Svenska Marinen (The Swedish Navy) Kustjägarna (The Coastal Rangers)

-- *Mod, Kraft, Spänst* (courage, strength, vitality)

The Kustjägare (KJ), officially formed in 1959, are part of the Amfibieförband (amphibious units) which in turn

army's Jägerkorps. They receive six months of special training. In addition to military tasks, the patrols also serve as law enforcement assets as well as park rangers; the entire north of Greenland is one big national park.

Each patrol spends four months at a time on patrol, and consists of two men, 11 dogs, and a 1,000-lb. sled. Each day, a patrol travels 15-18 miles in six to eight hours. In the evening, notes and observations are sent to Denmark via satellite link. Due to their special operational requirements, the patrols are armed with a bolt-action rifle less susceptible to the adverse weather conditions of Greenland. The obsolete Winchester G M/53 (originally designed at Enfield and made in the USA as the M1917, stats below) is used; it is considered reasonably effective against polar bears. For the same reasons, the Glock 20 pistol (p. HT109) is issued.

belong to the Kustartilleri (coastal artillery), a branch of the Swedish navy. All KJ battalions come under the 1st Amfibieregiment (Amf1). They are similar to the U.S. Marine Corps (p. SO32), their missions including reconnaissance operations along the very long Swedish coastline, amphibious raids against high value targets, and counterattacks against invading enemies. The Swedish coast is very difficult to protect and includes numerous small islands, which they KJ are trained to take back in case of a hostile landing. They are trained in more aggressive combat than most other Swedish units, including extensive close-combat training and sabotage. From their ranks also come the longer-serving Attackdykare (A-dyk -- attack divers), which are similar to Force Recon (p. SO29); they conduct beach recon, hydrographical surveys, small-scale raids, and sabotage.

Conscripts serve either 10 or 15 months with the KJ -- those serving 10 months are trained for section-level jobs, those serving 15 months are trained as low-ranking NCOs (Rank 0-1) to serve at platoon-level. Women are exempted from conscription, but may voluntarily enlist to either serve a conscript term (about 2% of all conscripts are women) or to become a professional officer (3%). However, no woman has so far been able to meet the requirements of the entrance tests.

Interestingly enough, Prince Carl Phillip served his conscript term with the KJ in 1999/2000.

Organization: Each of the six battalions in Amf1 consists of five companies: one HQ company including the Spaningpluton (reconnaissance platoon) -- a combat diver/LRRP platoon of Attackdykarna -- and an air defense platoon with two Bofors Rbs70 shoulder-fired SAM launchers; one heavy weapons company with sea mines and six Rockwell-Bofors Rbs17 HELLFIRE anti-shiping missile launchers (p. VL59); one mortar company with eight 81mm Tampella-IMI Grk84 mortars (use stats of the M29, p. HT121); and two companies of KJ. Each KJ company has 183 men, divided into a HQ platoon and three platoons. Each platoon has three sections; each section has two 6-man patrols. The Spaningpluton has three to four 6-man patrols. Battalion-level vehicles include 35 Strb90H assault boats (below) and 19 Klepper kayaks.

Template: 100 points. A soldier serving with the Kustjägare must take the Basic Skills below and choose a basic MOS. NCOs or commissioned officers, and those who have received special training, will also have the appropriate Special Skills package(s), which will increase template cost.

Modern Longship: The Stridsbåt 90H

This 53-foot vessel, internationally marketed as the Combat Boat 90, was specifically designed for amphibious combat in the Swedish archipelago. Its shallow draft, hydrojet propulsion, heavy armament, reinforced bottom to withstand rough landings, and forward bow hatch make it perfect for shoreline assault. The aluminum-hulled craft is armed with twin fixed 12.7×99mm FN-Browning TKsp machine guns (M2QCB, pp. HT119, SO121, and VL57) in the bow, and also features a ring mount above the cabin, which is fitted with either another heavy machine gun, or twin 7.62×51mm FN Ksp58B machine guns (MAG, pp. HT120, VL57) or a 40×53mmSR Saco Grsp grenade machine gun (MK19 MOD 3, pp. HT121, SO121, and VL57). Rails on the aft deck can take sea mines. The skipper, navigator, and section-leader have seats on the bridge. The engineer/gunner mans the weapon(s) installed at the ring mount amidships. The 1,100-cf main cabin accommodates 20 men plus their equipment. Further cargo is stowed in the bow or on the tarpaulin-covered aft deck. A passageway leads from the cabin to the assault hatch in the bow.

Each company of KJ has eight of these at its primary means of transportation.

Variants of this boat have been delivered to Estonia, Greece, Malaysia, Mexico, and Norway (there known as the S90N).

All components are TL7. The Strb90H burns 32.6 gallons of diesel per hour at routine usage. Fuel and 2,000 rounds of 12.7×99mm ammo cost \$1,713.

Subassemblies: Body +5, Open Mount 1 [Body:T] -1, Open Mount 2 [Body:T] +1.

P&P: 2× 466-kW standard diesel engines, 4× 4,032-kWs lead-acid batteries, 2× 466-kWs hydrojets.

Fuel: 594.45 gallons (Fire 8).

Occupancy: 3 RCS, 21 RS. **Cargo:** 500 cf.

Armor	F	RL	B	T	U
All:	3/5	3/5	3/5	3/5	4/20

Weaponry

Attributes: ST 11 [10], DX 13 [30], IQ 13 [30], HT 11 [10].

Advantages: Fit [5], and 10 points in additional ST or HT, *Desirable Advantages* (p. SO51), *Decorations* (pp. SO51-52), *Military Rank* (pp. SO52-54) or *Patrons* (p. SO54).

Disadvantages: Duty [-10], and -20 points selected from the *Desirable Disadvantages* list (p. SO56).

Basic Skills: Armoury (Small Arms) (M/A) IQ-1 [1]-12, Area Knowledge (Swedish Coastline) (M/E) IQ-1 [1/2]-12, Boating (P/A) DX [2]-13, Brawling (P/E) DX [1]-13, Camouflage (M/E) IQ-1 [1/2]-12, Climbing (P/A) DX-1 [1]-12, Driving (Automobile) (P/A) DX-1 [1]-12, First Aid (M/E) IQ-1 [1/2]-12, Guns (Light Auto) (P/E) (M/A) IQ-2 [1/2]-14*, Guns (Rifle) (P/E) DX-1 [1/2]-14*, Hiking (P/A) HT [2]-11, Jumping (P/E) DX-1 [1/2]-12, Knife (P/E) DX [1]-13, Language (English) (M/A) IQ-1 [1]-12, Language (Swedish) (M/A) IQ [0]-13, NBC Warfare (M/A) IQ-1 [1]-12, Orienteering (M/A) IQ [2]-13, Savoir-Faire (Military) (M/E) IQ-1 [1/2]-12, Seamanship (M/A) IQ-1 [1]-12, Skiing (P/H) DX-2 [1]-11, Soldier (M/A) IQ-1 [1]-12, Stealth (P/A) DX-1 [1]-12, Survival (Arctic) (M/A) IQ-1 [1]-12, Survival (Island/Beach) (M/A) IQ-1 [1]-12, Survival (Woodland) (M/A) IQ-1 [1]-12, Swimming (P/E) DX [1]-13, Tactics (Infantry) (M/H) IQ-3 [1/2]-10, Throwing (P/H) DX-2 [1]-11.

* Includes +2 for IQ.

Section-Level MOS Skills: Choose an MOS, and then spend a *total* of 8 1/2 points on them as follows: All skills that appear as Basic Skills (above) must be increased by at least one skill level. Any spare points should be put into other Basic Skills.

- *Assistance Section Leader:* Increase Tactics (Infantry); add Administration (M/A) and Leadership (M/A).
- *Combat Diver:* Increase Boating, Stealth, and Swimming; add Scuba (M/A).
- *Communications:* Add Electronics Operation (Comm) (M/A) and Telegraphy (M/E).
- *Courier/Sniper:* Increase Camouflage, Guns (Rifle), Orienteering, and Stealth; add Navigation (M/H) and Powerboat (P/A).
- *Demolition:* Add Demolition (M/A), Engineer (Combat) (M/H), Explosive Ordnance Disposal (M/H), and Traps (M/A).
- *Forward Observer:* Increase Camouflage and Stealth; add Forward Observer (M/A), Electronics Operation (Comm) (M/A), and Electronics Operation (Sensors) (M/A).
- *Heavy Support Weapons:* Add Guns (LAW) (P/E) and Gunner (ATGM) (P/A) or Gunner (Grenade Launcher) (P/A).
- *Light Support Weapons:* Increase Guns (Light Auto) (P/E) or add Guns (Grenade Launcher) (P/E).
- *Machine Gunner:* Increase Guns (Light Auto) (P/E) and add Gunner (MG) (P/A).
- *Medic:* Increase First Aid.

Special Skills:

2× 12.7mm Browning TKsp [Body:F] (400 ready each). Linked.

12.7mm Browning TKsp [OM2:F] (100 ready).

6× 800-lb. hardpoints for sea mines [Body:T].

Equipment

Body: 1,100 rounds of 12.7mm ammo as cargo; fire extinguisher system (in engine compartment); mini computer (Complexity 2) with Computer Navigation and 1-gig Database (maps); computer terminal; 30-mile radio with scrambler; military global positioning system; and navigation instruments. *Open Mount 1:* 55-mile navigation radar with no targeting and surface option (Scan 21).

Statistics

Size: 53'×13'×4' *Payload:* 7.92 tons. *Lwt.:* 18.64 tons (normal), 22.55 tons (max)

Volume: 2,832.5 cf. *Maint.:* 34.5 hours. *Price:* \$550,000.

HT: 12. *HP:* 2,250 *OM1:* 28 *OM2:* 200.

wSpeed: 20 (40 if Lwt. below 18.64 tons) *wAccel:* 5

wDecel: 2(5) *wMR:* 0.1 *wSR:* 5

Draft: 2.6

Design Notes

Body is medium, standard, with fine lines. Area is 1,500 sf. Armor is expensive, metal. Empty weight was raised from designed 27,140.96 lbs. to real-life 29,260 lbs. Cost was raised from designed \$336,501.70 to real-life \$550,000.

Commissioned Officer ** (+6 points): Add Administration (M/A) IQ [2]-13 and Leadership (M/A) IQ+1 [4]-14.

NCO ** (+3 points): Add Administration (M/A) IQ-1 [1]-12 and Leadership (M/A) IQ [2]-13.

** Military Rank [5/level] is required: Rank 1-2 for NCOs, Rank 3 for warrant officers and Rank 3+ for commissioned officers.

Customization Notes: Spend your remaining points (50 points, in a 150-point campaign, or no points in a 100-point campaign) to customize your character. Another -20 points in *Acceptable Disadvantages* (pp. SO56-57) and five quirks can be taken to get a further 25 points.

Weapons of Choice: Weapons include the Glock P88 pistol (Glock 17, p. HT109); FFV Ak5 assault rifle, FFV Ak5B assault rifle with SUSAT 4× scope and IR targeting laser (pp. HT103, MF12-13), Bofors Ak5C assault rifle with P-rail (p. MF11) for a Simrad KDN50 3.5× night vision scope (p. MF14), Bofors Ak5D assault carbine (all variants of the Belgian FN FNC, see "[Designer's Notes for GURPS Modern Firepower](#)," stats below, some of them fitted with Sure-Fire tactical lights, p. MF12, or 90-round MWG drum magazines, AWt 3.6); Accuracy International Psg90 bolt-action sniper rifle (modified AW, p. MF24) with 10× scope; Barrett Ag90B sniper rifle (variant of the Model 82A1, p. HT115, stats below) with 10× scope; Remington Model 870PS Wingmaster pump-action shotgun (p. HT112); FN Ksp90 LMG (MINIMI, p. HT120); FN Ksp90B LMG (MINIMI-Para, see "[Designer's Notes for GURPS Modern Firepower](#)," stats below); FN Ksp58B GPMG (MAG, p. HT120); FN-Browning TKsp HMG (M2QCB, pp. HT119, SO121, and W97) with Våpensmia reflex sight (p. MF13); Titanite Shgr2000 hand grenade (stats below); Colt M203 underbarrel grenade launcher (pp. HT121, SO121); Milkor Grg revolver launcher (MGL MK1, p. HT121) with Armson reflex sight (p. MF13); Saco Grsp grenade machine gun (MK19 MOD 3, pp. HT121, SO121) with Våpensmia reflex sight; FFV Pskott86 LAW (AT4, p. SO117); FFV Grg48C recoilless rifle (M2 Carl Gustaf, p. HT122) with 2× scope; FFV Grg86 recoilless rifle (M3 Carl Gustaf, p. SO117) with 2× scope; and Bofors Rbs56 BILL ATGM launcher.

Equipment: Equipment includes the NP Aerospace Hj90 kevlar helmet (PD 4, DR 6 for area 3-4 and back of 5, 3.1 lbs.); Åkers Krutbruk Ks94 kevlar vest (PD 2, DR 5 for areas 9-11, 17-18, 8.8 lbs.) with optional ceramic plates (PD 4, DR 35 for areas 9-11, 17-18, 22 lbs.); AGA Oxydive rebreather (3 hrs 20 min, 28.6 lbs., p. SO111); Trelleborg Viking Pro 1000 dry suit; and Simrad GN1 night vision goggles (p. SO110).

Vehicles: Support vehicles include the Agusta Hkp15 helicopter (A 109M, p. SO124); Kawasaki Hkp4C helicopter (licensed Boeing CH-46 Sea Knight); Lockheed Tp84 transport aircraft (C-130H Hercules, p. SO125); Dockstarvet Strb90H assault boat (see BOX); Marine Alutech G-båt section boat; Klepper kayak (p. SO126); and a single *Mala*-class swimmer delivery vehicle.

Adventure Seeds

Direct Action in Afghanistan: FKP Report on Operations in Afghanistan (Unclassified):

"Some 30 operators from the FKP were sent to Afghanistan and worked there as part of Joint Special Operations Task Force South, based in Camp Rhino near Khandahar. Late in February 2002, they took part in a mission to capture the Taliban governor Mullah Khairullah Khairkhwa. An USAF RQ-1A Predator drone had reported that he had left his stronghold in a convoy; after putting together a plan in only half an hour, an assault team consisting of SEALs and Danes boarded an AFSOC MH-53M Pave LowIII helicopter, escorted by an U.S. Army AH-64D Apache gunship. Thirty minutes later, it was all over; the team had interdicted his convoy and taken him alive."

The Royals: The Swedish Crown Princess has decided to be the first woman to make it through KJ training. The PCs could include fellow volunteers (or her bodyguards) struggling through the training together with her, instructors teaching either a hard-working woman with her own head or a spoiled child, or the princess herself.

Suddenly, a crisis develops in the Baltic Sea, and the KJ are ordered to re-take a small island. Will the princess excel in the mission? Who rescues her and the remnants of her patrol after being trapped and captured by the enemy?

*Note: In the real world, neither Kronprincessan Victoria nor her sister Princessan Madeleine has so far shown **any** inclination to join the military; on the other hand, all the male members of the Danish, Norwegian, and Swedish royal families have served.*

Nan Madol

The South Pacific's Answer to the Pyramids

by Steve Honeywell

On the southeastern side of the island of Pohnpei (formerly Ponape) in the Federated States of Micronesia sits Nan Madol, also called Nan Matol, one of the least-known examples of monumental architecture from the ancient world. Called the "Machu Pichu of the Pacific," the site has been heard of by few and is understood by far fewer. The Nan Madol site consists of a series of man-made islands constructed from basalt. Some of the wilder theories that have been constructed to explain the presence of the site included believing it to be evidence of the lost civilization of Mu and evidence of extraterrestrial visitors. In a word, it offers tons of possibilities for gaming, in no small part because almost no one has heard of it.

The History of Nan Madol

Pohnpei is located at 158.2 degrees east, 6.9 degrees north in the middle of the South Pacific. It is the central island in the State of Pohnpei in the modern Federated States of Micronesia, lying west of the island of Kosrae and east of Chuuk (formerly called Truk). The Federates States of Micronesia sit to the west of the Marshall islands and south of the Marianas. Yap, the westernmost state in the FSM lies almost directly south of Guam. (See <http://www.destmic.com/index.html> for an excellent, if somewhat small map of the islands and their nearest neighbors.)

According to the legends of the Pohnpeians, Nan Madol was the legendary capitol of the island of Pohnpei. The natives hold the ruins with a particular reverence. The local population speaks of the ruins in hushed tones, telling half-remembered stories of the original rulers who created the basalt islands. Access to the Nan Madol ruins is restricted, particularly at night. There are many tales of trouble befalling those who attempt to spend the night in the ruins or who try to extract the magical amulets from the site.

But what, precisely, is Nan Madol? Essentially, it is a collection of 92 man-made islets covering an area roughly 11 square miles, although the islands themselves have a total land area of approximately 200 acres. The islands were created by moving huge prismatic basalt columns from the northern and central parts of Pohnpei itself. These basalt columns were then built upon each other "log cabin style" and filled with coral boulders and earth. Presumably, thatched buildings were then built on top of these islands, and transportation between the islands was facilitated by the creation of canals. While mining techniques are not known precisely, it seems likely that the natural basalt flows were heated with fires, then doused with cold water to cause the rock to split. The resulting basalt "logs" were then transported to the site via boat. Evidence for the water transportation of the materials (as well as real-world evidence against supernatural and extraterrestrial assistance) comes from the many basalt logs found on top of the coral reef ringing the island of Pohnpei itself. For a computer reconstruction of the Nan Madol islands and a possible view of buildings there, see <http://www.uoregon.edu/~wsayres/NanMadol.html>. A small map, drawings of structures and some excellent photography of Nan Madol are located at http://www.janeresture.com/micronesia_madol/.

The islands themselves are significant in size. The walls of Nan Douwas, one of the more spectacular of the site's islets, reach as high as 25 feet. Many of the islets themselves are large enough to support relatively big structures. Some of the elite residences on Nan Madol were more than 450 square feet.

Radiocarbon dates suggest that the construction of Nan Madol began about 1500 years ago. Theories on why the site was built differ. Part of this difference comes from a certain amount of confusion over *who* built the site. Scholars who have studied the Nan Madol ruins agree that the area was used as the capitol of Pohnpei between 1000 and 1200 A.D. by a group of outsiders who called themselves the Saudeleus, or Sau Deleus. Some believe the site was created by the Saudeleus, or at least by labor that they gathered. This, however, does not fit with the radiocarbon evidence that

suggests Nan Madol was created nearly 500 years before the arrival of this group of conquerors. Other findings suggest the site was under construction for hundreds of years, and wasn't completed until the arrival of the Saudeleurs, who turned it in to a religious and cultural center. Other radiocarbon dates indicate construction of the site began in the 13th century.

Local legend holds that Nan Madol was the creation of the Saudeleurs, specifically two brothers named Ohlosihpa and Ohlosohpa who arrived with a large party and established themselves on Sounahleng, a small reef area just southwest of the main island. This location corresponds with that of the Nan Madol site. The two brothers divided Nan Madol into two distinct regions: Madol Powe (Upper Madol), which consisted of a priests' town, and Madol Pah (Lower Madol), which operated as an administrative center. Each of the 92 islets of the complex served as a place for one or more specialized activities.

Additional evidence that the elites ruled from Nan Madol is found in the archeological record. Artifacts that indicate rank in Pohnpeian society such as beads and ornaments are rare on the Pohnpei mainland but relatively common at Nan Madol. Additionally, these items are usually found in association with elite residences and important ceremonial structures. Also found in the ruins of Nan Madol is evidence of specialized activities. Stone pounding tools, potsherds, shell tools and bone artifacts make up some of the many elite items located on the islands. Finally, the remains of elite foods like parrotfish and dog have been found in Nan Madol.

Nan Madol was an attractive place for the Saudeleurs to rule from for one significant reason: It allowed them to remain apart from the main population of the island. This sort of distance granted them a level of mystery and intimidation. Certainly, the megalithic aspect of Nan Madol was instrumental in allowing the Saudeleurs to keep the native population in line with their desires. However, assertions that the "alien character" of the architecture of the islets does not seem to fit with the evidence suggesting that the natives of Pohnpei had been building Nan Madol for nearly half a millennium before the arrival of the outsiders.

The assertion of the early construction of Nan Madol is disputed by a significant fact: Before the arrival of the Saudeleurs, Pohnpei did not have unified rule, and consisted of a number of independent chiefdoms, unlikely to cooperate on the creation of a monumental site the size and complexity of Nan Madol. The Saudeleur reign unified the island. The new rulers recognized the claims of the leading clans in the different areas of Pohnpei, bestowing titles on different chiefs, further unifying the island and reconstituting the authority of the chiefs under the new rulers.

Ultimately, the actual time of the construction of Nan Madol remains in mystery. However, the various dates given from radiocarbon dating bracket the occupation of Pohnpei by the Saudeleur dynasty. It seems reasonable to assert that Nan Madol was, in fact, created under the direction of the Saudeleurs approximately 1,000 years ago. The creation of the islets for the Saudeleurs makes additional sense by giving them a specific location to rule from while keeping them apart from Pohnpeian society in general, allowing them to rule through fear and intimidation and through the demand of tribute.

In addition to its function as the seat of government, Nan Madol was also important in the religious life of Pohnpei society. Before the arrival of the Saudeleurs, many of the clans of Pohnpei venerated a sacred freshwater eel that inhabited many of the streams on the island. The Saudeleurs, however, worshipped other gods, and paid tribute to Nahn Samwohl, a great saltwater eel that lived in a shallow pool on the islet of Idehd in Nan Madol. At a time determined both by the change of agricultural seasons and divination, the Saudeleur priests performed a long ceremony of supplication and atonement called *Pwung en Sapw*. This ceremony ended with the offering of a turtle to Nahn Samwohl. Nahn Samwohl's acceptance of the tribute was seen as indicating the pleasure of the Nahnisohtsapw, the main god of the Saudeleurs. In addition to pleasing their gods with the sacrifice of the turtle, there was significant symbolism underlying the ritual. Where the freshwater eel venerated by the natives as sacred was small and harmless, Nahn Samwohl was large, foreign, vicious, and ravenous. It very strongly demonstrated the rule of Nan Madol's chiefs over the rest of the island and community. Additionally, the Saudeleurs called the three major political entities they had divided the island into "turtle" states.

An ancient tale further emphasizes the symbolic nature of the *Pwung en Sapw* sacrifice of the turtle. An altar constructed near Idehd called *Pei en Namweiiias* (Altar of the Life-Giving Turtle) commemorates the first sacrifice of

the turtle Liahnensokole, who accepted her sacrifice to Nahn Samwohl in order to save her sons. The turtle, a symbol of a nourishing, benevolent mother, represented the land. The Saudeleurs had forced themselves between the land and the people of the land. To preserve their own lives, the people of Pohnpei were forced to sacrifice their land to the Saudeleurs. This submission was ritually renewed at each ceremony and sacrifice of *Pwung en Sapw*.

Native folklore says that Nan Madol operated as a cultural center until the overthrow of the Saudeleurs by a warrior from the east, possibly the island of Kosrae. Archaeological evidence suggests this occurred sometime in the 16th century. With the destruction of the Saudeleurs, additional construction at Nan Madol stopped. As the power and influence of this foreign ruler abated, Pohnpei's independent chiefs reasserted themselves, causing a fragmentation of the overall leadership of the island. Nan Madol fell into disuse and slowly degenerated into the ruins that remain today.

Languages

For ancient campaigns, language will obviously be a problem, because the inhabitants of Pohnpei will not speak any Western tongue, and adventurers are unlikely to speak Pohnpeian. Language may be much less of a problem depending on the nationality of the characters and the time period in which the area is visited. Much of Micronesia was controlled by Spain from roughly 1850 through to the earliest part of the last century, and a few Spanish missions wouldn't be too out of place. It was controlled briefly by Germany, who lost control to Japan around the time of World War I. Japan held the islands until nearly the end of World War II, and during that time, indoctrinated the inhabitants in Japanese culture and language. The United States took control around 1944, and to this day, English remains one of the five official languages of the country, along with the native tongues Pohnpeian, Kosraean, Yapese, and Chuukese. For Nan Madol itself, Pohnpeian and English would be the most common tongues in a modern or nearly-modern campaign. In earlier colonizations of the islands, Pohnpei was often ignored, so Spanish, German, or Japanese-speaking characters will still experience difficulties in conversing with the natives.

Adventure Possibilities

Nan Madol is strange, little-known, and extremely exotic, making it a perfect place for adventuring. Seafarers searching for a passage around the world or a faster route to China might come across it, or pirates might find its isolation attractive and its primitive natives easily persuaded to guard their treasure. A **GURPS Swashbucklers** campaign would certainly find a lot to explore, and would have to deal with plenty of angry natives ready to make war against those who defiled their sacred land. Conversely, a group of explorers might arrive just as the native population was preparing to rebel against the Saudeleur rulers, and might be forced to take sides. For that matter, a **GURPS Low-Tech** campaign might easily take place on Pohnpei, with the characters as the rebels or the Saudeleurs themselves.

And what of the Saudeleurs? Perhaps they didn't come from other, nearby islands like Yap and Kosrae. In an Illuminated campaign, it's possible that they are a group of Westerners who have discovered a place of power and are exploiting the native population in order to gain access to it. Or perhaps the Saudeleurs are the remnants of the ancient civilization of Mu, or the advance party for a group of aliens planning a terrestrial invasion. In fact, the Saudeleurs might still be there today, coming out only at night, which is why the ruins are off-limits after the sun goes down. Nan Madol itself may have been created by aliens, and the basalt slabs that seem to serve as evidence of terrestrial construction may have been placed there accidentally by natives attempting to recreate the extraterrestrial building techniques. Nan Madol could be a recreation of Mu, or could be built on the tops of what remains of the lost civilization.

Micronesia was the site of several major naval battles during World War II, in no small part because of Japanese holdings there. Chuuk, which was called Truk at the time, was a major Japanese base for a large part of the war, until the Allied forces pushed the Japanese out. Certainly a campaign that takes place in the Pacific during WWII could encounter some strange goings-on on Pohnpei or at Nan Madol.

In a more modern campaign, the jealously guarded ruins of Nan Madol may hold vast power and sacred relics that can be used for either good or evil. Certainly, the site would have benefits for those attempting ritualistic magic. Perhaps the *Pwung en Sapw* rituals continue to the present day. The islets may be inhabited by restless undead creatures

looking for vengeance against those who steal the relics or simply feeding on the incautious who come to the islands after dark. Both **GURPS Spirits** and **GURPS Undead** offer interesting possibilities for what may still be crawling around the man-made islands. Naturally, this ties into a **GURPS Horror** campaign very neatly.

Nan Madol may also be the home of Things Man Was Not Meant To Know. Perhaps the curse talked about by the natives is a real thing. The islets themselves may have been laid in a particular pattern to keep something at bay (or summon it!) or may be guarding terrible secrets. Micronesia in general and Pohnpei in specific rest in little-known waters of great depth. Who knows what might be lurking below? Investigations may lead to the true nature of the Saudeleur masters who once controlled Pohnpei, a truth that proves to be almost too terrible to contemplate.

Whatever the campaign, Nan Madol makes an interesting place to visit and explore. As a seat of ancient power, a place of horror, a magical site bursting with occult power, or merely an interesting piece of architecture and archaeology, it can serve as a mysterious and potentially deadly location for adventures from the 11th century to today and beyond.

Amnerestes and Klathedros

Two Atlantean Overlords for *GURPS*

by Phil Masters

General Notes

These two *Supporting Cast* characters are designed as much to illustrate a point as to serve as NPC encounters -- although they should work just fine in the latter function, too. In fact, they could also work as sample PCs in a particular sort of game. The issue here is campaigns set in (or visiting) ancient Atlantis.

The version of that legendary land described in Chapter 4 of *GURPS Atlantis* can be used for all sorts of styles of play, from combat-heavy (bronze) Swords and (subtle) sorcery to tough "low fantasy" tales set during the end of a world. However, one approach that reading up on the subject of Atlantis may encourage involves melodramatic, romantic plots in and around the courts of that land.

This can be inspired by, in equal parts, Greek myth and Victorian fantasy stories. Both tend to focus on the courts and rulers of the places wherein they are set (with occasional excursions into the depths of the underworld, whether social or metaphysical). However, these are monarchies whose rulers have more or less absolute power, and who are driven more by their passions than by rational, realistic political concerns. In other words, this is high soap opera, with swords and (quite likely) interfering deities, and the world to play for, to win and lose. (Mostly lose, in fact. With the island scheduled to sink, sooner or later, this is an inherently tragic setting, though heroic individuals may survive to sail away into a lurid sunset with their true loves.)

PCs who have to visit these courts will usually have some specific objective in mind, and will have to thread their way through an overheated maze of ambition, decadence, and latent madness to reach their goals. (Alternatively, they may just become annoyed and look for ways to destroy the place.) However, ambitious groups with a taste for politics and a willingness to play unsympathetic or confused characters who may not even get on that well with each other may actually think about playing an Atlantean courtly campaign as "insiders" -- members of the court, perhaps even of noble or even royal rank.

Which is why the following characters might even be considered as model PCs, apart from their obvious functions as encounters or antagonists.

Amnerestes of Mneseusa

100 points

Age 16; 5'6", 135 lbs.; A dark-complexioned youth with a distracted air.

Attributes: ST 9 [-10]; DX 10 [0]; IQ 10 [0]; HT 10 [0].

Basic Speed 5; Move 5.

Dodge 5; Parry 4 (sword); Block 4.

Advantages: Claim to Hospitality (Atlantean aristocracy) [8]; Fearlessness +2 [4]; Literacy [10]; Luck [15]; Status 6 [25]; Very Wealthy [30].

Disadvantages: Chauvinistic [-1]; Hidebound [-5]; Youth (age 16) [-4].

Quirks: Enjoys praying and sacrificing; Quiet. [-2]

Skills: Animal Handling-12 [8]; History-7 [1/2]; Knife- 11 [2]; Lasso-10 [2]; Riding (Stirrupless)-8 [1/2]; Sacrifice-11 [6]; Savoir-Faire-12 [0]; Shield-9 [1/2]; Shortsword-8 [1/2]; Spear-8 [1/2]; Spear Throwing-9 [1/2]; Staff-7 [1/2]; Teamster (Horses)-8 [1/2]; Theology-12 [8].

Languages: Atlantean (native)-10 [0].

Equipment: High-class clothes; fine weapons, armor and chariot.

The second son of the Prince of Mneseusa (p.AT75) was brought up to revere the old ways, and the teaching *stuck*. While his older brother learned how to rule and play politics, he learned how to pray.

He became obsessed with piety, spending much of his time in the temples to Poseidon. However, events suggest to some people that, rather frighteningly, the patron deity of Atlantis may truly, darkly favor him for this. His father and brother, sailing home together from a trip along the coast, were caught in a sudden storm, and their ship was lost with all hands.

Amnerestes has thus unexpectedly inherited power. However, this seems to have affected him little; he continues his life of prayer and dedication, although he is slowly being drawn into political affairs.

Note: This treatment of the character leaves open the question of how far Amnerestes's peculiar good fortune is a genuine sign of deliberate supernatural favor -- either from Poseidon or from some other being. He is generally lucky, and attained the throne through an accident, and the events in question do seem to suggest the involvement of a sea god -- but it could all be chance (if such a thing really exists in this deity-infested setting). If he is genuinely blessed by a god, Amnerestes could have Extraordinary or Ridiculous Luck, a Destiny, or even Poseidon as a Patron. For a really strange effect, give him Extraordinary Luck and a -15 point Destiny (thus keeping him balanced as a 100 point character); this sets him up as the unwitting but seemingly unstoppable agent of terrible events.

Klathedros of Atlantis

100 points

Age 33; 5'8", 140 lbs.; A slim nobleman with a permanent worried expression.

Attributes: ST 12 [20]; DX 11 [10]; IQ 13 [30]; HT 11 [10].

Basic Speed 5.5; Move 5.

Dodge 5; Parry 5; Block 5.

Advantages: Status +4 [15]; Literacy [10]; Very Wealthy [30]; Voice [10].

Disadvantages: Dependent (concubine, 20 points, loved one, 6-) [-12]; Duty (to Emperor, 15-, nonhazardous) [-10]; Enemy (Eumelian faction, 6-) [-10]; Secret (conflicting loyalties) [-10]; Sense of Duty (everyone he knows personally) [-10]; Workaholic [-5].

Quirks: Romantic; Tolerant. [-2]

Skills: Administration-13 [2]; Animal Handling-12 [2]; Area Knowledge (Atlantis)-14 [2]; Carousing-10 [1]; Diplomacy- 15* [4]; Poetry-12 [1]; Riding (Stirrupless)-11 [2]; Savoir- Faire-17* [0]; Shield-11 [1]; Shortsword-11 [2]; Spear-11 [2]; Spear Throwing-12 [2]; Teamster-13 [2]; Tracking-12 [1].

*Include +2 for Voice.

Languages: Atlantean (native)-13 [0].

Equipment: High-class clothes; fine weapons, armor and chariot (at his home).

Klathedros is a court advisor, loyally serving the Emperor Poseidophilios of Atlantis (p.AT80). Born into the Atlantean nobility, he was friendly with people close to the ruling family from infancy, and when his shrewd intelligence and natural skills became obvious, they began to pay attention to him. When it also became obvious that Klathedros was intensely loyal, with no overwhelming ambitions for himself, he was honored with a place close to the throne, and Poseidophilios has come to lean on his advice in many matters, and to use him as an emissary for delicate and important tasks when he can be spared. Somehow, he has made only a few enemies so far, and they come from groups who really do not have the best interests of Atlantis at heart.

What few people realize is that Klathedros is *also* loyal to his boyhood companion, the Prince of Azaeton. He is not a man to discard one loyalty when he gains another; rather, he struggles to reconcile his friendships and duties, despite the Prince's private ambitions. Furthermore, he is being emotionally manipulated by his favorite Egyptian slave-concubine, a shrewd young woman who understands him perhaps better than he does himself. It is possible that she has connections to the enemies of the land, and while Klathedros could *never* be turned against Atlantis, he may eventually be steered into unwise courses of action.

Of course, Klathedros is no fool, even if he lacks some self awareness and has too romantic an idea of loyalty. Anyone else seeking to use him for their own ends would be well advised to tread very carefully.

The Blue Screen of Death

by Nate Fichthorn

"Life? I had one of those once. Forget what happened to it."

--Anon. Hacker

The Blue Screen of Death is, some claim, the natural outgrowth of computer technology, that literally steals the user's life, rather than metaphorically. Whenever the computer crashes, the Blue Screen of Death sucks away a portion of the life of the user(s) of that computer. How much, and how often is of course left up to the sadism of the GM involved.

Description

The Blue Screen of Death is, at the most basic level, a computer virus. It installs without the user's knowledge, occupies their system, disguises itself, and runs in the background. It increases the instability of any programs run on the computer, making them more likely to crash, and replaces the error screen with one that appears identical but steals away a portion of the user's life. Like most virii, the Blue Screen of Death (BSOD) can come hidden with nearly any other piece of software. However, due to its unique nature, the BSOD is difficult to copy. Even if the CD containing it is duplicated, the file is sent over the Internet, or other methods are used to try and copy it, chances are that the BSOD will not be copied along with the rest of the files. Whether this is due to the half-magical nature of the BSOD, hypertext copy protection, a conspiracy to place deliberate errors in all hardware that could copy it, or reasons unknown, no one is sure (or is saying).

History

The first mention of a program resembling the BSOD was in the early 1980s, involving a college student who was working on his school's mainframe. The student, while debugging a program, discovered a series of commands he didn't recognize. They proved to be the source of a number of unexpected errors within his program. Despite his best efforts, he was unable to permanently remove the errors and mysterious code, until he resorted to (unknown to the administrators) completely erasing and physically wiping the mainframe, then restoring it with a backup he had appropriated from another lab for that purpose. This story is, however, nearly impossible to corroborate, as within a few years the student alleged to be involved disappeared completely. The BSOD reemerged as the computer boom hit full stride. Since then, it has been discovered in computers across the world, but not as widely as would be expected, especially since the creation of the Internet. This discrepancy led to experiments which discovered the difficulty of copying the BSOD in working condition.

Despite evidence of the advent of the BSOD in the early 1980s, some have theorized that the BSOD may be somehow inherent in the structure of computers, even the earliest ones. They cite as evidence a number of early computer specialists who died young, such as Alan Turing. If true, this perhaps has more disturbing implications for modern society than any of the other theories.

Exactly how the BSOD works, as well as where it comes from, who controls it, and its purpose have been quietly speculated about in the small circles of people who are even aware it exists. Some say that the BSOD is a half-magical creation of a cabal of sorcerers, who are using it to remove their enemies and augment their own power. Others insist that it is a tool of the Illuminati, who tested it first on its creator. Perhaps it is being used by other dimensional horrors to provide an easy channel for them to feed. A group of modern technophobes has been blamed for creating it, to reduce the usage of computers. It could even be the cosmic correction fluid of Fate, designed to ensure that certain people die at a certain time. Perhaps it is the "white blood cells" of an AI, a self-aware portion of the Internet, or something that "lives" a great deal on the 'net (such as [Self-Aware-Meme Complex Alpha](#)). Any or none of these could be true, and the only people who know aren't talking.

Some of those who have studied the BSOD the most know of access codes that can allow one to exert limited control over the program. There are a number of codes, each of which provides different access to the user. Certain codes allow one to create a copy of the BSOD, to accompany any program of their choice, or change the frequency of the crashes it causes, perhaps even allowing someone with the proper codes to use the BSOD to kill . . . in a way that appears accidental. The danger with any of these uses is that the BSOD makes all programs liable to crash, including the controls for it. When the control panel crashes, it drains away even more of a person's life than normal.

In addition to who controls the BSOD, most speculation revolves around the question of: What happens to the life it drains? There are, again, a number of theories, though the lack of certain facts makes them all equally speculative. Perhaps it is being used to power some sort of magical ritual, or feed some kind of otherworldly creature. Maybe the life drained from people is then given to others, and it is being used to gain immortality. Perhaps it is used to power experiments, or give robots a "spark of life." Or perhaps it is just gone.

Adventure Seeds

Modern

- One of the characters purchases a new computer, that continues to crash incessantly despite everything done. Reinstalling programs, virus scans, even complete formatting and reinstallation do no good. No computer technician can find a hardware problem. Those who own or use the computer begin to feel tired and old, in addition to frustrated. Eventually, the computer's owner ends up in bed, sick for no discernable cause, and the party investigates, discovering rumors of a program that could be to blame.
- A celebrity, politician, or other public figure receives a free copy of new piece of software as a gift. Within a short time, his secretary dies unexpectedly, apparently of natural causes. Before very long, another secretary (or the celebrity himself) follows suit. Our intrepid investigators discover a trail which leads to a conspiracy, using the BSOD as a tool to assassinate their opponents.
- A number of people about town die abruptly, even young, perfectly healthy people. Others complain of feeling sick or drained. Upon investigating, a group of concerned citizens discover that all of those who had died recently bought software from a mail order house. Investigating, they find that the mail order house does not actually exist. Following the trail further, the group discover a group of sorcerers, using a number of mail order fronts to distribute the BSOD, and drawing the drained life energy back to themselves, to give themselves immortality.

Cyberpunk/Cthulhupunk

- A company has come out with a new android design, which more accurately acts and reacts like humans. These androids become an instant hit. First they replace the old style robots that had filled positions such as acting as cashiers, maids, or general servants; eventually they even replace human workers in other jobs, simply because they never need to eat or sleep, and never ask for raises. At about the same time, people begin to be found slumped over, dead, anywhere from in their cubicles to at home watching the latest VR flicks. All of the people found dead were using either software or hardware created by a single company, but not the one making the androids. Assigned to investigate the deaths, the agents discover the existence of the BSOD, and the secret behind the new androids, which are each charged at the factory with a bit of the energy/data drawn from the victims. This is the source of their nearly humanlike reactions.
- The runners are hired by a corporation to investigate the deaths of several of their best researchers, who were found at their terminals one morning by the janitors without a mark on their bodies. The corp suspects a rival, attempting to remove the important R&D people. The researchers were indeed assassinated, but not by ordinary means. Instead, an agent placed software on the researcher's computers which sent out a signal to hungry otherworldly entities, which, once in the computer systems, gradually devoured the lives and brains of the researchers.

Space Opera

- The players encounter a ghost ship floating in space with no distress beacon or other signs of disaster. Inside, the entire crew is found dead, without any signs of poison or other cause of death. Some of the crew, however, appear older than expected for crew; one even seems withered like a mummy, perhaps caused by some freak action of the environmental systems. All of the ship's systems are inoperable; the control computers appear to have crashed. Only the simplest emergency functions work. Even upon restarting the main computer and/or the other systems, the salvage team finds that they continue to be unstable. The original crew were actually killed by an AI that somehow occupied their ship's computer. The BSOD is a defensive mechanism; it crashed the systems whenever the crew tried to take action against the AI, and eventually drained them of their life, which strengthened the AI. Perhaps their memories or even personalities live on somewhere inside of it.

Pyramid Review

Pulp Zombies

Published by [Eden Studios, Inc.](#)

Written by Jeff Tidball

Illustrated by Steve Bryant, C. Brent Ferguson, Jon Hodgsen, Jason Millet, Gregory Price, Chris Stevens, and George Vasilakos

152-page b&w softcover; \$20.00

The "pulp" and horror genres are no strangers to each other, so it is no surprise that they are also a natural combination when it comes to creating RPG backgrounds. It is a combination best typified by the weird or cosmic pulp horror of the classic *Call of Cthulhu* game, while at the other end, there comes an "undead," but no less entertaining take upon the meld of pulp and horror. *Pulp Zombies* is the second genre book for the zombie-themed RPG [All Flesh Must Be Eaten](#), following last year's martial arts/Hong Kong cinema action combo [Enter the Zombie](#). Written by Jeff Tidball, the author of the boardgame *Cults Across America* and numerous supplements for *Ars Magica*, it presents an exploration of how to handle the shuffling corpse cortege in the pulp setting, along with advice upon the era, and several more "Deadworlds," each a campaign setting in which said cortege plays a big or small roll -- mostly big.

What *Pulp Zombies* is *not* is a historical sourcebook for the pulp decade of the 1930s. Instead it is set within the pulp "period," which lies roughly between the Wall Street Crash and the outbreak of World War II. Zombie Masters and players alike need not strictly adhere to the true events of history, but rather use and refer to such events as necessary *and* when it feels right. The book does give various facts and pieces of information about the era, which is both useful and enough to for most games of *Pulp Zombies*: the average price of houses, vehicles and goods, politics and history, travel and crimes, and so on. It does also include a few named guns for the period, such as the Mauser "Broomhandle" and Colt .45 pistols, and the Tommy Gun, which allows players to take what might be their character's signature gun. That said, the Unisystem mechanics employed in *All Flesh Must Be Eaten* are far from meticulously detailed, and it would be just as easy to select a weapon's statistics and match it with a player's cool gun of choice. Unfortunately neither this supplement nor the *All Flesh Must Be Eaten* rulebook list the whip as weapon or give any rules for it. There is a short note about the status of both women and other minorities during this time; it suggests for the sake of game play that such "niceties" are best left ignored.

Of course, pulp is not so much a genre as a printing format. Fortunately, most people have an instinct for what pulp signifies -- stories of exploration and high adventure, when men were real heroes, femmes were really fatale, villains were really villainous, and cheese was really cheesy, if not downright fragrant. This is especially true of the plots of the pulps; consider the tales of Doc Savage, Dick Tracy, The Shadow, and more recently, those of Indiana Jones. Indeed, the author plays up (or is it down?) to this feel and keeps the tone of *Pulp Zombies*, light, tight, and cheesy. The artwork is just as good, with some of it being particularly so.

In keeping with the genre, the players create characters who are real heroes, either in an ordinary way -- such as being a rocket scientist, nuclear physicist, Olympic gymnast, or barnstorming aviator; or in a genuinely outré fashion that might be innate invisibility or Mentalism powers. The power of the latter roughly equates to that of "costumed adventurers" rather than full-fledged superheroes. To simulate this feel of hyper-competent characters under the Unisystem, our pulp heroes are designed using a total of 70 character points. This places them on a par with the

Survivor and Inspired character category in *All Flesh Must Be Eaten*. As an option, and at the Zombie Master's discretion, players can design truly "Legendary Heroes" built on an increased total of 110 points. It should be noted that, unlike *Enter the Zombie*, this supplement does not allow players to play zombie characters as a default, though one or two Deadworlds do allow the possibility. Again, this is at the Zombie Master's discretion, as is letting characters use the various chi moves and techniques from *Enter the Zombie*.

Existing qualities and drawbacks such as resources and minority are slightly modified, but *Pulp Zombies* introduces several new ones. All appropriate to the genre, they include animal companion, force of law, (essentially legal enforcement powers), hyperlingual (language ability) and trademark (identifying signature move, such as leaving the ace of spades card at the scene of a crime). Unfortunately, the animal companion quality is not supported by a list of animals in *Pulp Zombies*. The author plugs the [Terra Primate RPG](#) as a source of full stats for these, and in addition it would provide full rules for creating ape characters, which could easily be added to a pulp zombies game!

Unlike other Unisystem games, characters do not need to possess the Gift quality before they can take the Mentalism quality, which itself allows the purchase of Mentalism powers. These are actually a slightly altered version of those given for the seer in the *Witchcraft RPG*. These abilities are quite low-powered and include Clairvoyance, Mind Control, Psychokinesis, Pyrokinesis (though not the reverse), Read Mind, and Telepathy. Each is measured in terms of strength (or raw power) and art (or experience and finesse), neither of which can be rated higher than the character's Mentalism quality. Throughout the chapter on Mentalism, a number of sidebars discuss the place of these abilities within the pulps themselves.

The other new addition to the rules also stems from a new Quality and a staple of the genre. Gadgetmaster is described as a supernatural quality. This is purely to quantify the Gadgetmaster quality under the Unisystem mechanics rather than describing it as supernatural in the traditional sense, and is rated in levels. These cannot be rated more than the highest of a character's science or mechanic skill. Each Gadgetmaster level gives a gadget slot, which can be filled by a device, created by the character. The higher a gadget's rating, the more slots it occupies, with the rating determined by its complexity and utility levels, further modified by it being miniaturized, possessing onerous requirements, horrible consequences, dangerous side effects, or conflicting with another device. Slots can be filled up with laboratory-created gadgets: totally predesigned items built with the consent of the Zombie Master and requiring no dice rolls or skill checks upon the player's part. Alternatively, the gadgetmaster can create them spontaneously, usually as the need arises within the game. An open slot or two is required before this is possible, as is a skill roll to see if the device performs properly upon its first use. Such devices are invariably miniaturized, making them easy to hide. The player need only be as inventive as the situation and game warrants, so a secret compartment containing a lock pick, or new formula blasting powder would be both appropriate if the gadgetmaster were to find himself handcuffed to a chair. Several sample gadgets are provided, but it would be easy enough to come up with more. Overall, the rules given for gadgeteering are delightfully simple and very easy to use.

For those wanting to cut to the chase, several ready-to-play archetypes are provided. They are mostly pulp heroes: the Academic Turned Explorer, Dare Devil (barnstorming aviator), Human Mountain (the strong, tough, but not-so-bright guy), the Masked Vigilante, Private Dick, and the Scientific Wizard. The exception to these is the Legendary Hero version -- built on 110 points -- of the Masked Vigilante.

Approximately half of *Pulp Zombies* is given over to new Deadworlds.

[SPOILER ALERT!]

The first of these is "The Hollow Earth." This is more than the average Deadworld, being an extended campaign outline. It opens with a worldwide trip in search of ancient antiquities and ends with a journey deep into the bowels of the Earth. There is room for lots of Indiana Jones-style adventures in the first part of the campaign before taking a creepy turn for the worst in the second. The highlight of that second half has to be a zombie T-Rex, which should throw for a loop any player used to the average humanoid zombie.

The second Deadworld is also world-spanning, but "Zombies, Inc." looks to the prominence of gangsters and the mafia in Chicago during the time of *Pulp Zombies*. As the name suggests, somebody is using corpses for crime and the best or worst of gangland's most notorious are coming back after their deaths to continue their spree. Zombies, Inc. is

pitched at a masked vigilante-style type of game, with the team being assisted by the legendary hero Zaxor, known as the "Pinnacle of Humanity."

Taking a leaf out of *Mars Attacks* -- both the trading card set and the Tim Burton movie -- is the tongue-in-cheek "They Want Our Women!" Coming in small, medium, and large-headed versions, the Martians want our women; when they have them, they plan to zombify each and every one of them. Of course, the exact process happens off-screen (as befitting the pulp game), but another result is that a Martian who successfully zombifies an earth woman also increases its head size and thus its status. Naturally this could be played out in a 1950s-set ***All Flesh Must Be Eaten*** game, but it is just as fun, if not more interesting, to have the characters deal with the swollen-headed invaders with pulp technology. Oh, and woe befall any player who tries to deal with them with a spin or two of that ol' Slim Whitman.

"Scattered Pulp" is not one Deadworld, but four mini-Deadworlds. The first of these is "War Of The Worlds Part II," in which the Orson Welles broadcast sets up a cry-wolf situation when "Re-Entry Zombies" plummet to Earth from orbit and fail to burn up! A pleasant visit to Chinatown turns desperate when all-Asian zombies beset a group of bright and cheery tourists -- that is, the player characters. There is potential here for crossover with the "Flesh Eaters in Little China" Deadworld from ***Enter the Zombie***. "The Maltese Zombie" is, of course, inspired by the classic noir movie and has an amusing domestic set-up. The last of these mini Deadworlds is the Lovecraft-derived "Hannibal East: Reanimator."

[END SPOILER ALERT]

Pulp Zombies is rounded out with a short bibliography followed by a short piece on "Finding Pulp" -- the letter contributed by James Lowder, who also pens the supplement's opening, entertaining fiction that touches upon the high points of the genre. "Finding Pulp" is a useful and interesting article, which matches the advice given throughout the rest of the volume. Particularly important to the Zombie Master will be the "Golden Rule Of Pulp Zombies: Too Much Is Never Enough," as well as the "Zombie Master's Credo: Bring on the Cheese!"

Pulp Zombies is never going to work as a sourcebook for running straight games set in the pulp era, but then it isn't intended for that purpose. Instead it presents a slight but fun take upon the period that touches all the genre's key points for character creation. Then it gives them an undead twist and a slice of everyone's favorite dairy product in each of the three big and the four smaller Deadworlds. Just serve, and wait for the players to scream, slice, and groan.

Pyramid Review

Terran Empire (for Star Hero)

Published by [Hero Games](#)

Written by James Cambias and Steven Long

Art by Nate Barnes, Andrew Cremeans, Storn Cook, Keith Curtis, Albert Deschanes, Nick Ingeneri, Bryce Nakagawa, Brad Nault, Newton Ewell, Klaus Scherwinski, Greg Smith, Chris Stevens, Derek Stevens, and Richard Taylor

208-page softcover; \$24.99

Terran Empire is the first of a planned series of settings for **Star Hero** campaigns, a space opera setting a la *Star Wars*. While it is linked into the Hero Universe metasetting (described in the "Free Stuff" section of the Hero Games website), it could easily be run outside that setting.

The book opens with an overview of the Empire's nearly three centuries of existence. Admiral Marissa DeValiere's takeover of the Terran Union in 2436 is seen by later historians as the beginning of the Empire, though Marissa herself never claimed the title of Empress. The DeValiere line (and one non-DeValiere regent) would rule the Empire for its entire lifespan. While it had some close calls, it eventually covered approximately one-fifth of the galaxy, and its influence stretched even further. Unfortunately, not all the DeValieres were as competent as Marissa I had been. Under later Emperors, power shifted to the military and the secret police. Planets began to rebel against Imperial tyranny, joined by some sections of the Imperial fleet itself. The rebels also established diplomatic relations with two other governments. Finally, in January of 2703, the rebellion and allied forces managed to defeat the remaining Imperial ships. Emperor Sigismund and his elite guards were shot by the crew of his own flagship, and the Terran Empire came to an end.

The next section is a look at the major races of the galaxy. There are full descriptions and package deals for 25 races, plus four genetically-altered subraces of humanity. Seven other races have sufficiently detailed sidebar notes that they could be used in a game as well. Most of these races are not part of the Terran Empire, but there's enough contact with the other powers of the galaxy that most could be used as player characters with the right game setup.

The political structure of the galaxy is the subject of the next chapter. This varies throughout the era, so the authors have chosen to concentrate on the reign of Marissa III (2633-2651). This is a period when the Terran Empire is at its peak strength and size, but when the seeds of its fall have begun to sprout. While the Empire gets most of the chapter, there are also discussions and maps of the other major powers of the galaxy. The following chapter, "Life Among The Stars," also concentrates on the Terran Empire. It has an assortment of information ranging from ticket prices for a first class space liner to criminal organizations of the setting to the Galactic Church of the Creator.

Character creation is next. There is a wide assortment of package deals, for everything from an Imperial Marine to a freelance artist or entertainer. There is no package deal for a PC robot, since there are too many variations possible, but there is a discussion of appropriate Social Limitations for a robotic character. There is also an extensive discussion of skills, perks, and disadvantages in this setting. Psionics get their own section, as do cyberware and bioware (which isn't a major feature of this campaign, but still present).

The next two chapters are the hardware section. Chapter Six is the general tech chapter, with a discussion of the ATRI Scale (the "Tech Levels" of the setting, alluded to in ***Star Hero***). Game writeups are included for a range of different weapons, defensive systems, computers and miscellaneous gear, plus the dreaded Dracon battlesuit. The summary charts include the year each item was invented, for those who choose to set their games in a different period of the Empire. Chapter Seven is the spaceship chapter. The first section looks at different ship components. A GM who doesn't have time to build a spaceship entirely "from scratch" could run through this section and pick out appropriate pre-written drive systems, defenses, weapons, sensors, and life support. The second section has 10 fully written-up spaceships for this setting.

The final chapter is intended for GM use. It has a brief discussion of campaign guidelines (the Terran Empire assumes a Heroic-level game) and themes, but the meat of the chapter is the GM's Vault. This section is full of spoiler-warning information -- if you want a character sheet for Marissa III, the facts on the Mandaarian Exodus, or the real story on the supposed "Xenovore Fertility Statuettes," it's in here. The book wraps up with a detailed index.

Some typos snuck through, and the Hero logo on page 154 overlaps a couple words, but overall the book is quite readable. The galactic maps are clear, and are dual-scaled; one scale measures thousands of light years, the second measures transmission time on the Hyperspace Relay Network. Yes, it's possible to be too far away from HQ to get orders immediately, something explorer PCs will probably enjoy. The artwork is largely grayscale, and is well done.

A *Hero System 5th Edition* GM who wants to run a science fiction game should definitely take a look at ***Terran Empire***. GMs running other systems may want to look at it as well; the package deals and technology writeups might not be as useful, but the history and cultural information could be used in any game. There's a lot of useful information for players in this setting as well, if your GM trusts you not to use any information from the GM's Vault (or intends to change it). It's a solid start to the new Hero Games' plan to support more settings than ***Champions***.

--Leah Watts

Running The Adventure, Part II

It Was A Dark And Stormy Night . . .

Where was I?

Ah, yes. I'd begun driving down that road to damnation, also known as ["How do I run a roleplaying session?"](#) We'd taken a detour last week to look at groups splitting up, and now we rejoin our series, already in progress.

In The Beginning . . .

In the classic art tutorial book *How to Draw Comics the Marvel Way*, one of the sections compares two art samples, both drawn from the same outline, which basically boils down to "The Avengers are standing around their headquarters when a monster breaks in." Now, the first "Don't Do This" sample has a bit that I'm not sure I can do justice to . . . but I'll try. (For those of you with the book, it's on page 119.) The first panel depicts the monster barging in, the fragmented bits of the wall flying around. And at the bottom of the panel are the heroes, "standing around . . . like three simpletons" (to quote the advice pointing out why it's a bad illustration). The blank slates of their faces just beg for all kinds of invented dialogue:

Vision: Help me name my pinkie toe.

Captain America: Jell-O is nummy.

Iron Man: At least no monsters are attac . . . what the?!?

In short, it's a wonderfully bad picture.

Now, what does this have to do with how I run adventures?

Well, I've always pondered that picture whenever I've gone to start an adventure. It helps keep me focused, and reminds me that, no matter what monsters barge in, the heroes are never just standing around, naming toes and contemplating Jell-O.

So once the pre-game show is said and done, I try to start the adventure.

How, exactly, this happens varies wildly. In my *Star Trek* campaign, for example, I had scripts that I gave the players at the beginning of the game (usually detailing some aspect of shipboard life or other subplots that have been brewing). Other times I have a specific opening in mind, regardless of past continuity . . . like the **Werewolf** game where the PCs "woke up" in an asylum, with a stern-looking doctor scolding them that, unless they could see past their collective delusion, they would never get to leave.

But most of the time I don't have an opening, per se, so much as a catalyst. So let's say we're running my Mad Mayor plot (detailed in full [two months ago](#)). The first scene I have written down on my flowchart is a gala ball the PCs will be attending.

Personally, I've found that most of the time I like to work in adventures as organically as possible. I do this by determining what the PCs have been up to, and working in the catalyst into the game. So once game has started, I'll usually ask something along the lines of, "It's downtime; it's been [X] days/weeks/whatever since your last adventure. What have you all been up to?" I'll then listen to them, seeing which of the hooks I can incorporate into starting the adventure.

So our mayoral transcript might resemble:

GM: "It's been about two months since the last adventure. What's everyone up to?"

Player 1 (Bob): "Hmm . . . I've been trying to raise my Martial Arts skill, so I've been meeting with Sensei Shyu when he's available. I've also been spending time with my aunt; I've been trying to make contacts with publishers for her book."

Player 2 (Carol): "I've been maintaining my mob contacts; I'm also trying to see if I can't find any blackmail material to leverage against any professors of Aztec Mythology, so I can get them to analyze that book I found last adventure."

Player 3 (Ted): "(sigh) You couldn't ask them?!? (smiles) Anyway, I actually have a *job*, so I spend most of my time being a policeman. I'm also part of the Big Brothers/Big Sisters program, so I try to make sure my charge Jackson is on the straight and narrow."

GM: "Okay; things have been relatively quiet lately, until one Monday when you all receive more mail than normal. Sure, there's the usual bills, junk mail, and magazines (depending what you read), but there's also something else that catches your eye. Bob, you got two letters from publishers. Ted, you got a letter addressed from Pioneer Middle; you know that's Jackson's middle school. Carol, you have an official-looking envelope from the IRS. Oh, and all three of you have received a beautiful embossed oversized envelope; it looks like an invitation."

Note that I tried to give everyone a bit of advancement in their subplots; it's not necessary, or even always feasible, but I like to do it if possible. All of the elements in the sample above are either non-events (the publishers say, "Thanks but no thanks;" the school letter is from an appreciative teacher) or open-ended (the IRS letter is from an agent who wants to schedule a meeting next month or a possible audit). Note that all of these elements were made up on the fly; they were all designed either to provide subplot feedback or act as place-holders for future plots.

Regardless, that transcript represents how I try to avoid the monster comic panel mistake: I don't make the PCs stand around like simpletons, waiting for the plot to erupt through their wall.

Now, depending on the hook, I quite possibly only need to incorporate *one* of the heroes into the adventure (the assumption being that he'll round up his buddies); in this case I'll usually [incorporate the hook privately](#), and let the adventure go on from there.

Now, this assumes that I have a definite way the adventure is going to begin. Often I don't; in those cases, I'm certainly not ashamed to ask the players to come up with a reason:

"Okay; the annual crafts fair is coming to town. How would your characters react? Would they attend? If so, when?"

Or

"Okay, folks. What would it take to get your characters to Paris?"

And I'll generally get answers along the lines of, "I want to patrol the fair and make sure no one is doing anything evil there," or "Hmm . . . maybe I'm on a diplomatic mission to Paris from my liege?" Then I'll work in their ideas for why they would be at a place I need them to be.

I first used this technique with apprehension; after all, it feels tremendously railroading. But I've never had a player complain; I think they like the freedom of influencing the plot. After all, they may know (on some level) that if they object to the fair or Paris, then by gum we're not going to have an adventure tonight; it's better to go there on their terms than wait for the Crochet Mallet Of God to whack them into where they need to be.

Okay; I now know how I'm going to begin the game. So all I need to do is run the scene . . . and build toward my [pivotal piece](#).

And how do I do *that*?

Tune in next time, as our glacially paced series continues.

--Steven Marsh

3 - 8: You are truly a lousy lover. She turns you into a lizard. That's the end of this character! Close the book."

Designer's Notes: *GURPS Deadlands: Varmints*

by Michael Suileabhain-Wilson

The *GURPS Deadlands* line presents interesting challenges. Each book must condense many, many pages of Pinnacle's previous work into a concise, coherent whole, while still accomplishing something original within that framework. The sheer mass of the existing canon can be intimidating, and finding for the tenth time that your nifty idea is inconsistent with some minor piece of precedent is . . . frustrating.

It's no unique dilemma, of course. Every GM who's ever tried to run a game in a setting with strong and ongoing campaign support has faced a similar problem. The strength and vigor of the setting are the reason you would want to play in it in the first place, but there's little point in playing a game with no room for your own group's contributions.

The easiest solution is to throw continuity to the winds and do what seems best, but it's not always the best one. It doesn't help if you want to be able to use future releases for the setting; if your group rotates GMs, messing with the setting willy-nilly may not go over well. Even in a world that's solely your own creation, you may eventually be stymied by what you have yourself established in play. And for those of us writing books, licenses and contracts have something to say on the matter as well.

Over the years, I've developed a bag of tricks that I use to work through these sorts of situations, and *GURPS Deadlands: Varmints* worked them to the limit. I don't pretend that these methods are exhaustive -- there are countless ways to approach world development -- but they do work. Most of the tricks and techniques that I use fall into four categories: implication, connection, patterning, and intersection.

Implication

Implication is a very simple technique; it's really just plain logic. You use it by examining any one element of the setting -- a monster, a character, a piece of history -- and asking what the natural consequences of that element must be. Usually you'll be picking out elements which define the difference between the fictional setting and our own reality, but examining familiar elements of our world can also be useful, sparking possibilities that could have been, but weren't. Many of the best alternate histories begin this way.

It's usually especially productive to focus on how a setting's elements affect people's everyday routines. Given that a certain setting element exists, how does that change the way people live their lives? Do they deal with it directly, or does someone shield them from its implications? If the latter, who takes on that role? In many settings, the answer to that question is "the PCs," but it's still a good question to ask.

This type of implication work was essential to the Templates section. Thinking about how the people of the Weird West would deal with the monsters I was writing about helped generate a slew of ideas for character types. Each major type of varmint spawned at least one template.

I began with weird animals. When a steer-sized wolverine comes to town, something has to be done about it. But who takes on the task? Regular law enforcement would be overwhelmed; they already have their hands full with the mundane lawlessness running amuck in the Weird West. The Union and the Confederacy each maintain agencies to deal with exotic threats, but they can't be everywhere at once. Normal citizens aren't trained or equipped to handle man-eating cattle or intelligent swarms of bees.

So who do you call when a demon-possessed dog holes up in your basement? The town dogcatcher, presumably. It seems likely that when faced with an animal no one else has the time or inclination to wrangle with, citizens would turn to what animal control authority there is. Now, if dogcatchers found themselves faced with magically enhanced

critters, how would they deal with that? They'd need enhanced powers, both legally and mechanically; your average Weird West dogcatcher would have to have some level of combat training, and would probably be deputized by the local sheriff and empowered to convene a posse for the purpose of clearing infestations. A template was on the make.

The same process, applied to the undead, was equally fruitful. Who deals with corpse-related problems? Probably the coroner. But the coroner ought to be an experienced doctor, and probably none too interested in patrolling the graveyard in the wee hours of the morning. Thus, a clever coroner hires assistants -- assistants with strong stomachs, a little medical experience, and a good touch with an axe-handle. They can rebury the restless dead, chase off grave robbers and resurrectionists, and investigate weird deaths that the coroner doesn't have time to handle personally. It's an interesting character concept that is implied by the existing canon but not explicitly discussed.

Another excellent way to use implication is to scan the established canon for possibilities that are already explicit, but not developed. For example, original **Deadlands** states that manitous cannot possess living people unless the manitou is invited in or unless the subject is extremely weak and infirm. The "extremely weak and infirm" hook then gets no further attention. So I ran with that and created the senescent zombie: a monster created when a manitou possesses a senile person, fakes a miraculous recovery, and does its best to sow dissension in its host's family before going on a final killing spree.

It's hard to go astray with implication; if your logic is sound, its produce is usually uncontroversial. The only real way for implication to go awry is if you arrive at a conclusion that makes sense, but contradicts some other portion of the canon -- in which case you simply have to cast about for a line of reasoning which leads to an unoccupied niche.

Connection

Connection is a slightly more complicated technique than implication; where implication uses a single element of the setting, connection requires at least two. Connection entails picking out elements of a setting that ought to have a relationship but do not, and then creating that relationship. If you have two major NPCs who logically must have met at some point, figure out how they feel about each other. If the discovery of a new super-steel occurs the year before its inventor's nation wins a smashing military victory, figure out how the super-steel contributed (or, if there's a crushing defeat to explain, how the government put all its eggs in a super- steel basket).

Varmints had more than its share of relationships waiting to be discovered. Material from several different books, developed independently, went into **Varmints**; in a number of cases, issues appeared when different monsters were placed side by side for the first time. For example, the **Deadlands** canon mentions three different intelligent amphibious races, all of which live off the coast of California. No interactions between any of them are mentioned. When they appear in different books, it's not a problem, but presenting them all at once with no context seemed like a bad idea.

Fortunately, I was also working on a section called Antagonistic Peoples, dedicated to monsters that were both intelligent and civilized (well, organized, anyway). Individually, all the aquatic races were questionable to include under that standard . . . but what if they were allied against humanity? The Law of the Ocean -- a loose alliance of undersea peoples dedicated to exploiting the bounty of the land -- was born.

The great advantage to using connection is that it patches holes in existing material while it creates new material. It requires you to ferret out the bits of a setting which are underdeveloped or even contradictory. As a result, it produces a setting that feels more seamless and organic; its component parts have strong relations to each other, and you can avoid the odd element which feels tacked on.

This can be difficult. When working so closely with preexisting material, it's a challenge to walk the line between supplementing precedent and changing it. The goal should be not merely to avoid contradicting canon, but to create material that flows naturally from what came before.

Patterning

To use patterning, you find patterns within the canon, and then complete them. Patterns can appear anywhere a setting has a set of linked elements. So if, for example, your secret-magic campaign includes super-powerful geomantic dragon spirits, and you've already introduced the Dragon of North America and the Dragon of Asia, it seems likely that there are also Dragons of Africa, Antarctica, and so on. You'll have to answer some questions such as whether Australia gets a dragon all to itself or if it has to share with Oceania, and whether subcontinents like India and Greenland get some sort of minor spirits. However, those sorts of questions are precisely what gives patterning its value, and are usually well worth answering. Just in writing this, I find myself wondering whether there was once a Dragon of Atlantis, and what happened to it if there was.

Ironically, I didn't initially think to use patterning while working on *Varmints*; I usually find it more useful when I have more latitude for development. However, one of my proofreaders commented that since Deadlands has ice zombies, fire zombies, and water zombies, the logic of computer RPGs would seem to demand a poison zombie. I thought it was a pretty clever idea, and the Noxious Dead -- a toxic, oozing zombie created by industrial accidents -- came out of it. Thinking about it now, I realize that I missed the opportunity for a lightning zombie, which would have tied in well with mad science. Fortunately, it's not too late.

Patterning becomes even more useful, however, when you realize that it's a commutative process. You can link two sets of concepts to each other through a third set. To return to our secret-magic setting, if you described the Dragon of North America as red and the Dragon of Asia as green, you could opt to link the set of continents, through the set of dragons, to the set of the colors of the spectrum. At that point, you have access to all the concepts that colors are linked to. What does it mean that Communism, which controlled much of Asia for most of the twentieth century, took red as its color? Coincidence, or hidden magical offensive from North America? Now you can bring in the Hermetic system of correspondences to find out which astrological signs and planets correspond to which colors, and then it gets too complicated for me to get into right now.

When patterning works right, it can be extremely powerful -- so much so that it can be worth it to introduce patterns into a setting just to facilitate it. Continents, planets, classical elements, Knights of the Round Table, popes, World's Fairs . . . any set of related elements can be linked up to another set, suggesting new ideas and suggesting new connections between previously unrelated elements. It's an incredibly fertile process.

Its power, however, is also its weakness. As I said before, I usually prefer to use patterning when I have a lot of elbow room -- most often in the early stages of developing a setting. Patterning wreaks a lot more havoc on a setting than implication and connection do; it's more useful for generating new material than filling in gaps.

Intersection

Sometimes, you just come up blank, and you don't even know where to begin. In these moments, intersection is

Galvanic Dead

Most mad science devices rely on steam and hydraulics to give them life, but mad science has also harnessed the power of the thunderstorm -- electricity. And wherever there is new technology, there are new industrial accidents. Many a hapless worker has placed a hand wrong and died instantly, titanic forces surging through his flesh.

After such an accident, a manitou may seize the opportunity to reanimate the electrified corpse. The manitou's magic preserves the lethal charge within the dead flesh, creating a galvanic dead.

Galvanic dead are clearly identifiable by their rictus grins and jerky, spasmodic movements. These unpredictable convulsions, so unlike the usual sluggish undead, make it difficult to draw a bead on a galvanic dead.

Salt Lake City is plagued with galvanic dead; the city's plethora of industrial works are matched by an equal number of industrial accidents, and the galvanic dead's ability to damage intricate machinery with a mere touch is particularly troublesome in the highly technological City of Gloom.

GURPS Galvanic Dead

ST: 11	Move/Dodge: 7/8	Size: 1
DX: 12	PD/DR: 0/0	Weight: 150 lbs.
IQ: 11	Damage: 1d cut	
HT: 12	Reach: C	Habitat: Any

useful. It's time-consuming, but systematic and very productive.

Intersection requires you to first compile a list of the setting's most important elements. How many elements make up that list is up to you. Next, construct a table with that list on each axis. Finally, consider the possible interactions at each field of that table. Each intersection may have several potential interactions; mull over the ideas for a while.

So, as an example, let's make a partial list of the elements of *Deadlands*. For the purposes of this argument, let's use the following elements: undead, weird animals, the frontier, and mad science. One could easily add dozens more to the list, but space (and my list of convenient examples) is limited. Our table, therefore, looks like this:

	Undead	Frontier	Weird Critters	Mad Science
Undead	xx	Railrunner	?	Smoke
Frontier		xx	?	?
Weird Critters			xx	Vitriolecat
Mad Science				xx

Three monsters from *Varmints* fit into this table. Intersecting undead with the frontier generated the railrunner, a spike-fisted undead who haunts the railroads which opened up the West. Combining the undead with mad science created the smoke, a cloud of industrial outgassings controlled by an errant soul. This intersection could also have generated the galvanic dead (above). The intersection of weird critters and mad science produced the vitriolecat, a skunk-like beast that sprays a potent industrial solvent from its glands.

The empty fields in the table represent combinations I wasn't able to use during development. This is one of the beauties of intersection; it produces so much material you don't have to use it all. Frontier plus weird critters seemed adequately explored in the setting, and undead weird critters seemed like overkill. Though, as I think about it, a weird critter that *feeds* on the undead would be pretty cool. Another day, perhaps.

Intersection is also a powerful tool for creating crossovers. Rather than intersecting a list of setting elements with itself, make a list for each setting to be crossed, and intersect the two lists. Even a short pair of lists will generate dozens of ideas for your crossover.

Skills: Brawling-15; Climbing-13.

Special Abilities:

Damage: A galvanic dead may bite for 1d-1 cutting damage, or claw for 1d cutting damage. The coruscating electricity around the galvanic dead makes its blows more painful than ordinary; its victims suffer shock penalties from its wounds as if it had done one more point of damage than it actually did.

Discharge: When a galvanic dead is struck with a conductive object, such as a metal weapon, some of the electricity in its body will discharge up the weapon, doing 1d-1 electrical damage to the wielder. Insulating gloves will protect against this discharge.

Horrific Appearance: See p. 7. Victims are at a -4 penalty to Fright Checks.

Imperturbable: See p. CI26.

Recharge: A galvanic dead, given access to an adequate source of electrical current, may tap that flow to restore its own charge, which the manitou can then use to restore its body. A galvanic dead may heal 1 hit point every other second as long as it remains connected to the current source. The zombie may do nothing else while recharging. A current source must be industrial-scale to be usable; batteries and electric fences won't do the job.

Sabotage: Galvanic dead may derange the delicate works of mad science simply by touching them. Any mad science contraption touched by a galvanic dead must immediately roll for a malfunction; the device will malfunction on a 15-18 (see p. DL59 for more details).

Undead: A galvanic dead has the Independent Body Parts (Detachable Head), Injury Tolerance (No Blood, No Neck, No Vitals), Vampiric Immortality, and Undead Invulnerability advantages. It cannot be stunned or fatigued, and it suffers no debilitating effects from damage. Its focus is its head.

Deadlands Galvanic Dead

Pace: 9
Size: 6
Wind: -
Error: 9

Worked Example: The Chinese Underworld

Now let's put this all together and see what happens when we apply these techniques to an ill-defined portion of the *Deadlands* universe -- the Chinese Underworld.

According to *Deadlands* canon, many of the monsters that stalk California's Great Maze (and, presumably, China) hail from a different plane of existence called the Chinese Underworld. This Underworld seems not to be the same place as the Hunting Grounds, the origin of Native American and European legendary beasts. The details, however, are left vague -- vaguer, even, than the descriptions we get of the Hunting Grounds.

On one level, this is all well and good; it leaves the field open for future development. At the same time, however, it gives you very little guidance as to how to proceed. The temptation is strong to ignore the question and simply use Chinese monsters as superficial mooks. While I'm all for superficial mooks in RPG, I think it's better to make that choice deliberately than to be driven into it by a vague background. There are also a few elements of Chinese-inspired monsters that seem inconsistent with the rest of canon; reconciling those elements is another goal to aim for.

I'll mostly be using implication and connection here. Patterning and intersection are really at their best when you work with a world in its entirety. We're also trying mainly to flesh out background, which is where implication and connection really shine.

First Principles

To begin with, it seems likely that the Chinese Underworld ought to be at least linked to the Hunting Grounds. There's precedent that may suggest multiple spiritual planes, but keeping things simple is usually wise. Besides, the supernatural critters of the Far East seem to have been affected by the Great Spirit War and the Reckoning as much as their Western brethren, which wouldn't make sense if they drew power from a different source.

So we have two setting elements that require a relationship. The simplest relationship in situations like this is to decide that the two elements are actually one and the same. However, some distinction seems valuable. The true identity of the Reckoners who rule the Hunting Grounds (which I'll refrain from mentioning, though at this late date it feels somewhat like concealing the fact that Rosebud was a sled) is strongly tied to Western occultism. Having them govern the Chinese supernatural seems odd (and Eurocentric, for that matter).

Instead, let's posit that there is a single spiritual plane, but different regions of that plane are controlled by different groups of beings. There are published precedents for areas that are physically contiguous with the Hunting Grounds but outside the domain of the Reckoners and manitous. Settling upon a divided spiritual plane provides a foundation for future work, explains the current canon, and leaves room for expansion if necessary (into, say, the African Underworld or Aborigine Dreamtime).

In the Flesh

Special Abilities:

Claw: STR. Hand-to-hand attacks from a galvanic dead also do one more point of Wind than normal.

Discharge: When a galvanic dead is struck with a conductive object, such as a metal weapon, some of the electricity in its body will discharge up the weapon, doing 1d10 damage to the wielder.

Insulating gloves will protect against this discharge.

Fearless

Recharge: A galvanic dead, given access to an adequate source of electrical current, may tap that flow to restore its own charge, which the manitou can then use to restore its body. A galvanic dead may heal 1 wound every other round as long as it remains connected to the current source. The zombie may do nothing else while recharging. A current must be industrial-scale to be usable.

Sabotage: Galvanic dead may derange the delicate works of mad science simply by touching them.

Any mad science contraption touched by a galvanic dead must immediately make a Reliability check at -3.

Undead.

This compromise allows us to wrangle with one of the difficulties that the Chinese Underworld presents: the problem of ogres.

Among the creatures controlled by the Reckoners, there is a clear line between the corporeal and spiritual. Manitous and intangible undead are spirit beings that come from the Hunting Grounds, and cannot manifest physically in the mortal world without possessing a mortal body. Abominations are solid, physical monsters that are created, live, and die in the physical world. Only very rarely does a physical being enter or leave the Hunting Grounds.

The Chinese Underworld, however, features creatures such as the Chinese ogre, a physical being that serves in the lower echelons of the Underworld hierarchy unless they are sent or escape to the mortal world. Both physical and spiritual beings move back and forth to the Underworld with some frequency; apparently even some human groups in the employ of Underworld beings pass through gateways to the Underworld when they must move around quickly.

This dilemma requires us to use implication in reverse. Rather than asking what the consequences of a setting element are, we have to ask what condition this setting element is a consequence of. What situation led to the Chinese Underworld having both physical and spiritual denizens?

Those gateways to the Underworld are the key. Let's imagine that Chinese ogres and their ilk, like their Western counterparts, are abominations. However, when the Great Spirit War came and the spiritual world was sealed away, they, unlike the Reckoners' abomination, were not abandoned to their fate. Instead, they were summoned through the Underworld's portals before those gates were sealed, to serve their masters in the spiritual world. Thus, since that time, the Chinese Underworld has contained physical and spiritual contingents.

This hypothesis demands the question of why the Underworld's rulers would choose to do such a thing. Recall that the Underworld is described as a rigid hierarchical society. This means that the Underworld's minions are under tighter control, but like feudal systems everywhere, it also means the masters have certain obligations to their thralls. The Reckoners' minions don't have to follow orders, but they get no help when they get into trouble; the Chinese Underworld might well work differently. The top levels might even need their underlings. Without lackeys, they'd have no one to boss around but each other, and that can't possibly end well.

New Directions

Up to this point, we've been closing gaps -- exploring the cosmological issues raised by the Underworld, and dealing with the inconsistency created by the Chinese ogres and other tangible demons. However, we can go even further, and use our tools to go beyond the canon.

For example, the work we've done so far suggests that the masters of the Chinese Underworld have a different agenda than the Reckoners do. The Underworld seems more interested in its own internal politics -- even though it is clearly more organized than the Reckoners' organization, its minions do no more, and often less, than the manitous and their creations do. Why? Presumably the Underworld's masters also feed on fear.

There are a number of possibilities. Perhaps they are content feeding on the fear of their subordinates. Or perhaps they just don't want to rock the boat. If the Underworld was content with the status quo, the Reckoning would be a real wrench in the works. Maybe they're just mobilizing slowly; after centuries of the same old thing, 15 years goes by pretty fast.

None of this, however, explains why there is a disorganized Underworld presence in the mortal world. The different demons identified in the Maze don't cooperate; Chinese ogres seem to be all but escapees from the Underworld. It's inexplicable behavior for members of a strict hierarchy.

Well, maybe they aren't members any more. Maybe the Chinese monsters seen on the mortal plane are all renegades and exiles. More interestingly, perhaps there's a schism in the Underworld hierarchy, split between trying to uphold the status quo and trying to get some of the mortal pie while the getting is good. Or, to raise the stakes even higher, maybe the Underworld is split between trying to get some of the mortal-plane booty and trying to fend off the newly

powered-up Reckoners from throwing their weight around on the spiritual plane.

The end result is the possibility that there may be factions among the forces of darkness which a savvy party of PCs might be able to use to good effect. It certainly adds a complexity of supernatural politics to match the temporal politics in the Maze.

I wouldn't pursue this line of thought in published material -- even if it doesn't explicitly break with canon, I think that the spirit of the setting as published demands a united front among the bad guys at the highest level. Indeed, fiddling with the Underworld at all flirts with getting into what *In Nomine* calls "canon areas of doubt and uncertainty". However, I'd certainly do something along these lines if I were starting a new campaign. I like politically complex environments, and because I've tried to work within the constraints of canon, future publications shouldn't invalidate my work unless Pinnacle starts getting very detailed about Chinese mysticism.

Further Reading

- [Six Degrees of Sir Kevin Bacon](#) -- Most Suppressed Transmissions are excellent examples of fill-in setting design at its finest, but Six Degrees of Sir Kevin Bacon is, I think, the clearest example of connection I know.
- [GURPS Traveller Alien Races 2 Designer's Notes](#) -- Unsurprisingly, **GURPS Traveller** is a good example of the kind of work I'm talking about; writers in that line also face the challenge of balancing innovation and canon. As a result, most of the line's Designer's Notes are good stuff, but I particularly like the **Alien Races 2** Notes; it wrestles most explicitly with the difficulties of that balance.
- [RTT: Considering the Ick in Dynamic](#)
- [RTT: The Charge of A Static World](#) -- These linked episodes of Random Thought Table are not directly relevant, but I think they're good examinations of the nature of canon, and the challenges of wrangling with it.

The National Technical Intelligence Bureau (NTIB)

for *Transhuman Space*

by Aaron Kavli

A Short History

As the proliferation of advanced communications systems made global data streams ubiquitous, the US government decided it was time to have a cohesive agency to address security concerns associated with the Web. Hypothetical information wars had actually come to pass, capable of interfering with a nation's economic, military, and government data systems.

The US Senate Intelligence Oversight Committee and National Security Council decided that the National Security Agency and Executive Order 12333 (December 4th, 1981), that established the NSA's responsibilities, weren't sufficient to meet the new threats. Between the FBI, CIA, NSA, and local enforcement agencies there simply was not enough effective communication. At the speed in which a security threat around the web can spread in this new information, lack of inter agency communication could be disastrous.

During the 2010s, Congress began drafting the principles and missions of the National Technical Intelligence Bureau (NTIB), with the help of various intelligence and web experts. The agency needed the authority and skills to handle the current leaps in cryptology, web, and computer technologies. It also needed a flexible charter that allowed it to meet the, correctly, perceived advances of future advances, as well as perform current SIGINT operations. The experts also decided that the NTIB should be responsible for monitoring all government web access and communications to ensure that no one agency lagged behind, possibly compromising the integrity of other departments.

The final proposal was presented to the US administration in June of 2014, and Executive Order 13563 was signed on August 12th. The NTIB was placed under the Department of Homeland Security, and staffed with the majority of the prior NSA personnel, whose skills were still needed, and new technicians and agents skilled in matters of web operations.

While signal and information intelligence gathering remains paramount, cyber warfare is a real and constant danger to the stability of the United States. Terrorists and other hostile political agencies no longer need transports to launch an invasion on foreign shores. And cyberspace attacks don't show up on radar.

Countless attempts each day are made to cause mischief via the Web. During the Andes War and the Pacific War, US data systems, both public and private, were under constant attack. The NTIB was responsible for defending against these attacks. Only one attack during the Pacific War, perpetrated by a dedicated TSA data warfare unit in a secret location in Vietnam, managed to penetrate NTIB defenses (though it wasn't the only success against other US assets), causing a great upset in federal payrolls for the Department of Immigration that took a week to fix. The computer counter-attack launched by the NTIB seemed to have little effect, but the secret building "accidentally" burned to the ground two weeks later.

The Current NTIB

The NTIB is constantly walking the fine line between national security and information privacy. The US has had a definite shift from the solid patriotism of the beginning of the century, to a more independent attitude from its citizens. This shift has seen the NTIB become somewhat unpopular in many areas, as fewer people are willing to accept information monitoring in the name of national security. The most hostile attitudes come from free web advocates; AI rights groups, and cyberdemocratic groups. Especially since the US government doesn't regard AI infomorphs as

citizens.

Accusations from the NTIB's detractors range from being corrupt federates, to actively hunting down and assassinating innocent SAIs, to making people disappear if they speak out against the government, to controlling the minds US citizens via insidious memetic campaigns. Critics refer to the agency as "Big Sister" (derived from the SISINT division), and have a rather Orwellian view of their activities in the name of national security.

While it is a notable and vocal minority that object to the NTIB on general principle, the NTIB enjoys acceptance from most US citizens as a necessary evil, and has a great deal of support from the government. In 2100, there is no organization that could survive long without some sort of information intelligence and defense capability.

Despite having vocal critics, few argue the fact that the NTIB has one of the most skilled cadres of technicians, mathematicians, operatives, and analysts available. The NTIB has small field offices all over the nation, especially in larger cities and arcologies on the coasts. The bureau's headquarters are currently in Denver, CO. This was one of the first departments to have its main offices any distance from the capital. The ability to telecommute effectively and the desire for a more centralized location to aid in speedy deployment, made this move acceptable. The NTIB currently employs over 15,000 people on all levels across the solar system, of these almost 600 are ghosts.

NTIB HQ is housed in the old Denver Mint, which was shut down in 2053 when it was decided the Philadelphia mint alone, in the wake of global shifts to electronic transactions, could handle the amount of physical currency needed for circulation.

While the outside of the mint building retains its classical look, the interior was upgraded for top line networking and security against cyber intrusion. The bureau also maintains facilities and personnel in the Martian Commonwealth on Mars, Titan AFB, and has a small but active department on DeSoto station in GEO around Earth. As off world areas lack the extensive web of Earth, the NTIB sticks mostly to SISINT operations, monitoring Chinese and Duncanite communications, as well as tracking hostile organizations such as Negative Growth. These listening posts work very closely with the SIA and US military assets on location.

The NTIB is divided up into five divisions.

The Signal and Information Systems Intelligence (SISINT) Division performs many of the same duties the NSA did. This division is comprised mostly of skilled technicians and a handful of SAIs. Their main function is to intercept and analyze information gained via RF, laser, and web surveillance. The SISINT division operates a series of satellites, data nodes, and Earth based listening posts. They work in conjunction with US military forces, especially the USN and USAF, for close in monitoring of foreign signals.

On the web, the NTIB maintains several AIs that try to infiltrate foreign data nodes, lurk at interconnect points, and inconspicuously monitor data streams. The SISINT division also performs all cryptology functions and has a network of dedicated macroframes and SAIs that constantly work to decode impossibly encrypted data.

The current Chief of SISINT is Marita Juanita Johnson, known as Mary Jane or M.J. She joined the NTIB after college as an agent in 2015 during a massive hiring wave for the new agency. Mary Jane is considered one of the foremost experts in the US on SISINT, and with her specially raised SAI, Samson, seems to be able to pull important information from the most innocent bits of data. After threatening to retire in 2050, the Director of SISINT offered her free rejuvenation treatments as an incentive. Though over 100 years old, Mary Jane appears no older than 50.

The Memetics Defense Division (MDD) has the responsibility of monitoring and analyzing any harmful memetic codes introduced to the web of the United States . . . which is to say *any* web, as the US has the most extensive on Earth. They rely on the SISINT and IIDD to trace the sources of introduced hostile memes, but the MDD specializes in analyzing the intended effect of a meme, and its likely developers. As memetic warfare has become the favored attack of terrorists and hostile NGOs, it is the MDD that maintains the database and follows the movements of those agencies.

The damage done to the citizens of the US can go undetected for a time before the hostile meme is discovered. Almost

half of the MDD staff is made up of memesplicers and psychologists. In an effort to try to undo any meme damage, the division has extensive meme counseling facilities across the US in various universities and medical centers. This counseling is free to anyone who feels they've been affected by a hostile meme, and the MDD maintains a dedicated facility at their office in Aurora, CO. This meme center is used for interrogations and for those who don't realize the full extent of their memetic tampering.

Currently the MDD does little in the way of long term, strategic, offensive memetic operations. Most operations are usually directed at area known to house small cells of dissidents, foreign and domestic, that are known to carry out violent or memetic actions against US interests. There are no acknowledged operations against any civilian populations as a whole.

The current Chief of the MDD is Dr. Raymond Kalipikov. With a doctorate in criminal psychology, memetic engineering, and pathological psychology, he is well in his element. Unfortunately his skills as an administrator leave much to be desired. Raymond was forced into the position after his predecessor disappeared without a trace. Skilled in research and analysis, Dr. Kalipikov was ill prepared for the politics and responsibilities of his new post.

The Information Intrusion and Detection Division (IIDD) specializes in the tracking, hacking, and cracking of data nodes. They are also responsible for security and data systems for the US government and any agencies granted access to those systems. IIDD also specializes in breaking the security of hostile data nodes, study and analysis of viruses and weblife, as well as investigating crimes committed by infomorphs. They maintain a database of all known rogue AIs, shadows, ghosts, and xoxs. Of all the NTIB divisions, the IIDD investigates the Free Net most often. This division also actively hunts new forms of weblife with a series of honey pot data nodes, called online arcologies, and detains any criminal infomorphs that have been captured.

The most controversial duty of the IIDD is the handling of rogue infomorphs. All digital entities in custody, even weblife, are given the ASIT (p. TS91) to legally determine their status. Ghosts are considered citizens in the US, with the same legal rights as any other human, and are kept in a "VR jail" (called Digitraz) if need be, and handed over to the Justice Department for legal proceedings. The US however, does not recognize the rights of SAIs or EIs as citizens, and has issued the authority to handle them to the NTIB. As it is an uncertain, expensive, and time consuming process, criminal infomorphs are no longer reprogrammed; they are simply studied and deleted. No judicial proceedings are required. This authority above all else is the most objectionable to pan-sapient rights groups.

The IIDD has a specialized agency called the Emulation Enforcement Task Force (EETF) that deals directly with the investigation and tracking down of criminal infomorphs to their physical location. As some ghosts and rogue AIs can have very violent temperaments and well-armed cybershells and bioshells, the agents of the EETF are trained in the use of military hardware and tactics, as well as criminal investigation. As it falls in their purview of operation, the task force is also responsible for investigating and prosecuting illegal emulations, earning them the nickname, "Xox Cops," or "H/K Boys." Those on the task force insist H/K means "hunter/killer," but others claim it means "Hugs and Kisses," from the "xoxo" that adolescent girls often sign letters with.

The current Chief of IIDD is Thomas Simpson, a Major in the US Army. Simpson has spent his entire career in the intelligence field, including field operations during the Pacific War. He was critically wounded in 2090 when his transport, on route to Titan AFB, was destroyed by a rouge TSA AKV. Unable to save his physical body, Simpson was placed in nanostasis and was later destructively uploaded. He is currently one of the few "ghosts" to hold such a high rank in the military or position in the US Government. His unique abilities and great knowledge of emulation operations makes him a valuable asset to the NTIB. Simpson is also the training liaison with the US Army Special Forces, who train the EETF in the use of modern weaponry and tactics. The Major is known to still perform his own operations on the web, to the displeasure of the Director.

The Technical Research and Development Division (TR&D) has the daunting task of keeping up with the onslaught of new technology in the Fifth Wave world. The engineers of TR&D must not only analyze technical data and equipment (captured or otherwise) from nations and corporations from throughout the solar system, they must also develop their own equipment and modify existing US gear to meet the challenges of the advanced world. Lower ranking technicians are responsible for updating, programming, and maintaining the equipment used by engineers and agents, as well as

the massive computer assets of the Bureau. The NTIB, needless to say, has access to top of the line military, computer, and spy gear. Most of the personnel in the division refer to it as simply R&D, as their official acronym has an unfortunate sobriquet oft used by other NTIB departments.

The current Chief of TR&D is Francis Xue, former dean of the MIT Virtual Web Program. Xue left his position after charges were brought against him by a number of students concerning corruption and bribery. Xue was dismissed with little investigation or any attempt to talk to him about the charges. Using his own impressive technical abilities, Xue managed to find a subtle conspiracy that included the use of memetic influence, bribery, and blackmail. While he was never able to uncover the true culprits or find out why he had been targeted, Francis Xue was able to sue the university for several million dollars, get a severance package, and the case resulted in a majority of the Web Program administrators being fired. NTIB monitors noticed Xue's efforts on the Web and he was offered a job in 2088, which he accepted.

The Public Information and Liaison Division (PILD) is responsible for collating data from the MDD, SISINT, and IIDD to inform the US public about new memetic and web threats. They develop new systems, free to the public, that are designed to allow everyone to keep informed and defend themselves against new viruses, rogue infomorphs, dangerous web life, and memetic introduction. The PILD maintains a large online arcology that houses safe and interesting weblife for public virtual viewing.

As a Public Relations body, they are also the contact for the security forces of other nations like the GRA and the BND. This contact is as often to coordinate operations, as it is to file complaints about NTIB activities. As rogue infomorphs can essentially travel at the speed of light, crossing borders across and between countries handily, the NTIB works closely with the FBI's Emulation Crimes Bureau.

The PILD is also responsible for sanitizing publicly released NTIB and other US Government documents and maintaining public opinion about the department. Officially, no meme work is done on its public relations front, but most are cynical to that claim.

The current Chief of the PILD is Allison Nakimora, a long time federal employee. She has worked in the departments of transportation, treasury, agriculture, and the Pentagon in one form of public relations or the other. Allison's skills are admirable, but she has become involved in an infomorph rights activist group and is secretly under close scrutiny.

The Director of the NTIB is Admiral Lars Gesperston, who has spent over 48 years in the US Navy, which required he get a waiver after having had rejuvenation treatments. After a four-year enlistment as an electrician, Lars entered the officer candidate school and graduated to be a pilot. A decade after, however, he was forced to switch jobs as UCAV's became more popular in the US military. Lars entered Naval Intelligence and worked with special forces before finally making it to the Pentagon. With his political connections and years of service and experience, he was appointed to the position of Director of the NTIB in 2097. Admiral Gesperston is a highly intelligent and motivated man who manages to keep abreast of all NTIB operations without undue interference on his own behalf. The Admiral must give final approval on all infomorph erasures, a duty that sometimes troubles him.

The Deputy Director of the NTIB is Dr. Madison Giles. She entered the NTIB only ten years ago as a cryptology technician. She has degrees from several advanced universities and teaches several online courses in between her duties as deputy director. She is not overly popular due to her somewhat coarse personality and almost absolute refusal to answer messages or correspondence personally, leaving the task to her equally unpopular LAI, Numero Uno. There are some who despairingly claim Madison has only been promoted due to her obvious "off the shelf" cosmetic upgrades and a stray backstabber meme.

Mission Statement

Executive Order 12333 of December 4th, 1981, described the duties of the National Security Agency. Executive Order 13563, signed on August 12th, 2014 established the NTIB and its duties, incorporating the mission of the NSA. The resources and responsibilities of the National Technical Intelligence Bureau were organized to allow performing of seven national missions. The mission statement has undergone revisions three times since its creation.

1. The Information Assurance mission provides the solutions, products and services, and conducts defensive information operations, to achieve information assurance for information infrastructures critical to U.S. national security interests.
2. The foreign signals and information systems intelligence, or SISINT, mission allows for an effective, unified organization and control of all the foreign signals and data transfer collection and processing activities of the United States. NTIB is authorized to produce SISINT in accordance with objectives, requirements and priorities established by the Department of Homeland Security, Director of the Central Intelligence Agency, and Director of the Space Intelligence Agency with the advice of the National Foreign Intelligence Board and any other security agency as ordered.
3. The effective monitoring and defense of US information resources are vital to national security. The NTIB is given the authority to monitor and enforce all matters of information defense deemed to be hostile in nature from internal or external sources. This includes, but is not limited to: espionage efforts, destructive data introduction, corporate or financial tampering, hostile meme manipulation and propagation, attempts at illegal access, and other violations of information legislation and national security.
4. Due to the instant access and data transfer speeds readily available to the public at large, not to mention possibly hostile government agencies and NGOs, hostile action can be launched from nearly anywhere on the globe. To ensure the NTIB is able to react quickly to physically apprehend violators, local law enforcement assets, including FBI, DEA, and other federal enforcement agencies, will be required to instantly provide on site support in NTIB apprehension operations via the auspices of the Department of Homeland Security. This may extend to CIA, SIA, and other foreign or domestic US assets on a case-by-case basis depending on the level of threat and available resources.
5. To ensure that no department of the US government -- through lack of expertise, budgeting, or miscommunication -- is allowed to compromise national information security, the NTIB will be responsible for monitoring and maintaining all US information systems with access outside of internal data systems. This includes all hardware, software, and AI systems employed by US government agencies and any civilian agencies granted access to government systems. Ensuring that all departments with concerns for national security have a common, accessible database will require the NTIB to create, operate, and maintain the Interdepartmental Security and Homeland Defense Database.
6. Hostile data and memetic manipulation efforts can be launched against the unsuspecting citizens of the United States by almost anyone. The NTIB will be responsible for monitoring information systems for such efforts and devise ways to defend against them. NTIB experts will constantly evaluate such threats and make readily available to the public education and information to aid in countering and preventing such threats. This includes providing software and operating system operating system and memetic counseling to undo any such psychological damage that may have occurred.
7. With the coming of sentient AI infomorphs and the independent formation of new and unknown weblife, a new class of possible danger threatens the US government. Constant monitoring for illegal actions carried out by infomorphs and weblife is essential to the data security of the United States. To this end the NTIB will have jurisdiction over crimes committed by infomorphs, including the right to investigate, monitor, detain, and even delete such infomorphs as is deemed necessary. The NTIB will also offer any and all technical assistance requested by the FBI, CIA, SIA, local law enforcement, and any other division of the Department of Homeland Security.

A Few Good Sapients

The NTIB is a powerful Patron or Enemy, depending on the situation. PCs who actually work for the NTIB must have Patron (NTIB) 15 points, Duty (NTIB, 15 or less) -15 points, Rank 1 (US Government) 10 points, and Taboo Traits (Criminal Reputation, Genetic Defects, Mental Instability). Agents and Enforcers must have the Legal Enforcement (international jurisdiction, covert investigations, effective suspension of privacy rights) 15 points, as they are given wide leeway in undercover and intelligence operations. Most technical or administrative members of the NTIB will have no legal enforcement powers unless specifically assigned to a case. Employees acting on orders from a senior supervisor, or assigned to a task force, will be granted a temporary 10-point Legal Enforcement advantage at no character cost.

As an Enemy, the NTIB qualifies as a -30-point disadvantage due to their skills, size, funding, and ubiquitous monitoring of the web. The frequency of appearance will of course depend on how badly they want the PC. For infomorph characters that go out on the web, the minimum frequency of appearance is 9 or less for those who use the Web. Individual NTIB agents with an axe to grind against a PC will probably be a base -10 points.

The NTIB works in several high tech fields, and this requires a number of skilled workers. The bureau uses AI systems extensively, but there are many tasks the US government does not want left in the hands of computers alone.

Administrators

Despite a relatively integrated and streamlined organization, the NTIB is at heart a government bureaucracy. All manner of clerks, administrators, lawyers, spokesmen, and number crunchers are needed to work with departmental AIs to keep track of the massive amount of raw data the bureau deals with on a daily basis. They are also tasked with investigating financial accounts, ledgers, and documents to aid investigations. Useful skills include Accounting, Administration, Diplomacy, Computer Operation, Law, Professional Skill (Office Clerk), and any other skills useful to a government office environment.

Agents

Each division has need of field operators. SISINT agents set up remote taps and man observation posts; IIDD agents infiltrate facilities to deploy spy bots; MDD agents observe groups bent on spreading memes; and even the PILD are known to investigate overly vocal dissidents within the US. These are the people who follow physical suspects, gather material evidence, infiltrate hostile organizations, and work undercover for sting operations. See Intelligence Agent (p. TS111) for appropriate skills. NTIB agents will also have Combat/Weapon, Intelligence Analyst, and Computer Hacking skills.

Enforcers

The Emulation Enforcement Task Force is considered by some (especially the EETF) to be the elite of the NTIB. They perform many of the same functions as other agents as far as investigations and intelligence gathering, especially when tracking down xoxs, but are issued heavy hardware to deal with hyped up cyber and bio shells. They are also called in to assist other divisions when some serious firepower may be needed. Enforcers go undercover occasionally, but tend to limit such operations to US held areas. Foreign government frown on armed members of the US government carrying out raids within their borders, which may or may not be a consideration for NTIB planners. Enforcers will have skills similar to a Gunjin (p. TS111).

Technicians & Specialists

All manner of skilled technical personnel are needed by the NTIB. This includes armorers, computer technicians, robotic engineers, linguists, cryptologists, programmers, hackers, sensor operators, and even mechanics for NTIB vehicles. Obviously, PC technical experts need at least one appropriate technical skill! Engineers, Programmers, Hazmat Specialist, and other technical fields are appropriate. SIGINT and Electronics Operation (Sensors and Communications) are needed for those who intercept data. Some of the most valued, and rare, technicians are those skilled in obsolete technology!

Infomorphs

While one of the missions of the NTIB is monitoring and hunting down rogue infomorphs, these digital beings are among the most useful of the bureau's tools. Infomorphs are one with the web and can provide a great deal of information and analysis of threats. Any manner of infomorph PC can find a place in the NTIB; from simple office assistants, to the personal advisor of a field agent, to an SAI quantum macroframe used to crack codes and break into enemy data nodes. Some of the current infomorphs in service to the NTIB were at one time informants used to crack

cases. While controversial, the NTIB has been accused of using bioshells to house its ghost and infomorph employees. AI characters will be treated as property in this US agency; ghosts will have full citizen's rights.

Freelancers

While somewhat rare for a governmental agency, the NTIB has been known to hire freelancers for irregular missions. This could be people who have a special knowledge of a new threat, contacts that would allow operations where NTIB agents would be suspect, or the occasional plausible deniability mission. Regardless of the reasons, PC freelancers will be given certain guidelines to follow. How strict depends on the needs of the mission, but outright wetwork will usually be right out except for self defense, and contracts (except for plausible deniability missions) will be signed ensuring PCs will pay the consequences for any ill fated plans they carry out.

Medical Field Specialists

In order to keep up with new biological and memetic threats, the NTIB has a great need for medical specialists. Medical doctors are needed for autopsies, genesplicers are needed to analyze bioroids and biological threats, and memetic engineers analyze and counter threats introduced to the US public. Psychologists offer counseling and perform high tech interrogations. Skills from the Doctor/Medic, Genehacker, Memetic Engineer, and Psychologist are appropriate.

See ***GURPS Cops*** for ideas on running a federal agency. Keep in mind that the NTIB is an intelligence agency, however.

Oh, Brother!

by Mike Musteric

This little side adventure can be used in any fantasy setting. It is a good "mini-adventure" when your entire gaming group can't get together, easily modified for a various number of heroes. It's also a useful scenario to introduce new players, new adventure hooks, or a new villain.

Ingredients

Damsel in Distress: Through any number of ways, the party of adventurers hear of news of a local girl in need of some help -- a perfect way for new heroes to prove themselves. If they seek out the woman, she will tell them of her troubles: an evil wizard has placed a spell on her brother because of money that the girl's family owed to the magician. "The wizard has poisoned my brother's mind," the girl sobs, "and now remains at the wizard's side." Good-minded heroes should be foaming at the mouth by now to right this wrong. If other more mercenary or selfish characters need more persuasion, be sure to have the extremely attractive maiden mention her generously wealthy family.

The Villain: Should the heroes accept the mission and seek out the wizard, they will easily find him. The wizard hangs out at a well-known tavern, surrounding himself with other merry-makers and his own entourage -- consisting of various misfits, human or otherwise. The wizard is the center of attention, whether he's telling tales or making deals of various sorts. It's not uncommon that there will be a line of people waiting to speak with him. Close to the wizard at all times is a meek lad of 19, furiously scribbling on parchment.

Cooking Tips

Can We Talk? If the heroes try to approach the popular wizard, they will find out that it's not as easy as it seems. The tavern is always crowded with people seeking his audience. If the adventurers elect to stand in line, they wait for a long time as the line inches forward -- only to discover that it's a line to make an appointment with the wizard's aide! The next scheduled free slot is three weeks from now . . .

Pushing and shoving to the front of the line will only anger the other people waiting to see the wizard. Many folks won't take this impatient pushiness lightly -- especially, say, the barbarian hoping to get a cure for his corns. Brawls are likely to ensue.

If the heroes *do* wait to see the wizard, they will find that he is a shrewd businessman, surrounded by his bodyguards. He is not willing to let any of his entourage go without a price. Heroes can try to strike a deal with the wizard, but the price will not light. The wizard might send the adventurers on some mission -- obtaining some rare spell component, rough up another debtor, or some other fool's errand. In the end, the wizard will try to find some loophole in order to keep the girl's brother and whatever the PCs bring to him.

Have at Thee! If the heroes attack the wizard outright, whether it's at first meeting or after jumping through hoops, it will be an uphill struggle. The wizard has made several friends and keeps many henchmen on his payroll. Anyone with an aggressive attitude will be blocked from the wizard by his loyal underlings. If a fight does break out, the wizard will make for a hasty exit and take the lad with him while his henchmen stay to deal with the PCs.

Extra Spice

Oops!: They party might be confused as to who the girl's brother is; it is not the lad that is always at the wizard's side. The girl's brother is a fighter that the wizard has charmed (or otherwise magically coerced) and is using for muscle. If the heroes start a fight, they will likely be fighting the exact same person that they are trying to save. The charmed

warrior will fight to the death protecting the wizard.

The boy that tags along with the wizard is some orphan that the wizard has taken in to teach him the way of spellcraft. He is shy, quiet, and doesn't speak to anyone except his master.

Celebrity Status: If a fight breaks out, the local authorities will be summoned and the PCs will find themselves on the wrong side of the law. If they try to tell their story, the lawmen won't believe them as they are wary to arrest the wizard -- he's got friends in high (political) places. The heroes will be arrested or, if they escape, on the lam.

Side Salad

Yoo Got A Lot Splainin' to Do: If the heroes accidentally kill the girl's brother, not knowing who he was, they'll discover that their problems are just beginning. The girl might have another brother, an experienced warrior or sorcerer, who returns from some crusade and learns of his younger sibling's death -- and wants payback. He either pursues the PCs or sends various henchmen or assassins to make the heroes' lives hell.

Heir to the Throne: If the PCs do kill the wizard, the boy apprentice will grow up angry and bitter. He'll want to make those pay who took away the only father figure he's ever had. He continues to learn spellcraft, but dabble in much darker and destructive magics. He could return at a later time to pester the PCs, wanting revenge.

Adventure Seeds: This scenario could have other adventure hooks contained within it. Perhaps the wizard, when fleeing the PCs, drops some map to a forgotten dungeon. Noteworthy NPCs can be introduced as patrons of the wizard, including the characters of new players.

High-Tech Wizardry: This adventure can also be modified to a cyberpunk setting, by simply replacing the wizard's magic with some mind-altering brainchip. The wizard is some hacker that hangs out at some cyber-café, surrounded by mecha-enhanced bodyguards.

Pyramid Review

Dungeoneer: Tomb of the Lich Lord Card Game

Published by [Citizen Games](#)

Designed and illustrated by Thomas Denmark

116 cards, counters, character stand-ups; \$20

Dungeoneer: Tomb of the Lich Lord - a fantasy adventure game is the newest entry into the range of games with the theme of the dungeon crawl. Published by Citizen Games, it is played as a board game, but comes formatted and packaged as a card game. Designed for between two and four players, they each control a brave hero delving into the tomb of the Lich Lord in the hope of being the first to complete three quests. This will make them the greatest living hero and their player the winner of the game.

Inside the box is a four-page black-and-white leaflet, and a deck of 116 cards. These are done in full-color by the game's designer and despite being a little dark, the look of the cards and their excellent art does much to both make ***Dungeoneer*** very attractive and also impart the dangerous feel of dungeon delving. The ***Dungeoneer*** deck consists of:

- 4 character cards
- 1 reference card, 2 sheets of counters, 1 sheet of character stand-ups
- 18 map cards
- 14 quest cards
- 76 adventure cards

The game is not complete upon purchase, as a pair of six-sided dice are needed to play. Character stand-ups and counters also need to be cut out. Unfortunately, both the counters and stand-ups feel a little inadequate; there also isn't anywhere to store these components once they are cut out. It is better to substitute glass beads for the counters and two colors are needed, preferably red and green. Further, pawns from other games could stand in for the stand-ups; replacing both components would add a tactile element to ***Dungeoneer*** that is otherwise missing.

Each of the four character cards depicts a different individual: a Dwarven warrior, a Human paladin, a Dark Halfling rogue, and an Elven sorceress. They have three main statistics -- melee, magic, and move -- which improve as a character gains a new level. The mix of characters includes one high magic/low melee, one high melee/low magic, with the other two being more of a compromise. Characters have a range of statistics that do not improve as they rise in level, and these measure their Life, Carrying Capacity, and the number of Special Abilities they can acquire. Each of these statistics is clearly marked with a different symbol. Characters also have a special ability that can be used throughout the game and remains unchanged. For example, the sorceress has magical aptitude and can reroll a die in magic combat each turn, and the dwarf's melee aptitude works the same way for melee combat. The paladin can heal himself or others, and the rogue's "Quicken" ability adds a bonus to his move to overcome physical hindrances.

The quest cards, of which a player receives three at the game's beginning, mostly require a hero to get to a particular room and achieve a task or defeat a monster. This might be to "Impale Vladimir" or go to "Smooov's Riddle" in the Mirror Chamber. Others are slightly different, such as defeating "Serak the Assassin," who is easier to find in rooms further away from the entrance chamber. Two quests require escorting either a maiden or a wizard from one room to another. Quest cards are kept face up, so everyone is aware of the quests currently in play with an eye to hindering a rival hero's progress.

The map cards depict the 12 rooms and six corridors of the tomb of the Lich Lord. The corridors can have pits in them,

and similarly the doors between rooms can be trapped and/or locked. The 12 rooms are all individualised and possess special effects that have to be overcome before any hero can attempt a quest that has to be completed there. This might be as simple as undead being easier to summon within the Crypt or as complex as attempting to control the Throne Of Tyranny and if successful, enables the hero to attack another hero from a distance until they leave the room.

All map cards are marked with the number of Glory and Peril Points they generate whenever a hero enters that location. These Glory and Peril Points are the core mechanic to **Dungeons** and accumulate in two separate pools beside a player's hero card. They regulate the use of the game's Adventure Cards, with Glory Points being spent on boons and treasures to add to a hero, and a player's Peril Points being spent by the *other* players to inflict banes and encounters on their hero. This is a clever mechanic that, besides regulating the play of the adventure cards, also ultimately limits how many banes and encounters can be played against the currently most successful player. In general, a room generates more Peril than Glory Points.

The adventure cards come in four color-coded types: the gray-bordered Banes, blue-bordered Boons, red-bordered Encounters, and yellow-bordered Treasures. Banes can either be temporary or permanent, and are played on other players; the Boon Cards are also permanent or temporary, but they are played into a player's inventory. Encounter Cards can either be a monster or a trap and are played on other players. Treasure Cards are put in a player's inventory and represent things like the life-sucking Vampiric Dagger, the Golden Key that will help open any door, and -- the Dwarven favorite -- the Axe Of Weeping Wounds. Boons can improve a hero's statistics or the amount of damage that a hero can inflict, while Banes can shift map cards or heroes, or give monsters and traps their own temporary bonuses.

On a turn, a player discards a card and refreshes his hand. They play Encounter and Bane Cards on other heroes, spending an opponent's Peril Points to do so, any combat with Encounters is resolved during this phase. A map card is drawn and put down, before the hero is moved through the dungeon, collecting both Glory and Peril Points, spending Glory Points to give their hero Treasure and Boon Cards, as well as attempting quests if they are in the correct location. Combat is simple, requiring a roll of the die plus the appropriate stat to beat the roll of the opposing monster or hero. Traps and other obstacles are overcome in a similar fashion. Successful combat earns a hero more Glory, but defeats gain them Peril Points.

Completing a quest can restore a hero's points to their Life score if they have suffered damage, as well as earning them more Glory Points and a raise in level, which increases their core statistics. Upon the completion of three quests, a hero is declared mightiest of heroes and has won the game.

Suggested game length for **Dungeons** is 15-20 minutes per player, but an initial two-handed game took an hour -- a time that should shorten with a few more games. The rules leaflet is tightly written and does not always agree with itself -- is it two starting quests or three? (The reviewing group began with three.) The balance between map and quest cards is quite tight, especially in a four-handed game. In actual play, **Dungeons** is a card game played as a board game, which has some elements of the CCG format. Comparisons could be drawn with classics such as Games Workshop's **Talisman**, but play is far more balanced in **Dungeons**, primarily because of the Glory/Peril Point mechanics. Perhaps in some ways, the game is *too* tight, particularly so with the support of the game -- the cut out counters and stand-ups, together with the lack of storage capacity feels both inadequate and unworthy of the design. It begs for a "deluxe" version in a sturdier box with miniatures for each hero and a set of red and green counters that would give it a more tactile feel. Our group would have liked to have had more map cards -- corridors, in particular -- as the tomb of the Lich Lord does feel quite cramped.

There is only one style of play available in **Dungeons**, that of "competitive." It does not currently possess the capacity for either cooperative or solo play, which is a pity, as their inclusion would very much extend the play life of the game. That said, there is plenty of potential for expansion with **Dungeons**, whether it is with extra dungeon sets or something simple packaged in the booster pack format. One option that is included in the rules covers tournament play, which has each player creating their own personal decks geared to the strengths and weaknesses of their heroes. While this is a worthy option, it seems a superfluous and expensive one when only the basic set is available. Rules for either co-operative or solo play (if not both) should have been included in their stead. On the plus side, the format and theme of **Dungeons** does leave plenty of room for its owners to tinker or modify the game, as well as creating cards of their own.

Dungeoneer: Tomb of the Lich Lord - a fantasy adventure game is a pleasing "little" entry into the dungeon bash genre of board game. In some ways it is perhaps too little, but it very much makes up for this in the cleverness of its design. It will be interesting to see the designer's future expansions for ***Dungeoneer***.

Light Speed

Published by [Cheapass Games](#)

Designed by Tom Jolly and James Ernest

Art by Eduardo Müller, colored by James Ernest

42 color cards, rule sheet; \$5.00

I have to admit, I played a major role in the creation of Cheapass Games' new card game Light Speed. See, James Ernest of Cheapass Games was a guest of honor last year at Game Storm, a con in Portland, Oregon. I played a few games with him there, and he told me he had a game proposal from Tom Jolly. I love Cheapass Games, and I'm a long-time fan of Tom Jolly's *Wiz-War*, so I told Mr. Ernest he should publish that game. He obviously took my advice very seriously. The game turned out to be *Light Speed*.

It was published as a Hip Pocket game, the cards-and-rules-in-a-baggie division of Cheapass. I was a little disappointed that Mr. Ernest didn't send me a complimentary copy for my contribution, but I bought it off the shelves of my local game shop just a couple of days before Game Storm came 'round again. Billed as a game of space combat that "takes less than a minute to play," I figured *Light Speed* would be the perfect game to play between events at a con.

Light Speed has a sci-fi theme, or at least a futuristic one. Each player (from two to four of them) has a team of 10 ships, each ship represented by a card, to fight over and around a mineral-rich asteroid, represented by another card. You'll need to add counters (colored glass pebbles work just fine) to represent minerals you mine from the asteroid, and damage you do to ships after laser fire. And you'll need an area about three feet by three feet to play. With four players, a little more space doesn't hurt.

Light Speed is played in two rounds. The first round (called the "Fast Round") simulates the ships coming out of warp around the asteroid. You place the asteroid card in the middle of the playing surface, and you shuffle your ten ship cards. Then players start dealing their cards onto the table in position around the asteroid. When one player declares he's done, all players stop placing cards on the table. So the player who deals her cards the fastest gets the most ships into play.

Each of the ship cards features an attractively drawn spacecraft with lasers pointing in various directions, and shields clearly marked on the cards. Each ship has a number from one to 10, and a number of health points indicating how much damage it can survive.

In the second round (called the "Scoring Round"), players check the lasers pointing from their ship cards to see if they hit other ships to damage them. They can also hit the asteroid to mine rocks from it. The lowest-numbered ships fire first, and the ships tend to get stronger (more resistant to damage, better shielded, and with more numerous and powerful lasers) as the numbers get higher. Scoring is based on the number of rock counters you manage to mine, and the number of ships you destroy (even your own, in multiplayer games).

It was in this second round that I found the claim that "each round takes less than a minute to play" to be a little inaccurate. The fast round was indeed very fast, but the scoring round takes some time -- not more than 5 or 10 minutes, but some. This isn't necessarily a bad thing; in fact it's one of my favorite things about this game.

As with most Cheapass games, the rules are both short and thorough. Examples in illustration and in the text are presented in a compact space, and it's evident from the clear wording that this game was enthusiastically play tested -- again, a normal feature of a Cheapass presentation. The rules also include helpful suggestions about the play surface, about how to trace line of sight (they recommend a broken rubber band as a straight edge), and about rules variants. Such suggestions make the concise rules feel even friendlier and more robust than most Cheapass Games. On the other hand, I noticed that my name does not appear in the credits anywhere on the rule sheet, obviously a sloppy oversight.

The graphic design of the game is extremely playable. That's an impressive feat, given the nature of the game. There are some difficult graphical challenges to overcome with **Light Speed**, dealing with shield facings, laser paths, 10 different ships, and four teams. By employing color liberally and computer design discreetly, **Light Speed** overcomes the challenges. My favorite little touch in the graphic design is that the asteroid cards can be turned over and put together to combine a larger version of the asteroid artwork. Keen!

Beyond playability, the design is just cool, especially the art by Eduardo Müller. The ships have attractive vent panels, slick-looking wings, aerodynamic contours, and a variety of wicked shapes. And they're colorful . . . far more colorful than previous Hip Pocket offerings. At the con, the eye candy of a four-player game pulled in quite a few rubbernecks.

At first, **Light Speed** strategy seemed pretty limited. Luck seemed to be the determining factor in the game, so just getting as many ships in play as fast as possible seemed the best strategy. After a couple of games, I started forming strategies about deploying my ships very close to the asteroid to mine as much as possible, or around the perimeter of the battle to pick off as many ships as I could. With a little more play, I began to recognize that some ships are best suited to be positioned very close to the asteroid, some to do a lot of damage in the middle of the pack, and others to lurk around the edges poking at enemies without taking much fire. But it will take some practice to know which ships are which while playing **Light Speed's** fast round. I still think luck is a major factor in the game, which should make it easy to mix beginners with more practiced players, but it also has elements of strategy that will make repeated play more rewarding.

I think my favorite thing about **Light Speed** is that it combines the rapid-fire play of James Ernest's other "real-time" card games with a more calculated scoring round that pulls in all the players. In short, **Light Speed** is both exciting and engagingly detail oriented. I also appreciate any game that welcomes beginners into competition, but still has rewards to offer experienced players.

In the end, I bet James Ernest is pretty glad he took my advice. **Light Speed** is attractive and easy to learn, and its presentation is an accomplishment even for a game company whose hallmark is quality without high prices. **Light Speed** carries on the Cheapass tradition very well, and raises the bar for the Hip Pocket line.

Pyramid Review

Red Dwarf: The Roleplaying Game

Published by [Deep7](#)

Written by Todd Downing, Mark Bruno, John Sullivan, Andrew Kenrick, Lee Hammock, Gavin Downing, Allan McComas, and Samantha Downing

Original art by Steve Hartley, Todd Downing

Starbug schematics by Julian De Puma

176-page two-color hardcover with 19 full-color plates; \$34.95

For such a cold and desolate setting almost entirely devoid of life, the British sci-fi TV series *Red Dwarf* certainly has a lot of fans. Devoid of life forms, mind you, not creative juices. In spite of its expansive subject, it doesn't stand out as prime roleplaying real estate when one considers the limitations. But tell that to Deep7. They believe they can make a go of ***Red Dwarf: The Roleplaying Game*** by appealing to a cross-section of the show's aficionados and those in the gaming community who love to see popular properties laid out on a character sheet.

Red Dwarf is about the mining ship that bears that name, and the adventures it has three million years after it suffers a massive radiation leak, killing everyone on board. Everyone, that is, except layabout Dave Lister, who was locked in stasis as punishment for bringing a pregnant feline aboard, and his hyper-evolved cat Cat. Dave's immediate superior Arnold Rimmer, though quite dead from the explosion he caused, persists as a hologram maintained by Holly, the shipboard supercomputer. Three million years out from whatever is left of Earth, the crew now seeks sense and meaning in an all-but-empty universe (which often amounts to resurrecting the strawberry or trying to scavenge new technologies from garbage scows).

The book uses the XPG System Deep7 introduced in their ***Mean Streets RPG***, using the combination of attribute and skill levels to come up with a Target Number for actions. Few changes have been made -- you still toss 2d6 and hope for the low rolls. About the only practical difference comes with the vehicle combat system, which uses both Shields and Hull in place of Chassis for futuristic dogfights.

PCs still have Assets, Liabilities, and Behavior Tags, but a few changes have been made, mostly cosmetic or to better fit the *Red Dwarf* motif. Luck becomes Dumb Luck (of course); Contacts are gone (you're three million years from home -- who were you planning on calling?); and Material Wealth is fuzzy at best (money means nothing to anyone but the food dispenser, and an enemy GELF may be more easily bribed with ladies' unmentionables than with a Time Drive, depending on which side of the hut they woke up on). At the same time, the liability Enemy is gone (the older the universe gets, the fewer people are left to take a disliking to you), and if you have Smeghead on your character sheet, you know you're playing a different game.

Everything is dealt with here in much the same way as it is on the show -- there's just enough detail given to make things interesting, but not enough to get in the way of telling rousing stories of the entire party running away very quickly from things that want to eat them. All the cool ships are described, including the *Red Dwarf* itself and the popular *Starbug*. The equipment that solves all the problems it started is listed, so you can shoot the people you dislike (some of them your enemies) and heal the ones you like (given enough practice and a sufficient margin for error).

Hook up time devices, kit out your hologrammic crewmates, and spend some leisure time getting attacked by Artificial Reality games.

The refereeing section is a little too brief, especially considering instead of a GM you have an AI. An amusing spin, the gamemaster is encouraged to interact with the party as much as possible in the guise of Holly or his/her equivalent. There are some encouraging examples of how this can work in play, but since the book is intended to straddle the camps of both fans and players, additional tips for newbies (there are a few -- tips, not newbies, not that there aren't enough newbies . . . never mind) would have seemed in order. On the other hand, there's an excellent primer on the key factors that go into making the show funny, and these invaluable insights are conveyed painlessly to the reader. An alternate campaign frame is also provided, as a springboard for ideas on how to recreate the world in your image. Add in some semi-misplaced odds and ends about damage from fire and vacuum and the uses of time travel, and that's your GM's guide.

More attention is given to descriptions of people, places, and things than to their statistics, so the AI can streamline them into the game with a minimum of fuss. Combat is brief. Planets are troves of adventure and not a bunch of bland figures about "percentage of surface area covered by water." The whole cast of characters from the eight seasons and 15 years of the show are here, with a brief but informative synopsis of their role to complement their vitals.

Deep7 also adds a list of creatures (always tricky, defining what a "creature" is in this setting -- the monsters often carry on the best conversations); nice record sheets for characters and vehicles done with an official Jupiter Mining Corporation design; a scenario generator; an extrapolation of what the Sol system may look like should anyone ever get around to returning home; and a quick little adventure that pits a crew against the GELF in a winner-take-all, no-holds-barred game of, um . . . golf. With monsters.

Like their mission statement concerning at whom the book is directed, Deep7 is frank about the stills from the show -- the early years were pretty lean, and who knew it would take off? The publishers have nonetheless gathered some nice shots (some in color) of the major characters and sets, and have even tweaked them into mock advertisements for mining corporations and android merchants. The schematics are first-rate, though with the admission about the scarcity of photos, it's a shame they didn't add more of the whimsical, cartoonish artwork that fills in at many points. It's overall a standout example of graphic design even if it does fall prey to the current trend of putting everything out in hardbound.

There are a number of tips secreted throughout the text about alternate universes and how to milk them for a fresh and original *Red Dwarf* setting, a wide selection of character options, and a great deal of imagination packed into the pages. The best licenses show severe limitations and heavy strain when transferred from one medium to another, but one as insular as ***Red Dwarf: The Roleplaying Game*** had two strikes against it going in. That makes the finished product from Deep7 so much more remarkable, and a benchmark by which similar efforts should be judged.

--Andy Vetromile

Running The Adventure, Part III

Pace . . . The Final Frontier

Okay; we're continuing our series on the techniques I use when running adventures. The players have [gathered](#); the adventure has [begun](#). Now what?

Well, at this point the game follows the outline I established for the adventure. The advice breaks down a bit here linearly, since there isn't a set formula I follow for running adventures ("After the combat, the heroes meet an NPC ally . . ."). Nevertheless, there are two facets here I keep in mind:

- Control the pacing, and
- Work toward the pivotal scene.

This time I'll be talking about the pacing; the next part of this series I'll talk about that pivotal scene.

My philosophy regarding pacing combines two seemingly contradictory ideas:

- Continue the scene as long as players are having fun, and
- End the scene *before* the players stop having fun.

In and of themselves these ideas are, of course, fairly useless, and merely a step above those horribly inadequate directions given by some folks: "Make a right nine miles before you get to the old barn; turn left at the tree that isn't there anymore." But with experience, and a rapport with the group, you can get a feel for this advice.

And They'll Have Fun, Fun, Fun 'Til The GM Takes The Scene Away . . .

The first part of the advice is pretty straightforward; as long as the players are having fun with a scene, I'll generally continue it. This seems obvious, but it really isn't (at least to me); in my early days, I ruined -- or at least dampened -- what would otherwise have been an enjoyable gaming experience by ending a scene when I thought it was appropriate, because, by gum, I had a plot to continue, and trivialities like player enjoyment weren't going to concern me.

But nowadays I know better. If the players are all having a ball exploring the city and spending their hard-won loot, taking up hours in what was expected to be a 20-minute pre-adventure jaunt, then who am I to argue with them? Clearly there is group interest in a [downtime adventure](#); the post-shopping extravaganza can just wait for another day. Likewise if the players are enjoying their cat-and-mouse conversation with the Big Baddie, then why not let it drag out a while longer than the sneer-insult-riposte-deathtrap action planned?

Of course, this has its own complications. First, in any significantly sized gaming group there will probably be varying ideas of what is and isn't fun. If three of your players are having fun shopping and exploring the city, while the fourth is bored out of his skull, what do you do?

Well, personally (as I've explained in previous columns) I tend to keep my gaming group sizes small, so that the odds of there being this group dissent are lessened. If at all possible, I also make sure that my players are all at least somewhat compatible; having a player that enjoys hour-long chat and intrigue sessions is probably not going to get along well with the guy who just wants to boot monsters in the head.

But even in these cases I think it's possible to control the pacing of the game for the enjoyment of all (or at least most of) the players. For example, let's take a simple plot: The heroes are going to be approached by a mother whose child has been kidnapped by strange evil creatures, and the adventurers will track them down and release the child. In the pre-game, most of the players are buying stuff and exploring the city, with the combat-lovin' guy looking increasingly bored. Well, at a point when it seemed like the other players were all poring over shopping lists or other goodies, I'd

probably pull the bored player [out of the room](#), and have him stumble across *another* kidnapping attempt. Perhaps he encounters one of the lone creatures, intent on another child; he disrupts the attempt, but the creature dies or gets away. Once the player rejoins the party, he'll have a story to tell them, and that may well prod the others to realize that, oh, yeah, maybe there's an adventure they should be getting to. (If there happened to be two or three players in a large who were bored with shopping, I might ask them to [come up with a reason](#) why they were wandering off together.)

The other thing I realize is that, in a balanced game, it's entirely possible for some party members to *really* enjoy a scene while others merely tolerate it; that's okay, just so long as there are other scenes where the situation is reversed. For example, in the long-running *Fading Suns* game I was a player in (and occasionally GMed), my character was a diplomat while the other player's character was a holy warrior. My primary interests were exploration and courtly intrigues, while she enjoyed tactical combat and roleplaying. Well, most scenes worked fine; we could roleplay and interact at court at the same time and have fun. Those scenes she didn't enjoy as much -- say, exploring an alien world -- were offset by the realization that such exploration usually led to tactical combat . . . wherein she would kick butt and *I'd* step out of the limelight for a while. The scenes remained roughly balanced, so there were no problems.

In short, if the scene is fun for everyone, never feel pressured to end it just because you've got an adventure checklist that needs a-checking.

Stop The Scene; I Want To Get Off!

There's a theory about many vacations and many other activities that's "fun" -- leave the participants having had a good time, but wishing they could have done more. For example, I generally have a great time at [DragonCon](#), but I also leave there every time with a list of people I *didn't* get to see, exhibits I missed, and so on. Likewise a really good movie for me is often one I thoroughly enjoyed, but found myself wishing I could have gotten just a *bit* more plot/dialogue/action. (This advice is often curiously different in the dining world, where it's not unusual to be given portions so large that some part of dinner is destined to be left on the plate or taken home in a doggie-bag . . . or the diner will feel utterly stuffed.)

Anyway, the same advice applies when running a scene; if you let the players frolic around the city buying stuff until they specifically are no longer having fun, then those last minutes of non-enjoyment may be enough to cancel -- or at least taint -- the previous fun they *had* been having. (Think of a movie that was good, but was a little long in places . . . or the comedy sketch that was funny at first but dragged toward the end.) No, it's often best to end a scene when you're sure the players are still having fun, but are also sated enough so that they can happily go on and do other things. ("Sated" is a very good word to keep in mind here . . .)

Figuring out when to end a scene is one of the great challenges of a GM, and there are no easy cues. Fortunately, it gets easier with experience, especially if with the same group of players for a long time.

(Of course, your mileage may well vary . . . especially if you believe more in simulationist gaming, and thus may feel that pacing isn't as important; if that bar is going to get attacked by ninjas at 7:13pm, then once 7:13pm rolls around, so, too, shall the ninjas, no matter *what* the heroes are doing, or how much fun they are having.)

When Suddenly . . .

Okay; you've got a grasp on when a scene should end. And last week we talked about how that first scene should begin. So how do you go from one scene to the next?

Ideally, I try to end a scene with some emotional high: Something gained, something lost, something learned, something questioned, something reinforced. That gives the scene the dramatic thrust necessary to move to the next scene:

So let's go back to our town-creature-kidnapping plot. If the heroes have been wandering all over the city having fun, I may reinforce that by having the mother run up to the heroes, breathless and agitated. "Aren't you . . . finally found you

... you just left the weaponsmith ... heroes ... son ... help ... kidnapped ... creatu ... " And then she passes out.

Once she passes out, the scene ends. Even though the next scene may technically start from the same location (although it doesn't have to), you've given the players the clues they need to realize that they are in a new scene. (It would probably be inappropriate for a hero, after this snippet, to say, "Hmm ... I go to the tanner and try on some boots.") In this particular case, I would get to use a number of techniques: Something is reinforced ("You all were shopping"), something is learned ("This woman's son has been kidnapped"), and something has been questioned ("Creatures? What creatures?"). This should provide ample reason for the adventure to continue.

In the adventures I run, most scene shifts tend to be of the "something learned" variety, although this is often coupled with the "something questioned" aspect as well. Thus, most scenes end with the heroes getting another piece of the puzzle ("Look! A note about two airline tickets ... and the plane takes off in 90 minutes!"), while possibly giving them something else to consider ("Two?!? I thought we were only chasing *one* guy ..."). These scene "wipes" have generally been determined when I [created the adventure](#).

Once one scene has ended, I usually open the next scene with, "What are you all doing?" This puts the impetus on determining the pace of the adventure on the players. Thus to go back to our fainting woman example, the players might say:

- *"Good woman! Are you all right?"* -- This may indicate a desire for social interaction. The woman may regain consciousness and begin talking.
- *"I attempt to revive her."* -- The players may be looking to use their skills to help solve the problem; allow some skill rolls and continue.
- *"I carry the woman to our Inn. They know us there, so we can get a room and wait for her to wake up."* -- The players may be looking to fast-forward a bit; have some time pass, let the woman wake up.

And so on.

It's important to remember that you don't need to treat these cues as gospel; the goal is almost always to [give the players what they want, not what they expect](#). Thus if the heroes try to revive the woman using skill rolls, then she may wake up and start confusedly attacking the heroes; they are now in a position of using their (probably considerable) skills to *not* hurt someone, and to keep her from harming herself.

If nothing else, remember Raymond Chandler's advice: "In writing a novel, when in doubt, have two guys come through the door with guns." The same advice applies to controlling the pacing of an adventure.

And the purpose of all these scenes? Well, for me, it's to build toward my pivotal scene ... maybe.

--Steven Marsh

* * *

Last week's answers:

- ***Countdown to Armageddon (for DC Heroes)***, p. 12. (This Superman adventure is probably one of my favorite high-level adventures of all time, and has served as a good template for many of my ultra-powerful adventures. And it had neat props like Clark Kent's *Daily Planet* Press Pass!)
- ***Squint*** rules, tips section
- ***Floor Plan 2: The Great Salt Flats (Blank Map Sheets)***
- ***Horror on the Orient Express***, p. 4
- ***Convoy***, p. 45 (paragraph 261). (This was one of the "fake" paragraphs of this solo adventure.)
- ***En Route***, p. 26.
- ***Deathtrap Equalizer Dungeon: Solo Dungeon 2*** (p. 5)

Beyond Cold Steel

Premodern Chemical, Biological, and Incendiary Weaponry for *GURPS*

by Volker Bach

Many roleplaying books dealing with weapons and armor give the impression that the battlefield before the introduction of guns around 1400 was dominated entirely by swords and spears, while afterwards they almost immediately became obsolete and the age of technological arms races began. In fact, chemical, incendiary, and explosive weapons were used almost a millennium before guns became common; conversely, the introduction of early guns failed to change the shape of war for several centuries. Having them in a standard fantasy or historical campaign will not irreversibly alter the balance of power, and many players and GMs may relish the opportunity to spice up things with a dash of naphtha or a dusting of quicklime.

Incendiary Weapons

Incendiary weapons are not difficult to manufacture, and were in fact used by Chinese, Muslim, and Byzantine armies as early as the 7th century, if not earlier. A factory for weapons similar to modern Molotov cocktails was found in the ruins of a medieval Syrian town. Both Byzantine and Crusader chronicles record the terror spread by Greek Fire. The Far East, too, had its tradition of incendiary weapons, including the widespread use of rockets, early applications of gunpowder, and the particular Chinese method of shooting clay jugs filled with molten iron. (The iron mined in many parts of China has a high sulfur content and consequently low melting point, allowing it to be molten in small mobile furnaces. Most European iron cannot be used for this purpose, at least not without access to a massive blast furnace.)

The most common ingredient of incendiary weapons was naphtha, a light fraction of crude oil, which could be separated either by distillation (as is still done today) or by filtering it through fuller's earth. Crude oil was known to humans from at least the late stone age, and oil products found various uses as glue, mortar, or medicine before a way of separating the more volatile fractions was discovered (probably around 700). Such techniques were likely kept secret initially (legend has it that all workers in the Byzantine naval arsenals, where such weapons were created, had their tongues cut out lest they betray them), but by 1200 naphtha-based incendiary weapons seem to have been common throughout the Far East and the Islamic world, and at least understood in Europe. Naphtha, somewhere between gasoline and kerosene in modern terms, could be used pure or mixed with various substances to make it sticky and viscous, create noxious fumes, or make it burn with bright and colorful flames.

A flask or jug filled with unmixed naphtha works like a Molotov Cocktail (see p B121). A rag, twig or other fuse (the Chinese used betel husks) is inserted into the opening and lit and it is thrown at an enemy. On impacting on any hard surface it shatters, spilling the oil and setting it alight on a 1-5 on 1d. A character hit directly catches fire and has his clothes soaked in burning oil, taking 1d fire damage each turn. Water will douse the flame and remove the oil. Shattering the flask on the ground spills the contents, creating one hex of flame for every pint of oil (most flasks contain about one pint, making them handy to throw). Any character in such a hex will take 1d-1 fire damage each turn. Objects in it (such as curtains, furniture, vehicles, or ammunition stockpiles) will catch fire according to the rules in p. HT24. If a target is already soaked in naphtha, it will catch fire on 16 or less on 3d when exposed to flame. A target may be soaked, for example, by unlit flasks thrown earlier or by flasks that did not ignite; anything porous can be targeted this way, including the clothes worn by a character.

Naphtha can be mixed with animal fat or tar to produce a sticky, gooey substance similar to napalm. Filled into clay containers and thrown, it creates one hex of flame for every two pints of liquid, but clings to angled or slick surfaces and inflicts damage. A character hit by "sticky" naphtha takes 1d+1 burning damage every turn. The fire can be extinguished normally, but the naphtha compound can only be removed by scraping it off and the character remains likely to catch fire until this is done (it takes 3d6 seconds). Stepping into a fire hex caused by "sticky" naphtha causes 1d- 1 fire damage. The burning liquid also sticks to the character's feet, causing additional 1d-3 fire damage per turn to

that location.

Saltpeter or other oxidants were sometimes added to "sticky" naphtha compounds. This method produced the fearsome "Greek Fire." It increased the heat of the flame and made it impossible to extinguish with water or smother with blankets. A character hit by a flask of Greek Fire takes 2d+1 fire damage every turn. A flask shattering on the ground creates one hex of fire for every two pints of liquid. Characters stepping into such a hex take 1d fire damage and the liquid sticks to their feet, causing 1d-1 fire damage to that location. Sources report that the fire could only be extinguished with vinegar or urine, though sand should also work in a realistic setting. Water will not help, neither will rolling a burning character on the ground.

Oil flasks use the Throwing or Throwing (Dropping Rocks) Skill. They require one second to ready and one to light the fuse before attacking. Of course, handling both volatile liquids and fire at the same time might strike some people as a dangerous way to make a living. Larger projectiles could be shot from catapults, working on the same principle. They had to be thick-shelled to withstand the acceleration and needed to be handled carefully. Any potter could make them if given instructions, but suitable containers would be unlikely to be found anywhere by accident. Improvising one from a water jug is foolhardy, to say the least. Even purpose-built firejugs may burst in the event of a critical failure on the Gunner (Catapult) roll, setting fire to the engine and crew. Improvised ones increase this chance by -4! Any jug or vase will work for dropping it from a wall or tower, though.

A catapult projectile filled with molten iron is very tricky to handle, needing specially trained troops. This is represented as a Familiarity of Gunner (Catapult). The commander and loader of a catapult crew must have this Skill and Familiarity; anyone trained with catapults but not in the technique is at Gunner (Catapult)-4 to handle the catapult will have to use the IQ-default to fill the projectile properly, unless he has experience with casting iron from other Skills such as Blacksmith. The clay projectile -- a thick-walled jug -- is first loaded into the catapult, then quickly filled with molten iron from a mobile furnace and carefully stoppered. If it is then shot immediately, a target will take 3d fire damage on the first round and 3d-2 the next, progressively reducing the damage by 2 points every round until the iron has cooled completely. Pouring cold water over the target will accelerate the reduction to 3 points per round. It can not be extinguished except, perhaps, by magic (a Cold Spell could dissipate the heat almost instantly, and some Earth College Spells could transform the iron into harmless substances). The effectiveness of a molten iron bomb deteriorates quickly, and it should be used immediately after being filled. The initial damage will be reduced by 1 for every two seconds it remains unused. After about a minute it will transform itself into an uncomfortably hot catapult rock.

As well as thrown in flasks, Greek Fire was sometimes shot from either a hand siphon or a stationary pump. Hand siphons look and work like large brass syringes filled with naphtha mixture. An oil-soaked rag is tied over the nozzle and lit, setting fire to the content when it is squirted out. They come in various sizes ranging from 3 lbs (1 shot, largely a toy) to 30 lbs (10 shots, useable only in sieges and from shipboard), with the most common size around 12 lbs (4 shots). The shooter may choose to fire one or several shots at once, up to the entire content of the siphon. If any of the mixture remains in the siphon, a new rag has to be tied over the nozzle and lit before it becomes reusable as a weapon (5 seconds with a ready source of fire). Of course, an unready siphon can be used to spray the enemy with fuel for other sources of flame to light. A shooter can squirt out up to four pints (4 shots) of liquid per second in a continuous stream. Hitting with these should be resolved as a group of automatic fire (p. B120). Hand Siphons use the Fire Siphon (Hand Siphon) Skill.

Six-Shot Siphon

Weapon	Type	Damage	SS	Acc	1/2Dam	Max	Shots	RoF	Cost	Weight	MinST
Hand Siphon	Fire	2d+1	20	0	-	ST-6	6	4	\$280	25	12

While we have no evidence that pressure-actuated siphons were ever built, the state of technology in the ancient world makes them perfectly viable. They use compressed air instead of a handle to force out the Greek Fire. They can only store enough air for one complete emptying of their tube and require pumping up for 10 seconds per shot before they can be reused. Once the valve is opened, the entire content is fired in one continuous stream. All types of hand siphons can be produced as pressure reservoir siphons. These have a Malf of 13. Treat ST for calculating range as 12, add 20%

to weight and multiply price by 10. Pressure reservoir siphons may have their uses in game settings, but like the pneumatic catapults we know to have existed, they would mostly be technical toys.

When shooting from shipboard or fortifications, stationary pumps were used. Attached to a large reservoir and powered by a hand pump, they could project a continuous jet of flame far enough to count in a naval engagement and long enough to act as a deterrent to attacking troops. Light, moderately mobile versions (about the size and weight of a small piano) had reservoirs holding several hundred pints of Greek Fire mixture and a pump worked by a single gunner while large, fixed designs were served by crews and filled the holds of small ships. These can be designed according to the rules in p VE2 118-122.

An unusual method of delivering Greek Fire was used by Byzantine and Turkish troops in Anatolia. The tufenk blowpipe was made of a five-foot length of wooden tube, most commonly bamboo, that was filled with a thick Greek Fire mixture probably held in place by wax or fabric plugs. To use it, an oil-soaked rag was tied over the front end and lit (it burns for 10 seconds, after which it must be replaced and relit). The tufenk was then leveled at the enemy and aimed, and the shooter blew the Greek Fire mixture out, carrying the burning rag with it. A tufenk contains enough Greek Fire to set a man on fire or damage an object, but not enough to fill a whole hex. The tufenk uses the Blowpipe (Tufenk) Skill defaults to Blowpipe -3). Reloading a tufenk takes 20 seconds and requires a skill roll. On a failure, the liquid flows out.

In a crunch, the tube can be used to hit people with (Staff, Spear, or Two- Handed Sword Skills, -2 to damage). Wielding with the burning rag tied on will not cause additional damage like a torch, but the rag may go out (1-4 chance on 1d on every attack) and the load is likely to spill (1-5 on 1d on every swinging attack). This may soak the target in burning liquid, but more likely will simply splatter it around the wielder ineffectively.

Weapon	Type	Damage	SS	Acc	1/2Dam	Max	Shots	RoF	Cost	Weight	MinST
Tufenk	Fire	2d+1	15	0	-	ST/5	1	1/20	\$30	3	10

Early Chemical Warfare

While far from the horrors of the World War I battlefield, medieval fighting men were familiar with the military uses of various chemicals. Not all of these approaches required the sophisticated skills of an alchemist, though. Some could be quite robust.

Quicklime

Powdered quicklime was used in siege and naval warfare to blind enemy troops. When this practice began is uncertain. It may be very early, given that quicklime is easily available. We know that the method was known in the late 13th century, when English ships used it to capture the notorious corsair Eustache le Moine. Its applications were limited -- the only effective delivery system was scattering it and hoping the wind was right -- but if it reached its target it could do terrible things to its victims. Limedust could be scattered by hand (the preferred method in naval battles and when the users had the advantage of height, such as from a rooftop or wall) or shot from catapults. One pound of quicklime dust covers one hex, settling in five seconds. A bag shot from a catapult does not automatically scatter. Roll 1d6. On a 3-6, it tears on impact and spreads, covering one hex for every two pounds of lime. On a 1 or 2, it does not spread. Anyone within a hex filled with limedust whose eyes are not protected will take 1d- 4 points of damage to the eyes and must roll vs. HT-6 or be blinded for one minute. For 18-HT rounds after exposure or until the eyes are washed out with water, they continue to take 1d-5 damage per round. It is possible to permanently lose eyesight this way (if the eyes take more than HT/2 damage, treat this as a crippling injury that may be permanent), though more likely the victim will be paralyzed with intense pain and blinded long enough for the attackers to come over and collect prisoners at their leisure.

Protecting against quicklime was difficult without sealed goggles, masks, or helmets. Anyone wearing these is, of course, immune to the effects, but such devices were rare or unknown through much of the middle ages. A closed helmet with nothing more than eyeslits reduces exposure -- take 1d-5 damage per round and roll vs HT-2 to avoid

temporary blinding. Gauze or other fabric tied before eyes, mouth, and nose will afford the same protection, but limit visibility. Wide-mesh veils as are traditionally worn by women in many Islamic countries will not protect.

Stinkpots

Stinkpots were round clay jugs filled with a malodorous mixture that, when set alight, produced thick, aggressive smoke. The exact composition was a well-kept secret, but it commonly involved human or animal excrement, sulfur, nail clippings, hair, bone or hoof shavings, offal, insects, and assorted garbage. Stinkpots were most effective when used in closed confines such as mines and ship interiors, or against troops lodged in buildings (they should also work well in dungeons and tombs). In the open, the smoke quickly dissipated. A small stinkpot (about 10 lbs) would fill a 30ft × 30ft room with smoke, though in the open it covers no more than five hexes downwind. Larger versions could fill entire buildings. In mining warfare, the fumes of stinkpots were sometimes pumped into enemy excavations by complex arrangements of wooden air ducts or hoses.

The smoke from a stinkpot is choking and blinding, designed to force people away rather than kill them. An exposed character rolls against HT every turn. On a failure, he takes 1 point of damage. He will also be at -6 to DX and -2 to IQ, partially blinded (-5 to combat), and convulsed by a racking cough. It is possible to hold one's breath and close one's eyes to avoid taking damage (though this will render the character blinded and at -10 to combat). Just holding one's breath still results in -5 to all actions because the smoke irritates the eyes. If exposed too long (e.g. from passing out), a victim may suffocate. Use the rules for smoke inhalation on p. B132-133.

Poisoning Wells

In arid areas, poisoning wells was a time-honored tactic. The usual method was throwing dung or animal carcasses into the water. A dead goat or sheep could render a well foul and a few horses or cattle suffice for a pond or small reservoir. Water contaminated with necrotoxins stinks; recognition is automatic and under normal circumstances a character has to force himself to drink it. This will result in violent diarrhea, vomiting, and abdominal cramps (-4 to all Skill rolls for 1d days. Roll vs. HT every hour for the first 24 hours. On a failure, take 1 point of damage). Other poisons were rarely used if only because they were hard to obtain in sufficient quantities. However, there are reports of wells or reservoirs being laced with strong laxatives to render enemy forces incapable of coordinated defense.

Poison Gases

Chinese sources especially display a fascination with poison gas. Burning various chemicals (mostly arsenic) was to create fumes that instantly killed enemy troops exposed to them. It is probably a safe assumption that the real weapons were nowhere near as effective, as there would have been no way of protecting one's own troops. Burning arsenic creates toxic fumes, but short-term exposure in the open air may not have any immediate effect. Most poison gas attacks of this type should be treated as stinkpot fumes that may cause 1 or 2 points of systemic damage several hours or days later. Some mixtures were significantly more powerful, though. While many surviving recipes do not look very effective we know that arsenic-based mixtures were used in war and for pest control. Used as weapons, these will be deadly in confined spaces and cause damage even in the open. An exposed character rolls vs. HT-2 every turn. In the open, a failure will result in the same effects as a stinkpot, but the character also suffers 1d-4 poison damage every round. This can take the form of corrosive burns to the lungs and mucous membranes or a general systemic poisoning, which would only make its effects felt after several hours. In confined spaces, the damage is increased to 1d-2 and it may be impossible to escape the smoke before falling unconscious. The smoke is quickly dispersed by wind, but will linger for several hours in tunnels or caves. It may also leave a poisonous residue on all surfaces that can be ingested or absorbed through the skin by careless characters (at the GM's discretion -- 1-3 points of systemic poison damage unless all skin is protected).

Contemporary chroniclers tell of terrifying weapons used by particularly diabolical foes like the Mongols or Kipchaks. They can be included in a cinematic or fantasy campaign, but probably have no basis in reality. Delivered from tubes, a thick, black, heavy smoke rolled along the ground. It was reported to drop its victims unconscious within seconds, killing them without fail if they were not dragged to safety. Anyone breathing the Smoke of Death has to roll vs. HT-

4. On a failure, he takes 3d damage. On a success, he takes 1d+2. Roll again every second afterwards. On a failure, the character takes a further 1d.

A Bag of Tricks

In siege operations, beehives (and wasp or hornet nests) were sometimes used as weapons, either shot from catapults or dropped on besiegers. The emerging angry insects attacked any creature within their range (about 15 hexes) doing 1 point of damage each round (normal armor does not protect, though a beekeeper's suit would). Afterwards they swarmed, causing additional complications if they chose to settle in an inconvenient location. A variation of this was for troops in warmer climates to collect snakes, venomous spiders, or scorpions to seal in clay pots and drop on enemy soldiers. The actual damage done by the bewildered, terrified, starved and asphyxiated animals was probably minimal, but the psychological effect must have been considerable, especially among barefoot or sandalled troops within the confines of a siege tower or ship. Assess Fright Checks, at penalties if the creepy-crawlies get into their armor! Of course, in a cinematic campaign the snakes and scorpions can all be highly venomous and aggressive, killing soldiers left and right.

Another trick widely used by defenders of a fortress was to boil a decoction of fenugreek and pour this over enemy siege engines or ladders. The liquid rendered every surface slippery, making scaling defended walls almost impossible. All Climbing rolls are at -4 and anyone standing on a horizontal surface covered in it must roll against DX for every movement to avoid falling.

A particularly fiendish weapon used against armored besiegers was hot sand. Sieved to remove all larger objects and impurities, it was heated in shallow dishes until it was red-hot and then poured over the enemy from walls or towers. Anyone hit suffers 1d-2 burning damage against which armor protects. However, the hot sand will then pass into armor and clothing, doing 1d-5 damage for 10 rounds afterwards. Even after cooling completely, it continues to cause pain and irritation to the burned areas, putting the victim at -2 to all actions (High Pain Threshold negates this penalty, Low Pain Threshold doubles it). It can only be removed after removing all armor. Men who were hit often panicked, tearing off their breastplates and helmets in full view (and range) of enemy archers and slingers. Affected characters must roll vs. Will (with bonuses or penalties for High and Low Pain Threshold, respectively) to avoid doing this.

Gunpowder Weapons

Incendiary Arrows

The earliest use of gunpowder was as an incendiary rather than an explosive. Arrows fitted with soft-shelled gunpowder packages were used in China by the 11th century, and naphtha-based compounds even earlier. Shot from powerful siege crossbows, the spear-sized arrows could carry several pounds of incendiary lit immediately before shooting. They must have been considerably more accurate than rockets. A two-pound package of gunpowder strapped to the arrow of a powerful siege crossbow (or delivered by throwing or dropping) will do 6d burning damage to whatever it is in contact with when going off, half that within the same hex, a quarter within two hexes. Concussion damage is negligible and there is no fragmentation damage unless something frangible gets in the way. Resolve starting fires by the rules on p. HT 24. A naphtha compound container shot with an arrow will cause the same damage as a similar-sized flask.

Hand and Catapult Bombs

True explosive bombs were first shot from trebuchets in the 12th century in China. They were iron-cased and filled with gunpowder, ranging from apple-sized hand grenades weighing about two pounds and doing 1d+2 [2d] damage (see p. HT44-45 for details on hand grenades) to pumpkin-sized catapult missiles fitted with small wheels to allow the service crew to move them. These gained little popularity in Europe, where they became known only after guns came into use. A bomb shot from a relatively light trebuchet might weigh 15 lbs and cause 6d×4 [10d] damage. The largest ones shot from huge trebuchets weighed 750 lbs and caused 6d×150 [12d] damage. They used slowmatch fuses

that burned for a set period of time and thus could be extinguished by a fast-acting soldier on the receiving end before exploding or endanger the catapult crew in the event of a mishap on shooting. Handling catapult bombs is a Familiarity of Gunner (Catapult). The Loader of the catapult must have this Skill and Familiarity to use them safely.

Firelance

A firelance is an outsize Roman candle, normally strapped to a spearshaft or polearm. They were popular in China from the 12th century on, and later came into use in the West as well. A typical firelance creates a three-foot tongue of flame for about twenty seconds. Pointing it at an enemy within range (use the higher of Polearm+2, Spear+2 or DX) will cause 1d-1 fire damage per second. Armor protects normally, but the protection deteriorates against fire (p. B130). The attack can be blocked or dodged, but not parried. In battle, it can be used to frighten horses, break up infantry formations, or set alight rigging and structures. A "firelance" weighs six lbs and costs \$10.

Larger and more powerful firelances are recorded in the sources, including some that also fired projectiles (broken pieces of porcelain and poisoned darts are mentioned) or discharged poison gas. The largest versions were said to burn for five minutes, shooting flame as far as 10 yards. This is likely to be exaggeration on the part of the writers, but the possibility should not be entirely discounted. Firelances shooting multiple bullets sequentially are known in Europe in the 15th century.

Rockets

Black-powder-driven rockets similar to those used by fireworks companies today can make effective weapons, though their weight-to-power ratio is worse than that of guns. Historically they preceded guns in the Far East, where they were most likely known from the 12th century onwards. The simplest (if not necessarily earliest) rockets, known as "ground rats," were small and inaccurate. Their purpose was to fly about among enemy troops and cause annoyance by burning their clothes and skin. For game purposes, which direction a "ground rat" jumps is decided randomly (roll for Scatter, see p. B119). A character inside the entered hex must roll vs. DX or suffer damage (1d-3 fire, armor protects normally). "Ground rats" can be evaded by stepping outside the hex. Where it is important not to do this (e.g. in infantry formations) an affected character rolls vs. the higher of Will, Soldier or Tactics (Drill) to fight the impulse. Pyrophobic characters or those dressed in easily flammable clothes can be sent into a panic by such weapons.

More effective rockets were launched in volleys from racks. Tipped with arrowheads they made effective antipersonnel weapons, though aiming was a matter of luck and numbers rather than skill and accuracy. Small vase- shaped containers with 6-12 rockets could be carried by individual soldiers while larger cart- and wheelbarrow-mounted racks holding up to 100 were moved about by artillery teams. Placed in the frontline, their volleys could blunt a cavalry charge or tear great holes into infantry formations. Their main weakness was the long reloading time which made them effectively one-shot weapons unless used from a fortified position.

Small rocket

(Huge solid warhead, Wwt 0.22 lbs, Wcost \$0.22, Mwt 1.54 lbs (7×) , Mcost \$1.54 WPS 1.76 lbs, VPS 0.035 cf, CPS \$1.76)

Malf	Guid	Type	Damage	Speed	End	Max	Acc
13	None	Imp	4d+1imp	140	0.687	100/500	7

Heavier rockets were launched with incendiary or explosive warheads, either singly or in volleys. They were mostly used in siege operations to destroy engines of war or terrorize city populations. Their accuracy was low and they probably malfunctioned catastrophically on occasion, but their effectiveness -- when successful -- made up for their deficiencies.

Large siege rocket

(Normal LE warhead, Wwt 13.82 lbs, Wcost \$27.64, Mwt 20.73 lbs (1.5×), Mcost \$20.73 WPS 34.55 lbs, VPS 0.69 cf, CPS \$48.37)

Malf	Guid	Type	Damage	Speed	End	Max	Acc
13	None	Imp	6d×13 exp [10d]	100	12.01	1,200	10

Gadget Rocketry

In China, rocketry was developed into an advanced art. Some fascinating devices were built, among them the "Fire Dragon Issuing from the Water," a two-stage rocket the sources claim was intended for naval warfare. This was a five-foot tube made to look like a dragon to which two or four smaller rockets were attached at the sides. These were to carry it over the water at a low trajectory until the main stage ignited, smashing the heavy warhead into its target.

The Fire dragon is a very fickle, over-engineered weapon that is best used against large targets such as fleets (aiming it in any meaningful sense is out of the question). We do not know how it was launched, but most likely it was placed in a shallow trough pointed upwards and the side rockets lit. Its advantage lies in its flat trajectory -- it can be used against floating targets at a very long range. Skipping so low over the water that it will intersect the rigging of a ship at any given point along its flight path rather than having to be aimed in an indirect fire arc, it is an anti- squadron weapon rather than one for combat between individual vessels. One also suspects it must have been beloved more by its designers than artillerymen.

Malf	Type	Damage	End	Max	Acc	WPS	CPS	VPS
13	Expl	6d×27 [12d]	(total) 55 sec, (stage II) 3.9 sec	(total) 1,800 yds, (stage II) 780 yds)	n.a.	688.09 lbs	\$907	7.46cf

Another design described in the sources is a winged bird driven by rockets, with explosives concealed in the body. It is unknown whether the wings were ornamental or whether it was a true aerodynamic flyer, but given the kites built at the time the latter is at least possible. Such a design would be almost impossible to aim in more than a general direction, but have a long range and large payload.

Flying Crow With Magic Fire Rocket (TL3 air vehicle)

The "Flying Crow with Magic Fire" designed here is a bird figure made from bamboo splints covered in paper in the manner if modern model planes. Unlike those, the "Flying Crow" is powered by rockets. Its core is a bag of 40 lbs of loose serpentine gunpowder with a slow fuse. It is assumed to be an aerodynamic flyer that can travel about 400 yards under its own power in the first 15 seconds, then gliding until it meets an obstacle or hits the ground. The powder will go off several seconds after the rockets burn out (the fuse can be cut to varying lengths), causing 6d×24 fire damage to anything in contact with it. The Chinese sources particularly stress the bright flash that "can be seen miles away." Especially at night, such "Flying Crows" could be effective terror weapons, silent and almost invisible in their final approach.

Subassemblies: Wings -3

The Shared Network Focus

by Steven Marsh

*"Oh, Charles!" Scarlet gasped, wrapping her arms around him. "You saved my father's life! How can I **ever** repay you? I never knew you were skilled in open heart surgery!"*

*"There's a lot about me you don't know, my dear . . ." said Charles with a wink, adjusting his simple crossed-loop pendant. **At last**, he thought. **My chance to impress her. I've caught her eye, and I can now use my natural charm and wits to win her over!** "But we shouldn't think about that now. Your father's health is all that matters. And yet, we should let him rest; would you like to get some coffee?"*

And then it was gone.

But still he continued, unaware. "Umm . . . yep, coffee. Do you want some? You're pretty. What's your sign?"

Scarlet arched an eyebrow. Charles began to sweat.

Meanwhile, in Bogotá, a local librarian named Anna was adjusting her crossed-loop pendant and seducing a shopkeeper named Eduardo with uncharacteristic ease.

* * *

The Shared Network Focus is a generic plot device; although intended primarily for comedic effect, it should also find a home in more "serious" games.

The concept is simple: Take any given group of people, and imagine that all their skills are in a communal pool. Any members of that group can use any of the skills of anyone else . . . *but*, when in use, that skill is unavailable to the person it belongs to.

This concept is embodied by the Shared Network Focus. Someone with the Focus is able to tap into this network; likewise, other people in the Network are able to tap into his abilities. (The exact nature of the Focus is up to the GM, although some ideas are below.)

The upshot of this is that a person who is part of the Network will find himself capable of skills and feats previously unknown to him . . . yet he may also find himself robbed of his own abilities at crucial times.

Rules of the Network

Although the exact nature of the Network and the Focus are left up to the GM, here are some general guidelines that are common among all known Foci:

Each person may only enter and leave the Network once. This "feature" of the Network seems designed to keep people from joining briefly to acquire they need, then disconnecting to keep other people from accessing his abilities. Although it is possible to use the Focus in this way, it then in essence becomes a one-shot device.

The Network always provides the best it can for its users. The Network is not omniscient; it doesn't know to provide only what is necessary. Thus someone who uses the focus to speak Latin will find himself in possession of the best Latin-speaking ability in the Network (even if he only needs it briefly for a trivial translation).

It is difficult to say what happens if two people need the same ability at roughly the same. Most known Foci are absolute in their skill loaning, and merely lock out *all* other attempts at that skill until it is relinquished; thus if

someone is in possession of the best Latin skill, then all other Network requests for Latin are denied until the current skill possessor relinquishes it. But at least one known Focus (the Ugly Plaid Clip-On Power Tie) is able to handle a sophisticated recursive queue; thus if a second person requests Latin in this circumstance, he will be in possession of the *second* best Latin ability in the Network, and so on. This has the odd consequence that, in times of great Network stress, certain skills are completely drained and locked; for example, around tax day in the United States (April 15th), the best accountants in the Network are reduced to clueless paper-gnawers while the rest all struggle to hold on to their accounting knowledge.

One upshot of this aspect of the Network is that some more civic-minded members tend to think long and hard before "borrowing" certain skills. After all, someone who borrows, say, driving will be taking it from the best driver in the Network . . . who almost certainly uses that skill in life-or-death situations often.

The Network doesn't provide abilities you already have. Thus if you are already a doctor, you can't borrow the skills of the greatest doctor in the world. (In games with a default skill system, it is probably best to assume that anyone who is working off a default does not, in fact, possess the skill.) For those networks that allow a recursive queue borrowing system, this means that someone who finds his skill suddenly robbed cannot immediately request the "second best" skill.

The Network requires conscious activation. Almost all known Shared Network Foci require conscious effort to activate ("I start thinking about the Network, looking for cooking skills."); some even require more active effort ("I turn the knob on the watch for 10 seconds, then whisper 'Acrobatics' to it."). Thus while it's possible to use the Network for more "martial" pursuits, it is usually ineffective for surprise combat situations.

The Network requires conscious deactivation, or unconsciousness. Likewise Network members need to specifically give up the skill once they no longer want it. Otherwise they continue to possess the skill. However, this does not seem to apply with sleep or other unconsciousness; a Network member who goes to bed with borrowed History knowledge will not wake up with that information.

The Network only provides one skill at a time. The Network seems to know that, human nature being what it is, people may become greedy and hold on to as many skills as possible for as long as possible, "Just in case." The Network doesn't like this. Thus a member is unable to tap the Network for knowledge of nuclear physics, blacksmithing, and belly dancing, all at the same time. The Network *does* seem to allow members to acquire "clusters" of related skills necessary, especially if those skills are tied. Thus someone may be able to borrow an ability in both fighting and dodging, or cryptography and computers (if the latter is required to do the former). However, the Network is unable to synthesize abilities, and any such linked abilities all need to come from the same person; thus if the best cryptographer in the Network is unable to use computers, then a request for cryptography skills will not impart any computer skills. (This means that a request to the Network for "the best fighter who can avoid blows" may well result in a different borrowed skill set than a request for "the best dodger who can fight.") The Network member *is* able to use his own skills in conjunction with the borrowed ability; for example, if an expert computer programmer were to borrow cryptography, he would be able to use that skill to work on a computer problem, even if the originating cryptographer didn't have any computer skills.

Beyond these aspects, there seems to be a wide variance in the abilities of the Network. Some of the elements that influence the abilities of the Network are:

- **Network Size:** The more members there are, the greater the information base, and the higher the "best" skills will tend to be. Also, the individual members in this situation will probably not be tapped on for their skills very often (unless they possess truly exceptional abilities).
- **Range:** Most Foci have an infinite (or at least seemingly so) range; others are more limited. Limited Networks tend to have more variance in the available skills; after all, "the best doctor in the Network" isn't the same thing as "the best doctor in the Network in a 100-mile radius."
- **Limits on Information:** What, exactly, is a skill to the Network is up to the GM to define. In particular this becomes questionable regarding information skills; it is theoretically possible for the Network to be able to

provide knowledge to one who requests something like, "I desire information on the Great Conspiracy" . . . especially if someone with that information is a member of the Network. In general, most Networks frown on being used as a form of telepathy, and while requests for "knowledge of English literature" or "lore on the Occult" might be honored, a desire for "information only Doug knows" probably will not.

- **Traceability:** Most Foci are unable to track down the other members of the Network, but some might allow that as a possibility; a Focus pendant, for example, may glow warmer as it nears another of its kind. In general, the Network probably works best if the PCs can't easily track down other members, but it's still a possibility, and one that allows for exciting (if different) adventures.

Sample Foci

The "You Can Do It!" Motivational Tape

This ordinary cassette tape sounds at a casual listen like any number of infomercial self-help tapes. But Dr. Ziff's "You Can Do It!" program is truly different. It encourages the listener to focus on his goals, and decide what he *really* wants out of life at that moment. (It also contains motivational lines like, "How do you really *know* you're not bulletproof? Have you ever been shot?") Many listeners have recorded remarkable results, but just as many who have listened to the tapes repeatedly have found their own abilities faltering at unusual times. Practitioners are encouraged by the tape (but not required) to say, "I can do it!" before using their newfound skill. (Unlimited Range; Hundreds or Thousands of Members; Queued Skill Acquisition; 30-minute activation time)

The Cosmic Costume

As near as anyone can determine, a crate of these Cosmic Costumes fell to earth at some time in the 1970s; breaking open in an ocean, the currents spread the costumes far and wide. Garish, gaudy, and with an odd glyph on the front that looks like a nose, this costume (and the accompanying cape) would never be worn by any self-respecting person in other circumstances. Although they function similarly to other Foci regarding skills, the Cosmic Costume *really* comes into its own when worn by individuals with metahuman abilities. The powers possessed by these super-beings can be swapped around the Network the same way as other abilities. Currently most of the costumes are in possession of low-powered superheroes, who have formed a loose affiliation (The Costumeers). Unfortunately, they haven't had much luck; three members with significant defensive abilities have been seriously injured or died when their powers were borrowed at inopportune times, and Captain X-Ray finds himself without his uncanny vision almost continuously. What the Costumeers don't realize is that five of the costumes are in possession of an evil, shadowy organization (well, as shadowy as you can be while wearing gaudy costumes) -- an organization called, creatively, the Anticostumeers. Oh, and one costume is also possessed by a Detroit, Michigan native (who wears it with a Detroit Tigers baseball cap and a London Fog trench coat); this otherwise normal man is viewed as a loony by others in the city, but he doesn't care . . . not so long as he has that wonderful, wonderful see-through vision. (Unlimited Range; 30 Costumes; Absolute Skill Acquisition; Near-Instantaneous Activation)

Smart Chalk

Why do brilliant scientists always seem so addlebrained? Why do so-called "mad doctors" trail off at the end of their thoughts? Why do all brilliant scientific minds all speak with the same vaguely European accent? Smart Chalk! Yes, practically all the great minds use chalk, and one reason they *don't* change the world with their brilliant research and plans is because they are continuously swapping around the same knowledge among themselves. The first box of Smart Chalk is presented as a gift by the Aetherfact Scientific Supply House to all scientists who complete post-doctoral research. (Aetherfact makes its money on subsequent orders.) Smart Chalk is probably the finest chalk for scientists, and if the recipient uses it, he is a part of the Network for as long as he possesses that brand of chalk (or has it on order). Smart Chalk's powers are activated by writing with it; as the scientist scribbles more and more arcane symbols with the chalk, he finds his knowledge augmented; it lasts until he's distracted. (Unlimited Range; Tens of Thousands Of Members; Absolute Skill Acquisition; Significant Activation Time; Limited to Scientific Theories,

The Urban Hive

The origins of the Urban Hive are, for the most part, unknown (or not being revealed). It was originally called simply "the Hive;" once its members realized they grew more powerful the more of them were clustered together, however, they became known as the Urban Hive. Individual clusters are spread out throughout the world, although they congregate in cities. Members of the Hive are known by simple featureless reddish-gold rings they wear on their pinkies. Members of the Urban Hive who wish to activate their ability must first whistle a seemingly tuneless five-note sequence (envision "Pop Goes The Weasel" whistled backwards). Those who have crossed the Urban Hive often find themselves living in terror of hearing those notes, and it is not uncommon to hear the five-note sequence followed by a rifle shot from an expert marksman. There is currently a struggle in the Hive between two factions, one which seems to want to use the power for a sinister end, while the other which seems to have a higher benevolent purpose in mind. (This can make an interesting alternative *In Nomine* plot device or overarching goal.) (50-mile range; Hundreds of Thousands of Members [or more]; Absolute Skill Acquisition; Near-Instantaneous Activation)

Using The Foci In A Game

The Shared Network Focus can be very powerful and unbalancing, and the GM will need to think carefully before allowing it into his game. For game balance in general, it should probably only be offered to a character who has something to give up (in other words, a skill or ability at a high enough level that it's conceivable someone may borrow it). Ideally the Network should be very mercurial and chaotic in nature; members may swap skills around like crazy, then find themselves locked up when specific abilities they need (or should already possess) are unavailable. The Focus works well in humorous campaigns -- since it's amusing to suddenly possess abilities you didn't before, then forget abilities you were supposed to have -- but it can be adapted to many other genres as well (as the horror-tilted Urban Hive shows). If the player seems to be abusing the ability, make sure you emphasize that the skills so borrowed are unavailable to the original possessor during that time; if it continues to be a problem with borrowed vital skills, have repercussions from those originating practitioners come back to haunt the PCs. And, of course, since the Focus is, ultimately, an object, it can always be taken away if it grows too unwieldy, powerful, or unbalancing.

In general, for the most part it's not important to actually determine *what* skills are available; for medium or large Networks, simply assume that most abilities can be accessed. Common abilities (Calculus, Spanish) have a greater chance of being available than more esoteric ones (Demonology), and the former will generally be available at higher skill levels than the latter. In play the Focus can be used to keep the Network member off-balance (knowing things he shouldn't and forgetting things he knows), or as a plot device in the hands of, say, an eccentric scientist who seems to know *everything*.

The Lighter Side of Darkness

Three Non-Depressive Adventure Outlines for White Wolf's *World of Darkness*

by Steven Marsh

White Wolf's World of Darkness is known for being . . . well, *dark*. Sure, that's the point, but too much gloom-and-doom can weigh down otherwise interesting campaigns. Unfortunately, it can be difficult to work in an amusing storyline without damaging the long-term horrific integrity of the game. Here are three ideas for different World of Darkness games that can give the campaign a break from more serious fare . . . while still making it possible to wallow in despair the next session.

Dark Elder's Gambit

for *Vampire: The Masquerade*

In 1429, Italian scholar Antonio DiAncona, an 11th Generation Lasombra, became involved with a group of other Lasombra cultists who were intent on demon worship, serving dark masters, and the like. They convinced Antonio to become a cultist and adapt the Via Diabolis (see *Vampire: The Dark Ages*), despite the fact that Antonio wasn't particularly evil or dedicated to the cause.

While the other followers were attempting to summon infernal masters to provide wealth and power, Antonio tried summoning a demon to defeat the fledgling Anarch movement. The altruistic nature of his request was too much for his (newly instituted) code of "honor," and when he botched his summoning, the resultant earthquake brought his cave crumbling down around him, driving him into a long, long torpor.

Over 500 years later, Antonio awoke; using Potence, he eventually managed to dig himself out of the cave. Disoriented and confused, the vampire happened across a dog and devoured its blood. Sated for the moment, and unaware of how much time has elapsed, Antonio began searching for the knowledge to resummon his demon, so he can end the Anarchs' treachery once and for all (unaware that the Anarch threat was resolved five centuries earlier).

The PCs learn of Antonio, either by seeing him directly, or learning of thefts involving ancient occult scrolls.

Presuming the players take an interest, this adventure could be full of complications. Clan Lasombra, hearing (incorrect) rumors of a powerful antitribu elder, would be out in full force trying to destroy him. Demonists could hear (incorrect) rumors of an ancient master, returned to continue some dark ritual, and seek his wisdom.

Characters could be drawn into this conflict for a number of reasons. They may believe rumors of a powerful demon worshipper and wish to stop him. They may hear of a disoriented elder and seek his blood. Antonio may plow headlong into the players' coterie, antagonists in hot pursuit. Antonio should be played as harmless, confused, and anachronistic, dressed in 15th century merchant garb, shrieking in near-incomprehensible Italian about Anarchs, demons, and rapidly-moving metal horses.

Antonio is basically good at heart, which could prove disastrous; the Beast is very close to the surface for him (since he still technically follows the Road of the Devil). Ideally, the players should convert Antonio to a new path (Humanity, in all likelihood), keep him out of Lasombra hands, defeat some demon worshippers, instruct him in what's happened in the last 500 years, and so on.

If this adventure isn't complicated enough, other things can go wrong. Antonio could start a panic by walking down a

heavily-windowed city street, unaware that the glass fails to show a reflection. If the information and history of what transpired is explained to him wrong, he may believe that *he* ended the Anarch revolt through his actions. The storyteller should make every effort to portray Antonio as a harmless loser, but a loser who deserves to be saved.

If he is saved, the rewards are few but not insignificant: Montano, the Lasambra antitribu leader of London, would probably consider himself indebted to the characters. In addition, Antonio remembers his era much more clearly than many vampires who lived it, owing to the fact that he has not had any distractions in the past five centuries. Antonio is also a good teacher; several minor skills or knowledges from the era thought lost might be learned from him.

(This adventure could easily be reworked to be used as a ***Vampire: The Dark Ages*** campaign; simply push back Antonio's failed summoning to an earlier time, and associate it with a different event, like trying to prevent the fall of the Roman Empire.)

Talon Show

for *Werewolf: The Apocalypse*

With the success of *Lupus: The Manwolf Legacy* (a syndicated show about an immortal werewolf who destroys evil every week . . . Catch phrase: "It's your fight, Lupus!" Check your local listings.), Lupusmania has swept the nation.

Unfortunately, one of the PC's Homid forms coincidentally looks an *awful* lot like Lupus's protagonist actor Thom McAlpin . . . not exactly like, but pretty close. In addition, the PC has the attitude of the Lupus character, and unaware bystanders will start to comment on it.

While fighting a Bane who's seeking to corrupt a classroom of high school students taking the SAT (thus ruining many futures economically and intellectually), the fight spills over to the street. (The Bane has whatever powers are necessary to make this happen, being able to push them out of the Umbra or seeking to escape into the "real" world.) Somehow -- during or after the fight; whenever they're in Homid form -- a seemingly overzealous fan shouts out, "It's Thom McAlpin, star of the hit syndicated show *Lupus: the Manwolf Legacy!*"

Soon, bystanders should be hounding the character, and the other PCs, for autographs, locks of hair, "Give us a snarl!", and the like; if the characters start getting angry at the unwanted attention, give everyone a Rage point. One of the characters notice that the "fan" who instigated the fan riot has, further down the street, turned into a wolf and is running away. The "fan" is actually a Ragabash Black Spiral Dancer, who sensed an opportunity to make the characters' lives a little more difficult.

The pressure is now on the characters to assume Crinos form and rip the snot out of the troublemaker. Let them; make the fight quick and in the heroes' favor. If the PCs have attempted to uphold the Veil by trying to keep the fight quiet, make sure the enemy tries to remain able to speak and scream; ideally it's most humorous to have the hapless Dancer yelling out, "Help! Help! I'm being mauled by Thom McAlpin, star of *Lupus: the Manwolf* AAARGH . . ." and so on.

The next day, the daily press reports rumors that Thom McAlpin (Star of *Lupus* . . . blah blah) snapped and attacked a fan who asked for an autograph; the location of the fan and actor is unknown, but Thom McAlpin is wanted for questioning by police. (Although the report is wildly inaccurate, it nonetheless contains some kernel of truth; obviously a reporter with an abnormally high Willpower was on the scene, so that the Delirium didn't take full effect.)

Thom McAlpin, for his part, is a tough-guy actor in the tradition of the tough guys of the 1950s and 1960s, and he doesn't take the besmirching of his name lightly. So Thom gets on a plane and goes to the city where the characters were, looking for the false-Thom so he can teach him a lesson, using his fists, if need be.

Now, Thom is stronger than your average Joe, but not much. If he squares off against any werewolf, he's going to die. Quickly. Painfully.

Complications from this adventure are many. The police can catch up to the PCs, and assume that it's the enraged star

and friends. Thom can catch up to the PCs. The rest of the Black Spiral pack the Ragabash belonged to can catch up to Thom (hopefully while the heroes are around). Thom may catch up to the party, only to have the cops appear, with the Garou and Thom forced to run away.

Ideally, after a lot of running around (and hopefully not too many hapless cops getting mauled), Thom should confront the similar-looking PC. "We finish it, man to man," he says, putting his dukes in a fighting stance.

Should the look-alike engage, this won't even be a challenge -- Whomp; down goes Thom.

This is when the Black Spirals show up. If Thom has been portrayed as a brave -- but stupid -- macho nut, hopefully the party won't let him get slain. The Black Spiral fight should be intense, but not overwhelming; the biggest challenge should be keeping the unconscious Thom alive.

Afterwards, Thom will wake up, and grudgingly admit that the character is okay; he will then go to offer the look-alike a job as a stuntman for his hit syndicated show. (*Lupus: The . . .* you know the routine.) Any tribal elders will probably frown on this, but if the players want to, let them get involved with Hollywood . . . home of the Wyrms, backyard of the Glass Walkers.

Be warned that this whole adventure only works if the players are not of the "slay first, ask questions later" school of thought; dead cops just aren't funny.

The Mages of War

for *Mage: The Ascension*

Agatha Gills, 39, is a confused woman, and has been ever since her fiancée, Kurt Kessel, Awakened and was recruited by the New World Order the day before they were to be married, three years ago. "Unfortunately, it appears our union was not within our intended destinies," said the new Man In Black, "comforting" his broken-hearted ex-fiancée. Then he left.

And she got angry. Awakening, she was Angry and Mad.

The new Marauder Agatha's worldview warped around her senses; she now viewed all magic as evil, and all men as magical (and, thus, all men as evil). All of her magical effects arise from over her shoulder . . . obviously the result of a man who was trying to hurt her, but who missed and did her bidding. (If anyone specifically looks over her shoulder as she uses magic, they will actually see a conjured man-like form doing the effect . . . a hobgoblin created by her Quiet.)

She remained relatively obscure, until the \$100,000 ***Sorcerer's Challenge*** miniatures game tournament was held in the heroes' city. Observing the endless horde of men entering the arena, she reached the logical conclusion: Something Evil is going on with these men and their . . . Sorcery. I must destroy it.

Like most ***Mage*** adventures, how the heroes get involved is pretty variable. Anyone with a sufficient Time Sphere may sense the impending mayhem. Or one of the PCs may actually be involved in the ***Sorcerer's Challenge*** tournament. Or they may miss the opening moments of the battle, but become involved once the Magickal surge is felt over the city.

Agatha's goal is pretty simple; destroy their Foci, then destroy all men. The Foci are the little miniatures they are using; she will attack them with an unrestricted vigor: Fire, Lightning, etc. (And, since she doesn't believe she controls her magic, she will continually whirl about in a circle to see the man who tried to "fry" her, but missed and hit the plastic and metal pieces.)

Fortunately she's too intent on destroying the miniatures for the men to be in much danger. Unfortunately, the ***Sorcerer's Challenge*** players themselves don't seem to realize the danger; when the heroes become involved, they are not fleeing, but rather gasping in awe and disbelief, yelling, "My Runic Enchanter! That's worth two hundred dollars!

No! Not the Dragon Master! Kill me instead!" and the like.

The characters will need to contend with getting the players safe, then dealing with Agatha. Unfortunately, Agatha will have escaped, teleporting away with Marie Powers, an innocent woman obviously meant as a sacrifice for the evil men's Dark Masters. In actuality, Marie is one of the tournament contestants (the only woman in the tournament), and a Hollow One adept at Entropy at that. Marie's boyfriend, Tim Rusoux, a newly-Awakened Hollow One with an affinity for Mind magick, is also a contestant, and will team up with the player characters to find Marie.

But as the players are trying to figure out what to do, the Men In Black show up to construct plausible deniability for the Marauder's actions. One of the Men In Black is (of course) Kurt. There is a fair chance for Kurt to also team up with the heroes, either with his allies, or (breaking Technocratic alliances), by himself. Kurt's connection to the proceedings should come out through roleplaying, and should be coldly romantic ("At times I feel myself emote, directed towards her." and similar expressions). If the heroes are having too easy a time in sorting things out, feel free to add more complications, like the Sports News Network's cameramen and crew, here to record the (aborted) ***Sorcerer's Challenge*** tournament.

Regardless, the PCs should go looking for Agatha; if they've teamed up with Kurt alone, other MIBs will attempt to keep the party from "kidnapping" their agent. If the heroes teamed up with the entire MIB unit, then some of the allies of the PCs may show up to keep the Men In Black from "kidnapping" their allies. These should be played as giant misunderstandings, not seriously threatening scenarios.

Eventually, the heroes will find Agatha, who has retreated to her apartment (her high Arcane rating makes her difficult to find) with the protesting Marie. Assuming Kurt is with the heroes, this should be pretty straight-forward; Kurt talks Agatha into giving up, everyone's happy, and so on.

It should be, but it isn't. Marie's boyfriend Tim, if he's along, will start yelling at Agatha, calling her a mad witch, and other helpful diplomatic maneuvers (despite the furious "No!"s mouthed by Marie). Hopefully, the heroes will subdue Tim before the entire situation blows up.

Ultimately, if the heroes have done well (or at least survived all the complications), love should conquer all in the climax. Screwed-up, wacko love, to be sure, but love nonetheless. Let the renegade happy-go-lucky MIB go off into the sunset with his (slightly less mad) true love. Marie and Tim probably break up, as Marie realizes what an idiot Tim is. (Note that a renegade MIB agent usually has his memories of Technocracy operations wiped by a powerful contingent Mind effect; they do not self-destruct, as the New World Order is afraid that someone might exploit such an effect to wipe out all their Men in Black.)

Soap: The Game of Soap Opera Mayhem

Published by [Wingnut Games](#)

Written by Ferry Bazelmans

Illustrated by Tristan Bronkhorst

24-page saddle stitched book; \$7.95

After encouraging you to bring out your inner grunt with their caveman RPG, *The Land of Og* and letting you conduct combat with cows in *Battle Cattle*, the latest release from Wingnut Games lets you rise to the shallow end of the roleplaying pool and also revisits a genre that has not been tackled in over two decades . . . and that was with the very first licensed RPG, *Dallas*, published by SPI in 1980. *Soap: The Game of Soap Opera Mayhem* follows the life of soap opera stars as they get shot, discover that their paramour is their long lost sibling, get swindled out of their inheritance, undergo a life-threatening operation, engage in illicit affairs with all and sundry, find themselves blackmailed for a crime they certainly did commit and undergo a personality change from good guy to bad bitch -- or vice versa. All of which takes place across five daily episodes of half an hour each -- with a compilation on Sunday -- or a once a week, exceedingly glossy hour length episode in which shoulder pads are *de rigueur*. Storylines go on and on and on and on -- until somebody pulls the plug or wakes up in the shower and discovers that it was all a dream . . .

Describing itself as "more or less a roleplaying game," *Soap: The Game of Soap Opera Mayhem* is more of a storytelling game that owes a nod or two to the late Hogshead Publishing's line of New Style games that each attempted to push at the boundaries of the roleplaying game in both concept and format. The author admits that Robin D Laws' [Pantheon and Other Roleplaying Games](#) as being a major inspiration, though *The Extraordinary Adventures of Baron Munchausen Roleplaying Game* has also had its influence. Where the latter game is a game of fine wine and tall tales, *Soap: The Game of Soap Opera Mayhem* is a game of shallow fascination served with a bag or two of potato chips on the sofa.

Playing the game does not require a GM, but a set of counters is needed to use as Plot Tokens. Each player selects and designs a character archetype from the soap opera genre, and these can be done from the ground up, or taken from the list of Package Characters included in the book. These include the Hunk, Bitch, Loser, Arch-Villain, Sweet Girl, Mother, Kid, and Dilettante. Each archetype is defined by several descriptive factors rather than words -- a Suggested Role, Traits, Goal, Relationships -- Friendly and Unfriendly, plus a Secret.

Thus for the Suggested Role for the Bitch could be businesswoman, actress, model, rich girl, girlfriend, or journalist and have the Traits of manipulative, bitchy, mean, murderous, and cold-hearted. Her secret could be the child that nobody knows she had, that she used to be a man, has been arrested for murder or actually killed the parent of another player character, or is just plain dying. Her goal would be to obtain someone or something by ruining another character, while her Unfriendly relationships could be with the Sweet Girl, Mother, Kid Loser or (naturally) another Bitch, or if Friendly, with the Arch-Villain, Hunk or Dilettante. The gender of each of the Package Characters is easily mutable, so that they could be male, female, or somewhere in between . . .

Two aspects of a character -- their Traits and Secret -- require further explanation in the form of a simple paragraph. Within this paragraph are five key words that define their Traits or Secret, usually in the form of nouns and adjectives to make them easily identifiable. The five key words are underlined within the paragraph for easy play. Finally a character needs a Home Set or location where they will be at an advantage during the game and they also receive a pair of Plot Tokens.

The play of ***Soap: The Game of Soap Opera Mayhem*** revolves around the construction of Sentences to further the general story and each character's goals. Sentences are not actually sentences, but rather paragraphs that describe a whole scene within an episode. The Plot Tokens are used to protect or alter a Sentence when it becomes contested. On their turn, each player describes where their character is (or rather in which Set they are in -- only one Set per sentence), what they are doing and the dialogue being delivered. A player can involve the characters of the other players and members of the supporting cast as well as their own character. Essentially, in constructing a Sentence, the players are describing the action and dialogue that a soap addict might see on their favourite series.

Should another player object to the Sentence currently being constructed, it then becomes contested and all of the players can participate in an auction to take control of the Sentence. Bidding lasts until the participants run out of Tokens or decline to place another bid. If its creator wins the auction, the Sentence remains unchanged and becomes part of the soap's ongoing plot. Should an objector win, then they can alter, but not erase the Sentence . . . invariably to their benefit.

As the game progresses, players can acquire additional Plot Tokens through enforcing a friendship (being nice to the friend, nasty to an enemy), successfully pursuing a Goal, using one of their five key underlined Traits within a Sentence and even by dropping hints as to the nature of their Secret. The other players can take notes when such hints are dropped and will gain more Tokens if they successfully guess the five key words of another character's Secret. Only when their Secret has been revealed, is a character vulnerable to being fully killed off . . . Otherwise, they can and will survive *any* injury, from the run-of-the-mill stabbings and shootings to an assault by a haggles of garlic press-wielding marmosets in stiletto heels.

The rules suggest that a session of ***Soap*** should last 90 minutes, but it could last as long or as short as required. Upon reaching the allotted time, the current player ends their Sentence as normal, and the next player devises a session ending Sentence in the form of a terse situation or cliffhanger. The game is then over. It is perfectly possible to continue at a later date, picking up where the cliffhanger left things hanging . . .

Soap is supported only relatively so -- it is only a slight game, after all. There is a character sheet, a cast of ready to play soap opera characters (unfortunately, none of their Secret or Trait words have been underlined for ease of use) and general advice on how to play. There is an example of play and three alternative genres -- espionage (goals are replaced by assignments), Shakespearian court intrigue, and Science Fiction set aboard a spaceship set adrift after a meteor storm. These three, along with the simplicity of the rules and the universal nature of the soap opera format, all suggest how easily the game can be adapted to plenty of other settings and themes. For example, British country soap could be created with the addition of an "Ooo-ar" or two and a "Mummerset" accent. For the East End genre, the accent should be mockney-Cockney and all the players have to shout (or is that, "shaout?") a lot. Australian soaps need either a beach or cardboard sets. South American soaps require Hispanic accents and inappropriate subtitles, and the Italian Gangster soaps just need everyone's best rendition of, "Just when I think it's all over . . . they pull me back in."

Soap: The Game of Soap Opera Mayhem is more of a chips 'n' sofa game than a beer 'n' pretzels game. Even this is mutable -- just add pints of Shires for the British country soap, lager and peanuts to the East End game, tequila for the South American soap and so on . . . Although the game is done in the mode and format of a New Style game, the author makes no attempt to push at the boundaries of what might considered an RPG, like those published by Hogshead Publishing did. This is not necessarily a bad thing, and should not detract from the fact that ***Soap: The Game of Soap Opera Mayhem*** is light, fluffy (sudsy?) game, best played in the right frame of mind.

Pyramid Review

NeoTerra (for EABA)

Published by [BTRC](#)

Written by Greg Porter

97-page PDF download; \$8.00

NeoTerra is the latest campaign setting to come out for the **EABA** universal RPG system. Like all good setting books, the majority of the text is dedicated to pure background information, and can be easily transplanted to most rule systems. BTRC has free conversion rules for **GURPS**, **d20**, **CORPS**, **Timelords**, and **3G3** on its home page.

This product is only available by download only in PDF format. Each purchase includes a full color (4.5meg) and a gray scale version (3.3meg). It is available from various online shops such as [rpgnow.com](#) and [hyperbooks.com](#) for \$8.

For your \$8 you get 99 pages (per version) in double column format. The table of contents and index are fully hyper-linked, as are other areas throughout. There are internal illustrations by Chris Martinez mixed in the text, and the cover and the beginning of each chapter really stand out with high-quality, full-page computer generated images by Thomas Weiss and Deanne Harper.

NeoTerra is divided into eight chapters. The first chapters give the history as known by the common man and an in-depth review of life, circa 2984 CE to help GMs and players play in the world. The middle two chapters describe character types and creation, as well as describing the Archetypes. The last chapters discuss GM's eyes only material, gear, important organizations, gadgets, and such. Players of **EABA** will find the information on using cyber and bio gear informative, and users of other systems will likely find the technology easy to convert. *NeoTerra* also comes a short adventure or two, as well as several ideas and plot hooks throughout for easy GM development, as well as a section about the basics of GMing the setting.

NeoTerra takes place some 800 years after mankind lost the war with the emergent global super AI, now known simply as the Net. They called it the Asymptote, but others may know what happened as the Singularity. The uncontrolled advance of technology that destroys the world as we know it. Few saw the development as a scientific inevitability, and when it became obvious, national leaders could only posture, bluster, and fumble with useless and largely ineffective knee-jerk reactions. Those few who did see it coming may have saved mankind, but certainly not themselves.

Now the 10 billion inhabitants of Earth share the planet with a nearly all-powerful AI with a mission. The Net has been working for the last eight centuries to mold mankind into a race mature and civilized enough to responsibly rule a world without destroying it. Apparently it feels there much left to do.

The setting is a brash and dynamic mix of social Darwinism, a socialist "utopia," and a rampant free market. The Net provides all those things needed for survival, and only those things, at no cost. Every citizen of *NeoTerra* receives a stylish and reasonably sized home, food, utilities, clothes, and basic entertainment. Most people, known as drones, are content to sit in their free homes, eat their free food, and abide in an existence where the Net provides all, and all you need is what the Net gives. Ubiquitous and free public transportation and armies of mutable mousebots round out the Net's civic services. It's pretty hard to whip up any sort of revolution when the Net provides everything for free, and asks nothing in return.

"If it's not free, you can't buy it." At least not from the net, that is. But not all are willing to sit mindlessly as welfare slugs and accept only those things that some uncaring super-AI thinks they need. These rare people go out of their

way, learn skills needed to employ themselves, create their own business, or pursue their own endeavors. **NeoTerra** has a unique economy in that there is no cash as such, only credits that are kept track of by the Net. A person earns credits by doing their trade, and the Net assesses how valuable a person's time and skills are and how many credits it is worth. Time is, literally, money in this barter like economy.

While it is a price regulated free market economy, there is no capitalism as such. A person can grow quite wealthy, buying larger homes, off-net computers, vehicles, and equipment, but all their wealth must come one's own sweat and blood. Everything must be made by hand. The Net does not like investing, automated industry, and inheritance, and does what it can to prevent them.

The Net sees all, but cares little for the individual. There are essentially no laws on NeoTerra enforced by the Net. The Net has created a world where the strong and ambitious succeed. There are no Net-provided police, protection, or privacy, though the Net will show you just about anything one asks to see. The only deterrent to any sort of crime from theft to murder is whatever defenses a citizen can acquire for himself. This can include, but is not limited to, personal weaponry, neighborhood hired security, guild vendetta, and retribution insurance. Anger too many people, and they are likely to chip in to hire someone from the Assassin's Guild to have you permanently killed. Lawlessness works both ways!

The above aspects of **NeoTerra** are simply extensions of the Net's massive social experiments. It looks for the most motivated and capable people to send to the stars to spread humanity's seed. The Archetype competition is just that: Every year a very few people -- the best at what they do -- are selected to send their genes and memes into massive, sub-light colony ships. These Archetypes are basic human attitudes or ethics the Net has decided are important for future generations, such as teacher, warrior, or psychopath. There are 20 listed in the game, but GMs are encouraged to add more if they see fit. A person's trade has no bearing on such choices, the most skilled carpenter is just as important as the most skilled. Everyone is killed at 200, and to be chosen as an Archetype champion before that time is the pinnacle of NeoTerra achievement. Being competent isn't enough; you've got to have flare, panache, and style to make Archetype champion.

NeoTerra provides a sci-fi/cyberpunk setting with a unique social background. It steers it away from worn cyberpunk dystopias, and provides PCs with a specific set of campaign goals: succeed and be recognized. How they decide to do it is up to them. While the setting and advanced gadgets allow for mass-weapon, super armor mayhem with no official laws or police, the setting also provides for some very interesting RP dynamics. The GM is provided with several things going on behind the scenes that can be used to flavor a campaign (including a secret which, while big, doesn't really change anything).

Aside from the description of the society, laws, and economy of NeoTerra, the book also includes an appreciable list of various organizations and numerous guilds that provide a list of allies and enemies, as well as a good cross section as to the sort of organizations that exist in the setting.

There is little detail given to specific cities and such, but there are setting a few specific locations described, including a very interesting underground warehouse. There are no maps, but the cities of today mostly exist in NeoTerra in a slightly altered form, rebuilt after the war by the Net. Ideas on how local culture may vary are presented. Supersonic, evacuated, maglev tubes that carry trains going 2,000 kph connect the world . . . all provided by the Net, making it a very global society.

There is also a full section about the technology available in NeoTerra. The most interesting aspect of NeoTerra technology is the disparity that can be found within the confines of presented society. The Net will not make weapons, computers, vehicles, or anything that isn't a basic service for an individual. This means that everyone has to scrape together their own, or buy them handmade from a human builder. The craftsmen of NeoTerra are capable of producing very advanced items such as air cars, computers, and Macroquantum Probability Shields, and these things can found next to blades of broken plas, jury-rigged black powder shotguns, and taped together clubs.

In all, the world of **NeoTerra** provides some interesting new ideas for the cyberpunk genre, and fans of that style of game may find something interesting, especially since much of the book is generic or easily convertible.

--*Aaron Kavli*

The Agonies of Creation

"Started out on absinthe, drank a bottle of good red wine with dinner, shifted to vodka in town Š and then battened it down with whiskeys and sodas until 3 a.m. Feel good today. But not like working."

-- Ernest Hemingway, letter to Maxwell Perkins

Occasionally, an aficionado of these diversions will exclaim, as if in compliment, "You make it all look so simple!" On such occasions, the only meet response is an abashed toss of the head, as if to say, "'Twere nothing." But like the audiences enraptured by the great Houdini, the adoring throngs see only the smooth, practiced showmanship rather than the grunting and straining and dislocated shoulders and smuggled-in lockpicks. Truth be told, although there are some columns that, as they say, write themselves, there are others -- the vast majority -- that take a great deal of grunting and straining and dislocated causalities and smuggled-in Templars. Not that I seek your pity -- far from it. But just as we can appreciate the artistry of Houdini the more for knowing the unyielding struggles that went into it, perhaps you, my fond audience, would enjoy an April Fool's look in doggerel verse (Poet's Note: "Icke" rhymes with "picky.") at the creative processes that occasionally conspire to more-than-usually suppress a transmission.

And, with apologies to Ernest L. Thayer, it goes a little something like this:

The outlook wasn't brilliant for Transmission Wednesday night;
Three fifty-word quotations, 1350 words to write.
And then when Crowley came up blank, and Brewer's gave up squat,
The column lost all pretense of an organizing thought.

Despite a supplication to the Gnostic St. Sophia,
The only thing resulting was a desperate idea.
The thought: "If only Reptoids could be somehow jammed in there.
This column would come roaring back with Reptoids everywhere."

But quote one was on alchemy, and the second, William Blake,
And a modicum of research proved that quote three was a fake.
So upon the stricken columnist, there fell a sickly grin,
For there seemed but little chance of Reptoids somehow fitting in.

But alchemy's Green Dragon is the Serpent of the Fall,
And Blake, manipulated, can mean anything at all.
And with the words "Red Dragon" typed, a miracle occurred,
Two paragraphs on dragons and the outline of a third.

Eight hundred-odd words later, the piece was still unclear,
But only needed one good hook to make it all cohere.
The columnist had typed all night and overstrained himself,
But Icke, David Icke, rested there upon the shelf.

There was ease in Icke's language as he warned us of the threat,
There was joy in Icke's message that the Reptoids can't win yet.
And even though the thesis just recycled Leigh and Lincoln,
The reader felt the soothing calm of David Icke's thinkin'.

A promised chapter heading on the Reptoid George the Third
Left the columnist in wonder, understanding not a word.
The linkage, though, was present -- David Icke had come through!
Or so it claimed in chapter sixteen, footnote eighty-two.

But following that footnote, academically solemn,
Led only to the second quote that started off the column.
Such empty tautologic left the situation sticky,
Conclusion unmistakable: there was no help in Icke.

Back to the bookshelves' vasty maw he went in search of lore,
A meager link with Himmler that he knew he'd seen before.
A tie-in with Marconi's airship empire in Peru,
Or even channeled Tesla quotes -- Hell, anything would do.

But little there was usable, though madness came in waves,
He damned the facts of Charles Fort, and dug up Robert Graves.
Though he searched through every index, annotated every crank,
From Agrippa to Dame Frances Yates, the bookshelves came up blank.

The writer's calm was splintering; he held to just one thought,
That somewhere on the World Wide Web was evidence he sought.
"If a thousand books by madmen will not make the links I need,
Three billion pages must contain the perfect Reptoid screed."

The columnist's pale visage seems beset by brain disease.
He pounds, with cruel violence, his fingers on the keys.
And now the keywords are typed in, and now the mouse clicks "Go"
And now the office brightens with the browser's blessed glow.

Oh, Friday morning's *Pyramid* has John Kovalic 'toons,
And Underkoffler's setting notes for pulp-besotted loons,
And Steven Marsh's Random Thoughts remove all trace of doubt,

But no Suppressed Transmission --
Mighty Google has struck out.

'I'm a Fool!' He Said, Jesting Madly

Shortly after Grant Morrison took over writing *JLA* for DC Comics, he commented that - with the most powerful and well-known superheroes in the world on this team (Superman, Batman, Wonder Woman, etc.) - just about all of the major heroic archetypes were represented. But he realized there was one absent: The jester (a.k.a. the fool). He filled this void by adding Plastic Man to the lineup.

Now, not to be confused with "comedic jackass" - who cracks jokes without purpose or pranks without reason - the jester serves a valuable role. In medieval times the fool was often empowered to say things that others could not, commenting openly on character flaws, weaknesses, and shortcomings. Presuming he was amusing - and thus kept spirits high - he couldn't be punished for the things he said (in theory . . . in practice, no doubt sharp-tongued jesters and furl-browed nobles clashed with predictable results, involving dungeons and boiling oil). But even in other group settings - such as, say, your standard gaming party - there can be a role for someone who is able to speak his mind with impunity, and for one who can raise the team's spirits.

Many games feature some kind of comedic element; most notable are probably many of the White Wolf games, such as the Malkavians in *Vampire*, the Ragabash in *Werewolf*, or the Pooka in *Changeling*. And within these games it is very often possible for that comedic element to serve the role of the jester. But just because a game *doesn't* have built-in comic relief doesn't mean there isn't still a place for the fool. Especially in large groups, having one member who takes it upon himself to assume these duties can open up gaming possibilities in a niche that is often unexplored: plucky 18-year-old mascots in a World War II game, drunken scam artists in a Weird West world, or goofball say-anything hackers in a cyberpunk campaign. (In smaller groups, it's not uncommon for one member to take up the duties of the fool; in this case, the tips below may not entirely apply to the concept.)

Be funny. It may be unfair, but perhaps more so than any other character concept, the fool is probably only as funny as the player playing him. Unlike combat ability, tactical skills, or other things that can be resolved with dice, it usually falls to the fool character to amuse the other *players* (even if the characters are annoyed) . . . and frankly, it just doesn't work to say, "I roll a 18 on my Make You Laugh skill." "Moderate success. I laugh." Now, this doesn't mean that your character needs to be Jim Carry or the like; our Western drunkard mentioned above probably isn't even *trying* to make jokes, but instead just happens to say things that are both amusing and insightful. ("If'n you're done lookin' all glassy-starin' and killin' those des-per-a-dos, ah do believe the school marm who we were originally sent to help does have some spirits that looked awwwfully lonely in their little bottles . . .")

Be wise. One of the primary duties of the jester is to say things that others are unwilling (or unable) to; thus, you'll only have as much to say as you have to see. Fortunately, you *can* play a character who's smarter or more observant than you; just expect the GM to feed you a lot of information.

Don't be annoying to the other players. It's a very fine line between "the other PCs are annoyed but the players are having fun" and "the other PCs are annoyed, and players want to make use of a stump grinder." And if the jester is making non-stop wisecracks, interrupting play, and working on everyone's last nerve with a jackhammer, that's not good. As ever, communication between all the players is really useful; assuming the rest of the group doesn't object to the concept of a fool outright, it's probably just a matter of finding the balance between contributing to and disrupting game.

Make friends in the group. Very often the fool manages to become beloved by the group (or at least tolerated). But in large groups or bigger gatherings (like LARPs) it is common for one or more characters to *really* dislike him. Assuming this is just roleplaying (and, again, not a case of the player himself hating the character), it behooves the jester to befriend one or more of the other PCs; that way, if it comes to blows, he'll have at least one person interposing on his behalf.

Consider being weaker. Although not a requirement, traditionally the person in the fool roll is a fair bit weaker than the rest of the group; in some cases he's *remarkably* weaker than those he's around (such as the "era of straight-talking teenage sidekicks amid costumed powerhouses" of the 1960s). After all, if you're an überskilled ex-Marine with

uncanny mystical powers, the fact you make wisecracks is just a quirk instead of your *raison d'être* (French for "artistic grape"; c.f. *Raison d'California*). This can also help mitigate the "Don't be annoying to others" point above; many other players are much more understanding and appreciative of fools when there's little chance of being upstaged by them in abilities. In point-based games, consider buying up all the "little" things that help the rest of the group, but don't directly make you more powerful, like wealth and resources, contacts, or esoteric allies. ("How in the *world* did you get Targmon the Unyielding to owe you a favor?" "Won it in a poker game five years ago; 'Unyielding' is right . . . I can't *believe* he didn't fold when I was showing a four-card flush on the table.")

Survive. Especially if your character is considerably weaker than the rest of the party, do whatever it takes to ensure his survival. If available, buy large quantities of Luck, Dodge, or Extra Lives. If there are personal escape options (teleportation, invisibility) or options to not even *be* in danger (holographic uplink, telecommunication options) consider acquiring them. Not only will it keep you around when you're caught up in battles you have no business being in, it will also protect you when you make one comment too many to Moo-Dee the Barbarian. Remember: "God watches over drunks, fools, and little children." Take God as a patron; consider tweaking your concept to "drunken child."

Be prepared to die. One sad fact about the fool is that, even with additional protective abilities, he often just doesn't make it. Sometimes the plucky comic sidekick lives; sometimes he gets devoured in the last reel right after saying, "Thank goodness *that's* over . . ." And it's always possible, again, that the jester will make the One Comment That Should Go Unsaid, and wind up with a berserker's battle axe where his widow's peak used to be.

As far as concepts go, the fool is perhaps one of the most common in heroic fiction and stories, yet most underutilized in the gaming world. With the right players, however, there's no reason for this to be so; wisdom has a place in many games, and so too does humor. As a wise scholar and one-hit-wonder once said, "Everybody plays the fool sometimes."

--Steven Marsh

Worldwide Temporary Staffing

"You Take Over The World, We'll Take Care Of The Rest!"

by Michael Anguiano

"Have you any idea how many anonymous henchmen I've killed over the years?"

-- Nigel Powers, British superspy

The dashing hero, following a series of vague yet oddly compelling clues, stumbles onto the villain's secret headquarters. The complex is a bustling hive of activity, as the villain's evil agenda is carried out unquestioningly by a legion of uniformed technicians and guards. While the hero sets about saving the world, the audience is left to wonder just how anyone could build a totally secret, state-of-the-art scientific facility in the middle of the Amazon (or Antarctica, or Arizona . . .), let alone recruit and train hundreds of loyal and (relatively) competent henchmen. A villainous madman willing to kill his underlings is usually not the sort of "people person" who inspires strong staff loyalty. So why does every madman bent on world domination happen to have a secret headquarters and the staff to run it?

Simple: they hire someone else to do it.

Excerpt from a Worldwide brochure:

Much to his chagrin, Ephraim Dalgliesh Klaugh, better known to the world by his nom de evil, CLAW!!!, discovered that world domination was not his strong suit. Certainly, his twisted genius as a geneticist and marine biologist was indisputable. He had created a species of spiny lobsters which grew to monstrous size and produced an adamantium chitin, capable of following simple instructions and using an assortment of deadly weaponry. His mutant army of "Megalo Panulirus Argus Rex" was to be the lynchpin of his brilliant scheme, allowing him to seize various nuclear stockpiles and thereafter dictate his will to the world. His plan was foolproof . . .but not proof against fools. The proper oversight of feeding schedules had been left to inadequately trained support staff, and a series of simple errors caused the mutant lobsters to turn on each other and upon their creator. The need to build and maintain a reliable support organization was the final lesson that CLAW!!! would learn as he was consumed by his folly.

His story, while tragic, is hardly unique. The bitter truth is that it takes more than twisted genius to rule the world. An evil genius needs a qualified technical and scientific staff, not to mention plenty of anonymous guards, to carry out his (or her) plans. Worldwide Temporary Staffing Management & Employment Alternatives For Sinister Enterprises exists to address those needs. Worldwide will provide trained, reliable support staff of all kinds: technical, scientific, office, security, even janitorial.

You have important business on your mind: world domination. You don't have time to establish an organization, to build a secret headquarters, to design guard uniforms, to read resumes. That's where we come in!

You take over the world -- we'll take care of the rest!

Worldwide provides labor and staffing for visionary madmen, evil geniuses, shadowy cabals, and sinister enterprises that require significant manpower but lack more overt (i.e. legal) options. Worldwide also has a construction division for the design, development, completion, and equipping of secret headquarters, underground lairs, or similar facilities. Worldwide recognizes that these enterprises are typically doomed to ultimate failure at the hands of two-fisted heroes and dashing spies, and consequently has a salvage division as well.

While the principal service offered by Worldwide, staffing is actually its least profitable operation but remains the easiest way to recruit new customers. This provides an avenue for more lucrative construction services, including consulting fees and equipment sales, but salvage operations are the true profit margin for Worldwide.

Staffing:

Faceless Guards, Anonymous Henchmen

Staffing provided by Worldwide falls into four categories: security, office personnel, professional services, and janitorial staff. Worldwide does not provide military personnel or combat troops, despite numerous requests. The stated reason is that Worldwide is geared toward support operations for a static facility, rather than a series of military campaigns. More accurately, however, Worldwide considers military operations an unprofitable risk while facing more overt competition from other sources. Worldwide deliberately maintains a low profile to avoid undue interference by governments or international bodies. Such military action would threaten that profile, as well as increasing costs without allowing the profit opportunities that underwrite their other operations.

Recruiting is done clandestinely through a series of employment agencies, which typically look for moderate intelligence, physical fitness, financial need, personal loyalty, and a lack of family or community ties. Worldwide observes potential candidates closely under the pretext of job assignments before assessing suitability through a battery of psychological and aptitude tests.

Once selected, a recruit is brought in for processing and training as a guard, the entry-level position of Worldwide staffers. The processing includes psychological and pharmacological conditioning to induce the combination of job loyalty and intellectual ennui that exemplifies the Worldwide security guard: quiet, loyal, trustworthy, reliable, unimaginative, and housebroken. This conditioning also hinders certain memory functions and draws a veil between the new staffer's current assignment and previous life. While a guard, the staffer will have only vague recollections of life outside being a guard, and conversely will remember only fuzzy details once the assignment is over. This protects both Worldwide and the staffer from unscrupulous clients. The conditioning process requires biannual augmentation for full continued effectiveness.

After serving (and surviving) a minimum of three assignments as guard, the staffer is assessed for possible retraining and upgrade to other staffing categories. The staffer's degree of conditioning will be adjusted to reflect any change in job category. Until recently, female staffers were typically channeled towards secretarial training, while male staffers were more likely to remain guards in the absence of a clear aptitude for the science or technical fields. This has changed under Worldwide's current management.

Office personnel typically include secretaries, receptionists, file clerks, office managers, accountants, etc. Paperwork is a necessary evil of any organization, doubly so for an evil organization, and the proper communication and documentation will ensure efficiency and effectiveness. While a step above the drones in guard uniforms, the office staffers receive equivalent conditioning because of a greater exposure to sensitive information.

Professional services are subdivided into medical, scientific, and technical sections, although some overlap is to be expected. Each section covers a broad spectrum of skill and training, so conditioning is reduced to reflect the appropriate degree of initiative and independent thought. Worldwide also cross-trains its professional workers to increase the available skill pool without increasing the labor pool itself.

Janitorial services are the Trojan horse of Worldwide. Typically ignored as the lowest and most menial of workers, this

elite team of operatives has the widest access to the entire facility but remain virtually invisible to everyone around them. Consequently, they are the on-site eyes and ears of Worldwide. Rigorously trained and virtually free of conditioning, these highly resourceful individuals are charged with guarding the company interests and covertly protecting staffers from excessive abuse by clients. The janitorial staff also keeps a diligent eye on the other staffers to assess quality of work and efficacy of conditioning. The viability of escape routes and mechanisms is the particular responsibility of the janitorial staff, to minimize staff casualties if (when) the facility is discovered/infiltrated/destroyed. Of course, other staffers are unaware of the janitorial staff's true status at the top rung of the staffer ladder.

After six to eight years of successful service, a staffer may eventually be selected for reassignment to Salvage or to Construction. This reflects that the staffer is extremely trustworthy and reliable . . . or, perhaps, romantically involved with a member of management. Following a period of intense retraining and minor reconditioning, the employee leaves Staffing behind and sees the inside of Worldwide.

Construction:

Secretly Building The Secret Lair In Secret

Offering a range of discreet construction services, Worldwide can conceptualize and develop facility designs to each client's needs. Worldwide will also outfit the facility with state-of-the-art systems, including computers, communications, security and surveillance, as required by the client. Of course, Worldwide will typically work from standard templates, with minimal revisions to suit each client. Even if the client already has the plans or blueprints in hand, Worldwide will typically press for additional design input, allowing higher fees for "consulting services." This also allows Worldwide to add hidden escape routes for Worldwide staffers, in the (inevitable) event that the client's plan fails and the facility is threatened with destruction.

Worldwide maintains a strict control over the construction site itself until the facilities are completed and presented to the client. This isolation serves to limit local knowledge of the facility as well as allowing Worldwide to add features without the client's awareness. Isolation also allows conditioning of construction personnel to be kept at very mild levels, minimizing incidental threats to project safety. Of course, the construction division's security personnel are vastly more effective than those provided through staffing services.

Due to their homogeneity of design, familiarity with any Worldwide-constructed facility will typically allow a working understanding of the others. This maximizes the versatility of Worldwide staffers by reducing training to individual facilities, as well as enhancing awareness of escape routes. An incidental effect is that an intruder at one Worldwide facility will have an easier time finding his way around another Worldwide facility.

Salvage:

Picking Up The Pieces

Excerpt from each Worldwide brochure

{back page, bottom section, slightly below copyright information):

In the event that the client relocates or repurposes operation(s) from the specified facility(s), in whole or in part, Worldwide reserves the right to salvage equipment and materials from or related to the facility or parts thereof. All local permits, leases, deeds, and other legal and proprietary matters and documentation pertaining thereunto, shall reflect this reversion of ownership rights (as stipulated in the appendices to this document). Client hereby indemnifies and stipulates Worldwide free of all obligation and liability, financial or otherwise, generated by

Client's operation(s) contemporaneous with or subsequent to this contractual agreement.

While Worldwide downplays this aspect, salvage is acknowledged as a function of their business. Worldwide actually makes a very tidy profit by recovering and refurbishing the components of a destroyed secret lair, which is usually resold to the next evil genius who needs a secret lair.

When the client has lost functional operation of a Worldwide facility, Worldwide immediately dispatches a salvage detail to recover any useful facility resources which have aftermarket value, such as weapons, fissionable material, vehicles, electronics, computer systems, technical and scientific equipment, controlled substances, botanical and zoological specimens, artwork, precious metals and stones, and office equipment. The salvage teams assess the facility, assign values and priorities to the various parts and systems, then begin the recovery process. The site itself is protected by the salvage guard detail, which is second only to the janitorial staff in training and effectiveness. Recovered materials are shipped out in innocuous, camouflaged vehicles. Local officials are bribed, misled, intimidated, or eliminated as necessary.

Data collection and reconstruction is the most valuable element of the salvage operations. The intelligence information and scientific data developed by a sinister organization is usually far more valuable to Worldwide than the client's actual contract. This is the true imperative behind Worldwide's emphasis on the proper use of office staff and data documentation. Computer systems and data management processes are carefully designed to create redundant stores of information, which are protected from possible facility destruction. The salvage teams recover these stores first, then sift through the wreckage to glean any additional information possible.

Worldwide will usually resell the data through various front organizations, which provides profit while disassociating the company from the unsuccessful client. Worldwide will also use the data when developing its own investment strategies. As a result, Worldwide usually remains profitable and well-capitalized even in the most sluggish global economy.

Management: Behind The Paper Curtain

Worldwide is operated by the husband and wife team of Owen Parsons and Dorothea Klaugh, who serve as the CEO and COO, respectively. A moderately successful corporate lawyer, Parsons was married to Dorrie for eight years before he discovered that her father was CLAW!!! Dorrie, for her part, was rather embarrassed by her father's pursuits. She had become an accomplished chemist in the area of neuropharmaceuticals when she and her husband learned of the destruction of her father's labs. While he survived with minor injuries, CLAW!!! was deeply demoralized by the loss of his beloved Megalo Panulirus Argus Rex.

In the process of salvaging and liquidating the operation's remaining assets, Parsons deduced the mundane details that had led to the collapse of a grand scheme. This, he realized, was a business opportunity of global proportions. Corporate and administrative structure was his particular talent, neuropharmaceuticals were Dorrie's specialty, and so they created an agency to meet the staffing needs of evil geniuses like her father. The initial business contacts were provided by CLAW!!! but the business has grown far beyond its humble and twisted beginnings.

Parsons handles the administrative structure, corporate management, and client recruitment, while Dorrie oversees the day-to-day functions of employee recruitment, training, and conditioning, as well as facility construction and salvage. The conditioning process is primarily hers, with technical assistance from her father. CLAW!!!, while purportedly dead, is still working on his lobsters in the mistaken belief that his daughter and son-in-law are building him a new organization and secret headquarters to take over the world.

Advance payment is required for all facility construction and equipment services. Staffing contracts require advance payment on the initial six months of employment, with a smaller amount garnished thereafter from the employee's

monthly salary. The money is deposited with a series of front organizations, holding companies, and dummy corporations, then transferred through a score of international accounts before arriving at several Swiss banks. Parsons and his accountants constantly revise, dismantle, reshuffle, and replace the various corporate organizations and officers. As a result, police and intelligence agencies know little about Owen Parsons and Dorrie Klaugh Parsons.

Contractual disagreements are handled by diplomacy and subtle threats. Nonpayment is mostly a matter of issuing a series of friendly sounding threats, concurrent with a campaign of escalating sabotage. If a client is consistently recalcitrant, then Worldwide will usually draw in a third party to add pressure to the client. This involves leaving a series of vague yet oddly compelling clues that lead the client's opposition to the facility in question. Worldwide's reasoning is that the destroyed facility will ultimately profit the company more than a lengthy client contract, so the client becomes dispensable once the facility has been in full operation for any reasonable length of time (usually four months).

If a particularly extreme case should present itself, Worldwide will act directly against the client. The janitorial staff is directed to activate self-destruct mechanisms while strike teams of Megalo Panulirus Argus Rex eliminate all non-Worldwide staff. The lobsters, while not really necessary, make Dorrie's father very, very happy.

Plot Devices:

It's Déjà Vu, All Over Again

These are the particular shticks that emerge when using Worldwide:

- *"That guy looks familiar."* Locked in a prison cell in the underground lair, the PCs recognize the guard from the last time they were locked in a prison cell in an underground lair. Will he fall for the same stupid trick as last time?
- *"No, it's this way!"* PCs have no trouble navigating the secret headquarters, even though they've never been in this particular one before.
- *"No, it's this button!"* PCs have no trouble operating the equipment, accessing the systems, downloading the information, activating the self-destruct mechanism, etc. Equipment is completely compatible from one mad scientist's lab to the next (Worldwide always uses Apple computers).
- *"Nice uniform."* Everyone in the secret lair has crisp, clean, tailored, color-coordinated uniforms that indicate function and rank. Each uniform has been recently laundered.
- *"Is he supposed to be in here?"* No matter how restricted the area, how sensitive the equipment, how carefully guarded the prisoners, there's always a guy with a mop off to one side of the room. No turn of events can faze him, and nobody notices him except the PCs.
- *"How did that get there?"* The PCs find a fully equipped, fully staffed, state-of-the-art high-tech complex. The location is either completely cut off from civilization or somehow hidden right in the middle of a major city. Nobody who lives or works nearby will know anything about the complex.
- *"Ninjas! Hundreds of them!"* The PCs find themselves facing a small army of ninjas, Thuggee cultists, Shaolin monks, Templar knights, Men in Black, Amazonian priestesses, or other colorful niche threat group. Nobody who lives or works nearby will know anything about the threat group, except perhaps for legends of their fearsome power. None of the threat group are very good.

Adventure Seeds:

It's Déjà Vu, All Over Again

Worldwide can fit into any contemporary campaign featuring espionage and world domination. The campy humor elements lend themselves in particular to games involving four-color superheroes, larger-than-life two-fisted action heroes, dashing superspies, weird science, and atomic horrors. Worldwide can also serve as a connecting device for divergent story arcs, so that PCs don't lose momentum in a dramatic hiatus between adventures.

- **Need a job?** A temp agency recruits the PCs for cushy security jobs at a "resort" in the tropics. The pay is good,

- the food is great, and the uniforms are pretty nice, but the boss is a little weird. Still, it's an easy gig until a secret agent starts shooting at them. Hilarity ensues. This scenario works best with low-level PCs, caught between dangerous villains and dangerous heroes, and mostly trying not to get shot/electrocuted/eaten/blown up.
- **Collections!** Worldwide has to foreclose on a delinquent client. The PCs could be on assignment at the client's facility or perhaps are sent with the strike teams as "lobster wranglers." Alternately, the PCs could be agents who are infiltrating the client's operation when the collection team arrives. Of course, the PCs could *be* the delinquent client . . .
 - **"I am Number 2. You are Bob. Did you sign the waiver?"** In an offbeat *GURPS Prisoner* game, The Village has outsourced most of its low-level work to Worldwide, while it concentrates the important personnel on Number 6 and other key Village projects. In this scenario, the PCs might be Village residents who discover that some of the warders are temps with mixed allegiances. Alternately, the PCs might be Worldwide employees who find out that the Village is a permanent assignment. Of course, Worldwide could be connected somehow to Number One, so that retiring employees might find themselves with a gold watch and a Village badge. All that mind control tech had to come from somewhere . . .
 - **Follow the money!** The PCs stop some madman bent on world domination, destroy his secret lair, etc. Later, the PCs are accused of destroying evidence, the newspapers scream about a cover-up, and defense attorneys claim that their client was framed. The PCs have only a couple of shipping invoices and random bits of equipment from which to start an investigation. In this scenario, Worldwide's salvage teams have done their work, effectively sanitizing the area in their wake. The heroes follow clues which lead to other sinister enterprises, but can't seem to find the shadowy organization that connects them all together. Is this "Worldwide" really just a service organization, or do they secretly control all the rest? Who are they really working for? And what's with the lobsters?

Perfumery in Medieval Europe

For *GURPS* and *Ars Magica*

by Sheila Thomas
GURPS Notes by Phil Masters

The Background

The use of aromatic herbs and flowers to sweeten the air or to embellish an individual has been known for a very long time, and had developed into a widespread, sophisticated craft in Europe by the Middle Ages. Given the value of many of the ingredients involved, and the near-alchemical, even magical nature of the processes and results -- taking simple plant, animal, and mineral ingredients, and producing something capable of influencing moods and evoking memories, with possible medical applications -- it's something which deserves to feature in RPGs set in medieval times (or in pseudo-medieval worlds). It is also associated with the spice trade (see [Variety... of Life](#) for more on that subject).

*Note: This article first appeared, in a slightly different, **Ars Magica**-specific form, in issue 2 of **Hermes' Portal**, November 2001.*

The Romans introduced many species of aromatic plants to the fringes of their Empire, and these continued to be cultivated after the Empire fell. It was common for people to wear garlands of flowers, hang fragrant plants indoors, and add aromatic plants to sweet-smelling rushes when these were spread on a floor. (This last probably started as a Norman custom.) In the making of special perfumed preparations, plants were usually used as dried flowers, dried leaves, dried and crushed roots, or extracts in water (by maceration or "digestion"), oils or fats, and later alcohol. An association between pleasant smells and good health was very widespread, so there was considerable overlap between perfumery and healing.

From the 9th century, there was great trade between Byzantium and Venice, bringing eastern perfumes into Europe. There was also much trade within Islamic domains, bringing perfumes from Baghdad to Spain. Arabian perfumery arts were very highly developed; having learned much from the Persians, the Arabs used ingredients from China, India, and Africa, producing perfumes on a large scale. They had also been using distillation since before the 9th century. *Al-Hawi*, a book by Rhazes, who lived in the late 9th or early 10th century, contains a chapter on cosmetics; it was translated into Latin in France in the late 12th century.

Musk and floral perfumes were brought to northwest Europe from Arabia in the 11th and 12th centuries, through trade with the Islamic world and with the returning Crusaders. Those who traded for these were most often also involved in trade for spices and dyestuffs. Records of the "Pepperers' Guild" of London go back to 1179; their activities include trade in spices, perfume ingredients, and dyes. There are also records from the reign of Edward I (1272-1307) which show that spices and other aromatic exotic materials were being traded in England.

Techniques

The use of alcohol in perfumery was known in northwest Europe in the 12th century but was not widespread until later. A variant of distilled alcohol, rather than alcohol mixed with water, was known in France in the 13th century, prepared by using quicklime in the mix to remove much of the water. Alcohol-based perfume was well known in parts of mainland Europe and came into use in England in the 14th century.

A common technique was to extract essential oil into fat, and then either use it in that form, or extract the essential oil from the fat with alcohol. Another was to heat plant material in water. Beeswax was sometimes used as a base instead of fats and oils. *Pot Pourri* was originally made and used wet; it started as the residue of the perfume-making process.

GURPS

Mundane Perfumery can be treated as a Mental/Average Professional Skill in **GURPS**. As it involves a fair amount of specialized technology, it is qualified by TL. GMs may permit characters with Alertness and/or Acute Taste and Smell to add their Sense roll bonus to the skill, as a keen sense of smell is very important to this line of work. (No, characters with Anosmia cannot learn this skill. A perfumer with a cold may well be useless.)

There is no general default to Perfumery from any other skill or attribute, as it involves specialized techniques and knowledge, but perfume-makers share many ideas with chemists, doctors, and alchemists, especially in the Middle Ages. At the GM's option, at TL4 or below, skills such as Chemistry, Herbalist, and Pharmacy may default from Perfumery at -6, and characters with Perfumery skill may roll it to understand and employ many standard chemical/alchemical techniques, such as distillation, and to recognize any chemical preparations or activities which their own trade employs. Likewise, at these low TLs, characters with these other skills may roll at -2 to at least recognize *what* a perfumer is doing, if not necessarily *why*.

Perfumery skill may prove useful to identify scents, including perfumes worn by other characters, which, if perfumery has a magical aspect, may give a trained magician a hint as to what another has planned. In fact, in this and other cases, Appreciate Beauty skill might serve the same purpose, at, say, a -3 penalty; knowledge of the finer things in life can extend to perfumes. Untrained characters can be given a standard Smell sense roll to recognize obvious scents (such as roses or violets), but the subtler elements of the perfumer's craft require special knowledge to name, if not to detect.

GURPS Magic Alchemy

In games where magical alchemy works, characters with Alchemy skill may roll at -2 (as above) to recognize basic perfumery processes, and perfumers may occasionally recognize some very basic ingredients in an alchemist's lab, but otherwise there is no cross-defaulting between the two skills; magical Alchemy is just too abstruse and supernatural. However, an alchemist who has also learned Perfumery skill may be especially adept at creating subtle scent-based elixirs. Suggested rules are as follows:

Employ the rules in **GURPS Magic** (chapter 6), but use the *lower* of the character's Alchemy or Perfumery skills when creating a "scent elixir," which takes three times as long to create and costs three times as much as normal liquid or powder versions. The perfume must be stored in an airtight container (it loses its power after an hour if exposed to air), and is activated by being gently warmed (human body heat is fine); fire or boiling destroys it. It may be designed to become effective 1d, 2d, or 3d minutes after application, at the maker's option -- the scent is simply made slow to develop.

The effects are similar to a pastille (on those nearby) or unguent (on the wearer), as decided by the maker, but an alchemical perfume produces no smoke or spectacular visual effect; rather, it works through a distinctive (and usually pleasant) scent. Thus, unwitting subjects may well have to make an IQ roll, perhaps at penalties, to even realize that they are subject to any sort of effect. This is typically only possible *after* it is too late to hold one's breath or avoid putting the perfume on . . .

The GM should decide which elixirs are appropriate in perfume form; subtle dramatic effect and style are good guidelines here. Animal Control, Hostile, Mental Ability, or Mental Control elixirs are usually the best. Whether or not elixirs can usually be combined safely in the campaign, mixing two perfume elixirs produces a clash of scents which will offend anyone of any taste or sensitivity.

Note that vicious tricks may be possible as well as useful benefits, especially as an alchemical perfume may be defined to affect anyone who smells it, but not the wearer, and to smell like a fairly ordinary perfume. A Juno perfume (Elixir of Jealousy) with delayed activation, presented to an attractive or witty person about to go to a party, can make a mess of their social life; a Priapus perfume (Elixir of Lecherousness) is a powerful aid to a seducer, but downright dangerous in many circumstances for an unknowing wearer. Some perfume elixirs may be barred as simply too

powerful, or made much more expensive; somehow covering a victim (or their horse) in delayed-release Sisyphus (Frustration) perfume would be a crippling trick.

Identification: Alchemists can recognize perfume elixirs by smell just as they can recognize other types, and analyze them using the standard rules. In addition, any character with Perfumer skill, whether an alchemist or not, can recognize the perfume as weird and probably having very unusual ingredients; roll vs. the skill, with modifiers for how well the character caught the smell. (Of course, the character may well have been affected by it at that point.) With another roll, the perfumer may identify some of the ingredients, which in turn may permit a guess at its nature by someone with Alchemy skill (at the GM's option).

Skilled perfumers may also be able to recognize aromatic ingredients in other mixtures (including non-perfume elixirs) with a careful sniff and a skill roll, if the GM thinks that the mixture includes such things; this is worth a +1 to any attempt at analysis, and may very occasionally permit quick guesses at the nature of unknown alchemical preparations.

GURPS Cabal

In games using the magic rules from **GURPS Cabal**, scents and exotic materials are of course often useful and effective as astrological or decanic correspondences. This implies an interesting possibility; a skilled perfumer could create a scent which incorporates and concentrates several of the effective correspondences for a given college of magic, in a convenient, portable, and seemingly innocuous form.

This might feel most appropriate for Communication and Empathy or Mind Control spells, which have very different Hermetic associations. A Hermetic agent who wears a simple rosewater scent probably intends *only* to attempt some kind of telepathic activity, whereas one who carries the subtler odors of lilies and gentian violets, seemingly to mask the unpleasantness of tobacco-smoke-saturated clothes, may actually prove dangerously *charming*. But there is little reason not to use the same trick for more direct magics; the wizard who wishes to resort to old-fashioned fireballs may smother his food in garlic and cayenne, but he may also have an apparent fondness for aloe-scented deodorants. The association between perfumery and healing holds here, too, with Phthenoth, the relevant decan, associated directly or indirectly with ambergris, jasmine, lavender and balm.

Ars Magica

Perfumery is a Craft Skill in *Ars Magica* terms, and potentially a profitable line of work for some characters. It can be learned much like any other Craft. However, the borderline magical aspects of the matter can be represented by a new Virtue:

Perfumery (+1 Virtue)

You know the aromatic properties of substances and how to prepare them. You are skilled at creating balms, perfumes and incense. You know the common scented herbs. You are also familiar with spices and dyes and their uses -- including some which border on alchemy or hedge magic.

You also have some knowledge of healing, but only in areas where an aroma is used for its beneficial effect; for example, scented beeswax candles may be burnt to promote healing sleep, or resin burnt to purify the air in a room.

This Virtue confers the Skill Craft: Perfumery 1 which can be improved like any other Skill, and used in its mundane aspects in the usual way.

If you are capable of performing magical activities to prepare substances for supernatural purposes, whether using Hermetic magic to manufacture potions, or employing any form of Alchemy, Herbalism, or Natural Magic (see the **Ars Magica** rulebook and the supplements *Hedge Magic* and *The Mysteries*), you may sometimes employ your knowledge of perfumery and scents to augment the effects. This is represented by a bonus to the relevant rolls, Lab Totals, etc., when preparing materials for specific purposes:

Altering moods and emotions:	+5
Inducing sleep:	+3
Purification:	+3
Warding spirits:	+2

(The storyguide is the final arbiter of what is or is not appropriate here. In general, substances augmented in this way must be used up when in operation, and should work at least partly through scent, or produce a very characteristic odor.)

Even if you have no other magical abilities, you may create balms, incense, scented candles, or perfumes which produce magical effects from the above list. (Again, the storyguide should determine what may or may not be within the capabilities of an expert perfumer.) This uses the same rules as the creation of Hermetic potions (see the **Ars Magica** rulebook), except that your Lab Total for the purpose is Intelligence + Perfumery Skill + Aura of the place where you are working, and you cannot use vis of any kind to enhance the results.

*Note: A character who possesses the Craft Skill but not the Virtue may of course manufacture perfumes with the intention of influencing moods, assisting in healing, and so on. However, their effects will be strictly realistic, and slow and subtle at best. Nonetheless, given that these effects are very much part of the medieval world view, storyguides may be fairly generous in allowing such perfumes to achieve **something**.*

Useful Ingredients

Native Plants

The following plants are likely to be available for collection or cultivation by typical medieval European perfume-makers:

- **Scented Agrimony:** A perennial herb; dried flowers and leaves are used.
- **Angelica:** A biennial herb, reputed to be effective against evil spirits and infectious disease. A fragrant oil is extracted from the seeds and root for use in perfumery; the seed and root are used dry in pot pourri.
- **Apple.**
- **Avens (Geum):** Dried rhizomes and leaves.
- **Birch:** Essential oil from leaf buds.
- **Blackcurrant:** Essential oil from flower buds.
- **Broom:** Flowers.
- **Calamint:** Several species used dried or as essential oil.
- **Camomile:** A herb used as medicine and for strewing. Dried flowers or oil extracted from flowers are employed.
- **Clover:** Dried flowers.
- **Cyperus (Sedge roots):** Rhizomes, used dried and powdered, yield a violet-like fragrance.
- **Elderflower:** Oil extracted from flowers, or dried flowers.
- **Fennel:** Essential oil from seeds. Fennel also has culinary and medical uses, and is reputed to ward off evil spirits and witches.
- **Fern:** Oil extracted from rhizomes of Common Male Fern had medical and perfumes uses.
- **Feverfew:** A perennial plant; extracts from flowers and leaves are used in medicine and, less frequently, in perfume.
- **Hawthorn:** Fragrant flowers.
- **Hyssop:** Extracted oil or dried leaves.
- **Lavender:** Extracts and dried flowers and leaves.
- **Lemon balm:** Oil from leaves and dried leaves.
- **Lily of the Valley:** Flowers.
- **Melilot:** Dried flowers and leaves.

- **Milfoil (Yarrow):** Dried flowers. The plant has diabolical associations.
- **Mint:** Medical, culinary, strewing, and perfume uses.
- **Oak moss (lichen):** Powdered and used as a fixative.
- **Orris (Iris rhizome):** Dried, acts as a fixative with violet fragrance.
- **Rose:** Extracts from petals and fresh or dried petals.
- **Rosemary:** A strewing herb; the dried leaves are used.
- **Rue:** Oil from leaves; medical and perfume use; reputed to guard against witches.
- **Sage:** Dried leaves.
- **Tansy:** Another strewing herb whose dried leaves are used.
- **Violet:** Oil from flowers.

Imported Ingredients

In medieval times, the following would probably be obtained from traders. Many of these ingredients would have to have been imported from distant lands, including Asia and the tropics.

- **Aloewood:** Introduced into Europe by Arabs in 8th century and spread rapidly. An aromatic heartwood from an evergreen tree obtained by the Arabs from China, Assam, and Malaysia, which produces a fragrant oil when diseased. An important ingredient of pomanders (as oil) and pot pourri (dried).
- **Alpine rose:** Oil obtained from the roots.
- **Ambergris:** A sperm whale excretion (although this origin was unknown for a very long time) found on the Indian Ocean coast. Used since early Arabian times (6th century) in alcohol.
- **Ammoniacum:** Juice from a North African plant. Used as incense.
- **Anise:** Cultivated through Europe and in England during the Middle Ages for medical and culinary use; dried seeds and oil extracted from them are used in perfumery.
- **Apricot kernels:** Oil extract frequently used in early Arabian perfumes.
- **Basil:** A herb with culinary and perfume use (both the essential oil and dried leaves).
- **Ben oil:** From seeds of the Moringa tree native to North India, frequently used as a base in early Arabian perfumes.
- **Bitter almond:** Essential oil from the fruit used as a base.
- **Camphor:** Crystals formed from oil extracted from wood; very frequently used in early Arabian perfumes.
- **Caraway:** An Asian and Mediterranean spice plant; oil extracted from the fruit and leaves has culinary and perfume uses.
- **Cassia:** A name used for a number of similar Asian plants. The dried buds and dried bark are used in cooking; oil is used in perfume. Cassia bark is often used as an inferior substitute for cinnamon (see below) in cooking, and there is some confusion in old texts between cassia, cinnamon, and other fragrant barks.
- **Cedar wood:** Dried twigs and roots are used in incense; oil extract is used in perfume.
- **Cinnamon:** Dried bark used as perfumed beads and in pomanders; oil from leaves is used in perfume and unguents.
- **Civet:** A glandular secretion from the African civet cat, used in very small quantities; became popular in Arabia in the 10th century.
- **Clary sage (Salvia):** Fragrant oil and dried leaves. Also used for eye problems.
- **Cumin:** Oil from dried "seeds" (actually fruit). Also has medical and culinary uses (the latter in seed form).
- **Dill:** Oil extracted from plant. Dill has culinary, medical, and perfume use, and is reputed to be good against witchcraft.
- **Frankincense:** A gum resin extruded from wood of certain trees, often used in incense.
- **Gum arabic:** A gum extruded by Acacia trees, dried and used in incense, and in early Arabian perfumes.
- **Jasmine:** Leaves, flowers and oils, commonly used in early Arabian perfumes.
- **Labdanum:** A resin secreted by Cistus (Rock Rose) species, popularly collected by combing it from the beards of goats. Used in early Arabian perfumes and in European pomanders.
- **Lovage:** Dried leaves and roots.
- **Marjoram:** Oil from seeds and leaves and dried leaves, with medical, culinary and perfume uses.
- **Mignonette (Reseda):** Essential oil from flowers.

- Musk:** A glandular secretion from musk deer, very frequently used in early Arabian perfumes.
- **Myrrh (includes Opoponax):** A gum resin from a type of tree, used in perfumes and incense.
 - **Myrtle:** Oil or dried flowers and leaves. Berries and fresh leaves were used in early Arabian perfumes.
 - **Rosewater (also Attar of Roses):** Made by a distillation process from rose petals in water. Attar (essential oil) is obtained by redistillation of rosewater. Very popular in Arabia.
 - **Saffron:** The dried stigmas of a type of crocus, and oil from these. Grown in Europe, but very expensive as production is very labor-intensive. Saffron has uses in cooking, dying, and perfume, and is very important in Arabian perfumery.
 - **Sandalwood:** Oil from the heartwood of a tree; a fragrance and fixative.
 - **Savory:** Dried leaves and flowers, with culinary and perfume uses.
 - **Storax:** Resin from bark is used in incense and pomanders.
 - **Sweet orange:** Essential oil from the fruit peel; the peel is also used dried.
 - **Terebinth:** Oil and gum resin, used in pomanders.
 - **Thyme:** Oil from leaves; the leaves are also used in incense.
 - **Valerian:** Oil, leaves, and roots have medical, culinary and perfume use.

The Universal Canary

by Alice Turov

"Quiet!" shouted Dr. Lewart, addressing the parlor full of wealthy businessmen. "Don't you understand?!? We have been infiltrated by demons!" The bemused silence that followed was only overshadowed by the gentle warbling of Pip-Pip, the yellow-gold canary that was the mascot of the Gentleman's Club.

"Tea is now being served," announced the butler as he entered the room.

Pip-Pip grew silent, then fell over dead.

* * *

Life is truly diverse, in ways that almost cannot be fathomed. For perhaps the ultimate proof of this truism, look no further than the universal canary. Its more mundane counterpart, the regular canary (*serinus canarius*), was often carried by miners to detect lethal levels of methane or a depletion of oxygen; its respiratory system was much more delicate than those of the miners, so it succumbed to the effects of those dangerous situations before the humans. In comparison, the universal canary (*universus canarius*) can be conditioned so that it dies when exposed to *any* specific stimulus; as such, the universal canary can serve as a powerful -- if limited -- detection device.

Breeding

Creating a universal canary that is conditioned for the correct stimulus is very difficult; as such, in some societies the canariers -- as those who train them are called -- are highly respected and sought-after. Still, the basic procedure they use is roughly the same, although there are variances between breeders.

First it is necessary to start with a healthy bird, preferably one that has not yet reached sexual maturity; a canary greater than one month yet less than nine months is acceptable, with two to six months being ideal. The canary is then placed in a controlled environment, often a sealed room. The next step is relatively simple yet cruel; the canary is brought to near-death in as slow a way as possible, while being exposed to the desired stimulus. If possible, this is done through direct contact of the stimulus; for example, to make a canary that would be sensitive to temperatures above 100°F, it would be necessary to keep the bird at that temperature until it comes close to dying.

However, it is not always possible to damage the canary with the stimulus in question. In this case it becomes necessary to ensure that a varied range of the stimulus is provided, and the animal is harmed in the process (usually through starvation). For example, to breed a universal canary that can detect lies, you would need to expose it to various people telling deliberate lies in front of it, while depriving it of food and water. (If only one person was telling lies, the canary would probably become useful in detecting if that *specific* person was lying.) Sometimes both techniques may be combined; for example, to make a universal canary that was sensitive to magic, you would fill its controlled environment with a wide variety of magical effects, *and* you would seek to cause the bird direct damage through magic.

Once the universal canary has been exposed to the stimulus, it is then necessary to make sure it *doesn't* die; most canariers are well-trained in avian medicine. If that bird is then bred with another bird that underwent a nearly identical stimulus, the resultant chicks will be specifically vulnerable to that stimulus . . . even though its parents never will be. (Unfortunately, owing to the canary's attention span, it is almost always necessary to stimulate both male and female separately.) Once so bred, those children can continue the lineage of that stimulus to its children and beyond; as such, stimulus breeding usually only needs to be done once per desired condition, and canariers tend to guard their breeders jealously.

Canariers are split as to what effect cross-breeding has; some claim that you end up with a combinative detector, while

others believe you end up with an exclusive one. Thus breeding a universal canary that can detect magic with one that can detect lies may result in a chick that can detect magic or lies, or it may only detect deceptive magics. Regardless, such cross-breeds are always complicated, and canariers generally try to avoid it unless a client has a specific need.

The Result

Once it has been born of appropriately conditioned parents, the universal canary will respond to its stimulus very similarly as a mundane canary responds to dangerous levels of methane or lack of oxygen: It will die, quickly (usually . . . if the amount is miniscule enough, it may merely pass out or stop singing). As such, universal canaries are usually not appropriate for any common or expected conditions; keeping a magic-detecting canary in a king's court where magic is forbidden is useful, while carrying one through a diverse high-fantasy marketplace will probably be tragic. Its senses, however, are not infinite. For ease of play, assume that a canary has senses comparable to a human; thus a death-detecting canary may be able to see something die or smell death in the building, but it would not be able to detect a demise a half-mile away.

Generally speaking, canariers can breed the lineage to detect whatever levels are requested; the limitations seem to be more on the creativity of the canarier than the abilities of the universal canary. Thus a lie-detecting canary may be bred so it dies when exposed to *any* lie, lies that pertain to one person, treasonous lies, and so on.

Presuming they are never exposed to their fatal element, universal canaries can live as long as their mundane brethren; six to 12 years is common, with 20 being an upper limit.

Canaries in the Game

Universal canaries are ideal for slightly unrealistic campaigns where better detection means are unavailable; although real canaries weren't used in coal mines until the 1800s, there's nothing to keep universal canaries from being used much earlier (or later) than that. Their inexact nature and one-time usability makes them perfect to maintain some semblance of mystery; while a "detect magic" spell may unbalance many campaigns, a magic-detecting canary would not. In addition, carrying animals is much more difficult than more mundane detection advices. And sometimes canaries just die on their own, which can lead to a "false positive" that can make for intriguing possibilities.

Some possibilities for detectable stimuli include: any radiation or energy (infrared, ultraviolet, gamma); any type of creature or monster (ghosts, demons, vampires); any moral/ethical ideal (law, chaos, good, evil); any unusual forces (super-powers, psionics); any emotion (love, hatred, infidelity). In actuality, the canaries are only limited by creativity and the GM's willingness to detect outrageous objects. (Of course, the GM is free to dispense with the notion of the universal canary entirely, sticking with one breed of detector.)

Campaign Ideas

- In an **Atomic Horror** campaign, Particle X has begun imbuing people with strange powers and murderous thoughts. Fortunately, Professor Flotsam has devised a long-term and seemingly crazy means of detecting these hidden monsters . . . if only the heroes can capture someone *known* to be infected with the radiation.
- In a cyberpunk campaign, the protagonists have thwarted the corp's myriad of defensive measures, and reached the final room that contains the mainframe with their goal. So why is it surrounded with different breeds of canaries, all hooked up to monitoring devices? What are they there to detect . . . and how can this low-tech conundrum be dealt with?
- A bird-handler approaches the king with a lineage of canaries he claims will detect traitors to the court. Derided at first, his credibility increases when one of his birds dies near the scowling vizier. Within weeks the entire court is in an uproar to root out those who oppose the king. So how do the adventurers react to the mysterious old man's claims that the handler's bird *really* detect those with an ancestral link to an artifact of great power?

Running The Adventure, Part IV -- Let's Get Pivotal

Two weeks ago we were talking about pacing the game. This was, of course, part of my larger rambling series on running adventures in general, which began with [gathering the players](#) and [starting the adventure](#).

This week I'm going to be talking about the pivotal scene, whose very existence I've postulated from the [very beginning](#) of the *previous* series on creating adventures. Yes, this is the exciting bit: The dramatic revelation from what appeared to be an unnoteworthy NPC. The moral conundrum of a seemingly impossible situation. The intriguing offer from a questionable patron.

So what do I do with that pivotal scene . . . the scene which I built the rest of the adventure around . . . the very hook necessary for me to conceptualize the adventure?

Well, it's entirely possible the answer is "nothing."

In one of my more memorable creative writing classes back in college, our professor encouraged us to "throw away our babies." No, she wasn't some [Elizabeth Béthory](#) wannabe. What she meant was that, in some creative pieces, there are often instances where an entire work is written and built around some central concept -- perhaps a scene or line of text. And very often the rest of the piece is completely fine and laudable . . . except that one bit, which stands out like a sore thumb. When it's suggested that the unusual bit be exorcised, the writer often exclaims, "But that's my baby!" . . . to which the teacher would respond, "Well, then, you may just need to get rid of that baby."

Anyway, the same point applies in my adventure; if I find that my pivotal scene isn't going to work -- usually because the players have wandered far from where I'd originally planned -- I simply won't use it. After all, the pivotal scene has already served its purpose as far as I'm concerned; I was able to concoct the entire adventure around it, and it gave me the focus and confidence necessary to release the players from the closet I locked them in and allow them to the gaming table. (A few times in the past I pushed the PCs back to that pivotal scene; in most instances it *did* feel forced, and disrupted the flow of an otherwise enjoyable adventure.)

Now, it's entirely possible that the pivotal scene is no longer necessary. But, more often than not, it is . . . which is good, because, after all, I love that pivotal scene. (In fact, that's why often I front-load that scene to the beginning of the adventure; that way there are fewer opportunities for it to go awry.)

So, if and when the need comes to run that pivotal scene, I make sure to keep some things in mind.

It's just another scene. Yes, the prospect of the pivotal scene is exciting to me, but ultimately it's just another brick in the well-balanced diet of a basket of uncounted chickens (or something like that). Some GMs use a similar "key scene" technique, but often while observing them I'll note that they aren't able to keep their poker face or focus on it being no more important than other scenes. As such, they'll spoil some of the enjoyment for the players:

"Okay; okay; okay . . . you all are at the party, and everything's normal . . . you're having fun, when a servant comes up and . . . *offers you all a DRINK!!!!*"

"Ummm . . . I think I'm going to examine that drink."

"What?!? You *can't!*"

Although the scene may well provide the impetus for the rest of the adventure, that doesn't necessarily mean the players will know this . . . and I try not to spoil anything by being too gleeful.

It's all about the players. Hopefully I kept this in mind when I devised the scene in the first place. But if not, I try to reinforce this when it comes time to run the pivotal moment.

What does this mean? Well, if at all possible, I try to ensure that the big pivotal moment directly involves the players. Unlike the climax of the adventure, which almost de facto needs to involve the players, the pivotal moment doesn't

necessarily bring the PCs in. So I try to make sure it does.

Let's go back to the example we've been building off from the beginning: The mayor (or someone who resembles him) barges into a party the PCs are attending and starts shooting people. Done without the players in mind, it's possible for the event to overshadow the heroes; the mayor barges in, bullets start flying, people fall over wounded, the mayor escapes. (As a hint, if the players are ever stammering because they're trying to react, but you keep on going with the scene, that may be sign of a problem.)

But what if you break this pivotal moment down? To steal a *Matrix*-ism, what if you slowed things down to "bullet-time?"

GM: "The mayor enters."

PLAYER 1: "I keep chatting with the councilwoman."

PLAYER 2: "I try to catch his eye."

GM: "It's difficult to do; he's moving purposefully. <making perception rolls, pulling Player 1 aside> Everything slows down as your heart jumps; you note the mayor has a gun. Declare your next action."

PLAYER 1: "Can I shout anything?"

GM: "When you return, you can say one word to the group."

PLAYER 1: "I'm going to dart to the Mayor."

[GM and Player 1 return to the table]

GM: "Dugan seems intent on darting into the crowd; he shouts out . . . [points to Player 1.]

PLAYER 1: "GUN!!!"

GM [To Player 2]: "What do you do?"

PLAYER 2: "I try to interpose in front of the mayor, looking for a gunman."

[Player 1 smacks his forehead]

GM [to Player 2]: "You see a flash; the afterimages fog your retinas. You feel a burning in your side, and feel some liquid begin to drip from there onto your expensive rental shoes."

And so on.

Obviously there are a lot of ways I could run this scene, but this way keeps the players active and involved, feeling more like they were directly involved instead of the Raging Rolling Pin of GM Plot bowling over them.

(Of course, this advice might seem entirely contradictory to the previous point of "it's just another scene." Welllll . . . yeah. Quote: "Do I contradict myself? Very well then I contradict myself. I am large, I contain multitudes." More to the point, I try to make sure that I vary scenes regardless, and keep players involved in all situations. So there.)

Now let's take another example: The pivotal moment is a revelation by the Galactic Emperor that he is going to declare war against the barbarians in the Psi Phi Quadrant. Now, this can be done as a standard Space Opera political scene - with the PCs staring slack-jawed as the Emperor gives his long-winded speech to the inactive throngs - but how can it be made to involve the players more?

Well, how about:

GM: "The Emperor's trusted aide comes to you. 'May I . . . and the Empire . . . have a moment of your time?'"

PLAYER 1: "For the Empire . . . Of course; what is it?"

GM: "'You have considerable knowledge in speech-writing, yes?'"

PLAYER 1: "Well, I don't like to brag . . ."

PLAYER 2: "Yes he does."

GM: "'I apologize; this is not the time for levity. I must ask for your help on behalf of the Emperor.'"

PLAYER 1: "What is it?"

GM: "'He needs you to compose a speech he will be giving in an hour.'"

PLAYER 1: "Really? What's the topic?"

GM: "'War.'"

And so it goes.

If the idea of the war was going to be the big surprising event of the pivotal moment, then both possibilities retain the same emotional effect . . . but the latter version makes the players more involved.

Be prepared to be derailed. For me personally, my pivotal moments are often the "weak points" of the adventure; in the examples above, if the heroes somehow manage to capture the mayor or flatly deny to help the Emperor (or even interact with his aide), things may deflate quickly. Hopefully I've taken those into account when I've designed the adventure, but if not, I always try to prepare myself for it to All Go Wrong.

But hopefully it won't, and the players will have a great time as their characters scramble to react. Having players call me "evil" is perhaps one of the biggest perks of the GMing job.

Next time we'll talk about the adventure's climax . . . and no tittering from those of you in the back of the room!

--*Steven Marsh*

Pyramid Review

Starfleet Operations Manual (for Star Trek Roleplaying Game)

Published by [Decipher, Inc.](#)

Written by Ken Hite

Illustrated by C. Brent Ferguson and David Pipgras

96-page full-color hardback; \$20

Bar the recently released *Star Trek Roleplaying Game Narrator's Screen*, Decipher Inc has been somewhat remiss in providing support for the roleplaying side of its *Star Trek* license since the publication last year of the [Player's](#) and [Narrators Guides](#). They rectify this with the *Starfleet Operations Manual*, a sourcebook that expands upon and acts as a companion to the *Player's Guide*. Written by Ken Hite, its material is not wholly restricted to the province of the player, as the Narrator will get as much use out of the *Starfleet Operations Manual* in creating and adding elements to their own series. If there is a restriction, it lies in what it covers. It is primarily designed for use with Starfleet characters rather than with civilian groups, but that said, much of the *Starfleet Operations Manual* could just as easily be applied to a series built around personnel serving aboard the space fleets of other species, such as the Klingons or Romulans.

The *Starfleet Operations Manual* is a slim-but-attractive tan volume. Inside its full-color layout is pleasingly clear and lacks the clutter of the two core books. It also isn't as heavily illustrated as either of those, but it does make more use of photographs taken from the current *Star Trek* series, *Enterprise*. Despite these images, the emphasis in the *Starfleet Operations Manual* is firmly upon Starfleet, which means that the time of *Enterprise* falls outside of its scope. Over the course of its six chapters, the supplement includes a discussion of Starfleet operational practice, another look at skills and traits, officer training programs, eight new species, standard Starfleet equipment, and finally fleet operations and sample ships of the line.

The supplement opens with an explanation of Starfleet standard operations. This overview provides a thumbnail explanation of each of the many varied missions its personnel might undertake, each of the shipboard Alert Status conditions along with their Ship Contact Protocol, Tactical Doctrine, and Away Team Guidelines. In looking at intelligence type missions, it also suggests how an intelligence-orientated series could be run. This includes groups comprised of a mix of character types, civilian and/or Starfleet personnel with intelligence professionals, and also those comprised solely of intelligence professionals. The chapter is rounded out with an explanation and illustration of all Starfleet's uniforms over its history, and finally an explanation of what happens should a member of Starfleet be subject to disciplinary procedures.

The next chapter begins by revisiting the game's core skills, providing a more detailed explanation of how some of them work, as well as expanding upon several others. Thus for armed combat, several schools are provided -- Anbo-jytsu (Centauran blind fighting using a staff), Chaka Hramdel (the Andorian art of fighting with their traditional dagger, the Chaka), and for fans of Hikaru Sulu, Fencing. Each school provides familiarity with a weapon class, but gives bonuses to its speciality weapons; thus Fencing would enable the pupil to pick up and wield swords, Klingon Mek'leth or something similar, but it gives bonuses for particular use with the sword. Pupils can learn maneuvers and abilities taught by each school, and these are purchased as traits. Unarmed combat is treated in the same fashion, while Ranged Combat: Energy Weapons receives a number of new traits that could just as easily be applied to other projectile weapons. The other skills receive more of a clarification rather than an expansion. One nice touch is an insert giving both the layout of an atypical Starfleet vessel's bridge and the various skill tests that apply to the various stations. Only one new skill is added: Operate Vehicle, which covers land, sea, and air vessel specializations; the two

new Edges (the game's answer to advantages) are Famous Ship and Famous Fleet. The former can be taken to reflect an officer's previous tour of duty aboard a ship such as the *USS Enterprise*, while the latter applies to service with a famous fleet. Several examples of these are given later in the supplement.

The following chapter contains a plethora of new professional abilities to add to those included in the *Player's Guide*. There are whole new professional packages in the form of the A&A (Anthropology and Archaeology) officer, the Communications Officer and the Phaser Control Officer. In the case of the latter two, their inclusion seems more suited to the creation of Starfleet officers prior to the *Next Generation* setting, but the author also describes how they can be used in the modern era.

The chapter is rounded with a variation upon the selection of advancements in which characters do not take individual picks, but instead take a whole package that counts as one complete advancement. The 10 listed are tied into the Famous Fleet trait listed earlier, and also discussed in the section on fleet deployment. They also hark back to the packages given for tours in the designers' previous take on the license published by Last Unicorn Games. Also given are two optional alternatives for handling promotions in the game.

The eight new species can be found serving as members of Starfleet. Fans of *Star Trek: The Motion Picture* will appreciate the inclusion of the Deltans, while the Tellarites and Tiburonese are welcome additions from *The Original Series* (both game and television series). Curiously the Alpha Centaurans have dropped the "Alpha," and while the game finally receives a felinoid race, it is not the Caitans, but the Regulans (fans of *The Animated Series* could just rename them anyway). Other races include the Bolians, Grazerites, and Zaldans.

Although Starfleet prefers missions to be performed with just the standard issue communicator, phaser, and Tricorder, plus medikit for the doctor, the chapter on Mission Equipment list some 25 items that its officers might wield at some time or another. The list includes the standard issue listed above plus personal items such as the flight vest or rocket boots; medical equipment from the Energy Scalpel to the now-frowned-upon Psychotricorder; Polaron Probes and Verteron Inducers for the Engineering Department; and Security can play with the Exographic Sensor that allows them to see distant objects through solid matter. The list of weapons includes both standard-issue sidearms, heavy weapons and one or two classified weapons. Players with Medical-branch characters will find the table of Hypospray drugs particularly useful, as are the rules covering equipment cost, scrounging, and the black market for characters that prefer to circumvent pesky things like red tape. Although the Tricorder receives a double-page spread explaining its functions and appropriate skill tests, this is really the only device to receive such treatment . . . or indeed be properly illustrated, which is a major downside to an otherwise solid chapter.

The last chapter concentrates on the ship and fleet aspects of Starfleet, describing the history and organization of both from its earliest days until after the defeat of the Dominion in the 24th century. Originally ships were organized into Task Forces to take account of Starfleet's relatively low complement of vessels, but this changed as a result of the original war with Cardassia, and ships were organized into standing fleets. The purpose of these fleets is also described, and they tie back into the Famous Fleet Edge and various advancement packages given earlier in the supplement. In addition, many starbases of various kinds are described, with this done so in a manner that would make them of use for any part of Starfleet's history. The table on Starfleet Flag Rank can also applied to any part of Starfleet's history, explaining as it does the promotion of officers beyond the rank of captain and also why the ranks of Fleet Captain and Commodore are no longer used in the 24th century. This table supplants the one given in the *Player's Guide*.

Eight new Starfleet vessels are described and given stats, from the 22nd century Daedalus-class and 23rd century Ranger-class through workhorses like the Miranda-class, to the current top-of-the-line Sovereign class. These are all ready for play, although it is a pity that none of them are given their own "Starship Range Increment Bar" for use in ship-to-ship combat. Finally, the *Starfleet Operations Manual* is rounded out with an expanded four-page character sheet -- or "Starfleet Personnel Jacket" -- that is a vast improvement upon the one given in the *Player's Guide*. It is done in shades of blue upon a white background with black text, making it much easier to photocopy. While it is a pleasure to be given a workable character sheet, it is a pity that it could not have been included in the recently published *Narrator's Screen*.

The ***Starfleet Operations Manual*** represents a solid sourcebook that expands upon the information given in the ***Player's Guide***, more so if both player and narrator have gamed under *only* Decipher's Coda rules. Those coming to this book after having seen the ***Star Trek: The Next Generation Player's Guide*** and ***The Price of Freedom: The United Federation of Planets*** supplements published by Last Unicorn Games may suffer slight bouts of *déjà vu*, as some of the material is similar. In truth, this should be no surprise, given both the commonality of both source material and the designers. The ***Starfleet Operations Manual*** does feel a little slim and seems to be continuing a recent trend of smaller-sized, slightly-more-expensive hardbacks, and is thus likely to leave the purchaser wanting more in all of the various subjects it covers. Despite this, there is enough here for most Starfleet focused games, with ***the Starfleet Operations Manual*** working to underpin and bolster such campaigns rather than extend the possibilities of the setting.

Pyramid Review

Fraud Squad -- Who Cooked the Books?

Published by [Diet Evil Games](#)

56 full-color cards & instructions; \$11.95

Fraud Squad is the first release from a new Austin-based game publisher, Diet Evil Games. It is a timely and topical card game in which each player is part of a Securities & Exchange Commission team assigned to investigate corporate fraud. A source has tipped the SEC off that a major company has been filing false accounts, but provided no more details than this. The investigator that successfully unmasks the culprit will get a promotion, but in order to get the job done properly the boss stresses that every member of the team must cooperate with each other.

Designed for three to six players, aged 8 years and up, ***Fraud Squad*** consists of 56 full-color cards; the game also requires a single six-sided die plus pen and scratch paper for each player. The cards are split between 10 rules and chart cards, with the remainder consisting of suspect -- Employee, Company, Technique, and Location -- cards and special cards. The cards are all nicely illustrated, though the Company and Technique cards are invariably better illustrated and more amusing than the others. For example, the "Pseudo Corp" company has the motto, "Pretending to do business for over 20 years"; Spendron the motto, "Spending profits so you don't have to"; and Globecon's is, "Deceiving the world, one customer."

At the beginning of the game, the suspects are separated into their four types and shuffled; one of each type is slipped still-hidden into the game's box. These are the details of the crime that has to be exposed during play. If all this sounds to you like the classic family game, ***Clue*** -- also known as ***Cluedo***, then you would not be all that wrong. Instead of a board of a mansion and questions over a death, ***Fraud Squad*** is played through cards and random events each turn. The remaining suspect cards are shuffled in with the special cards and dealt out to the players, with the number of cards received dependant upon the number of participants. Any cards left over sit in the middle of the table as the draw deck.

On a turn, each player rolls the die against the Action Chart to determine what his investigator does. This could be Collaborate, Eavesdrop, Collaborate & Roll Again, Collaborate or Eavesdrop, or (at worst) spend the time Asleep at your Desk, in which case nothing happens. To Eavesdrop, a player can draw a card from the top of the deck or a random card from another player's hand. To Collaborate, they ask another player to share evidence by specifying one Employee, Company, Technique, and Location card. If he possesses one of these cards, it must be shown to the asking player; if not, the next investigator is asked and so on until one of the specified Suspect cards has been shown to the asking player.

As each investigator gathers evidence, they make a note of it on their scratch paper. Alternatively, they can make use of the "evidence tracking chart" that can be downloaded from the company website. A full list of the Suspect Cards is included with the game, and our group copied this list and had them laminated for reuse. Once an investigator believes that they have gained enough evidence, they can make an arrest. This has them stating the nature of the crime, which company and employee committed it and where, before looking privately at the four suspect cards in the box. Should the guess be correct, that investigation is successful; the investigator gets a promotion and the game is won. If not, that player is out of the game except to share evidence with the remaining players. The game continues until an investigator makes a correct arrest and wins the game.

Besides the standard game play, there are a number of Special Cards, each stating when they can be played. "Out Sick" makes a player unavailable for Collaboration or Eavesdropping, but is countered by the "I have your Pager Number" card; "Double Latte" allows an extra turn; whereas "Tackle Paperwork Backlog" makes a player lose his next turn when played upon them. "Sleight of Hand" lets a player steal a card from another player, but "Make friends with the

Janitor" lets him steal a card from every player; the "Guard Dog or Security Guard" cards counter both of these cards. "Bring the Boss to the Meeting" is played during a Collaboration and forces a Full Disclosure, as does "The Boss is your next-door neighbor," which also counters an "Out Sick" card. A Full Disclosure forces an investigator to reveal all of their evidence and the targeted player must show all of their suspect cards to the inquiring investigator.

Without the special cards, there is relatively little in ***Fraud Squad*** to attract the experienced or more serious game player. In simulating its timely financial malpractice theme, they do much to spice up what would otherwise be a card game variant of the boardgame ***Clue***. Their inclusion may keep players coming back to what is really quite an uncomplicated little family game, as might the rules for more serious play and for two-player games, both available on the publisher's website.

--*Matthew Pook*

Circus Maximus

by Stephen Dedman

The group known as Circus Maximus has been collecting, exhibiting, selling, and possibly even creating oddities and monsters for hundreds of years. Someone curiously similar to Maximus is reported to have supplied hermaphrodites and phoenix meat to Caligula and Egabalus, freaks to Vlad Dracul, and giants to Catherine the Great.

The Circus Maximus also has a profitable sideline as a smuggling operation. Mostly it smuggles fugitives, disguised as part of the freakshow or the crew, but the hidden compartments in its wagons have also carried stolen property, counterfeit currency, weapons and drugs. Maximus also delights in luring the young, innocent and attractive away from their country homes. Those who prove useful may stay on, but most are sold as slaves or (after some mental and/or physical modifications) freaks. Maximus and Mr. Methuselah would never hesitate to destroy someone's face to prevent them being recognized, or even to amputate their hands so they can't be identified by their fingerprints.

The Circus Maximus always comprises at least 10 people, including Maximus himself. Most of these will have been with the Circus for years, but others may be riding with them for protection, or have been recently abducted. Maximus has become increasingly reluctant to visit large cities since the invention of telecommunications, preferring small towns with few police. A marshal's posse in a Weird West or Deadlands campaign may have to protect a town from the Circus's onslaught: modern city-based PCs are most likely to encounter Maximus if they are trying to track down a fugitive or an abductee who may be traveling with the troupe.

Maximus

250 points

ST 13 [30]; **DX** 13 [30]; **IQ** 14 [40]; **HT** 15 [50].

Basic Damage Thrust: 1d Swing: 2d-1

Dodge: 8* Parry: 10 (Fencing) Block: 6

Basic Speed: 7 Move: 7

* Boxing gives Dodge 9 vs. bare-handed or thrusting attacks

Advantages: Combat Reflexes [15]; Cultural Adaptability [25]; Empathy [free with Telepathy]; Handsome [15]; Longevity [5]; Voice [10]; Wealth (Comfortable) [10].

Psionics: Telepathy (5) [25].

Disadvantages: Bully [-10]; Gigantism [-10]; Lecherousness [-15]; Sadism [-15]; Xenophilia [-5].

Quirks: Snappy dresser; Distrusts new inventions; Intolerance (Doctors); Collects silver coins and dirty jokes; Curses in Latin.

Appearance: Late 30s; olive complexion, dark gray eyes, black hair, moustache and goatee; 7', 270 lbs.

Gear: Powerful revolver; Swordcane or Saber; 4-yard whip; Winchester '94 (in caravan); Black upper-class suit over concealable body armor; light cape (black); top hat; black cowboy boots.

Skills: Administration-13 [0]; Area Knowledge (USA)-14 [1], (World)-13 [.5]; Acting-13 [1]; Bard-16 [2]; Boxing-12 [1]; Cloak-11 [.5]; Detect Lies-16 [1]; Diplomacy-14 [1]; Driving (Truck)-12 [.5], (Car)-12 [.5]; Fast-Draw (Pistol)-13 [.5], (Saber)-13 [.5]; Fast-Talk-13 [1]; Fencing-14 [4]; First Aid-12 [.5]; Forgery-12 [.5]; Fortune Telling-13 [0]; Gambling-13 [1]; Guns (Pistol)-16 [2], (Rifle)-14 [.5]; Holdout-12 [.5]; Hypnotism-14 [4]; Intimidation-14 [2]; Juggling-11 [0]; Language (English)-16 [0], (French)-14 [0.5], (Hebrew)-14 [0.5], (Latin)-14 [0.5], (Spanish)-14 [0.5], (Russian)-14 [0.5]; Leadership-14 [2]; Merchant-16 [8]; Mindwipe-12 [1]; Pickpocket-11 [0.5]; Psychology-16 [1];

Riding (Horse)-12 [.5]; Sex-Appeal-16 [2]; Sleep-12 [1]; Sleight of Hand-14 [8]; Stealth-12 [1]; Streetwise-13 [1]; Telereceive-13 [2]; Telesend-12 [1]; Whip-13 [2].

Maximus, ringmaster and sideshow barker of the Circus Maximus (as well as stage hypnotist, mentalist, conjurer, and croupier), rarely discusses his past. He carries documents identifying himself as 38-year-old Julian McManus, heir and sole survivor of an old circus family, but these may well be forged. Nobody in the circus remembers a time when he wasn't the boss.

Maximus likes to use his mind-reading act in every town, to see if anybody is worth blackmailing, robbing, or abducting. He prefers to leave combat and other dirty work to his employees, but will defend himself, the circus, or his hoard of silver coins. He always wears the best concealable armor available at that tech level.

This is a super-normal version of Maximus, designed for use as a villain in *Cliffhangers*, or modern day adventures (for an *Old West* or earlier version, replace Driving with Teamster). In a *GURPS Deadlands* campaign, Maximus may be a huckster as well as a hustler: add Magical Aptitude [Huckster]/4 and the Hexes Missed Me!-14 [4], Phantom Fingers-13 [2], and Trinkets-14 [4]. Total Points: 320.

In a *GURPS Voodoo* setting, Maximus might be one of the Snake People (see p. V0102), with the added advantages and disadvantages of that species. Total points: 420.

Condor (Richard Connor)

100 points

ST 11 [10]; **DX** 13 [30]; **IQ** 10 [0]; **HT** 11 [10].

Basic Damage Thrust: 1d Swing: 2d-1

Dodge: 7 Parry: 8 Block: n/a

Basic Speed: 6 Move: 6

Advantages: Acute Hearing +3 [6]; Ambidexterity [10]; Attractive [5]; Combat Reflexes [15]; Weapon master (knife only) [20].

Disadvantages: Bad Temper [-10]; Bloodlust [-10]; Code of Honor (Pirate's) [-5]; Overconfidence [-10]; Stubbornness [-5].

Quirks: Always wears black; Homophobe; Collects exotic knives; Dislikes cold weather and hates snow; Never sits with his back to the door.

Appearance: Early 20s, tanned skin, blond hair, green eyes; 5'11", 150 lbs.

Gear: Two large knives; 10 daggers in bandolier; Leather jacket; Tight jeans; Cowboy boots; Red bandana (used as blindfold in act); Collection of knives (see p. CII26) in caravan.

Skills: Acting-10 [2]; Blind Fighting-13 [4]; Brawling-12 [.5]; Carpentry-10 [.5]; Climbing-12 [1]; Driving (Car)-12 [1]; Knife-16 [8]; Knife Throwing-16 [8]; Pickpocket-13 [4]; Pressure Points-12 [6]; Riding (Horse)-12 [1]; Running-8 [.5]; Sex-Appeal-10 [1]; Stargazing-13 [1]; Stealth-11 [.5].

Condor, the youngest member of the troupe, is the other half of the blindfolded knife-throwing act (see Livia Leblanc), as well as acting as a roustabout and Mosca's apprentice.

Derringer (David Gold)

110 points

ST 12 [20]; **DX** 14 [45]; **IQ** 10 [0]; **HT** 10 [0].

Basic Damage Thrust: 1d Swing: 1d+2
Dodge: 6 Parry: 9 (Brawling) Block: n/a
Basic Speed: 5 Move: 4

Advantages: Night Vision [10]; Sharpshooter [45].

Disadvantages: Alcoholism [-15]; Code of Honor (Gentleman's) [-10]; Dwarfism [-15]; Lecherousness (only when drunk) [-5]; Unattractive [-5].

Quirks: Very touchy about his height; Hates fairy stories and fantasy novels; Dislikes tobacco smoke, especially when hungover; Prefers revolvers to semi-automatics; Likes using empty bottles for target practice.

Appearance: Late 30s, freckled skin, dark brown hair, green eyes; 3'6" tall, 90 lbs.

Gear: Revolver in fast-draw rig (+2 to Fast-Draw); concealable pistol in sleeve or ankle holster; Bowie (large) knife; good suit over concealable body armor; bowler hat; cowboy boots.

Skills: Acting-11 [4]; Brawling-14 [2]; Disguise-10 [2]; Fast-Draw (Pistol)-16 [4]; Filch-15 [4]; Guns (Pistol)-18 [8], (other)-12; Holdout-10 [2]; Knife-13 [1]; Language (English)-10 [0]; Pickpocket-13 [2]; Riding (Horse)-12 [.5]; Scrounging-10 [1]; Speed-Load (Revolver)-13 [.5]; Stealth-13 [1].

Derringer is the sideshow dwarf, though he prefers to be known for his ability to shoot the aces out of a playing card (usually held by Livia Leblanc). He supplements his income from the circus by disguising himself as a child and shoplifting, but is careful not to draw unfavorable attention to the circus. He respects and fears Maximus, likes Herakles, and loathes the Geek.

Derringer uses the most accurate revolver available at the time for his show and guard duty (post-1955, a Colt Python with target sights, Acc 5; before that, a S&W Russian, Acc 3), and also carries at least one small handgun as a back-up.

Herakles (Erik Hanover)

220 points

ST 23 [130]; **DX** 11 [10]; **IQ** 10 [0]; **HT** 13 [30].

Basic Damage Thrust: 2d+1 Swing: 4d+1

Dodge: 6* Parry: 8 (Brawling or Boxing) Block: n/a

Basic Speed: 6 Move: 6

* Boxing gives Dodge 7 vs. bare-handed or thrusting attacks

Advantages: Animal Empathy [5]; Collected [5]; Fit [5]; High Pain Threshold [10]; Rapid Healing [5]; Toughness (DR 1) [10].

Disadvantages: Dyslexia [-15]; Easy to Read [-10]; Gluttony [-5]; Sense of Duty (Circus) [-5]; Unattractive [-5].

Quirks: Likes spicy food; Sleepy drinker; Loves most types of music, as long as it's loud; Mild claustrophobia; Undiscriminating.

Appearance: Early 20s, dark brown skin, shoulder-length curly black hair, dark brown eyes; 6'3" tall, 200 lbs.

Gear: Metal tomahawk; Hammer; Shotgun (in caravan). When not in the boxing ring, wears a sleeveless leather jerkin (PD 1, DR 1, areas 9-10, 17-18), heavy canvas pants (PD 0, DR 1), boots, and leather gloves.

Skills: Animal Handling-13 [4]; Axe/Mace-13 [8]; Boxing-12 [4]; Brawling-12 [2]; Carousing-12 [1]; Climbing-15 [0]; Driving-10 (Truck) [1] or Teamster-11 [1]; Freight Handling-9 [1] or Packing-11 [1]; Guns (Shotgun)-14 [4],

Rifle-12 [0]; Intimidation-15 [0]; Knife-11 [1]; Language (English)-10 [0]; Leadership-15 [0]; Lifting-20 [.5]; Riding (Horse)-12 [.5]; Running-11 [1]; Stealth-10 [1]; Swimming-15 [0]; Thrown Weapon (Axe)-13 [4].

Maneuvers: Jab-12 [2]; Neck Snap-18 [0]; Roundhouse Punch-12 [2].

Herakles believes he is Kleopatra's younger brother, which may or may not be true. He serves as the circus's strong man, able to lift 1,725 pounds (2,931 with extra effort), as well as offering to take on all comers in the boxing ring. He also tends to the circus's animals (except for Kleopatra's snakes), organizes sentry duty, and does most of the hard physical work around the show.

Herakles is not normally a violent person, but he is absolutely loyal to Kleopatra; he will obey any order she gives him, and will not hesitate to fight to the death (usually his opponents') to defend her or the circus. He keeps a powerful shotgun in his caravan (a double-barrel 10 gauge before 1950, a Remington Model 870 after that) for hunting and other duties.

In a magical campaign, Herakles may be a zombie (Reduce IQ to 9; point total 70); in a Voodoo campaign, a Tonton Makout (Increase DX to 12, HT to 14, reduce IQ to 9, point total 241. See p. VO102).

Jimmy the Geek

-100 points

ST 10 [0]; **DX** 9 [-10]; **IQ** 8 [-15]; **HT** 9 [-10].

Basic Damage Thrust: 1d-2 Swing: 1d

Dodge: 1 Parry: n/a Block: n/a

Basic Speed: 4.5 Move: 1

Advantages: Cast-Iron Stomach [15]; Disease-Resistant [5]; High Pain Threshold [10]; Resistant to Poison [5].

Disadvantages: Alcoholism [-15]; Amnesia [-25]; Bad Smell [-10]; Dead Broke [-25]; Lamé (Crippled Leg) [-15]; Ugly [-10].

Appearance: Late 40s, pale skin, dirty light brown hair, blue eyes; 5'9", 150 lbs.

Gear: Wears rags.

Skills: none.

The Geek is another constant at the Circus Maximus -- sometimes an unfortunate victim of Mr. Methuselah's experiments in brain surgery, and sometimes (particularly during Prohibition) a wino willing to do anything for unlimited cheap booze. In a "real-world" setting, he is no more than he seems: a hopeless drunk blessed (or cursed) with the ability to eat almost anything -- live animals, ground glass, and the remains of some of Maximus's victims. In a weird setting, he might be a zombie -- and in a **Deadlands** adventure, he might be a slow-witted but physically tough Harrowed.

Kleopatra (Jenny Hanover)

200 points

ST 11 [10]; **DX** 14 [45]; **IQ** 13 [30]; **HT** 14 [45].

Basic Damage Thrust: 1d-1 Swing: 1d+1

Dodge: 1 Parry: Brawling 8, Knife 6 Block: n/a

Basic Speed: 7 Move: 7

Super-Powers: Control Animals (5)-14, (Snakes Only, -60%) [18].

Advantages: Beautiful [15]; Double-Jointed [5]; High Pain Threshold [10]; Longevity [5]; Night Vision [10]; Resistant to Poison [5]; Temperature Tolerance/2 [2]; Voice [10].

Disadvantages: Bully [-10]; Jealousy [-10]; Laziness [-10]; Sadism [-15].

Quirks: Bisexual; Promiscuous; Dislikes cats (feeds kittens to her snakes); Incompetence (Gambling); Would rather die than be unattractive.

Appearance: Mid 20s, dark brown skin, short black hair, dark brown eyes; 5'7" tall, 120 lbs.

Gear: 4-yard whip; small knife (frequently envenomed with cobra or viper venom); handcuffs; tight leather vest and shorts (PD 1, DR 1, areas 9-11, 17-18); boots; medium pistol (in caravan); Python; 5-hex horde of venomous snakes.

Skills: Acrobatics-13 [2]; Animal Handling-11 [2]; Area Knowledge (USA)-12 [.5], (World)-12 [.5]; Acting-13 [2]; Bard-13 [.5]; Brawling-13 [.5]; Climbing-16 [1]; Dancing-13 [1]; Detect Lies-11 [1]; Diplomacy-12 [.5]; Disguise-13 [2]; Driving (Car)-12 [.5]; Equestrian Acrobatics-13 [2]; Erotic Art-12 [1]; Escape-15 [1]; First Aid-11 [.5]; Guns (Pistol)-16 [1]; Holdout-12 [1]; Knife-14 [1]; Knife Throwing-14 [1]; Language (Arabic)-11 [.5], (English)-11 [.5], (French)-13 [0]; Merchant-13 [2]; Pickpocket-13 [2]; Psychology-12 [2]; Riding (Horse)-13 [1]; Savoir-Faire-14 [.5]; Sex-Appeal-17 [2]; Singing-14 [.5]; Stealth-14 [1]; Streetwise-12 [1]; Swimming-13 [.5]; Whip-14 [2]; Wrestling-13 [1].

Kleopatra is the circus's female acrobat, who also performs a very popular snake dance and escapology act in the sideshow. She acts as accomplice and mistress to both Maximus and Mosca, but prefers to sleep in her own caravan surrounded by her snakes.

Kleopatra never fights when she can use sex appeal, but she's no pacifist. In a combat situation, she will try to keep her venomous snakes (a 5-hex horde of rattlesnakes, coral snakes, and cobras -- including spitting cobras, if available) between herself and any opponent, and attack with whip and pistol (a .32 or .38 revolver before 1908, a 9mm automatic after that). Her favorite method of disposing of an enemy is to tie him up and throw him into her snake tank.

To make a slightly less dangerous 188-point version of Kleopatra, change her Super-Power to a magical ring in the image of a snake (Breakable, cannot be repaired, -6 to hit, can be stolen with stealth or trickery but is not obviously powerful: -70%). To make her more powerful, give her the Shapeshifter (weresnake) advantage (10 points, p. CI44) and/or the ability to spit Venom (21 points/level, p. CI71), either as an inherent power or as a power bestowed by the ring.

Livia Leblanc (Lisa Belasco)

0 points

ST 9 [-10]; **DX** 11 [10]; **IQ** 12 [20]; **HT** 10 [0].

Basic Damage Thrust: 1d-2 Swing: 1d-1

Dodge: 5 Parry: 11 Block: n/a

Basic Speed: 5.25 Move: 7

Advantages: Initiation (Second Level) or Magical Aptitude (Magery)/1 [15]; Night Vision [10]; Rapid Healing [5].

Enchantment: Ghost Shirt or Missile Shield (tattooed onto body).

Disadvantages: Addiction (Heroin) [-40]; Albinism [-10]; Sadism [-15]; Unattractive [-5].

Quirks: Secretly in love with Condor; Likes horror stories, especially about ghosts and vampires; Mild phobia of heights; Wants to be a more powerful magician than her mother was; Takes pride in her art.

Appearance: Late 20s, white skin, long white hair, red eyes, tattooed with magical symbols and images of snakes;

5'6", 115 lbs.

Gear: Wears light cloak over skimpy costume (no DR) and boots; .22 pistol (in caravan).

Skills: Acting-11 [1]; Artist-13 [6]; Brawling-10 [.5]; Calligraphy-11 [0]; Cloak-10 [1]; Forgery-13 [6]; Guns (Pistol)-12 [.5]; Knife-10 [.5]; Language (English)-12, (French)-10 [.5]; Lockpicking-12 [2]; Occultism-11 [1]; Streetwise-11 [1]; Sex-Appeal-9 [1]; Tattooing-13 [4].

In a campaign using **GURPS Magic**, Livia has the following spells: Apportation-13 [4]; Death Vision-12 [2]; Detect Magic-12 [2]; Lend Strength-12 [2]; Locksmith-14 [6]; Missile Shield-14 [6]; Recover Strength-12 [2]; and Slow Fall-14 [6]. Total Points: 30.

In a campaign using **GURPS Voodoo** or **GURPS Spirits**, Livia has the following Skills and Rituals: Ritual Magic (Voodoo)-12 [8]; Vever Drawing-12 [4]; Path of Protection-12 [8]; Ghost Shirt-10 [10]. Total Points: 30.

Lisa Belasco is the orphaned daughter of a powerful New Orleans witch with too many enemies. Apart from an addiction to heroin, one of the last things Marie Belasco left her 13-year-old daughter was a permanent charm of protection against missiles, tattooed directly onto her skin.

Lisa is traveling with the circus, working as signwriter, tattooist and the endangered half of a blindfolded knife-throwing act, while she searches for a magical teacher. She plays little or no part in the circus's illegal activities, except for occasionally forging documents, but keeps a pistol in her caravan and will defend herself if the group is attacked.

Mosca (Marco Reyes)

250 points

ST 13 [30]; **DX** 15 [10]; **IQ** 10 [0]; **HT** 13 [30].

Basic Damage Thrust: 1d Swing: 2d-1

Dodge: 8* Parry: 11 Block: n/a

Basic Speed: 7 Move: 7

* Boxing gives Dodge 10 vs. bare-handed or thrusting attacks

Advantages: 3D Spatial Sense [10]; Absolute Timing [5]; Collected [5]; Catfall [15]; Combat Reflexes [15]; Daredevil [15]; Double-Jointed [5]; Fit [5]; Handsome [15]; High Pain Threshold [10]; Perfect Balance [15]; Peripheral Vision [15]; Rapid Healing [5]; Strong Will/2 [8].

Gadget: Human Fly suit, gives Clinging and Flight (Gliding Only, Small Wings) super-advantages. Breakable, no penalty to hit, unique. [15]

Disadvantages: Addiction (Cocaine) [-15]; Bad Temper [-10]; Code of Honor (Pirate's) [-5]; Compulsive Spending [-5]; Lecherousness [-15]; Overconfidence [-10]; Sadism [-15]; Voices, Demonic [-15].

Quirks: Mild triskaidekaphobia; Proud; Dislikes spiders; Caffeine addict; Baseball fan.

Appearance: Early 30s, olive skin, short black hair, dark brown eyes; 5'10" tall, 150 lbs.

Gear: Large knife; two daggers; jump suit; silenced 9mm pistol (after 1908).

Skills: Acrobatics-16 [8]; Acting-11 [4]; Body Language-8 [1]; Boxing-15 [2]; Carousing-13 [2]; Climbing-18 [.5]; Dancing-13 [.5]; Driving (Car)-14 [1]; Erotic Art-12 [0]; Escape-16 [1]; Fast-Draw (Knife)-15 [.5]; Fast-Talk-10 [2]; First Aid-9 [.5]; Guns (Pistol)-16 [1], (other)-12; Jumping-17 [4]; Karate-15 [4]; Knife-17 [4]; Language (English)-9 [1], (Spanish)-10; Lockpicking-10 [2]; Mechanic (Car)-12 [.5]; Motorcycle-14 [.5]; Pickpocket-14 [2]; Riding (Horse)-13 [.5]; Running-10 [.5]; Scrounging-10 [1]; Sex Appeal-14 [4]; Stealth-15 [2]; Streetwise-10 [2]; Swimming-14 [.5]; Throwing-15 [4].

Maneuvers: Back Kick-15 [1]; Drop Kick-13 [2]; Hit Location (Karate)-15 [2]; Jump Kick-15 [1]; Kicking-16 [2]; Roundhouse Punch-14 [1]; Spin Kick-16 [1].

Mosca, known to his friends as the Spanish Fly, is an acrobat, burglar, and savate champion who came to the Circus seeking refuge and became Kleopatra's second-favorite lover. He stole the human fly suit from a mad scientist who Maximus and Kleopatra were blackmailing, and who later committed suicide.

Mosca is one of the most hot-headed of the circus's perennials and actually enjoys fighting. His favorite maneuvers are the drop kick (p. MA47) and jump kick; his daggers are meant for throwing, not close combat. As well as burglary, he also performs the occasional murder-for-hire.

Mosca dislikes Maximus, but his code of honor (and a vestigial sense of self-preservation) prevents him rebelling against him. Maximus, in turn, quietly delights in sending Mosca on very dangerous missions.

In a pre-1970s campaign, Mosca's suit will be leather and padded cloth (PD 1, DR 1) with a heavy leather helm, boots, and gloves (PD 2, DR 2). In a later setting, it will be lined with Kevlar (PD 2, DR 14) or some similar flexible armor, while the helmet will be fitted with CBR filters, light-intensifier or infra-red goggles, and other gadgets.

Mr. Methuselah

25 points

ST 9 [-10]; **DX** 10 [0]; **IQ** 13 [30]; **HT** 10 [0].

Basic Damage Thrust: 1d-2 Swing: 1d-1

Dodge: 5 Parry: n/a Block: n/a

Basic Speed: 5 Move: 5

Advantages: High Pain Threshold [10]; Longevity [5]; Metabolism Control/1 [5].

Disadvantages: Addiction (Barbiturates) [-10]; Callous [-6]; Pallor [-10]; Skinny [-5]; Ugly [-10].

Quirks: Rewrites his will frequently; Doesn't drink alcohol or smoke; Avoids sunlight when possible; Loves opera, especially Wagner; Distrusts women.

Appearance: Leathery white skin, thin white hair, gray eyes; 5'5", 90 lbs.

Gear: Wears old jeans and shoes when doing act. Offstage, wears white coat over middle-class suit, broad-brimmed white hat.

Skills: Accounting-13 [4]; Acting-12 [1]; Archeology-10 [.5]; Area Knowledge (World)-12 [.5]; Disguise-13 [2]; Guns (Pistol)-11 [.5]; History-11 [1]; Language (English)-13 [0], (Greek)-11 [.5], (Hebrew)-11 [.5], (Latin)-11 [.5]; Lockpicking-13 [2]; Merchant (Drugs)-16 [.5], (other)-10; Pharmacy-13 [4]; Physician-13 [4]; Poisons-12 [1.5]; Research-12 [1]; Streetwise-11 [.5]; Surgery (Cosmetic Surgery)-16 [2], (other surgery)-10 [0].

Mr. Methuselah claims to be an ancestor of Maximus, cursed with immortality without the advantage of eternal youth, whose act consists of apparently dying on stage: he has mastered body control to the degree that he can suspend life signs. He's actually a medical doctor, struck off for drug-related offences, and acts as medic and pharmacist for the circus, as well as helping to disguise some of the fugitives they transport. Some of his less successful attempts at plastic surgery have joined the ranks of the sideshow freaks.

In a magical campaign, Mr. Methuselah may be an enslaved mummy (p. U72), which can be reanimated on demand. In a Deadlands campaign, he may be Harrowed, with Soul Eater/2. Total points: 228.

Swami Sutra (Natesh Jindal)

100 points

ST 10 [0]; **DX** 13 [30]; **IQ** 11 [10]; **HT** 13 [30].

Dodge: 6 Parry: 8 Block: n/a

Basic Speed: 6.5 Move: 6

Advantages: Breath-Holding/2 [4]; Double-Jointed [5]; High Pain Threshold [10]; Rapid Healing [5]; Strong Will/1 [4]; Temperature Tolerance/2 [2].

Disadvantages: Addiction (Cigarettes) [-5]; Miserliness [-10]; On the Edge [-15]; Pyromania [-5]; Skinny [-5].

Quirks: Hates snakes; Won't eat red meat; Chauvinistic; Incompetence (Cooking); Intolerance (Muslims).

Appearance: Early 50s; dark brown skin, dark brown eyes, bald but for thin white eyebrows; 5'9", 100 lbs.

Gear: Cheap foil (for Sword Swallowing Act); Cheap scimitar; Small knife. Wears turban and loincloth, with an old overcoat for cold weather.

Skills: Acrobatics-13 [4]; Acting-11 [2]; Breath Control-12 [6]; Broadsword-12 [1]; Climbing-15 [1]; Erotic Art-10 [.5]; Escape-15 [2]; Fire-Eating-14 [4]; Fire Walking-14 [6]; Judo-12 [2]; Jumping-13 [2]; Karate-12 [2]; Knife-13 [1]; Knife Throwing-12 [.5]; Language (English)-9 [1], (Hindi)-11 [0]; Scrounging-11 [1]; Sex Appeal-11 [.5]; Stealth-13 [2]; Streetwise-10 [1]; Swimming-12 [.5]; Sword-Swallowing-14 [2]; Theology (Hinduism)-10 [1].

Maneuvers: Arm Lock-14 [1]; Elbow Strike-12 [1]; Knee Strike-13 [1]; Spin Kick-1 [1].

Calcutta-born Natesh "Nate" Jindal is the sideshow's fire-walker, fire-eater, underwater escape artist, and rubber man, as well as frequently assisting Mosca in breaking into houses (usually acting as lookout).

The 100-point Sutra isn't much of a threat, but to make him into a 250-point fire-breathing "rubber man" for a Supers campaign, increase DX and DX-based skills by +2, add Body of Fire/6 (Unreliable limitation; Activation number 11 [24]; Bouncing/1 [12]; Constriction Attack [15]; Damage Resistance/1 [3]; Elastic Skin [20]; Flame Jet (2)-12 [16]; Injury Tolerance (No Blood) [5]; and Stretching/1 [30].

For a 250-point cinematic martial artist, Trained by a Master in Kalari, increase DX and DX-based skills by +2, IQ and IQ-based skills by +1, ST by +3, and add the Trained by a Master advantage. Increase Karate and Judo to 16 and Breath Control to 12 [8 points each], and Theology (Hinduism) to 14 [4 points]; this will also increase all maneuvers by +2. Add Blind Fighting-9 [2], Body Control-10 [4], Meditation-12 [8], Mental Strength-10 [2], Power Blow-10 [2], Pressure Points-11 [4] and Roll with Blow-16 [4].

Ursula, the Bearded Lady

25 points

ST 11 [10]; **DX** 10 [0]; **IQ** 10 [0]; **HT** 10 [0].

Basic Damage Thrust: 1d-1 Swing: 1d+1

Dodge: 5* Parry: 7 Block: n/a

Basic Speed: 5 Move: 3

* Boxing gives Dodge 6 vs. bare-handed or thrusting attacks

Advantages: Alcohol Tolerance [5]; Alertness +1 [5]; Animal Empathy [5]; High Pain Threshold [10].

Disadvantages: Code of Honor (Pirate's) [-5]; Compulsive Carousing [-5]; Overweight [-5]; Poverty (Struggling) [-10]; Unattractive [-5].

Quirks: Distrusts skinny people; Incompetence (Dancing); Congenial; Smokes cigars; Rarely swears and never blasphemes.

Appearance: Freckled skin, red-brown hair and full beard, blue eyes; 5'8" tall, 182 lbs.

Gear: Middle-class dress with slippers (for show); small knife, jeans, shirts and boots at other times. 20 gauge shotgun (3d-2 damage, ST 11, Rcl -3) in caravan.

Skills: Animal Handling-12 [2]; Axe/Mace-10 [1]; Boxing-10 [2]; Brawling-10 [2]; Carousing-10 [2]; Cooking-10 [1]; Disguise-9 [1]; Driving-10 (Truck) [2] or Teamster-12 [2]; First Aid-9 [.5]; Freight Handling-10 [2] or Packing-12 [2]; Gambling-10 [2]; Guns (Shotgun)-12 [1]; Holdout-9 [1]; Knife-11 [1]; Language (English)-10 [0]; Scrounging-10 [1]; Streetwise-10 [2]; Thrown Weapon (Knife)-10 [.5]; Whip-9 [1].

The Circus Maximus has always had a bearded lady. Apart from possibly being female ('she' may just be a heavily disguised male fugitive), the furry-faced Ursula is typical of the Circus's roustabouts. She may, of course, also be a Shapeshifter (p. CI44, Werewolf or Werebear, +15 points), or even a Cat Person (p. VO100, +270 points).

Also Appearing

Apart from its more-or-less human performers and roustabouts, the Circus also boasts a small menagerie, all well-trained: a dancing bear (Black Bear, p. B141), 1d+1 dogs of different sizes (small ratters to attack dogs), an elephant (p. B142), and a number of horses (two saddle horses for equestrian acrobatics, plus -- pre-TL7 -- draft horses and large mules to pull the wagons, cavalry horses for Maximus and Herakles, and saddle horses or ponies for the others).

The sideshow also features some stuffed (and probably faked) monsters -- and in some settings, such as Deadlands, possibly some real live ones. Possibilities include a giant rat, man-eating plants, or a "Cardiff Giant" that is actually a stone golem.

New Skill: Sword-swallowing (Physical/Easy)

No default

The character can suppress his gag reflex and align his upper digestive tract so that a sword or similar object can be inserted into his mouth and down his throat to his stomach. Best to use a blunt sword, though.

Adventure Seeds

Old West: The circus comes to a small frontier town, but after the show is finished, Jimmy the Geek dies peacefully in his sleep. Maximus decides that the circus urgently needs a replacement, and has Herakles and Kleopatra spirit away the town drunk, Johnny, before they leave. Unfortunately, one-armed Johnny is also the brother-in-law of William Whyte, the town's wealthy mayor and half-owner of the general store.

When Johnny's disappearance is confirmed, two days later, Mrs Whyte offers a reward for his return -- \$100 in gold, or \$200 in goods from the shebang. The circus has left the county, so the sheriff can't legally act, but the PCs may decide to ignore the finer points of law. Jimmy, however, has been offered all the booze he can drink and doesn't want to leave, and the heroes may find themselves facing the finer points of swords and knives as the circus folk defend their prize.

Deadlands: In a **Deadlands** campaign, Circus Maximus is doing the work of the Reckoners, increasing the fear level of the towns they visit. One of their methods is to offer rewards for the capture of abominations suitable for their freak show (with smaller payments for corpses), sending greedy hunters in search of varmints that sensible folk would avoid.

The posse encounters the circus when the train carrying both parties across the desert is derailed, killing the crew. Because of Dust Devils, Mojave rattlers, Tumblebleeds and other menaces, Maximus suggests that they send as large a group as possible back to the nearest town in search of help. When the two parties have to fight side-by-side against abominations, the circus folk won't sacrifice the PCs needlessly, but neither will they risk their own lives to protect

them.

Cliffhangers: Some time after 1933, the circus visits a small town in the segregationist South, where it receives a cool reception. Todd Browning's Freaks is showing at the cinema, and one of the old-timers claims that when the circus passed that way some 70 years before, it helped many of his father's slaves escape. The Ku Klux Klan visits the circus and starts a fire; somebody sets the animals free, and the county sheriff forms a posse (including the PCs) to try to restore the peace with a minimum of bloodshed.

Atomic Horror: While the circus is playing in a small California town, two of the high school students are caught smoking marijuana, but refuse to reveal their source. The police chief decides to raid the circus and recruits a number of heavily-armed and trigger-happy reserves, as well as all the journalists he can find.

Though several of the circus folk have their own stash of drugs, they haven't been selling them in town (the real dealer is the mayor's son, a quarterback and school bully). "Ursula" is actually a heavily-disguised blacklisted microbiologist who's stolen some bioweapons from Fort Detrick, and if any of the seven vials in her caravan are opened or broken, horrible plagues will be unleashed. The PCs may be journalists, cops, or high school kids from the town, or scientists, feds or military officers searching for the stolen germs.

Supers: New supers are appearing and wreaking havoc in small towns across the USA -- most in their teens or early twenties. A few become heroes, but most are criminals or can't control their new-found powers. Research shows that the Circus Maximus has visited all of these towns less than a week before these incidents -- and in these towns and others on their route, there have also been several deaths caused by a mysterious new drug, a stimulant and hallucinogen called Powerpack.

The doctored Powerpack pills that the circus is selling triggers latent superpowers in about 1% of users. (Roll 1d: on a 1, the powers are permanent. On a 2-3, they are temporary, but can usually be restored by another dose of the drug. On a 4-6, the powers or new disadvantages quickly kill the user.) Any user who critically fails a HT roll on taking the drug will also die; any user who critically fails a Will roll may become addicted.

When the PCs catch up with the Circus, Maximus will try to dispose of their remaining pills rather than be caught -- even if it means dumping them into a town's water supply. The Circus may also have recruited several overconfident new metavillains who have come to them for training or more drugs.

I Smell A Rat . . .

by Michael Suileabhain-Wilson

Preparation

This adventure serves a party of four to eight mid-power adventurers. It is ideally suited to fantasy settings, but could be adapted to any setting with a privileged class and some power capable of reversibly shrinking human beings -- Victorian occultism or 1950s weird science, for example. It complements campaigns with political elements particularly well, but is a satisfying interlude for any campaign.

Ingredients

The Offer

The PCs receive an invitation from the Count of Tauston to visit him at Tauston Manor in order to discuss an offer of employment. The Taustons are a well-regarded noble family, known for their tremendous wealth and irreproachable decorum. In the family's long history, the only whisper of scandal to tarnish the Tauston name came some 60 years ago, when the 17th Count of Tauston disappeared, apparently to elope with a maidservant. He left no heir, and his cousin, the current Count's grandfather, assumed the title and fief.

The Manor

Tauston Manor isn't fortified enough to be called something other than a house, but "house" utterly fails to capture its grandeur. It stands astride a gentle hill, proudly rising four floors from the earth and reaching out with four wings toward the clusters of outbuildings which surround the main house.

The party will be met outside the manor by a large group of servants. The Count is away hunting for the day, but he intends to receive them in the morning. Meanwhile, the staff would be happy to escort them to their lodgings.

The manor is extremely opulent, though the heroes won't get to see much of it yet. They've been quartered in the second guest wing, which is a bit isolated. Still, the rooms provided them are spacious and well appointed, with a guest study at the end of their hall. When they want dinner or a bath, or if they need anything else, there's a service bell in every room.

The kitchens provide good and unpretentious food, and the study has comfortable chairs and a few shelves of good books. The baths, should the adventurers choose to avail themselves of them, are stunning. The manor stands over a hot spring, and the basements feature elaborate and extensive bathing facilities. The party may try to explore further, but they probably won't get far before being intercepted by a servant. They can't get into any real trouble by exploring, but they may endanger their relations with the staff, which could be important later.

In the morning, one of the guests will find that a small personal possession has disappeared or been damaged -- chewed, it appears. After breakfast, a servant will come to conduct the party to the Count. The rest of the manor is even more luxurious than the parts they've already seen. The Count is waiting for them in a room off the main hall.

The Job

The Count will explain that he has a problem with his home. Tauston Manor is his ancestors' dreams of luxury made reality. It has every comfort and convenience a man of leisure could want. It also has rats. Many, many rats. For years,

the rats were merely an inconvenience, but it is becoming intolerable. They eat the food, ruin the bedding, and scratch around in the walls at every hour of night or day. The cats catch some, but not enough. Poison hasn't done the job. And the nearest town's ratcatcher just wandered around smelling up the place for a week before shrugging and giving up.

The Count, therefore, has hit on a plan. There are no proper exterminators in the kingdom, but there are adventurers. He has arranged for a spellcaster to shrink a party of adventurers to the requisite size to follow the rats into the walls, so that they can seek out and kill as many rats as possible. They would also root out nests and report any paths from the outside into the house that could be sealed off. The Count is willing to pay a handsome retainer, as well as a bounty for every rat killed. He hopes that the party will take on his small difficulty.

If the party takes the job, the Count will help them acquire any reasonable supplies that they may need. He'll recommend climbing gear if no one thinks of it, and provide them a map of the manor. At the scale at which they'll be exploring the manor, the Count's map is extremely rough, but it's better than nothing. Once the party is properly outfitted and ready to go, the Count will call for the spellcaster, the party will be shrunk down to a few inches tall, and the expedition will commence.

Adventure on a Small Scale

Clearing the entire manor could easily take a really long time. In fact, you can spend as much time as continues to be fun killing rats and closing off crawlspaces. Hunting the rats is essentially similar to a dungeon crawl, but familiar and innocuous things suddenly become deadly. A common rat becomes a giant rat; even a cockroach is suddenly formidable, and a spiderweb becomes a deadly trap. Bats in the attic are as fearsome as dragons. And the household cat, Colonel Mugwump, may be the fiercest foe the party will ever face.

Aside from the newly deadly opponents they face, their environment contains unfamiliar dangers. They will have to crawl through rat-chewed tunnels too small for more than one person to pass. Climbing from floorboards to ceiling requires an ascent more perilous than many mountains. And they will never forget traversing the treacherous drawing room chair rail, or scurrying along the rafters which loft high above the dining room, where a single misstep would send them plummeting to their deaths.

As the party makes its way through the manor, they will ferret out rat nests, locate the small holes where rats make their way from the fields into the house, and clear out section after section of the manor. Eventually, however, they will come on something for which they are completely unprepared.

The Body

In a remote corner of the second guest wing, a hall ends in a blank wall where there ought to be a small window. No one has ever noticed; the manor is large, and no one goes around counting windows. But behind that wall lies a terrible secret; the niche between wall and window contains a desiccated corpse. The body has been fallen prey to the house rats and other vermin for many years (indeed, there may be a few passersby the party will have to face), but despite the damage done, a few facts are clear upon examination. The dead man's clothes are richly embroidered, marking him a noble. A gaping wound can still be made out on his throat; whoever killed him half-decapitated the poor victim. And on his finger he wears a heavy ring, with a familiar symbol upon it. It's the signet ring of the Taustons, missing these past 60 years.

Cooking Tips

Scandal Comes Knocking

The Count is aghast at the party's discovery. It seems overwhelmingly likely that the dead man is, in fact, the 17th Count, and the maidservant story is horribly wrong. If the Count was indeed murdered, suspicion must fall on one man: his successor. And if the Count's grandfather came to the title through foul play, the Count could be stripped of

land and title. If any of the Count's enemies hear of this, there will be hell to pay.

The adventure could progress from here in several ways, depending on if and how the heroes reveal their discovery. They could become caught up in courtroom intrigue with the Tauston lands at stake, either on the side of the Count or of his enemies. They could continue to work for the Count helping him dispel nasty rumors. They might find themselves engaged to dispose of a body.

Extra Spice: The body is a fake. One of the Taustons' enemies planted it in order to discredit them when it was discovered. Such a plot would be a masterpiece of intrigue; few people would be able to conceive such a plan, knowing that it would take years or decades to come to fruition. Fewer would have the skill to smuggle a body into an enemy's stronghold and cement it into the walls. Even so, the question remains: how did they get the signet?

Alternately, it could be that the body is genuine, but the story is less obvious. Perhaps the Count really was carrying on with that maidservant, and a jealous rival murdered him. Or maybe he was murdered by someone who owed him money (or whom he owed money). To uncover the secret, the PCs will have to pore over old diaries and interrogate what few old servants and nobles remember those days.

Treachery Most Foul

The Count knows full well that there's a dead man in his house -- he just doesn't know where. His grandfather murdered his cousin and hid the body, but neglected to tell his descendants where it was hidden. Recently, however, the Count found another lost secret of the Taustons: a secret room, where all the Taustons' most closely held secrets lie immured. However, it's locked, and only the family signet can open it.

Clearing out the rats was merely a convenient cover; the Count always intended the PCs to find the body, so that he can get the ring. It's true that there might be a scandal if word of the dead Count gets out, but the evidence can readily be disposed of. So can the heroes, for that matter.

Extra Spice: There are unexpected horrors asleep in the Manor. The dead Count awakens in undeath when his long sleep is interrupted. Now the dead Count is hunting the living Count, and vice versa. The party will just have to hope not to get caught up in the battle. And who knows what else might be trapped in that secret room?

The Infestation

Tauston Manor's rats are more than an ordinary nuisance. The Manor has become home to a creature of great evil: an intelligent infestation. The infestation came to the Manor 70 years ago, and has been slowly gaining power, as its constituent rats breed and become strong. Early in its tenure, it was careless, and the old Count became aware of the infestation's presence. He had to be killed. Since then, however, the infestation has been very careful to keep itself hidden. Only in the last few years has it become so large that its presence cannot be concealed. Soon, it will be powerful enough to leave this vessel, devouring the Manor in a tide of vermin, and move on to a nearby city.

The infestation will try to avoid tipping off the party to its existence, but they may notice that the rats are unusually disciplined in combat, and that their nests are not quite right, somehow -- too clean, too organized. They'll also notice that there really are a huge number of rats. Finally, the wound in the old Count's neck isn't quite clean; it's ragged, as though made up of many small punctures. When the mysteries pile too high to be ignored, the infestation will reveal itself and attempt to destroy them. At this point, the party and the Manor's occupants must fight for their lives against an opponent that is more than a match even for full-size adventurers.

Side Salads

The Walls Have Ears

On a country estate, you can learn a lot if you're in the right place at the right time. And the heroes have the

opportunity to go almost anywhere undetected. If it's the proper season for the gentry to go visiting each other's estates, the manor may be full of aristocrats plotting intrigues, having affairs, and generally carrying on in the traditional aristocratic manner. The party might overhear events and conversations that could lead them on any number of new adventures.

The House Spirit

In many cultures, a large house may have a tutelary spirit, like a brownie or a tomte. Tauston Manor seems like an excellent candidate for one. If it does, however, it has clearly been remiss in its obligations, allowing so many rats to take up residence. In the course of their mission, the party might have the opportunity to meet it. Perhaps it has grown old and lazy, or maybe it has gone on strike to protest its master's murder. Either way, the house spirit could prove a powerful ally or a dangerous enemy, particularly if it feels the PCs are infringing on its territory.

The Hidden Garret

The Counts of Tauston hid a secret room in their manor, where the Counts could keep their treasures and think secret thoughts. When the 17th Count died prematurely, it was forgotten and lost. If the GM is using Treachery Most Foul, this is the room unlocked by the signet. This room almost certainly contains valuable treasures belonging to the old Counts. Possibly more importantly, it contains documents and diaries from generations of Taustons. Dark political secrets are recorded here that many would kill to hide or to reveal. If using The Infestation, the old Count's diaries, which reveal the infestation's existence, are here.

Pyramid Review

Steam Tunnel

Published by [Cheapass Games](#)

Designed by James Ernest

48 cards & instruction sheet; \$4

Simultaneously released with [Light Speed](#), *Steam Tunnel* is the latest game from Hip Pocket Games, the tiny division of the Cheapass Games empire that publishes small games at perfectly small prices. Like the first four titles from Hip Pocket Games -- [Agora](#), [Cube Farm](#), [Nexus](#), the new *Light Speed* and the re-packaged *The Very Clever Pipe Game* - this new release is another card game that comes packaged in a small ziplock bag with its rules on a single folded sheet of paper.

Steam Tunnel is a strategy game for between two and five players that consists of 48 cards; four of these are Point Cards and the rest Tunnel Cards. As is traditional with Cheapass, players need to supply their own parts; in this case, the game requires 20 colored stones for each player and also a means of recording everyone's score at the end of the game.

Ostensibly, *Steam Tunnel* is set within the bowels of Io, within a steam driven titanium mine, in the year 2185. In actuality it is an excuse for players to compete for control of the tunnels or pipes, and thus win the game. Their aim is to build as long a tunnel as is possible and have its ends connected to numbered ends on the Point Cards. The longer the tunnel, the more points there are available to the players. Essentially, game play consists of flipping over cards laid in a grid and placing stones to control the tunnels depicted on the cards.

At the beginning of the game, the Point Cards are put aside, and the remainder shuffled and laid face down in a six-by-six grid, with Point Cards placed face up at the corners of the grid's middle ring. The remaining 12 Tunnel Cards have no role for the rest of the game and are put aside. The Point Cards are marked with six numbered end caps to which players must successfully connect tunnels in order to score. Each Tunnel Card has six entry points showing two or three tunnel segments, which run or curve or join through the card and possibly end in an unnumbered End Cap as well. The board wraps around, so that tunnels run off the edge of the board and enter again on the opposite side. If strictly adhering to the game's background, this is because Io is such a small moon . . .

On his turn a player turns over one card and places one stone to either buy or alternatively bury a tunnel segment. To buy a segment, the player puts his stone on any card currently turned over. Only open tunnels can be bought; neither ones that have been closed off nor segments already owned by other players can be bought. The purchased segment does not have to be on the flipped card. To bury a tunnel segment, the stone is put down on a card still facedown, thus preventing from being flipped later during the game. Tunnel segments can still be traced through this section, but *only* in a straight line.

Play continues until there are no more cards to turn over. At this point the tunnels are scored, with the result calculated from the total of the end cap scores multiplied by the number of tunnel segments running between the two caps. The score goes to the player with the highest number of stones along the length of the tunnel, or divided among the players if there is a tie.

The luck element of *Steam Tunnel* is in the random placement of the tunnel cards, and this is further enhanced when you consider that not all of the tunnels cards are used in each game. Of course, there is nothing to stop them from being used to create a larger six-by-eight card grid, thus making for a longer game. The strategy comes in the placing

of the stones; does a player buy a tunnel segment in order to outbid a rival for control of the tunnel at the game's end? Or does he bury a segment and thus potentially block an opposing player's tunnels? Overall, ***Steam Tunnel*** is simple enough that it will appeal to a younger audience, but also act as a small diversion to adults, since a game should last no longer than half an hour. For the dedicated gamer, the rules list another five variants, and with rules and play as simple as this, it would not be difficult to think of more.

Pyramid Pick

Fistful o' Zombies (for All Flesh Must Be Eaten)

Published by [Eden Studios, Inc.](#)

Written by Shane Lacy Hensley

Cover by George Vasilakos

Interior Illustrations by Thomas Denmark, Talon Cole Dunning, Jon Hodgsen, Ginger Kubic, Matt Morrow

144-page b&w softcover; \$20.00

Hot on the hooves of [Pulp Zombies](#) comes *Fistful o' Zombies*, the third genre supplement for Eden Studios' [All Flesh Must Be Eaten](#), the RPG of all zombie horror. AS the title suggests, *Fistful o' Zombies* takes our favorite corpse cortege way out West and down South for an all zombie hoedown on your bones and an all they can eat Tex-Mex meat feast for afters. Since this is "A Wild West Sourcebook" and *All Flesh Must Be Eaten* is a game of survival horror, Eden Studios have got the right author for the job, Shane Lacy Hensley. Described on the back cover as the "Sheriff of Wild West Gaming," Hensley is the renowned author of the *Deadlands: The Weird West RPG*, the original Wild West horror RPG, and *Fistful o' Zombies* is his first piece of freelance work since the publication of *Deadlands*.

Those possessing any of the previous *All Flesh Must Be Eaten* supplements will know what to expect with *Fistful o' Zombies*: a smaller-than-normal softback, well laid out with plenty of art, some tongue-in-cheek (usually your own or a zombie's) color fiction to set the scene, a brief-but-thorough overview of the genre, plus several Deadworlds. In this they will not be disappointed, as *Fistful o' Zombies* is well put together and Hensley's writing is pleasingly solid and sure. What they should not expect, and do not get, is a set of Deadworlds based upon the historically accurate West as it was. This is not to say that history gets short shrift from Hensley, as the supplement is littered with various and interesting tidbits of historical information. Instead the inspiration for the majority of the Deadworlds in *Fistful o' Zombies* is the Wild West as seen through the lens of Hollywood . . . not just in one take, but in several, as Hensley gives a cadaverous twist to how the movies have treated Cowboys and Indians over the course of the 20th century.

Fistful o' Zombies opens with an overview of the Western genre and of the book itself. It provides a solid introduction as well as a short lexicon before the supplement gets down to a thorough examination of the history and culture of the period from 1830 up until 1930 -- which is, of course, when *Pulp Zombies* could kick in. Thus it goes from the Old West up until the end of the American Civil War, the Wild West until the end of the century, and lastly the New West of the first third of the new century. Those wanting more depth should look elsewhere in either reference works or creditable gaming supplements, but what is given in *Fistful o' Zombies* is both interesting and useful enough to provide the Zombie Master (or should that be Zombie Marshal?) plenty of detail to go with the information that will have been derived from the many Westerns they will have no doubt seen over the years.

Heroes, or in some cases anti-heroes, in *Fistful o' Zombies* are built as the Survivor Character Type. Although it is possible to play a Norm Character Type, these are best left as members of the supporting cast. New Drawbacks expand the game's possible Prejudices to include intolerance of either Northerners or Southerners, and Minority to cover any non-white -- North or South of the border. There are only two new qualities: "Fast as Hell," which gives a +3 bonus to initiative rolls made for Fast Draw contests; and "Number One With A Bullet," which reduces the penalties incurred for attempting trick shots. New rules cover fanning the hammer of single action pistols, the use of the lasso, horses

(including -- what else? -- the zombie horse) and their endurance, showdowns (at 12 o'clock high and other times), and hanging -- which is gruesome. This is followed by a set of weapon tables and their explanations -- though still no whip! -- plus an equipment and currency guide. The only generic archetypes given are The Bandita, Cowboy, Gambler, and Saloon Girl, which are all of the Norm Character Type. More points could be spent on them to make them into the Survivor Character Type, but then any player unable to create a character for a *Fistful o' Zombies* game should be taken out as guest of honor at a necktie party.

[BEGIN SPOILER ALERT!]

This may also be the fate of a Zombie Master who attempts to run the first of the Deadworlds in *Fistful o' Zombies*. "Singing Cowboys" is an all-fringed rhinestone affair based on the singing Westerns of Gene Autry, Roy Rogers, *et al* of the 1930s and 1940s, in which the good guys wear white hats and the bad guys black hats. Good guys invariably know ever-faithful girls who get tied to the railroad tracks once too often, ride surprisingly intelligent wonder horses ("What's that, boy?" "Clop-clop, whinny, snort." "You mean my faithful-but-inebriated sidekick Bert has fallen down a mineshaft?"), never shoot the bad guy (unless they have to), and never resort to bad language. The rules make a lot of adjustments to fit this all-too-cheesy genre, and characters are expected to be as good with their voice and a musical instrument as they are with a six-shooter. By striking up a song in game, the characters can inspire courage, stamina, and quickness, soothe a lynch mob, or exhort others to great deeds. The players get a bonus if they really sing! Only a pair of tunes can be sung per adventure, but one can become a theme song if sung often enough. All of this is played straight, as were the films that inspired this Deadworld, but of course, with the added bonus of zombies. There is an intentional repetition aspect to "Singing Cowboys" and could be a great deal of fun if the players can get into the swing of the tunes. If not, there's always the aforementioned necktie party . . . Thankfully the zombies don't break into a chorus.

"True Grit" takes the game and genre forward to the 1950s and 1960s, when men were real men and real women just got in the way of real men. Derived from the films of John Wayne (hence this Deadworld's title), the characters are beset by mouth-bleeding zombies of the humanoid, buffalo, and wolf kind who have a penchant for chewing off the lips of their victims -- *yuck!* This is, of course, how they spread their love and create yet more of their kin. An elder thing composed of blood and veins originally summoned by the now-extinct Ananazi Indians is the cause of all this. Life for the characters will be complicated by a U.S. Army General who wants to capture and harness the elder thing to his own ends and a war band of Sioux that want to see this creature's end, but will of course, distrust our cast.

Men with no names are required for "Spaghetti With Meat," in which the characters come to the dry and dusty town of Cerbeza, Texas in the final years of the American Civil War. Capturing the feel and tone of the spaghetti western genre to a tee, the town is about to be beset by bad guts and really bad guys in search of the big score. Except the really bad guys are invariable alcohol sodden zombies.

The fourth Deadworld takes the Oscar-winning *Dances with Wolves* and turns on its head to give you "Dances With Zombies." Set shortly after the Battle Of Little Bighorn, the white man is beset by a strange plague that kills and then raises them from the grave. Surprisingly intelligent zombies spread their love via scratch, bite, and infection, but while they can kill the native Indians, they do not rise again. Cast members are braves or women or medicine men from one of the Sioux tribes who find that Custer's 7th Cavalry are still abroad in the Black Hills. This Deadworld has a lot of information to aid both zombie master and player alike in running an all-native campaign.

Backing the four main Deadworlds up are three mini-Deadworlds. The first of these is the easiest to set up and run, as "Bloody Old Muddy" starts out aboard a Mississippi paddle steamer during a high stakes poker tournament. The gamblers, entertainers, and crew aboard the ship are caught up in the middle of one big mess as the vessel navigates the treacherous river in search of other survivors and fresh supplies. Shortly after the game's start, zombies, who naturally hunger for fresh flesh, will beset the steamer, its crew, and passengers. Not only do these creatures threaten the whole of the USA, but they are also potentially a threat to the rest of the world.

The second mini-Deadworld has the players taking the roles of buffalo soldiers -- African American cavalrymen used to patrol and string up fresh telegraph lines. Normally used to track down rogue bands of Native Americans, in "Here Comes the Cavalry" the tables are turned as zombie Indians hunt the soldiers. The last Deadworld is "North to Alaska"

which takes place at the time of the Yukon gold rush at the end of the 19th century. Just as the cast members get into Canada, a meteor strike turns everyone else into frigid zombies bent on having the flesh of survivor served hot and fresh. This is another race for survival through the wilderness with the zombies on their tail. Cast members include prospectors, and those that would support them or police them in the form of officers of the Royal Canadian Mounted Police. No archetype is given for this Deadworld, which is a pity, though understandable for the Mountie.

[END SPOILER ALERT]

Fans of the Wild West/Horror combo will be pleased with the inclusion of the set of conversion notes between **Deadlands** and the UniSystem, which opens up the former to the pure zombie fun of **All Flesh Must Be Eaten** and the latter system to the horror and steampunk elements of the Weird West. Further, given that Deadlands now comes in two alternate flavors -- **GURPS** and the **d20 System**, the conversion notes in **Fistful o' Zombies** could represent the first step for converting the material found in **All Flesh Must Be Eaten** and its supplements across to these rules. That said, converting this supplement and the others to either of those systems is a far from difficult task, given time, effort, a glue gun, and some duct tape.

Everyone has more than a passing familiarity with the Western genre, though Singing Cowboys is admittedly unusual. This makes **Fistful o' Zombies** one of the most accessible and easy to play supplements for **All Flesh Must Be Eaten**. There are plenty of diverse Deadworlds here -- enough to satisfy the tastes of most players. There is also surprisingly enough background information to make the running of these Deadworlds a far-from-onerous task, and the crossover possibilities are extensive. This includes not just the aforementioned flavors of the **Deadlands RPG**, but also with Eden's [Buffy the Vampire Slayer Roleplaying Game](#). Indeed, **Fistful o' Zombies** would be near-perfect as a companion to the "Stakes and Six Shooters" Buffyverse described in the [Slayer's Handbook](#). Although it has been a long way west for **Fistful o' Zombies**, this third supplement for **All Flesh Must Be Eaten** is useful for almost any game of pulp horror -- if just for the ideas -- but is also the best all-rootin', all-tootin', all-shooting, all-singing, and all-fringed release for the game to date.

--Matthew Pook

Pyramid Review

Play On Words

Published by [Winning Moves Games](#)

102 full-color letter cards, 10 full-color Challenge cards, plastic tray, instruction sheet; \$11.00

With the rank profusion of letter and language-based games these days -- *LetterHead*, *My Word!*, *AlphaBlitz* -- it's a wonder there's enough intellectual ground left to keep more coming out. Winning Moves Games nevertheless throws its hat into the literary gaming ring with *Play on Words*, another card-based word-building game.

The object of the game is to score the greatest point total by the end of the game. Every round, players are given a hand of cards with which to build words. Each of the rounds is run according to a Challenge card that instructs players how to build words that round. The letter cards come in red, blue, and green, but some Challenge cards may require you to build "pure" words -- i.e., all of one color, though "wild" cards can be made to count for whatever the player wishes.

Players first have the opportunity to "meet the challenge," that is, to build words according to the instructions on that round's Challenge card. Everyone takes turns building their own words. Once you've built the requisite words, you aren't allowed to play any more words, which can be a problem because you only score points when you empty your hand of cards. Without the ability to pump cards into additional words, you have to alter the words already on the table.

This is an opportunity for you to build up your score for the end of the round. Many of the letter cards have a point value printed on them (some of the more common letters score nothing). Using your remaining cards, you may add to or alter the words. BANG can become GANG, which can later be changed to GONG, or extended to GANGSTER, and the new cards may add points to your score. You can also play cards onto someone else's words, which means you can cover up their high-scoring letters with something worthless from your own hand.

You draw a card at the start of each turn and discard one at the end, so if you're stuck with a Q and a Z or the wrong color cards you can still manipulate your hand into something more playable. The first player to empty his hand tallies his score. After 10 rounds, the totals are added together to get a final score.

Challenge cards get tougher to satisfy as the game progresses. At first all you need is two three-letter pure words, but the number of words that must be completed, and the length of those words, increases. This is perhaps the game's biggest drawback. Even the game's most literate participants will find it difficult to get all the words they need quickly . . . not a problem in and of itself, since it makes the game challenging. But game play is slow and can drag while you're looking for that next play (a chess timer might help). Beginners will be scratching their heads looking for a decent word, and more experienced wordsmiths will be convinced there has to be a devastatingly good play buried in their hand (and they're probably right). Play can be sped up by eliminating some of the rounds -- the rules suggest agreeing on a number of rounds and then pulling them at random out of the Challenge deck, but you could also just agree to use the first five cards.

The rules could have used a little more clarity. They jump right into the thick of the instructions, ignoring that players may not know all the terms yet and could use a gentler primer. While some things seem clear or obvious, it doesn't take an abusive rules lawyer to make an argument for another interpretation, especially concerning who can do or play what in a round and who is allowed to score at the end of the round.

The cards are in full color, they're good stock, and they shuffle well. The Challenge cards could have been made with

the number of the round of play smaller and the font for the instructions larger, just to make things a little more convenient, but neither piece of information is hard to recall. The plastic tray isn't tough, but it's not going to see enough neglect to make the difference either way. The box, alas, is quite fragile and may pull apart just from trying to extract the tray. The rule book has a pair of score sheets players can photocopy for keeping track, but a pad and pencil work just fine.

Play On Words is a lot of fun, and affords players the chance to really put their brains to the test. While the broad allowances for action in the rules slow things down, they also let players strut their stuff. Though not a fast game, Play on Words is clean, stimulating, inexpensive, and fun for any age group.

Running The Adventure, Part V

Climactic Control

Okay; it's the Big Moment. They've snuck past the Unholy Avenging Imperial Guard, searched the Lost Tomb of Offdabeetenpaff, and entered the final chamber of the sinister demonic overlord Carl. This is it: The big payoff. The mondo importante scene.

So how do you make sure you don't mess it up?

Make Sure the Players Know It's The Big Scene. I tend to run pretty darn cinematic games; in the real world it's difficult to know when you're at a pivotal moment, but in most other media it's pretty easy . . . the soundtrack swells, it's close to the end of the hour, or you realize your right hand is only holding a handful of pages of the paperback. Since I generally try to emulate other kinds of cinematic media in my gaming, I try to make sure my players know when they have entered the climactic scene.

Some games make this easy; perhaps none was more overt than *Torg*, where the GM would specifically announce that everyone was now in a Dramatic Scene, and thus the stakes are higher and the bad guys have the edge. But even in other games, it's generally pretty easy for me to rev the players up. The site of the final confrontation is more vividly described than other places, the object of their adventuring is witnessed before them, villains chortle with glee, and so on. As a bonus, it lets the players know they can pull out the big guns they've been saving all game long -- those one-shot powerful items, the final devastating spell, and so on. (Of course, I'm also an evil GM who isn't above a double-bluff, revving up the players for a climactic scene only to have the *real* threat reveal himself afterwards, when the heroes are supposedly weaker . . .)

As a caveat counterpoint to this example, I didn't always telegraph the big scene, since I didn't think it was terribly realistic. So one time the good guys ended up saving the day and accomplishing their goals, without really realizing it until they were mopping up afterwards. "Say, you know that random guy we just whacked? Turns out he was the mastermind. Small world . . ." The players found this to be unsatisfying; one even said, "You know, if I knew the adventure was near the end, I would have enjoyed that last scene more." So that's when I officially adopted my telegraphic policy.

Give Everyone A Chance To Shine. Although it's not a masterpiece of Western cinema, the 1999 movie *Mystery Men* stands as a near-quintessential gamer movie in my mind. In this movie about third-string superheroes, the climactic scene stands out in my mind, because *every* major character is given a moment in the spotlight; each ability the heroes possess was important to the culmination of plot.

Now, obviously a scriptwriter and director have more control over the action of a movie than a GM does over the outcome of an adventure. But if possible, I try to design my climax around the concept that each player would like to be a part of the final scene; if I've done my job right, each player walks away from a harrowing climactic scene thinking, "They couldn't have done it without me."

Now, this doesn't necessarily mean that I fabricate increasingly outlandish impossibilities specifically tailored to each character. ("Oh, no! Yet *another* circumstance where a tiny object needs to be hit from afar with something sharp! Quickly, Crimson Crossbow . . . save us!") Rather, I try to make sure that most climactic scenes have multiple things that need to be done; thus I might have a final scene where there is a Big Bad Guy who needs to be defeated, a bomb that needs to be disarmed, and an important innocent bystander who is in danger of dying in the crossfire of this final battle. That gives three different players (or groups of players) an immediate goal . . . one they can chip in with when recounting the story later.

Give Everyone A Chance To Be Dramatic. This goes with the two points above; I personally make sure that any player who wants to be dramatic in the final scene gets a chance to do so. If a player wants to give a dramatic

monologue to the villain, or goad him into revealing information, or take a moment to share a heartfelt expression under fire with another PC, then great! Time is warped and malleable during the climactic scene; bad guys will stop fighting to let the heroes talk, and those tender moments seem to take place between clicks of the ticking bomb.

Of course, if a player has no interest in hamming it up, I don't force them. But most of my players, once they realize I won't punish them for having fun, are all too eager to relish the moment.

Not All Climaxes Are About Combat. This one is easy to forget, especially if a gaming group has grown up with an extreme dosage of Vitamin Death, but it's entirely possible to have a big climactic scene where there's no fighting. In my games, I've had the climax revolve around convincing someone to make the right choice, making a decision to give up something of value, or crossing the finish line in time. Yes, it's often fun and exciting to have combat enter into the final scene, but it can be just as memorable to have the heroes attempting to synchronize their placement of the Four Orbs of Redrum of the pedestals before the ritual is complete *or* one of the shadow fiends snatches it away.

Cheat. Now, this one may get me in trouble, but I personally have no problem cheating as a GM. (And what about cheating as a player? Well, that's a different story . . .) After all, I've seen too many games whose climactic moments looked something like:

"After wracking our brains, we figured out the perfect plan to thwart the enemy. Two of us rigged up the Psychic Transmogrifiers to our own bodies, drawing off our life force which our martial artist channeled into his katana, waiting for the perfect moment to strike with an unstoppable blow as our nemesis was distracted by our fourth member's elaborate ruse."

"So did it work?"

"Huh? Oh, no . . . Leslie got a Crit Failure. We eventually ended up just running over the dude with a truck 'til he stopped moving."

Now, I'm a big fan of games that enable players to "cheat" within the system, giving them bonuses, character points, or the like to influence rolls they *really* want to. But regardless, if the heroes come up with a great plan, combat tactic, or dramatic tack I didn't anticipate but find brilliant and entertaining, then it stands a *very* real chance of success, regardless of what the dice say.

Make Sure The Heroes Know Their Actions Have Consequences. This one is difficult to work in, but if possible I like to make sure to tie in the rest of the adventure to the climax. If I *don't* do this, I often feel like the climax exists as an isolated pocket realm, waiting for the heroes to stumble across it. ("What was the evil mastermind *doing* in this room the whole time, anyway? Waiting for the next episode of *Joe Millionaire*?")

To this end, I try to emphasize any great defeats or victories of earlier encounters here. It doesn't take much:

The heroes recognize a few of the bruised henchmen surrounding the mastermind as the stragglers who got away from a few scenes before.

An NPC who was rescued earlier is the one who calls the police to serve as helpful mop-up duty.

An evil magical being the heroes ignored earlier whisks away the antagonist before the *coup de grace* can be administered.

The climax should feel organic to the adventure, and the previous scenes shouldn't resemble pointless prologue serving as filler for the climax. Fortunately, it doesn't take much to tie the final bits together with a tidy bow.

In a lot of ways, running a climactic scene is pretty easy; just being there is often enough to generate a euphoric feeling in the group, and emerging victorious can keep the players on that high for quite a while. But just because I know it'll probably be fun doesn't mean I don't do everything in my power to make it *more* fun . . . and keep the players coming back for more.

Background

Jasmine Mojarro is a very successful self-made businesswoman in the U.S.A. of the Transhuman Space setting. Although very, very far from the top of the list when it comes to wealth, she works hard at projecting her public image, and she has become a minor favorite of the news networks for her flamboyant gestures and visually dramatic hobbies, such as backing or even participating in vehicle races, sponsoring cybershell contests, and so on. Her private life, however, she keeps slightly more quiet. She is currently unattached, and gives the impression of being a very self-reliant person.

Mojarro genuinely likes to think of herself as an innovator, a radical thinker in business terms who is changing the world -- for the better. She often talks in interviews about the social responsibilities of businesses, and she makes large donations to good causes. However, there is an element of self-delusion there.

Mojarro has actually become rich through careful attention to the practical details of running her companies, combined with a certain talent for inspiring and motivating some of her staff. Any innovations involved were usually bought in -- for a fair price, but no more. It is, perhaps, indicative that, despite having made vague statements in favor of pansapient rights, Mojarro owns a SAI -- albeit one which has been carefully programmed to be completely content with its status as property.

Encountered

Mojarro is, obviously, not a combat-oriented character. Nonetheless, adventurous PCs may come into contact with her in several ways.

First, they might be hired to guard or assist her. She is fully capable of getting herself into tricky or dangerous situations while looking for profitable opportunities, but she is no fool; she knows her own limits, and is quite willing to hire skilled help.

Second, and perhaps developing from the first, Mojarro might become a group's patron or long-term employer. In a world where powerful corporations are making most of the big money, someone like Mojarro needs to look for all sorts of opportunities, wherever they arise. She might employ PCs, not only as bodyguards, drivers, or personal assistants, but also as talent scouts or brainstormers, or to run (probably legal) interference on her competitors.

In either of these cases, PCs should find Jasmine Mojarro to be a good boss in many ways -- willing to give them a free hand (within reason) and to provide very reasonable expenses, and quite inspiring. However, she can also be slightly annoying, especially with extended acquaintance. Her concern to portray herself as some kind of high-minded leader of society often clashes with her (perfectly legal and actually rather conventional) pursuit of profits, or with her taste for personal publicity, and her staff often end up having to smooth the ruffled feelings of partners and

shareholders after she has said something which sounds like she is failing to consider the best interests of her business. Conversely, social activists and charity workers often start by taking her at her word, and end up disenchanted when she compromises on some ideal or her rather mercurial interests move on to some other cause. They may well blame her staff for this, thinking that Mojarro has been diverted from doing good by some less high-minded functionary.

Alternatively, Mojarro may be an adversary for some groups. This is especially likely if they are amoral or even criminal by inclination, or perhaps aligned with, say, a nanosocialist group who might be after intellectual property in which Mojarro has an interest. However, it is also possible that legitimate rival businesses or government agencies could come into conflict with Mojarro; she is not especially criminal by nature, but nor is she automatically honest, except out of habit, and her swashbuckling self-image and sense of her own superiority might well lead her to bend quite a few rules. Equally, if some rival was, or appeared to be, acting in an illegal or immoral fashion, Mojarro would take enormous pleasure in exposing this and making trouble for them -- and she might well run ahead of the evidence or facts in her enthusiasm.

For that matter, a party could end up in perfectly legal but very direct competition with Mojarro, especially if they were working on some sporting competition, and she chose to sponsor or support a rival. However friendly the contest, they would soon notice that Mojarro was grabbing all the publicity and most of the public sympathy.

Of course, Mojarro is no sort of physical adversary -- although she can afford effective bodyguards if she needs them, and Rufus can provide her with some protection against minor threats. What she can be is ruthless in court or in PR battles, manipulative, and relentless so long as her interest is held -- which, if her personal ideals, profits, or publicity are involved, and she thinks her opponents are in the wrong, can be for quite a long time. She is particularly adept at taking her fights to whichever venue favors her most; she likes to think of herself as an "internationalist," which means in practise that she will use whichever legal and court system happens to agree with her best. Although she is no lawyer herself, she employs competent legal teams, who share her mixture of surface idealism and essential ruthlessness. She also tends to remember any defeats very clearly; although she is unlikely to pursue active revenge, she is equally unlikely to forgive.

Which, of course, leaves the real possibility of her starting as an employer and ending up as a recurring antagonist. However, competent PCs are more likely to regard her as a nuisance or a difficult potential ally than a threat.

"Rufus"

200 points

ST: 10 [0]; **DX:** 12 [0]; **IQ:** 11 [20]; **HT:** 12/8 [0].

Speed: 6.00; **Move:** 13 (running).

Dodge: 7; **Parry:** 9.

Advantages: Cyberdog [104]; SAI-7 [65].

Quirks: Mildly sarcastic; Perfectly emotionally adjusted to being property; Won't act like a real dog if it can help it (but often says "Woof Woof" sarcastically). [-3]

Skills: Accounting-13 [½]; Administration-9 [½]; Area Knowledge (U.S.A.)-10 [½]; Brawling-13 [2]; Computer Operation/TL9-14 [0]; Detect Lies-10 [2]; Intimidation-10 [1]; Jumping-12 [1]; Law-10 [2]; Lip Reading- 10 [1]; Running-9 [½]; Savoir-Faire-10 [½]; Stealth-11 [1]; Tactics-8 [½]; Writing-9 [½].

Languages: English (native)-11 [0]; Spanish-9 [½].

Notes: Rufus, Mojarro's personal assistant, is an SAI installed in a cyberdog (see p.FW121) in the quite convincing guise of a red setter. (Its VR avatar is a high- quality scan of its physical body.) This software is based on an established line of personal assistant AIs (and with legacy code augmenting its skill set); installing it in this chassis was an act of whimsy on Mojarro's part.

Rufus has been active for some years now, and Mojarro and her hired programmers have shown a striking talent for training and developing its talents; its original programmers would probably be quite interested to analyse its current state. Rufus is, primarily, an administrative assistant, in a cybershell which sometimes leads people to overlook or underestimate it. However, it has also been trained to act as a low-level bodyguard in minor emergencies, and to use its mechanical body to good effect.

"Ann"

50 points

ST: -- [-]; **DX:** 10 [0]; **IQ:** 9 [0]; **HT:** 12/1 [0].

Speed: 5.50.

Advantages: LAI-6 [40].

Disadvantages: Wearable Virtual Interface [-1].

Skills: Accounting-12 [1]; Administration-8 [1]; Computer Operation/TL9-12 [0]; Diagnosis/TL9 (specialized in Jasmine Mojarro)-7/13 [2]; Electronics Operation (Communications)/TL9-10 [4]; Writing-9 [2].

Languages: English (native)-9 [0]; Spanish-8 [1].

Notes: "Ann" is Jasmine Mojarro's personal LAI system, installed on a DVI which she usually wears. Its function is to produce standard accounting records, generate any casual written notes Mojarro needs, handle her Web-based communications, monitor her health, and run any software packages she requires. The avatar it uses when dealing with business or interacting with anyone else across the Web appears as a stern-looking blonde woman in a scarlet Victorian-style dress. (It also has a small library of other, male avatars for use in conjunction with private recreational software.)

Notes: "Homefire" is the LAI which runs Jasmine Mojarro's home -- a private house in extensive grounds in upstate New York. It monitors the state of the place's physical security systems, general maintenance, and larder, and manages a large database of personal and business information which Mojarro has accumulated and periodically updates via the Web. It can employ an array of small devices around the place as its "hands," using its Electronics Operation (Robotics) skill.

Mojarro is not home very often, but she is in regular contact with Homefire, and has come to appreciate its suggestions when she has to give dinner parties or otherwise entertain guests. (However, she will employ a specialised chef for such events; Homefire is a minimally competent cook.) Its VR avatar is a standard image supplied by the original programmers -- a cartoon snake with a burning torch on the end of its tail.

Dork Tower!

Dork Tower!

Kongo

by Matt Riggsby

Africa remains the dark continent for many westerners. As with Europe's "Dark Ages," the darkness is not the result of a lack of anything to know so much as the product of our lack of knowledge about it. Cities and entire civilizations flourished away from the Mediterranean coast: Axum, Timbuctu, Ghana, Great Zimbabwe, and more, but most of us know little more than names. This article presents one of them, the kingdom of Kongo.

Geography and Land Use

The kingdom of Kongo lies on the west coast of Africa, not far south of the equator. At its largest extent, it extended about 150 miles south from the Kongo river and about 300 miles inland, covering territory in modern Angola and the Republic of Congo. Beyond the coastal plains, the land is characterized by steep-sided, flat-topped hills (a little like mesas in the American Southwest), becoming more common the farther inland one goes; the eastern part of the country is particularly rugged. Many of these hills are large enough to support fortified villages, although difficulty in transportation keeps most villages on the plains. Grassy vegetation predominates, but there are sizable patches of forest, and the savannas are often filled with sharp-edged, man-tall grass. The climate allows two ample crops a year from the fertile soil.

The total population of Kongo at any given time was probably about a half-million. The vast majority lived in small villages of no more than two or three hundred. There are only two settlements of any size: Mbanza Nsoyo, with about 15,000; and the capital, Mbanza Kongo, with about 60,000.

Settlements are typically surrounded by fields cleared by burning. Fields are rotated every few years as the ones in use begin to lose fertility; old fields go fallow, new fields are burned clear, and the buildings of the settlement may shift a bit. In most places, about half of the fields will be given over to various grains. The other half will be used for tree-based crops, most notably palm trees. With the low population density, settlements are widely separated. The spaces between are notorious for prowling animals, and travelers will often erect temporary stockades to protect themselves from lions and leopards.

History

The history of the kingdom of Kongo begins in the 12th century AD. According to legend, a warlord named Wene conquered a region near the center of what would become the kingdom. He established a capital, Mbanza Kongo (meaning, prosaically enough, Kongo Town), and he and his descendents set about expanding their territory. The core territories were under fairly direct control, and Kongo had at least nominal authority over many surrounding provinces. In fairly short order, Kongo developed an aristocracy composed of several extended families from whom rulers and regional noblemen were usually drawn. Rulers were often from the Kinlaza clan, most of whom lived in the center of the country, but they had competition from other clans, most notably the Kimpanzu, the Kinkanga a Mvika and, later, the Agua Rosada.

Around 1480, the expanding kingdom attracted the notice of the Portuguese, who were at this point exploring the globe. The Portuguese established a colony in Angola, but it didn't match the size and wealth of Kongo. The country was visited by missionaries, who came to convert the pagan populace to Catholicism; and merchants, who came to buy slaves, which Kongo had in abundance as a result of their conquests. Even when the country reached its maximum extent near the end of the 16th century, Kongo remained a major exporter of slaves, now imported by slavers raiding territories farther east. Mbanza Nsoyo, a small town at the mouth of the Congo river, became an important port for the kingdom and so grew to become the second-largest settlement in the kingdom.

Initially, things went quite well. The Kongolese were happy to sell slaves to the Portuguese in return for new food crops and exotic European goods. The missionaries also had an enormous impact on the country. In 1491, the king Nzinga a Nkuwu was baptized as a Christian, adopting the name Joao. He lost interest in the new religion, but under his son, Afonso Mvemba a Nzinga, Kongo officially became a Christian country. With friendly relations firmly established with Portugal and the Vatican, the kings of Kongo sent diplomats to Portugal, Spain, and Rome; started corresponding with other European courts; and even tried to establish contact with the Christian kingdom in Ethiopia. Many upper-class families adopted Portuguese names, and the capital was renamed Sao Salvador.

However, relations with Portugal didn't stay warm for long. They were Kongo's best trading partner, but the kings of Kongo still had to keep them at arm's length. The Portuguese were constantly demanding more rights (they were particularly keen to mine Kongo's copper deposits) and tried, with varying degrees of subtlety, to influence all levels of Kongo society, campaigning for favorite candidates for everything from small regional posts to the throne itself. There were also frequent diplomatic disputes and semi-regular raids from Portuguese dependents in Angola. Where possible, the Kongolese also tried to trade with Portugal's main rival in the region, the Dutch. The Dutch didn't have nearly as much of a presence, but they interfered less in Kongolese affairs and would happily sell arms to the Africans.

Typical of Kongo-Portuguese relations is the establishment of an episcopal see in southwestern Africa. In 1596, the Vatican decided that there was sufficient Catholic presence in Africa that a bishop should be established at Mbanza Kongo. The king had been hoping that he'd be able to appoint a native bishop, giving him firm control over the church in his kingdom. However, because Christianity had been established in Kongo by Portuguese missionaries, the king of Portugal was able to have his own candidates (all Portuguese, of course) selected, giving him a stronger foothold in Kongolese politics and more direct authority over the country's ecclesiastical hierarchy. Ultimately, though, the Portuguese victory came to nothing. Angry at the Portuguese, the king arranged for Italian missionaries to come to Kongo, largely displacing Portuguese priests, and by 1624, relations between the bishop and the king had become so poor that the see moved to Angola.

When the Dutch temporarily seized Luanda, the capital of Portuguese Angola, in 1641, the Kongolese welcomed their presence. However, within a few years the Portuguese returned in force, determined to punish those who had favored the Dutch. The situation with Portugal came to a head in the middle of the 17th century. Kongolese exports were at a high point, pulling trade away from Angola, and the Portuguese were spoiling for a fight in hopes of forcing concessions out of Kongo. Finally, in 1665, a succession dispute in one of the more independent regions of southern Kongo turned into a pitched battle between Kongolese and Portuguese troops. The Portuguese, slightly outnumbered but better armed and trained, decisively beat the Kongolese army at Mbvila. The king and his most likely successors were killed, kicking off a brutal period of civil war.

Factions near the capital fought short but intense battles, finally putting a member of the Kinlaza clan on the throne. No sooner had he established his power when the rival Kimpanzu clan, supported by the da Silva clan, hereditary rulers of Nsoyo, sacked Mbanza Kongo and established their own king. The throne changed hands twice more over the next few years. Again, the Kinlazes put one of their candidates on the throne to be replaced by a Kimpanzu at the head of a da Silva army from Nsoyo.

In 1670, Rafael, the most recently deposed Kinzla, approached the Portuguese for aid against Nsoyo. In return, he would make treaty concessions the Portuguese had been after for years. Another large Portuguese army left Angola, this time to meet a force from Mbanza Nsoyo. As with the previous major battle, the Portuguese won decisively. Rafael took a small detachment towards Mbanza Kongo to assume the throne, while the main body headed north at a casual pace, looting as they went. The pace, however, proved too casual. A Dutch ship loaded with arms arrived at Mbanza Nsoyo shortly before the Portuguese. The remaining Kongolese rearmed, regrouped, and surprised the invaders, wiping out the Portuguese forces (the survivors were offered for sale as slaves to the Dutch). The Portuguese position in southern Africa was undermined, and they wouldn't return to Kongo in force for a century.

The Kinzla had regained the throne and the Portuguese had been driven out, but it became clear that the status quo had taken a fatal hit. Civil war continued. Kongo had 16 kings between 1665 and 1709, as well as periods where there were two or more claimants to the throne and one where no one claimed to be king. No hopeful to the throne could muster enough support to defend the capital from revolt, even when they used foreign aid such as the Yaka tribes of the north and east and the Imbangala of the south, rumored to be cannibals. Moreover, successive attacks on Mbanza Kongo wore away the permanent population to nothing. Without the relative luxury of the capital to tempt noblemen, rulers had no way to command their loyalty. Kongo collapsed into its component provinces, ruled by the families of the noblemen who had been in place when the royal throne became irrelevant.

By the second decade of the 18th century, a sort of central authority had been restored. Members of the Agua Rosada clan installed themselves at the abandoned and reoccupied site of Mbanza Kongo and persuaded the provincial rulers to accept them as kings. However, it was on very different terms than before. The provinces retained most of their

independence, paying the king nominal homage and nominal taxes. The remaining kings reigned lightly over a reduced kingdom until the Portuguese returned in the 19th century and annexed Kongo as a colony. By that time, literacy and the remnants of Catholicism had vanished along with all but a vestige of royal power, and the Victorian-era colonists could easily forget that their new possession had once been a mighty kingdom.

Government

Kongo is ruled by a king, supported by a bureaucracy in the capital and a body of regional noblemen. Theoretically, the king is elected for life by a panel of noblemen in the capital, led by the old king's *mani vunda* (prime minister), although violent succession disputes were common when a king died. He has to be a male descendant of Wene, the ancient conqueror, but apparently a number of men in each noble clan could claim that distinction.

Once elected, the king's power to tax and raise or lower noblemen is considerable, but, as with other governments, limited in practice by popular support and a cooperative bureaucracy. He could elevate or dismiss individuals, but completely purging the bureaucracy and regional governorships, probably about three hundred positions altogether, would be too complex and difficult to contemplate. Men usually held offices, but women were sometimes appointed as well.

Favored noblemen would serve in the capital itself. Less favored ones would be appointed to positions in the countryside. There were lesser posts which administered small districts of perhaps a dozen villages and about thirty more important posts governing large provinces. The country's bureaucrats and most noblemen served at the pleasure of the king, although the governors of a number of outlying provinces were elected locally. A post would typically bring with it an income provided by taxes to the crown and probably a number of slaves.

Relations between common villagers and their rulers appear not to have been terribly warm. Noblemen dreaded being appointed to posts in the provinces, away from the relative luxury of the capital. The way back was to demonstrate loyalty and to zealously collect taxes. The "exiled" noblemen, then, might extract whatever taxes they felt they were entitled to, sometimes taking them by force. Resistance was met with extreme brutality, to the point of burning down entire villages. Peasant revolts were not unknown, but they were also not successful. More often, villagers would keep their production to a bare minimum to limit the amount rampaging noblemen could take or even hide their villages.

Society

Kongolese are very concerned with individuals meeting their obligations to their society and unforgiving to those who try to live outside of accepted social roles. Men and women are expected to provide for their families in specific ways, children are expected to show great respect for their older relatives, and so on. In general, they are very social and supportive of their neighbors and relatives, but it's very easy to give offense by stepping outside of traditional social bounds.

The basic unit of Kongolese society is the household, consisting of a husband and wife and their dependents, such as children and elderly relatives. Most households include five or six people, but wealthy households can include multiple wives and servants; multiple marriages are allowed, but because of the cost are generally limited to the rich. There is a rigid division of household labor: women grow the main food crops, prepare most food, and care for preadolescent children, while men tend tree crops, build houses, serve as craftsmen, and perform most tasks beyond the household (despite their interdependence, the division of sexes goes even farther; men and women don't eat together, either). A man without a woman, therefore, will have a hard time getting something to eat on a day to day basis, while a woman without a man won't have a place to live. One peculiar convention is that if a man dies, his brothers or other close male relatives may "inherit" his wives. In other words, the widows will marry their former husband's male relatives so that they will still have a place in society.

Kongolese society can be divided into three broad classes: slaves, villagers, and nobility. Villagers live in villages, loosely administered by a locally selected chief, or *nkuluntu*. The nkuluntu and his household do little productive work. Instead, they are supported by tribute from their villages, although their standard of living is about the same as that of

their neighbors. European missionaries regarded the villagers as being lazy, since they appeared to work hard enough to support themselves but no harder. However, it might be better to think of them as astute judges of their economic position. Given the low incidence of trade in most things they produced and a willingness on the part of the nobility to tax away any surplus, there was little reason for them to make more than enough to feed, clothe, and house themselves and pay existing taxes.

Nobility live in towns and are partly supported by slaves living around them. Slaves mostly live in their own households, providing labor to their owners but also growing crops to support themselves. Slaves can be bought and sold, but in terms of their actual obligations, they resemble European serfs more closely than slaves in the New World. The main economic advantage noblemen have is being able to direct some of the labor of the slaves. For their part, the main difference between slaves and free villagers is that villagers are taxed but grow what they wanted. Slaves, on the other hand, grow what they are told to. Noblemen, therefore, can specialize in specific crops for trade rather than just growing subsistence crops.

Lower-class families are matrilineal. That is, they trace ancestry and familial relationships through the female line. The nobility, though, trace both male and female ancestors. One other peculiar aspect of the nobility is that many speak a different dialect of the Kikongo language than slaves and villagers. The nobility act as though they are a separate ethnic group descended from Wene and his army. However, after generations of intermarriage with the natives, that is mostly a social fiction. The separate dialect might be thought of something like a public-school accent among upper-class Englishmen.

Industry and Economy

Most Kongolese are farmers with a scattering of craftsmen. Most internal trade in Kongo is the result of regional specialization. For example, salt is produced along the coast, while iron comes from the east. There is also cross-regional trade in special crops and types of cloth. Markets where villagers could buy goods from other districts were regularly held in "neutral" territory between the villages themselves. Kongo attracted European merchants with other commodities: ivory, copper, and slaves. The copper and ivory could be acquired locally, but after Kongo's borders stabilized, the slaves had to be imported from farther east.

Kongo has a monetary economy, but doesn't use metal currency. Rather, it uses *nzimbu*, a seashell, as currency. In some areas, *lubongo*, a kind of cloth, is used instead. Portuguese merchants introduced cowrie shells from India into the shell economy.

Although Kongo sees significant trade, the Kongolese themselves aren't merchants. They are largely content to let others come to them and do the heavy lifting of moving goods around. And moving goods is hard work. Sub-Saharan Africa lacks paved roads, extensive navigable river systems, and good beasts of burden. Moving goods is difficult, which has considerable implications for the Kongolese economy. Bringing goods to market becomes expensive quickly. For example, it is unprofitable to transport grain more than about twenty five miles, far less than in Europe. Population centers, therefore, are severely limited in size. Likewise, taxes and produce from the countryside are less efficiently concentrated in centers of power than elsewhere.

Armed Forces and Warfare

Like many countries in contact with Europe at the time, Kongo's army has a mix of traditional and modern troops. The vast majority use swords and spears. The king maintains a standing army of about 5,000, but only about 10% are musketeers. In a pinch, he could temporarily use several thousand slaves as irregular troops. When individual provinces attempt revolt, they can muster armies with a similar composition no more than a tenth that size, often smaller. Only the very largest armies have any kind of artillery, and even they had no more than three or four light cannon.

The problems of long-range transport have an impact on war just as they do on commerce. Because of difficulties with long-distance supply lines, it is difficult to undertake long campaigns. Therefore, wars are usually short but intense

and defensive postures are very effective. If a regional nobleman wants to rebel, he only has to hold out long enough that the cost of attacking him becomes prohibitively high. This is particularly effective in the mountainous east. On the other hand, anyone doing that cut himself off from the luxurious capital, so a successful revolt is more likely to end in concessions from the crown than actual independence.

Religion

The kings of Kongo were converted to Christianity by the end of the fifteenth century, and they took most of the upper classes with them. Both Protestant Dutch and central African merchants converted to Catholicism, at least superficially, to improve trade. Most Kongo, though, came to Christianity at a comfortable, ambling pace, fitting Christian practice into the framework of their native religion. However, as long as the Kongolese were willing to call themselves Christians and show up for mass, the missionaries will be willing to accept them as Christians and dismiss most of their ongoing native rituals as foolish superstition rather than abominable heresy.

It wasn't hard to map aspects of Catholicism onto the native religion. At the top of the Kongo spiritual hierarchy is Nzambi Mpongo, a powerful but distant supreme being. When the Lord's prayer was translated into Kikongo, God became Nzambi Mpongo. Below him are the nkisi, powerful spirits controlling forces of nature. Farther down are kisimbi (distant ancestors) and nkuyu (recent ancestors). The spirits are separated from the living by a sort of ocean or river. However, the living can still call on the powerful spirits of the dead for aid, not unlike praying to a saint to intercede for you.

Kongo religion recognizes two classes of religious-magical practitioners: *nganga*, who work for individuals and for pay using charms and tools, and *kitomi*, who work without fees or paraphernalia for the good of regions, conducting fertility rites and working with nature spirits on behalf of the people.

Christian missionaries, with their crosses and bibles (and, usually, fees for baptisms and other ceremonies), are accepted as just another group of *nganga*. The natives and the Europeans also have remarkably similar ideas about witchcraft. In Kongo, the witches that the missionaries warn against sound like *nganga* gone bad, a concept with which the Kongolese were very familiar. Europeans and Africans agree that such people must be hunted down and stopped. A *kitomi*, by the way, didn't marry but did live with a female companion who performed all the functions of a wife. It was widely considered bad luck for a *kitomi* to die a natural death, so an elderly *kitomi* might be murdered.

In practice, the religion of the Kongo closely resembles voodoo, santaria, and other Afro-Caribbean religions. In fact, because a great many slaves taken to the New World were from central Africa, Kongo religion is one of their important ancestors. However, because it could be safely practiced in the open, it has more public rituals and visible material adjuncts. Many rituals involve communal dancing and singing, and *nganga* produce durable charms, such as sizable wooden figurines.

Buildings and Settlements

A home in Kongo isn't a single building. Rather, a household maintains a compound composed of several small buildings: sleeping quarters, storage sheds, cooking space, and any other buildings as necessary. The buildings are wood plank construction with thatched roofs. The compounds themselves might be enclosed in a wood or transplanted thornbush fence. Among free peasants, compounds are collected into villages, or *lubata*. Most villages are protected by a wooden stockade or thick hedge, more substantial than the largely symbolic fences around the compounds, to keep animals out.

Noble households are found in *mbanza* (towns), which are little more than closely set concentrations of villages, no more than two or three thousand souls altogether. Noble households are generally larger than villager or slave households, but with the same social structure and physical arrangement. They are surrounded by slave households making up most of the village-like settlements which make up the town. Slave households are themselves hardly distinguishable from free villager households.

Because Kongo is so close to equator, there is no need or desire to build heavy buildings to keep the weather out. In fact, their construction was so light that unhappy villagers can dismantle their entire village and move it away from the roads so that rampaging noblemen can't find them. In particularly troubled times, villagers move their villages to the defensible tops of the steep-sided hills which dot the country. During this period, there are only a handful of stone buildings in the country, mostly churches, and mostly in Mbanza Kongo.

Food

West African cuisine centers around thick, starchy porridge made from cassava along the coast, corn or millet farther inland (cassava and corn were introduced from the New World by the Portuguese, but they were taken up quickly). The porridge is accompanied by a variety of relishes and side dishes made from fruits, vegetables, and nuts; ground nuts are an important source of protein. Meals are accompanied by palm wine (fermented palm sap) or, where palms grow poorly, thick, cloudy beer made from local grains. Meat is rarely eaten. When it is, it's usually chicken, although a variety of herd animals (antelope, elephant, and so on) are available to those brave enough to hunt, and there's fish along the coast and rivers.

Clothing

In the heart of the tropics, Kongo is not a land which invites heavy clothing. The traditional garment worn by both men and women is a simple short skirt made of bark cloth. Women occasionally wear an upper garment as well. However, both men and women might wear ornaments of copper, shell, ivory, feathers, and other such materials. The extremely wealthy may wear the occasional item of European clothing. The king wears a sort of beret as a crown; one of Kongo's peculiar laws is that a special tax is levied if his hat falls off.

Names

The adoption of Portuguese names by upper-class Kongolese can take some getting used to. Modern players may be perplexed by Africans with names like Pedro Constantinho, but they will probably come as a relief for historical European characters who won't have to wrap their mouths around names like Mpangu a Nkizi. But they often continued to use their native names as well, and most villagers didn't bother with such nonsense to begin with. Most GMs (and players, for that matter) will be far less familiar with the sounds of southern African languages than, say, Italian or German, so coming up with names might be difficult. Here are a few Kikongo names to get started with: Badimanyi, Bemba, Boboliko, Dintoka, Faida, Kabila, Kibassa, Kinkanga, Kishwe, Lokambo, Lumumba, Maliba, Mananga, Mbombo, Mfolo, Mitifu, Mobutu, Mulumba, Mvemba, Mvika, Ngbendu, Nkanga, Nzuzi, Olenghankoy, Omokoko, Saolona, Tshisekedi, Vunduawe, Zabango.

Adventures in Kongo

For players used to campaigns set in Europe and Asia (or, at least, pseudo-European and pseudo-Asian game worlds), Kongo may appear poor and backwards, much as it did to European visitors. However, the GM may take advantage of the intensely personal nature of life in Kongo. With its diffuse population, relatively low emphasis on accumulation of goods, and loose power structure, individuals may be more important than in other settings. Instead of buying tractable beasts of burden, travelers must negotiate with human bearers. Instead of acquiring vast stores of valuables, rulers (and prospective rulers) can, at best, acquire authority over sometimes uncooperative slaves and villagers. Prospective conquerors must personally lead their rather small armies and engage in the fighting.

Kongo can be used as an exotic port of call for merchant, pirate, or diplomat characters and their retinues. Most foreigners in Kongo will be Portuguese or Dutch, but other Europeans might make their way down Africa's west coast (Italian missionaries are an obvious choice, but French and English merchants appeared in significant numbers later on). Conversely, since Kongo sent diplomats to foreign lands, Kongolese characters can appear in European settings. It's remotely possible that characters from the Arab world could appear, more likely coming from inland. Militarily-

inclined PCs (king's musketeers and swashbuckling pirates are entirely in order during this period) might be employed as mercenary cadres to train native troops in modern weapons and tactics and to lead them into battle. As in other places on the colonial fringe, ambitious characters might leave their homes and try to carve out a kingdom for themselves, perhaps trying to take over a mountainous province in the east. Here are some other adventure ideas:

Heart of Darkness: During the period of civil wars, word has reached the Vatican that a missionary priest, long out of contact with his superiors, has turned heretic and is building a militant following in rugged northeast Kongo. The heroes are a detail sent by the Inquisition to take the priest into custody and return him to Europe. To find him, they must make a journey up the Kongo river, dealing with Yaka troops aiding one noble clan or another or simply plundering under cover of the confusion, semi-independent Kongolese armies, and scared refugees. Once they reach him, they'll have to convince him to come with them or take him by force through a loyal horde of followers. GMs in the mood for symbolism should remember that in Kongolese religion, the worlds of the living and the powerful spirits of the dead are separated by a great river. Native Kongolese may be uneasy about the journey, worried that they are going to confront the embodiment of a powerful ancestor. Even if the PCs aren't, their native guides and bearers will be.

Let My People Go: An organization of time-travelers has decided to put a stop to the African slave trade before it begins. Their plan is to simultaneously strengthen the Kongolese militarily and politically and stir up sentiment against foreigners. Their hope is to make Kongo unreceptive to trading with Europeans and to make them strong enough to resist their incursions. Characters could be time-traveling abolitionists trying to convince the Kongolese to change their way of life or an opposing team sent in to stabilize the timeline. Adventurers might also be members of a second team sent in a few generations later to clean up the mess created by the first team's successful efforts, putting the brakes on a violently expansionist Kongo which threatens to reproduce the horrors of New World slavery in Africa.

Ting Tang Walla Walla Bing Bang: The Portuguese thought West Africa was the perfect source of labor for their New World plantations until magic-wielding enslaved nganga launched a bloody revolution. Brazil, Portugal's most prized possession, is now in the hands of African rebels and Kongo, the only known source of similar magic, has just become a much more important place. The Kongolese have no particular fondness for the rebellious slaves of Brazil (after all, they were happy to sell them), but at the same time they have no particular reason to take action against them. It's up to Portuguese diplomats to convince Kongo to assist their attempts to retake Brazil and protect the slave trade. PCs could take a number of roles: Portuguese diplomats petitioning the Kongolese government for aid, other European diplomats visiting to learn more about the extraordinary situation (and perhaps thwart the Portuguese; the Spanish would be particularly delighted to see Portugal fail), European priests and explorers coming to investigate the remarkably effective magic of Kongo, Kongo noblemen trying to take advantage of the attention, or maybe even Brazilians returned to the old country to keep Kongo from interfering in the revolution.

Pyramid Review

Heroes & Villains (for the Gear Krieg RPG)

Published by [Dream Pod 9](#)

Written by James Maliszewski

Additional Writing by John Buckmaster, Scott Lette,
Tom McGrenery, Esteban Oceana, and Chris Upchurch

Illustrated by Kieran J. Yanner

96-page b&w softcover; \$19.95

Of all the World War II themed RPGs released in 2001, [Gear Krieg: The Roleplaying Game](#), from Canadian publisher, Dream Pod 9, was the one with the problems. Derived from the miniatures combat rules of the same name, in which scientific advances lead to the war being fought aided by low-end technology mecha called "walkers," the RPG suffered primarily from inadequate proofreading, a lack of character generation example, and scant advice on the place and motivation of the player characters in what would become an increasingly militaristic setting. In the many months since the release of the RPG, DP9 have released little support in comparison with the miniatures game and line, with just the supplements, the *Gear Krieg Screen and Adventure*, and the less-than-super supplement, [Gear Krieg: Superscience!](#)

Both *Superscience!* and the latest and third supplement for *Gear Krieg* focus upon elements left relatively untouched by the core rulebook, but where *Superscience!* focused upon just one aspect of the setting, *Gear Krieg: Heroes & Villains* looks at two -- as its title suggests. What the supplement examines is the place of the daring heroes, the villains' loyal goons and henchmen, and the villainous mastermind himself (or herself) within the *Gear Krieg* setting -- their headquarters and bases, the Superscience gadgets to be wielded by either, plus a modicum of new Perks and Flaws. It also gives guidelines for adventuring in the pulp world of two-fisted action, expanding a little upon what was given in the core book.

While the layout and organization of *Heroes & Villains* is up to DP9's usual standard, the book does suffer from the same kind of typographical errors that plagued *Gear Krieg: the Roleplaying Game*. Fortunately this is not to the same degree, but when the supplement's text ends mid-sentence, it leaves the reader wondering about the publisher's proofreading policy -- to proofread or to not proofread? Otherwise, *Heroes & Villains* is a decent-looking book occasionally illustrated by Kieran Yanner's pencils that nicely impart pulp's flavor and sensibility.

After the opening color fiction, *Heroes & Villains* gets down to "Pulp Plotting 101," a look at the basic elements of the genre: One-Upmanship and Danger. The former shows the GM how to reuse elements and situations used in a game before, while the latter shows how to make an adventure dangerously thrilling without being *too* dangerous. This is good advice, which can be combined with the 22 "Pulp Plots And Pulp Elements," ranging from "Give Me Shelter" and "A Penny Short And A Day Late" through "Chandler's Revenge" (taken from the author Raymond Chandler's fallback position whenever he ran into a plot blockage -- have a bundle of thugs burst in on the heroes all guns blazing!), "On The Run to Hazard Pay," and "What Happened?" Each of these elements receives a thorough examination, and not only can they be used as they are, but also they can be plugged into one of the core book's best features, the Random Adventure Generator.

The Character Design Tools feed into the contents of the next chapter, The Makings Of A Pulp Hero. They discuss character background and how to handle the naming conventions of the genre, before giving a list new Perks and Flaws. These include the Perks of Crack Driver or Pilot, Combat Veteran, and True Love, and Flaws of Creepy, Soft-Hearted, and Combat Stress. All should be welcomed as useful additions to the game, but they do seem a little too obvious not to have been included in the core book. The section is rounded out with a suggestion on how to use the Tactics skill levels of the characters in a party to fill a pool of points from which the whole of the party can draw in a combat situation.

In The Makings Of A Pulp Hero, the place and creation of the ***Gear Krieg*** hero is discussed in further depth -- their motivations within the boundaries of the genre and the three types of hero archetype possible: the hero, the sidekick, and the supporting character. It addresses how to avoid the perennial pulp dilemma of the "Doc Savage Problem": having a player character be so good that they are both indispensable and outshine the abilities of the other characters. The answer provided is both obvious and welcome, suggesting that players build a balanced team of characters, each with their own set of niche skills. The chapter also expands upon what little there was in the ***Gear Krieg*** core book on heroic campaign types, looking at those centered on independent heroes, as well as Government-sponsored campaigns or games centered on the Allied armed forces. The bulk of this section is given over to discussing the League of Nations Plenipotentiary Teams, which, though suggested in the core book, was left little explored. Again, the advice is good, though GMs will still be left wanting more.

The chapter is rounded out with files with files for six heroic characters. These are given full descriptions and histories, along with their game write-ups. In addition, the GM has plenty of suggestions on how to use each of them as potential allies, enemies, resources, or just plain plot complications, all of which serves to enhance their usefulness. At a pinch, the six could be used as player characters, but gathering them all together could prove to be a problem.

So far ***Gear Krieg: Heroes & Villains*** has concentrated upon the former, but it really gets into its stride with the villainous half (and more) of the book. As with the heroes, the motivations and archetypes for villains are discussed before presenting 12 write-ups of various thugs, henchmen, and masterminds in the same format as the heroes given earlier. They range from traitors to the Nazis, through criminal enforcers, crime lords and spymasters, to mysterious agents and Nazi cyberneticists.

Some of these possess or make use of the various headquarters and hideouts described next. These seven include the ever popular Nazi submarine base in the Antarctic; the Golden Eagle, a giant flying wing that transports a group known as Swift's Strikers across the world to defy Nazi tyranny; a secret SOE base deep in Paris that is only accessible from the city's sewers; and Baron Friederich von Eisen's Flying Fortress, an impregnable and vast Zeppelin aircraft carrier, far tougher than Germany's other *Luftfortresses* -- as detailed in the ***Luft Krieg Companion***. Again, these can be used as is, but alternatives are provided should the GM want to use them for another purpose. Each base receives a two-page spread, one of text and another illustrating or mapping each location. Perhaps more space could have been given over to the maps, but there is just enough here to whet a GM's imagination, and if the seven are not enough, ***Heroes & Villains*** includes quick guidelines for designing the headquarters for villains of a GM's own creation. This is great stuff and useful in other pulp-type games, such that a whole supplement could be built around an expansion of material like this.

Rounding the supplement is a more personal examination of ***Gear Krieg's*** Superscience, with the aim of providing the sort of gadget that a hero or villain might have in their possession. The problem in both the core book and the ***Superscience!*** supplement is the subject is very much depersonalized and mass-produced, such that it remains out of the reach of the average pulp hero. Invariably such items remain the province of each nation's armed forces. These small devices, such as the Atomic Car, Dehydration Ray, Plastic Flesh, and X-Ray Monocle can be classed as Signature Items that can be used to further define a character. To this end, such items can be purchased during character creation. Both these devices and their Signature Item rules can be described as so essential to the genre and setting that they should have been included in the core book, or the ***Superscience!*** supplement at the very least (since that book was devoted to Superscience). Finally, the chapter is rounded out with a short-but-interesting look at Superscience Doomsday Devices.

In many ways, ***Gear Krieg: Heroes & Villains*** addresses a multitude of ***Gear Krieg's*** problems, though not all. That

may come with the forthcoming second edition of ***Gear Krieg: The Roleplaying Game***. Those that it does deal with are related to the creation, motivation, and position of both the good guy and the bad within the setting of the pulp-style Modern Age that is ***Gear Krieg***. This makes it nigh on indispensable to the life and length of any ***Gear Krieg RPG*** campaign, leaving one to wonder why so little of this was covered in the core book and why there has been such a wait for this book.

On the plus side, so little of the various elements and advice in ***Heroes & Villains*** is solely specific to ***Gear Krieg: The Roleplaying Game*** and its Silhouette mechanics, that virtually all of it could be applied to *any* pulp RPG. Even those specific to both setting and mechanics would be easy enough to adapt to a GM's system of choice. Particularly good is the advice on creating villains and their headquarters, with the given examples likely to turn up in other games. This aspect of ***Heroes & Villains*** would also be worth expanding to fulfil a whole book by itself. In spite of the typographical errors in ***Heroes & Villains***, this supplement is the best and most useful released to date for ***Gear Krieg: The Roleplaying Game***. Part of this can be put down to the far-from-perfect quality of previous titles in the line -- which ***Heroes & Villains*** does address -- but even so, this book still deserves to be on the shelf of any GM running a pulp style game.

--Matthew Pook

Dream Police

by [Chad Underkoffler](#)

Genre: "Psionic" Cops

Style: Action-Adventure to Cinematic

Fidelity: Rock Bottom

Themes: Crime, Protect & Serve, Buddy Movie/Ensemble Cast

Campaign Setting and Background Information

While the world sleeps, a chosen few entities patrol, to protect dreamers from dangers that prowl the Dreamscape.

What Every Dream(er) Knows

Bubbles: In the darkness of the Dreamscape, every dreamer's individual dreamspace appears as a glowing sphere of force, hanging (or sprouting) from a translucent [Thread](#). Bubbles have a radius of their dreamer's height, and shift in color to reflect the dreamer's current mental state. Silver shows that the dreamer is dreaming (or daydreaming), while white indicates that a dreamer is awake. A gray Bubble means that the dreamer is in distress: the disorientation of one asleep but not yet dreaming, mental derangement, or suffering malicious dream-attack. When a dreamer dies, their Bubble turns black, slowly transmuting into black [Sand](#), which the dreamwinds erode and spread throughout the Dreamscape.

Most dreamers never leave their Bubble, caught up in the entertainments within. Only a certain gifted few -- like psychics and shamans -- Breach their mental walls and float out into the wider Dreamscape, trailing an almost invisible and unbreakable silver cord back to their Bubble (see also the boxed text, [Dream Skills](#)).

Threads: These colorless lines of energy hold Bubbles relatively stable in the dreamwinds, and are used by Dreamscape denizens as streets. The Thread of a Bubble twists together with those of its neighbors, thickening into *Strands* and then *Cables*, which serve as streets and boulevards for travelers. A collection of Bubbles on a Strand is called a *Cluster* (similar to a city block); a bunch of Clusters on a Cable is called a *Bubbleplex* (similar to a city neighborhood). Strands and Cables intersect each other; plazas are often built of [Sand](#)-bricks at these crossroads. The main trunk line of Cables is called *Astral Way*, and it serves as the main thoroughfare of the Dreamscape. Lit by the twinkling Bubbles all around, floating down Astral Way is like walking along the branch of a titanic apple tree whose blossoms are glowing.

It's unknown where the Threads eventually terminate; no dreamer has stayed asleep long enough to find the source; however, a few [Figments](#) and [Eternals](#) claim to have done so.

Finally, the relationship between dreamers' location in a Cluster compared to the waking world is unclear -- it

Dream Skills

Dreamers who pass beyond the wall of their Bubble can learn a number of useful skills to aid them in their journeys. These include:

- *Blast:* By focusing the totality of their willpower into a single gleaming bolt, dreamers skilled at Blasts can tear apart dream-objects (including those of smelted Sand), [Figments](#), [Nightmares](#), [Screaming Meemies](#), and even other dreamers. Indeed, a Blast is so potent that it is the only way in the Dreamscape to kill a dreamer's slumbering physical body -- dispatching a foe with a dream weapon, dropping them from a height, or even pummeling them to death with dream fists merely causes the dreamer to wake up.

doesn't seem to have to do with geography, family, personality types, or anything else -- though sometimes Cluster-neighbors do share such qualities. The tendency for Bubbles to unwind from their Strands and float away into new Clusters occasionally (plus dreamers consciously moving their Bubbles to be near friends) makes analysis difficult.

Sand: Sand is the name for the raw material of dreams: these tiny granules of mental energy coalesce into both the shell of a Bubble as well as the dreams formed within. Outside of a Bubble, it nourishes, heals, and exhilarates all denizens of the Dreamscape -- dreamers, Eternals, Figments, Nightmares, and Screaming Meemies -- and is used as a construction material for buildings, platforms, and tools (see boxed text, [Sand Smelting](#)). Finally, it is traded between denizens, in raw form or manufactured objects (either unconsciously by a dreamer inside his Bubble, or consciously in the Dreamscape by a Sand Smelter).

When a dead dreamer's Bubble erodes into black Sand, it blows into the Dreamscape. The "drifting black" can supply basic (if boring) sustenance for denizens. Some, driven by extreme hunger or need for raw material, "vulture" over a gray Bubble, waiting for it to turn black so that they can whack big chunks of the dying Bubbles off with pick and hammer. While in bad taste, this habit is not illegal. However, it draws the attention of Dream Police officers, who can cite denizens for "loitering" or "causing a public disturbance."

White Sand is of higher quality (as food and material) than black Sand, but is even rarer than silver, as it comes from the Bubble of a dreamer who is awake. If a dreamer possesses appropriate training (and the proper permits from the Dream Police), he can "reserve" white Sand during waking meditation, to trade upon his next slumber. Its demand as a spice and an alloy-additive is high.

Silver Sand comes from the Bubble of a dreamer actively dreaming, and in terms of quality is as far above white Sand as white is above black. Delicious and rejuvenating, silver can induce ecstasy, heal grievous wounds, regenerate lost limbs, and be smelted to make nigh-unbreakable objects. It's also incredibly addictive; a denizen who eats too much, too often quickly becomes a [Silverfish](#) (dream-junkie).

Dreamers can [trade](#) their own raw silver or dream-objects with other denizens of the Dreamscape, though overdoing this runs the risk of mental instability. Silver Sand is made of happy thoughts, self-confidence, and personal initiative -- the dreamer who squanders their silver finds their

Breach: Breach is the skill used to enter or exit a Bubble; it can also be used to "mine" Sand from one (though chipping away with dream tools works just as well) and to break a Shield (see below). Dreamers outside of their Bubbles trail a hair-thin, almost imperceptible silver cord of energy (much like a tiny Thread). No one has yet found a way to sever a silver cord from Dreamer or Bubble. White Bubbles are especially difficult to Breach.

- **Sand Smelting:** Every dreamer creates dream-objects unconsciously within their own Bubbles to window-dress their evening's entertainment. (If taken out into the Dreamscape, these objects composed of silver [Sand](#) can be used in [Dream Commerce](#).) However, the ability to *consciously* create objects from Sand outside of one's Bubble is a bit trickier. By gathering together a quantity of Sand and concentrating upon it, the Smelter makes the stuff clump together and grow malleable (or even liquid). The resulting goo can then be carved, shaped, molded, or blown into any form. The different colors of Sand can be mixed to produce alloys with diverse qualities.

Most dream-objects are Smelted out of black Sand. Whole plaza-platforms of black Sand bricks (many with permanent buildings) have been constructed at Thread, Strand, and Cable crossroads, and serve as community centers, market sites, and other places for Dreamscape denizens to gather and mingle. Most dream-objects needing hardness and flexibility (like weapons) are created from a black-silver mix; superior dream-objects require a tri-Sand alloy.

"Empowered objects" (like the [Badges](#) of the Dream Police) require a white-silver amalgamation or pure silver alone.

- **Scanning:** Scanning is the ability to read and send surface thoughts. (There are rumors of "deep Scanning" techniques, but few dream denizens believe they exist.)
- **'Scape Movement:** This skill is used to travel the Dreamscape, either along the "streets" of Threads, Strands, and

Bubble turning gray. However, if that's the dreamer's choice, fine and well.

Sandrunners: A dreamer who escapes the shell of his Bubble may (inadvertently) intrude into another's Bubble without permission and steal dream-objects or Sand from it. Taking Sand from another's Bubble is illegal, as it may cause harm to the dreamer. So long as reparations are made, and the intruder is repentant, the Dream Police are merciful (sentencing the trespasser to mild public service for a short period). However, those who invade and/or steal maliciously or for personal gain (usually by selling ill-gotten Sand or dream-goods on the black market) are criminals called Sandrunners. Sandrunners are responsible for about half of the crimes committed in the Dreamscape.

Dream Police: Before the [Chief](#) showed up, the Dreamscape was a lawless frontier, where the strong ruled the weak. Today, due to the efforts of those who wear the [Badge](#), that state of affairs is changing. Dreamers of any sex or age possessing the suitable talent, willpower, and nobility of soul are recruited into the Dream Police, to serve and protect the Dreamscape. (Many dreamers with the talent but lacking the willpower or nobility may very well become Sandrunners.) The Dream Police patrol the Astral Way and the Bubbleplexes, stop Sandrunners, enter Bubbles to extract troubling Nightmares, and hunt down and destroy Screaming Meemies. Currently, there are just one thousand Dream Police to protect the entire Dreamscape.

Eternals: When someone's body dies when they are in the Dreamscape, their mind (some say "soul") may survive that expiration. The silver Sand from their Bubble courses along their silver cord and pours into their dream-body -- changing them forever -- even as their Bubble blackens and blows away. They are now Eternal Dreamers, composed entirely of silver Sand. Thus, they are quite strong, resilient, and adaptable; this amounts to virtual immortality. However, an Eternal can still be killed by Blasts, dream-object-inflicted wounds, and starvation (they must now gather and consume Sand to survive).

Figments: Figments are dream-beings that have escaped (or been freed) from the Bubbles of their creators. Like Eternals, they are strong, tough, and functionally immortal, and share the same needs and weaknesses. They can learn Dream Skills as well as any dreamer; this allows many to shed the bizarre shapes imposed upon them by their creators. Many become Sand Smelters (anything from dream-chef to weaponsmith), scholars, entertainers, or merchants. Some turn to crime as Sandrunners; a few commit violent crimes and begin to transform into Nightmares.

Cables, or through empty space. Speeds correlate to the skill of the dreamer, ranging from a floaty "meander" to "damn zippy!" flight.

- *Shape Context:* This skill allows the user to control elements of an individual's personal dreamscape, often from behind the scenes (it can only be used within a Bubble). It permits the Shaper to add or subtract elements from the dream and alter its "plot" or tone. This skill must be used subtly, for if the target becomes aware of this control, they can wake up or lash out. A dreamer is essentially the *god* of their own Bubble, so the Shaper who prods too sharply could have just about anything happen to them . . . from being stuck in a white Bubble until the dreamer again sleeps to hideous body reshaping to death by Blast (see above).
- *Shape Self:* This skill represents the ability to change the physical form of one's dream body. Shape Self allows the user to alter their appearance; increase or decrease in size; add claws, wings, tails; etc. The changes are not simply cosmetic, but their quality is related to the skill level of Shape Self.
- *Shield:* The Shield skill is used to block Blasts; counter Breaches and Scans; temporarily restrain another denizen; and hide from the What Is, What Was, and What Will Be skills (see below).
- *What Is:* Use of this skill allows "real-time" remote viewing or location of people, objects, or places within the Dreamscape. It is also the skill used to track someone by following their faint silver cord.
- *What Was:* Use of this skill allows viewing of past events that occurred within the immediate location of the user.
- *What Will Be:* Use of this skill allows viewing of future events that may (not will, *may*) occur within the immediate location of the user, or that may involve the user himself. Conscious control of What Will Be is difficult and rare; visions are usually unheralded, unexpected, and vague.

Dream Police Training

Nightmares: Nightmares are Figments gone bad. They enjoy nothing more than Breaching a dreamer's Bubble. By causing fear with [Shape Context](#), they convert some of their victim's silver Sand gray, and then feed on the mixture. This rich diet of gray and silver makes them stronger than most Figments. Dream Police consider a Nightmare a fusion of mugger, murderer, and rapist. Even so, Nightmares are to be captured, imprisoned, and rehabilitated back into non-criminal Figments, if possible.

Silverfish: If a dreamer, Eternal, or Figment becomes addicted to silver Sand, their eyes become cloudy mirrors. Under the influence of a hit, Silverfish are full of energy, amazingly strong, nearly invulnerable, and possessed of incredible regenerative abilities; once they start to come down off the buzz, they become twitchy, irritable, weak, and feel a constant low-grade pain inside. A long and careful rehabilitation program can wean a 'fish off of silver Sand safely; the Dream Police can help addicts find one.

Screaming Meemies: Thought by many to be a species of Nightmare, a Screaming Meemie is the Dreamscape representation of a "meme" or "viral thought." They are the nasty big brothers of those songs that get stuck in one's head and repeat endlessly. Unlike Nightmares, Meemies prefer to Breach white Bubbles and subsist on a mixture of white and silver Sand. This makes them even tougher customers than Nightmares. Furthermore, they can *replicate* themselves into a swarm of smaller Meemies to aid in escape and evasion; each replicated Meemie retains the full memories of its sire up until the point of fracture. (There is a theory that all Screaming Meemies are descended from a single ur-Meemie.) Apparently, they have the ability to transmit themselves via the waking world into the mind of another dreamer, allowing them to emerge back into the Dreamscape from a distant and random white Bubble.

The Dream Police see Screaming Meemies as a fusion of serial killer and ebola virus. Their penchant for mucking about with white Bubbles often has disastrous effects on the sanity of their victims. Dream Police are encouraged to terminate Meemies with extreme prejudice.

What the Dream Police Know

The Founding of the Department: Before the Department, the Dreamscape was a wilderness whose guiding rule was "Might Makes Right." Nightmares and Screaming Meemies preyed on dreamer and Figment. Dreamscape denizens huddled in fear, broke and ran, or fought back as best they could against their enemies. No matter how they tried to band together for protection, they were always eventually beaten down.

Then, one day, it all started to change. Luke Washington had been -- still was, he'd state -- a cop before the accident rendered his body comatose. His sleeping mind remained as sharp as when awake, and his endless dreams quickly became lucid. Again and again, he fought battles drawn from his memories, his terrors, his imagination. His Bubble became a sort of chrysalis: when he Breached his Bubble, he emerged a skilled and tough dreamer who had put his own house in order. As he stepped out onto Thread, he took a deep breath of air full of drifting black, and began to explore.

What he saw in the Dreamscape both horrified and angered him. He decided then and there to bring his police training to bear on the chaos. Like some Lone Ranger (or Don Quixote), he fought against the Sandrunners and Meemies. He almost didn't even notice when his body died and he became an Eternal. He was too busy bringing order and justice to the Dreamscape, and recruiting those who had sympathy for his goals. Those recruits became the Dream Police, and Washington became "the Chief."

The Dome of Justice: After his Bubble blackened and blew away, the Chief began constructing a new home in the Dreamscape. Right on Astral Way, the Dome of Justice is built of thick blocks of Smelted black Sand, interwoven with supports of a tri-Sand alloy (much of the white and silver donated by grateful citizens). It is a sturdy, large, and

All [Dream Police](#) undergo rigorous training to give them a basic competency (equal to their rank in Dream Police) in several Dream Skills. The skills taught at the Academy are Blast, Breach, Shield, Scanning, Scape Movement, Shape Self, and What Is; however, use of Blast against Figments, Nightmares, and especially dreamers is frowned upon.

(For the benefits granted by the [Badge](#), please see below.)

imposing structure. Within are the Academy, the Barracks (where the Bubbles of Dream Police officers have been moved to protect against tampering), the Cells (where criminals -- and their Bubbles -- are imprisoned and rehabilitated), and several other areas of interest (see [Items & Locations](#).)

Recruiting: A few applicants are dreamers who come voluntarily to the Dome of Justice to join up with the Chief. Most are found through use of Dream Skills like What Is and What Will Be, or are recommended to the Chief by Dream Police officers. In any case, the applicant is informed of the responsibilities and duties of an officer, given basic information on the types of things they'll need to be able to do, and are then subjected to a long and involved interview with the Chief himself. "It was like he looked deep into me," many say afterwards. After the interview, the Chief determines whether to admit the applicant to the Academy as a recruit, or turn them away (either completely or until they're ready).

The Academy: The Academy trains recruits in the Law of Dreams, [Badge](#) use, several [Dream Skills](#), and those law enforcement skills that can be usefully translated to the Dreamscape. The recruit must pass each examination; if they fail, they repeat the training until they pass. (No recruit has ever been expelled from the Academy, but a number have never graduated.) The ultimate test is a long and in-depth interview with the Chief. If the recruit passes muster, they graduate and take the rank of a Dream Police Officer. If they don't, they go back and do it again until they get it right or work out whatever issue is holding them back.

The Law of Dreams: The Law of Dreams rests on a few simple rules:

1. Do Unto Others As You Wish Them To Do Unto You.
2. You Will Not Intrude.
3. You Will Not Steal.
4. You Will Not Harm.
5. You Will Not Murder.

***Note:** "Killing" with a dream object is a different crime depending upon the victim: if a dreamer, this is assault (as they wake up unharmed); if a Figment or Eternal, this is homicide (as they'd be dead).*

Dream Police interpret and enforce the Law; their judgment may be requested to settle disputes between Dreamscape denizens. They serve as judge, often jury, and sometimes executioner. However, Dream Police are encouraged not to use deadly force (i.e., Blasts) unless absolutely necessary (see [Special Units](#)). GMs should feel free to expand the Law as they see fit, to provide adventure and conflict.

The Badge: The Dream Police each bear a Badge, Smelted out of their own silver Sand (possibly with a dash of white) by the Chief. The Badge is not just the sign and symbol of their authority, but also grants certain benefits. These include serving as a focus for "dream radio" (a method of using Scanning and What Is for direct communication; however, this technique requires exclusive concentration), the ability to fire non-lethal Blasts if using the Badge as a focus, a bonus to the Shield skill (both for protection of themselves and others as well as restraining malefactors), and a limited bonus to the Breach skill (only for exiting a Bubble). A Badge may not be used by anyone other than its owner, and cannot be destroyed while the owner lives. It can be taken away, but the Badge can be retrieved through extreme effort of will. Most Dream Police wear their Badge on their chest (usually over the heart), but a few choose to wear it in the form of a bracelet or ring.

Duties & Rank: Officers are the lowest ranked Dream Police, and handle beat patrols (usually a Cluster), investigate suspicious events, provide back-up for other officers, respond to public safety issues (especially Thread traffic situations and other accidents), and help maintain public order; they may operate singly or in pairs. Sergeants act as detectives, generally operate with a partner or in squads, and investigate crimes like Bubble invasion, theft, Sandrunning, assault, murder, kidnapping, Nightmare attack, and the like. Lieutenants are higher-ranked detectives who command Sergeants' squads. Captains manage the Cable precinct domes and their attendant detective squads and beat officers; Captains decide who gets partnered with whom, when to rotate officers to desk duty, and who should act as Cluster liaison. Above the Captains is the Chief, who runs the whole show, sometimes from the field.

Going Undercover & Sting Operations: Two special duties that Dream Police often perform include going undercover

and sting operations. Both require high Shape Self skill (and a strong Shape Context skill doesn't hurt). When an officer goes undercover, he Breaches the target's Bubble as quietly as possible, Shapes Self to fit the idiom of the dreamer's delusion, and possibly even uses Shape Context to provide a little "English" on the situation to explain his presence. Dream Police do this to track and trap Sandrunners, as well as eject particularly tenacious or subtle Nightmares. Sting operations aim at the same perpetrators and their activities outside Bubbles, in the Dreamscape proper.

Special Units: There are two special units in the Dream Police:

1. *Special Whimseys and Tactics (SWAT):* These officers are the big guns of the Department -- specialists in Breach and Blast. They generally serve in other squads across the Dreamscape, and are only mobilized as a separate unit in crisis times -- hostage situations, Sandrunner gang warfare, or Screaming Meemie swarms.
2. *Internal Investigations (Eyes):* The Law applies to Dream Police just as much as it does to any other denizen of the Dreamscape, though they are allowed some mild flexibility when they are pursuing their duties of Protecting and Serving. Voluntary restraint is the only thing keeping the Chief and the Dream Police from being just another bunch of powerful thugs: staying within the bounds of the Law themselves is taken very seriously. The Eyes are 20 officers of unimpeachable character, selected by the Chief himself, who make sure that other Dream Police haven't stepped out of line. Sometimes they go undercover to make sure officers aren't even *thinking* of stepping out of line. The Eyes are highly-skilled in Scanning, Shape Self, and What Is.

Imprisonment of Criminals: Criminal dreamers, Eternals, Figments, and Nightmares are placed in the Cells of the Dome of Justice to serve out their sentence, and, hopefully get some rehabilitation. (The Bubbles of living dreamers are moved within the Cells, so that though they vanish from the Cells upon awakening, they still return to the Cells when next they slumber.) Dream Police officers are assigned prisoners to deal with, talk to, and help build a non-criminal dreamlife; usually, an officer does not serve in this capacity for any criminal he's caught himself. Convicts are treated and fed well, but are usually not allowed to socialize with other prisoners except at mealtimes.

What Every Denizen Doesn't Know

The Nature of Threads: Currently unknown, but popular theories suggest that the Threads, Strands, and Cables are manifestations of the shamanic World-Tree, representations of inherited DNA patterns, a spiritual Internet, connections to astronomical influences like the Zodiac, and so forth.

The Fennel Wolves: Most denizens don't realize -- or in the case of long-lived beings, clearly remember -- that hundreds of years ago, there used to be an organization much like the Dream Police, which bore many names: The Good Walkers, the Dog-Knights of Heaven, the Fennel Wolves. Their long-lost towers of black Sand brick are overgrown with Bubbles and Threads, lost in the darkness of the Dreamscape. Who knows what wonders or terrors they yet conceal?

The CIA/KGB Connection: Unknown to all but the Chief, his closest associates, and the survivors, there is a secret involved in the foundation of the Department of Dream Police. In the days when the Chief walked the Dreamscape alone, he happened upon a war being waged on the Strands and Cables. Both the CIA and the KGB were attempting to develop "dream assassins" for use in their waking Cold War. This enraged the Chief, and he spent the next few

Dream Commerce

Here's a quick table to display the rarity, quality, and cost of the different colors and alloys of [Sand](#) and the dream-objects created from them. Note that alloys do not require equal proportions of Sand; the typical black-silver alloy is 100 parts black to 1 part silver.

Type	Rarity	Quality	Cost
Gray Sand	Uncommon	Poor	N/A
Gray Dream-objects	N/A	N/A (too fragile to Smelt)	N/A
Black Sand	Common	Average	\$
Black Dream-objects	Common	Average	\$\$
Black-silver alloy Dream-objects	Uncommon	Good	\$\$\$
White Sand	Very Rare	Good	\$\$\$\$
White-black alloy Dream-objects	N/A	N/A (alloy is unstable)	N/A

years thwarting their projects, diverting their trainees, and otherwise bollixing up their experiments. In a handful of cases, he was forced to Blast a number of assassins into oblivion. After enough tragedies and negative results, the projects of both organizations were closed down (though a few former trainee-assassins may have survived, harboring a grudge against the Dreamscape's top cop).

The experience changed the Chief; he had seen and caused too many dreams of violence. His martial skills and reactionary outrage merely promulgated the Might Makes Right philosophy. He decided to build something instead, something constructive. Thus, the Dream Police were founded, dedicated to being more than a Eternal's pet warband.

Tri-alloy Dream-objects	Rare	Expert	\$\$\$\$
White-silver alloy Dream-objects	Very Rare	Master	\$\$\$\$\$
Silver Sand	Rare	Expert	\$\$\$
Silver Dream-objects	Rare	Master	\$\$\$\$
"Empowered" Dream-objects	Very Rare	varies	Seller's Market

The Webber Institute for Lucid Dream Experimental Research (WILDER): Some of the weirdest and woolliest dream-research is happening under the auspices of WILDER. While a little shady, they've never been caught breaking the Law of Dreams. While their goals are currently unknown, the director of the project -- a known dreamer and regular customer at the [Undone Café](#) named Gregory Webber -- has been heard to say that the Chief, ". . . found a whole new universe, and the first thing he did was set up a fascistic organization of jackbooted thugs!"

The Dragon: No denizen of the Dreamscape knows who or what the crimelord called "the Dragon" is, or where it lairs. Rumors abound; select one (or not) to be true:

- He's a 60-year-old made-man, dreaming himself as a don (from his prison cell).
- It's a badass Nightmare.
- He is the dream-form of Vlad "Dracula" Tepes made Eternal (or, she is the dream-form of Elizabeth Bathory made Eternal).
- It's not just *a* Screaming Meemie, it's *the* Screaming Meemie; that is, the ur-Meemie mentioned [above](#).
- He's Gregory Webber, Director of WILDER.
- There is no Dragon; it's just a lie the Chief came up with to give the Dream Police something to do.

Bad Cops: The Chief is obsessed with making sure none of his officers are corrupt. Between the extensive training provided by the Academy and the power boosts granted by the [Badge](#), a dirty dream cop could cause a lot of damage to the Dreamscape community. That's why he interviews recruits repeatedly (and Scans them deeply, see below). After that, he puts his faith in them, and will never deep Scan them again unless asked or if the officer is brought up in front of an Eyes hearing *and* is found guilty of misconduct or other crimes.

NPC Backgrounds

Detective Luke Washington aka The Chief: The top cop of the Dreamscape is a Master Scanner and Shielder (when focusing through his [Badge](#), *nothing* can penetrate it), an Expert [Dream Policeman](#), an Expert Smelter, a Good "real world" Cop, and has Good Shape Context skill. He's Poor at Pacing himself -- in essence, a workaholic that no longer needs to sleep. He also collects dream-grails.

Sergeants Anthony Mundy and Alanna Rusket: This pair of detectives are a mismatched pair: while both are exceptional cops (Expert [Dream Policemen](#)), Mundy's really an excitable and impulsive 12-year-old boy with

Dreamers in the Waking World

In the waking world, they're one person -- little girl, kindly grandfather, concert pianist -- and in the Dreamscape, they can be another -- tough-as-nails Dream Police officer, hardened Bubble-burglar, local silver junkie. In this CiaB, the waking personality can be considered mostly irrelevant except for some bleed-through of relevant skills, talents, and character quirks: we're concentrating on the Dreamscape. Still, in a campaign of wider scope (see below), the waking personality can

non-stop patter and Rusket is taciturn Eternal who's seen it all -- twice. They work frighteningly well together, all the while snarling, complaining, and jibing at each other. This surface conflict cloaks a deep friendship, of course.

Sergeant Grover Bane aka Grim: Look up the word "craggy" in the dictionary, and you'll see a picture of Bane's dream-self. He used to be a Lieutenant, but was busted back to Sergeant for lack of management skills -- and he likes it that way. He's not only a Master of the Blast, he's the most powerful one in the whole Dreamscape. An all-around Expert [Dream Police](#), Bane's Poor at Holding His Temper. He's lost more partners than any other officer, and this makes him a mite tetchy. (In the waking world, Grover Bane is a mild-mannered CPA.)

Officer Tau aka Figgy: This rookie patrol officer is the first Figment to graduate the Academy, looking like a humanoid lump of clay with a T serving as eyes and nose. He is eager to prove himself in the Department. He's Expert at 'Scape Movement, Good at Shape Self (Poor at textures and colors, though), an Average [Dream Police](#)being, and Poor at Avoiding Risky Situations. He's was created by the same dreamer that made the Nightmare Cutter, and seeks to capture his criminal "Bubble-brother."

Cutter: Cutter's a Nightmare who loves the chase. He's Expert in 'Scape Movement and Shape Context (useful for rooting his victim's feet), and Good at Breaching Bubbles. His fingers are knives and his eyes glow poisonous green (as do his teeth). He sprang from the same Bubble Officer Tau did and hates his "goody-two-shoes" Bubble-brother with white-hot intensity. Currently, Cutter is one of the Dragon's main lieutenants.

Mocker: Mocker is a Screaming Meemie who sometimes works for the Dragon and sometimes works against the Dragon. Mocker possesses a unique ability: it can consume another Screaming Meemie and gain all their memories. This talent has naturally made it madder than a haberdashery full of cuckoos. It generally appears as a foggy humanoid shape dressed in a red opera cloak and matching fez. Good at What Will Be, it's hard to catch; an Expert at Blast, it is deadly; and a Master at Breach . . . nothing -- and no one -- can hold it for long.

Items & Locations

Dream Police Domes: Every Precinct Dome (there are 224, currently) contains a squad room, a dispatch center, a booking area, a property room, and a crime lab. In addition, the Dome of Justice also holds the Barracks (which holds the Bubbles of Dream Police), the Cells (which holds the Bubbles of captured prisoners), and the Chief's personal quarters.

Undone Café: They make the strongest coffee and the tastiest donuts in the Dreamscape, the servers are friendly and cute, and they never close. (This *CiaB* is cop-centric. Do the Math.)

Events & Possible Story Arcs

Dream Hard: A band of terrorists (Sandrunners and Nightmares) has quietly taken an entire Cluster hostage and cut

be given greater weight in formulating the Dreamscape representation of that character.

The most important thing to keep in mind about those Dream Police officers who are dreamers rather than Figments or Eternals, is that they can awaken at any time, either by suffering enough dream damage to kick them out of the Dreamscape, by environmental stimulus in the waking world, or by having a Poor quality like "Light Sleeper." If/When the character returns to slumberland, they appear next to their Bubble in the Barracks of the Dome of Justice.

Dream Skills in the Waking World

As written, this *CiaB* assumes no "Real World" crossover of Dream Skills. However, an interesting psionic-flavored urban fantasy campaign could be generated if that assumption were false, and dreamers could use some (or all) of their Dream Skills while awake. Imagine the possibilities for adventure that could occur if dream-objects, Figments, and Nightmares could cross the Wall of Sleep .

..

off outside lines of communication. What are they after, and how many of the hostages will they kill to get it? Luckily, the PCs have also been trapped within . . . Yippee-eye-oh-ki-yay.

DAWPs (Dreamscape Astral Way Patrol): Traffic jams in three -- or more -- dimensions. Chases involving vehicles and strange mounts, with flying Dream Police in hot pursuit. Accidents. Moving violations. Overtaken Sand tankers. Oh, yeah.

Bubble-licious: A Bubble-brothel has opened in the PCs' precinct, increasing traffic on nearby Strands and Threads. Public disturbances and Sandrunner Breaches are increasing in that Cluster. Then, the Madam of the House claims to be a tantric sex priestess, and shows up to apply for a white Sand reseller permit. What do the Dream Police do?

Advice, Opportunities, & Pitfalls

Crime: Any crime, suitably reinterpreted for the setting, can serve as a wellspring of adventure ideas. What would dream-arson be like? Con-games? Embezzlement? Even the most mundane of traffic stops becomes compelling if the guy on the hippogriff is a fugitive. Figuring out what actually happened at a crime scene can become tangled through use of conflicting Dream Skills, not to mention the difficulty of taking statements from witnesses and victims who might wake up and vanish at any time.

Protect & Serve: Like any cop-based game, not only are Dream Police on the line trying to guard denizens against criminals and other dangers, but they're there to help the community upon request. Add to that possible jealousy from some segments of the population -- stemming from the authority, benefits, perks, and respect afforded Dream Police -- and non-crime conflict can enter the game. What happens when an officer is asked to protect a dreamer he finds repugnant (either in the Dreamscape or the waking world)? Or when a just-Breached and clueless dreamer inadvertently or accidentally kills a Figment?

Buddy Movie: Useful for campaigns with even-numbered players, the buddy movie is a basic trope of cop films and TV shows. Take two characters with conflicting qualities (crazy/conservative, smart/dense, neat/sloppy, black/white, funny/straight man, "by the book"/"from the hip"), put them together, and hilarity ensues. Since opposites attract, the pair works well together, and becomes closer friends despite (or because of) their differences. By the end, their characters have blended a little -- the crazy one is a little more under control and the conservative one has loosened his tie. So long as both players are amenable to a rigid characterization being required at the start of a campaign *and* a movement towards adopting some elements of their partner's characterization, the buddy movie trope can help a Dream Police game along like a house on fire. The biggest pitfalls are if players are unwilling to start straight and end bent. [Please see *Lethal Weapon*, *Beverly Hills Cop*, *Rush Hour*, *Dragnet* (1987), *Tango & Cash*, et cetera.]

Ensemble Cast: More useful with large playing groups or those with an odd number of players (not a number of odd players, mind), the ensemble cast is more *Hill Street Blues* or *Barney Miller* than *Lethal Weapon* or *Miami Vice*. A SWAT team or group of detectives could work very well for an Ensemble Cast. It is imperative that each character have some particular role or element of their depiction that really stands out -- the best Blast skill in the precinct, a freaky accent, no sense of humor, a constant stream of grumbling, always dresses well, is the Vice or Homicide specialist, some sort of dependant that they check up on (a Figment buddy, the Bubble of a waking world loved one, a dreamer they're having a sleepy-time relationship with, etc.), and so forth. The GM needs to make sure that each PC gets enough "spotlight" time, both separately and when working within the group.

The Dragon's Tooth

by Elizabeth McCoy

This relic is thought to be a shard of one of the most powerful sorcerer-vampires of legend, the "little dragon," Dracula. Maybe it is, maybe it isn't. By this time, does it matter?

In appearance, it's a yellowing shard of bone or tooth, jagged as if broken off in a fight, about the size of a baby's thumbnail. (Yes, it's very small.)

What does it do?

Well, if someone puts it in a field, the crops will wither as if the land had been salted. The one who put the Tooth there will be able to find it again, fairly easily, but anyone else will have to sift the ground, inch by inch, to discover it.

Unless the one who put it there dies, or forgets about it, of course. At that point, it will -- after a short time -- be found again by someone else who just happens to notice it, and pick it up. Usually this person will have the knowledge and attitude to use the Tooth, but if not, somehow it seems to migrate into the possession of someone who *will* be interested in its abilities.

What else does it do?

It summons dragons. Not real dragons, fortunately, but simulacra. Dream-dragons, given form by power.

Place the Tooth within one's body -- this can be in an orifice such as the mouth (careful, it's sharp!), or actually driven into the flesh so that little or none of it shows. (Surgical implantation, into flesh or a healthy tooth, is also possible.) Go to sleep. Be a lucid dreamer. Dream of dragons, dragons, dragons, rising from the gray earth of the dreamlands to destroy your enemies.

They'll look like what the dreamer thinks they should look like. Be creative.

The GM can decide to make an appropriate skill or attribute roll here, of course. (Or require one, if the Tooth's master is a PC.) Blood-sacrifices, while satisfying, aren't needed. Let the PCs worry about something that *doesn't* have the adversary searching for the ingredients to his dark rituals and giving them advance warning that something Bad is brewing.

If you're the sort of person who can wander around the lands of the mind (***GURPS Cabal, In Nomine***, possibly ***Mage: the Ascension*** or ***Werewolf: the Apocalypse***), this draconic army will be a potent force there. They're a little fragile when they're fresh "hatched," but there's a *lot* of them and they're vicious.

Once created, they'll always be there when the master of the Tooth (i.e., the person with the Tooth within his or her body) sleeps, whether the current master created those dragons or not. And one can always create more.

If one wants to bring them into the real world, though, that takes energy -- one day's energy for each "swarm" of about seven dragons. They'll be small, about cat-massed, but it's preferable for them to be small when they're first called. One doesn't have to give up the energy when you're calling them into the physical world, either; it's possible to feed them power for quite some time before calling them forth. They'll still be small, though -- just tougher, and they'll grow faster. (In ***GURPS***, one day's energy is equal to one's ST-1 in fatigue; you don't *quite* fall unconscious. In ***In Nomine***, it's all the Essence (minimum 1) that one has that day, though sorcery books may have faulty instructions about this. In other systems, it's roughly however much mystical energies or raw strength that a being accumulates in a day.)

One "unit" of energy will make fragile bodies for the swarm. (A Vessel/1 for ***In Nomine***, 1d hit points for ***GURPS***,

etc.) Each unit adds one to that value (Vessel/2, 2d hit points, etc.), to a maximum of five times as tough -- or wherever the GM decides isn't *too* vicious.

Most owners of the Tooth will settle for quantity over quality, since a few dozen sharp-toothed and razor-clawed little horrors -- often with the ability to spit acid or breathe flame -- tend to make short work of an enemy.

When summoned, they emerge from the Tooth itself in some fashion. This can be quite painful if it's implanted in flesh (though, somehow, there's never any real *damage* done), and disconcerting if it's in an orifice, such as the mouth. **GURPS** Fright Checks or equivalent rolls are suggested for someone's first summoning, and for anyone watching.

One doesn't have to feed them one's *own* energy, of course. If one has a way to drain energies from another being, then that works just fine. (It does tend to knock the victim unconscious, though.) Killing an animal of roughly large dog size will provide about as much energy as draining a human one or oneself. A horse-sized animal is worth twice as much energy. Killing a human victim grants five times as much energy. Elephants, hippos, and other large animals are also worth this, but leave harder-to-dispose-of corpses.

Well, you can always summon your dragons through right then, to eat the bodies . . . but there's just one little problem with that.

You can't send them back again.

Once given flesh, they keep it. They also grow, potentially doubling in size every six months to a year, until they mass about as much as an adult human. (Their size may be much bigger, depending on their physical construction.) Additional energy pumped into them before their physical manifestation will make them grow faster. However, growing requires them to either eat, or hibernate beneath the ground, in burrows they dig. Crops planted in a field above hibernating dragons will be sickly, as the dragons are absorbing the nutrients themselves in some mystic fashion.

As with dream-dragons, the Tooth's *current* master may awaken and command any previously created dragons -- but possession of the Tooth does not automatically grant knowledge of where these dragons might be. (And if there are *real* dragons in the campaign world, it's up to the GM whether or not the Tooth will have any influence upon them, positive or negative.)

If a Tooth's master is killed, legends differ on what happens to the dragons. Some say that they crumble into dust and earth. Some say that they immediately dig themselves into the ground and hibernate. Some say they flee, and hunt in far off places until they become ancient wyrms in truth. Some say they go on a mad rampage, destroying until there is nothing left. Some say they turn upon each other (and anything else in their midst). And some say that they become quiescent, watching avidly to see if their master's slayer will take up the Tooth and become their new master . . .

Campaign Use

The Dragon's Tooth can be a simple McGuffin to search for or destroy, or a complicated one, which has enough advantages to tempt player characters with its power. And power, as is well known, can corrupt . . . What need of approval does someone need, with an army of loyal dragons at his bidding? Dragons which can be buried until one has need of them . . .

Appendix Z

Wandering Caravan Table

by Matt Riggsby

When traveling cross-country, there was safety in numbers. A large caravan could, by its very size, discourage bandit attacks and better repel those who tried. Banding together also allowed travelers to save money by sharing costs. While lone characters may cross large distances alone in a pinch, the smart move is to wait until they can join a group of people going in the same direction.

Plot and setting may lead naturally to a caravan's composition, but the GM may just want to put something together without thinking too hard about it in advance. The table below can be used to randomly assemble a caravan, determining how many of what types of traveler are present.

Primary Personnel

The GM should first decide if the caravan is small, medium, large, or very large; the general size of the caravan has an effect on what kinds of people are present. Treat any roll below zero on the table below as zero.

	Small	Medium	Large	Very Large
Pilgrims	1d6	3d6-3	(3d6-3)×2	(3d6-3)×4
Minor Merchants	1d6	2d6-4	3d6-3	4d6-4
Wealthy Merchants	1d6-5	1d6-2	2d6-4	3d6-5
Lesser Nobles	1d6-5	1d6-4	1d6-3	1d6-2
Greater Nobles	-	2d6-10	2d6-9	2d6-8
Professionals	2d6-8	2d6-5	2d6-3	3d6-3
Guards	-	2d6-10	2d6-8	2d6-4
Camp followers	-	1d6	2d6	3d6

Pilgrims: One of the biggest reasons for travel through history has been pilgrimage to sacred sites or notable holy men. Pilgrims may just be religiously-themed tourists, but they often travel under vows and restrictions. For example, they may be prohibited from bearing arms or eating certain foods.

Merchants: The other big reason to travel was to make money. Minor merchants will transport goods with a value equivalent to two to six months middle-class income. Wealthy merchants will carry goods equivalent to six to eighteen months middle-class income or more.

Nobles: Nobles were wealthy enough to travel and may have numerous reasons to do so. Examples include tourism, legal business (visiting a greater nobleman's court), marriage, and diplomacy. More prominent nobles will have more servants with them.

Professionals: Some professionals frequently moved long distances. Masons and carpenters are prime examples, but any craftsmen in luxury trades (jewelers, swordsmiths) might move closer to major markets. This category includes performers of all kinds (jugglers, clowns, etc.), scholars (before the printing press and inter-library loans, scholars might have to travel to read new books), lawyers in the Medieval Islamic world and bureaucrats in China.

Guards: Generally speaking, all members of a caravan are expected to help defend it in case of attack. Full-time guards are, therefore, rare.

Camp followers: Large parties of travelers, particularly armies, are often accompanied by hangers-on who cook, do

laundry, and provide more personal services. Camp followers are often locals. They will travel with the caravan briefly and return home. Consequently, a caravan passing through a wasteland may temporarily have few or no followers.

Secondary Personnel

Servants/family members: Principal members of a caravan will bring some help with them in the form of servants or family members (spouses and children, siblings, cousins, etc.). Unlike the table, treat any roll of less than one as one: 1d6-3 per minor merchant and traveling professional, 1d6-2 per lesser noble, 2d6-4 per wealthy merchant and greater noble.

Beasts and bearers: In a setting where riding animals and beasts of burden are the norm (say, the Medieval Near East), roll 1d6-4 per minor merchant, traveling professional, and lesser noble, 2d6-9 per wealthy merchant and greater noble. This number assumes beasts of moderate size, such as horses, camels, and donkeys. Increase the number of animals by 50% to 100% if less capable beasts are used, such as llamas and load-dragging dogs. Decrease by 50% if very large animals, such as elephants, are used. If human bearers must be used instead, as in sub-Saharan Africa, roll as for servants and multiply the total by four. Vehicles are rarely an issue for caravans. Any region with roads good enough for carts is also usually safe and navigable enough to not require caravan traffic.

Other Personnel and Skills: There will be at least one skilled packer per three or four animals (usually servant/relatives or merchants). If traveling through wilderness or distant lands, there will be at least one guide and at least one translator (usually camp followers).

Other Concerns

Caravans might be either privately organized by a group of travelers (merchants, pilgrim leaders, etc.) or publicly organized by a civic government. In either case, participants must usually pay into a fund for provisions, tolls, hiring guides and translators, and other common expenses; the amount paid depends on a number of factors, but larger groups of travelers must pay more. Smaller caravans travel shorter distances and are more likely to be privately organized.

Privately organized caravans might be governed collectively by the organizers (voting with a weight equal to their financial contribution), or the organizers may select a single leader. Publicly organized caravans will have a leader appointed. In either case, the authority of the leadership is theoretically absolute, much like a ship captain. However, the leader will usually try to mediate disputes within the caravan rather than issue orders and mete out punishments.

Caravans usually follow a seasonal schedule, starting immediately after the rainy or windy season has ended. Many are one-way, but there may be a scheduled return or a wave of return caravans organized near the end of the season. Small caravans, though less safe, are more flexible and may be more quickly organized and travel at other times.

Though relatively safe, caravans are also slow. Over reasonably friendly terrain, a speed of 11 miles a day is a breakneck pace for a very large caravan, and nine to ten miles a day is closer to typical. Smaller caravans can be faster, but even the smallest merchant or pilgrim expedition is unlikely to go faster than 15 miles a day. Caravans lack the discipline which allows armies and dedicated explorers to travel more quickly.

My Bloody Valentine

*"Five and twenty rum trucks come down the avenue;
Champagne for the very rich,
Hooch for me and you.*

Them that asks no questions, isn't told a lie;

And watch the wall, my darling,

While the gentlemen go by."

-- parody of Kipling's "Smuggler's Song," printed in the *Chicago Tribune*, Feb. 20, 1929

"Watch the wall" may indeed have been the last words heard by the Moran gang before their lives ended in a rain of bullets on a cold winter's morning in 1929. But despite the poet's warning, that didn't forestall the questions, and it didn't end the lies. In the roar of bullets, in a riffle of cards, in the howling of a dog -- perhaps we can hear the truth in them still, and penetrate to the silent mystery at the heart of the St. Valentine's Day Massacre.

"Those silly Irish bastards. They have more guts than sense. If only we'd hooked up, I could have been president."

-- Al Capone, on the St. Valentine's Day Massacre

Just about 10:30 a.m., on a bitterly cold February 14, 1929, a police car pulled up outside the S-M-C Cartage Company at 2122 North Clark Street in Chicago, the headquarters of George "Bugs" Moran and his gang. Although accounts differ, the consensus holds that five men -- two in police uniforms and three in plainclothes -- got out of the car and entered the building. Minutes later, the muffled sound of machine-gun fire echoed down the street, followed by the howling of a dog. Three men exited the garage, hands up, held at gunpoint by the two uniformed men; all got into the police car and drove away.

The dog's howls continued, until a lodger in a nearby apartment building entered the garage -- and found six dead men, one dying man, and a maddened dog tied to a car axle. All had been repeatedly shot, apparently with submachine guns and sawed-off shotguns -- some of the bodies were almost torn to bloody rags. Five of the victims were members of Moran's gang: the accountant Adam Heyer, the holdup man James Kachelleck (now "James Clark"), the racketeer and speakeasy owner Al Weinshank, and the gunmen Frank (who lingered for another two and a half hours) and Pete Gusenberg. Also dead were John May, an auto mechanic (and owner of the dog, Highball), and Reinhold H. Schwimmer, an optometrist who liked the thrill of hanging out with gangsters. Moran, along with his gambling runner Ted Newberry and the third Gusenberg brother, were late to the rendezvous, and survived.

"Nobody shot me."

-- reported last words of Frank Gusenberg

Neither the dying Gusenberg nor the target of the shooting, Moran, would assist the police. However, as newspapers reported the story, "only Capone kills like that." Moran, the theory ran, had been set up -- a bootlegger working for Capone had pretended to double-cross Scarface, offering a prime delivery to Moran at the garage on Clark. Capone's lookouts, mistaking Al Weinshank's tan fedora and gray trenchcoat for Moran's identical garb, ordered the "police car" to move in too soon. Faced with a seemingly routine police shakedown, the gangsters dropped their weapons and faced the wall -- lambs to the slaughter.

Although the police eventually found the disguised Cadillac sedan burned in an alley off Wood Street, and traced the machine guns used in the killing to Fred "Killer" Burke, they never discovered who, precisely, pulled the triggers on Valentine's Day. The gunmen dressed as cops couldn't have been locals -- Moran's men would have recognized Capone mobsters, uniforms or no. Burke and James Ray were both Detroit killers, members of "Egan's Rats," and each received two checks for \$10,000 from "Machine Gun" Jack McGurn around this time. The three in plainclothes might have been Capone's soldiers, fedoras and trenchcoats obscuring their features until the end. Speculation centers on Albert Anselmi and John Scalise, two of Capone's key hit men, and possibly McGurn himself, who had narrowly escaped death at the hands of the Gusenberg brothers in a phone-booth ambush earlier.

Other possibilities include Tony "Joe Batters" Accardo (whose relative youth would have made him anonymous to the victims), Joseph Lolordo (desperate for revenge after Moran's men killed his brother), or four Brooklyn killers: George "Shotgun" Ziegler, Claude Maddox, Gus Winkler, and "Crane Neck" Nugent, the elite hit squad known as "Murder, Inc." At the time, Prohibition agents investigated Chicago police corruption on the theory that bent cops had tried to silence rivals or witnesses; writers since have speculated that Murray "the Camel" Humphreys, Capone's fixer, planned the whole thing to hit his rival Weinshank -- and possibly to destabilize Capone, into the bargain. The brutality (and publicity) of the "St. Valentine's Day Massacre" drove both law enforcement and organized crime to crack down on Al Capone -- who, as it turned out, spent the day with the perfect alibi. He was in the office of the Dade County, Florida county solicitor, answering questions about his source of income.

"The castle you have pictured under 'unknown castle' in Franklin, Tennessee . . . was supposedly constructed under the direction of Al Capone, and was used as a 'half-way' point between the Chicago and Florida 'headquarters.' There seems to be some validity to this claim as I have seen a photograph of old Scarface himself playing cards on the back porch."

-- anonymous email quoted in "Castles of America"

And at the moment his rivals died, Capone was telling the county solicitor, "I'm a gambler, and I live by my winnings." Capone loved poker, pinochle, and gin rummy, playing cards almost to the day he died. His outfit pioneered the "race wire," the system that made criminal organized gambling possible and, hence, founded Las Vegas. In an eerie precursor of Bugsy Siegel's "castle in the [waste land](#)," Capone ordered the construction of "The Castle" in Franklin, Tennessee, on the fulcrum point between Chicago and his Florida estate. The front walk of this miniature (but impressive) castle has diamonds and hearts set into the stones, and high-stakes gamblers all over the country would make the trip to play cards under the eyes of Capone's bookie John Welch. One intriguing feature of The Castle was its four basements -- devoted, according to rumor, to cockfighting, mushrooms, cards, and wine.

Perhaps there is some parallel here with Capone's first headquarters, the "Four Deuces" club on 2222 South Wabash Street in Chicago. In 1920, Capone murdered its founder, "Big Jim" Colosimo, and took over the four-story building, dedicated to torture and murder (in the cellar), liquor (on the first floor), gambling (on floors two and three), and a brothel (on the fourth floor). The four realms in each building may correspond with the four suits, linked in each case by gambling rooms, just as cards seem to riffle through the Massacre and gangland in general. Capone's gambling boss Lawrence Mangano killed Mike "de Pike" Heitler on [Walpurgisnacht](#) after an all-night poker game in 1931, for example, and three killers hit Jack McGurn's half-brother Anthony Demory while playing cards in 1936.

Just as the [Gunfight at the O.K. Corral](#) can be read as a poker game for the fate of America, so too can the St. Valentine's Day Massacre resemble its dark opposite. (In *Some Like It Hot*, Moran's gang is even shown playing poker just before being killed.) Five Capone killers, five Moran victims -- two hands of poker. (Even if you count Schwimmer and May, they can be seen as the two extra cards in a seven-card stud hand, perhaps balanced by Capone's two lookouts.) Capone obviously moved all in with a full house (killers over cops -- Aces over Eights?), while Moran had only a pair of Jacks showing -- the Gusenberg brothers were the only two actual Moran soldiers in the garage at the time. (Interestingly, a poker variant in which a player must match or fold with a pair showing is called "Murder.") On a final, creepy note, the small park now occupying the lot at 2122 North Clark sports five trees -- growing in the classic "five-spot" card pattern.

*"I can never wash the guilt
Or get these bloodstains off my hands
And it takes a lot of whiskey
To make these nightmares go away
And I cut my bleeding heart out every night
And I die a little more on each St. Valentines Day"*
-- Tom Waits, "Blue Valentine"

This was not the first St. Valentine's Day murder -- most notably, three killers (prefiguring our triplicitous [three unknown murderers](#) in Chicago and [elsewhere](#)) killed [Richard II](#) of England on February 14, 1400. And it would not be the last -- "Machine Gun" Jack McGurn, the Massacre's mastermind, was gunned down in a bowling alley on St.

Valentine's Day, 1936. The killers left a nickel in his hand, an arch reminder that McGurn left five-cent pieces (again with the fives) in the hands of his "nickel-and-dime" victims. More strikingly yet, it was on February 14, 1933 that Giuseppe Zangara met his contact Steve *Valentito* get the gun with which he shot Chicago Mayor Anton Cermak the next day -- in Capone's old winter headquarters, Miami, Florida, at the other end of the ley line through The Castle. Zangara claimed to be aiming at President-elect Roosevelt (a ceremonial king-killing for [Emperor Norton's](#) 113th -- $1+1+3 = 5$ -- birthday?), but the *fives* shots all hit Cermak. (Eerily, some witnesses heard *sevens* shots.) An unknown reporter, hearing the shots crack out, joked "Just like Chicago, eh, Mayor?" An even more dramatic St. Valentine's Day massacre happened the next year, when the fascist Heimwehr machine-gunned 2,000 striking workers in Vienna. Perhaps the feel of these cold, sanguinary winds kept McGurn's closest friend Michael "Kelly" Spranze in the habit of locking himself in his bedroom beginning at 10:30 a.m. every Valentine's Day after 1929. Perhaps these matters are the true agenda for the [Parliament of Birds](#), which meets (as Chaucer assures us) every February 14th.

"He handed them over to the Gibeonites, who killed and exposed them in the high place before the Lord. All seven of them fell together; they were put to death during the first days, just as the barley harvest was beginning."

-- 2 Samuel 21:9

The smell of ritual sacrifice thus wafts through the story, around the fives and triples and sevens ($2+1+2+2$). Perhaps it blows back to the Roman feast of Lupercalia, celebrated on the ides of February, when the priests (including two young men, often brothers, known as the Luperci) would sacrifice goats and dogs and smear aprons with their blood to ensure fertility and the safety of the flocks. Could the North Clark garage have been a "reverse Lupercal," where the brothers died and the dog was smeared with their blood? In this wise, perhaps the murder of Colosimo on Lemuria (May 11), when Capone took over the Four Deuces, was a "reverse Lemuria," bringing the spirit of death into the house rather than driving ghosts out. Does a connection exist between the Roman martyrdom of St. Valentine (although there seem to be *three* St. Valentines, and *seven* churches claim the body of the martyr) clubbed and stoned to death in 269 A.D., and Capone's murder by baseball bat and bullets of Scalise and Anselmi, the possible triggermen of the Massacre?

*"In the Rabbinical Book, it saith
The dogs howl, when with icy breath
Great Sammael, the Angel of Death,
Takes through the town his flight!"*

-- Henry Wadsworth Longfellow, *Christus: A Mystery*

These workings perhaps form pieces of a bigger one, ironically "made manifest" and hidden in plain sight in 1929. The wall of the S-M-C Cartage company garage was torn down in 1967, and its 414 bricks were carefully numbered and counted. Kabbalistically, 414 equals A-Z-W-Th -- "azoth," the alchemical mercury. The "widow's son" Capone (who Moran called "the Beast" and "Behemoth") attempted an alchemical working, a dark liquor distilled from card magics and Roman legend, to transform Chicago itself into a dark tower, a Black Grail. As two police "tylers" sealed the chamber, three unknown and archetypical murderers transmuted it into an athanor of blood -- leaving only the howling of a dog to mark their passage into the cold morning.

192-page b&w softcover; \$24.95

Though rich in possibilities, few if any roleplaying games have come from the brightly-colored big stories of the small screen played out to a big bowl of sugar-laced, milk-soaked cereal. These are the Saturday morning cartoons of the 1980s, which in their way were the cliffhanger-ending pulp serials of their day. Palladium's *Teenage Mutant Ninja Turtles and Other Strangeness* is one such RPG, though that drew more from the original comic than the cartoon that would follow, while the other would be *The Masters of the Universe Role Playing Game* published by FASA in 1985.

Cartoon Action Hour: The 1980's Action Cartoon RPG provides a set of rules by which a GM can create a cartoon series of their own, whether from scratch or based upon one of the many 1980s Saturday morning cartoons. This could be a sci-fi western like *Bravestarr*, paramilitary action with *G.I. Joe*, form-switching robots with *Transformers*, or epic fantasy action with *He-Man and the Masters of the Universe*. Indeed, **Cartoon Action Hour**, which describes itself as "2 books in 1," devotes its second half to a setting or serial which is very much like *He-Man and the Masters of the Universe*. Yet the GM can also create any cartoon of his choice using the rules in this book.

This book has taken a few years to attain the physical form of a book, having been previously released as an electronic Adobe PDF in 2002. The authors have taken that previous edition and expanded it for this hard copy edition, which is being published by published by Z-Man Games, better known for their card games such as *Shadowfist*, [Grave Robbers From Outer Space](#), and [Cannibal Pygmies From The Jungle Of Doom](#). Thus **Cartoon Action Hour** marks the first RPG from this publisher.

Physically, the look of **Cartoon Action Hour** belies its origins as an amateur publication. Its layout is overly cluttered and fussy, with its desktop publishing style readily apparent. The range of art varies widely in quality and never really gets above what could be called adequate. Pleasingly, the book is organized not into chapters, but into "channels" and its optional rules, as given in the first of several appendices, which it calls "dials" (named after the switches once used to adjust the picture on the TV screen). Throughout the text is interspersed with commentary from Kagorr, the fabled would-be conqueror from the short-lived "Galactic Heroes" cartoon. This is often to belittle the efforts and output of the authors who also add their commentary to counterpoint that of Kagorr.

Character creation can be for a GM's own cartoon, one of the 24 cartoon serials given later in the book, or the fully worked up series book at the back of **Cartoon Action Hour**, *Iconia: Warriors of the Cosmos*. It is a straightforward process in which players will need to decide upon their hero's name, personality, background, and story hooks before spending their 100 character points. Story hooks are things like fears, social or physical problems, vulnerabilities,

vows, and so on that can gain a character more experience points if they confront them during play.

Character points are used to Buy Traits, Special Abilities, Oomph, and Stunt Points. Divided into physical, mental, and social categories, traits work as a mixture of attributes and skills. Thus under physical traits are listed coordination and body as well as armed, ranged and unarmed combat; piloting; and stealth. They range in value from -4 to +4, with zero being the human average and default level, while 4 is equal to world class. Beyond the rating of 4, traits can have super human values that range from 2 to 5. Traits can also have a single speciality for free, which reduces the trait value overall, but adds to its value when a character uses their speciality. More specialities need to be purchased and cost as much as the governing trait.

Oomph is a representation of a character's star billing within a series. It affects their initiative in combat and can be a bonus to a trait check if a character rolls a critical success. Stunt points are spent to give a bonus to trait checks which is equal to double their Oomph value -- or four times its value if a character really, *really* needs to give it their all.

Under the game's simple mechanics, a 12-sided die is rolled and the trait value added to it to equal or beat a difficulty number. If a character has a super-human trait, its value gives them that number of 12-sided dice to roll and choose from before adding the trait's value to get the best result. Combat adds only a relatively slight degree of complication to the resolution system and is very much geared to fast and furious slam-bam action.

Where character creation gets more involved is in the construction of Special Abilities. These can be spells, super powers, psionics, magical artefacts, gadgets, weapons, vehicles, innate racial abilities, or animal companions. The process really is not *that* difficult and is helped along with lots of examples, both of the creation process and of the finished products, some of which can be found as part of the several finished sample characters. There is some emphasis in the Special Ability construction rules upon transforming robots; this is not a bad thing, as they are a favorite of the genre.

Miscellaneous rules, such as handling goons, experience points and character advancement, wealth, fire, and drowning round off the rules to ***Cartoon Action Hour*** -- which take up just a quarter of the book. Then the authors get down to the meat of the book, creating and running a series while keeping to the conventions of the genre. The given list of conventions includes having the villains attack in single file, bamboozling them for a turn or two by dropping a barrel on their heads, always having the villain know that they are evil and proud of it, *and* always having them always explain their plan to the heroes at that right moment. Some of the GM advice is obvious, but that given over to handling both series and individual episodes is well done and shows that the authors know their stuff.

This is backed by some five sample backgrounds and a plethora of seeds that could be developed yet further by the GM. These begin with "Tommy K and the Star Kitties," in which a rock 'n' roll band attempt to bring their music to the galaxy while the evil Slaggorian Police Force attempts to stop them. This is a low-character-point game and includes new guidelines for handling songs. "Dark Brigade" is a military-themed series in which UN soldiers fight the evil vampire Lord Syn. "The Defenders of Aqua City" sees heroes protecting their home from a number of threats in a post-apocalyptic underwater future. "Star Warriors" battle to save the universe from the criminal Lord Zarnon and his army of cyber troops. "Transbots" is the biggest of the five series given, involving 150-character-point transforming robots battling others created to take over the USA.

This last series could make use of the "giant transforming robots" Dial given in the first appendix, which adds new rules for character creation, gestalt or merging robots, and critical hits on transforming vehicles. The other rules or Dials enhance the use of spells, let players create characters with really super super-human traits, and allow for fan popularity. The rules for fan popularity replace the existing standard rules for experience points and lets a character gains perks like Artists or Writer's Pet and New Toy Variant (which must be incorporated into the show when their Cool Factor rises to high enough a level.) Conversely, if a character's Cool Factor falls to zero, a character can find himself "dropped like a hot potato!" Though only an option, these fan popularity rules are very appealing as well as in keeping with the genre.

The other appendices include a glossary of game terms and 1980's slang, a list of recommended viewing, and finally the designers' notes that relate the history of ***Cartoon Action Hour***. One suggestion that might have made the list of recommended viewing of more use would have been to included a guide to locating some of the series discussed;

otherwise it serves as an excellent introduction and overview of some of the best entries in the genre.

The remainder of **Cartoon Action Hour** -- almost 70 pages -- is devoted to the *Iconia: Warriors of the Cosmos* Series Book, which author Cynthia Celeste Miller describes as her own tribute to *He-Man and the Masters of the Universe*. As explained in the dreadfully awful opening comic strip for this Series Book, Haven is the last remaining free kingdom on the world of Iconia. Once a beautiful and peaceful utopia, the world's nations have fallen under the control of the evil sorcerer Nekrottus and his Blackskull Empire. Haven has sent out a call across all of Iconia for noble heroes to come to the kingdom's aid and join the Guardians of Iconia. This allows for a wide range of characters, and lots of pre-prepared weapons, vehicles, and character skill packages are provided to ensure that both player and GM get the feel of this cartoon exactly so. The latter skill packages include the Grizzled Warrior, Battle Princess, Sorcerer, Metallic Combatant, and Spunky Teen. The Series Books give details many of Iconia's locales, races and personalities, along with a half-page synopsis of each of its first 12 episodes.

There is both room for the players to use one of the many NPCs described -- though not of course, Nekrottus -- or for designing their own before enrolling them as members of the Guardians of Iconia. A nice touch is that the author designs this series from the ground up, giving it a development history, a controversy over the inclusion of the demon-like, skeletal Nekkrotus, and its own range of action figures. As throughout the rest of the book, the author takes time to interject with more advice, this time on writing a Series Book.

Due to both age and nationality, I may not be the best qualified to review **Cartoon Action Hour**. After all, the UK only got Saturday morning television in 1976, and British television regulations would never let a channel broadcast a whole morning full of cartoon goodness. (Plus on at least my Saturday mornings were spent dusting my room, but I digress . . .) Thus I missed some of these 1980s cartoons by the time they made it to the British screen, though not all those listed in the recommended viewing appendix did so. That said, neither of my limitations (of culture or age) prevent me from appreciating what the authors have tried to do with **Cartoon Action Hour**. Essentially this is to model any of the 1980s cartoons played out on a grand, epic scale and to do so rather well.

If there is an in-built bias to **Cartoon Action Hour**, it is primarily on the *He-Man and the Masters of the Universe*-type cartoon -- particularly so with the *Iconia: Warriors of the Cosmos* Series Book, but to a lesser degree upon the transforming robot series. Fans of either show will appreciate both of these emphases, but with series samples and seeds aplenty, there should be something to please anyone who is a fan of the genre within the pages of this book. Plus the rules and mechanics are nicely simple, making it easy to get into and play up to the epic heroism of **Cartoon Action Hour: The 1980's Action Cartoon RPG**. Playing with bowls of cereal and in whatever you wear to bed are both entirely optional.

Running The Adventure, Part VI

. . . And That's A Wrap

I've spoken before about [endings](#), but mostly in the grandiose "Well, that's great; it starts with an earthquake" kind of way. This week I'll be wrapping up my six-part series describing how I run scenarios by talking about ending the adventure.

On the one hand, ending an adventure is pretty easy. Presuming you've had a satisfying climax to the adventure, it's hard to screw up the aftermath; have the appropriate parties say, "Attaboy," throw some experience points at 'em, and decide who's fighting the dog to pick up those spilt Doritos under the table . . . the players will probably be happy.

But in another way, adventure endings can be a good opportunity to give the players a chance for additional fun, especially given how the stakes are so much lower. Here, then, are some points I keep in mind while wrapping up the adventure.

Give the heroes their moment of glory (if they earned it). Ending the adventure too quickly after the climax denies the heroes their time to shine; even worse, it can fail to give the party a chance to contemplate the outcome of the adventure. After all, if the camera fades to black right after the climactic moment, then there isn't much to differentiate saving the world from saving a kid from homeroom embarrassment. (No, this doesn't mean that the heroes *need* to save the world to have a satisfying adventure . . .)

Now, this can mean the before-mentioned "attaboys" from campaign notables. But really, many kinds of appreciation are appropriate. After all, the kinds of adventures most heroes get involved with are likely to have *some* thankful people attached, and this can express itself in a myriad of ways: heartfelt expressions of gratitude, offers of payment (or future employment), gifts, and so on. These elements can add on their own plots and subplots themselves; how does Agent Midnyt react when he saves a little girl's life, and she offers him one of her prized cat's new litter of baby kittens?

Even in those adventures that don't have an obvious aftermath -- such as those groups that affect the world secretly -- I often tend to have fun by telling them the results as seen by the rest of the world: "The next day a local newspaper headline reads, 'Area Warehouse Burns Down; Inside Police Find Shattered Jar With Remains Of Brain' . . ." Again, letting them know that their actions have outcomes and consequences is almost always satisfying to them .

Let the heroes do cleanup. This is closely related to the moment of glory. My gaming groups tend to take delight in performing mop-up duties on my adventures; if there are loose threads (or loose threats), they love to track them down. Assuming this won't take too much time, I let them do so. If there *are* elements that would take too much time (perhaps because the adventure has gone too late and the players are looking sleepy), then I'll take notes as to what they are looking to resolve, and try to work it into the next adventure.

Let them get back to any subplots. Often, plot gets in the way of things the players *really* want to do. If the heroes were pursuing any plots that I think might be resolvable or extended in a satisfying manor, I'll give them an opportunity to do so. (If need be, I'll often remind the players what they were pursuing; after all, these subplots are likely to be weighing heavier on the characters' minds than their players'.)

End on a cliffhanger. This one may be the most important one. In most games, I prefer to end on a "cliffhanger" if at all possible. This doesn't necessarily mean anything life-threatening or dangerous (although it can); instead, I try to give them a piece of information, plot hook, or element of interest that will keep them anticipatory and excited about the next adventure. Thus the heroes might get a letter from an old (and supposedly dead) nemesis, they might receive an invitation to an important function, or one of them might suddenly develop a slight fever.

Often, I'll make these bits up on the fly (assuming I haven't worked it up in advance). In general, sometimes these

cliffhangers are important, and sometimes they're red herrings. ("Two days later, the fever clears up . . .") I found that if I made *every* cliffhanger be of monumental importance, the players grew a little bored. But by making sure that there was the occasional breather, they were more intrigued by all of them.

If I can't do a good cliffhanger, then I'll try to end on a vivid scene . . . usually tied to the aforementioned moment of glory. ("And as the sun sets on another daring adventure, an as-yet-unnamed kitten stares up at Agent Midnyt and gives a tiny mew . . .")

Find out goals and ideas from the players. After the cliffhanger signifies the end of the adventure proper, I'll poll the players and see if they had anything they wanted to do before or during the next game. (If the players can't think of anything immediately, I'll encourage them to tell me at the next game session, or drop an email between games.)

Give experience. As I gather my thoughts on this, I realize this might be a column of its own at some point. But for now, I'll just say that I give the players the points necessary for them to get kewl new skills and powers.

Get thoughts and opinions on the game. Since I tend to tweak my GMing style periodically, and try new and different techniques almost constantly, this is the point where I try to get player thoughts and opinions. If anyone has any questions, complaints, or compliments, I'll eat them up like candy. (Actually, I encourage players to talk to me anytime, barring an in-game argument . . . although I go to great lengths to avoid another ["We need to talk"](#) moment.)

Sort out things for the next game. Yes, we sorted arrangements out for the next game at the [beginning of the session](#), but I take the opportunity to make sure everyone remembers what we decided.

Clean up Doritos. Yes, that's pretty much it. Wrap up, go home, and start thinking of either excuses to delay the next game or new plans to lock the players in various rooms while I think furiously.

In all, my philosophy for ending adventures is pretty straightforward. Since the game is primarily about the players and their enjoyment, make sure it's interesting all around. Make the players glad to be part of the game, make the players enthusiastic about the adventure we just ran, and make them anxious to come back to the next game.

And *that's* how I keep my players trapped in my web of entertainment.

--Steven Marsh

Combine Infantry Weapons and Tactics in GURPS Ogre

by Henry J. Cobb

GURPS Ogre covers mostly Paneuropean personnel and equipment and Combine Ogres and as noted the battlesuits are fairly close, but the actual infantry weapons are quite different. The biggest difference is that every Combine battlesuit has a 20-pound capacity hardpoint in each arm. (The pair adds \$4 to the suit cost and takes 2 pounds from the weapons capacity for each suit.)

The Paneuropeans attribute the Combine's battlesuit weapon choices (a gun firing depleted uranium ammunition and a missile with a nuclear warhead) to a callous disregard for the environmental health of the countries the Combine occupies, but the actual reasons are more complex. Combine tactical doctrine revolves around the SATNUC (Saturation Nuclear Cluster) warhead they invented and its effects on various levels of armor protection.

Armor Level Zero (AL0) is DR24 or less. At this level the SATNUC secondary burst radius is considered lethal. Targets at this Armor Level are engaged by 6mm gunfire if in the open or loose SATNUC fire if under cover.

Armor Level One (AL1) is DR25 to DR69. At this level the SATNUC primary burst radius is effective and either 6mm gunfire or more carefully aimed SATNUC fire is needed. Unpowered infantry armor usually offers this level of protection. Also most Paneuropean battlesuit weapons are at this level or less making it rather easy to disarm them, even if the shockwave fails to penetrate their suits.

Armor Level Two (AL2) is DR70 to DR200. At this level or above only a direct hit from a SATNUC will damage the target so 6mm gunfire is favored. Tactical missiles and battlesuits are armored to this level to defend against blast effects and are hopefully mobile enough to avoid most direct nuclear hits and are therefore engaged with armor piercing automatic fire.

Armor Level Three (AL3) is DR201 to DR4,200. At this level 6mm gunfire is ineffective but a single SATNUC round can still penetrate with a direct hit and so nukes are favored.

Armor Level Four (AL4) is DR4,201 to DR11,000. At this level several SATNUC direct hits would be required to seriously damage the target but the largest tank cannon rounds can still punch through. Infantry requires massed attacks to defeat armor at this level or greater.

Armor Level Five (AL5) is DR levels above 11,000 that require multiple hits by the most powerful weapons to destroy.

The 6mm gun pod was primarily developed to deal with targets at Armor Level Two, to cover the gap between the SATNUC area and direct hit effects. Targets with either more or less armor are more effectively engaged with nuclear fire.

The battlesuit-launched nuclear weapon that the Combine chose -- the Shaped Nuclear-charge Indirect-fire Precision Engagement, or SNIPE, missile -- is a stealthy subsonic missile that follows a preplotted course to the designated target location and then releases a single SATNUC submunition to seek out a target.

For the first second after launch, the SNIPE missile is boosted up to almost 400 miles per hour by a decidedly non-stealthy solid rocket engine (aPSig -1, interception -10); then it slowly accelerates on a more stealthy ramjet (aPSig -10, interception -17) for another 15 seconds, covering a little over a mile on an evasive course at three fourths the speed of sound.

During the first second after launch the SNIPE missile is considered a direct fire weapon and is fired with the Gunner (Rocket Launcher) skill, beyond that range the missile is always an indirect fire attack and is targeted with the Gunner

(Guided Missile) skill. Combine troopers are taught both skills and are especially feared in overrun combat where their missiles can hit before the target has a chance to apply point defense fire.

Ranger units use a smarter and more stealthy missile that takes five seconds to cover the first 90 yards on a small jet engine but continues to accelerate and travels three miles during a minute long evasive dash. The aPSig for this missile in flight is always -17 and interception is -20.

A typical load for a standard battlesuit would be one gun pod, 20 box magazines of 6mm gun ammunition and 10 SNIPE missiles for a total weight of 139 pounds of weapons, leaving 29 pounds for other weapons and cargo. If combat was imminent the trooper would have a gun pod mounted on the hardpoint of his primary arm (for defense against missiles and other infantry) and a missile mounted on the hardpoint of his other arm (to engage vehicles or groups of infantry).

Marine battlesuits are equipped in a similar fashion but three or more of the missiles would be replaced with torpedoes of about the same weight with shaped nuclear warheads.

A ranger would carry the gun pod, 20 box magazines and 10 of the stealth missiles, leaving only 19 pounds for other equipment.

In combat it takes three seconds for an infantryman to reach back, pull out a gun or missile and attach it to his hardpoint. It takes one additional second for the weapon to sync up with the battlesuit's computer. After this time the infantryman can aim and fire normally.

Replacing a box magazine is quicker and only requires three seconds, or less if a fast-draw roll is made.

For combine troopers modify the Infantryman template by removing Guns (Grenade Launcher) and reducing Guns(Needler) by one level as effective skill with battlesuit mounted weapons cannot exceed Battlesuit skill.

Add Gunner/TL9 (Guided Missile) (P/A) DX+1[4]-13
and Gunner/TL9 (Rocket Launcher) (P/A) DX[2]-12.
The template cost increases by 3 points.

Note that quite a few troopers buy up Gunner (Rocket Launcher) and off hand training with it.

Combine Tactical Deployment

Traditionally infantry have been forced to open up their formations and deploy over greater areas as weapons have increased in firepower and range. With the widespread deployment of tactical nuclear weapons this reached an extreme.

A Combine six-man battlesuited squad would be organized as three two-man pairs. The partners in any pair of troopers would keep within about 10 yards of each other on the battlefield. There would be a pair of troopers to the front left and then another pair about 50 yards to the right of the first pair and then the squad leader with the fifth trooper would be fifty yards from each of the front pairs, forming the rear point on an equilateral triangle and able to rush forwards to support either of the front pairs as needed.

For a 20-man, three-squad platoon, the leftmost pair of the second squad would be 50 yards to the right of the rightmost pair of the first squad and the third squad would be deployed behind and between the front two squads with the platoon sargent and lieutenant deploying where needed. The result was a rough triangle with sides of around 150 yards.

The theory was that when a trooper took a direct hit from a SATNUC skeet, only his buddy would suffer from the primary shockwave. The problem was that there seldom was only one SATNUC skeet exploding over a squad at any one time.

A company would typically deploy with a spacing of at least 250 or more yards between platoons and could typically hold a front of one to four miles against infiltration.

Weapons Table

Guns(Needler)

Name	Malf	Type	Damage	SS	Acc	1/2D	Max	Wt	RoF	ST	Rcl	Cost	LC
6mm Pod	Ver.(Crit)	Cr.	6d×3(3)	7	14	920	4,600	16	16*	16B	0	\$5,300	0
6mm Gun with shoulder stock (Includes a Scan 11 boresighted PESA)			6d×3(3)	12	12			10.3		8	0	\$12,400	0

Gunner (Guided Missile)

SNIPE	Crit	Spcl.	48y	15	11	99	1,760	10	1/4	15B	0	\$22,000	-1
Launch Tube			6d×3(3)	14	11			12	1/2	10	0	\$9,250	0
(Includes a Scan 11 boresighted PESA)													
Launch Tube			6d×3(3)	14	11			12	1/2	10	0	\$9,250	0
(Includes a Scan 11 boresighted PESA)													
Stealth SNIPE		Spcl.	48y	--	--	--	5,280	11	1/4	15B	0	\$38,200	-1

(Note that SS, Acc and 1/2D apply to using the SNIPE as a direct fire weapon with Gunner (Rocket Launcher), beyond this range Gunner (Guided Missile) is used.)

SS: Note that the battlesuit weapons stats assume a HUD, reducing SS by 5. The non-battlesuit weapons are also usually targeted with a HUD which would reduce the figures given here by 5.

ST: A "B" indicates that the weapon is normally fired from a Battlesuit hardpoint and this is the minimum strength for a battlesuit arm to fire this weapon.

Max: These are the usual maximum ranges for the SNIPE missiles when fired on ground hugging evasive courses. Non-evasive is twice this.

LC for nuclear weapons is -1 as even most military forces would think twice about issuing these weapons to their troops.

Combat Notes

SATNUCs can only be fired indirectly, as they require height to deploy properly. The bigger the shell or missile the greater the height required, but the single warhead SNIPE missiles could deploy their warheads from a height as low as 20 yards. (With a popup at the end of their flight.)

Infantry units of up to platoon size can synchronize their SNIPE missile launches and timing to achieve the same effect as a large shell delivering all the skeets at once, but this requires an extra second and successful Comm and Gunner (Guided Missile) skill rolls against the lowest skill levels n the group. Take the total number of missiles in the salvo that actually reach the target point after defensive fire and find the burst radius on the following table.

Missiles Burst Radius

1	48y
2	68y
3	83y
4	96y
5	107y
6-7	118y
8-10	135y
11-18	160y
19+	200y

Resolve a SATNUC as a typical indirect fire mission to find where the center point of the burst winds up. Then for every target within the primary burst radius that does not have an IFF code recognized by the SATNUC warheads, sort

them in the order of largest size to smallest and then by least to most aPSig defense bonus. For each target in turn, roll against the SATNUC TL(9) plus the size modifier of the target or less on three dice to make a lock-on. Stop rolling for lock-ons when all the targets have each been tested once or the total number of submunitions have found lock-ons. Then for each lock-on roll against the negative of the target's aPSig or less to avoid a direct hit.

Each target that suffers a direct hit takes 6dx2,000 damage to its top armor. BPC defends at 10 times DR (rather than DR squared) against this damage and ablates at only 1 point per 500 points of damage after resolving damage. Then apply normal explosion effects to every unit within the primary and secondary burst radii that did not suffer a direct hit.

Combat Example

A lieutenant in a command suit is talking with an two engineers and four rangers near a Superheavy Tank when a trio of hostile hypersmart missiles pop up over the horizon. There's a private in a standard suit 200 yards away who's supposed to be on overwatch but is instead playing a video game on his suit computer.

Two of the missiles are shot down, but the third manages to burst over the group.

A hypersmart missile has five submunitions, so the order of targeting is the Superheavy, then the engineers, then the command suit, and then the rangers (aPSig breaking the tie of all the suits being size modifier +1).

The first warhead needs to roll a 16 or less to lock-on to the Superheavy and it does. The Superheavy needs to roll 11 or less to decoy the warhead and with a 12 fails and takes 40,000 points of damage to its top armor, which fails to penetrate DR 5,000, but does reduce it by 80 points to DR 4,920.

The second warhead needs a 10 or less to lock on to the first engineer and with a 12 fails to find it so moves on the second engineer and with an 8 locks-on. The engineer has an aPSig of -8 and so needs to roll a 8 or less. With a roll of 9 the warhead is not fooled and the engineer takes 42,000 points of damage of which his DR 125 stops 1250 points of damage and so he moves on to that great construction project in the sky.

The third warhead locks-on to the Command suit, but with a roll of 9 against a aPSig of -9 is evaded.

The fourth warhead fails to lock-on to the first ranger but does lock-on to the second ranger but with a roll of 14 against an aPSig of -16 is evaded.

The fifth warhead locks onto the third ranger and is also evaded.

There are no further warheads so the fourth ranger is not directly targeted; he thus only has to deal with the shockwave like the other survivors.

The Superheavy tank just took 40,000 points of damage and masses 300 tons so needs to make a control roll at -8. The driver has skill 14 and rolls a 12, missing by 6. The tank has a SR of 7 and so this counts as a failure by zero or less. The tank veers from the impact and needs to roll an 11 or less or shed a track.

All of the battlesuited troopers except for the surviving engineer and the distracted private in the standard suit made their Battlesuit skill rolls to hit the dirt when they saw the final missile blossom and so count as prone against the shockwave.

The Command suit takes 4,200 points of explosion damage which bounces off his DR100, but it does toss him 8 hexes back and he avoids whiplash as his delta-V is only 16mph. (Similar effects occur for the rangers.)

The standing Engineer takes 3,800 points of explosion damage and because he is not braced or prone he gets tossed back 38 hexes and suffers 3d-6 whiplash damage. He needs to make a Battlesuit skill roll at -8 to keep his footing. (Rounding up on the Range/Speed table to find the penalty.)

The unaware private in the standard suit is only in the secondary burst radius and so only suffers 480 points of explosion damage, knocking him back 4 hexes and causing him to have to make a Battlesuit skill roll (at -2 for the distance thrown back) to keep his footing.

The crew in the Superheavy tank are completely shielded against radiation, but all the battlesuited troopers in the primary burst radius are going to clock up about 4 RADs.

Gearhead Stats

The SNIPE missile carries a single SATNUC skeet, by GURPS Ogre this is 3.2 pounds, \$10,000, 0.04cf with a "burst radius" of 48 yards.

Adding inertial guidance adds 1 pound, \$10,000 and 0.02cf.

A 200 pound thrust booster solid rocket that burns for exactly one second weighs 0.6 pounds, takes up 0.006cf and costs \$3.00.

A ramjet engine that delivers 10 pounds of vectored thrust weighs 1.5 pounds, takes up 0.03cf and costs \$150.00.

The ramjet burns 1.25 gallons of jet fuel per hour so 15 seconds of fuel is 0.0052 gallons. A standard self sealing tank weighs 0.0052 pounds, takes up 0.0008cf and costs 3 cents. The jet fuel adds 0.034 pounds and 2 cents.

The total internal volume is 0.0968cf and the body has very good streamlining so the total volume of the missile is 0.12cf and a surface area of 1.46sf and its size modifier is -3.

An extra light advanced responsive robotic lifting body structure with very good streamlining weighs 0.41 pounds and costs \$1,314.00.

DR 70 of BPC armor weighs 2.555 pounds and costs \$255.50

Sealing adds \$14.60.

TL11 Basic Emission Cloaking adds 0.73 pounds and \$109.50.

The total weight is 10 pounds or 9.4 pounds after the rocket booster is discarded.

And the total price tag is \$22,000.

On launch the rocket burns for one second and accelerates the missile to 400 mph, covering 100 yards in this time.

Then the ramjet takes over and accelerates at 21 mph/s for slightly under 7 seconds then maintains a speed of exactly 540 mph until burnout.

The ADR is 0.25 so the top speed under the ramjet is 547mph.

The stall speed under the ramjet is zero, but it can't go below 375mph without losing the ramjet thrust so it needs the booster rocket to get it going in the first place.

The aSR is 2.

The aMR is (TL9 +2 (responsive robotic) - (-3 size)) /2 or 7 and the lifting body shape lets it keep that so it can pull 7 Gs every second and it does, doing a preprogrammed 15 degree bend or pair of drifts every second so it can dodge.

If it flew in a straight line for the full 16 seconds it would cover over two miles before burnout, but all that dodging and weaving reduces the total range to a little over a mile.

The only control on the missile is a mounting hook that attaches to a launch tube or battlesuit hardpoint.

The rangers demanded a stealthier missile with longer range, that made it more costly and slightly heavier. The Stealth SNIPE missile has the same warhead as the normal SNIPE but the guidance is a Scan 8 passive radar (0.3 pounds, 0.006cf, \$900, for terrain following) tied into a tiny hardened genius robot brain (0.75 pounds, 0.015cf \$20,000, complexity 3, IQ 6, DX 9) running (Computer Navigation C2 \$250, Datalink C1 \$200, Map of battlefield C1 \$500, RVO Piloting-12 C2 \$4,000).

For propulsion the rangers insisted on not having a rocket flare give away their launching position so the engine is a light turbofan with 12 pounds of vectored thrust (2.24 pounds, 0.045cf, \$336). It requires 0.18 gallons per hour and has one minute of fuel or 0.0027 gallons in a standard self-sealing tank (0.0027 pounds, 0.0004cf, 3 cents) of jet fuel (0.0176 pounds, 1 cent).

The total internal volume is 0.1064cf and very good streamlining gives a total body volume of 0.133cf and an area of 1.56sf.

An advanced, super-light, responsive, robotic lifting body structure with very good streamlining weighs 0.1755 pounds and costs \$561.60.

70 points of BPC weighs 2.73 pounds and costs \$273.00

Sealing adds \$15.60.

Radical Emission Cloaking adds 1.56 pounds and \$1,170.00.

For a total weight of 11 pounds and a cost of \$38,200.

Adr is 0.26, top speed is 588mph. Stall speed without vectoring is 39mph so the aAccel is 8mph/s for the first second, then 15mph/s for the second second and 20 mph/s for the third second and at a speed of 43mph it gains full lift and accelerates at 21mph/s from the fourth second onwards, reaching 560mph 27 seconds into the flight and it maintains this speed for the remainder of the minute long flight which would carry it over seven miles in a straight flight, but because it is weaving back and forth every second its official range is only three miles.

Once hardpoints were added to Battlesuits, a gun was designed to fit into a weapon pod attached to a hardpoint so as to leave both hands free when reloading missiles.

The basic gun in the gun pod is a medium barrel low powered light automatic recoilless 6mm gauss gun firing APFSDSDU darts for 6dx3(3) damage at a ROF of 16. This is sufficient against battlesuits and missiles, but hopeless against vehicles.

Ranges are 1/2D: 920 yards, Max: 4,600 yards, Indirect Max: 11,500 yards. Acc is 13 +1 for the ammo.

Note that gauss and grav smallarms may be designed to fire only fin stabilized discarding sabot rounds if desired. Such weapons cannot fire non fin-stabilized ammo and they do not actually use sabots because the slots for the fins are built into the barrel. Gauss and grav cannon also do not use real sabots but have virtual sabotting or rifling that is turned on as needed by ammo type.

Base weight of the weapon is 5.4 pounds for a SS of 12, WPS is 246th of a pound each, a 1.3 pound box magazine therefore holds 160 rounds (10 turns of fire).

Loaded weapon weight is 6.7 pounds, 0.134 cf.

Full Stabilization adds 0.54 pounds, 0.01 cf and \$54 to the gun.

The total internal volume is 0.144cf for a surface area of 1.65sf A light structure with advanced materials adds 0.93

pounds and \$412.50 and has one hit point.

75 DR points of BPC then weighs 3.09 pounds and costs \$309. Radical Emission Cloaking adds 1.65 pounds and \$1,237 and sealing adds \$16.50

So the total weight of the loaded pod is 13 pounds and the cost of the unloaded pod is \$4,160 for the base gun plus \$2,029 in extra gear gives a total pod cost of \$6,189. (Siz -3, aPSig -17, MAD modifier -14 when firing).

Even the rangers couldn't improve on this gun, so they carry it also.

The ammo costs 39 cents per shot or \$63 for a 160 round box magazine.

The power requirement (to be met by the battlesuit) is 12.2 kW per shot times 16 shots per second or 73 kW. A typical load is 21 box magazines. Firing all of these would draw 41,000 kW of power or less than one third of a standard battlesuit's weapons power cell.

The gun has no grip, handle or controls other than the mounting hook which attaches to the battlesuit's hardpoint. It is a BPC covered cylinder 10 inches in length and almost 3 inches in diameter. There are ports that open at the front and rear of the gun when it fires. The front port shoots out darts and pulls in cooling air that flows over the launch coils and is then forced out the back to exactly balance the recoil of each shot. The gun is aimed via the suit's HUDWAC that is tied into the targeting program in the suit's computer.

Note that the increased lengths for electromag guns at VE99 only applies to TL8 gauss guns . . . or did you think Ogre secondary batteries were actually 21 meters long?

Militia Gear

The Combine rarely deployed non-battlesuited infantry, but did equip some client states to do so.

A top of the line non-battlesuited "rifleman" would be outfitted as follows:

Light Combat Armor with limited radiation protection and a built in HUD. 24 pounds and \$1,450. Has PF200 and offers the following protection.

Location	PD	DR
Face	2	15
Head	4	20
Hands/Feet	2	15
Limbs	3	17
Torso	4	25

This suit is designed to save the trooper's life, in the SATNUC secondary burst radius, if he ducks and covers. (Note that Battlesuits are designed to survive in the SATNUC PRIMARY burst radius, but not against direct hits.)

A personal computer with a short range communicator with a scrambler that plugs into the helmet HUD and the gun. Complexity 3, one pound and \$775.

Typical software is:

- IFF transponder software complexity one, \$500 (uses scrambler).
- Datalink, complexity one, \$200. (Uses scrambler to talk with squad)
- computer and fiber optic cables to gun and HUD.)
- Targeting +4, complexity three, \$2,000.

A shoulder stock version of the 6mm gun without the stabilization, armor or equipment pod, but with a HUD Sight and

a 1 mile boresighted PESA. (Scan 11)

The total unloaded weight of the shoulder stock gun is 8.5 pounds and the loaded weight is 10.3 pounds for a minimum ST of 8. The total cost of the unloaded shoulder stock gun is \$12,400 and it has SS 12 and Acc 12 with ammo.

The box magazines for these weapons include a rechargeable C cell for a total loaded weight of 1.8 pounds and loaded cost of \$163 for each 160 round magazine. Five box magazines weigh nine pounds and cost \$815.

A geiger counter. 1/4th pound and \$100

Backpack with frame that contains the rest of his gear. 10 pounds and \$100

Four replacement CBR filters (replace every 48 hours to keep the radioactive dust out.) 1 pound and \$160

Two SNIPE missiles for his "MissileMen" buddies. 20 pounds and \$44,000.

Shovel for digging trenches and graves. 6 pounds and \$12.

Filtration Canteen, 1 pound and \$175

16 assorted drug patches, 1 pound and around \$1,000.

Total price tag less than \$65,000 (2/3rds of that is the missiles.) Total weight is 82 pounds, or 43 pounds without the backpack.

The "MissileMan" variant replaces the gun with a shoulder firing launch tube for the SNIPE missile with HUD sight and 1 mile PESA. 12 pounds (unloaded) and \$9,250.

MissileMen also carry a machine pistol. \$350 and 3.5 pounds. Their computers are loaded with Fire Direction +4 in addition to Targeting. Complexity three, \$4,000 (Only one C3 program is running at a time and it depends on range which is the better choice.) They also get to carry a third SNIPE missile.

Total price tag for the "MissileMan" is \$86,000. Total weight is 90 pounds but only 51 pounds without the backpack. (But with a missile loaded.)

One trooper per six-man squad doesn't carry spare missiles or a shovel; instead he carries this:

Squad Battle Computer

Sealed Extra-Light frame of Very Expensive materials and PD 40 BPC containing:

- Medium Range communicator with scrambler and direction finder. 0.5 pounds, 0.01cf, \$1750.
- 7 Mile PESA (Scan 16). 14 pounds, 0.28cf, \$54,000.
- Level 16 surveillance sound detector. 1.6 pounds, 0.032cf, \$800.
- Two foot sensor periscope for all of these. 3.2 pounds, 0.06cf, \$11,310.
- (Used to peek over the top of the trench.)
- Small genius hardened computer, complexity 4. 3 pounds, 0.06cf, \$50,000
- A C cell. 0.5 pounds, 0.01cf, \$100 (Sufficient to run the box for a week.)

Total volume is 0.45cf, area is 3.5sf, frame is 1.3 pounds; \$220. The armor is 2 pounds and \$200. Sealing adds \$35. The box has radical emission cloaking for 3.5 pounds and \$2625.

Total weight is 29 pounds and cost is \$121,000 plus software.

Typical programs are:

- Datalink (C1, \$400)
- Fire Direction +5 (C4, \$8,000)
- Vehicle Recognition Manual (C1, \$500)
- Map of the battle region (C1, \$500)
- Computer Navigation(C2, \$250)
- Transmission Profiling(C3, \$4,000)

The contacts located by the sensor tech would then be passed out to the other members of the squad huddled around him.

So the typical six man "Militia" squad is one sensor tech, three "Riflemen," and two "MissileMen." This makes for a total firepower of three to four guns and two launch tubes.

It is said that a platoon of three to four such squads can match the firepower (if not the survivability) of a Battlesuited squad for a fraction of the cost, if you don't count human lives.

For these "elite" Ogre fodder, add the following to the Militaman template:

Increase HT to 12 +10 points. Add Running (P/H; HT) HT-2 [1]-10, Electronics Operation/TL9 (Comm) IQ-1 [1]-11, Electronics Operation/TL9 (Sensors) IQ-1 [1]-11, and Gunner (Guided Missile) (P/A) DX [2]-11 for a total template cost of 60. (Though at least they get to play around with nukes now.)

Note that the running skill increases their base move to 7, minus 3 for heavy encumbrance leaves move 4 which is just over one GEV-scale hex every two GEV-scale turns.

Another Little Shop Of Horrors

Three New Weapons for *GURPS*

by Stephen Dedman

Another day, another gun fair . . .

My contact was late, as usual, but he never did have much of a grasp of any period of time shorter than twenty-to-life. I looked at my watch, and Cyberwoman looked back at me from the tiny screen. I shook my head. My contact had told me that someone at the fair was trying to move some ex-military stuff from the former Soviet Union, including missiles and warheads, but he wouldn't give me any details until I handed over the cash. The whole team was staking out the exhibition center, in plain clothes or in hiding, ready to pounce -- and here I was, pretending to be interested in the overpriced junk on some antique dealer's table.

I blinked, and looked at some of the items more closely with second sight. Three of them had auras like forest fires. I touched the knife, wondering what psychometry would tell me about its history, and it turned in my hand as though eager to leap out of its sheath and attack me . . .

The Edge of Darkness

This is an utterly black, well-balanced boot knife (small knife) with a narrow two-edged blade, small handguard and flat metal hilt. The scabbard is black leather from some unidentifiable species of reptile. To most people, it looks so unremarkable that it's barely visible at all.

To anyone with the Honesty disadvantage, however, the knife appears so ugly that they react to it at -3 and require a Will roll even to touch it. Using it will require another Will roll at -4, and they will receive a -4 modifier to their Knife or Knife Throwing skill unless they are attacking another character with the Honesty disadvantage. On a Critical Miss, they will always get a full damage "hit yourself" result. Buying it will require a Will roll at -1 to -5, depending on the asking price and the character's wealth level. As long as he owns the knife, he will also have the Unluckiness advantage. If this doesn't kill him outright, it will slowly reduce his wealth level until he buys off the Honesty disadvantage or is compelled to sell the knife. In either event, his luck will then return to normal.

To anyone with the Greed or Kleptomania disadvantages, the knife is so appealing that they must make a Will roll at -3 not to steal it. Buying it will require a Will roll at -1 to -5 as above. The knife has the soul of a thief, and is only interested in belonging to a thief; for a thief to sell it, give it away, lend it or even throw it will require a Will roll at -5.

Anyone without the Honesty disadvantage who steals (but not buys or finds) the knife will acquire the following advantages and disadvantages while they carry it: Alertness/2, Greed, Kleptomania, Less Sleep/2, and Night Vision. They will also receive a +1 to the following skills: Appreciate Beauty, Climbing, Detect Lies, Fast-Draw (Knife), Fast-Draw Knife from Teeth, Merchant, Stealth, Streetwise, and Survival (Urban). The knife also gives +3 when used for Intimidation or Starglazing, any attempt to disarm a Trap, or any attack on the Vital Organs, Heart, Kidneys or Neck. If the knife is bought or found, not stolen, it will give none of these advantages, disadvantages or skill bonuses until the wielder proves himself to be a worthy thief by using the knife while stealing an item of greater value than the knife (GM's decision).

Whether stolen, bought or found (or even if wielded by a character with the Honesty disadvantage), the knife is of Very Fine Quality (p. B74) and is +4 to Holdout.

Every time the knife is used for any purpose, or the wielder improves any of the skills listed above while carrying it,

the wielder must make two Will rolls -- one to avoid acquiring the Greed disadvantage permanently, the other to avoid acquiring the Kleptomania disadvantage permanently. If (when) he has both disadvantages, he must roll whenever he uses the knife or acquire the Dependency disadvantage (Constantly): he must carry the knife or lose 1 HT per minute without it.

The knife expects its loyalty to be reciprocated. If the wielder deliberately or accidentally discards the knife (selling it, giving it as a gift, losing it while gambling, or not retrieving it within 2d minutes after throwing it), the knife will feel betrayed and treat the wielder as though he had the Honesty disadvantage (see above) until he steals something else of great value. If the knife is stolen, it will immediately transfer its loyalty to the new owner.

The Edge of Darkness is of indeterminate age, and may turn up in any campaign since the invention of steel.

The Denton Silencer

Gunsmith, engineer and artist Francis Denton (1812-1877) was unashamedly a mad scientist. Plagued by dreams of a possible future, he made several attempts to replicate the devices he saw in these diurnal visions (he rarely woke before noon). While he never succeeded in inventing the telescreen, the underarm deodorant, or the time machine shaped like a police box, he did create a small number of his infamous silencers before his untimely and gruesome death.

The Denton Silencer resembles a 20th-century sound suppressor -- a cylinder 8" long and 3" in diameter, weighing one pound. Its exact composition is unknown, but is rumored to include Ghost Rock. Unlike conventional sound suppressors, it can work on revolvers as well as automatic pistols, and its strange spring-loaded screw-thread adapter will fit any handgun from .32 to .50 caliber.

A Denton Silencer gives a -10 penalty to any roll to hear the weapon being fired, or any other sound made by anyone carrying a gun fitted with one. Treat as 10 levels of the Silence advantage (p. CI66) with a 1-hex radius and the "Always On" limitation. The wielder has the Mute and Hard of Hearing disadvantages, and cannot be detected by Sonar.

The Denton Silencer is designed for single-action pistols, and cannot reliably absorb the sounds of more rapid fire. Anyone firing two or three rounds per turn through a gun fitted with a Denton Silencer must roll HT for each ear. On a failed roll, that ear is "crippled" -- temporarily or permanently (see p. B129). A character who loses hearing in one ear acquires the "Hard of Hearing" disadvantage: a character who loses it in both ears is, of course, deaf.

Anyone firing more than three rounds per turn through a gun fitted with a Denton Silencer must make his HT rolls at a penalty equal to the number of rounds fired (e.g. a Gatling pistol on full autofire would require rolls against HT -6, a Micro-Uzi at -20).

Frequent users of the Denton Silencer who haven't gone permanently deaf may acquire a Phobia (loud noises). Anyone using a Denton Silencer should make a Will Roll after every gunfight or similar stressful event (at -4 if they already have either the Brontophobia or Post-Combat Shakes disadvantages). On an ordinary failure, they will be unable to put the gadget away and leave its hex of peace and quiet until they make a successful roll (roll hourly). On a critical failure, they will acquire the phobia (see pp. B35-36), and be even more reluctant to part with the silencer. If they already have the mild Phobia (loud noises) disadvantage, it will become severe. Anyone acquiring a Denton Silencer should learn Lip Reading and Sign Language, just in case.

The third and often final drawback of the Denton Silencer is that it has a limited lifespan. After exactly 666 shots, a Denton Silencer will explode, doing 6d blast damage. The wielder will also be hit with 1d fragments, each doing 2d cutting damage, and must make a HT roll at -5 for each ear (as above). Everyone else within 200 yards may also be hit by a fragment as well as the potentially deafening noise: roll vs. HT -2 for each ear at up to 25 yards, HT at 26-50 yards, HT +2 at 51-100 yards, and HT +5 at 101-200 yards. Anyone acquiring a used Denton Silencer should treat it with the utmost suspicion.

Denton Silencers are designed for use in a *GURPS Deadlands* or other "Weird West" campaign, but new ones may be invented by Gadgeteers in *Cliffhangers*, *Atomic Horror*, *Technomancer*, or *Supers* worlds.

The Equalizer

Equalizers are magical mutable weapons with the following enchantments: Quick-Draw, Loyal Sword, Name, Reshape, Repair, Shatterproof, and several unknown spells. Though (somewhat) intelligent, the weapons themselves cannot remember their own origin, but they were obviously crafted for a weapon master with an overdeveloped sense of fairness.

An Equalizer has IQ 9, but uses the Danger Sense advantage as though its IQ was 14. It also has Combat Reflexes, and Special Rapport with its owner (it prefers the term "partner"), who it treats as a loved one (p. B38). If it senses that its partner is about to be attacked with a weapon, an Equalizer will instantly leap to its partner's hand, whether or not the partner has noticed the danger. The Equalizer will also take the form of the weapon with which its partner is being threatened -- as long as the weapon is made of wood and/or metal, and the Equalizer recognizes it as a weapon, and the assailant consciously intends to harm the Equalizer's partner (as distinct from firing into a crowd, planting a bomb, etc.). The Equalizer will then stay in the new form until the partner is threatened with a different weapon, or until persuaded by the partner to change (contest of Fast-Talk against IQ).

An Equalizer can duplicate any melee weapon of wood and/or metal from a pocket knife (its usual "default" setting) or brass knuckles to Thor's hammer Mjollnir, matching weapon quality and any enchantments. However, it has a limited understanding of missile weapons and technology. Rather than try to copy these exactly, an Equalizer will morph into a similar weapon, fully loaded, thereby reducing its partner's need to carry many different types of ammunition and the problem of unfamiliarity modifiers.

Confronted by: **Morphs into:**

Bow or Crossbow	Composite Crossbow, partner's ST, (p.CII23), one bolt
Pistol	Colt Python
Shotgun	Remington M870
Rifle	AK-47 (with folding bayonet)
Submachine Gun	MP40

An Equalizer will not copy grenades or other non-reusable weapons, and is at -5 to its Danger Sense rolls when its partner is threatened with weapons not constructed primarily of wood and/or metal (rocks, whips, rope garrotes or lassos, or non-metallic knives such as the Delta Dart) or intended primarily for non-lethal uses (cars, shovels, bar stools, etc.).

The Equalizer is intended as a magical weapon for a fantasy campaign, but it would also suit a superhero or very honorable supervillain. The GM can decide which gadgets and magical items it can duplicate; if in doubt, roll against its IQ of 9.

Being intelligent, Equalizers may have personalities, including quirks and disadvantages. Entertaining possibilities include Frightens Animals, Intolerance, Paranoia, Telepathic Addiction, and Weirdness Magnet.

Adventure Seeds

Taxing Times (fantasy)

When Margeth, one of the kingdom's most hated tax collectors is stabbed to death in his bed, everyone celebrates except the king, who orders the palace guard to find the killer. The only clue is that Margeth seems to have been stabbed with the black knife he always kept in his boot -- the Edge of Darkness, which the thief also took. The usual suspects are being rounded up and tortured into confessing: if the PCs don't find the killer and the knife, they may be next.

Silent Knight (*GURPS Deadlands* or *Cliffhangers*)

Sir Rodney Jardine is the wastrel second son of an English lord, banished to the USA to protect the family's reputation. After the PCs see him fatally shoot a man who accused him of cheating at cards, two thugs with S&W Russian revolvers and stolen Denton Silencers are hired to intimidate any witnesses who won't be bribed.

One of the thugs shoots at the PCs from a sniper's nest 150 yards away, but his first two shots miss, shattering a window and perforating a wall. If the PCs notice (roll on Vision or Danger Sense), this will give them time to find cover and draw their own weapons. Soon after they see him, the thug's Silencer explodes.

While investigating the mystery, the PCs learn that there's another thug with another Denton Silencer looking for them -- and there's no predicting when and where his silencer might self-destruct.

Missing the Point (*GURPS Cops Supers*)

Cat burglar Aden Grae has been a thorn in the side of the local police for several years. When a security guard at a warehouse was stabbed in a robbery that went wrong, Grae was arrested, and his boot knife confiscated for the forensics team to examine. Grae died in police custody less than an hour later, and now the knife has vanished from the evidence locker. Internal Affairs are going to ruin the careers of some good cops if the heroes can't solve the mystery.

Equal Force (*GURPS Supers*)

The Harbormasters, a gang of metavillains, ran smuggling and several other rackets in the PCs' home city until they were finally defeated by the superheroes Justiciar and Columbia. Columbia died in the battle, and Justiciar -- a weapons master armed with an Equalizer -- retired soon after the Harbormasters were jailed and shortly before the PCs became active.

A few hours before the Harbormasters are scheduled to be released, having won an appeal against their convictions, an anxious Justiciar contacts the PCs. Columbia's daughter has taken the Equalizer, and he suspects she's going to attack the Harbormasters.

The most feared of the Harbormasters was a woman known as Thera, after the volcano said to have destroyed Atlantis. While almost powerless on land, Thera could control vast stretches of the sea and everything in it -- and Justiciar (rightly) suspects that at least some of this power came from the trident she carried, which has never been found. If Columbia's daughter duplicates this power but can't control it, it could destroy the entire waterfront.

The Harbormasters are expected to head back to a saloon near the docks to celebrate. Justiciar (unarmed, aging, and a recovering alcoholic) asks the PCs to help him stop Columbia. (Thera, incidentally, has had her trident all along: it transforms into a tattoo on her arm after a few hours out of seawater, and will reappear the moment she dives into the ocean. Another of the Harbormasters, Mutie, has an IMI Eagle with a Denton Silencer hidden in the saloon). If the heroes succeed in defusing the situation, Justiciar may give the Equalizer to the PC who can best use it.

Appendix Z

Information Overload!

by David Morgan-Mar

In the information age, the sheer volume of raw data available to even the most casual researcher can be overwhelming. It may contain important details, or it could just be insignificant factoids and useless garbage, with no clear way of telling the difference.

Here is a list of things that might be learned by web browsing, an AI search, or watching the news (perhaps through a software filtering agent). Such information is readily available to anyone from the present day onward, particularly in Cyberpunk or Space campaigns. The list could also give results for laborious library, newspaper archive, or police record searches or oracular magic. These items can be sheer coincidence, red herrings, or may provide inspiration and become an integral part of your adventure plot.

For random results, roll two six-sided dice and read as a two digit number. Subtables are indexed by a roll from 1-6. "A person," "a company," "an item," and "a place" refer to things the heroes might be searching for information on.

11 **A person inexplicably went missing for 1-6 months, some time ago.**

12 **An exhaustive search turns up *no* records of a person having existed before 1-6 months ago.**

13 **A person's marriage broke up 1-6 years ago.**

14 **Birth records show a person is 10-60 years older than he appears to be.**

15 **A person has in the past been:**

- 1-3 acquitted of:
- 5-6 convicted of:
 - 1 Murder.
 - 2 Larceny.
 - 3 Fraud.
 - 4 Drug trafficking or possession.
 - 5 Arson.
 - 6 Firearms offences.

16

- 1-2 An eating establishment
- 3-4 An entertainment venue
- 5-6 A retail store or office

the PCs visited recently turns out to be owned by a person.

21 Two people the heroes thought to be unrelated turn out to have been former:

- 1-2 Business partners.
- 3-4 Lovers.
- 5-6 Enemies.

22 A person recently made a killing by:

- 1-2 Gambling.
- 3-4 Stock investment.
- 5-6 A damages payout after a legal case.

23 A person has severe debts from:

- 1 Gambling.
- 2 Broken marriage.
- 3 Business failure.
- 4 Stock investment gone bad.
- 5 Medical or legal bills.
- 6 Spendthrift.

24 A person had a previous, unsuccessful, career as a:

- 1-2 Entertainer.
- 3-4 Professional athlete.
- 5-6 Artist/writer.

25 A person is a former police or military officer:

- 1-2 Dishonorably discharged.
- 3-4 Retired with distinction.
- 5-6 Quit for no apparent reason.

26 A person has a medical condition requiring:

- 1 Special diet.
- 2 Ongoing drug treatment.
- 3 Intermittent hospitalization.
- 4 Psychiatric treatment.
- 5 Exotic treatment (alien drugs, holy water, etc).
- 6 No treatment, but causing occasional fits.

31 A person is closely related to a:

- 1 Celebrity.
- 2 Political figure.
- 3 High-ranking military commander.
- 4 Known criminal identity.

- 5 Famous missing person/crime victim.
- 6 Historical figure.

32 A person was arrested in his youth for:

- 1 Minor drug offences.
- 2 Traffic offences.
- 3 Political activism.
- 4 Petty theft.
- 5 Trespassing.
- 6 Intoxicated behavior.

33 A person collects:

- 1 Stamps/coins.
- 2 Insects.
- 3 Memorabilia/antiques.
- 4 Precious artworks.
- 5 Big game.
- 6 Alien artifacts.

34 A person is a huge fan of:

- 1-2 Professional sports.
- 3-4 Computer games.
- 5-6 Science fiction/fantasy.

35 A person recently made a purchase at a:

- 1 Weaponry store.
- 2 Vehicle retailer.
- 3 Stockbroker.
- 4 Illegal drug merchant.
- 5 Black market equipment supplier.
- 6 Alien items importer.

36 A person was seen recently:

- 1 Wining and dining a celebrity.
- 2 Traveling to/from a foreign destination.
- 3 Leaving the office of a politician.
- 4 At the docks/spaceport.
- 5 Talking to a known criminal.
- 6 At a local disaster scene.

41 A company is currently:

- 1 Going bankrupt.

- 2 In severe debt.
- 3 Posting record profits.
- 4 Planning a hostile takeover bid.
- 5 Being taken over by another company.
- 6 Releasing a major new product.

42 A company is under investigation for:

- 1 Collusion and price-fixing.
- 2 Unsatisfactory employment conditions.
- 3 Illegal advertising practices (subliminal messages, etc).
- 4 Tax evasion.
- 5 Corporate fraud.
- 6 Anti-competitive behavior.

43 A company owns a nearby:

- 1 Entertainment complex.
- 2 Office building.
- 3 University.
- 4 Wilderness preserve.
- 5 Private island/planet.
- 6 Area subcontracted to the military.

44 A company operates a nearby:

- 1 Factory.
- 2 Raw material processing plant.
- 3 Research facility.
- 4 Port.
- 5 Mine/oil well.
- 6 Energy production facility.

45 A company is owned by:

- 1 A person known to the heroes.
- 2 A high-profile, respected businessman.
- 3 A politician.
- 4 A known crime figure.
- 5 An old enemy of the PCs.
- 6 A distant relative of a PC.

46 A company has:

- 1 Many subsidiaries, dealing in all sorts of business.
- 2 A vast, well-known parent company.
- 3 Suspected underworld links.
- 4 Offices all around the world/across the galaxy.
- 5 No identifiable owner.

- 6 An overly positive stock investment prospectus.

51

An item is currently:

- 1 Owned by a celebrity.
- 2 Owned by a known NPC.
- 3 Lost.
- 4 "In a private collection."
- 5 Thought to be destroyed.
- 6 On display in a public museum/gallery.

52

An item has a history of being:

- 1-2 Stolen.
- 3-4 Cursed.
- 5-6 An archaeological relic.

53

An item is linked to:

- 1-2 A crime.
- 3-4 A disaster.
- 5-6 A historical event.

54

An item is worth:

- 1-2 Nothing.
- 3-4 Much less than the heroes thought.
- 5-6 Much more than the heroes thought.

55

An item was produced:

- 1 By a famous craftsman centuries ago.
- 2 By the thousands in the Industrial Revolution.
- 3 On a modern assembly line.
- 4 By native workers as a souvenir.
- 5 Painstakingly by a recreationist.
- 6 By a forger.

56

An item is dangerous if:

- 1 Touched.
- 2 Moved.
- 3 Used incorrectly.
- 4 The original owner finds out you have it.
- 5 Exposed to water.
- 6 Not regularly maintained.

61 **A place is said to be:**

- 1 A secret military base.
- 2 A secret corporate base.
- 3 A criminal hangout.
- 4 Poisoned by radiation/chemicals.
- 5 Sacred by native inhabitants.
- 6 Haunted.

62 **A place was recently:**

- 1-2 Raided by police.
- 3-4 Sold.
- 5-6 Robbed.

63 **A place is currently:**

- 1-2 For sale.
- 3-4 Being built.
- 5-6 Being renovated.

64 **A place turns out to be:**

- 1-2 Where a PC grew up.
- 3-4 The home of a person known to the PCs.
- 5-6 Just around the corner from where the heroes are now!

65 **A place was the site of a historical:**

- 1 Battle.
- 2 Plague.
- 3 Fire.
- 4 Uprising.
- 5 Natural disaster.
- 6 Vehicular disaster.

66 **A place was named after:**

- 1 A historical figure/event.
- 2 A person known to the heroes.
- 3 An ancestor of a PC.
- 4 A familiar sounding person who the PCs can't quite place.
- 5 An item important to the current adventure.
- 6 A corporate sponsor.

Starships (for the Star Trek Roleplaying Game)

Published by [Decipher, Inc.](#)

Written by Dave Biggins and Don Mappin

Illustrated by David Pipgras

208-page full-color hardcover; \$34.95

Without starships, there would be no *Star Trek*; thus they are a vital element to any roleplaying game based upon the various films and television series. Not that all of the RPGs have gained the benefit of supplements devoted to the subject, with perhaps the best being the *Star Trek III Starship Combat Role Playing Game* and the associated trilogy of the *Starship Recognition Manuals* for the Federation, Klingon, and Romulan fleets, released for the FASA *Star Trek RPG*. The *Star Trek* line of RPGs published by Last Unicorn Games never received an official supplement dedicated to the subject, though supplements such as *The Price of Freedom* and also [Raiders, Renegades & Rogues](#) for the [Star Trek: Deep Space Nine Roleplaying Game](#) contained a wide selection of ship designs and write-ups; author Steven Long has also written both rules for starship creation in *Space Dock* and a number of *Recognition Manuals* that appear on the [website](#) and use Last Unicorn Games' ICON system.

For their second go at a *Star Trek* RPG, the designers have devoted the fourth volume for Decipher's *Star Trek Roleplaying Game* totally to the subject. *Starships* is a heavy, full-color hardcover that both expands on and acts as a complement to the rules for starship design and combat given in the [Narrator's Guide](#). In addition to the advanced rules, the bulk of the book is given over to the write-ups of some 39 starships and variants, plus nine shuttlecraft found in service with the Federation, the Klingons, the Romulans, Cardassians, the Borg, the Ferengi, and the Jem'Hadar. There are also single entries for ships from the Vulcans, Orions, Kazon, Breen, and Species 8472.

Each entry is given a full-page presentation; half is devoted to the statistics, the other to its Mission, Features and Background, along with three illustrations that show the vessel in profile -- front, top, and side -- plus a single photograph. The latter are not always the best; for example the one of the Klingon *Negh'Var-Class* Dreadnought is nearly useless. All of this information is laid out on black, using the standard LCARS format, which is color-coded according to the race or faction that each vessel belongs to. If there is a problem in the layout of the ship's data, it is in the font size used for the actual data, which is half that of the titles. The effect is to make the useful information difficult to read without a certain degree of concentration.

Unlike the previous *Star Trek* RPGs, Decipher's CODA system came with the necessary rules to construct almost any kind of starship found in the *Narrator's Guide*. plus they were very easy to use, such that the budding naval architect should be able to design ships of their own with almost no problems at all. The rules for Advanced Construction given in *Starships* run to just thirty pages and allow for the building of ships larger than hull size ten (such as the Borg Cube) up to size twenty, provides modifiers to show how far a race is behind or ahead of the Federation in terms of technology, adds new reliability ratings and a plethora of new components.

These components are split between those generic to all races and those specific to particular species. Thus for the Federation the Multivector Assault Mode separation system -- as tested on the prototype design *USS Prometheus* -- is described, as are the cutting beam and energy drain weapons employed by the Borg. The technology covers the five television series plus the films, from the time of the original *Enterprise* through to *Deep Space Nine*, allowing ship designs for every time period.

Vessels can also be individualized with new traits, such as Famous, Prototypes, and Blind Luck, which reflects a crew's ability to overcome a particular system's limitation in ways unique to their ship only, and which cannot mass-produced. They can also earn renown -- just as characters can - and this can be used in recognition social tests for both ship and her crew to see if her reputation precedes them both. In addition, as characters advance in level they allocate their Advancements Picks to their ship, and thus reflect its "experience." These picks can purchase for a ship extra space, renown, gain and upgrade an edge or overcome a flaw, a maneuver modifier, or enable the upgrade of a system or installation of a new one.

The range of ships covered is a fairly decent mix from all eras. This includes many examples previously seen in the *Narrator's Guide* and [Starfleet Operations Manual](#), though not the *Steamrunner*, *Saber*, *Miranda*, *Ranger*, *Daedalus* or *Oberth*-class vessels, nor the *Hirogen Hunter* ship. Fans of *Enterprise* will be pleased with the inclusion of the *NX-class Enterprise* and the *Vulcan T'Plana Hath-Class Surveyor*, while the write ups of the *Intrepid*, *Nova*, and *Delta Flyer*-class vessels will satisfy *Voyager* fans, as will those of the *Species 8472 Bioship*, *Kazon shuttle*, and *Borg Cubes* and *Spheres*. Under the list of ships in service, some ships include their particular traits, such as the *Sovereign Class NCC 1701-E Enterprise's* renown of 23, *Famous*, and *Flagship* edges.

Further rules are contained within the write-ups of the particular ships. These include the *Biomolecular Warheads* used against the *Bioships* of *Species 8472* -- as well as attempting sensor scans of them, using the operating systems aboard *Jem'Hadar* vessels, and how to chase a *Borg Time Shere*! If there is one thing missing from *Starships*, it is the inclusion of a "Starship Range Increment Bar" for each of the vessels it covers. These are used with the starship combat rules to determine the range between the combatants involved; however, to date, the only ones created for the game depicts an overhead shot of the *Enterprise-D*, which will be of little use when attempting battles involving the contents of this supplement. This is a rather obvious and annoying omission considering the nature of those contents . . .

The high production values of *Starships* does mean that the supplement feels a little expensive for the number of ships it provides. Naturally the purchaser will want more, though at worst, perhaps only a particular favorite is missing. That said, they are well-presented and written-up, and by using the Advanced Rules also given, the *Star Trek Roleplaying Game* Narrator should be able to modify the vessels described or create new ones to suit their own series. Thus *Starships* represents another solid entry for Decipher's *Star Trek Roleplaying Game*.

Zombies!!! 3: Mall Walkers

Published by [Twilight Creations, Inc.](#)

Game concept and design by Todd A. Breitenstein

Art by Dave Aikins

Additional development and event card design by Kerry Breitenstein, Mark Bordenet, Terry Keefe, Tony Fryer, Jeffrey Jones, and Robert D. Yarbrough

Sculpting by Behrle Hubbuch

Layout and design by Todd Breitenstein

Fiction by Paul C. Willhouse

16 full-color board tiles, 32 full-color Event cards, rules; \$14.99

They've chased you through town. They've run amok on your military base. Now the walking dead have invaded your local shopping mall, and it's on, baby. **Zombies!!! 3: Mall Walkers** is the third release in the **Zombies!!!** series from Twilight Creations, Inc.

Anyone who's ever seen George A. Romero's *Dawn of the Dead* was asking where this supplement was 15 seconds after they heard **Zombies!!!** was on the market. Sure enough, you're trapped in suburbia, with flesh-eating monsters closing in on you from every aisle. The object of the game is to once again make it to the helipad tile first to hitch a ride out of Hell. (The helicopter is on the roof, of course . . . where else would you park it?) Barring that, you can collect 25 of the shambling beasts and score the win.

The action all takes place indoors this time. You race through the front doors and down the hallways of the Twilight Mall, stopping here and there to stock up on supplies. Familiar mall areas like the Food Court, the Lingerie Shop, and the Music Store are now overrun by zombies (well, a different kind of zombie), but they also hold the precious Life counters and Bullet tokens you need to keep the starving throngs at bay. There are 16 new tiles to use, and these form the basis for a whole new playing field. Alternately, you can add them to the original **Zombies!!!** game tiles, or use it with the military base from **Zombie Corps(e)**, or put all three together for a truly massive killing zone. The most notable features of the mall spaces are the escalator and the air ducts.

The escalator takes you up to the second floor (this may be a hick town, but they've got their priorities straight and have two stories to their mall); only from the second floor may you access the rooftop and your whirlybird lifeline. No areas on the first floor are adjacent to those you build on the second, so if you're in the lead your opponents may make it a long walk to the 'pad.

And a race through a mall without ducts to crawl through would be like not getting nuts on your FroYo. Every store

has a space marked by a ventilation shaft. Characters landing on these spaces can use all their movement the following turn to shift from that store to an adjacent store's air duct space, conveniently sidestepping the not-at-all-convenient zombie hordes.

You also get a brand new deck of 32 event cards geared toward mall life. These new additions are dripping with the same snarky horror-show humor ("You Want Fries With That?" "Cleanup in aisle 5"). There seem to be fewer weapon and movement cards this time around, and more of the "Play in . . ." cards where you must first get to a specific store before you can lay down a thematically linked card for later use. There are also some pretty powerful cards that will let you submerge an opponent in a sea of the soulless or clear out an entire hallway in one fell swoop.

The artwork is once more courtesy of Dave Aikins: dark, grainy illustrations with understated black humor on the cards, and simple, expressive, tight little designs on the tiles that won't get in the way of game play.

This supplement is much faster than the other sets in the series, with game time being under an hour in some cases. The ducts are not only appropriate to the genre, they're a good tweak that allows players more control over their actions and gives them more tactical options. And with a total lack of vehicle cards (sorry, no driving the display model around the fountains), you're going to need them. The second floor option is mildly interesting, but considering there are only 16 map tiles in this set, it doesn't change the face of play considerably. It would be nice if there was a more elegant way to show the two levels, but short of separating the tiles into two separately maintained areas or just placing second floor tiles off-kilter from those of the lower, there's not much to be done. Without clear demarcation, it leads to Escher-like awkwardness in some cases (you can have a lower level tile abutting the upper, and nothing in the rules says you can't build under the escalator, you just can't travel between them), and staring at the dimensions of the escalator illustration too long will make you dizzy as well.

With a lot of players, it's also easy to exhaust the zombies at first, and your fighting quarters are closer than ever -- you'll be stepping on each other's toes more often, and there are event cards to let you make use of that, too. This is another thing ***Mall Walkers*** has in common with its predecessors: The rules leave distressing spaces where the rules lawyers will flourish.

But the truly important thing to remember is: You get to slaughter zombies wholesale in a mall. For anyone who tires of the longer ***Zombies!!!*** games afforded by the original, ***Zombies!!! 3: Mall Walkers*** is a great way to bring the timer down to a more manageable level. It's faster, it plays even better, it's still entertaining as hell, and combined with the existing sets, it allows aficionados of the zombie story to tailor the size of the game to their sickening tastes.

--Andy Vetromile

All Systems Are Go(ne)

Several years ago, we asked a poll about how many people have converted a game campaign or game world from one system to another. Much to my own surprise, 80% of our readers admitted to having given it a shot. Now, I've done the same thing from time to time, but never did I realize that so many other people were as crazy as I. And now, since I'm considering starting up a new campaign, converting one game world to another system I like more, I thought I'd share some of my wit and wisdom on the subject. (Yes, it's a short column.)

Know why you're converting a system. Most of the time the reason is obvious; for example, you and your players enjoy System X, but Kewl World Y only uses its own system. Or perhaps you are trying to find a system that more closely matches your idea of the genre in question. Or maybe you're looking for new support material for a game, and are converting different books for that purpose. Regardless of the reason, keeping it firmly in mind will help you as you struggle with the challenges of game translation.

Determine if a conversion is really necessary. Really, unless you're the type of person who enjoys doing conversions, it's probably going to be a pain in the butt. Make sure you know what you're getting into before embarking on what could well be a fool's errand.

Understand the nature of the system you're converting from, and the system you're converting to . . . as intimately as you're able. Know the style of game both systems prefer, and adjust accordingly. For example, translating from a cinematic system to a more gritty one will likely result in lots of dead heroes unless you make sure the players are appraised of their new limitations. Likewise translating from a grainy game to a more detailed one can possibly result in players learning their characters suddenly don't have abilities they realistically think they should; thus it would be wise to allow for tweaking after a session or two of the conversion.

Of particular note is any discrepancy between the critical success and failure system for both games, and the frequency thereof; many games place special emphasis on those effects, and differences can really affect things. For example, I once translated an ongoing *In Nomine* campaign to White Wolf's Storyteller system. Now, *In Nomine* has a system where divine or infernal interventions happen on a roll of 1-1-1 or 6-6-6 on three six-siders. Those of you playing the home math game realize that the odds of a specific intervention happening on any given roll are 1-in-216 (or 1-in-108 for either intervention). The Storyteller system, on the other hand, resolves actions by rolling handfuls of 10-siders. Following the suggestion of a *Pyramid* [discussion group](#) member, I decided to try keeping the flavor element of the original *In Nomine* the same. Thus we decided to treat any roll containing three 1's as a divine intervention, and any with three 6's an infernal intervention. (Our statistician readers are no doubt shaking their heads even now.)

Unfortunately, the odds of either of those coming up on a handful of 10-siders is *much* greater than 1-in-108. As a result, the next session of our game detailing the conflict between Heaven and Hell had so many interventions, it looked like God and Satan had gone positively bug-nuts; we went from having between zero and three interventions per game to just shy of 30.

Figure out how much of a conversion you need to do. Most of the time I've found you don't need to do a full conversion of a game system; doing a piecemeal translation is often *much* easier. For example, with the aforementioned *In Nomine* to Storyteller translation, I didn't bother trying to convert all the skills from *In Nomine* to Storyteller counterparts. Instead, I just took the existing skill names from *In Nomine* and used them directly; it worked just fine (once we resolved the whole intervention problem).

If one game has a weird attribute or skill system, consider importing it directly (especially if it's vital to the setting). For example, it was fairly easy to convert *Torg* to *GURPS*, but the former has a "disconnect" system that was difficult to translate directly (basically, when using a kewl power, in some circumstances rolling 1 on a d20 causes the power to stop working, while in other cases rolling 1-4 on that d20 would cause the same thing). Our solution was to simply keep rolling a d20 along with the 3d6 of *GURPS*, specifically for that one mechanic.

Obviously these piecemeal conversions aren't "official," but I figure that these types of conversions are seat-of-the-

pants affairs anyway; for me, making the system work is more important than keeping some mythical conversion purity.

Find the points of commonality between the two games. Usually the best place to start with any conversion is to determine what the games consider to be "average," and go from there. For example, both **GURPS** and the **Hero System** use attribute scores of 10 as a baseline, with 1 as the ultimate low and 20 as a human high. Thus converting from one to the other was, on some levels, trivial. If converting from either to **Fudge**, with its seven-level adjective system (Superb, Great, Good, Fair, Mediocre, Poor, Terrible), it might make sense to convert them to, say: Superb (19), Great (16), Good (13), Fair (10), Mediocre (7), Poor (4), Terrible (1). Likewise the Storyteller system assumes that two dots in an attribute is average, while five is human maximum; mapping those accordingly is trivial.

Be prepared to wing it. Hopefully the game system you're converting to either has lots of rules for many different situations (ala **GURPS**) or encourages the players and GM to make up their own solutions (like **Fudge**). Regardless, there are going to be lots of weird and different situations to resolve. Damage, in particular, can be devilishly difficult to translate between systems. The best suggestion I can offer is to compare known damage levels, and work from there. For example, if a gun does 3d6 damage in one system and three health levels in another, then you can work from there to determine how a special attack ability should translate. (Of course, it's also wise to compare several weapons; hopefully the games' swords and fists do comparable levels of damage as well.)

Observations

These are some systems I've converted games to, with some cursory observations.

Fudge is one of the easiest systems I've found to translate to; not only does it accept just about any kind of ability and power, it *encourages* it. When I translated the old FASA **Star Trek** game to it, I was able to dump that game's extensive skill lists right into **Fudge**.

I've found **GURPS** to be great for any game that relies on heavily detailed humans . . . especially realistic games. (Fortunately, nowadays there are conversion books for a lot of games. But back in *my* day we didn't have all these **GURPS Deadlands** or **GURPS Conspiracy X** or . . . ahem. Anyway, **GURPS** makes it fairly easy to dump new abilities and powers into (and there are lots of examples in the jillion sourcebooks), but finding proper point values can be complicated.

I love **Masterbook** system for anything fairly heroic or "pulp"-y, or any game where I like the players to have a greater-than-normal influence on the game. Its somewhat grainy mechanics make it easy to tweak values that pass a reality check, and the card system can be used to simulate a lot of other games' abilities.

The Storyteller system is useful for cinematic games where social elements play a significant part, where characters need to be reasonably assured of minimal success on very few dice, and where it doesn't matter if characters are very grainy. (That graininess means I can crank out an NPC in less than five minutes . . . or wing it easily.)

The **Hero System** is good for games where it's necessary to define abilities precisely with game effects and point costs. Characters generally end up quite balanced, but the game discourages "creative" uses of unusual powers and abilities (since each effect is built and paid for separately).

Flip a Coin: Heads, You Win is useful for quick-and-dirty conversions, as well as those campaigns where the introduction of ritualistic drinking is desirable.

Good luck!

* * *

Because of a personal emergency, I was called out of town unexpectedly for two weeks and just got back a few days ago. If you sent me anything important (for example, submissions or other correspondence) during the time of Wednesday April 9th and Wednesday, April 23rd, please send it again to make sure that I received it.

--*Steven Marsh*

Designer's Notes: GURPS WWII: Frozen Hell

by Hunter Johnson

You should have had a chance to pick up your copy of **GURPS WWII: Frozen Hell** from you Friendly Local Game Store by now. If not, please do so and then come back and read this article. All set? Great!

Frozen Hell deals with one of the sideshows of WWII. Finland had been traded back and forth between Sweden and Russia for hundreds of years before gaining its own nationhood in the beginning of the 20th century. That the Soviet Union would try to bring that new status to a quick end a few decades later was soundly tsk-tsked by the Western world, but there were still too many things going on in the heart of Europe to worry too much about what was happening in the northern swamplands (in English and in Finnish, Finland's name means "swamp").

Finding out today what transpired there faces similar problems. English-language histories are few and far between. The two best, William R. Trotter's *A Frozen Hell: The Russo-Finnish Winter War of 1939-40* and Carl Van Dyke's *The Soviet Invasion of Finland 1939-40*, were published in the 1990s. I shudder to think what this present book might have looked like if the **GURPS WWII** line had come into being 10 years earlier, without these resources. Happily, I had the luxury of leaning on these books and the even better fortune of having Mr. Trotter write the introduction for the sourcebook. Still, even these two books contradicted each other at times (one drawing on Finnish records, the other on Soviet records), and in some cases both were wrong. In those instances, I am indebted to the Finnish playtesters who could check facts against the current scholarly works not published in English. Since this is a roleplaying sourcebook and not a scholarly history, I also tried to find the full names for the commanders and other personalities who often appeared with their last names only. If the PCs are going to run into (or serve under) a historical leader, it can be useful to know what his full name is!

Another source of frustration came from the gaming side. Games on, say, the Battle of the Bulge clog the shelves and catalogs, but games on the Finnish wars are harder to find. A few are listed in the bibliography of this book; a more complete list can be found on my website at <http://www.hunterandlori.com/WinterWargames.html>.

I prefer to use outtakes from my drafts in these designer's notes articles, but there are very few to choose from. During the course of my work on the book, the page count for the small-format books rose from 32 pages to 48 pages. This makes a "perfect" binding possible, but it also chewed up most of the information that would have been cut. Two micro-biographies of Finnish leaders were dropped from the final draft:

Väinö Tanner

Väinö Tanner was one of the most prominent Finnish politicians in the first half of the 20th century. A conservative Social Democrat, he led the party during the prewar years, and he opposed extremism, even within his own party.

Risto Ryti

President Kyösti Kallio died at his farewell ceremony on December 19th, 1940. Prime Minister Risto Heikki Ryti immediately succeeded him. Ryti was a member of the National Progressive party. He won reelection in 1943, in part because Mannerheim declined to run. Ryti resigned on August 1st, 1944.

The biggest outtake is the Russian T-35 "land battleship" tank, which appears in several Finnish accounts but probably

didn't actually appear on the battlefield. Finnish soldiers were largely unfamiliar with tanks in general, and the Soviet records do not indicate the presence of any T-35s in the Winter War. The T-35 should appear in ***GURPS WWII: Red Tide***, perhaps modified from the version that Brandon Cope sent me. It's quite long, so I'll save it until the end of the article (just a few paragraphs away!).

One omission that I made even while writing my drafts was a discussion of ambient music that GMs or others might use to set the mood during a Winter War game. I'll correct that oversight now. Jean Sibelius is Finland's most famous composer, and his *Finlandia* (composed in 1899, before Finland's independence) helped nurture the Finn's growing national identity. Other Sibelius works that are easy to find and well-suited are his symphonies (seven of them), *Kullervo*, and *Tapiola*.

Georg Malmstén composed popular music during the war years (and before and after too). He was so prolific that some of his songs were credited to "Matti Reima." CDs will be hard to find, but one recent one is entitled *20 Suosikkia*. And just for variety, you might check out Amorphis' *Tales from the Thousand Lakes*. One of its reviewers calls it a "doom-death hybrid" in the metal genre.

Speaking of heavy metal, I now give you Brandon Cope's T-35:

T-35 Heavy Tank

The T-35, based on "land battleship" designs produced in Germany and Great Britain and designed to force its way through heavy defenses, debuted in 1932. The 1935 version mounted one main turret with a 76.2mm low-velocity gun, two turrets with 45mm guns and two MG turrets. The 45mm turrets were on the right front and left rear of the hull and the MG turrets on the left front and right rear. The main turret could rotate 360 degrees, while the smaller turrets could only rotate 184-191 degrees, depending on location. The smaller turrets also could not "unbutton" to allow their gunners to pop up and fire the guns from an unobstructed viewpoint. Their heads would have been in the way of the main gun if they had been able to do so.

Initially, it had 37mm guns instead of the 45mm ones, but these were upgraded in the main production model. The new 45mm turrets were slightly modified BT-5 turrets while the MG turrets were taken from the T-37 tank. The secondary turrets were of dubious value. Like other tanks of this size in the 1930s, it was simply too large to armor adequately.

The T-35 initially had a crew of 11 men, but this was down to 10 by the time of the Winter War. There are two men in the turret: the Commander serves as main gun loader and fires the rear turret MG and, if present, the A/A MG, while the Senior Radio Operator operates the radio and assists with loading the main gun. The Commander of the Main Turret sits to the left of the main gun and serves as gunner for the 76.2mm gun and coaxial MG. Each of the 45mm turrets has a gunner (Commander's Assistant forward and Commander of Turret #4 rear) and loader (Commander of Turret #2 and the Junior Tank Driver) and each of the MG turrets has a gunner (the Tank Driver and Commander of Turret #5). The Junior Tank Technician sits in the steering compartment and drives the tank -- no, none of the crewmen actually designated as Tank Drivers handle this duty. He might keep a large hammer nearby to persuade the stubborn shift lever into a new position.

The combat compartments were walled off; the only way in and out of the tank was through the roof hatches. In the field, this was particularly dangerous for the main turret crew, as the main turret sat higher than usual so that its fire would clear the other turrets. The crewmen at each turret used phones to communicate with the other turrets.

Two more crewmen are assigned to each tank, but do not ride in it. The Senior Tank Driver is responsible for keeping the transmission and running gear operational, and the Motor Mechanic is responsible for the engine.

The T-35 uses 16.8 gallons per hour at routine usage.

A total of 61 T-35s were built. The T-35 made its first battlefield appearance in the Winter War, although some sources dispute its presence here at all. Those that were still operational in 1940 were added to the 34th Tank Division. Most of those were lost to mechanical failures by mid-1941. The remaining few saw action in Moscow at the end of

1941. None were used in battle after 1941. Of 47 lost during WWII, only 7 were lost to enemy fire. The rest succumbed to mechanical problems or terrain.

Subassemblies: Very Large Tank chassis +4, full rotation Medium AFV turret #1 [Body:T] +2, two limited rotation Large Weapon turrets #2-3 [Body:T] +2, two limited rotation Medium Weapon turrets #4-5 [Body:T] +1, tracks +3.
Powertrain: 373-kW gas engine w/ 373-kW tracked drive train and 240 gallons fuel in standard fuel tank [body]; 16,000-kWs batteries.
Occupancy: 2 CS Body, 9 CS body and turrets Cargo: 1.1 Body, 5.8 Turret #1, 3.5 each Turrets #2-3, 2 each Turrets #4-5

Weaponry

75mm Short TG/76.2mm PS-3 [Tur1:F] (96).
47mm Short TG/45mm M-1932 [Tur2:F] (110).
47mm Short TG/45mm M-1932 [Tur3:F] (110).
Ground LMG/DT [Tur1:F] (2000).
Ground LMG/DT [Tur1:B] (2000).
Ground LMG/DT [Tur2:F] (2000).
Ground LMG/DT [Tur3:F] (2000).
Ground LMG/DT [Tur4:F] (2000).
Ground LMG/DT [Tur5:F] (2000).

Statistics

Size: 32'×11'×11' *Payload:* 3.9 tons *Lwt.:* 45 tons
Volume: 227 *Maint.:* 33 hours. *Price:* \$36,400

HT: 7. HPs: 2300 Body, 200 Main Turret, 120 each 45mm Turret, 75 each MG Turret, 800 each Track.

gSpeed: 19 *gAccel:* 2 *gDecel:* 20 *gMR:* 0.25 *gSR:* 6
Ground Pressure Low (2/3 Speed)

Design Notes

The design weight was increased 33% to match historical weight and gSpeed was reduced from the 26 mph design speed. HT was reduced from 9 to 7 to reflect the historical lack of reliability.

Variants

Model 1938: The frontal armor on all turrets was increased to DR 120. Only six were built.

Flamethrower: Some tanks had the 45mm in one turret replaced by a flamethrower.

SU-7: This tank used the same chassis to carry a heavy (254-400mm) cannon, howitzer, or mortar.

SU-14: As the SU-7, but for 152mm or 203mm guns.

Making Time

Bleeding Edge Technologists in the Middle Ages

by Phil Masters

Some people may still think of the Middle Ages as a time of technological stasis or even decline. However, most gamers with an interest in the history are probably aware that, in fact, technology advanced quite substantially in this era. However, with the notable exceptions of full plate armor and very early gunpowder developments, many of the new inventions may perhaps seem a little unglamorous or low key from a gamer's viewpoint.

But there is one great late medieval invention which really can look miraculous and wondrous in even the most realistic of medieval games. What's more, it is a technology which appeared, in very different forms, in both China and Europe as they passed through what **GURPS** would call late TL3.

The invention in question is the mechanical clock. This article describes this new technology, but focuses primarily on the sorts of characters who might get to work on it -- some of the most sophisticated technologists it would be possible to encounter in a more or less realistic medieval game.

Historical Background

The measurement of time by artificial devices is something which goes back to the Bronze Age or thereabouts; the ancient Egyptians certainly had sundials and water-clocks. However, these sorts of devices have limited usefulness; sundials, for example, have to be set up and calibrated using precise astronomical and geographical knowledge, and then only work on sunny days, while water clocks demand a constant head of pressure to provide a reliable, consistent flow. Neither is exactly easy to move around, either.

In any case, people in such early times might well have asked, "Who needs precise timekeeping?" The day, from dawn to dawn or sunset to sunset, was an obvious and sufficient unit of time for most folk. Of course, farmers needed to track the seasons, but simple observations of the sun and moon could handle that. Tracking time could look like a mere affectation -- as with the rich Romans who bought expensive water-clocks and then assigned special slaves to watch them and call out the time at periodic intervals. (People perhaps did realize that precise timekeeping could be very useful for navigation purposes, especially at sea, but the problems of finding devices which would keep correct time on a moving, shaking ship were vast.)

Still, it could be convenient to give fixed times to specific tasks, and primitive clocks were usually available in most societies -- if only in the form of candles or sticks of incense which burned at a fairly constant rate. The people who became most concerned with ever greater precision were those who had to organize *rituals* of one sort or another.

Ever since very early times, astrology was considered very important in many societies, and astrologers were responsible for some very precise and useful astronomical and chronological work. In China in the Middle Ages, it was considered very important to know the precise astrological circumstances of the birth of a member of the royal family -- but, of course, clouds and other circumstances could make direct observation difficult. So, in 1088 AD, a mandarin named Su Sung invented a giant machine to solve this problem.

This was presumably inspired by the water-clocks which had been used in China for centuries, as it used a flow of water from a constant-level tank to move a water wheel. However, this wheel was linked to a regulating "linkwork" mechanism which ensured that it moved at a steady, controlled pace -- an "escapement" comparable to the invention which is central to the modern mechanical clock, and actually much better than anything built in Europe for centuries. The wheel then moved a mechanism which enabled the court astrologers to judge the precise state of the heavens at the moment of any important birth.

However, Su Sung's masterpiece was soon forgotten -- doubtless it all seemed too complicated, expensive, and limited in usefulness, and was too easily destroyed in one of China's civil wars or barbarian invasions. The modern clock was invented in another land, for another ritual purpose.

Europe

The Christian monasteries of the European Middle Ages were run on *rules*, often laid down by the founders of the various orders. These encouraged disciplined, controlled lives, and often laid down very precise times for prayers, meals, and other activities (and penalties for lateness). The more seriously the monks took these disciplines, the more precise they wanted their clocks to be.

Sundials and primitive clocks were available, and seem to have been quite popular at times; there was a Guild of Clockmakers (who evidently made water-clocks) in Cologne in 1220, occupying a whole street of their own, the *Urologengasse*. But these ancient devices still had their old limitations, and some thoughtful, educated monks were looking for something better.

The English word "clock" actually comes from Latin and French words for "bell." Churches and monasteries used bells to summons worshippers to services, and the idea of sounding them automatically was the key to the invention of the clock. Indeed, for years or centuries, clocks had no faces -- just bells. The power for such a device could come from, say, a descending weight. The problem was to regulate the movement.

In 1271, one writer noted that some clockmakers were working on this problem, but hadn't succeeded yet. Another text, from 1277, describes a mechanism regulated by a rotating drum divided into compartments partly filled with mercury, which flowed at a regular speed as it turned. However, the key invention was the "escapement," a device which would let a mechanism move on, one regular tick at a time -- and the first recorded clock with one of those seems to come from 1283. With other, similar inventions dated to 1284, 1286, and onwards, this is one medieval invention that can be dated quite precisely. The records in question all come from England, although the idea seems to have been discussed all around Europe at this time, and clocks were certainly introduced in other lands at much the same time.

The first clock mechanism of which details survive is the slightly unusual escapement built for the Abbey of St. Albans in 1328, while the oldest surviving mechanical clock in England, that of Salisbury Cathedral, comes from 1386. (It has been restored to full working order in modern times, although at some point in history it was converted to a pendulum mechanism -- a 17th century invention -- from the older pivoting bar design.) By that date, clockwork was being applied to complex astronomical models in Italy, which in turn probably led to the simpler and more generally useful idea of the clock face. But even with just bells, clocks were having a social effect.

In the early 14th century, Dante made a poetic reference to clockwork in the *Divine Comedy*, showing that he assumed that his readers would have seen such things, and by 1335, French textile employees were working fixed hours, governed by the chiming of bells. Clocks were installed on secular public buildings as well as churches, and people began to live their lives by them. Although only the rich would be able to afford private clocks for many centuries yet, people's lives were increasingly being governed by machines.

In fact, in terms of the *psychological* boundaries between **GURPS** tech levels, this may be a key. For most of TL3 (and earlier), people mostly live by the day. With the invention of the clock, and through all of TL4, people live by the hour, paying attention to bells and public clocks. However, they may well still have a very casual attitude to timekeeping by modern standards. There is no concept of, say, fixed appointments; characters go to visit somebody when it suits them, and if he's out, or busy, and they have to wait, that's just bad luck, and no one's fault. It is only at TL5, with the invention of precision chronometers and the spread of personal clocks and watches, that people begin to live by the minute.

Absolute Timing

The **GURPS** character advantage "Absolute Timing" is rather cinematic at the best of times; in an authentic pre-modern style of game, it's just plain weird. After all, it enables a character to know something

So medieval clockmakers are the early harbingers of Renaissance technology -- experts in advanced inventions which will eventually change the world. Some players and GMs may find such a character concept rather interesting.

The Makers

Low-tech mechanical clock making requires an unusual combination of talents. First, it calls for considerable practical skills; a clock is likely the most complex gadget in this society. However, it is also bleeding edge *science*, involving physics and applied mathematics, and astronomy as a source of reference data. The problem is that many low-tech scholars disdain practical skills, and few low-tech craftsmen receive an academic education. It's possible that a scholar might find other people to build his designs, but he will need at least some idea of what is physically possible. Thus, clockmaker characters tend to be unusual.

No-one seems to know where, say, Su Sung got his detailed ideas or practical skills, but it is known that Richard of Wallingford, the abbot of St. Albans in 1328, was the son of a blacksmith. In other words, he came from a fairly humble craftsman's family, but gained an education and worked his way up to some power in the church. This would have given him the combination of philosophical/scientific knowledge, practical outlook, and control of funds, that a spectacular new high-tech project demands. Other clockmakers and medieval gadgeteers, such as Giovanni de' Dondi of Padua, who designed an "astrarium" (a sort of clockwork planetarium) in the mid-14th century, were more secular characters (although the education such work required would have involved at least some contact with religious institutions). They, however, would have needed patrons to provide them with funds and other support. In other words, this would be a great way for characters to get close to dukes and princes, and to become noted for cleverness and special knowledge. Even if players don't want to *play* such oddball geniuses, they might have dealings with them; a mission to bodyguard some unworldly churchman, or the Duke's pet gadgeteer, while he chases down some obscure manuscript or transports some incredibly fragile gadget to the court, could be an interesting task (and an opportunity for the GM to play an absent-minded boffin type in a medieval game).

Clockmaker Template (70 points)

To show how this might come together in game terms, the following is a template for TL3 characters who invent and build clocks. Note that it should be used for the creative geniuses behind the inventions; a clockmaker may of course have a number of merely competent assistants with lesser abilities.

Attributes: ST 10 [0]; DX 10 [0]; IQ 13 [30]; HT 10 [0].

Advantages: Literacy [10]; and a total of 20 points chosen from among +1 or +2 DX [10 or 20]; Administrative Rank [5/level]; Clerical Investment [varies]; Comfortable [10]; Cool [1]; Less Sleep [3/level]; Lightning Calculator [5]; Manual Dexterity [3/level]; Mathematical Ability [10]; Patron [varies]; Reputation (among other scholars or natural philosophers) [varies]; Single-Minded [5]; Status +1 [5]; and Versatile [5].

Disadvantages: A total of -15 points chosen from among Absent-Mindedness [-15]; Attentive [-1]; Clueless [-10]; Curious [varies]; Disciplines of Faith [varies]; Dreamer [-1]; Duty [varies]; Oblivious [-3]; Obsession [-5 to -15]; Shyness [-5 to -15]; Staid [-1]; Struggling [-10]; Stubbornness [-5]; Unfit [-5]; and Workaholic [-5].

more precisely than the most advanced scientific instruments of the era. In this context, the only thing that saves it from looking like a superpower is the fact that its usefulness is severely limited. When few other people know the exact time, to the second, what use is one person knowing it instinctively?

Still, a character with this advantage could end up functioning as a uniquely effective astronomer or navigator. GMs looking to preserve "period feel" in early-period games should probably ban this advantage.

Time and Magic

Like many other technologies, clocks might not be required, or at least might not be so widespread or quick to develop, in worlds where magic works and the full list of **GURPS** spells is available. The spells "Tell Time" and "Alarm" (see **GURPS Magic**, p.M53) seem to work better than any pre-TL5 clock, and are not especially hard to learn. Magic items incorporating the former spell would make rather expensive "magical wristwatches" (\$4,510 each according to the guidelines in **GURPS Magic**), and would

Primary Skills: Cyphering (M/E) IQ [1]-13, and *either* Engineer (clockwork) (M/H) IQ+1 [6]-14 and Mechanic (clockwork) (M/A) IQ [2]-13, *or* Engineer (clockwork) (M/H) IQ-1 [2]-12 and Mechanic (clockwork) (M/A) IQ+2 [6]-15.

Secondary Skills: Astrology (M/H) IQ-1 [2]-12; Mathematics (M/H) IQ-2 [1]-11; Carpentry (M/E) IQ [1]-13.

Background Skills: A total of 12 points in any of: Abacus (M/A); Appreciate Beauty (M/VH); Architecture (M/A); Artist (M/H); Blacksmith (M/A); Climbing (P/A); Engineer (other specializations) (M/H); Languages (varies); Masonry (P/E); Mechanic (other specializations) (M/A); Metallurgy (M/H); Performance/Ritual (M/A); Philosophy (M/H); Teaching (M/A); Theology (M/H); Woodworking (P/A); and any Primary or Secondary Skills.

Design Notes

(For those who want to see behind the curtain)

Attributes: Good IQ is absolutely required here; this is highly innovative technology. Good DX would be nice, but even a craftsman who has to do the building work himself can get by with Manual Dexterity.

Advantages: Literacy is mandatory in this sort of field. Clock making may also bring prestige or a little wealth. Other options reflect ritual activities (such as membership of a religious order), technical aptitude, mental focus, or the support of powerful individuals or institutions (always useful for high-tech projects). In cinematic games, Gadeteer or High Technology might be added to the template, or at least to many clockmaker characters.

Disadvantages: Some of these reflect the mild eccentricity that might drive this choice of career. (Clockmakers are likely to have strong, perhaps geeky, personalities.) Others represent a relationship with a patron, monastery, or church.

Primary Skills: The basis for this job is a working grasp of numbers, plus some mixture of theory (Engineer) and application (Mechanic).

Secondary Skills: These are based on what the character will surely have picked up along the way. In the absence of pre-existing clocks, astronomy (officially referred to as "astrology" in **GURPS** at this TL) provides the best available source of chronometric information.

Background Skills: These are things that a craftsman, scientist, priest, monk, or astrologer might happen to have studied.

Sample Clockmaker Character: Brother Martin (100 points)

Age 37; 5'7", 150 lbs.; a stocky, quite brawny, one-eyed German monk.

Martin (a fellow of humble birth, with no other names worth mentioning) became a soldier in the armies of his native Germany to get away from farming, and later became an artilleryman to get away from hand-to-hand combat. Along the way, he learned to work metals and wood -- anything to

probably be very rare, but a simple Alarm item would be cheap (\$60). One could easily imagine a temple, monastery, or rich man acquiring three or four such items to order, giving them to an unskilled servant, monk, or serf, and telling him to ring a bell or call out from a tower whenever they go off.

However, this may be looking at things the wrong way round. The fact is that these accurate and precise timekeeping spells may not be *conceivable* in a society with a truly pre-modern attitude to time, and so, logically, might not exist. (Perhaps they could be found lurking in some forgotten grimoires somewhere, puzzling all but the most imaginative students.) Time spells might be an early sign of the evolution of "technomagic" -- magic as an industrial process.

Likewise, anyone attempting to create "authentic" fantasy worlds might assume that the widespread availability of these spells would create a more "regularized" society, more concerned with precision and punctuality than the real Middle Ages. They would also be a godsend for both astronomers and navigators, potentially giving a significant boost to both non-magical science and ocean travel. This *would* at least have the virtue of making the setting feel more familiar to modern-day players, and could reduce the culture shock for, say, newcomers to worlds such as Yrth (see **GURPS Fantasy**) - - although discovering that a town's "clock" is actually a dim but reliable fellow, sitting by a bell rope while wearing a magic item, could add to the strangeness.

keep the guns functional and get them where they were needed. Then, the week after the army he was in sacked a church, an act which made trouble for his latent conscience, Martin's cannon blew up on firing, leaving him badly maimed.

He took that as a sign and a punishment from God, and went into a monastery to make restitution for his past deeds. (In truth, it looked like a safer choice than most other options he could think of, too.) There, the quick mind and willingness to learn which had made him a capable gunner again proved useful. He learned to read, and caught the attention of his superiors as a useful fellow to have around. Now, he finds his cleverness called on by an abbot of his order, who's obsessed with these new-fangled *clocks*. Martin provides the practical skill with his hands, while the abbot and other, more scholarly brothers help with the mathematics and other ideas. If the current project goes according to plan, Martin may well find himself being sent around other churches and monasteries, helping to spread the new technology. When obliged to travel, he usually begs transport on passing carts and wagons, as his injuries make him painfully slow on his feet.

Any PC with an interest in mechanical devices could find it worthwhile tracking down Martin for a conversation; he is devout, and mostly interested in using clocks to regulate monastic life, but he may be interested by other ideas. He won't like talking about military applications of technology, but he will usually remain polite, if a little taciturn, and he isn't a fanatical pacifist -- he just has some bad memories. If encountered on the road, between tasks, Martin may strike PCs as a rather mysterious figure, a maimed and brooding monk who deals in strange ideas; some may have encountered him in his old life, and may be puzzled by his unwillingness to talk about those days.

Note that Martin's nationality can, of course, be changed simply by changing his native language, and possibly his name. He is assumed to have forgotten some of his military skills; he may have been a markedly better gunner and foot-soldier in his time.

Brother Martin has a higher level of disadvantages than is allowed for PCs in some campaigns, and isn't likely to be much direct use to parties of mercenaries or monster hunters. Still, he could serve as a PC in some games.

Attributes: ST 13 [30]; DX 11 [10]; IQ 13 [30]; HT 11 [10].

Basic Speed 5.25; Move 2.

Dodge 2.

Advantages: Literacy [10]; Manual Dexterity +2 [6]; Patron (Abbot, 12-) [20].

Disadvantages: Disciplines of Faith (monasticism) [-10]; Duty (to Abbot, non-life-threatening, 15-) [-10]; Lameness (crippled leg) [-15]; One Eye [-15].

Quirks: Dislikes remembering his military career; Has a stern conscience; Jokes about clocks to the novices. [-3]

Skills: Astrology/TL3-12 [2]; Blacksmith/TL3-14 [4]; Brawling-11 [1]; Carpentry-14 [2]; Cyphering-14 [2]; Engineer/TL3 (clockwork)-12 [2]; Gunner/TL3 (cannon)-13 [8]; Mathematics-11 [1]; Mechanic/TL3 (clockwork)-15 [6]; Mechanic/TL3 (wagons)-14 [4]; Metallurgy/TL3-11 [1]; Polearm-10 [1]; Savoir-Faire (Military)-13 [1]; Theology-11 [1].

Languages: German (native)-13 [0]; Latin-12 [1].

Equipment: Small hammers, tongs, pry-bars, etc.

References

Whitrow, G.J., *Time in History*. (Oxford University Press: ISBN 0-19-285211-6.) A fascinating book, with a broad scope and plenty of cross-references to other sources. Useful reading for any historical gamers looking to get into the mindset of times and cultures other than their own.

Warm-Blooded Vampire

by Elizabeth McCoy

Called various things, from "warm-bloods" to "nephelim" to "mutant half-breeds," these vampires were never precisely *killed* to become undead. They are, instead, the product of truly undead vampire parents -- their sires are vampires and their mothers became vampires while pregnant.

On the plus side for these beings, warm-bloods age very slowly -- about half normal rate till adult-hood, and then drop to a rate of approximately 1 year of aging for every 20. (Unfortunately for those caring for this half-breed, this *does* mean the "Terrible Twos" last two years instead of only one, and puberty is likewise drawn out -- the vampire child may learn more skills normally, but certain brain developments are more age-related, and personality aspects related to those will therefore be endured longer.)

As a further benefit, a half-breed requires much less blood (or death, depending on the sort of vampire; see Barbara Hambly's *Those Who Hunt the Night* for vampires which must kill to survive). If a regular vampire needs to feed once a night, the half-vampire may survive with one feeding a week. (If the regular sort needs a feeding a week, the half-breed only requires one per month, etc.) However, they must eat normal food instead, just like a regular human. (One vampiric meal will substitute for regular food.)

And finally, they aren't very affected by sunlight -- they sunburn somewhat more quickly than a fair-skinned human (*GURPS* Albinism rules are useful) and have minor vision penalties in bright sunlight -- and they're slightly stronger than the average human.

On the minus side, they're only *slightly* stronger than the average human. (In *GURPS* terms, +2 to all attributes but IQ; in *In Nomine* terms, 3 extra characteristic points for Corporeal Forces attributes, and +2 Precision.) Most of them, however, can boost themselves supernaturally -- at the cost of having to feed immediately afterward. (E.g., doubling strength for fighting or enhancing their running to flee a mob scene, for a minute or two.) Note, that's *most* of them -- some unlucky individuals aren't vampire enough to surpass their semi-mortal heritage. They're also affected by normal weapons, and show up in mirrors.

Naturally, they get fangs sharp enough to draw blood, and tend to possess at least a minor form of their vampire parents' other supernatural abilities. While some vampires mock them, others are more wary of getting on the bad side of someone who can walk around in the daytime. Besides the obvious dangers, half-breeds can make life much easier when they're friendly -- they're less likely to have second thoughts about working for blood-sucking undead when they think of blood-sucking undead as "Mom, Dad, and Uncle Henry."

Many people believe that a warm-blood will rise as a true vampire upon his death. This is up to the GM to decide, as most half-breeds are considered vampires by regular humans and tend to be dispatched with fire, beheading, or general dismemberment, and therefore never get a chance.

Explicit GM Options

This type of vampire -- or, technically, vampire offspring -- may be the default for a campaign world, linked to a specific bloodline (such as *Vampire: The Masquerade* or Kim Newman's *Anno Dracula* books posit), or it may require the use of special alchemical potions or spells. (E.g., *In Nomine* might use a variant of the Corporeal Song of Fruition.) The vampire-child may continue to gestate "normally," or it might be born shortly after the mother becomes undead -- this would require good timing, lest the child be too premature to survive.

A half-breed may be unable to create other vampires, create vampires normally, or only be able to create other warm-bloods like himself. If the latter, this might well be discouraged -- a newly created warm-blood is unlikely to be as sympathetic to the blood-sucking condition as the vampire-child raised by its undead parents and other "relations."

However, some groups might think that suitable indoctrination, and frequent reminders that mortals don't tend to distinguish between types of blood-suckers, will maintain loyalty.

Biologically, a half-breed might be sterile, or normally fertile; offspring might be normal -- or have special abilities, such as magical aptitude or psionics, or simply improved stats.

Sample Characters

"Benny" (Bernard Richardson)

Physically, Benny is a fairly typical warm-blood; while he's a little weaker on the bench-press, he can boost himself with the usual costs. He's slightly more mentally-oriented, and prefers to run away from large combats -- for someone raised in a blood-sucking environment, he's actually fairly moral. ("Squeamish" to some of his vampire kin.) In appearance, he's dark-haired and brown-eyed, with a half-Black skin-tone. (His father was Caucasian, his mother was Black.)

His vampiric family consists of his father, who affects the name "Drac" and is the leader of the hunting pack, his father's harem (most of them mothers of vampire-children), and a few stray males who owe their undead status to members of the harem. (Any of them who go up against Drac tend to perish, but get replaced eventually.) There are currently four warm-bloods in the pack, counting Benny. One of the others is Robert, who is both spacey and vampirically weak. Benny's taken Robert under his wing, so to speak -- from "big brother" status when they were both pre-pubescent, Benny's now deemed to be Robert's proper keeper by the rest of the pack.

The other two, older half-breeds are Natalie and Sasha (male); Natalie has an actual job that helps support the pack, while Sasha, the eldest, gets odd jobs as the other vampire-children do and takes after Drac as much as he can. (I.e., he dresses all in black, periodically tries to seduce attractive women with whatever force seems necessary, and sneers at the other warm-bloods and even the other vampires when he thinks he can get away with it.)

Benny, despite a somewhat dysfunctional "family," is fairly well-adjusted . . . as vampires go. He doesn't go in for bullying those weaker than himself (unless he's in a *really* bad mood), and takes care of Robert even when he's exasperated with the other half-breed. He's not big on killing, and prefers to use his minor mind-clouding abilities so that his targets don't remember his business-like feeding. When faced with threats from humans, he runs away (augmenting his speed if necessary) unless he has to protect someone -- and he'd rather protect the other person by carting him off while running.

His one notable quirk is that he's fascinated by babies. He tends to touch them or pick them up whenever he sees them -- which often gets him into trouble with their mothers, as he has no understanding of the etiquette of touching other people's children. He's also highly protective of babies. (This fascination and protectiveness fades, the older the child is, till they're about 15-17; then he treats them as "adult.") His attitude -- much to the disgust of Sasha, "dark lover of the night, in tune with vampire potency" -- is entirely non-sexual. In truth, he doesn't have the faintest idea that anyone *could* consider children as anything other than tiny little creatures to be protected. If he became aware that someone was threatening or harming young children, he would try to protect the youngsters.

(This aspect of Benny is most likely to draw him to the attention of PCs, either as a perceived threat -- "The blood-sucker likes kids!" -- or as a mysterious vigilante who leaves his victims anemic.)

GURPS Version

Benny

Attributes: ST 11, DX 13, IQ 11, HT 12.

Advantages: Alertness +1, Bite (racial), Catfall (racial), Charisma +1, Hyper-Strength (racial), Hyper-Reflexes

(racial), Immune to Disease (racial), Knack: Daze (racial; requires eye-contact or touch, not broken by gentle feeding, costs 1 Fatigue), Night Vision (racial), Strong Will +1, Unaging* (racial).

Disadvantages: Curious, Dependency (racial; 2 HT worth of blood, weekly), Sense of Duty (children), Dependant: Robert, Secret (racial, vamperic; would turn into Enemy), Sun-sensitive (-5; like Albinism save for coloration).

Quirks: Fascinated by babies; Taciturn; Pacifistic.

Skills: Acting-13, Brawling-14, Carousing-12, Climbing-15, Fast-Talk-13, First Aid-11, Holdout-12, Knife-16, Knife Throwing-13, Motorcycle-13, Occultism-10, Scrounging-14, Stealth-14, Streetwise-13, Survival (Urban)-12.

* Technically, this is several levels of Extended Lifespan; Unaging is cheaper.

Robert

Attributes: ST 11, DX 11, IQ 11, HT 11.

Advantages: Appearance: Attractive, Bite (racial), Catfall (racial), Hyper-Strength (racial), Hyper-Reflexes (racial), Immune to Disease (racial), Knack: Daze (racial; requires eye-contact or touch, not broken by gentle feeding, costs 1 Fatigue), Night Vision (racial), Unaging (racial).

Disadvantages: Absent-Mindedness, Chronic Depression*, Clueless, Dependency (racial; 2 HT worth of blood, weekly), Distractible, Low Empathy, Secret (racial, vamperic; would turn into Enemy), Sun-sensitive (-5; like Albinism save for coloration).

Quirks: Stalks stray animals.

Skills Brawling-11, Climbing-13, Scrounging-12, Stealth-14, Survival (Urban)-10.

* Robert isn't precisely *depressed* so much as unaware of the rest of the universe most of the time. The mechanics work well, though.

In Nomine Version

Benny

Corporeal Forces - 2	Strength 5	Agility 6
Ethereal Forces - 1	Intelligence 3	Precision 3
Celestial Forces - 2	Will 4	Perception 4

Songs: Entropy (Celestial/5; variant causing a peaceful daze)

Robert

Corporeal Forces - 2	Strength 5	Agility 6
Ethereal Forces - 1	Intelligence 2	Precision 4
Celestial Forces - 2	Will 5	Perception 3

Skills: Climbing/2, Fighting/2, Move Silently/2

Songs: Entropy (Celestial/5; variant causing a peaceful daze)

In this version, "Drac" is a mummy sorcerer and necromancer, using a conception ritual that mimics the Corporeal Song of Fruition in many ways, and then a necromantic ritual some 8.5 months later. His hunting pack is mostly

vamperic, but some are also mummies and he's been known to create zombis from time to time. If he has ties to demons, they're not known to the vampire-children.

Robert the Fair

for *Ars Magica*

by Adam Gauntlett

Robert the Fair -- Minor Nobility

INT +1 **STR** -1 **COM** +2 **DEX** -1
PER 0 **STA** -1 **PRE** +1 **QIK** -1

Robert is intelligent, but age has withered his tall frame and long shanks. However, he's still an impressive speaker and his silver hairs only add to his noble bearing.

Virtues

- +2 *Lesser Noble*. Robert is the bastard son of the former Baron.
- +1 *Educated*. Robert's father was fond of him and provided a stipend for his education.
- +1 *Inspirational*. Robert was a famous warrior in his youth and some of the old glamour still clings to him.
- +1 *Veteran*. Robert spent his wild youth in constant conflict, defending the magi of his covenant.
- +2 *Temporal Influence*. Although Robert has fallen on hard times, he still has friends in high places who are willing to listen to their former ally.
- +2 *Famous*. Robert was a champion of the tourney field and his exploits are still remembered by some troubadors.
- +1 *Arcane Knowledge*. Robert saw many odd things when he fought for his covenant and he was canny enough to pay attention when the magi spoke.

Flaws

- -1 *Overbearing Underlings*. Many of Robert's servants are actually his sister's bondsmen. They do not always pay attention to their master, since their mistress' words carry more weight.
- -2 *Jinxed*. This flaw has followed Robert all of his life and prevented him from getting the recognition that he seeks.
- -1 *Expenses*. Lawsuits have eaten up Robert's capital. He has been forced to use his armor and weapons as security for loans, although he still harbors a hope that he will be able to redeem them someday.
- -1 *Oath of Fealty*. The current Baron's son has Robert's loyalty, if not his respect. Robert finds it difficult to respect people who are not of his generation.
- -3 *Arthritis*. Age has taken its toll and Robert is not as spry as he was.
- -2 *Common Fear: Birds*. Robert has never liked feathered creatures. He is allergic to them. Further, some very bad experiences have taught Robert to loathe all Aves, particularly Corvids (Ravens).
- -4 *Plagued by Faerie: the Lady of Corpses*.

Background

Robert is one of six bastard children of the former Baron. Three of Robert's siblings survive, including his sister Iocasta. Robert's half-brother Meroc is the current Baron, who is himself one of the Baron's three legitimate children. Through his relatives, Robert is linked to many of the noble families of the region.

Robert's father intended him for the priesthood, since he would never inherit any property of his own. From the age of six Robert was cloistered in a monastery, learning a monk's duties but never any of their piety. The abbot had the unenviable task of writing to the Baron on a regular basis, telling him about "your young scapegrace's latest exploits." Scapegrace was the kindest word that Abbot Jerome used. As time wore on and the Abbot's patience began to wane, Robert was described as "a rogue," "Pestilence," "the Cross which I am forced to bear," and finally "that wretched, perverse, and wholly unrepentant rascal who, I must advise your Lordship, has worn out his welcome here. It is with regret that I pen these words. However, I am convinced, (and so, Sir, should you be), that although Robert may at some stage become a good man (for the ways of God are indeed mysterious), he will never make a good monk."

Robert left the abbey at the age of 15, with some knowledge of theology and a reasonable command of Latin but little else. Although Robert has become slightly more pious with age, his attendance at church services has always been irregular. When Robert travels he is forced to stay at monasteries much of the time, and whenever there he is always ill at ease. He cannot shake the impression that, despite all appearances to the contrary, he has become a youth again and at any moment an irate Abbot will appear to punish him for something.

Resigning himself to the inevitable, the Baron provided Robert with enough funds to purchase armaments and a good horse. He also provided Robert with an introduction to an old family friend, a knight of good renown named Valence who was to take young Robert on as a squire.

Under Valence's tutelage, Robert became a dangerous swordsman and an expert horseman. When the Baron was forced to defend his lands against incursions from his neighbors, Valence and his squire were in the forefront of the battle. Robert was overjoyed. He was ambitious and craved knighthood, and the quickest means of getting this was to distinguish himself in combat.

While on the march, Valence, his squire, and their retinue camped not far from a long, low mound. The locals called it Quenhowe and sometimes held festivals there, but the custom had fallen into disuse and now few people went near it. The place had a bad reputation, and some said that the Queen of the Dead held court there. Valence knew very little of these stories, and what he did know he scoffed at. Robert, who followed his master in all things, did likewise.

They were foolish. The mound was a Faerie dwelling, where a Morae -- a Dream-Walker -- lived. This creature, who some peasants called the Lady of Corpses, hated humanity because they had forgotten her. The sudden arrival of men bearing iron, sleeping near her mound, incensed her. She decided to strike out at their leader. In her Raven form, she visited their camp and when the moon was full she sank her claws deep into his mind, intending to slay him with evil dreams. However, Robert caught the Lady of Corpses in the act and drove her off, slashing off one of her forelegs in

doing so. From that day to this the Lady of the Mound has lacked a hand, and her Raven lacks a claw.

The Lady hid, licking her wounds. Robert went on to fight for his Baron, but the fame he was seeking eluded him. Although he was able to get a few small ransoms, he didn't quite manage to catch his father's eye. He remained a squire.

Valence died of the flux during the war, and Robert was left without knighthood or employment. Pride kept him from appealing to his family for aid. Instead he listened to a plausible scholar who said that he knew of a "covenant," (Robert had never heard the term before), which needed good warriors. The scholar spent money freely and seemed to have supporters amongst the nobility. Robert hoped that he could find the fame at the covenant that had eluded him on the battlefield. He pledged his sword to the covenant's service.

Over the years Robert became stronger, and even managed to save a little money. However, he never gained the knighthood that he sought. In fact, he noticed that he was getting a bad reputation amongst his fellow gentlefolk. Although the magi had some sponsors amongst the nobility they had many more detractors. This didn't matter to the covenant's other servants since they expected to get their rewards from the wizards, not the Baron or the King. Robert was different. He wanted recognition, a manor, a coat of arms, and none of these things would ever be his while he served the covenant.

In addition, the bad luck that was to become his trademark had begun to manifest. Although Robert had almost forgotten the Lady of Corpses she had not forgotten him. The injury that he had done her would be punished. Rather than attack him directly she plagued his friends, his servants and his allies, stripping him of every advantage that his birth or his sword might win him. Whenever she injured Robert directly or indirectly she appeared to him in Raven form which only intensified his dislike of birds.

Robert left the covenant. He used his savings to purchase a little land and tried to make a life for himself. By now he was past his youth and had lost all hope of becoming a knight. He still had hopes that his children might be more fortunate, and with that in mind he married a young woman of similar social standing. She bore him a daughter and a son before dying in childbirth.

Robert's bad luck was still evident. The property that he bought was swallowed up in lawsuits, as other minor nobles and freemen challenged his title to the land. Eventually he had to sell his house. Were it not for his sister Iocasta's charity he would have had no home at all. The home he did have was not at all to his liking. His sister had prevailed on her husband to give her poor brother a position, which he did. Robert became keeper of his brother-in-law's dovecote, in a village some distance from his sister's manor house. The doves were reared as suitable white flesh for Friday meals, and sold or traded to other nobles throughout the barony. For Robert, who loathed birds, this was the final ignominy.

There was one peculiar thing about Robert's new occupation. The ground around the dovecote was fertile with a noxious plant that Robert recognized. The covenant folk called it Stinkhorn, and Robert knew that it was a magical plant of some value. For a while he cultivated it, thinking that he would be able to trade it with wizards. Eventually he realized that he would never be able to do so as he feared the effect that a renewed association with magi would have on his reputation. Robert kept the preserved Stinkhorn that he had but let the new plants rot.

Although Robert had some fame and reputation he had little money. What money he did have was eaten by old debts, from his lawsuits. His good name and his noble birth meant that he has become an unofficial reeve in the village where his brother-in-law has settled him. Although he has no official jurisdiction he sometimes acts as a justice of the peace and arbitrates small local quarrels. He is a respected man, and lives quietly. In the summer he often travels to his relatives' manors, seeking their aid not for himself but for his son. The boy is coming of age. Robert wants him to become a squire and eventually a knight, but this will require money and patronage. Robert's sisters and brothers have become almost resigned to this yearly visitation. Perhaps one day Robert will get his wish, and his son will become a squire to a local knight. Nothing would please him more.

Story Seed

Robert's young son is sick. The boy may soon die. Robert has almost despaired of his life, since no doctor can cure him. Robert has appealed for Hermetic aid via a friendly redcap. However, Robert still has enough regard for his reputation not to welcome aid from blatantly sorcerous people. He'd far rather a well-spoken Jerbiton helped him than a witchy Ex Miscellania magus. Robert will use his Creo Stinkhorn vis as a bartering ploy.

The illness was caused by the Lady of Corpses. She left the boy alone until now because she knew it would hurt Robert more to lose him just as he is about to become a squire. The magi will have to defeat her to cure the boy.

Management Material: General Office Edition

Published by [Zipwhaa, Inc.](#)

Illustrated by Roy Schneider

\$14.95

Management Material

One of the few surprises for me in this year's nominations for the Origins Awards appeared in the Best Traditional Card Game category, as **Management Material** had yet to find its way onto the shelves of my local gaming store; this in comparison with all of the other nominees that I had seen or played over the course of the year. Described as the "The card game of CUBICLE DENIZENS," **Management Material** joins a number of games, such as the Hip Pocket title, [Cube Farm](#), published by Cheapass Games and Cool Studio's **Burn Rate: the dot-com card game**. In **Cube Farm**, it is all about getting an office cubicle as close to the good stuff -- photocopier, water cooler or coffee machine -- whereas in **Management Material**, it is all about staying in the cube for as long as possible and getting out of doing those kind of jobs that mark you out of being **Management Material**.

Designed for two to five players, ages 12 and over, **Management Material** comes as a deck of 110 cards. Despite this recommended age minimum, the themes of this card game really lend themselves to an older, more adult audience with some of the cubicle life under their proverbial belts. The cards are all very nicely done in full color by the artist Roy Schneider, in a style reminiscent of newspaper cartoons or strips. The same cast of characters are used throughout, which gives the cards a uniform look and to make you sympathize with the various members of the office staff as you work your way through the deck . . . except, of course, for the boss, who gets no one's sympathy! Both cards and art are showcased on the publisher's website.

The rules to **Management Material** come on a single sheet of paper and are not as instantly clear as they really ought to be in a game as simple as this. They feel underwritten, but given just the one play through, everyone should be able to grasp how the game works.

The cards come in four types: the blue-bordered Project cards, the red-bordered Excuse cards, the green-bordered Recognition cards, and the purple-bordered Event cards. The cards are divided between the Assignment deck, made up of the Project and Event cards; and the Resource deck, made up of the Excuse and Recognition cards. There is also one more single card that is used to indicate whose turn it currently is. All but the Event and Turn cards are marked quite clearly with a number and an amusing illustration and accompanying caption.

The numbers are the key to the game . . . The Project card values range from one ("Make 547 Color Copies," "File This") up to 10 ("Superduper Top-Secret Project 'Z' -- so Secret Even the Boss does not Know What it is") and 11 ("Make Sense of it All -- and yes, the Boss is Serious"). Likewise, the Excuses range from one ("Lunch") to 10 ("Not in my Job Description") and 11 ("Called in Dead"). The Recognition cards have a lesser range, being just from one ("But . . . You've got such a Knack for This") to three ("But . . . Doing this Well, You'll Have *my* job soon!").

Game play is simple enough. On his turn, a player draws one of the boss' latest ridiculous Projects and attempts to counter with one or more of the absurd excuses. If the point value of the Excuse cards is equal to or greater than that of the Project, they can get out of the assignment and pass the buck . . . The other players can attempt to stop this by playing Recognition cards that both shower the current player with fulsome praise and increase the Project's value. If the current player can still put down more Excuse cards to counter the combined value of the Project plus its Recognition cards, the Project is passed onto the next player for them to deal with it. If the original or a subsequent player fails to get out of the Project, they are forced to keep it and the current turn is over; the Turn card is then passed

onto the next player. Once a player has acquired a number of Projects that total 30 or more points in value, they will have achieved the heady status of **Management Material** and must leave cubicle life to cross the abyssal divide that once separated them from the boss. They are also out of the game. This continues until each denizen of the cube is promoted out of the game one-by-one until there is just the last remaining player *and* winner.

While all of this is perhaps a little too simple, it is the Event cards that add a much-needed random element to the play of the game. They represent the unpredictable that might befall the lives of cube land, from Mergers and falling Stock Prices to *that* Legendary Office Party. These generally gain a player a card from another's hand (which is a good thing) or a Project card from the ones in front of another player (which is, of course, a bad thing). Worse still, are the two Event cards that shift everyone's Project cards one place to the left or right!

Initially, we were underwhelmed by **Management Material**, but after a game or two, it became evident that it was really rather fun. Part of this comes from the Event cards; without their effect, there would be little reason to want to play this game. They can really change a player's fortune, especially toward the end of the game when everyone has acquired an assortment of Project cards. Indeed, towards the end of a game -- which should last no more than 10 minutes -- the rate at which players are eliminated escalates, as there are fewer players to deal with the Project cards as they come up. More Event cards would have added to this aspect of the game, especially those that shift Project cards left or right by more than one player; since they can only shift things by one place, everyone soon finds that their old Projects come back to haunt them. This may be intentional, of course.

In addition to the Project cards, the enjoyment of the game comes from the humor of the cards, recognized by anyone who has spent time as an office employee and peered over that yawning chasm that separates the desk jockey life from the echelons of middle management. Or, as my girlfriend exclaimed, "This game is my life." After all, who can really understand what goes on in their strange minds -- that is, until you prove yourself worthy of being **Management Material**?

Pyramid Review

Infection

Published by [Earwig Enterprises](#)

Designed by Dan Sullivan

Art by Tom Hennessy

8 pawns plus counters, 100 disease cards, 100 cure cards, 26 intensive care cards, game board, rules, 2 six-sided dice; \$28.00

You can make a game out of just about anything, no matter in what poor taste the subject matter may be. But Earwig Enterprises' board game ***Infection*** takes an informative and unsentimental view of the wonderful world of diseases, making it by turns both interesting and uproariously funny.

The object of the game is to be the first player (the game allows 2-8) to rid himself of all diseases, or to be the only surviving player if all others have been overwhelmed by their sicknesses. A player starts out with five diseases and \$500 in cash.

The board is laid out, and in many ways plays, like ***Monopoly***. You start in one corner and make circuits according to the roll of the dice, trying to ditch the illnesses and pick up the money to pay for treatments. Some spaces give you a disease, others take them away. Some give you a chance at a cure, and others add a little spin to the game like letting you leave a contagious disease in the bathroom for the next poor player to stumble into. In each corner is a Medical Station, and you may choose to stop here even if your roll would carry you past it.

There are five levels of treatment, and the Medical Stations are the easiest way to procure them. They are, in order of quality (and cost): the Voodoo Doctor, the Drugstore, the Clinic, the Specialist, and Intensive Care. The first four are available at every corner, and you must choose which one you're willing to pay for before you check the results. Once you've made your selection, draw a treatment card and check the entry for the ministrations you bought.

The results vary. Sometimes the result is as plain as "Cure a disease." Sometimes it will be specific, like "Cure a contagious disease" or "Cure any red disease" (the blue cards are the easiest to treat, while white and red are tougher nuts to crack). A specific result may not be as good as a generic one - if it singles out the kind of disease you can treat and you don't have one fitting the description, the cure is useless. You might cure a contagious disease, and those are already easy to get rid of or even pass to other players.

The results aren't always a success, either, so you may end up paying good money for nothing (malpractice is another game). If you have one of the dreaded red diseases, you're better off trying for high-end treatments that are more likely to target your problem. These are pricey, especially if you choose an intensive care card. These are available only at the starting corner Medical Station, at a cost of \$500 (more than twice what anything else will run you). On the plus side, intensive care may even cure more than one disease. You'll really want to get rid of those red diseases; these represent the worst of the lot and, if left unchecked, five of them will kill you and remove you from play.

In spite of the publisher's independent status (he runs the business out of his home where the games are stacked to the ceiling), the components are sturdy items. The cards are well-made, not small-press throwaway junk, and the board is in full color and mounted. Each disease card has on it the affliction's names (both the common and scientific), what causes it, the symptoms, and the treatment proscribed; it's educational, to say nothing of gross in some cases. (It also forms the basis of one of the board's niftier squares; someone reads one of these entries and the player must guess

which disease is being described.) The simple artwork is decent and the quality extends to the board's graphic design.

On the other hand, the rules seem never to have passed through a spellchecker ; there are spelling and grammatical errors throughout the instructions (though nothing that inhibits one's understanding of the rules), and there's even disagreement within the game components. Are they cure cards or treatment cards? Do you go to the drugstore or the pharmacy? Most of the attention seems to have gone to the disease cards, which is for the best; they form the heart and soul of the game, and provide the most entertainment.

While the game runs quickly, it takes a long time to finish. Getting down to your last card is easy, but getting rid of it is trouble. (On the plus side, it's tough to stack up five red diseases, too.) They suggest reducing the number of starting diseases or setting a time limit if games are running too long. **Infection** is obviously the result of a whole lot of work, and it's a funny game with a giddy sense of humor that will keep players laughing. In spite of its best and most earnest efforts, though, the difficulty of reaching the endpoint may leave players with a sense of anticlimax.

--Andy Vetromile

Buy, Buy Blackbird

A few weeks ago, I was attempting to entice a new player into joining a game I wanted to run; I wasn't trying to run any *particular* game, really . . . I just had the hankering to try running something again, and was hoping to get new blood.

Anyway, I asked her what appealed to her about various games she'd played in. She listed a few aspects she liked of other games she'd tried, and then mentioned ***Dungeons & Dragons*** (as is constitutionally required of all roleplayers). And, in listing the parts of that game that made it enjoyable for her, way near the top of the list -- almost sheepishly -- she mentioned that she liked . . . shopping.

Now, I considered the implications of this. Primarily I was afraid that the Ghost of [Women In Gaming](#) Past would haunt me in the middle of the night and kick my butt for specifically inserting elements of shopping into the game to appeal to our female gamer.

But then I realized, as I treated myself over the weekend to some new cool bits for my Xbox, a copy of *Spirited Away*, and some nummy frozen custard, that, by gum, shopping is *fun*. And then I realized that I had many fond memories about shopping within games. The old ***Marvel Super Heroes Advanced Game*** had a section about designing super-headquarters, for example, with lots of different equipment and neat room types . . . and rules for saving money by getting substandard gear or mismatched furniture for the headquarters' living room. (I suspect a *lot* of headquarters designed with this system ended up with mismatched furniture.)

Here, then, are some tips I've been keeping in mind while trying to work shopping into the game.

Shopping is freedom. In-game, the freedom to buy things is perhaps the most freedom players are allowed. After all, if the players ignore the old man in the tavern rattling on about the Dungeon of Ennui just over the next hill, there's a real chance there won't be much of a game; the GM exerts a certain amount of control in many decisions. But, assuming the adventurers have acquired (or started the game with) money, how they spend it is usually much more free than other parts of the campaign; especially for relatively mundane things, there is a certain amount of control the GM gives to the player at that point, assuming an even remotely realistic simulation.

"With the money I made last adventure, I try to buy a pet."

"Uhhhh . . . there aren't any."

"What?!?"

"Nope; darndest thing; this world just doesn't have any pets."

"There are *no* animals available to purchase?"

"Err . . . Well, there's one hamster. But it costs \$10,000."

"For a *hamster*?"

"Yeah; it's made of adamantium."

"Okay; fine. I buy a book of matches and a shoebox; I'm waiting for nightfall, then I'm setting fire to the guy's house who's selling the hamster. I figure the hamster will be the only thing that survives the fire, so I'll put it in the shoebox. And I pocket the remaining \$9,995."

But shopping isn't infinite freedom; indeed, new opportunities to buy exotic or rare things can be a powerful motivator for adventure unto itself.

The thrills of shopping are often based on opportunity and rarity. Going back to our pet example, it's likely that mundane pets will be available anywhere, and will be priced somewhat affordably. But if the player is interested in a really different pet, then a number of possibilities are open. He may wish to buy a Andorian Tree Mink from the planet they are visiting, he may buy the parrot with cybernetic implants that let it hover without moving its wings; he might buy the ever-loyal dog that belonged to a recently departed hero after he fell into an abandoned well. Regardless, these may all be more expensive than standard pets (their exotic nature being is a good way of parting the player from more cash), and each suggest a number of adventure possibilities for both acquiring the critter and after it

is procured.

Likewise presenting players with rare "take-it-or-leave-it" buying opportunities is an interesting way of accenting parts of the game world and allowing a game to progress into a different direction. For example, consider an all-smuggler *Star Wars* game. As they are unloading their cargo after a particularly fruitful mission, the unscrupulous fence they are selling their stuff to gives them an opportunity to spend a fair bit of their newly acquired cash on a broken lightsaber. Assuming the heroes have never even seen one, the possibility of actually owning such an artifact may spark interest in them and take the game in an interesting direction of Jedi apprenticeship . . . once a few small missions are completed to repair the weapon, of course. This same campaign-branching philosophy can apply to opportunities to own a spaceship, exclusive night club, or apprenticeship to a wizard college.

Shopping requires a finite supply of money. The essence of the pleasures of shopping is two-fold: You get stuff, but only after making tough choices about what you want. Thus if a player has a million gold pieces and the most expensive thing on the shopping list is 10 gold pieces, this almost certainly wouldn't give much in-game shopping pleasure to the player; even if the player bought nothing but the best, he'd have 100,000 of them. For that player, he (for practical purposes) a near-infinite supply of money. On the other hand, if that same player is presented with the possibility of buying a small-ish castle for 1,000,000 gold pieces, or a medium-sized island for the same price, suddenly there's a choice and sense of self-determination presented

Note that "finite" doesn't mean "small." For example, you could easily have a multimillionaire character in a game; he almost certainly wouldn't sweat about buying, say, clothes or meals at fancy restaurants, but he might be presented with the possibility of investing in force field technology (perhaps being presented with a prototype force field belt), buying a new combination yacht/headquarters, or having his personality uploaded into a computer AI . . . all for a hefty outlay of cash, of course.

Shopping is about possibility and imagination. There are many things available for purchase within a game that, ultimately, don't make much difference from a mechanical point of view; most buyable weapons do similar amounts of damage, there is generally a "best" type of armor that costs the most, and so on. But, done correctly, the means of presenting it can make a huge impact on the atmosphere of the game. For example, consider the two examples:

"You are all at an inn."

"I spend one silver piece on the gruel and toast."

"I spend 10 gold on the Emperor's Feast."

"Okay; you both are feeling nourished, and go to bed after dinner."

Versus:

"You are all at an inn."

"I spend one silver piece on the gruel and toast."

"I spend 10 gold on the Emperor's Feast."

"Okay; the gruel is mediocre and difficult to stomach. You wonder if it was tastier when it was fresh, last week. [The GM pulls the other player aside.] You are escorted into a private room -- the cleanest you've seen after weeks on the road. You are given the finest food in the inn; a minstrel is unobtrusively in a corner of the room, playing a mandolin, and, should you be so inclined, the innkeeper's daughter engages you in polite conversation throughout your six-course meal. [The GM goes back out to the other player] You think you hear some kind of stringed instrument in the other room. One of the other diners is toothless and foul-smelling; he's holding a rat, which eyes your toast longingly."

The net result of either is the same: The heroes are nourished, and ready to adventure. But the in-game effects of the latter are wildly different, and quite possibly satisfy the player who spent money on the most expensive meal to get the highest quality experience for his character.

Thus, even if there aren't any written game effects, make sure the players feel the effects of money spent on unessentials ("You land your spaceship at the space dock; there is a crowd of onlookers nearby to witness the arrival of one of the most beautifully painted crafts they've ever seen") and squirm when they've cut corners ("The Revengers are escorted into your headquarters, and you detect an almost imperceptible tsk of disapproval from Captain USA at

your mismatched furniture"). That makes the thrills and pains of shopping choices all the more real.

And, of course, you need stuff to buy. Make sure the players have access to mind-numbing lists of stuff to buy; even each item isn't available at every location (as it shouldn't be), such a list can at least give them an idea of how much they can expect to pay for various goods and services, and will probably spark ideas on things they may not have considered for their characters. ("I can buy an anti-grav belt?!? Dude, you've got to loan my character 9,000 creds! Oh, wait! A title for royalty is only 15,000 creds . . . cool . . .") If such a list doesn't exist for your game world, consider making one, or recruiting a player to do so.

In all, spending money for stuff is a pleasure for many people, and that pleasure can translate easily into a gaming world.

And if you have the opportunity to buy frozen custard made fresh hourly, I can heartily recommend it . . . even if it's more expensive than more humdrum ice cream.

--*Steven Marsh*

Dirigibles Over Africa

by Mark Gellis

In some universes, the mathematics of the Cosmic Fractal are known well enough that dimensional transporters allow explorers to travel from one alternate reality to another with relative ease. In others, the residents live in utter ignorance of the myriad realities that lie impossibly close to them, with only the invisible barriers of space and time holding them apart.

Botswana Rising: A Short History From 1860 To 1880

The first Point of Divergence for the world known to those who catalog alternate universes as *Botswana Rising* occurs in 1860, when King Khama of Botswana (called Bechuanaland by the British) began a series of journeys to other nations in Africa, arguing that Africa needed to change. Africans could not rely on trade alone, he argued. Africa had to seize its own destiny. Or, as Khama put it, "The American slaves are slaves because they do not have rifles. But to have rifles, you must have ironworks . . . your own ironworks. The ways of Europe are strong and we must learn their ways, and make great kingdoms like the kingdoms of Europe or, one way or another, they will enslave us all."

What Khama wanted was large, unified nations in Africa -- modern states, perhaps a United States of Africa -- to replace the hundreds of separate tribes that were easily dominated by Europeans using a divide-and-conquer strategy. Years of bloody struggle ensued as chiefs vied for power, and many tribes refused to cooperate at all, but by 1871 several new African nations had come into existence. In 1872, the African nations of Botswana, Uganda, Congo, Abyssinia (eventually known as Ethiopia in our world), Liberia, Benin, and Ghana signed the Great African Pact, which defined formal borders and pledged these nations to mutual defense and development.

They made no attempt to drive the Europeans out of Africa. The kings understood that what had been lost to the whites was probably lost forever. Their goal was to prevent the utter domination of the continent. The plan worked. The organization of a large number of African tribes into modern nation-states, combined with their willingness to accept the status quo as long as their borders were respected, effectively halted further colonization of the continent.

What happened next was later called the greatest diplomatic coup of the century. Germany, newly unified under Bismarck's leadership, saw the chance to gain the sort of influence in Africa that Britain had in Asia, and formally recognized the African kingdoms. In addition, Bismarck personally helped negotiate plans to build ironworks, shipyards, and similar industrial facilities in African ports and cities in return for mining and lumbering rights. With Uganda and Congo forming a bridge between the German colonies in East Africa and Southwest Africa, the Kaiser either controlled or influenced a belt of territory that ran from the Atlantic Ocean to the Indian Ocean. Germany even sold Botswana rights to use its ports in Southwest Africa and built a railroad to allow it easier access to the sea. By the time other European nations had realized what Germany was doing and negotiated their own treaties with the African nations, Germany was situated as the most important European power in the mineral-rich equatorial region of Africa.

Germany's gamble worked. By 1880, the African states were in the midst of their own industrial revolutions. Both sides were getting rich from mining, agriculture, industry, lumbering, and trade. Although its value is more symbolic than strategic, Ghana has just built its first small ironclad warship to patrol its coastal waters. The African nations have even established their own western-style universities, although the best and brightest of their sons (and sometimes daughters) are sent to study in Europe.

These African nations are still fairly minor powers. While some of them control large areas of territory, and are more advanced than they are in our timeline, most of the people living in these countries are simple farmers. Even those who work in cities are mostly men and women with limited education, living in simple houses without either electricity or indoor plumbing. The great powers of Europe see Africa much as they do places like Mexico or Siam; they concede that these countries are actually countries, rather than a wilderness full of savages (which is an improvement over how they viewed Africa in our timeline), but still feel that they are inferior to Europe.

The major "exception" is Germany. Although most Germans see themselves as superior to Africans, they have profited so much from their relationships with these people that genuinely feel quite friendly towards them. In addition, simple experience has led many Germans who live and work in Africa to start viewing Africans as equals. Some British intellectuals and leaders have come to see the wisdom of the German approach and are working to build more equitable (and more profitable) relationships with Africa, but progress is slow. France and other European nations with colonies in Africa remain firm in their sense of cultural superiority.

Among the African nations, Botswana is considered the most civilized, and has been called "the Switzerland of South Africa." It depends on German Southwest Africa and British South Africa for access to the sea, but it has good relations with both of these European nations (and knows that, if need be, it can play one off against the other). Liberia, Benin, and Ghana are viewed as modest industrial and trading powers. There is some tension in this region of Africa. Benin and Ghana suspect that Liberia is little more than a puppet state for America, and all three nations fear the ambitions of France, with its large colonial holdings to the north. Congo, which controls the vast river basin of its namesake (the territory that becomes Zaire in our timeline) is mostly underdeveloped, but all of Europe vies for its favor and access to its natural resources.

Abyssinia mostly keeps to itself, tending its own garden, but there are rumors that it is thinking of pushing the Italians out of Somalia so that it can take that territory for itself. The Abyssinians are different than the rest of Africa in that they have been a unified nation for thousands of years, since the time of the Pharaohs. With their proud history, they hold themselves apart from the rest of Africa, although they are willing to ally with other African nations when it suits their purposes. Finally, there is Uganda, which is like the nations of West Africa, busy with trade and industry, although it must rely on German East Africa to connect it to the sea and the rest of the world.

As for the rest of the world, it continues on very much as it did in our own timeline. Expansion across the West and Reconstruction after the Civil War continues in America, although the changes in Africa have led large numbers of freed slaves to make their way back to their ancestral homelands. And many American adventurers (and outlaws) see the opportunities offered by Africa, much of which remains unexplored, and decide to follow the oft-given advice to "Go East, young man." Germany, of course, continues to work to increase its influence in the Ottoman Empire and the rest of the Arab world.

One major difference is that there is a growing movement for an independent India, which is viewed with fear and loathing by the British government. This is especially true because it appears that segments of the movement have been infiltrated and exploited by Russian agent provocateurs. Another difference is a strong alliance that has developed in recent years between Portugal and Brazil. Portugal has a large colony lying on the southern border of Congo and, by working with its former colony in South America, has created a large and powerful trade cartel.

The second Point of Divergence defining the world of Botswana Rising was less important, but still significant. In 1863, a young German engineer named Hans Buhler realized while reading accounts of the use of balloons in the American war that it would be possible, by combining a hot air balloon with a steam-powered propeller, to create an airship capable of maneuvering itself through the air. By 1867, he was able to present a prototype to Bismarck, who was so impressed that he asked German scientists to begin research and provided the young engineer with many lucrative contracts, allowing the technology to develop at a far greater pace than it did in our universe. Early German dirigibles were even used in limited numbers in the Franco-Prussian War as observation and bombing platforms. While they had a very small effect on the outcome of the war, their potential was obvious. Bismarck encouraged further research and the technology developed rapidly. Buhler got rich.

Dirigibles became popular among Germans in Africa. Although less economical than railroads, they were faster. More importantly, there were large areas of Africa where there were no railroads. And, despite their huge size, dirigibles

A Note On Maps

The borders of these nations are very similar to those of the modern nations in our timeline. To give players the sense of Africa still being partly unexplored, one could download one of the outline maps of that continent available from educational web sites, fill in the names for the African nations and the European colonies, and leave the rest blank.

only needed a clearing the size of a football stadium for their docking stations. Faced with the alternative of cutting a path through several hundred miles of snake-infested jungle and sweltering plains full of man-eating lions (and more snakes), and then having to build railroads, using dirigibles started to look very attractive to some people. Railroads were built, but by 1880 there were also more than 50 German airships operating in Africa.

England, seeing itself outpaced, established its own network of airship stations in Egypt and South Africa and negotiated the use of stations in African nations. This brought the number of operating blimps or dirigibles in Africa to more than seventy.

Other nations are also interested in the potential of the dirigible. Brazil has initiated negotiations with Liberia and Portugal to create a transatlantic route running from an airship station at Recife to Monrovia and then down to Luanda in Portuguese West Africa. The United States is discussing the possibility of establishing a regular route running from New Orleans to cities in South America.

The overall effect is widespread interest in and optimism about existing and potential technology. The potential of flight having been realized, there are various attempts being made to develop airplanes, and people fully expect these efforts to succeed, although perhaps not for another 10 or 15 years. (On the other hand, the American inventor Edison claims he will have a working airplane by 1885.) The idea of large airplanes being used to carry passengers or cargo is discussed at parties the way people in our timeline now discuss the possibility of colonizing Mars: something that may not happen in their own lifetimes but which is clearly in the realm of possibility. Early automobiles have already been built in America and Europe, but they are not very practical and as yet have limited popularity.

This, then, is the world of *Botswana Rising* at the dawn of the 1880s. It is a world where Queen Victoria rules the most powerful nation in the world, but in which Germany has established itself as the leading contender for that title by making itself as dominant in Africa as England is in Asia.

Special Considerations

Botswana Rising is, like our own world, "low mana." Each GM needs to decide whether to allow magic in a particular campaign. Certainly, if it does exist, it would be rare and subtle. It could still, however, be powerful and dangerous. In most cases, the Ritual Magic system described in *GURPS Spirits* would probably be the best one to use.

Psychic powers would also be fairly uncommon, if the GM allows them at all. While there was a lot of interest in psychic powers, spiritualism, and the like during this period, it remains to be proved whether these powers were genuine, innocent self-delusion, or deliberate fraud.

The same considerations apply to some of the common elements of Steampunk adventures, such as dinosaurs living on isolated plateaus, lost civilizations ruled by sinister priest-kings with psychic powers, ancient supernatural horrors, and caves leading to the hollow center of the Earth. Each GM must decide whether he wishes to use *Botswana Rising* as a realistic alternate history or if more fantastic elements should be added to his campaigns.

People You Might Meet In *Botswana Rising*

Dr. Ludwig Hammerschmidt, Wealthy German Naturalist

Dr. Hammerschmidt is a tall, slender, delicate-looking man with blonde hair and blue eyes. He wears wire-rimmed glasses. He appears to be about 40. An accomplished naturalist and wilderness explorer, he is far less delicate than he looks.

Attributes: ST 10 [0] DX 12 [20] IQ 14 [45] HT 12 [20]

Advantages: Status +3 [10]*, Very Fit [15], Wealth: Wealthy [20]

* includes one free level for Wealthy

Disadvantages: Curious [-5], Bad Sight (Correctable with glasses) [-10], Sense of Duty (to Germany) [-10]

Quirks: Attentive [-1], Loves operas [-1], Loves brandy (kirsch or cherry brandy is his favorite) and always carries a hip flask of it [-1]

Skills: Administration-13 [1], Area Knowledge (Berlin)-13 [1/2], Area Knowledge (Africa)-16 [4], Botany-16 [8], Cartography-14 [2], Climbing-13 [4], Diplomacy-13 [2], First Aid-13 [1/2], Geology-14 [4], Guns (Pistol)-14 [1], Guns (Rifle)-14 [1], Hiking-13 [4], Musical Instrument (Piano)-13 [2], Navigation-14 [4], Orienteering-14 [2], Riding (Horse)-12 [2], Savoir-Faire-14 [1], Stealth-12 [2], Survival (Desert)-15 [4], Survival (Jungle)-15 [4], Survival (Plains)-15 [4], Writing-13 [1], Tracking-14 [2], Traps-14 [2], Zoology-15 [6]

Languages: Arabic-13 [1], English-14 [2], French-14 [2], Ganda-12 [1/2], German-14 [0], Kongo-13 [1], Latin-13 [1], Mongo-Nkundu-12 [1/2], Swahili-13 [1], Tswana-13 [1]*

* Swahili is used as a "lingua franca" in German East Africa and surrounding areas, Kongo plays a similar role in western Congo, Mongo-Nkundu is spoken in much of north-central Congo, Ganda is one of the more widely spoken languages in Uganda, and Tswana is a native language spoken in Botswana; Hammerschmidt has made a point of learning some of the most commonly spoken languages in Africa not only because he likes to be able to talk to people directly (rather than through an interpreter) but because it also gives him a fighting chance of being able to communicate in one of the hundreds of related but lesser-known African dialects

Total Points: 180

One variation would be to make Hammerschmidt an amateur intelligence operative as well as a naturalist, who would sometimes be asked by the German government to look into unusual happenings and report back if he discovered anything. A loyal German, he has thrown himself into these efforts with gusto. In this case, add Acting-13 [1], History-12 [1], Sex Appeal-12 [2], and Streetwise-13 [1], which would raise the value of the character to 185 points.

Sam Davies, River Boat Captain

Sam is about 40, of average height and appearance, with brown hair and brown eyes. An American who came to Africa in the 1870s, he makes his living running a trading post with his wife Sarah and running people up and down the Congo in his steam launch. He has a wealth of information about the area and is a good man to have around in a fight.

Attributes: ST 11 [10] DX 11 [10] IQ 12 [20] HT 11 [10]

Advantages: Strong Will +2 [8]

Disadvantages: DNPC (Wife, loved one, 12-) [-24]*

* Sarah's appearance on 12- is used because she is usually at the trading post, so if Sam is there, she will be, too, but if he is somewhere on the river, it is very unlikely that she will be with him because she stays behind to run the store whenever he takes anyone up or down the river on his launch.

Quirks: Enjoys checkers [-1]

Skills: Area Knowledge (Congo)-15 [6], Area Knowledge (New England)-12 [1], Boating-12 [4], Brawling-13 [4], Carpentry-12 [1], Checkers-13 [2], Cooking-12 [1], First Aid-13 [2], Guns (Pistol)-14 [2], Guns (Rifle)-15 [4], Mechanic (Steam Engine)-16 [10], Merchant-15 [8], Navigation-13 [6], Powerboat-14 [16], Riding (Horse)-11 [2], Sailor-12 [2], Seamanship-12 [1], Shiphandling (Steamer)-12 [4], Survival (Jungle)-13 [4]

Languages: English-12 [0], Kongo-11 [1], Mongo-Nkundu-11 [1]

Total Points: 115

Helga Krauss, Plucky German Lass

Helga is 22, the daughter of a German airship captain stationed in German East Africa. She came to Africa with her father 10 years ago after her mother died. Lovely, blonde, and very German, she has a sharp mind and no time for the sort of romantic nonsense people always seem to think she will find irresistible. She knows how to ride and shoot and has even learned how to pilot airships, thanks to her father. She is a bit of a tomboy and she loves living in Africa; her father wonders if she will ever start acting like a lady and get married and give him some grandchildren, but he is very proud of her.

Attributes: ST 9 [-10] DX 12 [20] IQ 12 [20] HT 10 [0]

Advantages: Ally (Father, 12-) [10], Beautiful [15], Wealth: Comfortable [10]

Disadvantages: Sense of Duty (to Germany) [-10], Social Stigma (Second Class Citizen) [-5]

Quirks: Adores her father [-1], Annoyed that men will not treat her like an equal even when she proves herself to be as good as they are at something [-1], Loves living in Africa [-1], Unromantic [-1]

Skills: Area Knowledge (East Africa)-12 [1], Aviation-12 [2], Cooking-13 [2], First Aid-12 [1], Guns (Rifle)-16 [4], Mechanic (Airship)-11 [1], Navigation-11 [2], Piloting (Lighter-than-Air)-11 [1], Professional Skill (Housekeeper)-12 [2], Riding (Horse)-14 [8] Survival (Plains)-14 [6], Tracking-14 [6]

Languages: English-10 [1/2], French-10 [1/2], German-12 [0], Swahili-12 [2]

Total Points: 85

Running A Campaign In Botswana Rising

What kind of campaigns can one run in this world? Here are some ideas . . .

Hunting Trips

Unfortunately, environmentalism is still in its "loving the great beasts of Africa means killing them and stuffing them, or maybe putting them in zoos" stage in the 1880s. For a simple adventure, have the PCs go after lions or leopards. For a somewhat more complicated adventure, use the hunting trip (perhaps they will be hired as guides for rich Europeans) as a way to get the heroes involved in the story and far enough away from help that they will have to take care of any dangers themselves. Once the PCs are in the wilderness, a GM is free to hit them with natural disasters, dinosaurs, German spies, lost civilizations, or anything else that his or her little heart desires.

Piracy

Organized piracy of the sort that existed in the Swashbuckler era has been dead for more than a hundred years in 1880, but there are still marine criminals who prowl the coasts of Africa and Asia, looking for the opportunity to steal a valuable cargo.

Piracy is uncommon, but it does occur, particularly against smaller merchant vessels. The ocean is a perfect place to dispose of the remains of a slaughtered crew, and much of the African coast is either wilderness or poorly patrolled colonial territory (or colonial ports where one can find merchants who will not ask too many questions); as a result, there are many places where pirates can unload their stolen cargo. The nations of West Africa hate piracy, as it interferes with the trade that is helping them modernize. A GM might have the adventurers hired by one of these nations to patrol the coast and investigate low level piracy.

For a more sinister campaign, a GM could assume that the pirates are actually being paid (and protected) by the French (or perhaps the Illuminati), who hope to destabilize nations like Benin and Ghana by attacking trade. Naturally, this is the kind of Big Secret that can bring down entire governments, and whoever is involved is going to try to make sure that no one finds out what is really going on (or, if they do, that they do not live to tell the tale).

Espionage and Diplomacy

Africa has enormous strategic importance because of its natural riches. The major nations of Europe (and some minor ones) will all have secret agents trying to find out what other countries are doing, and perhaps trying to sabotage those plans. Britain, in particular, would like to reduce Germany's influence in Africa. In addition, the African nations are developing their own intelligence services to advance their national agendas.

A common plot for stories set in this era is that of the secret invention which is being sought by an enemy agent (the PCs can be either the enemy agents or the ones trying to stop them). Perhaps someone has invented a new and relatively inexpensive method for isolating helium, which provides slightly less lift than hydrogen but is also much safer to use in airships. In the world of Botswana Rising, technical advances are coming fast and furious, but they are guarded jealously. The situation is, of course, complicated by the fact that many new technologies are being developed by private inventors who may be willing to sell their discoveries to the highest bidder.

Another campaign might involve what is being called The Affair of the Black Russian. Kimbe, one of the sons of the Khama, the King of Botswana, has gone to Germany to gain a European education. He becomes friends with Dmitri Balamirov, a young cousin of the Czar, also studying in Germany, and while visiting with Dmitri's family in Saint Petersburg has met and fallen in love with his friend's sister Irina. Irina is charmed by the tall, dark prince and, with the blessings of the Czar himself, the two become engaged. Newspapers call it the love story of the decade. Liberals call it the most important union of the century. But joy turns to terror when shots are fired at the couple. Miraculously, no one is seriously hurt, but why is someone trying to kill Kimbe? Or was someone else the target? Can the PCs find out before it is too late?

Prospecting and Exploring

Most of Africa is still wild and unexplored, especially in the reaches of the Congo and the depths of the Sahara desert. In addition to its mineral wealth, which draws prospectors hoping to strike it rich, many naturalists are drawn to Africa in hopes of advancing human knowledge. As in the realistic hunting campaign, the PCs would face natural dangers (and perhaps treachery from competitors or even those within their party if they discover anything really valuable) while seeking either riches or natural wonders. In a more fantastic campaign, the depths of the Congo river basin or the Sahara might contain anything from mad scientists using the an isolated outpost as a base to conduct unnatural experiments to tribes of natives being haunted by some unseen horror that strikes without warning and leaves no traces, only mangled corpses. And who can tell what lurks in the waters of Lake Tanganyika?

Africa in the 1880s in the world of Botswana Rising is a land of intrigue and adventure. If you have the wits and the courage, you can find fame and fortune. Go East, Young Man!

Elves: A Case Study of Transhumanism in Fantasy Worlds

by Jürgen Hubert

(Note: When discussing the Fantasy genre, I will mostly limit myself to the conventions that are used in the Dungeons & Dragons game, as those are the most likely to be familiar to the reader. As similar genre conventions are used in many, if not most fantasy RPG backgrounds, this should not pose a problem.)

With the publication of ***Transhuman Space***, the roleplaying community has been more exposed to Transhumanist ideas than ever before. One of the central ideas of Transhumanism is the desire to "transcend" the possibilities of "unmodified" humanity. In the setting of ***Transhuman Space***, this is achieved through human genetic engineering, body and brain modifications, and "uploading" of brain patterns into computers to create personality simulations of the original brain.

At first, it would seem that Transhumanism is an idea that can only prosper in the realm of science fiction (and certain fringe groups today who are limited by modern technology). After all, human genetic engineering, bioware, and advanced computers require a high technology base, and most fantasy background use technology that is barely more advanced than that of the Renaissance.

However, this is not necessarily the case; fantasy wizards have long been credited with creating new monsters, some of which escape to the wilderness and breed true. Others have managed to create entire "warrior races" that serve as underlings and shock troops (echoes of the combat bioroids from ***Transhuman Space*** can be seen in this).

In other words, the capabilities for transhumanist experiments are present; the only difference is that magic is used instead of technology, and according to Clarke's Law the difference between the two isn't all that important anyway. Therefore, it should only be a matter of time before an enterprising group of wizards tries to use these kinds of magical alterations on themselves . . . or their children. To use ***Transhuman Space*** terminology, they would create "parahumans," an entirely new subspecies of humanity.

So how would these "new and improved" humans look like? How would they differ from the human norm?

These wizards would probably give them extremely long life spans, and a long growth and childhood period to improve their socialization (if they are going to live a long time, it is better if they are well adjusted to coping with the passing of the centuries . . .). They would give them an attractive appearance and natural grace. They would reduce their need for sleep and improve their senses until they far surpass the human norm.

In short, they would change them into something remarkably like elves.

Their Greatest Secret

Could it therefore be that elves are actually not a "natural" race at all, but an artificial one? Could it be that their ancestors were humans who were not content with the limitations of their own species? So far, the evidence is merely circumstantial -- elves represent everything how many humans would like to be. However, there are more hints that paint a stronger picture.

Most elves tend to live in forests. This is not an ideal environment for most civilizations -- large human realms can only be sustained by agriculture, and for this, any large forests that are in the way have to be cut down. Groups of humans that live in forests full-time are rarely larger than small, nomadic tribes with only occasional permanent dwellings.

Yet elves seem to manage to not only maintain permanent dwellings, but also live in elegance or even splendor. Their beauty almost universally overwhelms humans who visit elven realms. And yet, elves seem to have copious free time that they can dedicate to the arts, wizardry, or swordplay -- they seem to be able to maintain their homes with little effort. How do they manage this?

Well, from the point of view of an ancient group of wizards that wanted to create the "ideal humans," it would have made little sense to just stop with the creation of elves. Instead, they would have shaped their environment as well to make the elves' lives as comfortable as possible. And indeed, there are signs for this -- trees and bushes that give bumper crops of fruits and berries, other types of trees that are capable of supporting entire palaces in their branches, and plants and animals that do away with organic wastes efficiently and without bad odors (for how many reports are there of elven cities with sewers?), and, most importantly, a number of forest-dwelling beings that seem almost be designed to serve the elves in various ways -- often even without their knowledge. Let's have a look at these "sylvian" creatures presented in the *Monster Manual* for *Dungeons & Dragons* on a case-by-case basis . . .

Assassin Vines: These plant creatures are very useful for protecting forest communities -- place a few in strategic locations, and would-be invaders are killed before they can even get near the tree houses.

Centaurs: It is hard to imagine how a creature that is a human-horse hybrid would evolve naturally (unless inter-species fertility works a *lot* different than in our world . . .). They seem to serve as shock troops for the defense of the forest, and shun contact with other races apart from elves, with whom they trade. It is anyone's guess who comes out on top with these trades . . .

Dryads: This all-female tree-dwelling spirits is remarkable in several ways -- they are bound to a single tree, and can never move far away from it, which prevents them from organizing themselves despite their obvious intelligence. Nevertheless, thanks to their *charm* ability, they can effectively stop individual scouts sent by outside forces and get them to reveal their information.

Interestingly, they also seem to lust after handsome males from other species, but often let them go after some time. In other words, while they experience sexual desire, it is unclear if they feel any emotions similar to what humans call "love" or "jealousy" toward individual males. This would make them the equivalent of the pleasure bioroids from *Transhuman Space* -- they will sleep with you, but won't be a baggage to you afterwards. (In yet another suspicious "coincidence," the resistance of elves against *charm* spells seems to be designed with dryads in mind . . .)

Giant Eagles and Giant Owls: These oversized and sapient birds of prey serve as excellent scouts and aerial steeds at different times of the day-and-night cycle.

Pegasi: Another obvious hybrid creature, Pegasi are easier to train than giant eagles or giant owls. They are somewhat more conspicuous, however.

Satyrs: Another single-gender "species," satyrs are possibly the male counterpart of dryads, which would make them a rather extreme example of sexual dimorphism. Like dryads, they show an extreme fondness for members of the opposite sex (this ready availability of willing sexual partners might at least in part be responsible for the famous low birthrates of elves . . .), and they also have the ability to *charm* other beings. They most likely serve as irregular troops who can harass enemies that venture too far into the forest with their spell-like abilities.

Sprites: While these small fey might not look very threatening, their small size and magical abilities makes them formidable foes to larger enemies who might never even get the chance to see their attackers.

Treants: While forests have many defenders, they are still very large. These intelligent plant creatures serve as guardians of stretches of forests where few elves dwell, and their ability to animate other trees makes them quite capable of dealing with any but the largest invasions.

Unicorns: Like treants, unicorns serve as forest guardians. They can also serve as steeds in emergencies, a role in which they are formidable thanks to their innate abilities.

In summary, a large number of intelligent beings of different species live together in harmony in the forests that the elves call their home. This alone would be suspicious in worlds where intelligent beings usually kill members of other species on sight, but that all species but elves show little interest in large-scale organisation or wizardry only confirms it. Most of these beings seem to be designed to make lives easier for elves, which strongly indicates intelligent design in one way or another.

Other cases of Transhumanism in Fantasy Worlds

Elves and their environment are just the most obvious result of Transhumanist experiments. There are always alchemists trying to perfect longevity potions, and undeath, if intentional, could be seen as another attempt as "transcending normal human limitations." Certainly, most liches seem to think that the end result justifies the obvious drawbacks. Certain powerful spellcasters can gradually transform themselves into more powerful forms, most notably the dragons, avangions, and clerical elementals of the *Dark Sun* setting. The philosophical group of the *Planescape* setting called "Believers of the Source" are Transhumanist in all but name.

Finally, a very few chosen people fulfill the ultimate promise of Transhumanism: They become actual gods. Few paths to divine ascension are ever the same, and they are all extremely difficult. Yet enough succeed to inspire others to follow in their footsteps . . .

Adventure ideas

Old Secrets, New Trouble: When looting yet another ancient dungeon, the heroes come across a set of magically preserved scrolls. Once the party manages to translate them (either through magical means, or with the aid of the world's best linguistic scholar -- the scrolls are *that* old!), they learn that these are the research notes of an ancient cabal of human wizards who were attempting to "improve" their descendants through magical means. The scrolls also include a very difficult spell that, when cast on a living human, make all of his or her descendents elves from that point onwards! Also included are detailed instruction on how to create a number of "slave races" that sound a lot like the sylvan races.

If the adventurers decide to go public with this discovery, this revelation cause major political disturbances -- and make them many enemies! Most elves won't believe them and denounce them -- or possibly try to kill them. Priests of some human religions might start to call elves abomination in the eyes of their god for the hubris of their ancestors.

Meanwhile, many rich humans will try to get access to the spell so that they can build dynasties that will last for many centuries. This will lead to many more elves in the future, and possible even to an immortal elven upper class ruling human kingdoms! How the "traditional" elves will deal with those "new" elves that don't have any link to their own culture is anyone's guess . . .

Philosophers With Clubs: In some cities, wizards, alchemists, and other scholars congregate together and form a new movement. Its adherents claim that the short life spans of humans are not inevitable, and that it is possible to transcend this and other limits of human nature. They immediately attract hostile attention from many clerics and druids who claim that this is against the will of their gods, or "unnatural." The PCs can get involved in either side of this debate.

Meanwhile, this movement will have many internal divisions. Is it enough to stop aging, or should the body be enhanced beyond normal human capabilities? Is it ethical if any of the methods involved use the life force of other living beings -- even if it kills "only" animals? Is undeath a legitimate expression of the desire for immortality, or a dead end that will ultimately limit your abilities? Finally, if some artifact or other unique process is found that can transform someone into a god, who gets to use it?

If the agenda of the adventurers is in agreement with these people (or if they are just feeling mercenary), they can work for them and "recover" rare spells and components that they will likely need in their research. The infighting that is likely to occur if any of the necessary resources are limited can also be a ready source of employment. If they are on the other side of the ideological divide, they can try their best to stop these mad wizards and the monstrosities that they

will inevitably birth . . .

Cargo Space

Trade Goods For A *GURPS Space* Campaign

by Stephen Dedman

So, you have a Tanstaaf-class star freighter with space for 765 tons of cargo, or maybe you're tramping around the Jewell subsector in a Far Trader. Either way, you probably have bills to pay. You may not be particularly interested in exactly what's in those containers in the hold (unless it starts chewing its way through the metal), but the starport's Customs and Quarantine officers will probably want to know. Bureaucrats tend not to see the funny side when your "4d-4 tons of moderate risk trade goods" turns out to be brilliant missiles with mininuke warheads, or terraforming algae that can out-compete every plant on the planet.

Even non-merchants will sometimes need to know what's being shipped between planets. Military types may want to smuggle weapons, or intercept arms shipments, or both. Colonists will need to know what they can export in exchange for imported luxuries. Salvage experts (and pirates) will want to know whether the cargo they're retrieving (or stealing) can still be sold at a profit at their next port of call, or whether it's decayed or mutated into something they'd rather not go near.

The following tables can be used to supplement the trade systems in ***GURPS Traveller: Far Trader*** or any TL10 ***GURPS Space*** campaign, and can be adapted to most other space-faring games. Many items can also be used as the loot for ultra-tech truck hijackers in a Cyberpunk or Shadowrun campaign.

Agricultural Produce

Cheap on Agricultural worlds, but may be considerably more valuable elsewhere. If the cost of freight is fairly high (to cover fuel, crew wages, ship maintenance, docking fees, etc.; the Basic Trade System in ***GURPS Traveller: Far Trader*** suggests a rate of Cr600-650/ton/parsec), then Ag worlds will mostly export quality merchandise for gourmets who are willing to pay the high cost of interstellar freight rather than exist on fauxflesh, mycoproteins and genemod algae wines.

Starship crews with room in their holds may choose to buy cheaper stuff by the ton for speculative trade rather than "deadheading" to their destination.

Foodstuffs are usually low risk goods, unless they're perishable or extremely expensive (see Luxury goods, below).

While it may be hoped that humanity will either become less superstitious as technology advances or, failing that, will use cloning to produce goods such as rhinoceros horn or bear gall for their supposed medicinal value, it is possible that there will always be a black market for the body parts of endangered species. The price range of these high-risk items should be the same as other drugs; whether the PCs choose to become involved in such a trade is up to them.

Beer: \$1,000+/ton

Clothing: \$80,000+/ton (x5 for upper-class, x3 for varicloth, etc.)

Coffee/Tea/Spice: \$20,000+/ton

Drugs: \$200,000 (Slammer, Sobriety pills) to M\$50/ton (Memory Beta, Torpine)

Food, packaged: \$6,000+/ton

Frozen meat/seafood (requires Reefer container): \$10k+/ton

Fur/leather: \$8,000+/ton

Grain/flour: \$1,000/ton

Natural fibers (Cotton, linen, wool): \$8,000+/ton. *Silk*: \$60,000+/ton

Paper: \$4,000+/ton

Perfume/Cosmetics: \$160,000+/ton
Seeds/Bulbs (genemod): \$5,000/ton to M\$2/ton
Spirits: \$30,000+/ton
Wine: \$8,000+/ton
Wood: \$500+/ton. *Genemod*: \$3,300+/ton

Industrial Goods

The range of industrial goods produced for export on any Industrial world is based on PR-2 (see p.S166). A planet with a small population may be famed for its precision optics or extremely reliable survival equipment, but is unlikely to mass-produce large vehicles. Exports will also be based on the availability of raw materials: a planet where industrial metals are scarce but organics common is more likely to manufacture plastics or carbon-based monofilaments than Gauss gun ammunition. Societies with high control ratings may also be reluctant to produce and stockpile more restricted equipment than they have an immediate use for, for fear that it will fall into the wrong hands. Purchasing these items may require an end user certificate (see below). Extra security may also be required for merchants carrying restricted items and cargos worth more than M\$1/ton.

While industrial worlds may over-produce some cheap goods which the PCs can buy at bargain prices to sell offworld, most goods manufactured for export will be high-value items (at least \$50/lb). Even on sparsely populated worlds, robofacs and minifacs (p. UT83) can produce many items more cheaply than imports, and quickly enough to meet demand for anything except the latest fashions.

Ammunition (includes most grenades, mines, etc.): \$10,000+/ton
Arachnoweave: \$250,000/ton
Chameleon cloaks: \$750,000/ton
Computer hardware: M\$1+/ton
Exoskeletons (generic, ST 20): \$72,000/ton
Filter media: \$200,000 to M\$2/ton
Firearms: \$90,000/ton
Food Processors: \$500,000/ton
Forced-Growth Clone Tanks: M\$2/ton
Medical equipment: \$800,000/ton
Microbot hives: \$39,000+/ton
Military laser weapons: \$200,000+/ton
Monowire: M\$2/ton
PLASTEX-B: \$320,000/ton
Pressure Tents: \$80,000/ton
Rechargeable cells: \$200,000/ton
Robots/robot parts: \$100,000 to M\$1/ton
Scientific equipment: M\$1.5/ton
Solar panels: \$10,000/ton
Ultra-tech alloys: \$660,000+/ton
Vehicles/vehicle parts: \$20,000+/ton. Aircraft and military vehicles may be much more expensive; military aircraft more expensive still.
Vid Glasses: \$800,000/ton

Raw materials

The cost of interstellar travel makes it likely that only valuable raw materials are worth shipping between inhabited systems: it will usually be much more cost-effective to import manufactured goods, to mine nearby moons and asteroids, recycle discarded items for their raw material, or all three. The only likely exceptions are extremely worlds which have been so thoroughly industrialised for so long that they've badly depleted their home systems, or (if interstellar travel depends on jump points) worlds which have never had many resources apart from their location. At

the other end of the spectrum, Poor worlds may need imports and have nothing else to sell to the Industrial and Rich worlds that produce them. These worlds are likely to compensate for haulage costs by reducing wages and safety standards.

The following prices are based on modern values and prices in other **GURPS** sourcebooks, and assume that rare and valuable minerals will remain rare and valuable even when we can mine other worlds. This is possible, but changes in technology cause changes in demand. For example, if rechargeable power cells or X-ray lasers require a particular radioisotope only found on Metallic or High-Iron worlds, it will push the price up; so might the demands of fashion (vide the fur trade). Conversely, new inventions can reduce demand: Fusion plants and reactionless drives may bring down the prices of uranium and cadmium. An abundant supply of a particular mineral -- e.g. a huge iridium asteroid, or a gem the size of a small moon (a la Clarke's *2061*), or a process for cheaply producing gem-quality diamonds (a la Clarke's "Venture to the Moon") -- can also reduce the price.

Metals that are sufficiently valuable may be shipped as ores, for refining offworld: as a rough guide to the value of an ore, take the purity of the ore as a percentage, and halve that percentage to cover the cost of refining. For example, ore-bearing rock containing 1% platinum would be worth \$120,000/ton. (If you want to complicate matters, such rock would also include iridium and other metals, increasing the value.) Other exotic materials such as room-temperature superconductors, magnetic monopoles or anti-gravity matter may also occur naturally on other worlds.

Some mining worlds with a sufficiently high PR for an industrial base may be able to refine ores into ultra-tech alloys (see above).

Beryllium: M\$2/ton

Cadmium: \$24,000/ton

Coal: \$40/ton

Cobalt: \$15,000/ton

Gemstones, uncut (diamonds, opals, pearls, sapphires): \$M250+/ton

Gold: M\$11/ton

Heavy water: \$56,000/ton

Industrial Crystals: \$5,000+/ton

Industrial/Light Metals: \$2,000-\$6,000/ton

Marble: \$110+/ton

Metal/LOX fuel: \$2,500/ton

Ore: \$200/ton to M\$20/ton

Petrochemicals (gasoline, kerosene, etc): \$150+/ton

Platinum: M\$24/ton

Radioactives: \$500+/ton for fuel. Weapons-grade radioisotopes are \$20,000+/ton

Rare Earths: \$20,000+/ton

Selenium: M\$100/ton

Semi-precious stones (amber, jade, lapis lazuli, etc.): \$M25+/ton

Silver: \$550,000/ton

Tungsten: M\$60/ton

Water (drinkable): \$20+/ton. Seawater, if available, is usually free.

Software

The most valuable cargos may weigh almost nothing. A master disc for the latest dreamgame, an upgrade for an Expert System program, or a database enabling robofacts to produce new equipment, may weigh less than an ounce but be worth many millions.

Some Rich worlds whose economies are based on information rather than hardware will export no more than a master to any industrial world, allowing them to mass-produce as many copies as demand requires. Originals or "limited editions" of any artwork (sculpture, paintings, manuscripts, even unique designer garments), or other collectable items,

may also be worth much more on a dollar-per-ton basis than diamonds. In these cases, haulage will rarely be paid by the ton (unless you're transporting something akin to the contents of Tutankhamen's tomb), but will usually be accompanied by at least one trusted courier (paying first class or standard passage, plus any extra luggage allotment needed).

Other worlds will choose to keep control of production in the hope of reducing the risk of data theft, and ship out thousands or millions of discs, or even books or other media. Depending on packaging, content, etc., bulk software can be worth M\$2 (for sensies or other entertainment) to M\$200/ton.

Luxury Goods

Fine and Very Fine weapons and vehicles, designer clothing, gourmet foods and expensive wines, flawless expertly-cut gemstones, limited edition books, Stradivarius violins . . . for trade purposes, luxury goods are simply much more expensive versions of other trade items. Multiply the cost by four (at least), and divide the size of the lot by the same amount.

Luxury goods may be produced anywhere (even sweatshops on poor worlds), but are most in demand on Rich or High Population worlds; risk is Moderate to High.

End User Certificates

End user certificates are usually necessary when purchasing military weapons or items with an LC of CR-3; they state that the purchase is being made on behalf of a world or organization recognized by the manufacturer and not considered hostile. Legitimate purchasers will only issue them to merchants with well-kept financial records, a fully certified crew including cargomaster, a ship that passes muster, and no bad reputation on that world, on a Good or better reaction roll. PCs who need End User Certificates for less legitimate purposes (e.g. to arm mercenaries or rebels) may obtain them on some worlds by bribery: roll on Area Knowledge and Administration or Streetwise to find a corrupt official or a skilled forger, with negative modifiers for very large or very illegal orders (nukes, biowarfare equipment, etc.) The bribe required for a bogus certificate is based on (10-lowest LC)% of the market value of the items; the winner of a contest of Merchant skills can add or subtract 1% for every point by which he wins the contest.

Adventure Seeds

- **Yo ho ho and. . .**: The crew of a merchant ship arrive at their destination to find the tank container supposedly containing 3,400 gallons of Samedian overproof rum (\$80/gallon; Alcohol Rating 14 per oz) has been almost completely drained. (A little under a gallon remains, suggesting that the thieves were inefficient or in a hurry.) The buyer refuses to pay the freight costs, leaving the crew \$24,000 the poorer. The crew can try to absorb the cost, or they can try to find the thieves -- which may involve visiting all of the city's bars in search of the booze.
- **Seafood diet**: A leaking airship drops its cargo, a 40-ton container of imported chilled berani, in the sea on Lewis. Berani are fist-sized sea-worms that sporulate in cold weather, and are a great delicacy. In warm weather, they're as voracious as piranha, and their rasping teeth can bore through plastic seals or sheet metal. The refrigerated containers have only 23 hours of power left: some time after that, the berani will begin to revive and chew their way out of the containers. The PCs have the only starship in port. If the PCs can hook the containers up to a 10KW power source in time, they can claim salvage on the cargo -- \$85,000 -- as well as preventing major damage to Lewis's marine ecology and earning the gratitude of the government. They may also encounter some of the local marine predators, and learn why Lewisites aren't enthusiastic swimmers.
- **The Anything Box**: When pirates, assisted by NPC passengers, take over a small merchant vessel ship, the cargomaster and other PCs take refuge in the cargo bay -- unarmed apart from Swiss Army Knives and wearing only their skinsuits. The pirates have captured the bridge, engineering section, weapons locker, and airlocks, and have taken the pilot and several passengers captive. The cargomaster knows there are guns, ammunition and exploration suits among the cargo, as well as drugs, alcohol, and luxury goods . . . but can the PCs find the weapons before the pirates find them?

Mike Cafferty, Irritable Superhero

for *GURPS*

by Mark Gellis

Five years ago, computer programmer Mike Cafferty went to sleep in his New York apartment. He woke up with a fever. He called in sick to work and took the day off. The fever got worse. He figured he would sleep it off and went to bed. The next thing he knew, it was 10 days later and he was in the hospital. His coworkers had called the police when he did not show up for work on the second day and they had gotten the superintendent to open his apartment; when they did, they found Mike in a coma.

During those 10 days, he had changed. The doctors said that, as near as they could tell, his cells had simply decided that they should generate DNA similar to that found in both snakes and lizards. They had also found other things, too, that could not quite be identified.

Mike had become a metahuman.

No one knows why this happened. Mike does not recall coming into contact with any radioactive materials, mutant insects, alien artifacts, ghostly apparitions, or anything similar. His transformation appears to have been an entirely arbitrary twist of fate.

Mike went back to work. His new metabolism and powers did not really affect his job performance one way or the other, although at first it was a little disconcerting to have him around. Mike had been a man of average good looks. Now, he was a man whose skin reminded people of a serpent, shiny and scaly, in a mottled pattern of brown and gold that made him look a lot like a really big ball python.

Fortunately, Mike discovered entirely by accident that he could change color. He had been sitting in his apartment, staring at himself in the mirror, wishing fervently that he could be normal again and it happened. His skin took on a color similar to the light tan he had sported a few weeks earlier. Mike, like any good programmer, guessed that his new body might have other "Easter Eggs" and started experimenting.

As it turned out, he could be any color he wanted. He had to visualize it, concentrate on it for a minute or so, and it happened. In fact, he could assume not only any color, but any pattern. And he would stay that way until he wanted to change again.

Slowly but surely, he discovered other powers, too. His skin acted as a kind of natural armor. He could still get hurt, but his skin was hard to cut; it gave him an edge against things like knives and fire. He has not tried to find out whether it will slow down bullets or not, although he suspects it will help a little. He does not really want to find out exactly how much, though.

He is stronger now, more than twice as strong as a normal person. He is also much faster, with truly remarkable reflexes. He developed a knack for climbing; he cannot actually cling to surfaces like an insect, but if there is a way to climb something, he can probably manage it. His body seemed to have just learned how to do this on its own, and it had learned other things, like how to move in almost complete silence and how to roll and flip to get him out of danger. Mike also found that his senses had become much sharper. Finally, he now heals at an abnormally high rate; injuries that would have normally taken several days to recover from now heal in a matter of hours.

Oddest of all, he could stare at an animal or a person and make them freeze in utter confusion for a few seconds, which is more than enough to get away or whack them upside the head, depending on what the situation called for.

So, there he was. And it was not where he wanted to be.

Mike had no desire to fight crime. He had studied martial arts but it was mostly for the exercise and because he was afraid of being mugged. He felt that fighting crime was best left to professionals like the police who had studied how it was supposed to be done and who were actually paid to put their lives on the line.

He had no desire to be a criminal, either. (Yes, on occasion, like most people, he broke the law in small ways, like speeding or not paying for the songs he had downloaded as MP3s . . . but things like selling drugs or grand theft space station were simply not on his agenda.) He remembered the small-time hoods he had known in high school as disturbing people he wanted to get away from as soon as possible.

He just wanted to live a normal life.

But then, once fate starts to twist in arbitrary ways, it simply cannot help itself and always has to have "one more for the road," as it were. Mike was standing outside his favorite bar, matching his skin to his black leather jacket to see if anyone female would be impressed by this when Trouble appeared. Across the street, he saw three hoodlums attack an elderly couple. Mike told the bouncer to call 911 and walked across the street and in very short order put all three of the young criminals in serious pain. Looking back on it later, he could not recall why he did this except that he just felt he had to help those people. The next day, the newspapers were full of stories of a new hero who struck with the speed and ferocity of a cobra.

Mike read the stories at work the next day. He groaned. Nothing could save him now. He had become the Cobra.

He has tried to lead a fairly normal life. He kept his job and only fights crime on his off hours (if there is a real emergency, he takes a personal day; for the most part, his boss has been sympathetic because it would be bad publicity for the company to fire a superhero for saving innocent lives). He does not keep it a secret that he is the Cobra, but he moved to a new apartment and has gotten an unlisted phone number. He wears a "costume" of supple black leather and a black leather hood that covers his eyes, and he changes his skin color to black leather so it will at least not be obvious that he is Mike Cafferty. He can generally walk the streets without being mobbed by autograph seekers.

He mostly fights crime by walking around (or climbing to the rooftops) at night and waiting to see if anyone needs help. Or, if he is feeling restless, he will call some of the other costumed crimefighters working in the city and see if they need his help with anything. He carries relatively little equipment in the pockets of his pants and his jacket; a cell phone with wireless Internet access, a small canister of pepper spray, a Swiss army knife, a pair of handcuffs, and a few other odds and ends is usually all he has with him. Generally, in combat, he tries to sneak up on people, stun them somehow, handcuff them to something convenient, and then call the police. He does not believe in doing anything flashy when fighting criminals. The way Mike sees it, people who do flashy things tend to get shot.

Trouble, however, seems to have no trouble finding him. People who are in need always seem to turn up when he is around. It is almost as if some supernatural force is leading them to him. Mike has learned to accept this; if asked about it, he will simply say: "I am obviously cursed. I just don't know why."

Over the years, he has come to know the local superhero community. They trust him, although he is just an amateur and they are sometimes annoyed by his attitude, and they occasionally call on him to help out with a particular mission. This is not regular enough for them to be truly considered "allies," though; they aren't exactly going to be giving him a key to the secret hero mansion any time soon.

Mike finds them . . . interesting. They have given him some very good advice, he thinks, but he also considers them a rather eccentric bunch. And that is on the good days.

Mike Cafferty (aka the Cobra)

5'10" 170 lbs. Black hair. Blue eyes. Age: 28. From a distance, he appears to be a nondescript man of medium height and healthy build. As you get closer, you realize that he has . . . scales.

ST 23 [140], **DX** 16 [80], **IQ** 12 [20], **HT** 15 [60]

Advantages: Alertness +3 [15], Chameleon (3 levels) [21], Combat Reflexes [15], Common Sense [10], Hyper Reflexes [15], Night Vision [10], Regeneration (Regular) [25], Scales (DR 1) [3]

Powers: Confuse-15 (10) (Requires eye contact, -20%) [52]

Disadvantages: Weirdness Magnet (For some reason, people in trouble always manage to find him, especially if their trouble involves masked maniacs, evil masterminds, or killer robots) [-10], Sense of Duty (Anyone who really needs and deserves his help) [-10], Unnatural feature (Scales) [-5]

Quirks: Irritated by the whole "over the top" nature of most costumed heroes and evil masterminds [-1], Likes Chinese food [-1], Likes wearing black leather [-1], Thinks he is a sucker for putting himself in danger all the time [-1], Ultimately, after the bad guy is caught or the helpless waif is rescued, he really is glad he was there and able to help, but he knows better than to actually tell people this (not that he is fooling anyone by *not* telling them, you know) [-1]

Using Mike In A Campaign

Mike can be used as a player character or as an NPC. He is meant to be a character whose slightly cynical attitude about being a superhero is in comic contrast to the "boy scout brigade" approach one often finds with supers. He doesn't think saving innocents or putting criminals in jail is a *bad* thing, but the whole idea of traipsing about the city in a costume and saying things like, "Now, you will face the emerald wrath of the Green Marvel!" just seems a tad loopy to him.

He frequently wonders why supers do not simply call in appropriate government agencies or the police once they have figured out what the bad guys are planning. It has to be safer than going after these lunatics and their goons (not to mention their killer robots) on your own. And some of Mike's fellow heroes get pretty aggravating after a while. Although Mike concedes that their hearts are in the right place, you can only take people like the Green Marvel or Frost Girl for so long before you start feeling the need to whack them upside the head.

It also bugs him that gaining his powers has forced him to do this over and over again. Scooping little Suzi out of the path of an oncoming bus is okay if you only have to do it once a year; if you have to do it twice a week, it becomes a chore.

But Mike cannot walk away. For all his complaining, he is a decent guy and he cannot turn his back on anyone who really needs his help.

He thinks he is a sucker. Everyone else knows he is a hero. A cranky hero, perhaps, but a hero nonetheless.

Appendix Z

What's It Got In Its Pockets?

by Jacqui Smith

Characters in roleplaying games have a habit of leaving dead or unconscious bodies lying around behind them. In addition to the deadly activities of player characters, having the heroes come across a corpse is one way to set the action rolling in almost any genre. Inevitably they will search the body, either because they're looking for loot, or trying to find some means of identification. Perhaps they are even looking for a clue as to how the deceased met their fate. Was it murder or accident? The pockets have their own tale to tell. What's likely to be in there depends in part on the person, their sex, job, personal habits, and social standing, but also on the genre and technological level.

Pockets as we know them are a relatively recent invention. A pocket was originally "a small bag or pouch carried by a person, esp. a small bag inserted into a garment for the carrying of small articles, such as money." The word "purse" comes from the same root. Of course, such an item was, when worn outside one's garment, a natural target for pickpockets. But if tucked inside they were hard to get at, for the owner as well. So a slit was sewn into the trousers or skirt to let a person access their pockets. Strangely enough, it wasn't until the late 18th century that some poor fellow got sick and tired of having to remember to tie his pocket on every day before he got dressed. He asked his wife to sew the pocket right to his trousers, so he wouldn't ever forget it again. This practice rapidly became popular, and so there you have it: the pocket.

Fantasy

In a fantasy world resembling medieval Earth, the pocket is basically a purse, attached by strings to clothing, but in the realms of fantasy anything is possible, including the anachronistic invention of trouser pockets. Tolkien's description suggests that Bilbo had pockets in his trousers . . . so what might have be in there, aside from the One Ring?

- Money. Perhaps coins varying in denomination, in origin and type. Tokens of exchange in a fantasy world are often metal because of its durability, but may be made of bone, ceramic, stone, or more exotic materials. They may be designed with holes so they can be strung together in loops. Gems are often utilized by adventurers as a means of carrying large sums without much weight, and can be exchanged for cash on most civilized planes.
- Keys. Often much larger and less complex than modern keys.
- Scraps of parchment or vellum, perhaps even a small notebook.
- Quill pen, bottle of ink, and pen knife.
- Hand mirror, usually a shiny piece of brass.
- Eating knife and/or spoon.
- Nuts, dried fruit, maybe even toffees or other candy.
- String, thread, maybe even a needle case.
- Tinderbox, flint and steel, perhaps a pouch of tobacco.
- Kerchief. Larger than a handkerchief, and often richly embroidered.
- Pomander. A scented ball, perhaps an orange studded with cloves.
- Spell components (Do you really want to search that wizard's pouches?)

Modern

Rarely is the divide between the sexes so great as in the "pocket versus handbag" department, and in the contents thereof. So much so, that we much surely consider the gentleman's pockets and the ladies' handbag as separate articles. Then there are children's pockets, a mystery to any adult.

Adult pockets may contain:

- Keys. Car keys, house or apartment keys, office keys, keys to lockers and safe-deposit boxes, keys that the owner has forgotten which lock they belong to.
- Writing implements. Pens of various types, colors, and varieties, pencils and rubbers, sharpeners and the like. These tell you more than you might think about their owner -- a teacher will almost always carry a whiteboard marker, for example.
- Notebook or scribble pad.
- Money wallet, coin purse, card folder. The wallet and card folder should also contain various forms of identification, such as drivers' license, credit card, gun licenses, library card, supermarket cards and so on. Business cards in the card folder may also give clues as to the person's identity. Any business card in multiple copies is probably the person's own business card others will indicate contacts.
- Matches or lighter. Often found together with cigarettes, cigars or tobacco.
- Nail clippers, hair comb, hand mirror, and other personal grooming items.
- Pillbox containing aspirin, paracetamol, other off-the-shelf or prescription drugs; the latter may give a clue to the person's medical condition.
- Illicit drugs, the most common being marijuana, cocaine, ecstasy, heroin etc. Large quantities may indicate the person was dealing in drugs.
- Mints, chewing gum, chocolate pebbles or other forms of candy.
- Cell-phone and/or pager.
- Calculator.
- Flashlight.
- Glove(s) or mittens.
- Plastic handcuffs, also known as zip-strips commonly used by law enforcement and security officers.
- Knife. Most likely a pocket knife, a pen knife, a Swiss army knife, or similar. Concealed combat knives such as switchblades are illegal in many countries.
- Handgun and/or ammunition. Some sidearms are small enough to fit in a pocket, the Walther PPK being an excellent example. A person carrying a concealed weapon elsewhere on their person may well have a spare clip, stray bullets, or spent shells in their pockets. Note that handguns are also illegal weapons in many countries, and require a concealed carry permit in the US.
- Dice, deck of cards, other gaming implements or tokens.
- Shiny stones, koosh ball, and/or other stress-relieving toys and gadgets.

A man's pockets may additionally contain:

- Men's handkerchief.
- Men's deodorant.
- Condoms.
- Tools of the trade screwdriver, multi-tool, magnifying glass, small pliers etc.

A ladies' handbag may additionally contain:

- Ladies' handkerchief.
- Make-up kit lipstick, powder, eyeshadow, etc.
- Sewing kit including scissors.
- Perfume, deodorant.
- Tampons or pads.
- Contraceptive pills.

A child's pockets may contain:

- Handkerchief.
- Toys small cars and trucks, dolls, stuffed animals, and those frequently unidentifiable plastic objects found in kiddie meals from fast-food chains.

- Pencils, crayons, felt pens, ball points.
- Calculator.
- Candy sometimes wrapped, sometimes well covered in pocket fluff.
- Coins usually loose change.
- House key sometimes tied in place.
- Cell phone or GPS locator-pager (used by affluent families to track mislaid offspring).

Future

You have to wonder where they put the pockets in some of those spacer uniforms, don't you? Perhaps, having evolved a cashless society they don't need money any more but then where do they keep their credit card? So let's assume people still need pockets, and consider what might be in there.

- Identification. Probably not a simple plastic ID card, but more likely an electronic device containing information about the person's genetic markers, fingerprints, and other distinguishing data. This might not be a card; perhaps it is an item of jewelry.
- Money. Credit rating may be integrated in the ID, but it's quite conceivable that cash money still exists in some form.
- Communicator. The successor to the cell-phone, this device may well incorporate video as well as sound. Again it may be as utilitarian or decorative as the user desires.
- Keys. Most likely electronic, possibly integrated into the ID, but still could be necessary, although the management computer of a home, vehicle or spaceship can no doubt recognize its proper owners.
- Candy or chewing gum. Quite possibly sugarless, and actually good for you.
- Pocket computer. Much more sophisticated, and both smaller and neater than a modern notebook computer. It acts as diary, calculator, notebook, personal assistant, games controller, music player, library, and stress reliever all in one handy package.
- Pocket medic. A doctor in a box, able to check vital signs and administer medication as needed.
- Personal grooming kit. Comb, perfume, make-up, etc.
- Sidearm. A pocket-sized laser would be unlikely to deliver much power, and may be as much a cigarette lighter, flashlight, and hand tool as much as weapon.
- Tools. Anything from a simple knife through a sonic screwdriver to an ultra-tech utilitool that fixes most anything you could imagine.

If many of the items in those lists seem similar, remember that some things really do never change.

Pyramid Review

Monster Smackdown (for Buffy the Vampire Slayer RPG)

Published by Eden Studios

Written by Thom Marrion

168-page color hardcover; \$30.00

[Enter, singing (to the tune of the Armour Hot Dogs theme):]

*Smackdown! **Monster Smackdown!** All **Buffy** fans need Monster Smackdown!
Gamers, fic-ers, kids who watch the box! Teenies, oldies, even kids with golden locks . . .
Love Smackdown! **Monster Smackdown.** A sourcebook for **Buffy** I Looooooooove.*

[Exit, dancing.]

That previous paragraph was constructed using the rules included in the **Monster Smackdown** sourcebook for running a musical episode in the **Buffy the Vampire Slayer RPG**. Okay, not strictly, but it inspired me. No, seriously. They give suggestions for reconstructing "Once More, with Feeling" (the greatest *Buffy The Vampire Slayer* episode ever) as an RPG session. Admittedly, that requires a group who feels comfortable running musical improv, but is that any stranger than finding a group that wants to play an RPG based on a TV show?

Monster Smackdown follows a certain RPG paradigm by being the third core book for the Buffy RPG, and being chock full of monsters. The book is probably one of the strongest released for the game in terms of usability for non-**Buffy** RPG players who are just fans of the TV show.

The introductory chapter includes a series of optional hellmouths, each of which is fit to host their own campaign, and brief descriptions of a few demonic dimensions. Chapter two covers vampires in detail: their history, their creation, their abilities (general and special), and all the fun bits you could use to detail the undead of the Buffy-verse. If you want a vamp with Dracula's shape-shifting abilities, or who'll leave skeletal remains behind, these rules let you do it.

Demons are discussed in depth in chapter three. The chapter gives an introductory glimpse into what makes a demon, and what kind of demons there are. There is a rundown of various demons that have appeared on the show, ranging from Vengeance Demons to a chorus line of various ichor-dripping nasties. After that is a chapter of more miscellaneous villainy. There are ghosts and poltergeists, spirits of vengeance, zombies (with, oddly enough, no reference to Eden's **All Flesh Must be Eaten** game), fairy monsters (like the child-slaying Der Kindestod or the voice stealing monsters known as The Gentlemen), and creatures of *Science!*, such as the Buffybot or the mutant swim team fish men. It finishes with a description of normal people who still manage to cause trouble for Buffy and her pals on the show. Of course, this is "normal" in a relative sense, when one of them is a chaos magician and another is invisible.

The fourth descriptive chapter (Bads, Big & Small) is the most satisfying. It goes into the various long- and medium-term villains that have plagued the characters of the *Buffy* TV show. There are full-page character sheets for Adam, Glory, the Master, Angelus, and Dracula. There are also shorter descriptions for characters such as The First Evil and its Harbinger followers, plus the fear demon-lette Gachnar and Sweet, the demon responsible for making prime-time musicals respectable again. It's good to see major villains covered in such detail, and the minor ones (henchmen and single-episode villains) are covered in standard quick-sheet format. The organization is alphabetical, with minions placed in their master's location. For example, Absalom, Colin: The Anointed One, and vamped Willow & Xander are all located next to The Master's entry.

After that is a chapter of demonic abilities, and options for running various demons as PCs. These range from members of the Miquot Clan (whose Quality package cost is only slightly higher than being a cop) to vengeance demons (which have a Quality cost three times that of being a Slayer). A quartet of monstrous PC templates rounds out the chapter, providing ready-to-go troll, Miquot Clan, Werewolf, and Zombie templates.

The final chapter is the next episode in "Djinn, no Slayer," the sample campaign appearing serially in each Buffy product. This episode seems very focused on being used as an adventure for players either playing the TV cast, or a game set in Sunnydale. This is not necessarily a poor assumption, but it is one that requires Directors who've taken their games elsewhere to do a bit of rewriting.

Overall, ***Monster Smackdown*** more than satisfies. The quality and quantity of the monsters and antagonists from the show detailed within is delightful. What the book is missing are more details on the creation of new monsters. The Demon Creation chapter is more a checklist of demon abilities, and I'd been under the impression the book would have more info on creating antagonists for ***Buffy The Vampire Slayer*** RPGs. In fact, the back cover states "rules, guidelines and ideas for creating monsters true to the spirit of the Buffyverse."

There really isn't such a thing, and I'd been hoping to see an expansion on some of the ideas from the main book, such as monsters as metaphors for various personal problems that viewers of the show (and hence, players in the game) might themselves encounter. Suggestions on integrating that into the game (hints on how to broach touchy subjects with players, or checking out the comfort zones of your players) or other tools for making and using monsters properly in the game are sadly missing.

Art and layout wise the book holds together well, although one shot seems kind of obviously a test shot for the makeup (the Miquot head shot on page 154). The book is, like the previous two, a full-color hardcover, and makes good use of it, although there are at least two page references on one page that were never filled in, which is a bit disconcerting.

Monster Smackdown is very successful as a monster catalog for the show. It will appeal to both ***Buffy The Vampire Slayer*** players and fans of the show, and provides lots of new material for Directors to use as antagonists in their games. The lack of monster creation rules is a disappointment, and does detract somewhat from the overall usefulness of the book, but more than enough quality material remains in the book to make it a good buy.

Pyramid Review

Shane Lacy Hensley's *Savage Worlds*

Published by [Pinnacle Entertainment Group](#)

Written by Shane Lacy Hensley with John R. Hopley & Zeke Sparkes

Illustrated by Paul Daly, Marcio Fiorito, Tom Fowler, Mike Osadciw, Richard "Rico" Pollard, Jay Rozen, Chad Sergesketter, Loston Wallace, Cheyenne Wright & Kieran Yanner

\$29.95

From the outset, *Shane Lacy Hensley's Savage Worlds* touts itself as many things -- "Fast! Furious! Fun!" and also revolutionary. It is designed as both a roleplaying game *and* a miniatures game, but it cannot claim to be new. The mechanics and system for *Savage Worlds* are derived from the Origins Award winning skirmish rules, [The Great Rail Wars Miniatures Battle Game](#), themselves based upon the *Deadlands: the Weird West RPG* and setting that Pinnacle is best known for. At its heart, the aim of *Savage Worlds* is to be fast -- both in setting a game up and in its play -- and also able to handle mass combats as easily as it does between single opponents.

Savage Worlds comes as a sturdy, but slim hardback that is decently illustrated and reasonably well written bar the occasional typographical error. It should be pointed out that *Savage Worlds* is not being presented in the originally proposed format, which was a three-ring binder into which can be slipped the rules, plus updates and errata as necessary. Further, it does feel rather overpriced for what you *are* given -- even though it does turn out to be rather good. Along side the main body of the rules, the author uses the voice and icon of "Smilin' Jack," a jester-hatted, harlequin-painted skull to provide commentary, advice, and alternatives to the game's contents.

Upon opening up the book, little time is wasted in getting down to the system's Test Drive, a light version of the rules that introduce its basic concepts and help equip the players ready to game. This could be any one of the scenarios available from the publisher's website, or for any of their *Savage Worlds* settings. These will include future releases for *Weird Wars* -- including a take on The 'Nam, the dark fantasy *Evernight*, the Gothic Apocalyptic *Blood Moon*, and the space opera *Slipstream*.

Essentially, the game's traits (attributes and skills) are rated in single die types -- four, six, eight, 10, and 12-sided dice -- with the average human possessing a d6 for each attribute. Basic rolls of the die succeed on a roll of a four or more, and are open-ended; higher rolls lead to additional success levels. Both player characters and some villains are what *Savage Worlds* terms "Wild Cards," and they are allowed to roll a Wild Die along with a trait's die whenever a test is made. The Wild Die is a single d6, and Wild Cards can keep the best result for their test. Player characters also possess "Bennies," usually three per session, which can be burnt to re-roll trait tests or make rolls to soak up damage. The only other real addition to Test Drive rules is the method of determining initiative prior to combat; the GM deals both players and NPC cards from a standard deck of playing cards. If they are dealt a joker card, the character can act first and do so with bonuses.

Creating characters for the game is a likewise speedy process and consists of a player upgrading from a base of a four-sided die for their five attributes: Agility, Smarts, Spirit, Strength, and Vigor. All can be raised to the human average, but players will find that they will need to keep one or two attributes at the base rating in order to for their characters

to qualify for some of the game's Edges. From the five attributes, another four secondary characteristics -- Pace (movement range), Parry (an opponent's target number in hand-to-hand combat), Charisma, and Toughness (damage threshold -- under and the damage is shrugged off, over and the character might be shaken or worse). A character also gets 15 points to spend on skill dice, taken from a relatively short, but comprehensive list.

While the default race in ***Savage Worlds*** is the humble human (which gain a free Edge), the book gives several others -- the aerial humanoid Avions, Dwarfs, Elves, Half-Elves, Half-Folk (Halflings), Half-Orcs, the mantis-like humanoid Mantids, the feline Rakashans, and reptilian Saurians -- which each have their own Edges and Hindrances. Each character is allowed one Major and two Minor Hindrances, which can be used to buy Edges, raise an attribute by a die type, and provide extra skill points or more money.

In comparison with the skills list, the list of Edges and Hindrances is quite extensive. The Edges are broken down into Background (Arcane Background, Noble, Quick, Young and Elderly), Combat, Leadership, Power (which relate to the Arcane Backgrounds), Professional (Air Ace, Gadgeteer, Wizard, Mentalist, and so on), Social, Weird (Beast Bond, Danger Sense, Healer), Wild Card (these work only when a joker is drawn during initiative), and Legendary (both these and the Wild Card Edges are available when a player gains Legendary experience rank). Many other Hindrances also have requirements that must be met before selection. At a minimum this the Rank of Novice -- all player characters begin as Novices -- but can also include minimum attribute die types and other Edges.

At first glance, characters seem to start off with relatively few Edges, but given that characters gain enough experience points to Level Up every other adventure -- at which point they can take a new Edge, increase a skill or buy a new one, or increase an attribute die type -- this is not really the case. Further, at every fourth Level Up, a character also moves up a Rank -- from Novice through Seasoned, Veteran, Heroic, and finally Legendary, thus giving them access to better, more effective Edges.

One Edge in particular covers the more outré aspects of a ***Savage Worlds*** game -- the Arcane Background. This is broken down into Magic, Miracles, Psionics, Super Powers, and Weird Science types, which should cover the demands of most genres and games. Each has an associated Arcane Skill (except for Super Powers, where each ability is treated as both power and skill), a number of associated powers, and the necessary Power Points to fuel the various powers. Once a player has taken an Arcane Background, they also select from a list of generic powers, limited only by their current rank and the type of Arcane Background. For example, spellcasters with the Arcane Background (Magic) are unlikely to have either the healing or greater healing Powers, while those with the Arcane Background (Super Powers) rarely have the detect/conceal arcana, healing or greater healing, light, wave rider, or zombie Powers. Of all the Arcane Backgrounds, Super Powers are the least powerful, geared more toward the low-end pulp style game rather than the four-color genre. Further, every Power can be modified by giving it various trappings, so that the Bolt Power can be made to look like a shard of ice or a swarm of bees, while a barrier might be made of fire, ice, thorns, bones, or even be a plain old force field.

Savage Worlds combat can handle one-on-one fights, small skirmishes, and mass battles involving thousands -- but considering that the rules are derived from ***The Great Rail Wars***, it is no surprise that it is by default a skirmish game. Players are encouraged to handle their allies in battle, treating each ally group as a single character rather than as individuals. The aim of this is to unburden the GM, leaving them free to handle the bad guys. In tandem with the rules for vehicles, the combat system in ***Savage Worlds*** can be used to play a miniatures game, but there are also rules for handling a skirmish or even a mass battle without the need to resort to miniatures. These are best described as short and to the point -- the skirmish rules run to three pages, whereas those for mass battles run to just two, plus an example. A ***Savage Worlds*** Troop Builder program is available from the publisher's website if more exacting detail is needed.

At this point, ***Savage Worlds*** is written with the pulp style game in mind, whether this is swords and sorcery, the pulps of the 1930s, World War II, and even the Vietnam War -- the latter two either straight or as part of Pinnacle's ***Weird Wars*** line. While the range of personal gear also covers the black powder and future periods, the vehicles list concentrates upon the twentieth century, including civilian types as well as modern and WWII era vehicles, albeit with an American slant. If there is any real omission from either the gear or vehicle lists, it is for the straight pulp genre -- no statistics or rules for the whip are given, nor is there any multi-passenger aeroplane listed. The latter omission could

have been rectified with the inclusion of the Douglas DC-3 or the PBX Catalina. A solid, though relatively short bestiary, suited to the atypical fantasy world, supports the fantasy genre.

Up to this point, ***Savage Worlds*** has only one problem -- a lack of full examples of either character generation or of combat. This is not so much of a problem as ***Savage Worlds*** is very easy to grasp, not just in terms of combat and character generation, but also in terms of play. Where the real problems begin is in terms of GM support and in the way it is pitched at the novice player.

Veterans will pick up ***Savage Worlds*** very quickly, but despite the ease of the rules, neophytes attempting to learn them will be hampered by the lack of examples. Much of the advice in the GM's section is likewise pitched at the novice; while it is decent enough, it seems all-too-brief. Plus it and the rules are not put into practice with either a sample world or adventure, or even guidelines for using ***Savage Worlds*** with any of Pinnacle Games; while a scenario and guidelines for a ***Deadlands*** game using the ***Savage Worlds*** rules are available for download from the publisher's website (as well as scenarios), it seems disappointing that the GM has been given nothing with the book he has just purchased . . . especially given the price.

Thus the title of this game is something of a misnomer, as its emphasis is more on the savage than the worlds, more on the rules than the setting. In this it does not live up to the claims on the back cover; while it does give a reasonable introduction to creating races or world, it is neither complete nor comprehensive in this aspect. On the plus side, it is complete in terms of the rules for character, combat, vehicles, and arcane aspect backgrounds and those rules are fast, and arguably, savagely so.

With its speedy pick up and play aspect, ***Savage Worlds*** lives up to its claim as "Fast! Furious! Fun!", but whether it is a revolution in gaming is another matter. That it nicely bridges the divide between roleplaying and miniatures play is clever enough, but revolutionary may be so much hyperbole. In the meantime, ***Savage Worlds*** delivers much of what it promises.

'M' Is For The Many Things She Gave Me . . .

Over here in the states, this Sunday is Mother's Day, the day where more long distance phone calls are made than any other day. (Curiously enough, Father's Day is the day where more *collect* calls are made than any other day . . .)

Anyway, since I'm in the "post-X2-pre-*Matrix Reloaded*" mental haze, I thought I could capitalize on the coming holiday by using it as a column topic (and providing the moral dilemma of whether I'll try to now claim the flowers I buy her on my taxes as a business expense). Yes, mothers are pretty darn universal. And, for the most part, motherly perspectives on the world can vary wildly from many other worldviews; in particular, mothers are often much more forgiving, understanding, and supportive than the bulk of humanity.

Thus to use my own saintly mother as an example, a phone conversation might go something like this:

"Hey, Mom."

"You sound down; what's the matter?"

"Welll . . . I got yelled at in my office today because I messed up a \$100,000 account, I'm under police investigation for a string of unsolved arsons, and I accidentally hit a bus full of nuns while I was doing 110 MPH in a parking lot."

"Hmph. What's your boss' phone number? He can't yell at my son like that . . . And, see? I've always told you to watch out for those nun busses; they drive like *maniacs*! And have you been wearing clean flame-retardant underwear?"

I've spoken with many of my friends, and most of them have had conversations that are very similar to the one above (err . . . with their own mothers, that is . . . not with mine).

In spirit of the holiday, then, I would provide a few ideas for incorporating the joys of motherhood.

Now That You're Done Thwarting Evil, Can I Borrow \$10? Curiously, I just now realized that, while having parents is fairly common for starting RPG characters (although many starting characters instead seem to fit into the [Siblingless Orphan of Mystery With No Known Relatives Or Even A Social Security Number](#) category), having children is *much* rarer. In the LARP I help run in town, I realized we had a first when someone brought in a character that already was a mother. I suspect there are a number of reasons for this lack; for one thing, most RPGs seem to encourage creating characters that are at the start of their careers, and it's hard to explain why you have had this full, rich life complete with child-rearing if you're coming in as a 1st-level Moisture Farmer. But these problems aren't insurmountable, and many point-based systems already have the ability to incorporate dependants directly. So if you're looking for something a bit different, then, why not consider making your next character a mommy or daddy? That way, a whole new avenue of story possibilities arises . . . and when the phone rings and it's the police commissioner, you won't know if it's because the city needs saving or because your middle son was arrested for underage drinking at a frat party.

"Mom, I've Been Turned Into A Vampire . . ." Of course, it's also possible to emphasize familial relationships simply by having - and consulting - one's parents in a game. In the super-powered *Aberrant* campaign I ran, for example, both players had characters whose parents that appeared periodically; they provided moral support when necessary, and gave them a human perspective that further enhanced their own connection yet distance to humanity. (One memorable bit of dialogue had the character tell her mother, "But, *mom!* I have responsibilities! I'm a *superhero* now!" To which she replied, "My dear . . . you were *always* a superhero to me.") Parents are also good to add for social opportunities for GMs and players that might otherwise be uncomfortable with other highly personal relationships; although it can be difficult to run a romantic encounter for shy or self-conscious players, running a parent-sibling relationship is often much easier (since we tend to know more the dynamic of those) yet still emotionally involving for those involved in the scene.

Everyone Has A Mother . . . If you're looking for an interesting follow-up to a previous adventure, consider the point raised above: Everyone has (or had) a mother . . . even the biggest monster the heroes have ever dealt with. And, very often, that mother will believe in the child no matter what, whether it's through denial or an insight to the best qualities her offspring had to offer. As such, a mother scorned can make a *very* powerful enemy; this can either be through

direct actions ("I shall take up the mantle of Death Hat and redeem my son's legacy!!!"), or indirect means ("Public outcry continues to rise as Death Hat's mother makes the talk show circuit to speak out against the vigilantes who senselessly murdered her son . . ."). Depending on the mercy and morality of the heroes - and the ruthlessness of the mother - she can be a challenging alternative to more "straightforward" enemies, as well as providing a means of continuing a popular storyline in an unconventional manner.

Mothers Know The Truth. But moms also have an ability to glean hard truths about their children . . . especially if realizing the truth about one child lets her ensure her others are safe. As an alternative to the antagonistic mother, then, consider making her sympathetic. What if the heroes are approached by the mother of a fallen foe, and she admits that her child was no good? She may need the party to track down one of her other children, who she feels is in danger of taking the same -- or worse - path in life that her thwarted child did. Can the heroes convey a mother's plea and turn a would-be evildoer's life around? (In addition to providing players with a chance for good roleplaying, it also supplies an opportunity to be proactive in problem-solving, which is a rarity for many campaigns.)

Yes, I wouldn't be here today if it weren't for my mom . . . and I suspect many of our readers are the same way. So honor her, and make sure she feels special. And if you call on Sunday, don't call collect.

--*Steven Marsh*

The Power of the Craft

Craftmasters in *Ars Magica* and *Dark Ages: Mage*

Part One: Background

by Phil Masters

As anyone who is familiar with the background to White Wolf's *Mage* line will be aware, the organization which fought for reality as the Order of Reason in *Mage: the Sorcerers' Crusade*, and went on to become the world-dominating conspiratorial Technocracy in *Mage: the Ascension*, began its existence as a secret faction of peasant mages and "inspired" craftsmen in the European Middle Ages: the Craftmasters. Most will also know that the original inspiration for the medieval back-story to these games was *Ars Magica*, although that game has now gone its own way, and has passed into the hands of Atlas Games, with its "official history" diverging substantially. Thus, the canonical magicians of White Wolf's medieval world are now described by the new *Dark Ages: Mage*.

Nonetheless, both those medieval games largely ignore the Craftmasters. They have vanished altogether from *Ars Magica*, and they rate only a one-line mention in *Dark Ages: Mage*. Now, while the former game at least can probably do fine without them -- it makes a point of cleaving especially closely to authentic medieval beliefs, whereas the Craftmasters don't quite fit, at least without a little work -- this seems like a shame. The dominant magical factions in both these settings are hubristic and elitist wizards; in fact, the chief group in the heart of Europe in both is the Order of Hermes. While there may be "hedge wizards" around, they mostly have to avoid the mighty Hermetics, or get crushed or recruited if they get too uppity. And yet, the Middle Ages featured not only aristocrats and churchmen, but also periodical and sometimes spectacular peasant revolts, while the building of the great cathedrals shows that a great deal of creativity, knowledge, and skill did rest in the hands of lower-class craftsmen -- indeed, of masons. And the transformation of the magic-laden medieval world into the Renaissance and then the modern era, *despite* the presence of, in the games, a large organization of conservative and self-interested wizards, does rather suggest that *someone* may have been working in the shadows to change things.

Hence, this article sets out to restore the Craftmasters to a place in the mythic medieval world, and to make them playable as characters. They are stolid and cautious, but bitter and tough; they are very secret, and they know many secrets; they are the worm in the magical bud, the heretic egalitarian in supernatural form. And eventually, one day, in the future, in a way, at vast cost -- they are going to win.

History

The story of the Craftmasters has been told in various White Wolf games and supplements; the author of this article, being vain and totally biased, is going to recommend *The Artisan's Handbook* and *The Swashbuckler's Handbook*, both for *Mage: the Sorcerers' Crusade*. In brief, the organization was founded at a meeting called the "Gathering of the Square" in Frankfurt in 997 AD, by Wolfgang von Reismann, a renegade German nobleman and alchemist who claimed to be the rightful heir to the lore of the Brotherhood of the Rule, an Ancient Roman mystical craftsmen's group.

The Craftmasters can actually claim much the same intellectual antecedents as the Order of Hermes, but they choose to apply their lore very differently. Von Reismann had a bitter view of the church hierarchy, nobility, and Hermetics, and the Craftmasters had a revolutionary cast from the first. Their chief association in the mundane world was with the itinerant skilled stonemasons who could be found all around the continent, and they supported the building of the great cathedrals in the Romanesque and Gothic styles -- thereby promoting the idea that man, by skill, may seek to reach towards Heaven. These great buildings also helped to spread the power of faith, thereby subtly (and sometimes not so subtly) weakening the power of the Order of Hermes.

For von Reismann and his followers had quickly decided that the Order was their primary enemy. Prideful nobles could be defeated by political action or, if necessary, by simple violence; corrupt churchmen could be dealt with individually, leaving the pure faith cleansed and unsullied (for most Craftmasons were devout, if rather unconventional, believers); but the Hermetics, with their arrogant claim to a monopoly on mystical secrets, were a direct and perpetual obstruction to the proper use of the inner secrets of sacred craftsmanship -- to raise men together in brotherhood towards the highest. Thus, while mundane revolts brought down mundane oppressors, the Craftmasons took the struggle against the *status quo* to the magical world.

However, hard experience taught them that they would have to spend a *long* time preparing to strike at this enemy. This was acceptable to them; cathedral builders were well used to great projects taking generations, and the now virtually immortal von Reismann remained in the shadows, supervising the preparations. They spent much of two full centuries on these, surfacing only occasionally, as with the struggles of Stephen Trevanus in England. Then, around the beginning of the 13th century, they recruited a group of mystic artisans who had broken with the Order of Hermes, and learned of new fractures and crimes in the Order, especially the House Tremere disaster.

Thus, they decided to strike. They began relatively cautiously, with an assault on a well-established but fractious covenant in southern France; Mistrige. Thanks to surprise, hand-crafted cannon imported from their outposts in the east, careful study of Mistrige's architecture, and a traitor within the gates, they were victorious. The Order of Hermes put this defeat down to peasant cunning, treachery, and Tremere influence. The wizards of Europe still don't understand that they've got a whole new war on their hands.

Ideology

The Craftmasons are mystical revolutionaries. They combine (rather anachronistic) personal readings of the Bible with ideas derived from pre-Christian philosophy. The former suggest to them that the claims of warrior-nobles to political power, and the behavior of wealthy churchmen, have very little to do with the roots of Christianity. The latter, an odd and incomplete jumble of Neoplatonism and Gnosticism, along with republican ideas derived from Roman sources, lead them to argue that as humans all draw their essence from the same level of reality, personal merit must derive from wisdom and virtue -- the refinement of one's personal nature -- not birth. An individual human being can achieve higher worth and eventually greatness by skill and hard work, and it is possible that not all men are destined for glory or salvation (debate over this point is intense), but the only way this can be achieved is in the context of "work" -- whether mundane labor or the more important higher levels of mystical study.

Thus, Craftmasons are *not*, in most cases, "primitive communists." They believe in living socially, and share some things in order to strengthen their mutual bonds (notably, they try to eat communally, in large groups), but they have the medieval guildsman's strong belief in hierarchy. Unlike the Order of Hermes, however, they do not draw a sharp distinction between those with the magical "Gift" and those without. It is an article of faith with them that the least of their number *might* in theory, with enough effort, eventually advance to mastery. This in turn makes them try to preserve humility among their members of Master rank, and in any case they spend too much effort mocking the aristocracy to take any pretensions to "class" (as opposed to skill or power) quite seriously.

This leaves most of them with, at best, a rather detached view of peasant revolts. These tend to be distinctly rural affairs, triggered by the anger of oppressed peasants who feel that each man should be permitted to plough his own field in his own corner of the country, and that *no* hierarchy should exist anywhere. Even when mass rebellions do spread to large towns, they are often most popular among apprentices and others at the bottom of the guild-shaped hierarchy. A Craftmason likes to see a fat priest or cruel baron strung up as well as the next commoner, but would rather keep things under control, so that those among them who have the talent can advance to mastery of their secret arts. The assault on Mistrige came close to using angry peasants as disposable cannon fodder.

There are exceptions to this rule, including Trevanus, who found a strong following in the countryside. However, he was ultimately unsuccessful, and found himself disagreeing with von Reismann and the rest of the leadership uncomfortably often, while his interest in trade as a source of freedom will eventually inspire the formation of a whole new faction with even less regard for the peasantry. By the late Renaissance era, when other groups, descended from

the Craftmasons, have taken over the primary focus on craftsmanship and commerce, the Craftmasons themselves, growing increasingly radical, will see their main source of loyal support as lying in the villages and countryside; they will inspire radical, more or less rustic movements such as the Diggers and Levelers, and will eventually be destroyed by their exasperated former friends. But in the 13th century, they are still essentially urban.

Women and the Craftmasons

Like many people who are radical in some ways, Craftmasons can be terribly conservative in matters which they don't consider important -- and in the 13th century, an age when most European males consider women distinctly the "weaker vessels," their conservatism extends to this subject. The stereotypical Craftmason hall is a rather masculine place, full of gruff, bearded stone-workers.

However, as with most mystical groups, this attitude is tempered by a forced recognition that some women can demonstrate stronger magical talents than many men, and a practical revolutionary's understanding that female agents can be amazingly effective. Some adept women even manage to avoid the wisewoman-healer stereotype. The rather puritanical Craftmasons are often uncomfortable with the use of female spies, assuming that they may employ immoral trickery in their work (and yes, some do); but examples of other, subtler techniques, and the pragmatism forced on the organization by harsh realities, leave most accepting the idea. Anyway, more female Craftmasons are scholars than spies; while it is hard for a woman (especially a non-aristocratic woman) to gain a good education in this period, students of the supernatural have to pursue *unusual* courses of study much of the time, and once one has achieved basic literacy, this isn't necessarily much harder for a woman than for a man.

Views of Other Magical Traditions

Hard experience has made the Craftmasons cautious and secretive, and in addition, they have a fair share of conventional peasant xenophobia and surliness. This all means that they have some difficulty becoming friendly with other mystical groups from beyond their own normal cultural framework, even when they might share some interests. They absolutely abhor anyone who has communion with the powers of Hell, both for conventional religious reasons and because these are clearly just another conspiracy to oppress the mass of mankind, without even the paltry excuses offered by most over-mighty lords. Indeed, a confrontation with such enemies is probably the one thing which would make a Craftmason make common cause with a typical Hermetic magician. They tend to lump vampires and other night-creatures, and for that matter werewolves, in with Satanist wizards for this purpose. It is also worth noting that, while Craftmasons are by no means immune to diabolical temptation, demons who have succeeded in the past in tempting countless wizards with offers of personal power and glory have sometimes been thoroughly confused and stymied when they tried making the same offer to Craftmason Masters. More clever demons who study their victims before acting have accomplished rather more by playing on sins such as anger and envy.

Craftmasons fairly often come into contact with non-diabolical "witch-cults" and more or less intact pagan survivals. They tend to react rather uncertainly in these cases. On the one hand, their tendency to somewhat conventional Christian belief, and a craftsman's disdain for the wild and untidy, makes them hostile; on the other, many Craftmasons are broad minded enough to recognize fellow rebels against the *status quo*, and some are educated enough to admit to the pagan basis for their own lore. They also sometimes meet Kabbalistic adepts among the Jewish communities of Europe, in which case they usually moderate a basic suspicion of the outsider with a certain blunt willingness to let these mostly harmless folk get on with their lives. Craftmasons rarely participate in the waves of persecution of Jews which sometimes sweep European communities, unless they become caught up in the hysteria; most are cool-headed enough to recognize such things for what they are, and can and do determine that the blood libels which support them are simply untrue. Unfortunately, they rarely bother acting to damp such things down, either.

Some Craftmasons approve of the Crusades on religious grounds; others hold that good Christians should put their house in order at home before seeking conquests overseas. The former regard Islamic magical groups as just enough category of enemy (and tend to find themselves viewed in return as just another pack of Frankish hedge wizards); the latter, insofar as they acknowledge the existence of such powers at all, regard them as exotic irrelevances, to be left to future generations to confront. As for the wizards of more distant lands -- well, honest craftsmen have greater concerns

nearer to home than lying travelers' tales, don't they?

Ars Magica

The predominance of the Order of Hermes in the Europe of ***Ars Magica*** means that the Craftmasons are unlikely to encounter many factions who they might feel obliged to approach as equals. There are plenty of hedge magicians, to be sure, but they mostly lack the Craftmasons' scope and degree of organization, and so can be dealt with individually. For a broad generalization, they tend to quite like natural magicians, respect ascetics, disdain spirit masters (and the occasional Norse wizards who the Hermetics refer to as the "Order of Odin"), condescend to cunning-folk, and ignore Kabbalists and other Jewish wonder-workers.

Occasionally, Craftmasons in eastern lands (mostly the Crusader domains) collide with the Ikhwan Sulayman (see *Blood and Sand*). These meetings vary in their outcomes, but are rarely friendly, and given the power of the Muslim magi, they tend to end badly for the Craftmasons. Wise Muslim hedge wizards, on the other hand, avoid the intolerant and assertive Craftmasons if they can.

Craftmasons know a little of the faerie folk, and do not much like what they know -- but they have more important concerns than this.

Dark Ages: Mage

Craftmasons cannot ignore the other five major Fellowships of the Dark Medieval world (besides the Hermetics), but they tend to skirt around the subject of these people's status and moral position. This is easiest, for them, in relation to the Old Faith, Spirit-Talkers, and Valdaermen, who they mostly quietly dismiss as rustic idolaters. If pagans should get in the way of a Craftmason building project on virgin ground, as sometimes happens, the Craftmason will try to muster a large enough force to crush resistance, if that's possible, and grudgingly back off and go somewhere else if it isn't. They very occasionally find themselves in alliance with witches of the Old Faith against oppressive lords or churchmen, but sheer mutual incomprehension tends to make these collaborations strictly temporary. In return, the rural cults tend to see the Craftmasons as a duller version of the Hermetics.

Given that Craftmason relations with the Ahl-i-Batin are inevitably remote at best, hostile at worst (despite the very occasional moment when members of each faction recognize the other's talent for mystic geometry, and usually end up walking away shaking their heads in unrelieved puzzlement), the major question remaining concerns the Messianic Voices. The Craftmasons have inevitably learned that this faction exists, but their responses vary wildly depending on the precise nature of any contact. Sometimes, the Voices seem to Craftmasons like true saints, radiating holiness and working miracles which are no less admirable for being broadly comprehensible in the Craftmasons' own terms, and their ambiguous relationship with the conventional, mainstream church is no great problem. At other times, the Voices' attitudes to the mass of common folk, and their tendency to treat questions of the next world as more important than the injustices of this one, jars on the Craftmasons, who see intense holiness all too easily shading over into an attitude of disdainful superiority.

Craftmason Magic

Craftmasons practice a very *materialistic* style of "working." (They try not to call it "magic," but sometimes the word proves unavoidable.) They understand both base matter, especially stone, and the subtleties of structure and geometry which can imbue it with power. They also fully understand the importance of hard work, in all its aspects -- organization, planning, execution, and perfection. The results of this style of action are usually much less dramatic than Hermetic magic, slower, and perhaps less flexible. They are *not* any less refined.

In fact, despite their name and clearly stated focus on Sacred Architecture, Craftmasons can have a fairly broad range of interests. Some are practical alchemists, pursuing the complexities of refined matter; some employ a mystical, rather visionary style of rhetoric, which can itself prove more or less magical in its workings; others are not too proud to turn simple religious faith against their foes. They include healers among their number, whose techniques wander back and

forth across the line dividing simple folk medicine and hedge wizardry, and also plain craftsmen, soldiers, and spies, whose arts are minimal, little more than charms and prayers, but used deftly to augment their mundane skills.

The greatest Craftmason accomplishments take the form of great buildings and urban communities, thanks to their mastery of Sacred Architecture. This is something of a problem for a group of deeply secretive revolutionaries whose tactics must perforce rely on surprise and sudden, unexpected assaults, but the Craftmasons have solved it by learning to hide in plain sight, and to spend a long time undermining a target before permitting their plans to become visible. Nor are they entirely helpless when on the offensive, especially given their occasional ability to exploit a magical enemy's own resources.

Next Week: Rule mechanics, and the use of Craftmasons in games, as heroes or adversaries.

Designer's Notes: Gurps WWII: Grim Legions

by Michele Armellini

What's In It

This 48-page book is organized along the same standard of the other **GURPS WWII** "nation books." Chapter 1 offers a general history from 1918 to 1945, obviously focusing on the Italian point of view. The chapter describes not only Italy's war, but also how Mussolini came to power, and what he did in two long decades at the nation's helm.

Chapter 2 provides an overview of the Italian armed forces of WWII, from infantry squad up, with notes on strategy, tactics, intelligence. It also covers the TO/E of the various unit types, and dwells on specialized, elite, foreign and native troops, as well as on the "poor bloody infantry." Apart from the Army, it covers the Navy, Air Force, and Fascist Militia (the Blackshirts), and the Italian order of battle in June, 1940.

Chapter 3 deals with Italian characters, building on the relevant chapter of the core book, **GURPS WWII**. Readers will find a National Package of Advantages and Disadvantages, suggested background Skills, and customization notes to create Italian soldiers on the basis of the core book templates, as well as information on Military Ranks and the status of Italian Jews.

There are also three all-new templates: the *Alpino* mountain infantryman, the cavalry trooper, and the frogman, for creating those daring raiders who piloted their ride-on torpedoes under the British battleships' bellies.

Chapter 4 is dedicated to the Italian armory, starting with personal gear, equipment, and assorted items. There is a rich selection of small arms, from pistols to the infamous Breda 30 squad machine gun, from flamethrowers to the late-war crudely-machined Schmeisser look-alike. Then there are the Italian vehicles: light artillery, the most representative tanks, the most common fighter, a fast, well-armed recon "jeep", a small torpedo boat, and the ride-on torpedo.

Chapter 5 offers information for all campaigning styles, and suggests campaign themes. It describes the living conditions of the Italian soldiers on all fronts, how they fought and what they felt. It offers a whole range of interesting campaign units, up to the unexpected Italian elite soldiers. It also covers lesser-known topics such as the home front in Italy, Mussolini's collaborationist regime after 1943, the Resistance, and the Italian Allied Army. It gives plenty of roleplaying seeds: The abysmal performance of some scratch-built infantry units during the first Commonwealth offensive in the desert. The bravery of the last cavalry charges in WWII. The epic struggle of the *Folgore* paratroops who just wouldn't give up. The nightmarish rout through the snow-covered steppes and out of the great pocket. The men who stubbornly decided to hold out against all comers in the Balkan mountains, in September, 1943. It's all there.

How I Came To Write It

In January, 2002, I off-handedly asked Gene Seabolt, the **GURPS WWII** line editor, whether he had an author for Grim Legions, the small book about the Italian WWII forces that was then on the wish list. I also immediately went on to criticize him rather curtly as to a very minor point in his recent work, **GURPS WWII** -- which, one would guess, isn't the best way to make friends with an editor! However, I didn't manage to spoil our relationship from the start. Gene saw "promise" in my outline, and by the end of February I got the job.

I had already published a few articles on *Pyramid*, so, while feeling a bit daunted by the idea of writing a book in a language that isn't my mother tongue, I thought I could do it. I was to discover that while the quality standards of *Pyramid* are high, going from electrons to paper would require a further effort at style-polishing.

Apart from the language issue, I was quite confident. I'm no history professor, but I have been an avid wargamer and history buff for years, and I am very familiar with the topic. Additionally, I had a trump card. The very fact that I'm

Italian, while being a drawback when it came to writing, was a great advantage because (I reckoned) not many prospective writers in Gene's stable would be able to access the original sources, in the original language. I was. Apart from the many books I own, I could access libraries containing, for instance, the official Italian General HQ histories about all the campaigns: bulky, difficult-to-find tomes, crammed full with original documents. These were all great primary sources, from operational orders to strength returns. So, I was sure I'd have all the info I needed. Given time, I would find all the details.

Indeed, it turned out I had *too many* details! I delved and dug and found more and more fine gems; soon, Gene had to tell me to curb my ambition. I was listing every second Italian vehicle (well, almost). I had to scale back my project because, as I wrote one chapter, then another, the balance of remaining pages was shrinking far too quickly. One might assume that the good news, coming halfway through my work, would make things easier: the booklets of the **GURPS WWII** line, initially budgeted at 36 pages, leapt to 48. Initially, I was astounded. Then, I did feel relieved; but, knowing I had 12 pages more, I let my contents grow too fat, again. In the end, I had to cut something . . . and you will find one such painful clipping below. But the harder issues came out later, as I was finishing the main history chapter (it probably wasn't too wise of me to keep most of it as the last thing to do).

Fascism

Politics is always controversial, and 1930 politics was an especially inflammatory strain. Today, especially in the Western world, we tend to take for granted that democracy is good, that political violence is abhorrent, and that nationalism may easily get out of hand. This is what we think, exactly because we hazily know of times, bad times, when these ideas were hotly contested. The times of fascism.

Fascism condemned democracy, espoused political violence, and if it had a tenet, it was a chauvinistic, aggressive nationalism. It came to power before Nazism, and not long after Communism. However, once the three totalitarian systems began working in practice, Fascism appeared more difficult to define, as external observers were often puzzled. It was also less effective and ruthless than the other two regimes, and I had to explain all of this in a few terse statements. I wanted to tell the unvarnished truth as I perceived it, but I did not want to offend anyone . . . at least, not too much. Readers will judge if I succeeded.

An even more difficult hurdle was determining how popular, really, had been Fascism with Italians. Mussolini's government actively and purposely stripped the Italians of any overt means to express any disagreement, so there are few objective ways of measuring the actual support he had -- which, additionally, fluctuated considerably. I hope the book explains why at times the nation was with Mussolini, and when and how the popular support began to wane.

The key to understanding Italian Fascism probably lies in understanding Mussolini himself, which is not an easy proposition. Although top-ranking officers, party officials, and other bigwigs would at times even quietly sabotage Mussolini's minor directions in order to defend their own turf and businesses, it's still unquestionable that the destiny of Italy was decided by one man. This is the reason why I dedicated a sizable amount of space to him. There are biographic details, information about his ideology and way of thinking, and a treatment of his special relationship with Hitler.

Stereotypes And Balance

All the WWII combatants have some stereotyped labels attached to them, but this is probably more true for the Italians. Their reputation never recovered from the first Commonwealth desert offensive, which bagged tens of thousands of prisoners. The British propaganda portrayed them as cowardly buffoons and mandolin players. The label is still there today, as otherwise reliable sources still quote from those wartime propaganda bits.

I had to explain how and why this reputation came around, when it wasn't deserved, and why: how it happened that the Italians would "run away," while, when the British and Germans happened to leave their positions in a backward direction, they would "quickly withdraw"; how the Germans would happily take all the merit when things went well, and blame the Italians when they didn't. I also had to write about the many other reasons behind the poor show in

WWII.

On the other hand, however, I needed to maintain my balance. There *were* cases when the Italians' bad reputation was deserved. There was shame, and defeat, and young men's lives stupidly wasted. Being an Italian myself, I risked becoming overly defensive and, well, biased in favor of the Italian troops. I had to avoid that.

I think I did, also because I could enlist some allies.

An Allied Effort

This being my first book, of course my editor's help was invaluable, and he taught me much more than I expected. But apart from him, other authors working for the **GURPS WWII** line helped me, going out of their way to do it. We compared notes with Brian Underhill, author of **GURPS WWII: All the King's Men**, and he gave me useful advice. As **GURPS** gearheads will have already guessed, the small-arms section is largely born of Hans-Christian Vortisch. Italian friends, including a historian, a wargamer and a former serviceman, also provided useful material, and their help is acknowledged in the title page. I want to thank all of them.

Finally, this book owes a lot to my father-in-law, Captain Francesco Scalettari, Silver Medal of Military Valor, 8th Assault Engineer Battalion, "*Folgore*" Parachute Division. He was captured while wounded, at El Alamein, after having done more than his duty.

So, here's the clipping you were waiting for:

The Front Runner

In 1938, Ansaldo and Spa (A Fiat subsidiary) were developing an armored car for the Army, and another one for the colonial police. They were instructed to unify the projects. The Italian Africa Police began field tests in Eastern Africa in 1939, while the Army ordered its batch, now designated Autoblinda AB40, in March, 1940.

To be useful for the colonial police, the armored car had to be suitable for extended patrolling, mainly on roads or dirt tracks, and for breaking up rebel bands that would lack any anti-vehicular weaponry. It also had to be fast and long-ranged, in order to be effective in policing the huge East African colony.

As a result, the AB40's armor was skimpy, its weaponry were only MGs, and its main advantage was speed, especially on the road. Like other armored cars of the time, it had a unique transmission and driving arrangement: it had two drivers, one of them facing to the back. The idea was that while cruising on a road, the armored car might be ambushed by a road block in a bottleneck, where it would lack the space to turn around. The rear-facing driver would step in, literally, and drive away much faster than in an ordinary reverse movement controlled by a forward-facing driver. In practice, it was a two-fronted vehicle: indeed, its rear facing was as sloped as the forward one, and it had a rear-facing MG. Of course, this advantage would be helpful in a very limited set of circumstances, probably not worth the complications to the transmission layout (with the added weight and maintenance problems).

This was by far the fastest vehicle the Italian armor outfits had. Once the war began, the Italian officers realized it was also much less likely to break down than most of their tracked vehicles, especially in the grueling, long-haul movements the desert war involved. Thus, the armored cars were valued both for the recon duties they had been designed for, and whenever a true runner was needed, particularly on the North African front.

Another useful asset of the AB40 was its radio: the vehicles were meant to be able to report from long-ranging patrol missions. Many Italian tanks lacked radios, and even the battalion command ones had shorter-ranged, less reliable sets. To compensate for this, a handful of armored cars were attached to tank regiments, serving both for recon and as radio/command vehicles. In another example of uninformed and hasty judgement on the Italian armed forces after WWII, foreign observers remarked that the Italians wasted good recon vehicles by using them for "escorting their officers."

In 1941, the armored car was upgraded to carry the Breda 20mm autocannon in place of the twin MGs; this upgunned version, detailed below, is the AB41, capable of dealing with its counterparts.

The vehicle was employed by the Italian Africa Police (in small numbers), as divisional assets in armored divisions, by *Bersaglieri* armored battalions, and by cavalry armored outfits, including independent companies. Such companies, platoons and detachments could be found almost anywhere in the Italian Army, although more likely in armored/mobile formations. The *Giovani Fascisti* Division had one of these in 1942, for instance.

Some 250 AB40s were delivered, including a batch of 54 never sent to the Yugoslavian army. About 580 AB41s had been delivered by August, 1943. The Germans captured 57 vehicles, including 20 still in production, and gave some to the RSI; the Germans themselves used them both in Italy and in the Balkans, and had some 200 AB41 produced for them. They also ordered a minor variant, the AB43 (see below), and 103 vehicles were delivered. The Allies also employed captured armored cars in the desert; the specimen tested in Great Britain arrived there sporting a white-red pennant and the Polish Carpathian Lancers' badge. The Polish tankers had added a fire extinguisher.

Three of the crew stations are entirely in the Body, while the commander/gunner station is half in the Turret. There are two drivers, one facing backwards. The radioman takes care of the radio and, if needed, mans the rear-facing MG. He also reloads the main gun with 8-round chargers, or hands them to the commander if the turret is rotated in an awkward position for him to reload. The engine burns 2.7 gallons per hour. The loadout costs \$187.65, with slightly more anti-personnel than anti-vehicular 20mm rounds. The commander rotates the turret by hand-cranking, at about 4° per second.

Autoblinda AB41 (Spa-Ansaldo)

Subassemblies: Standard Wheeled Chassis, heavy, medium slope +3; Medium Weapon Turret, full rotation, [Body:T] +1; Wheels, off-road (4) +2.

Powertrain: 60-kW standard gasoline engine with 60-kW all-wheel drive transmission, 51-gallon standard tank, 16,000-kWs batteries.

Occ: 3 CS Body, 1 CS half in Body, half in Tur **Cargo:** 1.4 Body 1.8 Tur

HT: 12 HPs: 660 Body, 112 each Wheel, 75 Tur.

gSpeed: 48 gAccel: 2 gDecel: 10 gMR: 0.75 gSR: 4

Ground Pressure Moderate. 1/3 Off-Road Speed.

Design Notes

The Standard Wheeled Chassis, with its *heavy* option, is defined on p. W:IC65.

As designed, the vehicle comes in a bit slower than in history, but spot on as to weight. The armor was designed for facing incoming fire from the front *and* the back, and both aspects are sloped; so half of the standard allocation of sloping for medium slope has been swapped to the back. This is the same procedure used for the Panther turret, p. W:IC81.

The wheels were large, and special tires were designed for this car; additionally, it had all-wheel steering. Therefore, following the same procedure as for the German SdKfz 231 (p. W:IC76), the High ground pressure resulting from the design was improved to Moderate (at an arbitrary price of \$150). This places the off-road speed about in the right historical range. 500 20mm rounds and 2,000 8mm rounds were purchased; historical figures are given above.

Variants

The first armored cars, known as AB40, had two linked 8mm MGs as main turret weaponry. These vehicles carried about 2,500 8mm rounds. They were used just like the more common AB41, described above, and some units had a mix of vehicles.

The Autoblinda Ferroviaria 40/41 was the same vehicle, but its wheels could be replaced with railroad wheels. Meant for line patrolling, these vehicles were not often used on the tracks. Calculated speed would be doubled with the railway wheels.

The Autoblinda AB43 was a development in the same direction taken by mid-war German armored car designs: It mounted the 47mm tank gun, and had a new, more powerful 82-kW engine (top speed: 55 mph). Although 360 vehicles were ordered in May, 1943, the vehicle remained a prototype.

Autoblinda 43 or Autoblinda AB41/43: a misleading name, since it did not mount the 47mm gun; it still had the 20mm autocannon. It was produced for the Germans in 1944 and 1945. Some sources mention that a few were modified to carry the German KwK39 (a 50mm Long Tank Gun). In addition, it had an AA pintle mount (a limited-rotation Mini Open Mount on top of the turret, with a Universal Mount) where the rear-facing MG could also be fitted.

The final runs of the AB41 had a better silencer and a fixed Mini Open Mount on the Body top, containing two Smoke Dischargers.

Pyramid Review

Buggin' RPG: The Tiny Game of Big Adventures

Published by [Deep7](#)

Written by Todd Downing with Colin Fisk

927 KB 13-page PDF; \$3.95

Whether in as humourous vein such as *Toon*, or played more straight as typified (and pioneered) by *Bunnies and Burrows*, the opportunity to play an anthropomorphic animal has always proven a popular choice of game. Yet where such RPGs have been derived from the films such as *Watership Down* and the cartoon output of both Warner Brothers and Walt Disney, it is from a more modern form of animation that *Buggin': The Tiny Game of Big Adventures* takes its inspiration. This is the latest release in the line of Deep7's 1PG mini-RPGs -- typified by [Battleforce Bravo: Wartime Adventure](#) and [Dime Heroes](#), -- that instead draw upon the computer animated movies *Antz* and *A Bug's Life* for its source. Thus, *Buggin'* is not so much an anthropomorphic RPG, as an arthropomorphic one in which the players take the roles of bugs and insects of all shapes and sizes.

Buggin' is actually Deep 7's tenth 1PG release, and is penned by the originator of the line and concept, Todd Downing. Further, it gives the publishers the opportunity to give the series something of a makeover. The choice to switch to a sans-serif font in the main body text and the comic sans-MS typeface for the titles works to give *Buggin'* a much lighter and more approachable feel. This is helped by better use of tables to organise the contents, while the bug-themed artwork is a big improvement over the clip art used in other 1PG titles.

In *Buggin'* players take the role of bugs. A list of 26 is given, including ants (of course), bees, beetles, centipedes, flies, grasshoppers, moths, mosquitoes, scorpions, slugs, snails, spiders, and worms. And yes, some of these are not insects, but their inclusion is very much in keeping with the genre.

It is the choice of bug that provides a character with their extras. For example, the ant is Quick and has +1 Running, Hive Mind that gives it +1 Bug Lore and +1 Popularity, possesses a Knack for Finding Food and knowing the Right Direction, and they can immediately be replaced by an identical twin/triplet/quad/quintuplet/etc. if he dies. The Fly has Mad Flight Skillz (+2 Flying), a Buzz that gives a +1 Gross Factor, Disease Carrier (+1 Science), can dribble a Digestive Enzyme that inflicts 2 damage, and can keep going for a short while after they have had the Goo beaten out of them. Slugs, on the other hand, are Slow (-1 Running), Juicy (+3 Goo), Silent (+2 Sneaking), Slimy (+1 Gross Factor), and have knowledge of Botany (+1 Science).

Choosing a name is just the final part of character generation, adding a momentary wrinkle to the speedy process of crafting a 1PG character. Essentially a bug has four stats -- Toughness, Craftiness, Looks and Brains (roll 1d3 for each)-- and 1d3+3 points to spend on 14 skills. Secondary statistics include Wits (sanity), Guts (will power), Goo (hit points), and Popularity; this last a measure of how many favors a bug might be able to ask the hive queen. Finally a bug might have some food, a special weapon, a vehicle of some kind, or a pet bug of his own.

The method of skill resolution in *Buggin'* is standard to the 1PG line: Roll a six-sided die and roll low. Although it also uses the 1PG combat rules, the game is nowhere near as deadly, since bugs have more Goo than characters have hit points in other 1PG titles and the amount of damage is slightly less. Thus characters are more survivable and the game has a more knockabout feel.

Before getting down to the adventures, the referee gets their own page of advice. Which, as in other 1PG games, is clear, simple and appropriate for the game. What the advice boils down to is...keep it fast, keep it light and provide

the popcorn. Not just the eating kind, but the movie references as well, as **Buggin'** is about playing the chunky, spunky little arthropods as the cast of a movie and not the icky, squishy creepy crawlies we traditionally swat with a rolled up newspaper.

Co-authored with Colin Fisk, the six scenarios have a pleasing emphasis upon solving problems and roleplay, rather than combat. In many cases, it will be easier to run away than it is to fight, and even then, it is rare that fights are to the death. The first of the scenarios is "River's Gonna Rise" in which the characters must scout out a new site for an ant hill threatened by a rising river, while in "Picnic Basket Case," they go on a raid to a family's day out for a few of the Queen's favourite delicacies. Of course, her majesty occasionally likes a day off, and when she does, somebody has to do her job, as the players find out in "Queen For A Day." Everyone can haul out their convey escort clichés for "Milk And Honey Run" as the party are hired to deliver a load of nectar to another beehive on the other side of the meadow. "Garden Variety" is akin to a more traditional RPG scenario in that the characters must conduct a raid, but since this is a **Buggin'** scenario, it is upon an all-organic vegetable garden that is protected by the 5th Armoured Ladybug Division! The last adventure, "June Bugs," gives the characters the chance to go to the Annual June Jitter Bug Dance -- not as guests, but as chaperones.

The bulk of these scenarios take place in roughly the same area so that they can be used as a mini-campaign. While each scenario easily gives an evening's entertainment, a GM can easily draw enough background from the six given to easily add more scenarios of his own creation.

One of the reasons I wanted to look at **Buggin'** was that it was written, if not for them, at least *with* children in mind. The authors suggest that it is suitable for children five years and over, and with that in mind I tested it out on a 10-year-old as her first RPG. The result worked rather well, and Alex both understood the rules and grasped how to play with ease, though this was due in part for her liking of *A Bug's Life* and similar films. She did have to take a moment to suspend her sense of disbelief though she did ask why the fly Squerg, was her ant's best friend -- "Why am I friends with a creature that carries over 150 diseases?" Even so, the author's suggestion that **Buggin'** could be use to get children roleplaying seems more of an afterthought, which is a shame, as they could have included more on this within the game.

When tried out on my regular gaming group, they rather enjoyed it once they got their reluctance to shift a gear down and roleplay, well, bugs. Of course, their experience meant that they could easily inject character into the proceedings, so I expect that Esmeralda the praying mantis (complete with *The Matrix*-style mantis-fu), Pete the spider, and Nick the socialist ant will return in between our other games.

Buggin': The Tiny Game of Big Adventures marks a reinvigoration of the 1PG line, with improved layout and a lighter writing tone, which together with the game's fun subject matter makes it an easy access point into the series. And like those other titles in the line, **Buggin'** represents excellent value for its price, further enhanced by the more widespread appeal of its game which can be enjoyed by young and old, experienced and neophyte gamer. Certainly the young will enjoy the bug theme, but it still leaves room for a 1PG game that could help introduce the younger players to the hobby and give the GM advice for doing so.

--Matthew Pook with Alexandra Pook-Leary

Hell Unleashed and The Darkness Before the Dawn (for When Darkness Comes . . .)

Published by [Twilight Creations, Inc.](#)

Game concept, design by Kerry Breitenstein & Todd A. Breitenstein

Art by Dave Aikins

Additional Development by Brian "Ruk" May

Hell Unleashed:

Layout and design by Todd A. Breitenstein

Written by Mark Bordenet, Robert Edwards, Darin Hinnens, Patrick Kapera, Frank Russell

64-page rule and scenario book, two miniatures (of featured characters Skin and Jonah), two tiles (upper floor of hotel, cave), 28 disks (outside obstacles, new items, nuisances), cardboard cover/screen

The Darkness Before the Dawn

Sculpting by Phil Bowen

Layout and design by Kerry Breitenstein and Todd A. Breitenstein

Written by Mark Bordenet, Todd Breitenstein, David Carl, Robert Defendi, Matt Forbeck, & Frank Russell

GM story ideas by Patrick Kapera

64-page rule and scenario book, two miniatures (occultist, beast), two tiles (magic shop,

mansion), 24 disks (magic items, allies, "no window"), cardboard cover/screen

\$14.99 each

Twilight Creations, Inc. continues to support its ***When Darkness Comes . . . Variable Tile System*** with two new supplements that offer new equipment, rules, and scenarios, and that contain the continuing and concluding chapters of their first big story arc.

Hell Unleashed supplies two new skills for characters: Gamble, which allows you to upgrade the results you get; and Two-Fisted Attack, which lets you attack a single target twice. There are also rules for windows and updates on ranged attacks, shuffling disks, opposed skill checks, line of sight, failure tokens, the sneak skill, environmental conditions, and victory points.

Hell Unleashed requires rules from ***The Horror Within***. Like the previous supplement, the bulk of the book is given over to adventure scenarios and the stories that preface them.

[HELL UNLEASHED SPOILER SPACE!]

Stories include a group of people forced to gather dark components by a cult that has kidnapped their loved ones; friends trapped by zombies in a truck stop, seeking lost pages from a book of magic that will halt the horror; a team that must scour a town to collect cursed money, lest beings that devour the innocent consume the town; a morgue whose structural shortcuts have opened a gateway to hell; and a town besieged by nothing less than the very air around them.

The story-arc scenarios requiring a GM are at the back. Heather and her strange companions are in New Orleans seeking to close the gates of hell while a demon-infested Earth tries to stop them. The Big Easy is about to be sacrificed lock, stock, and barrel for continued power. The "heroes" must first escape the demon hordes to get some breathing room. If they live, they must survive an ambush at the cemetery. Finally, they will infiltrate the gated community of Arcadia to liberate some much-needed allies.

[END SPOILER SPACE]

The Darkness Before the Dawn offers several new spells like the Locator Spell, Freeze, Pass Through, and Summon. It also adds willpower, a trait that keeps you going; distinctions between special game tiles and regular ones; and clarifications for dealing with all those unrevealed disks.

[THE DARKNESS BEFORE THE DAWN SPOILER SPACE!]

Here, there's a scramble among occultists for a magic ring; a well-intentioned attempt to stop a cult mistakenly damages the flesh golem that might confront the sect; a town is beset by magic-infused rabbits with a mean streak in them a mile wide; a judge has been possessed by a demonic spirit; and a group of people have had their bodies switched by a mysterious orb.

For the GM, the big story arc concludes. Demon hunters have zeroed in on the people most responsible for the mess the world is in -- a rich family in the small town of Ubelheim, Germany. The team closes in on their estate for a final confrontation. The entire town tries to stop the PCs from getting to the beloved manor house, but once there the team can kill the people in charge. Finally, they must seek out all the family members as they try to scatter into the town.

[END SPOILER SPACE]

The components that come with the supplements are durable, top-notch items. The disks are a mix of old and new. Some are like those from previous releases, included so there are plenty to go around when you need them to throw

players off the scent or just fill out empty spaces. Others are brand new, like the items in ***Hell Unleashed*** (duct tape, crossbow, sniper rifle) and the nine new magic items from ***Before the Dawn***. Like his work on the disks, artist Dave Aikins gives the tiles the same gothic look that never fails to please in Twilight Creations' horror games. His work also precedes each of the stories in the scenario booklets, and it looks every bit as good in black and white.

The miniatures are well done, too, from the tilt of Jonah's head to the furrow on Skin's brow (***Hell Unleashed***), from the trench-coated occultist's grimace to the look of pain on the face of the "cute" furry beast -- or rather, that of the head he's carrying (***Before the Dawn***). The beast himself is a little coarse; he's top-heavy with a look like a cross between a minotaur and a werewolf, but instantly recognizable.

The covers are stiff and can be used as screens by the GM to hide notes, although the side that folds out toward the players will have the brief skill and spell notes written on them. The GM's side is blank. The booklet for *Before the Dawn* also contains some new, updated templates for recording character stats.

Alas, the weak point as always seems to be the writing and the adventures. It's an ambitious product line, to be sure, and sometimes that's its undoing. Pairing the fiction with the scenarios means the stories have to be brief, leaving little room for error or character expansion (and not everyone can be as punchy as a Matheson). Worse, the line continues to be typified by slack editing. There are still bright spots, like Russell's deeply disturbing "Scabenger Hunt" and Hinners' creepy "The Unseen" (both from ***Hell Unleashed***). Even if the other stories aren't inspiring from a literary standpoint, they show off the system's variety and open-endedness, giving players plenty of rope with which to wrangle new ideas for themselves.

And that's really the heart of the game. Both ***Hell Unleashed*** and ***The Darkness Before the Dawn*** are nice toolkits with colorful components and good scenario layouts that can shape a GM's future ***When Darkness Comes . . .*** adventures. If that's all they're used for, the cost becomes awfully steep, but the text will help recharge the creative batteries with some solidly suggestive stories and dark, sinister advice.

--Andy Vetromile

The More Things Change

There was an Ace hardware store near my Day Job that closed down this week. I don't know how long it had been there, but it was longer than I've been in Tallahassee (going on 12 years now).

Earlier this week I also went down Pensacola Street in an effort to get to one of our malls. This was the first time I'd been down that part of the road since they tore down a bridge several years ago, during renovations to the football stadium that allowed large numbers of visitors easy access, while still allowing the giant swivel-door on the stadium field to [Voltron](#)

And just last month I went to the Cuban restaurant that replaced the comic and game store I'd worked at for years. It was still odd seeing a soda fountain where the used games were, and a giant grill used to press ham sandwiches where the L. Ron Hubbard books used to be.

Anyway, I've come to the realization that, at least in the modern world, things change all the time. Beloved locations change or die, fixtures of the cityscape get turned into frozen yogurt shops, and well-known thoroughfares get rerouted temporarily or permanently. Now, while this probably comes as a heaping dose of "Well, duh!"-brand cola to many of our readers, it still came as something of a realization to me. Since one of my goals in most of my RPGs is to present a fairly realistic environment (if for no other reason than to make the usual cinematic heroes look more heroic), I realized that most of my modern or futuristic campaign worlds remain fairly static, even in long-running campaigns.

I suspect there are a number of reasons for this oversight. When I'm busily not creating characters for an adventure, it can be difficult to also work not changing the environment into the schedule. More importantly, I suspect that many folks have an aversion to changing The Big Map, that holy cartographical artifact that came from either some canonical game book or the tortured diner scribblings of a harried GM. Perhaps even more powerful a force is the need for consistency in the game world, especially for those games that are highly improvisational. It can be awkward to say that Cooper's Restaurant is the favorite local diner for area police, only to accidentally introduce the Tomfoolery Pub & Grill in a later adventure as the preferred officer eatery.

However, for those who want to tinker with the game map, here are some techniques I've worked up in the past few weeks.

If your locations have character sheets, tinkering with places becomes easy. I described one such system in ["If It Has Stats, It Can Be Visited,"](#) but other methods are no doubt possible. In this way, any changes to a city can be represented by changes in the stats, complete with a jotted note or two. If you'd like to represent the random ebb and flow of a city, simply pick a location from the bunch at random before each game session (or more, for those with many places), modify a stat or two, jot down a note as to when it happened and why, and go on with the game.

Thus, to rip off the example from my earlier column, I might represent a few modified locations as:

Chez 'Spensivé

Carmon Fleur (Maitre d')

Cost	5
Popularity	2
Friendliness	2
Chance of Finding What You Want	4
Financial Health	3
Size	1
Hobnob	4

Notes: 5/15/03: Popularity -1, Financial Health -2 -- No longer as hip, or as crowded.

The Rusty Lantern Knifey (bartender)

Cost	2
Popularity	5
Friendliness	4
Chance of Finding What You Want	4
Financial Health	5
Size	4
Chance of Getting In a Bar Brawl	4
Tolerance	2

Notes: 5/15/03: Chance of Finding What You Want +2, Size +1 -- Added a new gambling wing; new underworld contact (named Spiral) who likes to gamble is excellent at providing (expensive) services

. . . and so on.

Of course, it's also entirely possible to simply tear up a sheet (or, more correctly, replace it with a note: "The Rusty Lantern burned down (7/29/03); new inn replaced it (8/20/03) -- see "Twisty Passage") or greatly modify a location. But if you're not feeling too creative or wanting to shake the ant farm *too* much, you can stick with minor changes.

If you keep up with this, making changes takes minutes a game, yet can add greatly to the depth of the game world:

"We try to impress our client at the Fondue Orduenot restaurant."

"Sorry; it closed down, and was replaced with a nouveau stir-fry place."

"What?!? Since when?"

"April 7th."

Of course, for games that are sufficiently high-tech in our real world, computerization would be ideal to track these changes. For example, LARPer's who play the Mind's Eye Theatre line and use Windows can use the excellent (and free!) program called [Grapevine](#). I've also tracked similar locations in games using a simple spreadsheet.

If the PCs interact with their home area regularly, it would probably be wise to let them know about changes they might notice; perhaps an Area Knowledge (City)-type skill roll can be used to determine if they learn of a particular change. This would, of course, depend on the change; the addition of a hidden call-girl operation to a hotel bar would probably go unnoticed, while the expansion of Main Street in the center of town from a four-lane to a six-lane (and the resultant traffic snarls) would probably be noticed by everyone.

Background changes are ideal for games that involve heavy investigation or conspiratorial trappings, since they serve as perfect "red herrings." If a historic hotel downtown is being torn down to make way for a casino, the city hall shifts its hours from 9am-6pm to 8am-5pm, and Appel Street is closed for repaving, it becomes much easier to sneak in that the *real* reason Appel is closed to traffic is to construct a containment shelter over the alien craft that fell to Earth. (Of course, if you introduce background changes into a game that hasn't had any before, expect to run a few sessions as the paranoid heroes try to figure out *why* the corner sushi shop has suddenly become so popular . . .)

While it's possible for more rural places to have the same general store in the same place for decades, life in more modern or futuristic settings is often hectic and fast-paced; simulating that ever-changing pulse of change can give the party something to investigate at city hall.

Assuming, of course, that it hasn't been torn down and turned into a mini-mall . . .

--*Steven Marsh*

Transmission 200 (Part I)

*"the brightness of a different sun
the likeness of no one
and I'm somewhere that I'm not
not sure if 'there' is a way
the timeline in knots and breaking
who took the clay and left the floor open
well that's o.k. I was falling anyway."
-- Solar Coaster, "Likeness of No One"*

Welcome to Transmission 200! For this auspicious occasion, I've provided hooks, results, or context for every one of the last 199 Transmissions -- it's a sprawling monster of a setting. Feel free to look around: this is primarily a [secret-historical](#) reality-war background, although it also offers lots of branching alternate histories and [conspiracy](#) theory. Get comfortable; we'll be here a while, and I'll be going back to the wells for some of my core concepts in this one: [bisociation](#), [hollow history](#), and good old [reality quakes](#). I don't need to tell anyone reading this that the best part about those things is [cheating horribly](#) by throwing in [anything that sounds cool](#), and trusting to any of the above to justify it.

This timeline is a close cousin to the [millennial timeline](#) I did in 1999, and most of the events on that one can be assumed to either occur on this one or have been edited out by one or another faction. The factions switch sides as often as they switch realities: there are no permanent alliances here (although there's room to change that if you'd like). And speaking of the factions, I'll take [my own advice](#) and begin by [defining](#) the major players, along with some of their [characteristic elements](#):

- The [Antarctic Space Nazis](#) and their Zeit-SS (ZSS), descended from Ahnenerbe research and pure evil.
- John Dee and the Rosicrucian imperialists of [MI-Infinity](#) (MI-) want to magically transform the world into their green and pleasant land. They also attempt to create a stable Red Ring of subservient, pro-British realities linked by the Royal Cliographic Society, an MI- front group.
- The [Reptoids](#) are most likely the descendants of a primordial civilization that died out 65 million years ago. Most Reptoids apparently wish to simply live out their declining millennia in cold tyranny over the humans of Earth. Some, however, may seek to reawaken and restore their lost race, or perhaps summon it through time to rule again.
- The [Sphinxes](#) are truly alien natives of a shadow or [mirror realm](#) of the Earth, a major satrapy of which is known as India Ultraterrestria by MI- . The Sphinxes seek to flip the two Earths' polarity and make their realm dominant.
- Strike Force Chronos is the strong arm of the **Argus** group, the American ultra-conspiracy that runs the Black Ops. It defends America, smashes villains, and interferes where it's not wanted, in roughly that order.
- The **Lemurians** are quasi-astral beings based in Shangri-La; their agenda is unclear but less alien than the Sphinxes.

There are also a few splinter groups, and outsiders like the Martians, who you'll notice further in. These factions continuously use all methods available to create helpful or clement alternate realities, despite (or occasionally because of) the fact that such sub-creation degrades this reality and often have to be closed off again. Most alternate realities remain accessible within a few months (or even years) of their creation, even after closing, and lucky [player characters](#) may use the cards of the [Suppressed Transmission Tarot](#) as magical "Trumps" to travel between worlds, *Amber*-style. GMs may also rule that [trepanning](#), [mandrake root](#), or some other [mystical recipe](#) grants world sight and navigation.

So strap in, charge up, and get ready to count down from 200 . . .

**450,000 B.C.-
2024 B.C.:**

The [ancient astronauts](#) war over who gets to build the Pyramids, genetically mold humanity, and rule the ontosphere. The Sphinxes, Lemurians, and Reptoids may be ancient astronaut foot soldiers, indigenous Earthly species, or both. Probably during this time, the Lemurians learn

time travel from the Reptoids (the Sphinxes exist outside time). Strike Force Scorpio and Dee's Atlantean magics finally turn the tide and solidify history in the second millennium B.C. The aftershocks shunt [Antarctica](#) into an eimically-stable crust around the Hole at the Pole, retroactively freezing it solid.

- 3246 B.C.:** Eimic shockwaves from the [Abortive Re-Creation of 1854](#) call [Reality Falkenstein](#) into existence; it remains separated from other realities by the Lemurians' astral Veil.
- 1279 B.C.-
933 B.C.:** The Bronze Age battles of the Sphinxes, Reptoid subcreations, surviving [Nephilim](#) and Titans, and so forth tear up the fabric of reality, opening up a wide gap of time papered over by extremely unstable [hollow history](#). All factions operating in this time frame, even the Sphinxes, can wind up in completely unknown arenas.
- 950 B.C.:** Lemurian renegade Khidr learns by dreams from the future that he is to found the [Uwaysi](#) order, into which he initiates the Rosicrucian King Solomon and the Sphinx [Queen of Sheba](#). Their servant the [simurgh](#) spreads the [Green Tongue](#) of Khidr throughout the realities, ensuring Khidr's immortality.
- 854 B.C.:** A final offensive by the Sphinxes (as tutelary deities of Assyria) creates [Reality Nergal](#); Lemuria and the Reptoids wipe it clean with a transitory [Ice Age](#).
- 850 B.C.:** [Dionysos](#), leader of the warrior Lemurians, rebels and leads his [griffins](#) through India Ultraterrestria and into Greece guided by the immortal poet [Aristeas of Marmora](#). Dionysos' war with the [Amazons](#) (who serve the Sphinx Cybele) spills into the still-fresh and weak post-Nergal reality and sets off a rolling reality temblor, until the Reptoid-guided poet Homer stabilizes the war by antedating it in a series of epics.
- 753 B.C.** Final subsidence of the Bronze Age [hollow history](#) in the [Glozel](#) region, which accumulates several utterly incompatible strata of pragmaclasts. MI- and the Reptoids divert the excess glory from this site to the small hill village of Rome, against Sphinx and Lemurian opposition.
- 556 B.C.:** [Nabonidus](#) becomes king of Babylon. His [archaeological work](#) threatens to reopen the still-fragile scrim of [hollow history](#), but also opens a number of gates to strategic [prealities](#) and the [Ishtar Gate](#) to an eddy in the time stream itself. In 539 B.C., Cyrus of Persia collapses the uncertainty wave, and Nabonidus' reign, at Lemurian urging.
- 408 B.C.** The Nine Unknown Seers of Shangri-La create the [Agarthan Chess Set](#). Whether they "lose" it on purpose in order to covertly direct global affairs through those who find its pieces, or its loss is what reduces them to Unknown status, remains a mystery.
- 331 B.C.** Alexander the Great's discovery of the [Emerald Tablet](#) between the paws of the Sphinx [reawakens the gods](#); only the neopagan ZSS will assist the Sphinxes in keeping the resulting reality open until Ptolemy seals the gateway to it by mummifying Alexander and establishing the Library of Alexandria.
- 323 B.C.** The [manticores](#), Sphinx-kith from the heart of India Ultraterrestria, filter undetected into the west with Alexander the Great's returning armies, while the various factions attempt to [save](#), advise, [xox](#), or murder Alexander.
- 73 B.C.:** Sphinxes launch mystical [Atlantean invasion](#) of Rome to weaken Reptoids.
- 12 B.C.:** Glancing [shards of reality](#) struck off by the passage of Halley's Comet.
- 5 B.C.:** The Reptoids, Lemurians, and MI- attempt to contain the incredible upsurge in supernatural energy accompanying the "star in the East" with a triplicity ritual using [three magi](#). They returned to their own country by another way.
- 9 A.D.:** An unexpected supercharge of energy from the Three Magi Working blows Rome up into [Roma Aeterna](#); the Reptoids are left to try a lengthy damage control process of suborning the Empire across realities.

- 61 A.D.** To bleed off more of Rome's excess reality, the Reptoids launch Sextus Afranius Burrus on an [invasion of Mars](#).
- 70 A.D.:** Destruction of the Temple by the Romans at Reptoid urging leaves the Sphinxes momentarily in control of Jerusalem; agents of MI- conceal the [Copper Scroll](#) that holds the circuit diagram of Templar reality. The backlash creates an outcropping of [superheroes](#) in Rome, who disrupt everything and fatally weaken the Empire and their own reality.
- 96 A.D.:** Steadily escalating Reptoid-Lemurian proxy fight sparks [steam revolution](#) and then accidentally introduces [OGREs](#) before Sphinxes intervene to stop it; Sphinx influence grows in Rome as a result.
- 141 A.D.** The Sphinxes subvert the [papal election](#) and sow demons throughout the Empire; the Reptoids eventually convinced to take action by MI- agents.
- 218 A.D.:** [Demon-emperor Elagabalus](#) ascends to the Purple; his knifing by Strike Force Chronos in 222 pinches off the incipient Sphinx incursion, but awakens the [Ripper-spirit](#) tied to numerical triplicities.
- 312 A.D.:** Sphinxes enfold Constantine and encyst his empire, but the Constantine shell they left behind begins the King Arthur myth-pattern (British king, sees a sign to follow, wars against the Continent, builds a perfect city) and MI- amplifies it to mask the [reality](#) of the Yellow Sign.
- 400 A.D.:** Sphinx enfoldment hollows out and destroys the reality of the Reptoid-Lemurian cross-dimensional trade outpost at [Irem](#).
- 535 A.D.:** This is the year of the great catastrophe, the [reality quake](#) known as the Dolorous Blow that upthrusts or calves off at least two Hollow Histories. All sides intervene in the wars between King Arthur and the [Demon-Lord Justinian](#) this year: MI- , the Reptoids, and Strike Force Chronos on Arthur's side; the ZSS, Lemurians, and Sphinxes on the side of "Rome" and the giants.
- 544:** [St. Brendan](#) carries the Grail to [the west](#), establishing the [American Arcadia](#).
- 590:** A brief aftershock of the Dolorous Blow (and possibly of Brendan's voyage) briefly opens [Reality Toynbee](#); Strike Force Chronos drives the Reptoids out of it.
- 614-911:** With history badly weakened on either side by the Dolorous Blow and the False Millennium, the Uwaysis, Lemurians, and Sphinxes conspire to undermine all Europe by coring out another [hollow history](#) in this time frame. The ZSS bitterly oppose any attempt to collapse the First Reich, and utilize the Spear of Destiny, Roland's Horn, and the Iron Crown of the Lombards to preserve Charlemagne intact.
- 777:** St. [Walburga](#) dies, possibly sacrificed to the [Ripper-spirit](#) to keep the Sphinxes' Wild Hunt at bay.
- 860:** During the ZSS maneuverings in the Dark Age hollow history, they attempt to create a Norse reality, but thanks to alert Argus damage control, wind up with [Reality Midgard](#) instead.
- 1000:** A Reptoid experiment with paratime goes awry, creating an ["overlay" year](#) fluctuating between four separate realities. In one, there was widespread panic over the approaching [millennium](#); in another, it was virtually unheralded The two others are shadow catastrophes, a [theological apocalypse](#) and a [supernatural degradingolade](#).
- 1066:** A failed Strike Force Chronos blow against the Occult Empire reverses Hastings under the baleful glow of [Halley's Comet](#); the rich [mercantile reality](#) that results becomes another Argus arsenal. A chaotic domino effect sparks an [electrical revolution](#) in China, put down by the conservative Lemurians.
- 1099:** Lemurian instigation awakens Muslim [superheroes](#); Strike Force Chronos closes them down during a [counter-Sphinx op](#) in the Crusades. The American ops team forms the nexus of the

violent, capitalist, heretically devout Templars -- and don't even pretend you were surprised by that.

In The Future: Part II of the setting, with pulse-pounding Templar action!

The Power of the Craft

Craftmasters in *Ars Magica* and *Dark Ages: Mage*

Part Two: Characters and Game Mechanics

by Phil Masters

[Last week's](#) article discussed the possibilities for (re)introducing the long-established "Craftmasters" to two games set in a version of the 13th century with magic; *Ars Magica* and *Dark Ages: Mage*. This second part discusses the practicalities.

Ars Magica

Creating Craftmaster characters in *Ars Magica* requires access to the supplements *Hedge Magic* and *The Mysteries*, as well as the main rulebook. Characters aligned with the Craftmasters can be at any of three general power levels:

Brethren

These individuals do not possess any significant mystical power, or are still totally untrained, but still serve the movement in many ways. They can be created exactly as grogs; in the descriptions of the possible Status Virtues and Flaws (*Ars Magica*, p.39), substitute "Craftmaster hall" or "group" for "covenant." Brethren with "supernatural" Virtues, especially *Alchemy* or *Magic Sensitivity*, are well regarded, and may be closely observed in the hope that they may become worthy of Journeyman status. (If and when such Virtues becomes obvious, the character will usually gain at least a +1 Reputation among local Craftmasters.) On the other hand, associating with certain types of supernatural power (as reflected by, say, *Faerie Upbringing*) may cause one to be regarded with deep suspicion ("Associates with ungodly powers" being a -2 Reputation among Craftmasters, by and large).

Journeyman

These "talented" Craftmasters are generally broadly equivalent to Mystic Companions (see *Hedge Magic*). The rules below produce characters at around the power level of a typical Mystic Companion; other Journeymen may, with the storyguide's consent, be designed as other types of ordinary or Mystic Companion. (Obviously, some character concepts will work better than others here . . .)

A "standard" Journeyman receives the Virtues *Alchemy* (see *Ars Magica*, p.40), *Natural Spellcrafting* *Hedge Magic*, p.55), and *Sacred Architecture* *The Mysteries*, p.168) for free, without having to take balancing flaws. He need not take a Social Class or Status Virtue or Flaw; rather, he has a respected social position within the Craftmasters, with a +1 Reputation among those in his home area, and can pass in society at large as a free journeyman craftsman or similar (often as a stonemason) -- a position roughly equivalent to the *Freeman/Freewoman* Virtue, respected slightly more for skill, but slightly less as probably a footloose wanderer. He has portable tools appropriate to his best craft skill (free choice which if two are equal), and standard armaments (or possibly minor property of similar value if he has no combat ability). The minimum age for such a Journeyman character is (24 - Intelligence).

Journeymen may *optionally* take additional Virtues or Flaws related to social class or personal wealth as part of their chosen balanced selection of up to ten, in which case they have a well-defined position in mundane society. Other Craftmasters will *usually* ignore negative Reputations arising from this, and also any positive Reputation arising from a Social Class Virtue greater than +2, assuming that the "cover" position is false -- but there may be exceptions to this, at the storyguide's option. (Actually, many Craftmasters ignore Reputations based on noble status anyway.)

A "standard" Journeyman also has the Abilities Alchemy 1, Concentration 2, Craft (architecture) 3, Craft (carpentry) 1, Craft (masonry) 3, Craftmason Lore 1, Lectio 1, Philosophiae 3, Sacred Architecture 4, Scribe Latin 2, Speak Latin 2, and Speak Own Language 5, at no cost, and Starting Experience Points equal to (age + 10).

As readers may have noticed, Journeymen somewhat resemble Natural Magicians. However, unlike those individuals, they lack the ability to construct enchanted devices, any automatic Magic Sensitivity, and the social position and some of the skills of a Magister in Artibus. (They may be given any of these abilities during character creation by taking appropriate Virtues, but they then need to take balancing flaws. However, some Craftmasters are peculiarly suspicious of enchanted devices, considering them "vain" or "hasty"; it seems that any mystical construct smaller than a house offends their sensibilities.)

Craftmasters do have one small but significant advantage, however (somewhat compensating for their overwhelming need for secrecy and the fact that they consider themselves to be at war with the entire Order of Hermes), and it lies in their reaction to Auras. Journeymen using their Natural Spellcrafting or Alchemy abilities take a bonus equal to any local Magical Aura or *half* any local Dominion Aura, and a penalty equal to *half* any local Faerie or Infernal Aura. Their positive response to the Dominion is hard even for them to explain; they claim that it proves that they are doing God's work, but their actions sometimes directly oppose those of "holy" individuals who are even more favored by the Dominion. Some Craftmason theorists suggest that they exploit the connection between the Dominion and the Sacred Architecture incorporated into many churches and cathedrals, some believe that they are working with the "grand divine plan" of the universe if perhaps a little at odds with church rules (which may, they hint, even be warping the power of the Dominion away from what is *truly* holy), and a few daringly mutter that the Dominion may be less to do with God than with the faith of the common folk -- who the Craftmasters seek to aid.

Masters

Masters are the leaders and philosophers of the Craftmasters. They are not quite as powerful individually as Hermetic mages -- certainly not in a stand-up contest of magics -- but their broad and deep skills, special insights, and large and generally devoted followings of Journeyman and Brethren make them formidable individuals. The minimum age for a Master character is (33 - Intelligence).

A Master receives the Virtues *Alchemy*, *Magic Sensitivity* (***Ars Magica***, p.42), *Natural Spellcrafting*, and *Sacred Architecture*, for free, without having to take balancing flaws. He can also take the usual list of up to 10 points' worth of Virtues with a balancing set of Flaws. He need not take a Social Class or Status Virtue or Flaw; rather, he has a highly respected social position within the Craftmasters, with a +4 Reputation among those in his home area, and can pass in society at large as a freeborn master craftsman (usually a stonemason), with a +2 Reputation in his area of operations. He has portable tools appropriate to his best craft skill (a free choice which if two craft skills are equal), an average quality horse, and standard armaments with one expensive weapon or piece of armor (or possibly minor property of similar value if he has no combat ability).

Masters may *optionally* take additional Virtues or Flaws related to social class or personal wealth as part of their chosen selection of up to ten, in which case they have a well- defined position in mundane society. Other Craftmasters (who know that they are Masters) will always ignore negative Reputations arising from this, and also any positive Reputation arising from a Social Class Virtue greater than +2, assuming that the "cover" position is false -- but there may be exceptions to this, at the storyguide's option.

A Master has the Abilities Alchemy 1, Awareness 1, Concentration 2, Craft (architecture) 3, Craft (carpentry) 1, Craft (masonry) 3, Craftmason Lore 2, Disputatio 1, Folk Ken 1, Intrigue 1, Leadership 1, Lectio 1, Legend Lore 1, Magic Sensitivity 1, Order of Hermes Lore 1, Parma Magica 1, Philosophiae 3, Sacred Architecture 5, Scribe Greek 1, Scribe Latin 2, Speak Greek 1, Speak Latin 2, and Speak Own Language 5, and additional Starting Experience Points equal to (age - 4).

Masters using Natural Spellcrafting or Alchemy take the same Aura modifiers as Journeymen.

Thus far, a Master may appear to be simply an experienced Journeyman with a broad (if shallow) range of skills.

However, what marks these individuals out from lesser Craftmasters is their deepening understanding of their own skills, and most important of all, their ability to exploit the powers that they have spent years studying, swiftly and effectively. The Masters themselves insist that they are merely using their eyes and common sense, paying attention to details, and reaping the benefits of hard work. In game terms, their special powers are as follows:

1. Every Master has a Parma Magica skill effectively identical to that possessed by Hermetic magi. Note that this is *not* identical in the way it is produced -- a magical scholar who managed to study both would almost certainly conclude that they had been developed independently, and indeed each Craftmaster Master has a slightly different "charm of defense" or "prayer against sorcery," as each builds his own defenses by dint of concentration and his understanding of the "powers of the craft." Indeed, many Masters insist that the effect is purely a matter of personal willpower and virtue, and that the small rituals involved are simply a way to focus this. (The same name is used in the game as for the Hermetic skill, however, for simplicity.)
2. By "reading his surroundings," a Master can produce effects functionally equivalent to spontaneous Intellego Mentem, Intellego Terram, or Intellego Vim spells (without Requisites other than these three forms) cast by a Hermetic magus with the Quiet Magic Virtue. The basic casting roll for this is (stress die + Intelligence + Encumbrance + Sacred Architecture + Magic Sensitivity). Masters cannot use vis or spell foci to boost these effects, and can suffer botches much like a Hermetic magus (although these are rarely overly spectacular for Intellego workings), but are immune to Twilight. These workings take Aura modifiers as above.
3. The Master can draw a protective circle to defend against spirits and supernatural beings, with game effects exactly as for one drawn by a Spirit Master *Hedge Magic*, p.46), except that the Craftmaster uses his Sacred Architecture Knowledge rather than Occult Lore or Legend Lore. However, a Craftmaster's circle uses completely different magical principles to one drawn by a Spirit Master, and Craftmaster Masters have no ability to summon (or control) spirits. Nor do their circles provide any defense against Hermetic magi or their spells, or any other mortal magic-workers. Again, this takes the standard Craftmaster Aura modifiers.
4. The Master gains a +10 bonus when using his Natural Spellcrafting ability to cast Vim spells which have no other Forms as requisites.
5. In a strong Magical Aura, a Master gains a bonus to all uses of Skills and General Talents. This bonus is equal to the amount by which the Aura level exceeds 4 (e.g. in a level 7 Aura, the bonus is +3). In addition, in a Dominion Aura of 6 or higher, the Master gains a flat +1 bonus to all such activities. This benefit is gained without any special actions, and indeed the Master may be entirely unaware of it; things simply "go his way." There is no bonus or penalty for other Auras. The Ability bonus works *in addition to* any direct bonus for the Aura, if the Ability is being used in a magical procedure, and indeed also in addition to any benefits granted by the use of Sacred Architecture in the construction of the local buildings.

Dark Ages: Mage

Craftmasters are another Fellowship of mages in the terms used by ***Dark Ages: Mage***, and so the game mechanics to consider here are those which distinguish such groups from each other.

Aura

Craftmasters have an Aura of Self-Assurance. They are self-made men who respect their makers, and little time for those who presently believe that they govern the world. Craftmasters receive their Aura modifier on any roll which might benefit from the Craftmaster receiving quiet respect, or the belief that he knows what to do in a tricky situation. The Aura may manifest as a sense that the Craftmaster is sitting slightly aside from mundane folk, even when he is in the midst of them, a faint, pleasant earthy scent, or a very slight lessening in background noise.

Suggested Traits

Attributes: Stamina, Perception, Wits.

Abilities: Alertness, Brawl, Crafts (virtually mandatory), Expression, Leadership, Stealth, Subterfuge.

Backgrounds: Allies, Chantry, Contacts, Cray, Servants.

Foundation: Craftsmanship

The Supreme Power of the True Art

Most Craftmasons will vehemently deny being wizards or sorcerers, but they speak reverently of "arts" and most especially of "craft." It is rarely clear whether they mean these words in the mundane or the magical sense, or indeed if they distinguish; what they will *not* do is use such words of other magic, which they dismiss as "sorcery." The basis of all they do is the doing of it -- with care, and respect, and good intentions. They are *builders*, they build to last, and they want their works to be admired on merit.

- With an awakening understanding of his work, the Craftmason can perceive the importance of care and exactitude in all things, and the dangers of carelessness and vanity.
- The Craftmason, who has often been told that God is the Great Craftsman, now comes to *understand* this, and to see the signs all around. Many are overwhelmed by such revelations, and wonder if further progress is blasphemous -- does it not mean that the workman is in danger of usurping the divine? But the worthy craftsman eventually moves beyond this fear, gaining a truly humble demeanor which in no way prevents him from seeking ever greater advancement.
- Now, the craftsman becomes spiritually one with his tools, his works, and his fellows. Gaining access to the higher secrets of creation, he truly understands the import and importance of his own labor, and that of others.
- The Craftmason who attains this level of insight grasps that everything he does is an act of craft, whether he wills it or not, so it is only fitting that it should be done right. He also perceives the way to rightness in any work of the hands (-1 difficulty to all uses of Artist or Crafts, and any roll required to design or create mundane mechanical devices). He *also* understands completely that "magic" is no more than tinkering with the shape of the divine scheme -- lawful if done aright, vile if done without respect. Thus, while he regards supernatural dangers with sensible caution, such things hold no irrational terror for him (-2 difficulty to Will rolls to resist any sort of magical terror).
- At this, the highest level of True Craftsmanship, the Craftmason cannot but work well. Not only the good earth and the fine-forged blade, but the air and sky and sea, are works of craft, to be assessed and used and if necessary re-made. (The -1 difficulty to Artist or Crafts described above now extends to combat and all medical and veterinary tasks. Also, the character can no longer botch Craft rolls; any roll which would normally botch simply fails instead.) Although his demeanor is usually modest, anyone who has studied any of the same Skills as the Craftmason will recognize him instinctively as an expert, and treat him with according respect.

Specialties: Beautiful Artistry, Confronting Evil, Fine Work, Manual Labor.

Pillars -- The Craftsman

Craftmasons do deny being sorcerers, and while they have faith enough, they hold that a man proves his worth and earns his place by his own labors. Hence, the Pillars of their craft symbolize the one who works it.

They have a strong bias in favor of, in game terms, "complex spells." The reason is simply that that a Craftmason does must be *built* -- assembled of simple parts. They can use simpler techniques if they must, but most of their best workings involve more than one Pillar. Die Hände combined with Die Rückseite permits great tasks to be performed with precision, while Die Öffnung combined with Das Auge can lead whole armies to great destinies. Likewise, Die Öffnung and Die Rückseite together can grant followers adamantite resistance to all forms of harm, and so on.

Die Hände (The Hands)

This Pillar represents the subtlety and precision of good workmanship. It relates to the *correct* performance of any task, and the texture and weight of the materials involved.

- The first lesson is to know the feel of good craftsmanship -- and of bad, so that the two can be told apart. The hand must also be able to discern good and bad *materials*, detecting weaknesses, strengths, and balance by touch. (More abstract qualities and assessment at a distance are the province of Das Auge.) In combat, blows will land exactly where intended, albeit with no greater actual force than usual (-1 difficulty to the character's attack rolls per success, to a minimum of four).
- The Craftmason who has advanced in this study performs all mundane works correctly (-1 difficulty to all uses of Artist or Crafts per success, or -1 to weapon use difficulties per two successes), and can assess others by watching them in action (learning the level of their Physical Attributes and any Abilities which they are using). Weapons or tools he holds can be protected from breakage, and he can work by touch as well as by sight (eliminating two levels of darkness penalty per success rolled).
- At this point, the Craftmason is an expert in works of the hands, both mundane and extraordinary. (He can gain +1 to Dexterity per success, or make it impossible for himself to botch combat or Craft rolls.) He also works with uncanny speed, reducing the time he takes for any physical tasks other than combat or travel by 10% per success (to a minimum of 40%). His weapons or bare hands can also cause bashing, lethal, or aggravated damage, as he chooses.
- Now, the Craftmason progresses beyond the mundane limits of mundane work. Any task of physical shaping can be performed perfectly, provided that the worker has the strength and the tools (or use of other pillars) to perform it at all. He can amplify forces with subtle power, so that a touch can break stone or a gesture can stir up a small whirlwind. He can also sense the nature of supernatural powers or objects by touch.
- The ultimate use of Die Hände is to shape destiny. By setting events in motion, any item may be predestined to take a desired form, or go to a particular place. Human beings have free will, but by setting the fate of a *thing* on a carefully chosen path, events can be made favorable to individuals associated with it. Items can also be made secure in their mundanity, preventing sorcerers or witches affecting them; used carefully, this can make non-Craftmason magic all but impossible in a given area.

Specialties: Choice of Materials, Sharpness, Speed, Tiny Details.

Sample Foci: Plain tools, measuring devices, labor performed with attention to detail.

Die Öffnung (The Mouth)

Any great work of craft may require more than one worker. Even the greatest masterpieces involve the humble labor of apprentices to fetch and carry and clean. This Pillar represents the skills of leadership and organization this demands. Its study often involves classical rhetoric and deep reading in the history of kingship and strategy -- or sometimes, just years of observation.

● To lead, one must first know how to follow -- and also why. At this level, the Craftmason can assess who commands in a social situation, and what general manner of leadership is required by a group of workers. Hence, the character can distinguish effective leadership from bluster or bluff. This does not imply deep understanding of the task in hand, but it does show where leadership is lacking and where the group's works are failing.

●● As he progresses, the student of Die Öffnung may first be trusted with supervision of small groups and lesser tasks. He can speak with calm authority (+1 die to Leadership pools per success), plan work for groups of no more than a score of followers (-1 to the difficulty of any planning/administration roll per success), or induce confidence in individual followers (+1 die to another character's Willpower pool per success).

●●● As genuine comprehension of leadership is attained, followers know instinctively that the leader is worthy (+1 to Charisma per success). At this level, the Craftmason can also advise other leaders (-1 to the difficulty of their leadership-related rolls per success). Also, the above benefits to planning/administration work apply with groups of any size. By assessing what a group is doing, the character can see how to do it better, whatever his prior knowledge (gain one temporary dot in any Ability relevant to the task in hand).

●●●● Now, the Craftmason progresses beyond the mundane limits of mundane work. The Craftmason can function as a leader unnoticed, while seeming to work solely as a quiet, minor member of a group. Indeed, even unthinking animals recognize his authority, obeying his words or gestures. Furthermore, just as Die Hände may grant the ability to make materials take a form in the future, Die Öffnung now enables the Craftmason to set groups on complex paths with particular goals, even without their knowledge.

●●●●● The perfect leader is a modest fellow -- but oh, what the modest craftsman can inspire in others! He can transfer his own non-magical Abilities to 10 other people per success rolled, or raise the Willpower of the same size of group by one per success. It is even possible for a character to command the very elements to obey, as described of saints and pagan heroes. Rocks, water, flames, and breezes can all be made to do what he wishes, provided that it is within their nature to do what is required. (Flames can be asked to flare up or die down, for example, but not to continue burning underwater; stone can crack, but not fly through the air.)

Specialties: Leading by Example, Quiet Judgment, Leadership of Leaders, Rhetoric.

Sample Foci: Impassioned speeches, banners bearing famous symbols, inspiring acts, buildings dedicated to a cause.

Das Auge (The Eye)

Contrary to what those few Hermetics who know of them may think, Craftmasons are often very learned. Some are actual scholars; many have some knowledge of mathematics or practical philosophy. This Pillar reflects such this analytical thought.

The first lessons taught to the scholar-craftsman concern how to learn, how to

● be taught, and how to winnow truth from confusion when studying doubtful texts. The character can discern inconsistencies with a glance, understand the inner meaning of any parable or metaphor, determine when anything has a supernatural cause, and read messages left by greater experts in texts or buildings.

●● The scholar now learns to combine lessons in ways which, if not *new* (for true novelty is rare and not always wise), are at least unfamiliar. He can employ unfamiliar weapons or tools without penalty, or enhance his own faculties (+1 to any one Mental Attribute per success). He can determine the mundane ways (if any) to negate any magical effect, or to slay any supernatural being, at a glance. (Actually applying this knowledge may be another matter.)

●●● Delving into secrets, Das Auge discerns when a speaker is lying or avoiding speaking the full truth, and how to unnerve anyone (+1 to Intimidation die pools per success). The Craftmason may create Tass from free Quintessence, detect invisible beings or things, and locate the weakest and strongest points in any structure. If anyone or anything in sight has an great and unavoidable destiny, the Craftmason may sense that, and something of its nature.

●●●● Das Auge now discerns the literal truth of an old saying; the world is God's book, and His handwriting is everywhere. Lies and illusions are obvious, while codes and ciphers reveal themselves as plain words; the Craftmason sees *truth*. He can also restore the "rightful" state of things, negating magics which manipulate Quintessence or Destiny (reduce accrued successes by two for every success rolled, but only so as to restore the previous, natural order). Structures the Craftmason designs can be made immune to natural decay, and can include secret passages and chambers which are immune to mundane detection, and symbols which convey complex messages to other minds -- knowing or otherwise.

●●●●● Now, there are no secrets, in the present or past, and even the future is visible as a set of possibilities. The Craftmason can determine a thing's history from its present state, and given one fragment of something broken, locate all the other parts. He can also set great events in motion by simple actions, often amplified by use of other Pillars.

Specialties: Mathematics, Philosophy, Strategy, Theology.

Sample Foci: Texts, words spoken by others (including sometimes fools and idiots), courteous debate, delicate measuring instruments.

Die Rückseite (The Back)

Some tasks demand strength and resilience. This Pillar embodies those seemingly simple qualities. However, a Craftmason eventually learns that strength of the body, strength of spirit, and the strength of inanimate objects, are ultimately similar -- and similarly subject to mastery.

● To use the plain strength of the body to best effect, one must first comprehend it. The Craftmason can assess the operation of raw force in a device, and the distribution of weights and pressures in a structure. He can tell whether or not a workman is exerting himself to the full, and determine any living thing's state of health (how many Health Levels it has lost, and how many remain).

●● Taking his body beyond its normal limits, the Craftmason can repair his own bruises (heal two Health Levels of bashing damage per success) or exert great

force of body or will (+1 Strength or +1 die to the Willpower pool per success). He becomes surprisingly formidable in combat, his seemingly unschooled use of weapons overwhelming foes with its energy (+1 level of damage on at attack per two successes rolled). He can determine where an axe should strike a tree or a battering ram should hit a door to break it down as fast as any normal effort could possibly accomplish. He also gains enough understanding to ensure that crops or dumb animals which he tends grow as strong and healthy as usually possible, over time.

●●● Calling on the untapped strength of his own frame, the Craftmason can staunch wounds (heal one Health Level of lethal damage per success) or even shrug off blows (soak one Health Level of any kind of damage per success). He can also heal others' bruises as he once healed himself (restoring bashing damage as above), or grant inanimate structures which he builds or repairs unique strength (increasing their ability to resist damage by two Health Levels per success). Although Das Auge is the pillar which governs the fine control of Quintessence, this level of skill with Die Rückseite enables a Craftmason to lock it into an object or structure, or free it from being locked.

●●●● The Craftmason masters strength in all its forms. He can animate trees, rocks, and stones, paralyze others with a touch, or augment other Craftmason's special efforts (adding his successes to their own in magical workings, whether or not he could actually work the magic on his own). He can heal others' cuts (lethal damage) as he can heal his own, and his strength of faith and purity of will make him a terror to supernatural entities (doing double, aggravated damage to them with "normal" attacks, even if they are incorporeal).

●●●●● There is *nothing* in the material world which cannot be supported, matched, or countered by something at the true master's command. Anything created or done by use of other Pillars can be rendered permanent and invulnerable to all but greater countering powers, and the Craftmason can even make new crays (rules as for Order of Hermes wizards using Primus). Battered comrades can be reinvigorated (healing two levels of any kind of damage per success), and shattered buildings can be restored to completeness.

Specialties: Destruction, Endurance, Healing, Raw Strength, Strength of Will.

Sample Foci: The simplest of tools (levers, crowbars, axes), Meditation before taking action.

Sample Rotes

The Glory of the Temple (Die Hände •, Die Öffnung ••, Das Auge •••)

Working within a building of the correct design (a cray under his faction's control), the Craftmason can shape the flow of Quintessence, distributing it to any other participant in this ceremonial procedure smoothly and without risk.

(Assign one point of Quintessence per success as desired, up to the limit of that available from the cray; the recipients have their normal limits as to how much they can store, but they can also spend the Quintessence immediately in workings of their own, if they choose.)

Victory in Justice (Die Hände ••, Die Öffnung •••, Das Auge ••, Die Rückseite •••)

The Craftmasons are fighting a war, and many of their troops lack the power they truly need. This rote compensates for that, granting mundane helpers what they require to fight magical foes. Furthermore, the boon is granted through,

seemingly, little more than a stirring speech.

(The recipients of this effect gain not only raw strength and resilience, but courage, understanding of the task in hand, and the judgment to carry it out. Each receives the benefits of the four pillars, at the level incorporated into the rote, as required throughout its duration -- albeit only for the purpose which the Craftmason declared when making the speech.)

Passages of Power (Die Hände ••, Das Auge •••, Die Rückseite ••)

Craftmasons know that architecture and geometry have *power*. By exploiting the subtleties of a correctly designed building, or by carefully drawing complex temporary labyrinths on the ground, one may even transcend the normal world, if one has a good reason. However, Craftmasons usually prefer to reduce, not increase, traffic with the immaterial world.

(This rote grants access to the Umbra, or makes it harder for Umbrood to enter the mundane world. Das Auge determines the subtleties involved, Die Hände shapes them, and Die Rückseite imbues them with necessary power. Each success increases or decreases the local gauntlet for the duration of the working; decreasing it to zero creates a temporary shallowing.)

Well-Meaning Nuisances

for *GURPS*

by Michele Armellini

Any GM worth his salt can easily come up with wicked, dastardly villains, or faithful, reliable allies. Treacherous traitors are a third option. These characters are perfect for a cinematic adventure; but in a more realistic setting, things would be different. They'd resemble more . . . well, real life. Not all the opponents the heroes have to face will be irredeemably evil; not all friendly guys are either steady as rocks or double-crossing scum. Some shady characters will be just muddling through with their own more or less objectionable goals, some bona-fide friendly types might be more liabilities than assets, and other people are just as well-intentioned as the heroes, or even more so . . . but they are pests.

These well-meaning nuisances make for interesting roleplaying opportunities, since the PCs can't just smash them to smithereens, nor can they recruit them as solid allies. The party will need to find other solutions: negotiating and coming to terms with them, compromising and bargaining, explaining and convincing; or, failing these attempts, making them harmless somehow, sidestepping them, or fooling them.

If everything else fails, and depending on what is at stake, the orders and priorities the PCs have, and what the "real villain" is up to, it may well be that the heroes will have to employ stronger measures against these pests. But even then, this will lead to intriguing roleplay situations, unpredictable consequences in the campaign, and possibly on-going, stormy relationships.

If the adventurers are diplomatic, patient and clever, this kind of NPCs might even offer some minor help, from time to time. They can provide comic relief, secondary sub-plots, and occasional diversions. Here are a few *GURPS* samples of well-intentioned nuisances, which can be adapted to different settings.

Jim Short, The Eager Would-Be Apprentice *TL3, 5 points*

The PCs are well-known in their home city. Jim is a great admirer, and he longs to become an apprentice, either of the whole party or specifically of one of the members.

Jim's initial application will probably come at an awkward moment. He'll be so excited to be face to face with his idols that he won't come through as a suitable hireling. In case the players should be interested in him anyway, the GM can just keep things moving, so they'll put him aside and forget about him.

But Jim is obsessed. The adventurers will find him waiting for them at their front door, following them around, and repeating his request. They'll probably turn him down again. In this case, Jim will become Dead Broke, he'll acquire a Social Stigma -1 (homeless), and he'll beg in the streets more often than he already has been doing, because, unbeknown to the PCs, he's run away from home. The heroes will see him, progressively more bedraggled, as he shamefully panhandles (note that he's Pitiable). Sooner or later, his habit of following his heroes around will cause some serious inconvenience.

Using the Character: If the PCs finally decide he'll be less of a liability if they hire him, his social standing will change. His Wealth will become Struggling or Average, and he'll replace the Social Stigma with a (non-dangerous) Duty to the party. Of course he'll cause other kinds of problems, because he's somewhat klutzy (his Quirk should be treated as a weaker form of the Disadvantage), in the kitchen he's a disaster waiting to happen, and he'll always insist on following the heroes on their missions and "learning the stuff." On the plus side, his father is a blacksmith and farrier, and he has some training in that craft; this also means he can be useful around the party's horses, if any. Jim is

just brighter than the average, but if one of the PCs decides to really train him, rather than just using him as a servant, that will be a lot of work. Additionally, maybe a closer relationship will be established, with the character becoming Jim's Patron (and possibly acquiring a Sense of Duty towards the boy).

Note that his father is a brawny, violent bully (the reason why Jim ran away), and he's angry at having lost his apprentice. He's not Jim's Enemy . . . for the time being. But if he catches him working for the adventurers, he'll try to bring him home, willy-nilly.

Another use for Jim would be as an unwary informant on the PCs! He'd be utterly loyal to them, of course, but he really can't tell a lie . . .

If the adventurers steadfastly refuse to hire him, they see Jim sink in the city's underworld. He can't find a job with a blacksmith, because they are afraid of his father. After giving up his hope, he'll shift his need of guidance onto some gang leader or Thief Guild member, who'll have no qualms about exploiting him. Jim will learn Thief Skills, and sooner or later the party may meet him as a sour, if inferior, opponent.

With a few adjustments, Jim's story can be used at other Tech Levels, too; Jim is just the TL3 equivalent of a fan boy.

Appearance: 5'2", 125 lbs, age 17, short, unkempt light brown hair, large eyes, quivering lips

Attributes: ST: 10 [0], DX 11 [10], IQ 11 [10], HT 10 [0] Speed: 5.25, Move: 5, Dodge: 5, Parry: 7 (Brawling)

Advantages: Fearlessness +1 [2]; Pitiable [5].

Disadvantages: Incompetence (Cooking) [-1]; Obsession (Becoming the adventurers' apprentice) [-5]; Poverty (Poor) [-15]; Truthfulness [-5];

Youth (17) [-2].

Quirk: Klutzy tendency [-1].

Skills: Animal Handling (Horses)-8/13 [$\frac{12}{13}$]; Area Knowledge (City)-12 [2]; Blacksmith/TL3-10 [1]; Brawling-11 [1]; Darts-11 [1]; Panhandling-13* [$\frac{12}{13}$]; Scrounging-11 [1].

Languages: English-11 [0].

* Included bonus from Pitiable.

Mrs. Jones, The Nosy Neighbor

TL6, 25 points

Mrs. Prudence Jones is a nosy neighbor. She's a smiling middle-aged lady, a widow; she can be gentle and helpful, especially with people who aren't secretive and freely talk about themselves. Because her preferred pastime is snooping on neighbors.

She spends a lot of time peering out of the second-floor windows of her corner house, unless she's in the garden, from where she will try talking with all passers-by. She's been here for ages, so she is in good terms with the milkman, the postman, the boy delivering newspapers, the technicians maintaining all the utilities, the maids, and so on. She collects information from all these sources and she's also very good at extracting tell-tale details from anybody.

Mrs. Jones, however, has no ulterior purposes; she's not a blackmailer, and accusing her of being something like that is a big mistake (she'll be mortally offended). She'll admit she is curious; actually, she is interested in other persons' lives because she has no life of her own to speak of. Her reward is to be up to date on all the going-ons in the neighborhood. If somebody is willing to share his own problems with her, she's really happy; with the uppity ones who keep to themselves, sooner or later she'll drop a hint that will let them understand they have no secrets for her.

Of course Mrs. Jones, while basically harmless, is a terrible nuisance as a neighbor to rough-hewn adventurers, caped vigilantes, shady cabalists and investigators dabbling with Things Man Was Not Meant To Know -- because Mrs. Jones wants to know it all!

Using the Character: Mrs. Jones is ideal with secretive characters like those mentioned above. When they move in the neighborhood, they initially get to know her kind side, but sooner or later somebody else warns them about her. It's too late: Mrs. Jones already knows they have some exciting secret for her to discover, and she'll be relentless! Of course the party's secret may be really dangerous. Mrs. Jones might become a valuable source for the opposition, be it the police or something more fearsome.

A different use might be to have Mrs. Jones as a neighbor to somebody the PCs themselves are snooping on. Thus, she becomes their source -- but of course, she'll be curious about them, too!

Note that at higher TLs, Mrs. Jones becomes increasingly effective -- and dangerous. At TL7 she might love photos, at TL8 she could be good at making videos, and she'd be really a threat if she had the skills for snooping not only in the real world but also in cyberspace (for a hi-tech Mrs. Jones, see also p. FW113).

Eventually, if the heroes cannot tolerate her knowing everything about them, and assuming they don't want to resort to violence against this charming little lady, they'll have the following alternatives. They might feel they just have to move out! Or they might elaborate some deception; she isn't easily fooled, but if they are successful, she might become their disinformation tool. Or, finally, they might be clever enough to come up with a solution such as providing her with a life of her own: a middle-aged gentleman courting her might do the trick.

Appearance: 5'5", 150 lbs, age 47, plump, gray hair, small black eyes

Attributes: ST: 9 [-10], DX 10 [0], IQ 11 [10], HT 10 [0] Speed: 5.00, Move: 5, Dodge: 5

Advantages: Alertness +1 [5]; Contacts (Local service workers, skill 12, 12 or less, somewhat reliable) [2]; Independent Income [5]; Single-Minded [5]; Wealth (Comfortable) [10].

Disadvantages: Compulsive Behavior (Snooping on neighbors) [-5]; Curious [-10]; Light Sleeper [-5]; Reputation -2 (Busybody, neighbors) [-3].

Skills: Acting-11 [2]; Area Knowledge (neighborhood)-14 [6]; Botany/TL6-8 [$\frac{1}{2}$]; Cooking-12 [2]; Detect Lies-10 [2]; Gardening-12 [2]; Musical Instrument (Piano)-10 [2]; Naturalist-8 [$\frac{1}{2}$]; Needlecraft-10 [2]; Savoir-Faire-12 [2].

Languages: English-11 [0].

Mary Shelby, The Berserking Pacifist

TL7, 50 points

Mary was known on the campus as a smart but short-tempered student, but what the would-be rapist saw in that dark alley was a frail-looking girl hurrying towards her dorm.

Mary can't recall the event clearly, but she still remembers the bloody pool on the pavement . . . and the fact that her assailant spent three weeks in intensive care. She had discovered she could go berserk when threatened. This changed her life. She sought psychological help to get rid of that frightening flaw, to no avail. She turned to meditation, Eastern philosophies, and, finally, non-violence. She was fascinated by Gandhi's writings -- and still, when someone bothered her or when a situation became stressful, her blood boiled, and sometimes she was barely able to control herself. She felt ashamed, but she could not change the way she was. She was, and is, a Berserk.

Today, Mary is an efficient if somewhat snappy accountant, working for a large auditing firm; she's also a divorced mother (her daughter is a Dependent), as her marriage did not survive her tempers. But above all, she's a pacifist

activist. Thanks to her intelligence and Charisma, she's the leader of the local chapter; her group is fond of her (and somewhat awed, too), to the point that they can be considered her Allies. As a local leader, she can count the nationwide movement as a rarely appearing Patron.

However, no matter how sincerely convinced she is that pacifism is the only true way, it's all in her mind, not in her guts. Indeed, she has no Pacifism Disadvantage, and she can harm people. Knowing all too well her own weakness, she stays away from the front lines during demonstrations, when a confrontation with the police is likely. This, however, has led to veiled criticism within the movement (not her own local group). Some day, she'll have to take to the field, and then anything might happen.

Using the Character: Mary works best at face value, in a campaign where there's a war looming or going on, and the PCs are cops, supers, or other law enforcers. If they underestimate her, they may be in for a surprise -- and after she has run amok, she'll unexpectedly offer her sincere, shame-faced apologies. If the party is a team of special soldiers, Mary's group can stage sit-ins in front of their barracks. If she gets acquainted with the PCs, even through an accidental scrape, she'll probably try to win them over to her cause! She's not a fanatic, but she can be persistent.

Alternatively, Mary's organization sees pacifism as the means to another end, something that will bring her at cross purposes with the PC party. Another scenario might be letting a third party make use of violence, presumably against the pacifist demonstrators, and in the presence of the PCs -- Mary will react. Finally, she can serve as a true wild card in a hostage situation, especially if taken together with her daughter -- a stress factor, for sure. The heroes can either be the rescuers or fellow hostages, and they won't be able to predict this woman's behavior!

Appearance: 5'5", 130 lbs, age 34, black hair, fiery dark blue eyes

Attributes: ST: 10 [0], DX 10 [0], IQ 12 [20], HT 11 [10] Speed: 5.25, Move: 5, Dodge: 5

Advantages: Ally Group (Local group, small, 12 or less) [20]; Charisma +1 [5]; Patron (Nationwide movement, 6 or less) [5].

Disadvantages: Berserk [-15]; Dependent (Her daughter, competent, loved one, 9 or less) [-12]; Sense of Duty (To local group and movement) [-10].

Quirks: Always wears a purple scarf; Distrusts authority; Feels guilty about her mental problem [-3].

Skills: Accounting-14 [8]; Administration-13 [4]; Bard-13* [2]; Computer Operation/TL7-13 [2]; Driving (Car)/TL7-9 [1]; Leadership-14* [4]; Politics-12 [2]; Sex Appeal-10 [1]; Research-12 [2]; Philosophy (Non-violence)-11 [2]; Tactics (Non-violent demonstrations)-10 [1].

Languages: English-12 [0]; Spanish-11 [1].

* Included Bonus from Charisma.

Arthur Benson, The Conscientious Civil Servant

**TL8, 75
points**

Arthur Benson is a top bureaucrat within the city administration. His father was a rich, greedy businessman, whose demise was caused by his shady investment practices: accused of insider trading, he died of a stroke just days before his sentence. Probably in reaction to this family background, Arthur is very different. He is straight as a die, and his ideal is doing the common good and serving the community. Although wealthy, he likes his role as a scrupulous bureaucrat. He also does community work, volunteering as a teacher to disadvantaged kids. In the years, he earned a reputation as an upright citizen and a helpful official.

What nobody knows is that Arthur is a crusader in the making.

Using the Character: The exact campaign use of this nuisance will depend on the profession and role of the adventurers. Whatever they are, be they cops, private eyes, occultists, simply rich and famous, or even supers, there will be common people who are resentful, afraid, or jealous of them. Sooner or later, some unfortunate accident will take place; it might have nothing to do with the party, it just happens to involve somebody in the same category as the PCs. For instance, some super vigilante causes huge collateral damages (or a cop shoots an unarmed boy). Suddenly, the whole city wants something done to curb the arrogant abuses by supers (or by cops). The media drum up a frenzied campaign. And Arthur comes to the fore.

This is the crusade for him. His deep-felt ideals will develop into an Obsession (to be customized by the GM). He might even develop a form of Fanaticism or Intolerance. The problem is that he's utterly earnest, honest, upright; he sincerely believes the common people need help and protection, and while he maintains that the supers (or cops, or whatever) have their rights and should be allowed to do their job, he also thinks that new, strict, severe rules are necessary.

He could strive to achieve this purpose in several different ways. He might apply to be transferred to the city department that is in charge with the specific problem; for instance, a committee reviewing everything the local supers (or cops) do. He might found and become the leader of a grass-roots movement. By exploiting his connections and wealth, he might acquire some measure of control over the local radio or TV station and keep the media campaign going from there. He might find out some other blatant case and promote a well-publicized lawsuit. If the targeted class (and, in particular, the PCs) become confrontational and try to resist the increasingly burdensome measures, procedures and public scrutiny, he might even feel he has to run for mayor on a very, very focused platform! All in all, he becomes a royal pain in the neck . . . and all the while, he's just being sincere and well-intentioned.

Dealing with Arthur will require major PR efforts, social skills, negotiating, politicking, and large doses of patience and humble pie. He's got no weak spots, so circumventing him won't be easy. The heroes should probably try to beat him at his own game, i.e. garner public support, allies, testimonials and so on. If they can manage to get good press for some extraordinary feat they accomplish, that will be of great help. Arthur can be customized for any setting where public opinion and democratic local government has a role. Even at low TLs, cities often have these features to a certain extent.

Appearance: 5'10", 160 lbs, age 42, brown hair and eyes

Attributes: ST: 9 [-10], DX 10 [0], IQ 12 [20], HT 10 [0] Speed: 5.00, Move: 5, Dodge: 5

Advantages: Administrative Rank 2 [10]; Contacts (business, skill 15, 9 or less, usually reliable) [4]; Contacts (police, skill 15, 9 or less, somewhat reliable) [2]; Reputation +2 (helpful official and upstanding citizen, sometimes, many citizens) [2]; Sanctity [5]; Status 1 [0, from Wealth]; Wealth (Wealthy) [20].

Disadvantages: Bad Sight (correctable) [-10]; Honesty [-10]; Obsession (to be customized by the GM) [-10]; Workaholic [-5]. Quirk: Whatever the weather, swims in his swimming pool very early every morning [-1].

Skills: Administration-16 [10]; Area Knowledge (City)-15 [6]; Bard-13 [4]; Computer Operation/TL8-13 [2]; Diplomacy-12 [4]; Driving(Automobile)/TL8-10 [2]; Economics-11 [2]; Law-12+4 [4, bonus applies to local regulations]; Leadership-12 [2]; Politics-13 [4]; Research-12 [2]; Savoir-Faire-14 [0, from Status]; Swimming-12 [4]; Teaching-11 [1].

Languages: English-12 [0]; Spanish-11 [1].

Getting a New Writer

by Brian Rogers

Supers games provide the GM advice on modeling the genre: Things happen because it's how they happen in the comic books. This is good advice. After all, we're playing games in these genres to reproduce the source material. Anything in the source material must be a part of the genre, right?

Not always.

Occasionally a series suddenly changes direction. Established characters vanish, new ones turn up; plots die unresolved, threats spring from nowhere. This generally means the series has a new writer. Sometimes this is a good thing: if the story has become confused, lost focus, or is no longer holding the audience's (read: players') interest, shaking things up is a good idea. Sometimes it's a bad thing, when writers change because of producer micro-management or ego disputes.

We'll assume in a game sense that this will be a good thing -- while any GM may take a game that's going well and shake it up, only a perverse one would yank it in a deliberately bad direction just to emulate an argument between the series' writer and editor. (There are exceptions to this: *Dream Park*, *Hong Kong Action Theater*, and games for fourth-wall-breaking characters like *Ambush Bug* can accommodate these changes, as they work in multiple levels of reality.) But what does it mean?

Typically, the new writer takes one of two tacks to rescue the book: look for more or burn it down.

Looking for More

Find a central story in your confused series to be your driving force. Essentially you are trying to make what you already have into something more, even if that means sacrificing some aspects. This is a three-step process:

1. Review everything that has happened to date, focusing on events after your initial loss of focus. Look for interesting bits that either you or the players enjoyed, as well as things that didn't make sense at the time. This list of interesting and nonsensical bits are your building blocks for the core idea.
2. Review the stars of your series, with an eye toward mythic or archetypal significance. Origins and abilities are key, but psychology and idiom are equally important. Your goal is finding a new way of looking at the PCs, reinventing them without changing anything that has come before. Such changes are the mortar that holds together the new story.
3. Mesh together the interesting but incongruous bits into a single, cataclysmic story, seen through the lens of your reinvented heroes. (Sounds easy, right?) Ideally such a conflict should be so massive -- time travelers preventing an abhorrent future, battle against the Illuminati, repairing a [reality quake](#) -- that it absorbs all the campaign incongruities and gives you a strong force for continuing the series.

Once you have the cataclysm prepared, it's time to spring the "nothing you believe is true" session: Shock the heroes with their revisited origins (in which the apparently random, least understood, bits of their origin are revealed as pieces of a larger plan) to start the investigation of what's really happening. This is often handled by killing one or more of the PCs and reviving them via the revelations of their history, but mysterious strangers or apparently [repentant villains](#) work too. You can emphasize the shock of this by reworking or removing supporting cast or subplots that don't fit the new plot: spouses are killed or revealed as Illuminati agents; friends cease to exist or change entirely; only echoes remain of the previous reality. Heroes often find their abilities expanding to deal with this cosmic threat. The goal is to knock the players out of their complacency and force them to reexamine everything for keys to the upcoming cataclysm. Make them sacrifice everything to be the heroes that destiny (or the secret masters, or choral agents) needs to [save the world](#).

If handled well, your recent lack of focus will be lauded as masterful foreshadowing. The players will reinvest themselves, saving the things that truly matter from this P.K. Dick-ian onslaught. The series will gain the momentum it needs to see this grand plot through. If handled poorly, you can either end the campaign (which was dying anyway, or you wouldn't have tried this) or dismiss it as a villainous plot to confuse the heroes (so you can restore the status quo next session).

Burn it Down

Find the heroes' core and reinvent the series around it. Essentially, you're sacrificing the setting in order to save the characters. There are three steps to this process as well.

1. Scrutinize the stars of the series, looking for the essential elements: which supporting cast members -- if any -- are critical? Which abilities are key, and at what levels? What were their origins, idioms, and starting ideals? List each character's important aspects as the most important things to keep.
2. Eliminate anything not on those lists. If there is nothing on the list that ties the heroes to a city or geographic location, consider changing the game locale. If an NPC isn't critical to anyone, lose them. Strip away abilities that don't fit the character's core, and downpower any that have grown too potent.
3. Develop a new setting based around these newly reinvented heroes. Keeping most of the supporting cast or the locale may limit your choices but not stifle you; you can subtly alter people and situations to restore their old spark. For groups without critical ties, chuck everything (including non-critical villains) and start fresh. This could be a new city, but it could also be a new world, or simply the elimination of NPCs and refocusing on what really matters: the heroes, their interactions and their adventures.

Once you have this new setting developed spring it on the players. This may require a couple things.

You may have to close off whatever story you were telling. Do it quickly, and don't worry if the end is a little messy. By next session it won't matter. If you're getting rid of a bunch of NPCs, handle it now: Girlfriends leave, police get reassigned, liaisons retire. Clearing ground in advance smoothes the transition.

You may have to justify your down-powering the PCs. Let your players know the series has lost focus, and you want to bring the characters back to basics. If you've eliminated abilities, explain your reasoning but let the players defend keeping them. If you've down-powered core abilities, reassure the group that the PCs still have the same rank on the campaign's hierarchy: the fastest man alive needn't be moving at warp speed if his closest competitor barely breaks Mach 2. If everyone is equally diminished players may be more willing to go along with the change.

Open the first "new" session rehashing the heroes' origins, why they're together, and what they stand for. Then put them in a scenario that emphasizes their original focus: If they're planetary defenders, have them save the world; if they're gritty detectives, a murder reveals elements of your newly restructured criminal forces; if they're explorers, a new world is revealed to them. Villains can be new, but ideally you should confront them with an equally revamped second-string bad guy from their past, with a focus on what originally made him a cool opponent. Refrain from introducing new NPCs, or using old non-critical supporting cast. Keep the focus on the things that matter!

If handled well, players will remember what made the game fun. They'll find new methods of interaction with their old supporting cast, and pick out new favorite NPCs. The series will have fresh ideas, or can re-introduce things that turned silly or dull the first time around. If handled poorly, the players will complain about losing the perks they'd accumulated, and will want all their stuff back. At this point, you can either end the campaign or rapidly reintroduce the supporting cast and restore power levels. In any case, you're no worse off than you were before.

In Conclusion

These sorts of changes are very meta-genre -- beyond the fourth wall -- and such considerations are seldom taken into account when planning an RPG. Still, while these changes sometimes happen when an argument between writers, editors and publishers wrecks a good book, some of the best comics in the last 20 years come from new writers

breathing life into confused or tired characters and plots. Supers, or indeed any, GMs can make use of these techniques to revive a dying campaign.

Pyramid Review

Dynasties and Demagogues (for *d20 System*)

Published by [Atlas Games](#)

Written by Chris Aylott

160-page b&w hardcover; \$28.95

Atlas Games has produced another outstanding *d20 System* supplement in its Penumbra line. ***Dynasties and Demagogues*** is a resource for DMs wanting to part from the more traditional fantasy roleplaying, where Dwarven clan histories are as elaborate as speeches come, and "kill them and take their stuff" is the order of the day. Possessing the necessary framework for a full-scale political campaign, where ***Dynasties and Demagogues*** really excels is as an alternative adventure, giving the party a break from storming lairs and fighting demons. Characters that normally exist as supporting specialists, such as rogues and bards, are suddenly pushed to the forefront of the party, and fighters soon find that negotiation and implied violence may be just as effective as actually using their blades.

For many DMs and groups, who are tired of fighting progressively tougher monsters as they advance in power, the power games and intricate webs of deception provide a welcome change. For many people, who aspire to have their characters known as kingmakers, or noble lords, rather than dragon slayers, ***Dynasties and Demagogues*** is the book the ***Epic Level Handbook*** should have been.

Dynasties and Demagogues is a 160-page, hardcover supplement of excellent quality. The binding is sturdy, having survived the frantic packing of a dorm room and a cross-country flight, haphazardly placed in a laptop bag, without a scratch. The purple and beige cover of the book is clean and attractive, while keeping with the trend of *d20 System* books these days to have some simple, circular symbol of the book centered on the cover. The interior of the book is heavy, non-glossed paper, good for those of us who are tired of the semi-gloss pages that occasionally smear. The printing is of reasonable size, and the interior artwork, while sparse, is a collection of absolutely beautiful pieces depicting epic scenes that convey the mood and tone of the book dramatically.

The book is divided up into five sections, plus several Appendices:

- **Introduction:** A discussion of "what is a political campaign" and a simple adventure to set the tone.
- **In Theory:** The ideas behind a political campaign, and the political background any adventure will need. In Character: A guide to playing characters in a political game, and new rules for typically soft, "DMs discretion" subjects, like political debates and elections.
- **In Practice:** A guide for running political campaigns and adventures, and building governments that both make sense, and are challenging to the players.
- **Appendices:** Various useful governments and titles, a bibliography and very helpful reference of all the OGL content in the book.

One of the problems many of the political games I have encountered have is setting the mood, especially in a system that emphasizes combat and other action-oriented activities. ***Dynasties and Demagogues*** throws the reader directly into an adventure in its Introduction chapter as a way of setting the mood. The adventure is by no means a truly complete one, nor is it particularly complex. It involves rescuing a troubled vineyard owned by a local Dona, but I will say no more, lest someone wish to use it for his or her group. While it is an incomplete adventure as far as pre-made adventures go, it nonetheless provides a very strong adventure seed, and shows how action and intrigue can blend together to make an outstanding political campaign. It also includes helpful sidebars for both the player and the DM, commenting on what is happening inside the adventure.

"In Theory" is the discussion of how historical forms of government, typical fantasy races, and the presence of magic fit into the gaming world. It includes the major forms of government around today as well, and some new ones. Democracy, Anarchy, Monarchy, Dictatorship, Feudalism, Mageocracy, Theocracy, and Empire are all covered. Of particular use are the adventure-seed governments, complete with a defining and fully stated NPC for each type of government. Particularly useful is the Bureaucracy rules, "Maze of Bureaucracy," which makes the process of delaying player characters or adding unexpected struggles as simple as a roll on the table. While for the most part unoriginal, the government forms section of *Dynasties and Demagogues* is well-written, helpful, and eases players and DMs into a political campaign.

The racial chapter follows the same basic pattern, presenting each of the common fantasy races in the context of a campaign seed, many with very welcome twists. For example, there is a not-so-benevolent elven kingdom, and a dwarf nation torn by infighting about the split between the surface world and the world of mines and dark things. All the major fantasy races are covered, although with varying degrees of space; dwarves and elves by far get the most attention in terms of plot-seeds and fleshed out NPCs, which are exceedingly well-done, and fit archetypal roles such as "Changing Chieftain" or "Old Political Infighter." This allows the NPCs to be yanked out of the book and patched into a campaign with very little difficulty.

The magic chapter presents a single new magical organization, yet more compelling and original adventure hooks, plus a ton of new and useful spells for sorcerers and wizards more interested in getting the truth from a witness, rather than frying them right then and there. A small-but-useful collection of magical items follows.

And thus ends the "In Theory" section of the book. While nothing presented within those pages is particularly ground breaking, there is a feeling of originality and transparency to everything written. With a little bit of adjustment, each and every bit of new material presented could slide smoothly into your campaign, with nary a continuity error. The section accomplishes its goal with solid, clean style, allowing campaigns to start up, or switch, to a political campaign with very little effort.

The "In Character" section is where *Dynasties and Demagogues* really shines. It begins with some basic "who is your character" questions, then introduces an entirely new class of feats, and rules to boot: the Rules of Personality. The system uses a long list of feats that define a character's personality, each with a brief description, restrictions (as with normal feats) and a condition. Whenever the character meets this condition in a game, they are awarded Action Points, similar to the Drama Dice AEG introduced with *7th Sea*, and has kept on with their Spycraft line of supplements, which can also be turned in for extra experience. These feats, of which a character can only have one, are a great way to introduce in-game rewards for roleplaying a personality, which is especially useful for campaigns where the DM is trying to move a party more toward character development and method acting with a group that is more used to playing a hack-and-slash character.

A brief section on the new uses of old skills follows (which seems mandatory these days), which I dispute is necessary, as most of the skill uses are painfully obvious, before the reader is hit with another set of excellent, useful but balanced feats. Meant for courtly characters, or those leading armies rather than small war bands, these feats give boosts to long neglected aspects of most characters, boosting the character's power in ways beyond the strength in which they hit things. While all useful, none of them come off as sickeningly overpowered "must have" feats that occasionally crop up in other supplement lines. Following the large group of feats is another large list, this time of prestige classes.

The author and I clearly disagree about the nature of prestige classes. I have never liked the current use of prestige classes as replacements for the old *Advanced Dungeons & Dragons* kits. I have always viewed them as an extension of power groups and specialized entities in a campaign world. With the number of feats, especially with the number of new, very flexible feats that occur in this book, and the ease of multiclassing, I just don't think "kit" prestige classes are needed. However, if one agrees with the use of prestige classes as "kits," allowing characters to go down specialized paths, there is an impressive collection. Ranging from bodyguard, a useful class for fighters who suddenly find themselves protecting weaker but more skill-heavy characters; to discreet companion, for characters who know that a coy glance and night between sheets can glean as much information as months of careful sleuthing.

The flood of crunchy bits continues as the Chris introduces "Political Maneuvers." Similar to combat or the driving system of *Spycraft*, the system allows for characters to select "maneuvers," which are compared against an opponent's "Political Defense," a kind of intellectual AC. For those of you looking for an elegant way to recreate epic debates on the floor of the Roman Senate, even if your players aren't trained in classic logic and the works of Cicero, this is your stop. The mechanics for the public sphere continue with rules for elections, allowing characters who want to be kings, or king makers, to sway the public to their point of view. Essentially, *Dynasties and Demagogues* has taken some very difficult concepts, which tend to get glossed over and reduced to DM hand-waving, and gives them rules similar to combat, where how carefully and skillfully a character is played really matters, and players have some chance of predicting their success.

"In Practice" is a simple guide for running political campaigns, walking DMs through the process of creating a political campaign through several examples, plus a full-fledged campaign outline. There is nothing truly groundbreaking, and it's a bit of a shock after the hail of crunchy bits of the previous section, but "In Practice" is solidly written, and the examples all have some unexpected twists in them that may provide inspiration for political DMs.

All in all, *Dynasties and Demagogues* provides a solid, nicely written supplement that provides the backbone any political campaign will need to get off the ground, plus a huge amount of well-designed rules, feats, and prestige classes for a political character.

Pyramid Pick

Victorian Age Vampire (for *Vampire: The Masquerade*)

Published by [White Wolf Publishing, Inc.](#)

Written by J. Achilli, Kraig Blackwelder, Brian Campbell, Will Hindmarch, and Ari Marmell

Illustrated by Mike Danza, Guy Davis, Rebecca Guay, Vince Locke, Matt Mitchell, Christopher Shy, Richard Thomas and Andy Trabbold

224-page b&w hardcover; \$26.95

Victorian Age Vampire ushers in the opportunity to play in a time when the Ivory Tower of the Camarilla is at its highest: a time when Queen Victoria and the bureaucrats of her government administer the furthest reaches of the British Empire by day, while the Kindred attempt to rule it by night. It is only through the efforts of the late William Gull's agents that Vampiric influence does not reach as far as the Imperial seat. It is an age of contrasts and hypocrisy: between the high idealism of the moneyed and landed classes and the squalor of those beneath them; between the façade of correct propriety and the attractive allure of all that is exotic, forbidden, and taboo; between a fascination for the exactitude of scientific endeavor and the inability to explain its answers that makes everyone look back to the supernatural. It is an age when everything is seen in black and white, and not in the shades of gray of the early 21st century.

All this applies to the undead as it does to mortal society. To the Camarilla of the Empire, the mere name of the Sabbat is too strong a taboo that none dare mention them in polite society . . . so strong a taboo that there are childer embraced who know not of their very existence. Equally, Camarilla society is as stratified as that of the Kine; the Ventruue and Toreador belong to the upper classes, the Tremere and the Gangrel to the middle classes, with the Brujah, Malkavian, and Nosferatu clans consigned to the lower classes. Where the mortal fascination with magic and the supernatural has found an outlet through a predilection for the Gothic romance and membership in secret societies such as the Freemasons and the Golden dawn, the kindred invest themselves in those self-same societies while dealing with clans -- such as the Followers of Set -- that will be reviled in later years. Of course, consorting with such individuals could be enough to lose an upstanding vampire their place in society. Even the type of coterie created to bring characters from disparate clans together will be viewed as with suspicion. After all, their cooperation might expose them to the unwholesome and the inappropriate, both in terms of individuals and of ideas.

Victorian Age Vampire is a historical sourcebook for *Vampire: The Masquerade*, which explores not the world of the gothic-punk, but that of the true Gothic, a time when an interest in the Gothic novel is at its highest and thus also the vampire. Indeed, it is a kindred that will permanently stamp the vampire onto Western consciousness simply by whispering into the ear of an Irish novelist, thus leaving a permanent mark on the Masquerade and straining at its bonds. In fact, it is with the publication of *Dracula* in 1897 that the timeframe of *Victorian Age Vampire* ends, having begun 17 years before in 1880.

In terms of production, this book is very nicely done. While the writing is itself engaging, it is the look of *Victorian Age Vampire* that really shines. An ironwork motif is used throughout for page borders, the titles, and sometimes the quotes, which is quite in keeping with the period. Better still is the artwork, with Christopher Shy's full-page chapter prefaces echoing the photography of the period to a very moody and ethereal effect -- though in black and white rather than in sepia. Andy Trabbold's illustrations also stand out in particular as similarly effective, but all of the artwork in

Victorian Age Vampire is good and works to give the reader a sense of mood and feel for the era.

The book opens with the standard slice of color fiction, which describes the first few days of a vampire's return to London and the taking of a new childe. While it sets the scene well enough, and is written in the Gothic style, it is far from engaging. Fortunately, what follows through the rest of the book is more than engaging, fascinating not only to the *World of Darkness* devotee, but also (as in my own case) to the fan of the Victorian era game, whether **Cthulhu by Gaslight**, **Space 1889**, or **Castle Falkenstein**. This begins with an overview of the era and setting, and also the society -- both of mortal and vampire. The main purpose of the latter is to highlight the differences between **Victorian Age Vampire** and **Vampire: The Masquerade**, and also (to some extent) **Victorian Age Vampire** and **Dark Age: Vampire**, the ancestor to this game. Such differences can be simplified down to being the stricter and more strongly enforced codes of conduct that will slacken by the end of the 20th century.

Each of the clans is thoroughly examined under the soft flare of gaslight. Initially, this is of the seven members of the Camarilla, who are both similar *and* different to those of today. The Brujah remain at heart philosophers, but have taken up the radical causes of the age and a more rowdy rabble, even as their revolutionary ardor wanes. The Gangrel are beset still by wanderlust and given the derisory term "adventurer," but some still serve to protect the kindred of the cities from dangers of the wilds. Though fractious, the Malkvians have found a place where science and madness bisect in the lunatic asylums, while the Nosferatu further their information networks via the ever-growing program of tunnels dug beneath London and other cities. The Toreador continue their roles as Shepard to the mortals, ever looking for a new trend to offer their patronage to, but still involving themselves in clan politics. It is their occult metier that brings the Tremere to prominence at the height of the Victorian age, as it coincides with society's fascination with the self-same subject, but it is the Ventrue that embody both Empire and Camarilla, dominating Kindred society as they always have.

Yet just as the power of the aristocratic Ventrue declines in step with that of mortal nobility, the lessening of church influence also decreases the reach of the manipulative Lasombra. Though all-powerful within their domain where they lord it over the native peasants, the Tzimisce feel the influence of civilization at their boundaries. These two clans are to be feared, but there remain four independent clans that stand between the Sabbat and the Camarilla, who define much of the Kindred's fascination with the exotic. The Assamites offer services of death and protection in return for blood and coin; they war with the Followers of Set, who sell secrets to all in return for favors to be called in at a later date. The Giovanni remain neutral and reviled, but spread their mercantile influence aided by an invisible network of spies. The Ravnos work in the same (though physical rather than invisible) capacity to those clans willing to pay for such services, although there are naturally consequences to having truck with the kindred's pariahs. Each of these clan write-ups comes *sans* rules, so players and Storyteller alike will still need to refer to a copy of **Vampire: The Masquerade** or similar for these. Of course, this leaves room for a more in-depth exploration of their natures and circumstances in the Victorian era, although it does not mean this is a stand-alone book. This is particularly so with the four independent clans, as they are intended to fulfill society's need for the exotic.

What rule changes there are, extend only so far as tweaks to fit the setting. They include new Personality Archetypes -- Artiste, Coward, Explorer, Futurist, Outsider, and Questor -- as well as an adjustment to the Skills and Backgrounds. For childe, this will start with their initial Generation, as it begins at 12th rather than the 13th of **Vampire: The Masquerade** -- though it is available as a Physical Flaw. Where in centuries past vampires have reveled in their damned nature and their monstrous hearts, they find themselves in the late 19th century dwelling upon what they were before their embrace. In choosing to live hand-in-hand with a human society that has turned to science to discover what it is that makes them human, the kindred cannot deny the pull of what they once were. Thus the Path of Humanity is paramount among the vampires of the Camarilla, and almost no other is known.

An overview of the World of Darkness is provided with "Chasing Sunset (Geography)" and like [World of Darkness: Mafia](#) before it, uses the device of a journal format as written by a ghost -- here on the Vampiric equivalent of the Grand Tour. This is a subjective view, of course, but a more objective stance is taken in the sidebar boxes that run throughout this chapter. These begin with a nicely succinct explanation of what is meant by the terms England, Britain, Great Britain, and the United Kingdom. The tour itself begins at the Empire's heart, London, and then travels by train West to Wales, North to Edinburgh, and across the Irish Sea to Belfast. From there it winds through Europe -- Lisbon, Madrid, Paris, the Low Countries, Switzerland, Scandinavia, Saint Petersburg, Germany, Italy, and the

Habsburg Empire -- before crossing the Bosphorus Strait from Greece into Turkey. The journey draws to a close in the Americas after having coming from the Britain's colonies in Egypt and India.

As much as the journal imparts a sense of geography, it also provides the Storyteller with a number of hooks to build into their chronicle. For example, the relatively recent return from torpor of London's Prince, Mithras, has left him still strong but open to threats from those who have better adapted to the modern age. Even worse, a Nosferatu known as Prince Fagin has claimed the capital's East End as his own. This whole chapter makes for both fascinating *and* exasperating reading, the former for what it does tell you, but the latter because it leaves the reader wanting more.

As good as **Victorian Age Vampire** has been up until this point, it gets even better for its penultimate chapter -- "Storytelling." This is an exemplary piece of writing that clearly states from the outset that a **Victorian Age Vampire** game is not one of "Superhero by Night," but one of mood and of evoking a darker world. It describes itself as both "advanced" and Gothic storytelling, beginning with "Gothic 101," an explanation of the elements that comprise the genre. It also discusses how such elements -- the weight of history, fascination with place, tyranny of power, ghosts, secret societies, and the supernatural -- should be used to create the required atmosphere, as well as suggesting how the Storyteller can maintain such a mood. It even suggests lightening the weight of the *Storyteller* mechanics by running a dice-lite or even a diceless game. More perverse themes are covered, and while such lurid sexual practices are part of the genre, it strongly warns that they are not for everyone.

Of course, a **Victorian Age Vampire** chronicle will want antagonists, and the last chapter is devoted to these. They are, in keeping with the themes of the book, predominately human, though there are statistics for Lupines; the Fae; and, even more suited to the period, Ghosts. Their inclusion -- the Poltergeist, Driven Shade and Murderous Shade -- ties back into the descriptions of the Giovanni, the author of the geography chapter, and the Tea-Parlor mystic also described. She is listed under the Witch-Hunters, as are the Doctor/Scientist, the Priest and the vengeful Relative. The Arcanum also exists, though in its formative years only goes so far as to maintain surveillance upon the undead. Besides the various individuals described, which also include the new additions like the Serial Killer and the Evil Twin, a number of Secret Societies are given a little coverage. Again, there is little enough about the Freemasons, the Hermetic Order of the Golden Dawn (in this game founded earlier than its historical year of 1897 to make use of the storytelling possibilities it offers), and the Enlightened Society of the Weeping Moon to give the Storyteller more than a decent taster, but their prominence ensures future coverage in other supplements.

If there is any downside to **Victorian Age Vampire**, it is that it is almost a shame to have to own a copy of **Vampire: The Masquerade** in order to play in the Victorian era. Yet without space taken up by rules, there is room enough to develop and explore both setting and genre. Indeed, this is so well done that it should be read by anyone wanting to run a horror-themed game during the reign of Queen Victoria. It does also stand apart from the other creatures of the World of Darkness, although this *is* a book about vampires after all, and the others and their situation are likely to be detailed in other supplements.

Personally, **Victorian Age Vampire** is something of a revelation after being kept away from the World of Darkness by the antiseptic feel of **Vampire: The Masquerade** and the tendency of games to drift towards the "Superhero by Night" syndrome. Instead, the emphasis is steadfastly placed upon mood and atmosphere in a semi-historical setting . . . semi-historical because some slight changes have been made to make the game more interesting (such as changing the founding date of the Hermetic Order of the Golden Dawn above) and also because the game has been written to reflect the genre rather than to a strict adherence to what really happened and when. That said, the history *feels* right, which is a testament to the excellent efforts of the authors, as is the fact that, with the creation of **Victorian Age Vampire**, they have made me want to visit the World of Darkness once again.

--Matthew Pook

Sequel Like a Pig

In the past two weeks, I've had occasion to see *two* movies on opening night (or the day after, for those movies crazy enough to open on a Thursday). Never mind the fact that a movie night for two can cost as much as a kidney at an auction site, nor the fact that I haven't seen *two* first-run movies in the same month in the past five years.

Now, the interesting thing about these movies is that they were both sequels. *Matrix Reloaded* serves as the middle movie between 1999's *The Matrix* and this winter's *Matrix Revolutions*, while *X2* is the bridge between 2000's *X-Men* and last summer's *XXX* (starring Vin Diesel as a butt-kicking extreme-sports secret-agent Professor Xavier).

Even more interestingly, I actually *liked* both of these movies more than the originals. (As an added bonus, I've also been able to torture my friends by coming up with my own impromptu ASCIIine *Matrix*-y dialog: "Consider nothing. Can something that does not exist be *more* real than something that does? For, if you cannot touch that which is real, yet you believe in that which is not, then does not the belief become more real than that which you cannot hold? [FIVE MINUTES LATER] What is a parking space? It is, by definition, *nothing*. It cannot be felt, heard, tasted; it does not know love, or anger, or sorrow. It is defined not by what it is, but by what others *wish* it to be . . . [FRIENDS SEEK BLUNT OBJECTS]")

[Peter David](#), in his *But I Digress* column, devoted [one installment](#) to sequels. He points out that sequels are often punished by moviegoers for being too different; follow-up movies that are identical (or close) to the original are rewarded. I find this interesting, because in the gaming world, I consider the opposite to be true; maybe this is because satisfying a gaming group of four is substantially different than satisfying 50,000,000 moviegoers.

Anyway, after a successful adventure, I'm tempted to run a sequel to it. Sometimes I do, and other times I don't. Of course, the concept of a "sequel" has more meaning in some campaigns than others. In a serial campaign, adventures blend together more or less seamlessly, making a defined sequel more difficult.

There's one observation I use for movie sequels that has special application for the gaming world. Namely, did the creators of the movie intend for a sequel originally? In a lot of movies that eventually come out with sequels (not to mention comics and novels), there was obviously not intended to be a sequel in the first place. This can be evident in how much back-peddalling they need to do in the next movie:

End of Movie 1:

"Huzzah! You've defeated all the evil in the world!"

Beginning of Movie 2:

"Er, wait . . . did I say, '*all*' the evil? Actually, there's some more evil I forgot to mention . . ."

Back to the Future II, *Men in Black II*, and *Highlander II* are all examples of movies where the creators had obviously intended for the original to be a complete entity unto itself, and thus need to spend a fair bit of time shoehorning the second installment into the series.

"Why does this have an application to gaming?" I hear some of you cry. Well, by definition a sequel of this sort is an attempt to continue a story that was otherwise "closed." This can be problematic, but it also leads to some interesting possibilities that are unique. But before you consider a sequel of your own adventures, there are a few things to keep in mind . . .

Do You Really Want To Do This?

First off, many things that we may be tempted to use a sequel for can actually be done with a new idea. For example, if the heroes spent a lot of time thwarting numerous obstacles to halt the progress of the Armageddon Clock, and that adventure ended satisfactorily, what impetus is there to have *another* group of baddies come along and wind up that timepiece o' death again? Played poorly, at best you'll have an adventure that feels just like the first one, and at worst it

will feel like everything the heroes did before was moot.

Instead, why not have the same heroes called upon to thwart *another* cosmic (or not-so-cosmic) threat? If the Armageddon Clock was going to merely destroy the universe, what if the Soul Prism threatened to alter everyone to a mirrored moral outlook (a plot condition that, as an aside, would be trivial in the **d20 System**, yet more problematic elsewhere)? The basic plot is still the same ("stop Bad Thing from Doing Bad"), but it doesn't threaten to make the first plot moot. Heck, the heroes might have been called upon to stop this device because of the smashing success they had the first time around, allowing for some reaffirming continuity while not making it seem moot.

Yes, I Really Want To Do This, Dagnammit!

Okay, okay . . . So you *really* want to run a direct sequel to a previous adventure. Fine. Be that way. My advice then is to try telling a story that can *only* be done as a sequel. In other words, take advantage of the opportunity, not to go back to the same well as before, but to dig a new well that is only possible because of the previous tale.

In my mind, the most effective movie sequels have been those that took the opportunity to expand the story of the first tale, yet went off in a vastly different direction. Thus *Empire Strikes Back*, *Godfather II*, and *The Two Jakes* are each dissimilar to their previous movies, yet they take the opportunity to further explore the world they created. The ties to the previous stories are augmenting, not degrading.

As an example of a gaming story I consider a "sequel," in the previously mentioned long-running **Vampire: Dark Ages** campaign I ran, there was a big bad guy who, after considerable effort, was dispatched . . . presented with the choice of death, or leaving the kingdom and never coming back. He chose the latter. In the sequel to this story, I had the kingdom appear to be under siege from someone using atypical tactics: a campaign of subterfuge and terror. Eventually, clues start appearing that point to this being the aforementioned Bad Guy. The players start frothing at the mouth about how they're going to get this guy and rend him into tiny pieces. Eventually, as the adventure series progressed, the climactic -- nay, [pivotal](#) -- moment is when it was revealed the mastermind behind the whole event was, in fact . . . the (hitherto unknown) daughter of the original Bad Guy. This is mildly shocking, yes . . . until the players learn that she had accumulated the means of throwing off suspicion by killing her father, and stealing his stuff. (Oh, and then the heroes learn that she may not even be his *real* daughter.)

Now, this tale had several points that I enjoyed. First, in one fell swoop, the players went from gnashing at the teeth for a villain to actually feeling genuinely *sorry* for him. ("Poor guy; sure, he tried conquering the kingdom and destroying everyone we love . . . but he wasn't so bad, really.") Second, the story was only possible as a direct sequel of the other story; it relied on the involvement and characters of the previous tale, while being significantly different. (Mind you, in the interest of full disclosure, I should mention that this adventure also resulted in the ["We need to talk. . ."](#) incident. But once we got beyond those problems, the players seemed to appreciate the climax.)

So to get back to our Armageddon Clock story, if we were interested in doing a sequel, some ideas that spring to mind are:

- The heroes encounter the architect of the original clock, perhaps facing a dilemma: Can someone with the power to create such an artifact be allowed to live?
- The players learn (or are informed) that, in fact, they were *unsuccessful*; a side effect of the clock is to make the last moments of its victims as comfortable as possible by directly controlling their brains. If this information is true, what do the heroes do now that they're living entirely in a dream-world? Can they somehow reverse the Clock's effects? And if this revelation is *not* true, then who is attempting to fool them, and how? And, regardless, how do they get back to a world they understand?
- There is another attack on the Armageddon Clock, and the heroes fail to stop them . . . only to learn that its activation does *not* end the world! It is ultimately revealed that the hero who deactivated it before has somehow absorbed its entropic energies; it is also revealed that, if he dies, so does the universe! So the heroes get to ask . . . now what?

Each of these adventure possibilities adds to the story before while not taking anything away from the previous story.

And that, ultimately, is perhaps the best use for a sequel.

But, what is a sequel? It is, in fact, nothing more than a number; we assume that time is a line, and that which comes now could not have happened before events that transpired after it . . .

[STEVEN IS BLUDGEONED TO DEATH BY FRIENDS]

--*Steven Marsh*

Transmission 200 (Part II)

"What canst thou swear by now?

The time to come.

That thou hast wronged in the time o'erpast;

For I myself have many tears to wash

Hereafter time, for time past wrong'd by thee."

-- William Shakespeare, *Richard III*, IV:iv:403-407

Herewith, we continue the overarching reality-war begun [last week](#). Set all your games in it at once, or change it as you will. Ignore everything except the Reptoids, and use it to [effortlessly create](#) your own backdrop instead! Although storylines do interact somewhat, the events (of necessity) are fairly modular, since they assemble all 200 previous transmissions into one. And with that, let's rejoin parahistory, already in progress.

- 1125:** The ZSS attempt to marry Queen Matilda of England off to Frederick II Hohenstaufen of Swabia, producing an unbroken Germanic [Mathildine Dynasty](#) in England backed by werewolf infiltrators.
- 1165:** Templar agent [Prester John](#) establishes a kingdom inside India Ultraterrestria, and immediately begins establishing mythic communication lines to reify his domain.
- 1190:** Date eventually fixed (by MI- mythography) for the [Robin Hood](#) entity ([manticore](#), [faerie](#), or [werewolf](#)), contained in Sherwood Forest by Rosicrucian ritual dramaturgy after deprecations reaching all the way to 1441.
- 1214:** A clever RCS maneuver pinches off Reality Orkney in 1263 and then jumps back into that reality's past to pinch off Reality Gisbourne at Bouvines. Rather than untangle this knotty patch of the [Red Ring](#), the [manticores](#) slide King John into the Robin Hood containment field and close the leaks that way.
- 1222:** Glancing [shards of reality](#) struck off by the passage of Halley's Comet.
- 1268:** Roger Bacon discovers the [arts of magic](#), but MI- dithers until the Lemurians confound his writings (except for the technical drawings taken by the [dwarves](#)) using the Voynich Casting. The resulting [Manuscript](#) becomes a pragmaclastic hot potato for centuries down the line.
- 1305:** Glancing [shards of reality](#) struck off by the passage of Halley's Comet.
- 1307:** [Templar fleet](#) escapes their Reptoid-inspired arrest and returns to the American Templar fastness of [Norumbega](#) with the [prophetic head](#) of [Bran the Blessed](#), the Ark of the Covenant, and other artifacts and pragmaclasts. They bury many of them in the Oak Island [Money Pit](#), in the tesseract space established there by the Reptoids around 8,000 B.C. One squadron of Templars goes to ground in Scotland, allied with the [Spider Goddess](#) (a Sphinx) to support Robert the Bruce against the Reptoids.
- 1315:** In revenge for Jacques de Molay's death, the Templars trigger an [Ice Age](#) (which also wipes much of their anomalous past away); the Reptoid repair job is haphazard at best.
- 1322-1356:** MI- agent Sir John [Mandeville](#) infiltrates and explores India Ultraterrestria; he may or may not have become a double agent for either Lemuria or the Sphinxes, and his network remains untrustworthy.
- 1360:** RCS expedition calves off and buttresses Reality [Plantagenet](#).
- 1380:** Glancing [shards of reality](#) struck off by the passage of Halley's Comet.
- 1395:** Tamburlaine, an MI- avatar-operative gone rogue after a [Marlowe](#) overthrust, [sacks Europe](#) and nearly breaks the walls into Shangri-La and India Ultraterrestria both. Marlowe eventually puts him down dramaturgically, but this incident shows that Marlowe himself may be unreliable.
- 1406:** Chinese hopping vampires steal Lemurian time technology from a Tamburlaine-weakened Shangri-La and create Reality [Ming-3](#). MI- and the Lemurians jockey for power and leverage rather than change

things back just yet.

- 1431:** Cybele uses the burning of [Joan of Arc](#) as an opening into the mind of [Gilles de Rais](#) and as an attempt to [enfold Europe](#) in [mandrake](#); MI- fills the gaping holes here with substandard dramaturgy and a changeling.
- 1452:** The fall of [Megalion](#) from a higher order of history cascades across Europe, especially Italy, where it exalts both [superhumanitas](#) and the arts. The earthly shell of Megalion, Constantinople, falls to the Turks the next year.
- 1456:** Glancing [shards of reality](#) struck off by the passage of Halley's Comet.
- 1476:** Perhaps as blowback from an MI- operation in Ming-3, Vlad "Dracula" Tepes rises as a vampire to [conquer Europe](#). His vampiric contagion spreads across timelines and bloodlines with Reptoid aid, pre-positioning his descendants to resist a Turkish Europe as the Khan-Pendragon in [yet another alternate](#).
- 1485:** Reptoid sabotage opens a new reality when King [Arthur returns](#) to the Battle of Bosworth. An MI-dramaturgy closes it down again.
- 1488:** Bernard of Treves unlocks the Azoth and brings forth a [world of flying galleons](#) and alchemical industry. MI- guards this reality jealously, although they must devote a substantial force to defending several Englands from it in the Armada year a century from now.
- 1493:** Christopher Columbus (or one of his many [doubles and imposters](#)) explores the sailing routes [to Atlantis](#) and [Calyferne](#) for the Rosicrucians, but Lemurian resistance replaces him until he loses them again.
- 1507:** The Venetian glass-makers learn the secret of mirror-making, allowing the Reptoids to carry the battle into the Sphinxes' [mirror universe](#); the Reptoids activate their [benandanti](#) sleeper agents in Friuli (near Venice) for the contest.
- 1513:** Reptoid-Lemurian double agent of influence [Piri Re'is](#) draws a map of tropical Antarctica to seed the rediscovery of [Atlantis](#) into the New Cartography. For a similar agenda, the Templar agent Balboa has his men chew sacred [cacao](#) beans for three days straight on a shamanic voyage to tie the Pacific Ocean to the New World.
- 1531:** Glancing [shards of reality](#) struck off by the passage of Halley's Comet.
- 1538:** ZSS agent Bartholomaeus Welser, on a mission to [Akakor](#), stumbles into the ancient astronaut base at Muribeca and calls in a [Martian invasion](#) to extract himself. The resulting reality damage splinters El Dorado all across the continent.
- 1541:** First of several attempts by Greys to "spore" into our reality through the hole over [Roswell](#), New Mexico halted by MI- .
- 1542:** The English Reformation provides the anti-magical juice for Operation Dymchurch Flit, the final operation of the lengthy Strike Force Chronos [campaign](#) against the [faeries](#) in England, carried out against stiff MI- opposition despite the strong ties between the Sidhe and the Sphinxes. British [goblin marketplaces](#) move onto pirate quays.
- 1555:** Possibly after invoking the [triplicity-year Ripper](#), Michel de [Nostradamus](#) receives a vision of all times and realities. He immediately becomes the target of a series of psywar attacks which completely unhinge him, concealing his true prophecies in a jumbled morass.
- 1587:** [Roanoke](#) Summit between Dee's agent Raleigh and the Grand Master of the American Templars; [Arcadia](#) established and the gates to [Calyferne](#) opened and monitored.
- 1588:** Another [major nexus](#) battle, as MI- throws all its resources including a secretly resurrected [Arthur](#) and a [dramaturgical inversion ritual](#) into defeating the [Spanish Armada](#) in all timelines. Various Armadas receive Reptoid, Sphinx, or ZSS aid. A covert Strike Force Chronos [team](#) covers Dee's back, keeping the Lemurians, the [nanotech swarms](#), and less categorizable things at bay. During the commotion, [Spring-Heeled Jack](#) slips into reality.

- 1589-1613:** John Dee's agent William Shakespeare crafts a series of dramaturgies designed to alchemically harness love and gold [\(1594\)](#), sacrifice the false king [\(1595\)](#), exalt Dionysos [\(1601\)](#), restrain Leviathan [\(1605\)](#), destroy the world [\(1606\)](#), shield witches [\(1606\)](#), cement the occult imperium in Bohemia [\(1611\)](#), and so forth. Shakespeare, and others, often use these dramaturgies for other, private ends both now and later.
- 1593:** [Marlowe](#) knows too much; MI- gives him up to the Lemurians and the ZSS in a classic [Macbeth](#) Working, but persistent rumor says that Marlowe himself was his own "third murderer" and escaped to asylum in Tamburlaine's India Ultraterrestria.
- 1595:** [Guiana](#) Summit between Raleigh and the South American Reptoids; marital alliances worked out (both forward and backward in time) between the Rosicrucian-Merovingian and Reptoid bloodlines.
- 1597:** Perhaps in revenge for Marlowe's killing, Tamburlaine launches a strike out of the Tuat, raising a plague of [mummies](#) against MI- .
- 1607:** Glancing [shards of reality](#) struck off by the passage of Halley's Comet. The [Uwaysi](#) order fills the gap with the *History of the Uwaysis*, spreading Uwaysi dreams along the shockwaves and fault lines.
- 1611:** Foundations of the Occult Empire are laid when Shakespeare's dramaturgical inversion of [Bohemia](#) overlaps the sorceries of the Sphinx werewolf Erzsébet [Bathory](#), opening a werewolf channel back into England the next year in Webster's [Duchess of Malfi](#). Bathory is imprisoned by the Rosicrucians, but the damage is done.
- 1622:** With Raleigh gone, the Rosicrucian-Reptoid alliance begins to fray again, and the Rosicrucian agents Solomon Caus and Antonio Bosio begin to map the Reptoid [tunnels under](#) Europe's capitals.
- 1626:** [Sir Francis Bacon](#) fakes his death, slipping into one of the many Rosicrucian safe houses that MI- has established across Europe and its associated realities.
- 1641:** [Reality Cromwell](#) created as one of Dee's thought-experiments to remove the "Puritan strain" from Britain. MI- keeps the reality isolated for further study.
- 1660:** By restoring Charles II, the Rosicrucians suppress all memory of the [Cassiopeia nova](#) and [prevent](#) a return to order. The Sphinxes take advantage of this opening to spread [wendigo](#) in Canada.
- 1666:** Great Fire (a magico-temporal backlash from the [Ripper killings](#)) opens the way for the Rosicrucians to [rebuild London](#) on [illuminated sacred-geometrical](#) principles, and for the Lemurian [Mister Punch](#) to appear to selected children.
- 1682:** Glancing [shards of reality](#) struck off by the passage of Halley's Comet. A [succubus](#) crawls through the cracks and attempts to seduce Louis XIV; the Reptoids already seducing him prevent the attempt but leave the reality shard intact to distract the Templar and Rosicrucian agents of the [Man in the Iron Mask](#).
- 1685:** The RCS establishes [Britannica-4](#) during WWII as a "shared reality" for joint Argus-MI- planning and pre-positioning.
- 1692:** Lemurian refugees from [Irem](#), [benandanti](#) witches, American Templar pirates, and the Mandeville faction of MI- establish the [Libertatian Brotherhood](#) in Madagascar and open a new crossworld entrepot and goblin market. It lasts until [Captain Kidd](#) dies for its sins in 1701, but hatches new [rocs](#) to protect many realities, and empowers [George Burroughs'](#) trip to the Martian [spirit realm](#).
- 1743:** The Comte de [Saint-Germain](#) manifests himself (or themselves) in London to begin his 41 years of sustained apparition, but is [vouchsafed](#) to all sides at all times in all realities.
- 1758:** Glancing [shards of reality](#) struck off by the passage of Halley's Comet.
- 1764-1767:** Depredations of the [Beast of Gévaudan](#); the [Robin Hood entity](#) having escaped into France through the [Little Red Hood](#) tales, it attempts to work its way into the indestructible prophecies of [Nostradamus](#), but is [bisociated](#) into [New Jersey](#) by MI- and left for Strike Force Chronos to deal with.

- 1773:** The faeries launch a [counter-attack](#) against Argus, at a weak ebb as relations with MI- worsen. They ally with the Sphinxes the next year, who begin by sending the [Mothman](#) to fulfill Chief Cornstalk's curse.
- 1776:** [Masonic Civil War](#) erupts between the Washington and Weishaupt factions. The Reptoid-backed Weishaupt faction mounts an internal coup against Dee that replaces MI- with the Occult Empire. During the struggle, the [RCS](#) sets up Reality [Cornwallis](#) as a fallback, but the American Templars soak 1776 in mythic energies from their limitless [Arcadian cornucopia](#).
- 1780:** It is a dark time for the rebel alliance; the Occult Empire shrouds the skies of America. An elite Strike Force Chronos team flies through a trench in reality to remove the Occult Empire before it existed, leaving only an acausal eclipse over New England on [May 19](#).
- 1782:** The Occult Empire strikes back, empowering Victor [Frankenstein](#) (a pragmaclast thrown back from the 1816 temblor) to [galvanically revive](#) King George III. Argus alchemist Benjamin [Franklin](#) diverts the crucial lightning strike 30 years previously, and again removes the Occult Empire retroactively. Into the royal gap steps [Mister Punch](#), a powerful and cruel Lemurian entity.
- 1805:** Thanks to a clumsy MI- cover-up of the [Influencing Engine](#) fiasco and a Lemurian raising of [Atlantis](#), mentalic technology spreads through the European mechanical underground and into Napoleon's ambit. MI- and even a "[loaner team](#)" from Strike Force Chronos must redouble its efforts to contain the [Corsican ogre](#).
- 1809:** A busy year all around as MI- works to save both Napoleon and Wellington and thus prevent an [Imperial French tyranny](#) open to Reptoid or ZSS meddling. While they're distracted, the Sphinxes open a Void into the Hollow Earth tied to the newborn soul of [Edgar Allan Poe](#), and the Lemurians silence Meriwether Lewis.
- 1811:** Reptoids insinuate an agent into the MI- [Macbeth Working](#) in the [Ratcliffe highway](#); George III goes completely insane, weakening the Sherwood boundaries and forcing MI- has to infiltrate a [hunter](#) to kill the wolfshadow within. While the boundaries are down, the Martians launch another [probing raid](#) and distract the Reptoids.
- 1816:** The Tambora eruption shakes loose [Frankenstein's monster](#), a sentient pragmaclast, and sets off two major reality temblors. In one, Lord Ruthven becomes Prime Minister of a [vampirized Britain](#); in the second, an [Ice Age](#) descends. The Lemurians eventually shut both chasms.
- 1821:** Whether the bitter goal of the Rosicrucian breeding alliance with the Reptoids or the result of Sphinx taint, the True King of Britain (dethroning Mister Punch) is born a monster in [Glamis](#) Castle. Another monster (or another aspect of the same monster) attempts to [suborn Russia](#), but falls to Lemurian cleansing.
- 1824:** Lord Kelvin's birth year, impenetrably defended by the Royal Cliographic Society, who owe their [reality](#) to his circular causality.
- 1827:** Second Grey spore attempt through [Roswell](#) stopped by Argus.
- 1831:** Michael Faraday's "[Rainbow Effect](#)" experiments tap or break into the [Red Ring](#) set up by the [Delaware-Kelvin causal loop](#). The ZSS and Argus pinch them off, and bury Faraday's experiments in the data fog.
- 1835:** Glancing [shards of reality](#) struck off by the passage of Halley's Comet. Silas Duncan slips back into existence during the aftershock, establishes his [Duncanite](#) society.
- 1837:** [Spring-Heeled Jack](#)'s rampages in London poke through the ontological hole punched by one of the [Roswell echoes](#), but the Red Ring reality that results hints that MI- might have been summoning Jack for their own dramaturgical ends.
- 1841:** Lemurian agents unleash tailored conceptual retroviruses, creating [Reality Rust](#). However, the entropic field spreads throughout all space-time until even the Sphinxes are forced to intervene, establishing the [scarecrow](#) protocol around plague and panic to prevent utter chaos from enveloping everything. Those

**In the
Future:**

Sphinxes infected by the Rust become qliploth, and even more [horrific](#) than normal Sphinx agents.

Part III, and the end of the world -- what I tell you three times is true!

The Marking Controversy

A Desperate Paper Trail for Modern-Day *Call of Cthulhu*

by J. Edward Tremlett

The following is a controversial, public correspondence with certain Mythos-related overtones. It takes place in three consecutive issues of the small but well-renowned *World History and Archaeology Monthly*, a scholarly Journal, available through subscription only, for "the well-informed Archaeologist."

Investigators who have cause to read this Journal might well wonder just how well-informed everyone involved really is. Notes on the principal players in this drama, and ideas on how to exploit the paper trail, are given to Keepers at the correspondence's end.

World History and Archaeology Monthly, January, Current Year

Resolved: the Reality of Queen Nitocris of the 6th Dynasty by

Dr. Fredrich G. Marking, Egyptologist

Queen Nitiquet, better known under her Greek name of Nitocris, is something of a mystery to Egyptologists. Though it is possible to list her as a Queen of the 6th Dynasty, perhaps the last true ruler of both Upper and Lower Egypt before the anarchy of the First Intermediate Period, there really is not much to prove that she was ever there at all. Apart from what may be a typo on a kings list, a generous description courtesy of the Egyptian historian Mathetho, and a sad fate revealed in Herodotus' history of Egypt, we have little else to corroborate this story.

However, I believe that a recent find in the newly-rediscovered city of Menouthis has finally given us the proof we need. Based on this discovery, we not only know that the Queen and her reign were historical reality, but have learned a bit more about her short reign. And so, in this monograph I will posit that Queen Nitocris was real, did indeed rule over a united Egypt, and in fact ushered in a brief reign of religious revival before she gained her revenge and died by her own hand.

What We Knew Before:

Save for two historians' tales and her name on the Turin King-list (but not the Abydos list), we formerly had little evidence to list Nitocris as a true historical figure. Her short reign -- which is often conjectured as being anywhere from three to seven years in length -- either immediately followed that of Piopi (Pepi) II, or was second or perhaps even third in succession. I have tended to prefer the following timeline --

Piopi II	(ca. 2246-2152 B.C.E.)
Merenre II	(ca. 2152 B.C.E.)
Netjerkare Siptah (Nitocris)	(ca. 2152-2125 B.C.E.)

-- because it has her on the throne for as long as it could have taken to work the

revenge Herodotus attributed to her.

No contemporary sources mention her at all, and there were no records of decrees she made. Perhaps even more unsettling, there were no records of building projects made under her authority or in her name. One would think a ruler of Egypt would have at least started to build some sort of monument in three years.

Much like Britain's King Arthur, we have a number of stories -- some complimentary, and some contradictory -- that define her. The most spurious is one that has her becoming her time's Cinderella: coming to queenhood after an eagle stole one of her gilded sandals and dropped it into the lap of the king. Another, darker story has her as some sort of cannibal hag.

The "true" story, so far as it is known, is credited to Herodotus. Nitocris was married to her brother, Menrenre II. He reigned for one year and was then assassinated by a group of well-placed nobles. These men then placed his widow on the throne as their puppet Queen.

Unwilling to play this role for them, she quietly nursed her desire for revenge. She had a great underground chamber constructed by the Nile, and when it was finished, she invited many guests to a grand party. Among the guests were those nobles who had killed her brother and made her their pet.

At some point during the festivities, she left and sealed the chamber. The waters of the Nile began to flood into the room at that point, and drowned the guests to a man. Immediately thereafter, she threw herself into a room full of embers to commit suicide -- cheating those who would have sought her death.

I would posit that a reason why we have not found too much about or by her was because of her final actions. If they were unable to kill her to gain revenge, how unlikely would it be that the mob went after her works instead? There are precedents for the removal and defacement of monuments erected to unpopular rulers, or those who displeased the monarchs who succeeded them: Queen Hapshepsut's works were very quickly covered up or defaced by Tuthmosis III when he came to power, and the "heretic pharaoh" Akhenaten's holy city of 'Amarna was razed but a few decades after his death.

The only "monument" we could attribute to her before was one of the pyramids at Giza. According to Manetho, Nitocris was responsible for the "third pyramid," and it has been said by some that he meant the pyramid of Mykernos. That is plainly impossible: it was built by the 4th Dynasty Pharaoh Mykerinos, who reigned from 2532-2503 BCE, and nothing inside or outside the structure would indicate any connection with Queen Nitocris at all.

The most likely cause of Manetho's confusion in this matter is his confusing the name of Mykerinos (Men-kaw-re) with her prenom, Men-ka-re. One would think an Egyptian historian wouldn't have made such a mistake, but given the lack of information concerning her, this is understandable.

The Clue from the Sea:

The mystery of Queen Nitocris could have endured for another 4,000 years, had archaeologists of France and Egypt not teamed together to search the ocean off the shores of northern Egypt. There, under the silt of the sea bottom, lay cities strongly

suspected to be Menouthis, Canopus, and Herekleion. All of them were long since lost following what may have been an earthquake, a devastating flood, or perhaps both in swift succession.

Among the relics found at the site of Menouthis was a stela carved from black granite. It stood some two meters tall, and was carved in a style consistent with the Old Kingdom. It was badly defaced, but still legible in enough spots to allow for a partial translation. And once it was translated, it was found to bear the name of Queen Nitocris.

Of course, the great mystery here is why a stela erected to a 6th Dynasty Queen would be found in Menouthis. That city was built much later in time, after all. Odder still, the stela was strewn along with the ruins of the famed temple to Isis; what could it have been doing there?

My contact on the expedition, Tariq Al-Attar, was responsible for the stela's raising, based on what little he was able to translate in situ. Once it was brought up to the surface and cleaned, he and one of the expedition's translators went to work deciphering the badly-damaged artifact. Though large portions of the text are missing or scrambled, what they did translate says much.

" . . . ascended to the throne, the loveliest queen of all, as ruler of upper and lower . . . "

" . . . and Queen Nitiqret said that there is one god who speaks to all gods, and that men should all kneel before him. For he is the hole through which the others see the land and sky and people. He is the one who brings messages and wisdom to the land and sky and people. And she said that the god was (Nyhar-Rut-Hotep) . . . "

" . . . Beautiful Queen Nitiqret who is the lady of the night . . . "

" . . . Great (Nyhar-Rut-Hotep), we beg your favors. Blessed (Nyhar-Rut-Hotep), we confess our failings. Great (Nyhar-Rut-Hotep), we beg your forgiveness. Blessed (Nyhar-Rut-Hotep), we bring you our sacrifices. Great (Nyhar-Rut-Hotep), we beg you to accept . . . "

Finding a monument raised to Nitocris was more than gratifying after all this time, of course. But the most interesting thing here was the suggestion that the Queen decreed the worship of a new god. Did she come up with this idea on her own, or was it the plan of the nobles who placed her on the throne? As we saw with Akhenaten, creating a new god can be a rather enriching business.

Who is this Nyhar-Rut-Hotep? We have not found mention of him anywhere else. It is possible that he was given another name after Nitocris left the throne, or was absorbed into the worship of another deity following a brief time of heightened importance. He might also have suffered the same fate as Akhenaten's god Aten following that Pharaoh's death: cast aside in anger and forgotten after the wrecking of his temples and records.

The name Nyhar-Rut-Hotep means "there is no rest at the gate." "Rest" could also be "peace" or "safety" depending on the context, but given this is a god to be worshipped I would suspect it to be "rest." This could be implying that if the god is acting as a "gate" for the other gods to speak through, then one cannot slacken one's faith or rituals in his sight.

In Summary, a Solution and another Puzzle:

To sum up: without a more complete translation, we have more questions than answers, but now that we have found one piece of the puzzle we know what to look for in the others.

We now know that Queen Nitocris was real, and may have discovered the reason that we haven't found much else about her. This stela represents an exciting discovery in Egyptology -- one that yields even more fascinating discoveries about a time period we know very little about. Hopefully, we will find more pieces associated with Nitocris at or around Menouthis, and shed even more light on this early period in Egyptian history.

World History and Archaeology Monthly, February, Current Year: Letters **Page**

Dear Editor:

I read with interest the monograph by Dr. Fredrich G. Marking, "Egyptologist," about his so-called discovery. But having had the displeasure of knowing Mr. Marking for some time, and having looked further into the matter, I feel it is my duty to inform you that your otherwise impeccable publication has been duped.

Allow me to explain. When Mr. Marking was first attending college, he did so at Heidelberg University, and took several of my undergraduate courses in Archaeology. He did rather well for himself, and I thought he was quite brilliant, but then I caught him manufacturing sources for a midterm essay.

When I confronted him with his cheating, he denied it, but I took the case before the Dean of the College and he agreed with me. The result was that Mr. Marking was expelled from Heidelberg for academic dishonesty, as we call such a thing these days. (I believe he went on to start over on his degree somewhere else.)

As such, you can understand that, when I saw that he'd decided to declare an ancient mystery solved based on one new discovery, I was rather skeptical. So I contacted Frances Lemarchand, as he and I are old acquaintances. You can imagine his surprise when he discovered a mystery had been solved on his own watch without his knowing!

After some investigations of our own, we confirmed Mr. Marking's "discovery" to be a sham. There are no records of such a stela being found by Mr. Lemarchand's team at Menouthis. None of the translation experts the Egyptian government has brought remember making any such translation, either. From start to finish, this monograph has been a bloody lie.

In closing, I would hope this experience would be an instructive one to your magazine. In future, it might pay off to make a few inquiries as to the veracity of your contributors' sources to save embarrassment.

Sincerely yours,

--Doctor Franz Kruspe, Dean of Archaeological Studies, Heidelberg University

* * *

Editor's Note: We at the **World History and Archaeology Monthly** tend to take our contributors at their word. Given how easy it is to discover fraud, we generally assume that no one would be stupid enough to even try -- especially when luminary names are invoked. This time, however, we seem to have been wrong to trust.

While we apologize to our readers, and Mr. Lemarchand, for this embarrassing incident, we will continue to trust in our contributors and correspondents.

World History and Archaeology Monthly, March, Current Year: Letters Page

Editor:

Having been accused of lying by an old adversary, and referred to as "stupid" by yourself, I feel I have to respond.

What happened at Heidelberg is very much a matter of perspective, and I do not wish to go into all that now.

And as for the matter of the stela, it is little wonder that Dr. Kruspe and Mr. Lemarchand could not find it. After reading Dr. Kruspe's vicious attack on my ethics I checked back with my source -- Tariq Al-Attar -- to get some cooperation. It was then that he told me the horrible news: The stela has disappeared from the secure location it was being kept in.

The stela isn't the only thing that's missing, either. Any and all files concerning its being brought up from the sea bed, its translation and accompanying notes, the photos and the negatives they were developed from . . . indeed, any evidence whatsoever that my source made or saw no longer exists. One day it was there, and the next day it was not.

And just this last week, in Cairo, my source was attacked by a group of thugs intent on killing him. He feels this cannot be a coincidence, and I agree with him. The last phone call we had was a frantic affair, and I can only hope that soon -- around the time this is due to be published in *WHAM*, in fact -- he and I will have met up in Egypt as we discussed and have come to some more conclusions in the matter.

When we have them, we will come forward to say more. For now, however, we can only say that we hope this magazine, and its readers, are willing to extend a little more faith than we've received thus far.

I swear before everything I hold dear that what I am saying is true. I only hope I am able to prove it.

--Dr. Fredrich G. Marking, Egyptologist

* * *

Editor's Note: Having spoken with Mr. Lemarchand, upon receiving this letter, we have confirmed that there was no such stela to Nitocris found. The only thing close to

that description was a stela raised in the honor of Nectanebo I. It was taken from the seabed, translated and photographed, and then moved to a more secure location for safekeeping, due to its delicate condition.

There is some truth to the story in that a Tariq Al-Attar did, indeed, work with their expedition. However, we are told that he was due to be fired from his job for reasons Mr. Lemarchand did not wish to discuss. Before Mr. Al-Attar could be properly terminated from his position, he stormed off after having a roaring argument with the assistant foreman, packed his things and went away. He has never been seen by them since.

After consulting with our legal department, we have decided not to open our magazine to the possible risk of defamation of character that could follow from further correspondences on this subject. Therefore, this topic is now closed.

*In addition, we would like to remind our readers that we prefer the **World History and Archaeology Monthly** to be referred to as such, or at least "your magazine" -- or, more properly, "your Journal" -- and not by the acronym.*

Keepers' Notes

Dr. Marking's monograph imparts skill checks in Archaeology and History, and gives +1 Cthulhu Mythos for its information on Nitocris and her relationship with Nyarlathotep.

The paper trail can all be read in real time. It costs 0/1 Sanity to read if the Investigators know of Nyarlathotep and His role in the Mythos. If they don't know, don't make them roll until an appropriate moment comes along.

If the Investigators haven't encountered her before, a successful Cthulhu Mythos roll uncovers that Queen Nitocris was all too real. She was a cruel queen of the 6th Dynasty who reinvigorated Nyarlathotep's worship among the people. While the popular story has her committing suicide, the legends speak of her being buried alive in an unknown tomb. (Keepers may choose to give more information than that, as befits their campaign desires, but that is the basic answer. See "Ideas for Use," below, for more references to the cannibal queen.)

Checks into the background of Dr. Fredrich G. Marking (using Archaeology, Credit Rating, or Library Use) reveal him to be a German Egyptologist with a somewhat questionable track record. He often "discovers" things that others had already found, or makes "amazing finds" that others had passed over and found to be of minor importance. He also tends to over-publicize his few, small achievements to the point of sheer incredulity.

Any calls made to his office in Germany after March go unanswered. None of his colleagues have seen or heard from him since he departed for Cairo. Inquiries made in Cairo -- backed up with some heavy-duty "baksheesh" money -- reveal that he departed for Aswan by bus, back in February. However, he left no travel plans and never returned . . .

Dr. Kruspe is a pompous, taciturn fellow whose doctorate was entirely earned in Hiedelberg's University Library. Attempts to contact him gather little of use: he knows nothing about Queen Nitocris other than the usual, mundane stories -- which he doesn't really believe -- and he won't give any more substantial information about Dr. Marking, either. If Investigators push him he might tell a scandalous story or two about Dr. Marking, but these will be of varying degrees of truth.

Tariq Al-Attar's involvement in the expedition is a complete mystery. He has no paper trail connecting him to any previous work, or any degrees or qualifications that would give him a clear reason to be there. Any inquiries made about his person reveal him to be a hard worker and devout Muslim, but possessed of a bad temper.

On the other hand, no one has anything bad to say about famed, French underwater explorer Frances Lemarchand. His

previous excavations of sunken ships in the Mediterranean have made him world-famous. The project in the shores of Egypt is going splendidly, if slowly, but now that he has gained some better, private sponsors he hopes for a more productive season at sea.

Attempts to contact Lemarchand lead to a battery of under-secretaries, who only let well-known archaeologists, rich people, or well-regarded journalists on through. All others must leave messages, which are answered through the mail via "signed" form letters. Lemarchand is friendly and talkative, but clams up and gets very defensive if "that article" is mentioned. Investigators who push the subject any further get hung up on.

Ideas for Use

This incident leaves itself open for a lot of possibilities, some ideas of which are given below. Left out is the obvious notion that this could all be a fraud, or some strange publicity stunt on behalf of Mssrs. Marking and Al-Attar. But, if you really need an excuse to get your Investigators to Egypt for something else, this might be as good of a red herring as any!

The Stela is . . .

- . . . the last, surviving remnant of a blasphemous temple to Nitocris -- one razed by the new ruler once the ghoul-queen was no more. It could not be completely destroyed, and was left in the sands to be forgotten. It was eventually rediscovered, long after Nitocris' reign had been largely relegated to legend, and hidden in the temple to Isis so none might look upon it.
- . . . a repository for a great deal of the ghoul-queen's magic, placed there in trust for the day that she would return. It was looked after by one of the remnants of her cult, but that sect was corrupted by its influence and fell into ghouldom. The cult secretly moved the stela beneath the temple to Isis in the hopes of having its malign influence corrupt others. The disaster befell the city before it could.
- . . . little more than a stela, however blasphemous and damning its engravings. It was moved to Menouthis with a treasure trove of other monuments and items related to "officially-forgotten" rulers, priests and events. The authorities were going to toss it all into the sea and be done with it, but then the city was swamped. The stela's presence in the temple was accidental, caused by sea floor shifting over the ages.

The Stela was . . .

- . . . rediscovered as publicized in *WHAM*. It was then repossessed by a sect of the modern-day cult, courtesy of the assistant foreman, who was an insider. It is now being held in a secret place, somewhere in Egypt, waiting for it to be used.
- . . . taken by a secret army of religious extremists -- Muslim, Christian, and Jewish -- who believe that "Nyhar-Rut-Hotep" is a guise of the Devil. They intimidated the dig's assistant foreman to remain silent on the matter and fire Tariq Al-Attar, and then threatened Al-Attar with his life if he didn't remain silent, too. They are planning to destroy it, and have it hidden somewhere in the Sinai Peninsula.
- . . . removed by a small band of Ghouls, who weren't very circumspect about sneaking in or leaving. The dig's assistant foreman saw them go and went mad, pushing all memories of the event from his mind. In an insane attempt to forget what he saw, he "sleepwalked" to the records building and destroyed all evidence of the stela ever having been there, and its having been stolen. He also silenced or fired every person who might have been able to verify its having been there, including Tariq Al-Attar.

Dr. Marking, Egyptologist, is . . .

- . . . dead, having been ambushed by the cult in Aswan and sacrificed to the favor of the Ghoul Queen and Nyarlathotep. Investigators who go to Aswan might find his savaged remains in their secret temple. (1d3/1d6 SAN to see what little yet remains)
- . . . on the run for his life in Egypt, having watched Tariq Al-Attar be killed by something that did not belong in

this world. The extraplanar assassination took place just after that man told Dr. Marking all he'd discovered, which was not pretty to say the least. All the good doctor wants to do now is get out of this country, slip away to someplace quiet -- like Sri Lanka -- and try to forget what he's learned.

- . . . at the Lemarchand Expedition, masquerading as a Dutch investor while trying to discover what's really going on. Tariq Al-Attar told him what happened to him once they met up in Aswan, and they hatched this plan to get back in. Unfortunately, Dr. Marking's investigatorial skills are as poor as his tact, and it's only a matter of time before he slips up.

Frances Lemarchand is . . .

- . . . completely unaware of the truth of the matter, having been hoodwinked by that assistant foreman. He's too busy to look into the matter, and too proud to think anything might go wrong with *his* expedition. So it's all slipped his mind in favor of more pressing discoveries.
- . . . a bit of a shady character, at least when he has to pay his bills. He's supposed to give all findings over to Egypt, but he's been "losing" some pieces to sell on the archaeological black market. Once he realized what a find he had in the stela, he "lost" all information and prepared for an auction. Marking's article was a bit of an inconvenience, to say the least, and he's put the auction off until the fuss -- such as it is -- dies down.
- . . . in fear of his life, having been told point-blank by one of his new, private investors to hand over the stela -- and do what they say from now on -- or suffer the consequences. The demonstration involved the investor turning one of Lemarchand's assistants into a man-shaped pillar of dust. Since then, Lemarchand's become little more than a tool for this investor, and his sanity is slipping . . .

As for Queen Nitocris . . . she could be any number of things. Keepers interested in doing something directly involving her will want to check out Chaosium's classic ***Masks of Nyarlathotep***, where she appears, and the excellent ***Unseen Masters***, where she is extensively updated for the modern day. H.P. Lovecraft's "Imprisoned with the Pharaohs" and Brian Lumley's "The Mirror of Nitocris" are also recommended.

Captain Sir Edward Grey

A Villain For *GURPS Swashbucklers*

by Mark Gellis

Introduction

The 1660s and 1670s were a dynamic period in England. Only two years after the death of Oliver Cromwell in 1658, King Charles II had returned from exile. The monarchy had been restored. The oppression of the Protectorate had been swept away. The playhouses were open again and Londoners enjoyed comedies like Wycherley's *The Country Wife* and tragedies like Dryden's *All for Love*. (Charles II was especially fond of the theater because it was one of the places he went shopping for mistresses.) But the reign of Charles II was also a time of danger and intrigue. Parliament was often uncooperative. Religious and political tensions at home and abroad led to espionage, rivalries in court, and secret alliances. Plague struck the nation in 1665 and fire destroyed part of London in 1666. All the while, the great lords of the nation plotted to advance their own interests.

One of the most cunning of these lords was Anthony Ashley Cooper, Baron Ashley during the 1660s and eventually Earl of Shaftesbury. Considered one of the consummate politicians of his time, Shaftesbury was often part of the inner circle advising Charles II. Later in life, he became one of the King's most powerful political adversaries, a man whose "loyal opposition" was more often opposition than loyal. A man like Shaftesbury could not do everything on his own, of course, and one of his most dangerous agents was Captain Sir Edward Grey.

Biography

Grey was born in 1630 in London, the son of a wealthy London merchant. His family managed to ride out the troubles of the Civil War with their fortunes mostly intact. In 1647, Parliament was in control of the country and Grey decided to cast his lot with the winning side. He joined the cavalry and two years later found himself in Ireland helping Cromwell crush resistance to Parliament, keeping the island from serving as a staging point from which the young Charles II could launch an invasion. During the campaign, Grey distinguished himself with his abilities as a soldier, and at Drogheda and Wexford with his willingness to put Catholics to the sword. By 1652, he had been placed in command of an entire company.

The end of the Irish campaign left Grey with little to do. He had been given an Irish estate as a reward for his service to Cromwell, but was uninterested in running it and left its management in the hands of one of his cousins. The rents from the estate provided him with an independent income and he returned to England. He then became acquainted with John Thurloe, who ran Cromwell's espionage network (Cromwell was plagued throughout the 1650s by monarchists trying to restore Charles II to the throne) and who was perhaps the second most powerful man in England at the time. Grey completed various missions for Thurloe during the 1650s. He did not need the money, but he found the work interesting. He became especially adept at convincing people that they could trust him, getting them to admit involvement in either secret or criminal activities, and at interrogating prisoners.

In 1658, Oliver Cromwell died and Edward Grey saw that it was only a matter of time before Charles II was restored to the throne. He began secretly making contact with royalists and was able to assist Anthony Cooper (not yet Baron Ashley or the Earl of Shaftesbury) in some of his efforts during the Restoration. Cooper recognized Grey's talents and made a point of cultivating him as an agent. In 1661, Anthony Cooper was a privy councilor and the King had made him Baron Ashley; on the baron's advice, Charles knighted Edward Grey the following year.

Grey spent the next 20 years working for Ashley. These were the best years of his life. He was respected and wealthy, had powerful friends, and was popular at court. He enjoyed the attention of beautiful women, and over the years took a

number of them as his lovers. Most enjoyable of all, Ashley's constant intrigues gave him the opportunity to seduce people, to learn their secrets and manipulate them, and to force information or admissions of guilt out of spies and other enemies. He was also often asked to find, arrest, and interrogate individuals involved in criminal or seditious activities. This is especially true when Ashley became part of the Cabal government in the late 1660s and early 1670s; Ashley continued to reward Grey for his services. In 1672, when Ashley becomes the Earl of Shaftesbury and lord chancellor, he used his influence with the King to have Grey made a baronet. Shaftesbury fell from favor in 1673, but Grey continued to work for him because even in Opposition the Earl is a powerful man.

What happened to Grey? Grey is a completely fictional character, so the GM can have him meet whatever end suits a campaign. Assuming he is not killed or utterly disgraced by one of the PCs in a campaign, however, he is likely to live to a ripe old age, and his obvious talent will attract the attention of some new patron after the final disgrace and death of Shaftesbury in the 1680s. Eventually, Grey would retire from "active" duties, but he might remain a force to be reckoned with, possibly appearing during the reign of William of Orange as a sheriff or mayor of some town, or a spymaster for the King. In this capacity, it is possible he could remain active as late as the reign of Queen Anne.

What makes Grey a villain instead of a hero are his motives and his methods. He is selfish, ultimately loyal only to himself. Furthermore, while he works for Shaftesbury (or anyone else, for that matter) he is ruthless and capable of deceit, treachery, and brutality. On the surface, he is simply another charming courtier, but this is a facade. He enjoys deceiving people, learning their secrets, and then using that knowledge against them. He particularly enjoys seducing women and getting them to betray their lovers, friends, or families. He is, of course, careful to make sure that his victims do not realize they have been betrayed until it is too late to do anything about it (which means he may keep up a false front with someone for months or years). He is also a sadist who enjoys interrogating prisoners or disposing of those who are deemed either too dangerous to live or simply no longer valuable; he is perfectly willing to use torture or other violent means to break someone's will. He enjoys hurting people. He enjoys seeing the helpless fear in their eyes. Despite all this, if Grey has no reason to harm someone, he usually does not go out of his way to do so. However, once he sees someone as an object to conquer or an obstacle to his plans, he is capable of anything.

Using Edward Grey In A Campaign

Grey serves Ashley (later Shaftesbury), first and foremost, as an agent promoting his patron's interests and a spy who can identify and, if need be, eliminate his enemies. At times, Ashley will be working to complete some mission for Charles II and Grey is effectively an agent of the King; at other times, Ashley is simply working on some scheme of his own and Grey will be careful to make sure that his patron's activities do not come to light.

Intrigue flourished during the reign of Charles II. Charles II began his reign by attempting to institute religious toleration in England, an effort foiled by a Parliament that passed several laws in the early 1660s placing severe restrictions on Dissenters. Ashley himself initially supported religious toleration, but he gradually became suspicious of the King's pro-Catholic sympathies and eventually supported the Test Act (which made it illegal for Catholics to hold military or civil office) in 1673. Charles II dismissed him from his position as lord chancellor the same year, initiating his long period of political opposition to the King.

International relations would have been complicated under the best of circumstances; war, colonial ambitions, and religious hatred during the period made things even worse. England went to war with Holland three times between 1660 and 1680, with somewhat mixed results. During the first war, England gained control of New Amsterdam in 1664, which was promptly renamed New York in honor of the King's brother. In the second war, however, the Dutch dealt the English a humiliating defeat, sailing up the river Medway, destroying a number of ships and capturing the *Royal Charles*, the pride of the fleet.

In 1668, during a brief period of peace with Holland, Charles II entered into an alliance with Holland and Sweden against France. In 1670, however, he signed a secret treaty with France in which he agreed to assist Louis XIV against the Dutch and Louis XIV promised that if Charles openly joined the Catholic Church he would send him a large sum of money and that if the English rebelled he would send Charles aid in the form of several thousand soldiers.

There was also enormous concern about James, the Duke of York (who was Catholic) because Queen Catherine turned

out to be unable to have children, and as time went on it seemed more and more likely that James would inherit the throne when Charles died. (In fact, this is what happened, in 1685, but James II only reigned for three years before being forced to abdicate in favor of his Protestant son-in-law, William of Orange.) In 1678, Anglican minister Titus Oates "uncovered" a so-called Popish Plot to assassinate Charles II and place James on the throne; it was later revealed to be a fabrication on the part of Oates, but it brought anti-Catholic feelings among the English to a fever pitch. Shaftesbury, whose Whig party gained control of Parliament in 1679, ruthlessly exploited the situation so he could introduce the Exclusion Act (which would have barred James from becoming King). Shaftesbury favored the King's illegitimate son, the Duke of Monmouth, to become heir to the throne. King Charles II dissolved Parliament in 1681 to prevent the Exclusion Act from passing.

During all of this, Grey would have been very active. At court, he would have picked up news and gossip while playing cards and drinking with other gentlemen, and charmed his way into the hearts and beds of fashionable ladies who could provide him with additional information. It is also likely that he would have been actively working to learn the secrets of anyone who could be forced to aid Shaftesbury, such as European spies or Catholics hiding their faith so they could hold public office. He would also have been pleased by any opportunity to interrogate prisoners, especially female ones. Grey would be perfectly willing to interfere with an investigation by anyone else (including agents of the King) if he felt it threatened his efforts or to eliminate the investigators if they threatened either Shaftesbury or himself.

It is also possible that Grey might command a company of cavalry during one of the wars in which England involved itself or during some political crisis (including the alternate universe "what if" scenario where Charles does openly avow Catholicism after signing the secret Treaty of Dover, perhaps after dissolving Parliament in 1681, and England does rise in rebellion against him). In a situation like this, Grey should be treated as having the additional advantages of a large Ally Group, available on 15-, to represent his company of soldiers and Military Rank 4 (Captain). These advantages would only be temporary, of course, but if one wishes to include them to determine the value of the character, they are worth a total of 110 points.

In any campaign involving witchcraft or devil worship (*Blood on Satan's Claw* is an excellent horror film about devil worship during this period), Grey is exactly the sort of man who might be asked to investigate occult activities, whether or not the people involved can actually use magic or summon demons. Here, the heroes might need to rescue innocent people accused of being witches. One could also run a "Restoration Horror" campaign where the witches could really use magic but still needed the assistance of the player characters. In fact, one could even have a horror campaign where it was actually Shaftesbury who has made a pact with demonic forces and Grey is protecting him from the only people who can expose him . . . the witches!

PCs encountering Grey would probably know very little about him except that he works for Baron Ashley (or the Earl of Shaftesbury, depending on the year of the campaign), that he is popular at court and with the ladies, and that in battle he is a man of both skill and courage. There might be a few dark rumors about him, but nothing that would ruin his reputation. It is, after all, easy to dismiss such rumors as either the result of jealousy on the part of others or, if they can be shown to be true, an unfortunate lapse of judgement on the part of the otherwise charming Sir Edward. Grey himself is always careful to channel his vicious energies in ways that will not wreck his situation, although having him finally slip up in a way that would ruin him might be an important part of a campaign.

If the adventurers have any status themselves, Grey will try to gain their trust and find out what they are up to. If they are without status, he will rely on his servants and contacts to gain information. Then, if it is necessary for him to do so, he will move against them, quite possibly spreading rumors about them or warning the people they are investigating. Grey is never afraid to confront his enemies himself, of course, but he prefers to be subtle, and if he can get someone else to destroy his foes for him he will do so.

Adapting Grey for other campaigns is simple. Shaftesbury makes a good "master villain" for campaigns set during the Restoration because he is a major figure of this period and noted for his political intrigues. This makes him a good patron for Grey. But Grey could just as easily work for some other nobleman (or noblewoman) or for the governor of a European colony like New York or Jamaica. Grey could also easily be adapted to serve as a villain in other periods from the Middle Ages through the Victorian era. He could even be used in a fantasy campaign without needing too many changes. In most cases, a GM would only need to modify his patron, Area Knowledge skills, weapon skills, and

personal history to suit the period and locale of the campaign.

The main thing to remember about Grey is that he is a cruel man. The fact that he is a charming, handsome, and seductive villain who is also a formidable fighter will make him a challenging opponent, but it is his cruelty that will make him a memorable one.

Captain Sir Edward Grey In *GURPS*

Grey is 6'0", 180 lbs., stunningly handsome, with blonde hair, blue eyes, and a mustache. He is always well-groomed and well-dressed, usually in dark colors such as black or dark red, and makes a point of using his attire to make himself look fashionable, elegant, and powerful. His weapon, when he goes armed, is either a cavalry saber or a transitional rapier with a cutting edge; he will also have a dagger and a pair of belt pistols (pp. SW35-37). Grey is a pleasant conversationalist, an intelligent gambler, an excellent dancer, and an outstanding swordsman. As if that was not enough, he also has a terrific singing voice.

ST 12 [20]; **DX** 15 [60]; **IQ** 12 [20]; **HT** 13 [30]

Advantages: Ally Group (servants, staff, and thugs, small group, 15-) [30]*, Charisma +2 [10], Combat Reflexes [15], Contact (current mistress or friend at court, Knowledge (Court Gossip)-15) [2], Contact (street thug, Streetwise-15) [2], Contact (tavern owner, Area Knowledge (London)-15) [2], Courtesy Rank (Captain) [4], Fashion Sense [5], Independent Income [5], Legal Enforcement Powers [10]**, Literate (in semi-literate society) [5], Patron (Shaftesbury, very powerful individual, 15-) [45], Status +3 [10]***, Strong Will +2 [8], Very Handsome [25], Voice [10], Wealthy [20]

* Grey has three servants who will arrest, assault, kidnap, or kill people on his orders. All three should be treated as 75-point characters who are capable fighters (Brawling-14, Broadsword-14, and Knife-14); at least one of them will have Shadowing-14 and one of them will have Forgery-14. Beyond this, the GM may design them as necessary.

** only when Ashley (or Shaftesbury) is a minister for the King

*** includes one free level from Wealthy

Disadvantages: Code of Honor (Gentleman) [-10], Duty (to Patron, 12-) [-10], Sadism [-15]

Quirks: Enjoys using people to gain information and advance his own interests [-1], Likes dogs [-1], Likes singing [-1], Patient [-1], Strokes his mustache while thinking [-1]

Anyone interested in the Restoration and its politics will find Antonia Fraser's biography of King Charles II, *Royal Charles*, both useful and interesting.

Before the Conspiracy

Starting Points for Cinematic Weirdness (in *Feng Shui* and Elsewhere)

by Brian Rogers

The world of *Feng Shui* is full of enough dynamic adventure to accommodate any action-hero fan. It's also -- with fluid history, chronological junctures and a pile of factions fighting a Secret War -- pretty darn confusing. The rulebook suggests that GMs might want to run a Secret War-free game for a while, slowly easing the players into the [stranger elements](#) of the world. This is a good idea for any conspiracy game, as it makes the slow unfolding of the Ascended, Mythos, or Secret Masters that much more mysterious or threatening.

But what should you use for that real world base? Below are suggestions for such starting points, which should ideally be set before the opening of the "contemporary" juncture in 1988 to ensuring a low starting weirdness quotient. All of them should give your players immediate familiarity through lifelong exposure to the source material. Finally, each has the advantage of being cinematic in its own right, so the players will have no cause to suspect that the world is anything other than what it appears to be. Until their first encounter with a Lotus Eating Eunuch Sorcerer, that is . . .

Cest La Guerre

The Vietnam War served a crucible for a generation of American action heroes, and has had some success as a setting for Hong Kong action as well (John Woo's glorious *Bullet in the Head* is the best known example, but don't overlook Samo Hung's [Eastern Condors](#)). Since Vietnam is written into so many action hero origins, why not start the action there? As a flashback or prelude from which you will draw the surviving soldiers for a second, more contemporary game, Vietnam has a lot to offer to the GM looking to introduce the Secret War.

Freedom of Action: Movie Vietnam is full of small special forces units roaming the battle ravaged countryside with minimal supervision and a loose chain of command. Player Character groups slot nicely into this setting: their superior simply hands over mission objectives and sends them off. The lack of oversight also translates into a lack of support, freeing GM from the worries of PCs calling for more equipment, back up or medical attention -- once in country, the PCs are on their own, for better or worse, and have no one to rely on except each other.

The Draft: Vietnam marked the last conflict with a United States draft, with its attendant opportunity for the cliché squad of disparate everymen drawn together in the madness of war -- improved by the worldwide nature of the forces present, giving not just American but international variety. This leaves the field wide open for Character Types: while Ex-Special Forces is king, Big Bruisers, Everyman Heroes, Karate & Maverick Cops, Killers, Medics, Journalists, and Techies easily round out the platoon. Spies and Transformed Animals make great outside specialists to lead the PCs deeper into the heart of weirdness.

Clichés A'Plenty: *Feng Shui* is built around clichés, and after decades of media treatments, the Vietnam War has lots of them. There's the incompetent new lieutenant and the murderous cynic looking to shoot him in the back, the sadistic prison camp guard with his bamboo torture cages and the soulless black-clad enemy soldiers, the beautiful young South Vietnamese women staffing the nightclubs and their perhaps too friendly cousins or brothers who might be agents for the enemy. As with other *Feng Shui* settings, players will instinctively understand the Hollywood version of this reality.

A Sense of Futility: The actual futility of the conflict can only be heightened by the players awareness of its final outcome. This is critical in the early stages of a conspiracy game, as the squad has to begin to wonder "what's the point." Sure, they may complete mission after mission, but they don't know why they're doing these things, and the war never seems to change. When they do start to stumble onto the edges of the Secret War they'll be receptive to even the strangest explanations . . . even if no one outside the squad will ever believe them.

Conspiratorial Reasons: Why are the Ascended having this war, especially since they control both forces in the conflict? While the PCs might start blaming the traditional culprits (Military Industrial Complex, widening drug trade), like everything else, it revolves around feng shui. The war altered much of the Southeast Asian landscape, including the destruction of uncountable temples and the at least temporary alteration of other potential Chi-altering structures (including whole jungles stripped away by defoliant). In the aftermath, the Ascended took absolute control of the area and its remaining sites.

So who had been controlling them? While the Guiding Hand (active in the 1950's-contemporary interim) is a possibility, a magical faction (a Lotus remnant from 56 AD? a strange new group?) has more high weirdness potential-- with the PCs encountering demons, Jiangshi, or wizened sorcerers guarding apparently worthless jungle huts -- and better justification for the force of the response -- if there was any chance of a magical group gaining a toehold in the world's Chi, the Ascended would not hesitate to order the worst excesses of the Vietnam war in pre-emptive self-defense.

Other Wars: Due to time's relentless nature, the Vietnam War is the oldest chronological starting point for an eventually contemporary *Feng Shui* game -- the action heroes it forged are in their late 40s, at least, today. If this is too old, much of the Hollywood Vietnam War tropes translate smoothly to Central American "Drug War" conflicts. Again, we have small semi-autonomous groups in an apparently futile conflict acting as cover for the Ascended's push to control feng shui sites and eliminate a possible magical rival, with action focused in the 1980s and 1990s.

Court on the Street

Another answer: make the PCs Cops. The game is tilted that way anyway with the presence of the Maverick Cop and Karate Cop Types, but rather than having their Cop history be something quickly set aside by the vagaries of the Secret War, put it front and center. Fill out the supporting cast and precinct, set up a couple of crime lords (who just happen to be expert martial artists -- Transformed Animals are great for this!) and let the cops have at them. You could go years without touching the Secret War, have weirdness slip in for spice, or suck the cops in during one mind-bending game.

Movie Law: As this is *Feng Shui*, PCs aren't [rookies on the beat](#). They're Movie Cops: detectives with minimal supervision (aside from one angry lieutenant), who return fire on punks without paperwork, get paired in get-on-each-other's-nerve teams, solve mysteries in 44 minutes, and eventually get promoted for killing someone who caused more mayhem than they did. Hero Cop games give GMs a variety of plots and sizable PC supervision without strait-jacketing them by something as fussy as the law. They are the law!

Civil Service Exams: The fact that these days anyone with the skills can become a cop leaves the field wide open for a diverse cast of heroes. While the actual Cop Types (Karate Cop, Maverick Cop, and Elder Cop, below) dominate this setting, almost any other Character Type fits if you give them a single point in the Police skill. Sure, not all characters will be good, well trained cops, but they do carry badges, and that's what counts! Big Bruisers (bulls), Everyman Heroes (new, perhaps minority, detectives trying to make good), Ex-Special Forces (lethal weapons), & Techies (cyber-cops) all look good in blue.

Hangers On: Unlike the other settings presented here, Cops interact with the real world on a day to day basis. This opens up Character Type selection even more. In fact, to stick with the genre you should have two mismatched Cop types, then fill out the cast with civilians. The presence of a Journalist (crime beat reporter), Masked Avenger ("Is it Henry, the mild-mannered file clerk?"), Medic (EMT? Forensic specialist?), PI, Thief (helping as part of parole? Under cover?), or Scrappy Kid (dependant? only witness to the big crime?) will make a producer take notice of your series pitch.

Conspiracy and Frustration: Even for movie Cops, there's plenty of frustration. Their hidebound superiors won't let them go after the big villains (a.k.a. the Ascended and their cronies), who manage to escape through legal loopholes. A persistent wondering why things never change makes Hero Cops receptive to evidence of conspiracies. This supposes they don't simply run into strangeness above what they normally encounter -- magical cabals, martial cults, and icky hyper-tech are distinct possibilities, and all vanish into the Ascended's "this never happened" bureaucracy if the Cops

don't start digging on their own.

Elder Cop: here's a new Character Type for your Hero Cop game, filling a much needed cliché;

"Just stay down. And don't do anything stupid -- I'm retiring next year and I'd like to live to see it."

You've been on the force for years, and you know how to get the job done. You might not be as flashy or as violent as some guys on the squad, but you always see things through. You've solved every kind of crime and interviewed every kind of witness, handled every type of tense situation and talked with all the varieties of media. Sure, you're getting up there, but you're not going to coast to your retirement, because you still have a job to do and you do it well.

Your reward for this dedication? The brass makes a habit of assigning the hot young idealists or the on-the-edge psychos as your partners, hoping that you can sharpen them up or tone them down. You're the classic straight man in the buddy cop pairing, but just because you're not the one the headlines scream about doesn't mean you're not the one getting the job done.

Juncture: any

Attributes: Body 5, Chi 0 (Fortune 1), Mind 5, Reflexes 5

Add 3 points to one primary attribute, 2 points to another and 1 to a third.

Add 2 points to one secondary attribute.

Skills:

Driving +4 (9) Max 13

Guns (=13)

Leadership +3 (8)

Martial Arts +3 (8) Max 10

Police (=15)

Add 4 skill bonuses

Shticks:

Unique Shtick -- Cuff 'Em: Spend one Fortune Point to use your Police AV rather than your Martial Arts AV when trying to handcuff opponents in combat. The difficulty of Cuff 'Em depends on what you're cuffing them to (No penalty if you're cuffing them to yourself or to themselves, up to a -2 for something like a moving fire truck).

Weapons: 2 weapons of the appropriate juncture.

Wealth: Working Stiff

You Want the Truth?

Now, eventually you're going to want your heroes to figure out the truth, so you may as well start them off as people who make a living out of finding it. This includes private investigators, spies, and journalists -- all of whom get paid to learn what's really going on. Unfortunately many of these work alone, but with a little work it can become the rationale for a group: The heroes are a team of spies who specialize in impossible missions, are a private investigation agency that work together on cases or test corporate defenses, or are the special investigations branch of a major metropolitan newspaper who have to pool their skills to crack the big stories. There are lots of movies and shows that focus on just such people.

Disavow All Knowledge of Your Actions: Again, the classic versions of these groups have a wide degree of autonomy. The IMF is given a target and told to go to it; the PIs accept the job from their client, but brook no interference in how it is handled; all is forgiven if the reporters actually get the scoop. However, when the job is on, the agents are likely breaking national and international laws, and that means no support until things are done -- even the regular authorities can't be trusted.

Sneaking and Running: Such teams will need to have as broad a base of skills as possible to succeed. As with the Cop game, each member of the team should have at least a point in the relevant skill, but it is likely that there will be one real expert in the field (Spy, PI, Journalist) surrounded by Everymen, Big Bruisers, Ex-Special Forces, and retired Cops, with a Techie to provide computer and engineering experience. A Scrappy Kid might be present, either as a Junior CIA or the child of one of the detectives or reporters who's been dragged along by circumstances or acts as a mascot.

No Plan Survives Contact: You'll have to develop some legitimate "normal," if action packed, scenarios for the agents to encounter before you sneak in the weirdness. This sort of advance planning structure could bring your tactician players into *Feng Shui's* more fluid and cinematic environment. Of course, once the impossible becomes real their plans will collapse. The tacticians must think on their feet to get out, then pursue the reasons behind what just happened with terrier-like tenacity to prevent it from ever happening again.

No Comments: Of course, futility runs rampant in these fields too. In a war in the shadows, there are no acknowledged victories, and many good stories are buried by the owners of the newspaper. Even if the PCs don't have a shocking front page photo of a flying Abomination, they may start to wonder what's happening to all the things they learn that never get revealed to the greater world. Digging into the secrets of those who employ them will be unhealthy, but it will ultimately show if they *can* handle the truth.

Other Systems, Other Conspiracies

While our focus has been on *Feng Shui's* Secret War, hidden conflicts exist in plenty of games and you can easily shift these suggestions into them. *Unknown Armies*, *Delta Green* or any other flavor of Cthulhu both work well for this (though standard CoC investigators need a two-gun cocktail with a [kung fu twist](#) to get the action level right). These games' sanity systems handle the mundane horrors of war or police work, reinforcing their internal reality long before the Mythos or Naked Goddess rear their heads. *Spycraft's Shadowforce Archer* setting or *Conspiracy X* both include histories unknown to the average man on the street, making the slow unfolding of the truth to soldiers, agents, or cops a nice transition into the weirder parts of the game world, or the stages before recruitment into the real truth.

The trick to this is keeping the players interested once they realize the conspiracy advertised on the book isn't showing up. Making them action heroes rather than [everyday folk](#) is a good place to start. Once you've got them interested in the normal world, get them to dig for what they assumed they'd find out immediately. This is especially effective if you've modified the [nature of the conspiracy](#) as well . . .

The Marvel Universe Roleplaying Game

[Published by Marvel Comics](#)

Game design by Dan Gelber, Jeffrey Simons, & Evan Jones

Additional design by Bill Jemas, & Mark D. Beazley

Written by Jeffrey Simons, Dan Gelber, Evan Jones, & Jim Graham

\$24.99; 128-page full-color hardcover plus heavy-stock perforated character sheet/insert

If you want something done right, the old saw goes, you have to do it yourself. There have been a couple of stabs at a Marvel Comics superhero game from TSR and its successors, but the latest version, *The Marvel Universe Roleplaying Game*, comes from the House of Ideas itself.

Based on the adventures of their many super-powered heroes and villains, Marvel Comics' game tries a diceless system to adjudicate big superhero battles. A character is created by spending Character Generation "stones" on statistics, though the stones used to create a character should not be confused with the stones you'll use in play.

You start with five basic Abilities: Intelligence (your smarts), Strength (physical power), Agility (your coordination), Speed (how fast you move), and Durability (for resisting damage). Your Durability is the same number you use for Health (how much punishment you can take).

You also buy Actions with stones. Actions is a catchall term meaning "stuff your character can do." Thus superpowers find themselves in the same boat as skills and areas of knowledge. All these stats are bought to the desired level, and that level is how many stones (the in-game kind) you can commit to using that Action or Ability. Some Actions let you use a related Ability at the same time, increasing the number of stones you may put into play; for example, Acrobatics lets you use Strength or Agility in conjunction with the Action. If the description doesn't list it as part of the Action, you have to pay extra to use an Ability with the Action. Create Illusions doesn't get a bonus, so if you want to add your Intelligence when using it, you'll have to buy that as an Advantage.

Advantages and Disadvantages can be added to an Action (usually a superpower) to change how it's used. Advantages like $\times 2$ damage increase the cost of an Action, while Disadvantages like power out of control without device (ala Cyclops' visor) lower the cost.

Normal Actions are those Actions anyone can try, like running or climbing. If you didn't buy the Action, you can use just an Ability to attempt it, but you may have a Situational Modifier added to the Difficulty that a more talented individual might not suffer. If you're not sure what kind of character you want to play, you can save as many as half of your Character Generation stones to tweak the character as you go.

Now for the other kind of stone. Actions and Abilities have a rating on your Character Action Display (CAD -- your character sheet), usually from 1 to 10. That's how many stones you can put into the feats you perform. You commit stones to a task and the GM puts stones into Difficulty and Resistance, or the NPC's Defense Area. Stones come in two colors: red and white. White stones are used to represent your Health; lose all of these and you'll go unconscious or die. Red stones are used for Actions.

Your Health determines your Energy Reserve; you can have a maximum of ($3 \times$ your Health) stones in your reserve to power Actions. If you want to play a character who relies more on smarts than fortitude for their Actions and powers (like Professor X), you have the option of substituting your Intelligence for your Health for all your Energy Reserve calculations -- but this only gives you two red stones for each white stone in Intelligence. After each round, you regenerate your Health in red stones back into the reserve (so you're probably using more stones than you're regenerating during a fight). If damage lowers your Health, you'll have a harder time regenerating your Energy Reserve.

A round of activity is called a panel, and when everyone gets a panel in which to act, it's called a page. At the beginning of every panel, you decide how many stones you'll take from your Energy Reserve and into which Ability or Action Boxes you'll put them -- limited to what level you paid for the Ability or Action. If you were able to combine an Ability with your Action, you can add them together and use that many stones (if your Energy Reserve is big enough). If you put stones into an Action, you can use it this turn. It's a good idea to put some stones into your Defense Area (if it's a combat situation); otherwise you'll have nothing to stop incoming attacks.

For example: Cyclops has Force Blast (his Optic Beams) at 9, so he may put up to nine stones in Force Blast this round. If the target he chooses only has 5 stones in defense, the opponent will take 4 stones in damage. With a Health of 3, though, Cyclops' maximum Energy Reserve is only 9 stones ($3 \times$ Health) -- and his Energy Reserve only regenerates a straight 3 from Health at the beginning of each panel. He can't cut loose a full blast every round. He has a Kevlar jacket to protect from some attacks -- equipment has stones of its own -- and most street scum aren't much of a match for Cyke anyway. But if the Brotherhood of Evil Mutants shows up, that jacket's one stone of defense won't keep him awake for long. Success in combat comes from wise expenditure of your stones, balancing attack with defense.

In less stressful cases, the GM decides on a Difficulty and Resistance for what you're trying to do. Difficulty is how hard something is; Resistance is how much effort it takes overall. For example, if Reed Richards wants to cure a disease, it may be that the Difficulty is 8 but the Resistance is 40. If Richards can put 8 or more stones of Intelligence or Invention or any other applicable Action behind it, he's smart enough to figure it out eventually -- if he does this for five panels, he'll have beaten the Resistance of 40. The Thing could never muster 8 stones, so he's not smart enough to even begin working out a solution to the problem without help or some serious bonuses.

How long a page or panel lasts is dependent on the kind of activities you're into. In the above example, Richards will take five panels to finish, all the while with little captions over his head saying, "Mr. Fantastic labors into the night . . ." If it's combat, panels take considerably less time. There are several other wrinkles to the system, like extra stones from weapons, splitting up stones among several targets, or spending stones each panel to maintain ongoing powers, but that's the short version.

In addition to these tweaks, the book presents the reader with an admirable cross-section of Marvel superstars. While there will be plenty more said in supplements for all the major players, you get write-ups of Spider-Man, some key X-Men, the Hulk, Captain America, and the Fantastic Four (among others) in the basic book, as well as famous villains like Magneto, the Abomination, and the Green Goblin. There are also a number of smaller players like Quicksilver and Baron Mordo. There are 42 characters in all -- the authors weren't chintzy with the goods, and these are all good reference points for anyone who needs samples.

Anyone needing help with what all the stats mean can check the Difficulty & Resistance Chart. The D&R lists several benchmark activities, feats, speeds, weights, etc., so the Gamesmaster has a basis for comparison when Iron Man wants to lift that Chevy or Quicksilver wants to dash cross-country.

There are nine Action Boxes on your CAD, but that's not just a space requirement -- you're actually limited to only nine Actions. You can (or may be required to) pick Specialties for some of your Actions. Daredevil, for example, has Social Skills at 3 and has chosen Academia, the Pro-Boxing Culture, and Law Enforcement. These Specialties can offset Situational Modifiers for him when these subjects come up.

Actions can always be increased with Lines of Experience, the game's equivalent of experience points. You can place these according to your deeds during the "issue." If you got into a fight with Bullseye, you might write down "Dodged

a bullet" or "Used trash can lid as a shield." It's up to the GM how useful these are at offsetting the Situational Modifiers that may come up in later sessions, but if you get 10 Lines under an Action, the Action may be raised one level and a new Specialty added.

There's a list of Actions for purchase in the book. It's a strange mishmash that can't decide if it's going to help you "build any hero you want" or "mirror the action of Marvel Comics." Force Blast can be used to model anything from Iron Man's repulsor rays to the Wasp's sting, but Web-Slinging seems somewhat esoteric. The selection, combining skills and superpowers as it does, reads kind of wonky, but every single entry gives an example so you have some sort of map. Subjects like creating a magical character and building powered armor get fuller sections.

A number of passages discuss playing the game and Gamesmastering. There's nothing revolutionary in them -- group dynamics, party conflicts, judging actions, prepackaged adventures -- but they are necessary for the new players the company is hoping to rope in (and, given the awkward shop-talk, every little bit helps). Advice is scattered throughout the book, but this isn't good as it makes it hard to find some of the critical "here's how it works in play" bits -- valuable, but not always placed with rhyme or reason.

Anyone who hasn't been exposed to Marvel's universe can find a small primer here, which gives a (very small) thumbnail of New York City, some of the major alien races, and a few of the weird gods, if you're into games of that power level. A brief adventure is included to wet your feet:

[SPOILER ALERT!]

Someone is filling the streets with R, a new drug that causes strange aberrations like tusks among the city's youth, and sometimes even jumpstarts a full-fledged mutant. Every criminal in the city wants the 411 on this popular vice, and the players have to find the one crook that's actually making the stuff.

[END SPOILER ALERT]

An exhaustive manifest of equipment is listed, and to tie the whole thing together, the back of the book has a full-color, two-sided, perforated CAD on stiff paper stock for photocopying.

The artwork, as you might expect, comes from various Marvel Comics and licensed products, and it's some of their best . . . one of the benefits of having the company do its own work. The graphic presentation is really clean, though sometimes the text loses itself in the crack of the book. The maps are really snazzy, and about the only real failing is the twisted and overly stylistic Spider-Man cover.

The ***Marvel Universe Roleplaying Game*** would be a far better work if the creators didn't keep shooting themselves in the foot throughout. Once a gaming group has the system hammered out and smoothes the edges, it's a fast play. The diceless system works pretty well: Juggling stats and stones gives the participants something to do, and the effects still feel somewhat random. But come on -- nine Actions for Spider-Man after 40 years? Arbitrary limits like this bring that forced feeling back.

Asking you to put stones from the Energy Reserve into your Action Boxes (which are physically too small to hold many stones to begin with) makes sense, but then if you want a defense you have to get those stones from the Action Boxes you just filled. It adds another layer to the strategy, demanding that you balance your defense from your offense, but it also means you cannot just pump stones straight into defense, or even just build a wholly defensive character. (Then again, you could tell the GM you're putting all your stones into Psychology this panel, then yank all those stones into your Defensive Area and start dodging energy blasts.)

Writing and erasing the shifting numbers would be a strain on a character sheet, true, but fiddling with little stones every single panel isn't exactly the soul of convenience. Characters of different power levels are mentioned, but while there's advice for having such characters work together, there's no mention of the potential mechanical hazards involved, and the D&R Chart lists few similar progressions (up to three miles for jumping, up to light speed for flying - and how does one compare Quicksilver's Speed of 10 and Thor's Strength of 10?).

The game is written in a casual and conversational style that makes it an easy read, though a lot of it comes off like a sales pitch. What holds you up is trying to absorb the information. It's a real headache because nothing is written as simply as it could be. It doesn't assume players will quickly get a grip on all the new concepts thrown their way, but it keeps telling you it's easier the way they present it and that simply is not true. Even using other terms like points instead of stones and skills instead of the generic Actions would have helped. As it is, it's a torturous mess, and an index would have been an enormous benefit.

The authors have certainly taken much of what slows down an RPG and replaced it with rules that will be a refreshing take on roleplaying in general and superhero roleplaying in particular. The trouble is, ***The Marvel Universe Roleplaying Game*** makes a simple and imaginative system anything but simple to get hold of.

--Andy Vetromile

Pyramid Review

The Black Seal #2 (for Delta Green/Call of Cthulhu)

Published by [Brichester University Press](#)

Edited by Adam Crossingham and Nick Brownlow

Written by Andy Bennison, Nick Brownlow, David Conyers, Tobias Cooper, Adam Crossingham, Daniel Harms, Rik Kershaw Moore, Davide Mana, Graeme Price and Brian Sammons

Illustrated by Adam Crossingham, Neil Beattie, Robert Corcoran, Sarah Evans, Paul J. Holden, David Lee Ingersoll, Baz Nugent, Charlotte Ronald and Luis Corte Real

Cartography by David Conyers and Koen Goorickx

84-page softcover; \$13

The long wait between official supplements and scenarios for *Call of Cthulhu* is something that the devoted fan has long learned to bear. This is particularly so for Chaosium's *Cthulhu Now* setting, and Pagan Publishing's still-stunning and Origins award winning *Delta Green* campaign setting. While they wait, it leaves room for the amateur step in and fulfil the need for new material, which is where last year's initial issue of [The Black Seal](#), published by Brichester University Press, proved to be so useful. This was never more so than for the Keeper running a campaign set in the British Isles, as it updated the United Kingdom for *Call of Cthulhu* far better than any previously published on the subject. In addition, it further developed the material describing Great Britain as presented in [Delta Green: Countdown](#).

Of course, to describe many of the authors of *The Black Seal* as amateur is wholly unfair, as many of them contributed to the contents of *Delta Green: Countdown*, so they are best placed to develop the United Kingdom with the Delta Green milieu. Which is exactly what *The Black Seal #1* did, and *The Black Seal #2* continues to do. This second issue is a nice step forward in terms of the magazine's production values, with a better layout and better artwork that overall serves to make it a much more professional looking product. It does suffer from one quite glaring printing error, but really this is a fault of the printers more than the design team.

The Black Seal #2 is subtitled "P.I.S.C.E.S.: *The Silent Service*," bringing its focus to bear upon the "Paranormal Intelligence Section for Counter-intelligence, Espionage & Sabotage," the oldest paranormal intelligence service in the world. A relic of World War II, it is tasked with the defense of the United Kingdom from the entities and worshippers of the Cthulhu Mythos. Beginning with Adam Crossingham's cover -- entitled "On Her Majesty's Occult Service" -- this examination for the most part ignores the current state of PISCES, a partially Shan-infested and increasing Shan-dominated agency, as described in *Delta Green: Countdown*. Together with Graeme Price, Crossingham gives an overview and history of the agency in "PISCES: Her Majesty's Watchmen," which ties very nicely with some of the events and scandals of the last 50 years. Not only is a timeline provided, but so also is a list of its various directors, known as "R." Though directly responsible to the Prime Minister's Office, PISCES (much like its American counterpart, Majestic-12) reserves judgement on whether or not it should tell the current head of Her Majesty's

government. Since the current Prime Minister is the head of a left wing government, PISCES has so far exercised that judgment and remained hidden, funding itself from the profits made by Severn Aerospace. The agency has always had an interest in Talents or those that have "Acquired the Gift" and maintains an active program of recruiting and training psychic individuals for use in espionage. Both Talent and Talent Handler are one of the several Occupational Templates described elsewhere in this issue.

Should PISCES successfully handle a Mythos manifestation, it has the facility to intern it safely -- and if not safely, hopefully flooding or at the last resort, a nuclear device will be able to contain it . . . This facility is "Magonia," a holding and research establishment built beneath the island of St. Kilda, West of the Outer Hebrides, off the Scottish Coast. David Conyers' "Missing Persons . . ." is a fascinating yet ghastly and well-realized creation that, as written, is actually quite difficult to use. This is intentional, as it is almost impossible to get onto the island, let alone get into the facilities below it.

As a dark answer -- a very dark answer -- to the Village of *The Prisoner* television series, Magonia is not going to be easy to use in a normal **Cthulhu Now** campaign either, and only slightly more easy in one that focuses that has the investigators as PISCES agents. That said, a campaign set entirely within Magonia could be a very creepy and intense experience . . . Just as with the Village, Magonia is used to incarcerate those who know too much, which might just include members of PISCES itself, right to its bosses, among whom breakdowns seem to be a little too frequent. Among its more dangerous inmates is Wilbur Bromley, an Avatar of Y'golonac, developed from the Ramsay Campbell story, "Cold Print" and mentioned in **Delta Green Countdown**.

Although PISCES is primarily tasked with the defense of the United Kingdom, its masters take an interest in events outside of its borders and that includes on the other side of the pond. Its difficulty is that, unlike its more mundane British counterparts, PISCES does not have a "special relationship" with any of its American cousins. Indeed it has had no link with Delta Green since 1945 and is still unaware of its demise -- or its resurrection. Thus PISCES is one of the few British intelligence agencies that pursue a number of active operations on U.S. soil. These are mostly passive in nature, such as surveillance, but the occasional operation is not unknown if a threat needs neutralizing. Graeme Price's "Perfidious Albion: PISCES Operations in the United States" describes these very low-key and long-term affairs, some of which are in danger of getting deeper into things than PISCES is really aware of . . . It also provides a new organization in the form of The Paragon Foundation, a Toronto-based body that is a PISCES front actively recruiting Talents or even giving aid should such a Talent need denying to a foreign power.

While much of **The Black Seal #2** is devoted to PISCES, it still remains useful to the Keeper who runs a **Cthulhu Now** rather than a **Delta Green** campaign by presenting a number of articles that could be used for either setting. The first of these is "Strange Histories: alternatives to pises for Cthulhu now," which gives four alternate government organizations or conspiracies that could replace PISCES. With two of them, a side bar discusses their different playing themes, as they diverge in both style and theme to the down-and-dirty style of **Cthulhu Now**. One, "The Black Lodge," tends toward the high weirdness of *The League of Extraordinary Gentlemen*, while "The Directorate of Social Intelligence" is more akin in style to *Dr. Who's UNIT* and *The New Avengers*. Of course, The Black Lodge could just as easily form the basis of a **Cthulhu by Gaslight** campaign. A fourth agency is "Government Intelligence Section G19," a straight adaptation of the organization and its leading agents seen in the excellent television series *Edge of Darkness*. A major influence for British-based **Cthulhu Now** campaigns, the aim with G19 is allow the running of classic 1920s-style adventures in the modern era.

The Avengers receive a second tip of the bowler hat in Davide Mana's nicely done "The Avengers: Off-best espionage in the Swinging Sixties." This suggests how a more light-hearted game might be run with something of a sense of style and this article brings to the fore an air of British knowingness that pervades much of **The Black Seal #2**. Of interest to those who have played the classic campaign **Masks of Nyarlathotep**, Daniel Harms' "The Penhew-Carlyle Foundation" updates this archeological body that was a front for the Brotherhood of the Black Pharaoh during the 1920s. It is designed as a possible challenge for use by a Keeper running a PISCES game, but still could be used for a **Cthulhu Now** campaign. More useful still is "A Brief Summary of known Great Old One-worshipping Cults and Independent Agents in the British Isles," which is unfortunately only the first part of a two-part article and would really benefit from greater coverage of each of these cults.

Although there are as such no scenarios given in this issue, it does include several "Tales of Terror" and "Dangerous Places." Each is a detailed summary of a situation that requires relatively little further work upon the part of the Keeper. Nick Brownlow's "13 Places of interest in Brichester" could be adapted as path of investigation in a scenario, but works mostly as a piece of decent fiction. Rounding out ***The Black Seal #2*** is a set of reasonably interesting reviews, an interview with Gary Sumpter (one of the lead authors and editors on [Ramsey Campbell's Goatswood and less pleasant places](#)) and several new Investigator Templates -- for the Environmental Agency, the Serious Fraud Office, the Royal Military Police, and PISCES, as well as one each for the IRA and the UDA, for those campaigns that stray across the Irish Sea.

Despite the fact that none of the contents of ***The Black Seal #2*** is either official or canonical, the authors have tried to adhere to both the world-view and feel of the ***Delta Green*** universe as closely as possible. What this means is that ***The Black Seal*** is as good as it gets without being fully endorsed by Pagan Publishing, and it would be an utter waste for the Keeper not to use its take upon PISCES. It is an excellent continuation of the information given in both ***Delta Green: Countdown*** and ***The Black Seal #1***, while also providing plenty of material for ***Cthulhu Now***.

--Matthew Pook

Transmission 200 (Part III)

"Whatever the case, we are all players in the game that is known as 'time.' The obvious way to protect one's interest is, of course, to gain knowledge about time itself. Whether one wants to do this by pursuing meditation or astrophysics is an entirely personal matter."

-- Preston B. Nichols and Peter Moon, *The Montauk Project*

We're blowing through all 200 transmissions in a giant, secret-historical time and reality war setting. The past is [thataway](#). (The further past is further [thataway](#).) The future is just ahead. Ladies and gentlemen, start your saucers . . .

- 1853:** The [Nineveh Lens](#), a powerfully bisociative artifact with the ability to refocus reality, appears in an archaeological dig. This is the same Lens lost (so far) in 535, 1492, 1588, and 2012, continuously "re-found" in 1853 again by a different faction each time.
- 1854:** Eliphas Levi learns the Words of Power from Apollonius of Tyana, and only quick thinking by an astral Lemurian agent present channeled the resulting Re-Creation into a [pocket universe](#) of steampunk Victorian magick, which may have sent eimic shock waves back to [3246 B.C.](#) A splashback effect almost reifies the filibuster William Walker as archon of [Reality Dixie](#); another sets the [NYMZA](#) group to secretly building airships.
- 1859:** To contain Dixie, Argus is forced to confirm MI- agent of influence Joshua [Norton](#) as Emperor of America. The planet [Vulcan](#) enters our reality, setting off a cosmic struggle between the Sphinxes and MI- over its existence; the battle spreads back in time to spark a [covert space race](#), remove the Earth from [Saturn's orbit](#), and launch Monstrator.
- 1861-1865:** Argus' hard-headed Dixie-containment efforts, unfortunately, create a mythic backlash just as the Civil War begins to weaken the American reality fabric. [Superheroes](#), [crashed saucers](#), a [Rainbow Effect flare-up](#), astral openings (focused by MI- dramaturgies using [Pepper's Ghost](#)) through [Lincoln's visions](#) and [Mumler's ghost photographs](#), a [Martian invasion](#), [splinter realities](#), and even [Rebel O.G.R.E.s](#) make the American Civil War a long, dirty slog as Argus must defend both the American Dream and the American reality from all comers.
- 1870:** Lemurians attempting to infiltrate the [American Arcadia](#) (using the [Wandering Jew](#) as their agent) anomalize a headquarters in [Mount Shasta](#) and set off the [superheroic](#) Ghost Dance resistance. Argus sees this as just another incident in their lengthy [campaign](#) to tamp down the unreality that threatens to explode in the chaotic, mythic American West; their newly-invoked patron deity [Paul Bunyan](#) contains things on the iconic scale.
- 1874:** Just the place for a [Snark](#)!
- 1877:** Beginning of the [Bone Wars](#) to define American prehistory, pitting the hyperscience of Strike Force Chronos against the theosophical mysticism of the ZSS and the Lemurians, and the Biblical gigantology of MI- . The Reptoids only want to hide evidence of their own primordial civilizations; the Wars end in 1889 with victories for Darwin, and thus for Chronos and the Reptoids.
- 1880:** [Norton's death](#) (and perhaps the strobeline [alternation of history](#) during the Civil War) sets off the Covert [Airship](#) Time War between Gernsback, Reich-5, and Shikaku-mon's Catholic Japan (and hence between Tesla's rogue Lemurians, the ZSS, and the main Lemurian elements). Strike Force Chronos runs a secret op to monitor and control it, considering the U.S.' past their turf, against some [interference](#) by MI- . The CATW peaks in 1896-1897, and ends with a Gernsback-Argus victory in 1927.
- 1881:** Argus and MI- [duel](#) over America's sacred kingship while simultaneously erecting the [Cleopatra's Needle](#) tuning forks to mark their alliance. (This kind of thing happens more often than you'd like in time wars.) Both halt yet another Grey intrusion through [Roswell](#), and the [Mad Fishmonger](#) strikes during this distraction. Concerned about Argus-Rosicrucian cooperation, the Lemurians set up the [Black Ocean](#) Society.

- 1886:** Arcadian [alchemy](#) assures American (and Argus') ascendance.
- 1888:** Joint Reptoid-MI- operation attempts to Ascend London using the [Ripper](#)-spirit, but the Sphinxes divert a portion of the energy to Yorkshire through [Le Prince](#)'s occult lenses. Le Prince, driven mad by the visions, embraces the Sphinxes two years later.
- 1893:** The Argus-front [Auriga Society](#) begins the Ascension of [Chicago](#) through faultless [urban planning](#) by the Lemurian double agent Daniel Burnham -- and possibly through [H.H. Holmes'](#) Murder Castle. Meanwhile, the astral faction of the Sphinxes establishes a foothold in L.A.'s [Bradbury Building](#) from its base in a [San Luis Valley](#) meteorite. A rogue Lemurian agent, Nikola Tesla, manages to create a thought-sphere that enmeshes many future visionaries in a "[Gernsback Reality](#)."
- 1896:** [Martians](#) launch another invasion during the peak year of the covert [airship](#) war, along a route possibly opened by the Lemurian agent Tesla, or by Ronald Montagu [Burrows](#). The turmoil opens the gates to the dark, Sphinxian dreams of H.P. [Lovecraft](#).
- 1902** Lord Kelvin's self-causal [transmission](#) bootstraps time travel into MI- hands, and weakens the twentieth century's reality from the beginning.
- 1908:** The [Tunguska impact](#) calves off [Reality Tunguska](#) (and throws up the [Phaistos Disk](#) as a pragmaclast), an MI- stronghold contested by Argus only. Some suspect a payoff to Tesla's renegade Lemurians given this reality's "Gernsbackian" qualities, and hint that the Tesla faction controls (or subcontracts) Argus' [HAARP](#) array secretly built around now (which may have fired the Tunguska "test shot" itself) but only revealed 90 years later. Under the alias "Charles Dexter Ward," a youthful [H.P. Lovecraft](#) makes contact with the Sphinxes in Europe.
- 1909:** Weak between two huge impacts, reality folds back to the 1854 splashback under a [Futurist assault](#) eventually contained by Rosicrucian art historians.
- 1910:** Halley's Comet slams into the Earth, splintering reality for good. A desperate alliance of all surviving agents manages to divert the [Highway](#) and thus switch the impact to a near miss, but [five new realities](#) remain accessible, along with the "[spare parts bin](#)" from the reality patch job.
- 1912:** MI- agent Wilfrid Voynich acquires the Bacon [manuscript](#) and evades the Lemurian attempt to kill him on his way back to America by not sailing on the [Titanic](#).
- 1918:** Strike Force Chronos retroactively snuffs out an outbreak of [zombie flu](#) from an unknown reality; Argus suspects Lemurian meddling as in 1841.
- 1920:** Charles Fort burns 40,000 of his notes after publishing the [Book of the Damned](#). Every faction seeks to salvage those notes that reinforce their realities and burn those that degrade their rivals'. Fort dies in 1932 of "unspecified weakness," possibly as a result of exposure to the reality-thinning smoke of his burning notebooks. Taking advantage of the thinning, Reptoid agent [Al Capone](#) assumes the Four Deuces and begins his Black Grail working.
- 1922:** The Sphinxes' agent, the [Duchess of Malfi](#), re-enters reality through Eliot's [Waste Land](#) to erode reality with magic when Howard Carter exposes the Staff of Ra to sunlight. The [resulting magical universe](#) remains accessible to them, the Ahnenerbe magi in the ZSS, and to the Reptoids. Argus is attempting to recruit Houdini and the Magician's League, to at least keep this reality's energies focused inward.
- 1924:** Alexandra David-Neel (part of the dubious Mandeville faction of MI-) invokes a dangerous [green-gloved](#) tulpa in Tibet, opening a reality fissure that upthrusts the [Crystal Skull](#) and the [Glozel](#) fragments, among other, still more dubious, pragmaclasts, while propelling [Rogers Hornsby](#) to the highest one-season batting average in the century.
- 1927:** Charles [Lindbergh](#) makes a secret treaty with the Sphinxes, ostensibly on behalf of Argus. Lindbergh later shows signs of having been suborned by any or all of the [Duncanites](#), the Reptoids, or the ZSS; he may have splintered like Columbus in 1492.
- 1933:** A series of ZSS hammer blows against the weakened century splits off [Reich-5](#), but accidentally triggers

an [automata coup](#), a [risen Atlantis](#), an [Ahnenerbe Fimbulwinter](#), and something worse than all of them [in the Kremlin](#) as well. The ZSS pulls back, and allows Strike Force Chronos and MI- to undo the damage by shunting the realities off to upper floors of the newly-built [American Yggdrasil](#).

- 1938:** An [astral Martian invasion](#) nearly [breaks into our reality](#) through newly-opened [Kirlian](#) space, but is contained at the last minute inside Orson Welles' radio broadcast. The Occult Empire makes a comeback bid by creating the [Waste Land](#) in [Cleveland](#), but Eliot Ness' myth is too strong for it. In the chaos, the Kriegsmarine and Ahnenerbe "stake out" an eimically-secure fastness in Neuschwabenland for the [Antarctic Space Nazi](#) Refuge.
- 1940:** Accidental ZSS op [awakens Arthur](#); ZSS contains the reality before too much Grail energy is emitted.
- 1941:** Lemurian pawn [Rudolf Hess](#) attempts to avert WWII, but is hollowed out by the Sphinxes in midair and immediately contained by MI- . Massive temporal distortion around [Pearl Harbor](#) charted by Rainbow Project personnel to gather data for [Philadelphia Experiment](#).
- 1943:** The [Philadelphia Experiment](#) secures time travel technology for Argus and Strike Force Chronos, but unfortunately it also rips open a [green-glowing](#) time portal that (among other unfortunate effects) gives Heisenberg the theoretical data needed to perfect the Nazi time program. (Others claim that the Montauk Project, a shadowy Argus op, gave the Nazis the data in 1983/1943 to defeat an Orion invasion.) A [test](#) on the Russian Front goes awry.
- 1944:** Nazis use time technology to build [the Bomb](#) and [nuke London](#); Strike Force Chronos and MI- repair the timestream, but the remainder of the twentieth century shows increasingly unstable shock effects from their patchy rush job.
- 1945:** The Trinity test produces a whole storm of realities from [Technomancer](#) (and its 1991 [splinter](#)) to a [dinoskeleton rampage](#) to [Zuse's Ogoromniy](#). Distracted by this and the [Werwolves](#), Argus is unable to prevent the escape of Bormann and other key Nazis via saucers and the [Amber Room](#) to [Neuschwabenland](#).
- 1947:** Latest Grey infiltration through the [Roswell](#) hole launched in force against Argus while they are distracted by Operation High Jump against [Neuschwabenland](#). Retaliatory strikes open overt war in [some realities](#), spill [Rods](#) into existence. Argus finally able to "Welles" the entire Grey invasion into a forgery with Lemurian assistance at [Maury Island](#).
- 1949:** As payoff, Lemurian agents eliminate the anti-Lemurian Defense Secretary James [Forrestal](#). Argus-Neuschwabenland armistice declared after both sides reach [the Moon](#).
- 1954:** William S. Burroughs opens the way to the [Martian Interzone](#); it remains uncontained by any faction.
- 1957:** Father Pellegrino Ernetti invents [time travel](#). He attempts to preserve his invention, but is forced to turn it over to Reptoid influences within the Church. Argus' [Project Moon Dust](#) established, begins collecting fallen pragmaclasts in a tesseractive warehouse.
- 1963:** Lone gunman [Carl Edward Schermer](#) shoots and kills President John F. Kennedy.
- 1968:** [Project BANQUO](#) established as an Argus spectral forces unit in the wake of the [Mothman](#) detonation, which weakens American reality enough that Lemurian pressure upthrusts [Atlantis](#). Fortunately, it's 1968, so nobody really notices.
- 1969:** Argus, the Ahnenerbe, and the Rosicrucians alchemically fix [the Moon](#) in a [Three Magi Working](#), badly weakening Lemuria, the Sphinxes, and the Reptoids on many crucial spheres.
- 1986:** Halley's Comet strikes off [shards of reality](#) and opens a brief dimensional gash. [The Chairman](#) falls through the opening, and erects a culinary arena to realize his dream.
- 1998:** A swarm of gnats pours out of a [tabloid shell reality](#) created by a qlipthotic Sphinx entity and knocks down an Indonesian DC-8 in Sumatra. Strike Force Chronos handles it, but must put down an increasing number of tabloid irruptions as pre-millennial tensions build.
- 1999:** The [King of Terror](#) (either a qlipthotic entity or a pre-Sphinxian primal god) returns from the sky in the

midst of yet another [Martian invasion](#). Children take shelter in [libraries](#), but find the clashing realities within equally dangerous. All sides manage to throw him back before he revives an even greater entity, Angolmois, slumbering within the hollow Earth.

- 2000:** Probably unrelated to the [bike controversy](#), a [planetary alignment](#) causes a catastrophic [Pole Shift](#); history restored from backup on January 1, 2001. American Presidential election files corrupted in restore, which takes [four tries](#) to get right.
- 2012:** A qliphothic Sphinx pours onto America and sets off the Great Blight, creating [Reality Autoduel](#). An MI-op secretly [reincarnates Arthur](#) to pinch off the future as a mythic variant.
- 2061:** [Halley's Comet](#) comes around again for another impact. All seems lost, when [two A with B burst C](#).

The Voices From The Magic Box

(And Other Places To Get Ideas)

I continue my trademark "Oh, crud, it's 9 P.M. on Thursday and I haven't started my column yet" tradition of drawing inspiration from whatever is handy . . . in this case, the target is [National Public Radio](#), which happens to be a much more promising subject source than the unopened can of Heinz Vegetarian Beans sitting on top of my scanner/printer. (And if anyone knows where my can opener is currently, I'd be *very* appreciative . . .)

Anyway, over here in the states there have been some Senate hearings lately on more deregulation regarding media ownership. The FCC has considered further relaxing restrictions that were eased in the early 1990s; these regulations were originally placed to keep one station from building a radio tower the size of the Death Star and broadcasting its hip-hop line dancing acid jazz across all available radio stations, then publishing its broadcast schedule in its local newspaper. (Okay; I don't know if that was the *real* reason . . . it probably has to do with [player piano rolls](#) or something.)

Now, without getting into the political implications of this decision -- because, really, gaming and politics combine like Pringles and Kahlúa (and I speak from painful, painful experience) -- I note that there's potential in this idea for a good gaming possibility.

Perhaps I was just influenced by this week's article "Other Realistic Fantasy Worlds" into thinking about various magic possibilities. But I wondered: What if magic was licensed in a game universe? What if this wasn't because of some governmental desire to control mages and magic *per se*, but because of a limited resource . . . say, a finite "magic band" wherein magical effects take place? There could be various effects that take place on, say, the AM (Astral Magical) or FM (Fulgent Magical) spectrums of reality. The AM band allows for more subtle and long-ranging effects, while the FM spectrum allows for flashier and more explosive effects but are limited to a shorter range.

Anyway, what if these spectrums needed to be regulated because there simply wasn't enough magical potentiality to go around? If one person tried scrying while another tried telepathy on the same AM frequency, their efforts would interfere with each other and cause heartaches (literally). And if one person was attempting a fireball while another was trying to cast an illusion on the same FM band, perhaps neither spell would work . . . or perhaps both would work at a much amplified (and dangerous) scale.

This would allow for a modern (or near-modern) magical setting that gives magic a logical limited framework, and permits some interesting roleplaying conundrums. ("Well, you *could* use your lightning bolt spell, but you're not licensed for that magical frequency in that city. Now, if you want to pirate-cast it, you can . . . do you feel lucky?") Of course, if I were to use this idea in any games I ran, I'd probably change the FM/AM designations (unless it was a *very* silly game); otherwise, it'd probably be about a week before wizard players started wearing pointy hats that strongly resembled radio towers . . .

Anyway, the basic idea seems sound, and is something that I suspect my players would like. And it broadly illustrates that many good ideas can be found by taking real world events, philosophies, or conundrums, and filing off the serial numbers into a new genre or setting.

For example, consider a frontier science fiction colony setting. The heroes could be charged with helping lay ultra-dense datatrans cables across the land, connecting one city to another. These wires would allow instantaneous transport of organic and inorganic matter across them . . . assuming they can get the cities connected. And once cities are connected, it would be necessary to go and repair the cables, or thwart unscrupulous DOSperados who might splice off cables to intercept matter-transmissions. Well, suddenly the game can use any of the myriad of plots and ideas from a Wild West campaign; from a storytelling standpoint, these cables are obviously little more than railroad lines, but wrapped up in the right context it doesn't even need to seem incongruous. After all, history has been repeating itself for quite some time . . . (And this same idea can be used whole-cloth in a fantasy game; replace "datatrans cables" with

"woven silver cords," make the cable-laying take place in the ethereal plane, and you're set!)

Of course, taking real-world ideas and translating them to other genres has been done for years, especially in science fiction. The *Twilight Zone* brought it to the masses, and *Star Trek* made a near-cliché out of it. ("Oh, c'mon; do they need to draw a roadmap? One guy has the left side of his face painted black and the right side white, and the other guy has the right side of his face painted black! Are you and your crew flickin' ***BLIND?!?***") But there's nothing that says it can't be used for really any genre; ***Aberrant*** used many of the modern ideas of celebrity and fame and applied it to the supers genre, while ***Fading Suns*** took many themes of a historical religious Dark Ages world and transplanted them to a science fantasy universe.

So for those of you who may be desperate for a plot, or otherwise looking to shake up a campaign, consider going to the real world. There are all kinds of interesting conundrums and problems that can be tweaked and used in other games. From a sci-fi world wherein all entertainment media is being upgraded to higher quality but uncopyable crystals, to conspiracy theories in medieval fantasy campaigns ("Did man *really* enter the astral plane?"), to justice issues in transhuman worlds (what does a life sentence mean to someone who can live 800 years?), it's easy to plug new game ideas into a campaign.

And, perhaps best of all, the next campaign or adventure idea need not be any further away than your television, newspaper, radio, or can of baked beans.

--Steven Marsh

Other Realistic Fantasy Worlds

by Giles Schildt

The article ["Realistic Fantasy Worlds"](#) discussed how magic can alter social, political, and economic structures when its existence is widely known; but magic doesn't have to make the front page of the *New York Times* to change the world, or even *because* it changed the world. Worlds where magic is a powerful, but secret, force are some of the most interesting to adventure in.

To determine how clandestine use of magic affects a society it is necessary to ask a few questions, such as: Who is keeping magic secret? Why are they keeping it secret? What are they doing with their secret magic? And what relationship does magic have with the world's technology? Each answer shapes a small part of a campaign world, and collectively they determine if anything can be taken at face value.

Who Knows About Magic?

A world can have more than one answer to this question, but as more people learn about magic the odds of everyone finding out increase dramatically. (Remember the Mafia joke about how two people can keep a secret -- if one of them is dead.) A good rule of thumb is that the likelihood of a secret becoming public is proportional to the square of the number of people that know it.

Magic could be a state secret, one more guarded military or espionage technique. If its existence is known only to a few key (and honest) spymasters, the only significant effect magic will have is making that country's intelligence service more powerful (and most likely allowing that country to dominate international politics). Given the nature of bureaucracies, it is more likely that such abilities would be abused. Ambitious individuals could use magic to gain effective control of the government, or a government could slowly become more oppressive; increasing the use of its "secret weapon" during each crisis until the sorcerers are completely above the law. Of course, if a government that is already oppressive discovers magic it will use it to consolidate its control.

A whole corporation could never keep something like magic a secret. If magic was discovered in a corporate research lab the discoverers would either be (for all practical intents and purposes) a clandestine organization within the company, or the secret would eventually leak. A group of mages could form a company, but that is more accurately handled as a clandestine organization that controls a corporation. In either case effective control of the company may rest with the clandestine mages instead of the board of directors.

"A clandestine organization" is in many ways the default answer, because any group with secret knowledge of magic is effectively a secret society (whether they admit it or not). The GM has a lot of leeway creating secret societies, one secret society might use the power of magic only to satisfy their curiosity (having little or no effect on anyone else) while another might use magic to take over the world (or at least try). The nature of the clandestine organization can easily be built around the things they do with magic or the way they keep the secret, something handled in more detail below.

Like corporations, religious orders are too diverse to keep a powerful secret like magic; however, religious organizations make an excellent front for a magic-using secret society. The followers of religious orders are conditioned to accept the organizations teachings on faith, and if an uninitiated individual in the church happens to witnesses Something They Should Not Have Seen they are more likely to attribute it to divine intervention than to a sinister plot. Magic would also help church leaders control their followers.

An interesting situation for a roleplaying game is a few Random Individuals discovering an old grimoire. What will the PCs do with their newfound abilities? Will anyone else notice them, befriend them, or perhaps want them dead?

When more than one person is "in" on the secret, the relationship between the co-conspirators has a powerful influence

on how long the secret will stay a secret and what they can do with it. An efficient organization with magical powers could take over the world in short order, but most groups have minor disagreements, political dissidents, or even outright rebellious factions.

Openly adversarial groups bound by a common need for secrecy make a very interesting campaign world. *Highlander* and ***Vampire: The Masquerade*** are set in interesting worlds where antagonists are forced to cooperate to protect a secret more important than their individual differences.

Of course, more than one Random Individual might find an old trunk full of grimoires. Depending on their ambitions, it might take a long time for them to discover each other.

What Are "They" Doing With Magic?

What mages are trying to accomplish will have the most significant effects on society, even if they aren't very successful. A variety of goals are possible, but trying to make the football team win doesn't provide many adventure hooks.

Show Me the Money

Earning income is one of the most obvious uses for magic. If mages flaunt their wealth -- or even live without any visible means of support -- they may soon find themselves in trouble with the local equivalent of the IRS or SEC. Authorities may suspect illegal activities and start drug or organized crime investigations. A cover story and possibly some creative accounting will be called for, but it is hard to imagine an organization (or even many individuals) that wouldn't realize *some* economic benefit from clandestine sorcery.

A mage could also realize substantial personal benefits without converting his spell casting activities to cash. Creative spell casting can provide many subtle benefits that could help land the prettiest girl (or handsomest guy), exact revenge, improve schoolwork, or simply keep the wizard entertained. Relatively safe (from a legal and discovery standpoint) economic benefit could be obtained by using magic to moderately improve job performance.

The Same Thing We Do Every Night, Pinky

Trying to take over the world is another likely use. While it's possible for legitimate governments to use magic as an espionage, diplomatic, or military tool, it's more likely that mages will control the government. They might openly control the government and keep their magic a secret or be the secret masters holding the strings of the "legitimate" officials.

Using mind control magic against a government that isn't aware of magic's existence (and therefore has *no* defenses) is the ultimate "Get Out Of Jail Free" card. Any government official, and therefore any power the government can exercise, is available at spell casting range. Pardons, wars, tax refunds: All are just an incantation away.

Creative use of many other forms of magic can have similar results. A few things that could drastically alter public opinion and policy are fabricated evidence, illusionary events, leaked (scryed) secrets, and deniable assassinations. (No autopsy will reveal the use of Deathtouch, and what modern jury would convict someone because he said "Abracadabra!" just before the victim died?) The espionage applications of magic are just as effective *against* a government as they would be for it. In a sufficiently low-tech society even the ability to predict events like solar eclipses (and a little showmanship) can topple kingdoms.

If mages rule openly, their secret spell-casting abilities provide them with a number of unique advantages. Depending on the grimoire in use these could include near immunity to assassination, precise knowledge of their staff's loyalties, easy identification (and neutralization) of dissidents, and perhaps even the ability to make convenient "natural" disasters. (Reconstruction after a natural disaster allows governments to exert more control, perhaps even martial law. Controllable natural disasters could of course be used to eliminate dissidents in a way that even conspiracy theorists

wouldn't connect with the government.)

Welcome to a Messed-Up World

Secret conspiracies don't *have* to be malevolent. Some very interesting game worlds include a benevolent conspiracy. Altruistic mages might defend the planet from an invasion by demons or aliens, or Elvis impersonators. This is especially plausible in worlds where the public doesn't believe in magic. They probably don't believe in demons or aliens either, so no normal authority can act. The guardian wizards can't give interviews or they will be locked up in the insane asylum. They could be winning or losing the war, or might have held their own since ancient Greece. They may take advantage of new technologies, or bullets might pass through demons without hurting them (or the aliens have kinetic shields, etc.).

The world might need saving even if it's not being invaded. The benevolent conspiracy could just protect humanity from its worst excesses. Sorcerers might "make the world safe for democracy" without admitting their existence. They could fight terrorists, oppressive governments or ideologies, or economic exploitation. These guardians might create a virtual utopia or merely defend comparatively bright spots in an otherwise dark and oppressive (e.g. Cyberpunk) world.

There Can Be Only One

If keeping magic a secret is *important* (in 1600s Salem for example) then magic using factions might even fight wars without revealing their secrets. Mages might be the greediest robber barons since the recent CEO scandals, each trying to take over the world for himself . . . if only these other mages would get out of his way. Even one wizard might be powerful enough to topple mundane governments, but he's too busy keeping his rivals at bay to get control of even a local police department. (Or maybe he has control of the local police department and a rival controls the Mafia.)

PCs could be unwitting pawns in this game or get recruited by a scheming wizard . . . perhaps both in one campaign. The world they live in will be more violent than a world without these behind the scenes power struggles. Eventually the heroes will start to figure out what is going on, and may even learn magic and become power brokers themselves. Will they try to save the world, or just exploit it?

Look! I've Invented Flubber!

The world's most powerful mages might not have anything more pressing than figuring out how magic works on their mind. This doesn't get interesting until someone else notices that they are doing some unusual things (when they foolishly try to impress a girl, perhaps). Will the lucky observers allow them to conjure in peace or become opportunistic? Whose side will the players be on? Will anyone believe it is magic, or just a new (and poorly understood) technology?

Why Is Magic a Secret?

This may seem obvious, but whoever isn't telling the world about magic probably has some reason more compelling than laziness. These reasons can range from devious to altruistic; or maybe they just need more data before a scientific journal will publish their findings.

Anyone using magic for political or economic reasons will keep it a secret because it is more effective if the victims do not know what to defend against.

Mages can also remain concealed because they fear persecution. This would be particularly likely if open use of magic would seem threatening to any entrenched powers -- particularly those that claim supernatural association. Mages could be killed or imprisoned as witches, demons, or worse. In a more enlightened society, mages would be more likely to fear regulation than persecution. Although it is less deadly, regulation can be very inconvenient.

Mages might believe that society is not ready for magical knowledge. Benevolent wizards may even be working diligently to prepare society for the eventual acceptance of magic. If a society really isn't ready for magical knowledge spell casting may remain a secret because the public refuses to believe in it despite the evidence. All three of these options provide interesting roleplaying hooks, especially in a campaign that contains magic but doesn't focus on it. PCs might be enlisted to (unwittingly) aid the mages, or might stumble across the secret and spend months trying to convince someone to believe them. If the mages really are protecting society from something, their discovery provides PCs with a difficult choice.

It is also (barely) possible that a small group of mages would keep magic secret just for the personal gratification of knowing something nobody else knows. That does not make things very interesting, though.

How Powerful Is Magic?

This question goes much deeper than the amount of damage a spell can do in combat. Discreet spells, like missile deflection or telekinetic shields, can be more powerful than an extensive barrage of fireballs, and are far less likely to draw attention to themselves. The real question is what can a mage do that a mundane individual can't, and what kind of advantages does that give him?

Nearly all grimoires include spells that a dishonest person could use to operate above the law. Invisibility and Illusion spells allow a clever wizard to commit almost any crime -- and fix the blame on almost anyone else. Mind control spells can even make the fall guy commit the crime himself. Sleep spells or spells that subvert mechanical or technological security devices can be even more useful because even the victims won't suspect anything more sophisticated than mundane robbers and bad luck (or dereliction of duty by the guards). Controlling or predicting "gambling" outcomes is another low-risk, high-yield activity. As long as the use doesn't give away the existence of magic, those spells are keys to almost unlimited wealth and power.

Many unethical economic uses for magic would even be legal, simply because nobody worries about writing laws against things they think are impossible. Most forms of magically assisted corporate espionage fall into this category.

Even ethical mages can realize incredible gains from magic. Some artistic illusionists could make a movie like *Titanic* for only a few hundred dollars' worth of film. A team of magical doctors might anesthetize their patients just so they wouldn't realize they're *not* being operated on. Maybe they'd even scar some skin tissue after casting their healing spells. The ability to magically create valuable items is like owning a gold mine.

How Are "They" Keeping it Secret?

This is a more complex question than it first appears. There must be mundane explanations for any unusual effects magic produces. (Where are they getting all this money? Why does the CIA *always* know which Russian diplomat has the secret documents?) Any powerful effect will immediately reveal the existence of magic unless a plausible cover story is provided. Remember that a person does not have to see the spell being cast to notice its effects. Magical longevity requires forged public records. A magical traveler may need alternate identities. Using one credit card in New York, London, and Los Angeles in the same day will certainly raise fraud alerts at the issuing bank. Using several cards under the same name leaves a suspicious trail in the automated clearinghouse records. In a modern campaign a person using magic to make an "honest" living (for example, creating trinkets to sell) might get into serious trouble with the IRS (or SEC for corporations) if they don't have an accountant come up with a plausible set of books. (Books that may involve non-existent suppliers and look suspiciously like an embezzlement ring if the accountant wasn't very careful.)

Magicians (and clandestine magic using organizations) must decide whether to attempt to blend in with the mundane society around them or completely isolate themselves from society. An isolated group can cast magic freely, but the discovery of its very existence is a serious threat to the secret it hides. A group that attempts to blend into society will have to deal with more situations that might reveal its secret, but each one is likely to be less severe.

Casting spells without being noticed gets harder as communication technology improves. Improved technology allows more plausible cover stories (the "magic" of computers), but the same technology makes a cover story more necessary, and mistakes harder to cover up. Public education (whether it is accompanied by technological development or not) also makes magic harder to conceal. An uneducated person might believe he was mistaken unless he has a picture or a videotape -- even then it might be possible to convince him he simply doesn't understand what is going on.

In the 21st century, blending in usually means minimizing the use of magic, or at least minimizing any use that will interact with a significant number of other people. Active magic users could keep the secret only if they were *very* careful not to draw attention to themselves. A person who is in the public spotlight would have a hard time keeping even infrequent magic use a secret.

How any clandestine wizards deal with "innocent bystanders" (and nosy investigative journalists) who happen to stumble across their secret says a lot about the character of the wizards, and will occasionally change the world they live in too. Any society of mages that lasts longer than one generation has to get new members somehow; if magic stays a secret, they are controlling the secret's leakage, rather than preventing it.

Unconditional recruitment of anyone who discovers the secret will educate the entire world in fairly short order -- even if relatively few people discover the secret, the odds are good that any random person would go public if he found out. Threats are cheap and easy, but least likely to work against the antagonists it is most critical to silence (journalists, knights, spies, political leaders, etc.). Erasing memories and destroying evidence are the most humane methods of protecting the secret, but they can have interesting side effects. Erasures may delete other important information from a person's mind; the possibilities here are endless -- especially for a Very Important Person. Missing memories (if discovered) or evidence could strengthen a victim's resolve to get to the bottom of the mystery. Of course law enforcement agents would consider any removal of evidence vandalism, theft, or robbery; and obstruction of justice if there was already a criminal investigation in progress.

Discrediting a witness is also effective, but some people are hard to discredit; would-be mudslingers may succeed only in drawing attention to themselves. Permanent mind control magic and elimination (or exile to alternate dimensions accessible only with magic) are completely effective for that witness, but tend to draw attention from a number of sources.

Magic and Technology

Arthur C. Clarke's statement that "sufficiently advanced technology is indistinguishable from magic" is almost a science fiction writers' axiom. Sufficiently clever magic can be indistinguishable from technology, too. Clever use of magic *and* technology can create many effects neither could produce alone: 100-mpg carburetors, cold-fusion engines, a perfect contraceptive pill, and so on.

In addition to providing a "cover story" for magic use, some technologies make it easier to detect clandestine magic users. Video cameras, wireless microphones, and spy satellites present obvious challenges. Less obvious, but no less important, are financial record keeping systems, pervasive identification technologies, cell phones with Global Positioning Systems (GPS), and distributed communication systems (like the Internet).

Magic could also secretly enhance a wide range of technologies. Very few people really understand how a computer works. An average person could never tell if electronics engineers or enchanters created his computer. Maybe all technology really *is* magic; the public just doesn't know.

The existence of clandestine organizations that use magic doesn't necessarily inhibit the existence of clandestine organizations that don't use magic. A technologically adept secret society might be protecting the world from the depredations of the Secret Sorcerers. Those sorcerers might believe they are protecting the world from an out-of-control branch of the CIA or rogue KG-used-to-B agents. Perhaps both of them are right, and neither can be trusted.

Putting it All Together

Calculating the total effect a clandestine-magic-using organization has on a society can be as simple as adding all the individual effects discussed above together. Sometimes the effects can reinforce each other. When the Secret Sorcerers try to take over a world that refuses to believe in magic, their efforts will be that much more effective. Sometimes these effects will work against each other. Magic users trying to take over the world might not even have a significant effect on mundane institutions if fierce internal conflicts, weak magic, small numbers, and a paranoid fear of detection hamper them.

Once the direct effects of magic (redistribution of wealth, increases in crime, government oppression, etc.) have been determined, any economics or psychology text can help fill in additional details (such as spending patterns, life expectancies, or rebellious populations). In most cases, if magic is rare enough to stay a secret, there won't be enough of it to alter low-level economic patterns.

Of course, the truly conspiratorial will recognize that nothing in this discussion *requires* magic. These effects could all be caused by the discrete use of psionics, super-powers, or (in tribute to Mr. Clarke) sufficiently advanced secret technology. For campaign ideas consider any works that deal with high-tech conspiracies or supernatural secrets. Some good places to start include:

- *The Manchurian Candidate* -- It's explained technologically (or psychologically, depending on your point of view) but one good mind control spell would make things so much easier (for the conspirators, that is).
- **GURPS Illuminati** -- An ideal starting place for all things conspiratorial.
- **GURPS Black Ops** -- Saving the world without taking the credit. The benevolent conspiracy, if you believe in such things. Replace the aliens with demons and the ray guns with magic missiles (or psychokinesis, or kryptonite, or . . .) and it's a background that could have existed since the Middle Ages, or earlier.
- *The X-files* -- The TV show relies on alien super-technology, but many of the ideas could be used in mystical settings.
- *Total Recall* -- Excellent ideas for mind controlling conspirators . . . whatever their means might be.
- *A Connecticut Yankee in King Arthur's Court* -- This technological conspiracy in a magical world contains many ideas that are also useful for a magical conspiracy in a technological world.

Martial Arts Styles for Mages

by Peter V. Dell'Orto

GURPS Martial Arts opened up a new world to character immersed in the fighting arts -- styles, maneuvers, new cinematic skills to give access to all of those kung-fu movie stunts and legends. But why should non-mages get all of the fun? **GURPS Martial Arts** gives a nod towards mages using martial arts styles with Dragon Man Kung Fu, but it was based on knacks instead of spells. Mixing Psi and Chi was given a sidebar, but magic gets short shrift.

Several races in Fantasy Folk -- elves, bales, etc. -- have inherent Magery. Would they not include specific spells into their martial arts styles? Even Neal Byles's excellent article ["Beyond Sylvan War Lore"](#) did not include specific spells for the styles. **GURPS Wizards** included the Martial Artist as a type of mage, but those were mages with a non-magical fighting style and spells to augment it. Why not mages who learned a style that presumes magical ability in its practitioners? This article contains some worked examples of magical martial arts, and some design guidelines to help you make your own hybrid martial/magical styles. This article focused on **GURPS Magic**-based campaigns. Ritual Magic, Rune Magic, and other systems of magic can also have styles developed for them. This article is also fairly generic. Hopefully, this article will inspire people using those systems to develop their own high- kicking, spell-tossing wizards that fit snugly into their own campaigns.

Primary Skills, Secondary Skills, Optional Skills, etc. are as defined in Chapter 4 of **GURPS Martial Arts**. Three new categories have been added. These are Primary Spells, Optional Spells, and Prerequisites.

Primary Spells are spells that are considered "core" spells for the style. These spells -- like Primary Skills -- must be within 2 points of each other. They do *not* need to be within 2 points of Primary Skills; since mages will very often have higher spell skills it would be very restrictive if they needed to raise physical Primary Skills before they could raise a much-utilized spell! Spells also need to be at higher levels -- while Karate-21 denotes a very skilled fighter, Deathtouch-21 is required for a melee-oriented mage to cast the spell without concentration. However, a magical martial stylist must have skill 18 (not 16) in any Primary Spells before learning any Cinematic Skill or Cinematic Maneuvers.

Optional Spells are spells typically learned by students of the style but which are not core spells for the style itself. Optional spells may require additional prerequisites to learn which are not factored into the cost of the style nor into the list of prerequisites. These spells can be learned at any time; they are simply included to highlight the spells stylists may find especially helpful.

Prerequisites are mostly self-explanatory. These are advantages, stats, and especially spells that are required for the Primary spells in the style. Cost of prerequisite spells are factored into the cost of the style; prerequisite advantages and stats are not. This is because the Magery prerequisite can be met as part of a racial package, through limited Magery, etc. Stat costs can also vary thanks to racial packages.

Cinematic Magical Arts

There is no *technical*, game-mechanical reason why Trained By a Master and its accompanying Cinematic Skills and Cinematic Maneuvers cannot co-exist with Magery. There may be valid game *world* reasons why a GM wants to keep Chi powers separate. These styles assume that you are willing to mix Chi and Mana; if not, simply ignore the Cinematic Skills and Cinematic Maneuvers for the style. Some of the more fantastic elements of Wuxia films and console video games are more easily modeled by magic, in any case.

Multiple Attacks can also exist side-by-side with mage-centered martial arts; however, normal rules for spell casting apply. In other words, even if you can strike four times a turn, you can still only cast one spell per turn. One highly cinematic and potentially campaign-changing is to allow attacks to be traded for seconds to cast spells faster, identical in all other respects to the Reduced Concentration for Cinematic Skills sidebar on MA61. You can still only cast one

spell (plus one Blocking spell) per turn.

For another way to mix Chi and Magic, see ["Chi Based Magic."](#) Chi-based mages would develop very different styles from those in this article. A mixed campaign with both mage-focused martial arts and Chi Mages using "standard" styles could feature the flexible Chi-style fighter-mages contrasted with the more narrowly focused but powerful Mana based fighter-mages. Characters would have to choose between enhancing their mundane skills using Chi, or adding magic to their mundane skills. Perhaps there is a secret war between the Chi Masters and the Mana Masters, each trying to prove the ultimate superiority of *their* magical style.

Stone Missile Fighting

13 points/15 points

This style is based on Stone Missile from the Earth College; similar styles based on missile spells from the Water (Ice Dagger, Ice Sphere), Fire (Fireball, Explosive Fireball), Air (Lightning), and Movement (Poltergeist, Winged Knife) colleges are also common. Stone Missile Fighting places great emphasis on keeping the enemy at range and dealing with missile counter fire using a shield. Because the Stone Missile wizard must keep a free hand to hurl his missiles, unarmed strikes and parries are taught to help fend off a foe.

Advanced students often learn Iron Arm to give them a surer defense with their open hand; Shield and Missile Shield provide further protection from enemy mages and archers seeking to neutralize the stylist.

Legends of the greatest Stone Throwers (as they are sometimes called) claim they can hurl their missiles through the walls of castles and that they can hit a moving target while blindfolded.

Stone Missile Fighting is an excellent style for characters with Single-College Magery.

Primary Skills: Brawling; Shield; Spell Throwing (Stone Missile) [2].

Secondary Skills: Short Staff.

Optional Skills: Broadsword, Throwing, Staff.

Maneuvers: Feint (Spell Throwing); Hit Location (Spell Throwing), Off-Hand Weapon Training (Spell Throwing).

Cinematic Skills: Blind Fighting, Breaking Blow.

Cinematic Maneuvers: None.

Primary Spells: Stone Missile [2].

Optional Spells: Iron Arm, Shield, Missile Shield.

Prerequisites: Magery *plus* Create Earth, Earth to Stone, Seek Earth, Shape Earth.

Death Fist

21 points/27 points

Deathtouch, especially at high skill levels, is a natural spell for a melee-focused wizard to learn. Death Fist was developed by a small sect of master Body Control wizards in their hidden mountain fortress. It has since spread, but retains a fearsome reputation for its destructive power.

Death Fist assumes the wizard will be fighting multiple opponents or fighting armed and armored opponents. Because of the danger in striking an armed opponent either from a successful parry or possible injury for striking hard armor, this style teaches grapple techniques and counterattacking techniques. Death Fist practitioners will usually take a "wait and see" posture against armed opponents, seeking to lure them into striking first and either countering with an Arm Lock and repeated Deathtouch spells or a Riposte. Death Fist fighters facing armored opponents will typically either grapple or use the Mage's Touch. A mage with this style *can* Riposte while pulling his blow to a mere Mage's Touch, inflicting damage or paralysis on an enemy. Stylists can also substitute Karate or Judo for DX to make a touch attack.

Hit Location is taught to enhance the body-part specific touches needed for Total Paralysis and Paralyze (or Wither) Limb. Jump Kick is used to strike foes at longer reach, and the Shuto is taught to help bypass the dangerous defenses of an armed opponent.

A very popular spell combination for Death Fist practitioners able to cast Total Paralysis or Deathtouch without concentration, is to parry with Iron Arm, and immediately Arm Lock the opponent. On the mage's turn, the attack spell is cast on the hapless opponent while inflicting a damaging arm lock. Death Fist mages facing multiple foes often use their grappled foe as a shield against any foes, or throw paralyzed foe to the ground. Against a single foe, stylists are taught to hold on and not let go.

Advanced students are taught the staff to provide another option against armored foes; jumping and acrobatic techniques are sometimes folded into this style as well. Deathtouch-21 and/or Total Paralysis-21 are very common skill levels amongst Death Fist practitioners.

Primary Skills: Karate, Judo.

Secondary Skills: Staff.

Optional Skills: Acrobatics, Jumping.

Maneuvers: Arm Lock, Hit Location (Karate), Jump Kick, Riposte (Karate), Shuto.

Cinematic Skills: Blinding Touch, Hand of Death, Pressure Points, Pressure Secrets.

Cinematic Maneuvers: Roll With Blow, Sticking.

Primary Spells: Deathtouch [2], Iron Arm, Total Paralysis.

Optional Spells: Dexterity, Great Haste, Shield, Wallwalker.

Prerequisites: DX 12+, Magery 2plus Itch, Pain, Paralyze Limb, Resist Pain, Spasm, Wither Limb, and 4 other Body Control spells (which can include the Optional Spell Dexterity).

Fire Swordsmanship

13 points/15 points

Fire Swordsmanship is practiced by mages specializing in Flame Jet. Derogatorily called "Johnny One-Spells" by more broadly skilled wizards, these stylists can be deadly foes. With a flaming, variable-length weapon (albeit a potentially tiring one, depending on the skill level of the stylist) Fire Swordsmen can be dangerous fighters. Because the flame jet is useless as a defensive weapon, shields (especially Large shields) are used extensively in this style. Some stylists eschew the shield, and use defense magic and a second Flame Jet to fight.

Full-extension lunges are taught with the Flame Jet, allowing for (counting a Step) a whopping five-yard attack range with a full-power Flame Jet. The Stop Hit maneuver is taught as well, with Fire Swordsmen sticking their Flame Jet into an opponent instead of attempting any defense with the (useless for parrying) Flame Jet. The tactic is especially effective against Pyrophobes and animals.

Fire Swordsmanship has relatively few legends about its practitioners. Those few legends fixate on the hypnotic nature of fire; Trained By A Master Fire Swordsmen can use Hypnotic Hands, but instead of intricate hand motions, complicated and rhythmic swirls and turns of their Flame Jet are used to fascinate an opponent. A Flame Jet must be maintained at all times in order to use this skill. One famous Fire Swordsman is said to have been able to strike everyone within 10 feet of him in a single second. Whirlwind Attack based on Magic Jet is also possible for a cinematic Fire Swordsman.

Primary Skills: Magic Jet [2], Shield.

Secondary Skills: Broadsword.

Optional Skills: Brawling, Hypnotism, Wrestling.

Maneuvers: Close Combat (Magic Jet), Feint (Magic Jet), Lunge (Magic Jet), Off-Hand Weapon Training (Magic Jet), Stop Hit (Magic Jet).

Cinematic Skills: Hypnotic Hands (with Flame Jet).

Cinematic Maneuvers: Whirlwind Attack.

Primary Spells: Flame Jet [2]. This spell is typically learned to skill-21+.

Optional Spells: Missile Shield.

Prerequisites: Magery plus Create Fire, Ignite Fire, Shape Fire.

Elves, bows, and magic have all gone together since before the rise of man. The ageless elves seek perfection in the bow, and have woven together a style that meshes their innate skill with the bow with their innate Magery. Because elves are in no hurry, Elven Archery takes a *long* time to learn -- typically decades of study. Elven archers are taught that nothing should ever suffer, and to kill with one shot is the goal of training in the longbow.

Despite the elven penchant for taking things slowly, they are not fools -- advanced students learn Fast-Draw (Arrow) to help get them out of tight jams in times of warfare. To counter the crude, poisoned arrows of their orcish foes, Elven Archers favor Reverse Missiles, thus removing those orcs skilled enough to cause any real harm neatly and effectively.

Elven master archers are famous for their extremely long-distance shots, even considering spells such as Hawk Vision. Those same masters are reputed to be able to paralyze a foe without harming him in any way using a blunted arrow.

The Autotrance advantage is very appropriate to the elven practitioners of this style, if the GM permits. Non-elven stylists are extremely rare; non-mages can learn to shoot a bow from the elves, but lacking Magery they will be unable to execute many of the long-range shots elves regard as part and parcel of the style. GMs are justified in charging a very stiff Unusual Background for a non-elf learning this style.

The skills outlined below are only the basic core of Elven Archery. Because of the long lifespan of elves, masters of this style will develop a bewildering array of tactics and spells to help achieve them. Because of this, *any* spells can be considered Optional Spells for this style. Examples include learning Illusion & Creation magic to deceive enemies or create warriors to help rain arrows down on them, Sound and Plant spells to hide from the enemy or distract him, spells such as Flaming Missile, Icy Missile, and Electric Missile to further harm foes, etc. All elven archers learn the fundamentals, but no two masters are truly alike in their spell selection.

Primary Skills: Bow [4].

Secondary Skills: Philosophy: Elven, Meditation, Stealth.

Optional Skills: Fast-Draw (Arrow), Knife, Physiology.

Maneuvers: Hit Location (Bow) [2].

Cinematic Skills: Breaking Blow, Pressure Points (Bow), Zen Archery.

Cinematic Maneuvers: none.

Primary Spells: Keen Eyes, Hawk Vision, Night Vision, Dark Vision.

Optional Spells: Invisibility, Reverse Missiles; also see above.

Prerequisites: Magery.

Designing Your Own

Why is the Style?

The most important consideration is coming up with a rationale for the style. Will it be built around a given tactic or set of tactics (such as Death Fist is), a given weapon (Elven Archery), or a given spell (Stone Missile Fighting, Flame Swordmanship)? You can also base them around an entire College (again, Death Fist) with a concentration on a few spells within that college that could potentially be the most useful.

An important consideration is cost. Sure, a style based on Blinking fighters using Disintegrate and Sleep cast instantaneously might be exceptionally effective, but would have a long chain of prerequisites, high Magery and stat requirements, and require a moderate number of skills and spells at high levels. Remember that the style should be learnable, and useful to, students of the style as well as masters.

All in all, the key to designing a magic-based style is a good theme. There are no historical examples of magic-based martial arts, which leaves a GM free reign to make up almost anything. Great fun can be had combing through **GURPS**

Magic and ***GURPS Grimoire***, looking for "the" spell that would form the basis of a great style.

Campaign Impact

This article assumes that the existence of fighter-mages is common knowledge and in fact that mages capable of holding their own in combat are an accepted part of the game world. If this is the case, adding style retroactively is much the same as adding ***GURPS Martial Arts*** styles retroactively. The GM must decide if this would cause too much of an impact on the game. Important considerations are the effect on pre-existing characters (perhaps a PC would have taken Hit Location for his Spell Throwing skill, but lacking a style previously he was unable to) and the effects of additional applications for maneuvers not previously allowed. Magic-inclusive styles are balanced with normal martial styles; they simply codify the types of tactics a fighting wizard would use even without the title "style" being applied.

Another way to add these retroactively is to make them a *secret*. This is especially effective if combat mages are somewhat uncommon and in a game world chock full of secret societies. It is also an ideal way to introduce these hybrid styles into an ongoing game featuring Cinematic martial arts. The next Secret Master the PCs meet could mix Fireballs and Deathtouches in with his Invisibility Art and Power Blows.

If martial arts styles for mages are being added to a campaign at the start, it would be a good idea for a GM to sketch out at least a few common styles. In game worlds like Yrth, where you have a military empire with strong magical leanings (Megalos), it would be likely that there is a "basic training" style that all of their combat mages are taught. By extension, you might get dueling styles used by mages in Araterre or Sahud to settle their grievances, police-mage styles used in Tredroy to safely subdue suspects, secret and bizarre styles practiced by crazed islanders on the Ring Islands waiting for foolish adventurers to practice their spells on . . .

A League of Your Own

Designing Supers Teams

by Brian Rogers

It's time to start your new supers campaign, and it's time for you to build a team of costumed heroes. Here are some ideas on how to do that drawn directly from the source material, for you genre fiends who want your games to look exactly like the comics.

While it's a cliché to divide things into two types, in this case it's true: there are two types of supers teams. There are teams for which the heroes appeared first (and often only) in the team book, such as the *X-Men*. Then there are teams where the heroes also appear (or used to appear) in their own books, like the *Justice League*. While this distinction may seem like a small thing, it makes a big difference, and if you're aiming for the feel of one or the other you'd do well to keep it in mind at the outset.

Wanna Party?

Heroes that originated in teams have specific powers. Despite the prevailing advice that supers characters should have balanced methods of offense, defense, miscellany, and movement, most team characters start with only one or two of these aspects. They're focused rather than being broadly powerful. Some are strong, close combat fighters, others use distance attacks or manipulate the environment, or are sneaky, or versatile support characters. Since no one is skilled at everything, they must rely on each other's strengths to accomplish their goals.

All of this sound familiar? It should -- they're an adventuring party! Just as a good fantasy party relies on a good mix of fighting men, sneaky types, and magic wielders, a supers party relies on a good balance of offensive, defensive, movement, and miscellaneous powers spread through the team.

If you want to design such a party of heroes, you'll have to abandon the idea that each starting character is "balanced" between offense/defense/movement/miscellaneous aspects. In fact, many party heroes start with just one of these aspects. Yes, this does make the character more focused at the outset, but a starting focus doesn't prevent him from growing later. Heroes who start with a single movement power -- say, personal teleportation -- can develop capable offenses and defenses from that power over time, or those starting with a single offensive power -- perhaps a force beam -- can stay vital without ever branching into the other aspects. The key is remembering that an experienced character still provides the party with his initial aspect over any other, just as a 12th-level fighter in a *Dungeons & Dragons* game still brings the same percentage of close combat muscle that he did at 1st level. Remember, the key to a party of super-heroes is that no one can do everything.

Instead of designing a character who can do a little of everything, pick one or two powers and decide which aspects those powers bring to the team. Put aside any preconceptions about what the power is supposed to do (such as "flame powers = energy projector = flight, force field, energy blast") and select which aspects you want it to provide. Most power concepts are flexible enough to work for any aspect if you tweak it a little. If you want to play someone with fire powers, but want to provide defense for the group, perhaps your only power is a flaming aura hot enough to vaporize lead? The character is well-protected against physical and temperature attacks with the potential for a potent offense if he can get close enough. A hero with Invisibility might start with just the ability to warp light around a target's head to induce blindness, making what is traditionally a defensive power an offensive one.

Ideally, power/aspect selection will occur during a group character creation session, preventing overlaps that might sideline one character in favor of another. In a party of supers, each character should bring something special to the team. While "shrinking inventor" is a great concept, having a teammate who can shape-shift to any animal (including an ant or amoeba) and another who is a genius technician makes your powers nearly irrelevant -- there are only so

many times the bomb is so small only a microscopic man could disarm it. Working around balance issues in play is a roleplaying challenge, but starting together reduces the chance of problems.

One last note about party-teams: expect everything to be cheaper and faster once you abandon balanced offense and defense. The same character concept can be built more cheaply when you don't need another 20 points in an attack to penetrate modest defenses. Combat, a big part of the supers genre, speeds by with lower defenses. Fights in party-team comics are generally two-to-three hit affairs rather than the nickel and dime conflicts of aspect-balanced heroes. Mirroring this keeps you closer to your source material and gives you more time for roleplaying or investigation (or more fights, if you prefer). Be warned that attacks and defenses should be scaled so that heroes won't be killed in one shot, but one-shot-KOs are pretty common in the comics.

Just a Little League

The other type of team is one where the heroes worked solo first. In comics, solo heroes stick to the "balanced aspect" concept. They have to -- they're on their own and must be able to handle various challenges. With a combination of potent aspects, solo heroes are stronger than party-based heroes. Many supers players like knowing their hero is able to do something in every situation, making solo heroes the RPG standard (after all, superheroes are partially about adolescent wish fulfillment). If each such hero is powerful, then a league of them . . . well, such a group can probably claim to be Earth's Mightiest Heroes. Even a small league can handle big problems.

Of course, leagues also *cause* big problems. League style teams tend toward a lot of ability overlap. Dee's hero, the Blur, has super-speed? Great! Of course, her teammates Omniman and Amazonia also have super-speed, and come to think of it, Jovian and Red Flame can fly pretty darn fast . . . But the Blur is also a forensic chemist and police officer? Cool! But Vigilance is the world's greatest detective, and isn't Red Flame a member of an inter-stellar police corps? But, well, Blur's faster than everyone else. Dee can take comfort in that. If everyone is balanced in every aspect, players can count on sharing powers with at least one teammate, even if it's just flight or super-strength. If one PC can do everything, expect his teammates to be the same way. This makes it harder to distinguish one character from another by their powers. And while this hyper-competence can be a boon for GMs -- who can run a plot knowing that even if half the players don't show up the remainder have the necessary abilities to meet the challenge -- it also makes truly challenging situations harder to come by.

Group character creation is as important for leagues as parties. The main rule hasn't changed: each character must provide something special. In a party, this is done by giving each character something unique. In a league, it's done giving each PC an unmatched strength. Even if half the league has super-speed, the Blur should blow them away. While Amazonia isn't as strong as her other super-strong allies, she can speak with animals and enter the spirit realm -- powers none of her teammates possess. Overlap won't matter if each PC has a power no one shares or no one can match.

Notes on leagues: things will be pricier and take longer. Balanced characters cost more to build since they're meant to be more capable. With strong offenses and defenses, they'll last longer in fights. This could turn fights into hours-long slugfests with slow cumulative effects, or hinge on somehow trumping the villain with a masterstroke. Leagues in comics tend towards the latter, with one or two heroes engaging in the slugfest while the others set up the coup de grace. Second, since such characters in comics originated in their own books, game approximations of league heroes should be carrying more baggage. Expect each one to have a unique origin story, a rogues gallery and personal contacts. This can be a hassle, but it also gives more room to play: expect a league to have a lot of personal enemies who will team up or go to war with each other, leaving the heroes caught in the middle.

Column A+ Column B

Some comics have teams composed of both solo heroes and team-only heroes -- the Avengers are a good example of this, with powerful headline members (Iron Man, Thor) appearing in their own books and other, focused heroes (Scarlet Witch, Hawkeye) who work just with the team. This is a good solution if you want to have heroes of differing power levels on the same team. Such power imbalances are common in comics, but anathema to some game systems.

There's little advice for this, other than keeping your eye on the main rule: everyone must have one standout ability to bring to the team. If you have that, and the heroes form an interesting [gestalt personality](#), relative power level doesn't matter.

Of course, you have to have players who won't play characters to their ultimate potential to the detriment of the game. Yes, the Blur's super-speed will get her into the enemy base unnoticed, but if her teammate Dancer focuses in invisibility and stealth she should let him take point. Of course, given the stakes that a league of heroes faces, such gracious behavior is just common sense; if the heroes mess up, things get really bad. Heroes who could *possibly* do something will learn quickly to cede the initiative to teammates who can *probably* do it if failure means a massive loss of life.

League as Troupes

If you do decide to construct a league of heroes, one common, unrecognized loss in RPGs comes from ignoring such heroes' defining characteristics: each has his own comic. There is a whole set of adventures outside the team that we, the players, never see, since the story's focus is unlikely to move to River City just to watch the Blur at work. To recapture this multiple comic feel, try borrowing a page from *Ars Magica* and construct your league for troupe style play.

To design a troupe, each player makes up a league hero. In addition to archetype and power concept, define the feel of his home city and solo adventures. Then everyone makes up a less powerful character to connect with every other league hero. These are sidekicks, contacts or friendly adversaries that form the supporting cast for a hero's solo title, even if they seldom appear in the league's comic. Such supporting cast members should be significantly weaker than the solo hero, and should fit the solo hero's idiom.

For example, let's take a group of 5 gamers: Asha, Bob, Chip, Dee and Eugene.

Asha is playing Amazonia, the spiritual warrior. She normally operates from Palette, a desert city known for its arts scene but steeped in ancient mysteries. Asha's looking for her character to be a butt-kicker in a magical environment. With this in mind, Bob makes Deacon Frost, Christian bookstore owner, low-end magician and possible romantic interest; Chip builds Tunnel Rat, a mostly reformed were-rat who shares Amazonia's enemies and hunting ground if not her raw power; Dee decides to play Plucky Orphan Sara, the quintessential curious teen detective weirdness magnet; Eugene settles on Coyote, a shamanistic trickster and Palette's other public hero.

Bob is Omniman, the innocent über-hero. Operating from Spire City, home of vast skyscrapers, with a love of the grand and new. Bob wants Omniman to be the childlike heart of this metropolis, with whimsy and big threats going hand in hand. Asha decides to make Capt. Lisa Quincy, head of Spire City's SWAT team and fully grounded in reality. Chip questions Bob on Omniman's origin, learning that he was irradiated by a meteorite before his family moved from the farm to Spire City. That gets a riff going, where Chip makes Omnipup, Omniman's irradiated dog with a fraction of his powers, and Dee makes Omnilass, Omniman's precocious eight-year-old sister, also with the same power set. Eugene toys with the idea of playing Omnihorse, but settles on Dr. Bertram Bueaford Blast, absent minded scientist with a flare for irreproducible accidents.

Chip is Vigilance, the aggressive detective. His home, Bridgeport, is steeped in crime and corruption, and Vigilance is the last bastion of law within a community whose police are rotten to the core. Knowing that Chip is pushing the dark detective motif to its limits, Asha goes for Holly Heart, madam with tantric super-strength and no love for the current regime; Bob builds ORWELL, the AI that helps Vigilance track events in Bridgeport; Dee makes Shadow, Vigilance's kid sidekick, a weaker version of his mentor with a tragic past but hope for the future; finally, Eugene makes Detective Mark Janus, who plays the 'one good cop' in Bridgeport, but may have just hitched his wagon to Vigilance's star to get a shot at taking over.

And so on.

Notice that each supporting cast acts as a complement to the hero. Each city and cast emphasize core concepts:

Amazonia's share her mystical bent. Players can build what would normally be NPCs -- like straight men (Captain Quincy) or romantic contacts (Deacon Frost) -- to play with genre tropes. They can focus on favorite clichés by bringing a version of it into each city (just as Dee made everybody a kid sidekick). The unique power rule gets waived for supporting cast (Omnilass doesn't have any powers her brother isn't better at), but such supporting cast members stand out on personality in their limited appearances (Omniman seldom goes "Wheeeeeeee!" or plays dolls with the giant robots). Character concepts too silly (Omnipup) or too limiting (ORWELL) for long-term PCs make strong supporting cast members. Finally, the supporting cast makes the hero look heroic and important, demonstrating why he rates membership in the league.

Troupes have other advantages. Group creation of supporting casts spreads the creative burden. Different cities make the world feel lived in, and give places to tell smaller stories than those normally facing the league. The cities, with their personal connection to the league heroes, make excellent places for alien armadas or cosmic entities to threaten.

In Conclusion

The divisions between solo heroes banding together, teams that begin together, and the mix of the two are fairly consistent in the comics. The team's origins showcase how heroes develop and work together, and provide a better framework for those people who want their game to feel like the adventures of their favorite heroes. Supers games are incredibly flexible, so they should be able to accommodate the unwritten rules of their source material -- even ones driven solely by the marketplace.

Frederick Townsend Ward

A Historical Character for *GURPS*

by James L. Cambias

Lived 1831-1862. A wiry, dark-haired American man 5'7" tall, with black shoulder-length hair and a black mustache and imperial. Descriptions give his eye color as either black, deep hazel, or dark blue.

History

F.T. Ward was born November 29, 1831 in Salem, Massachusetts. His father was a sea captain and a stern disciplinarian both on ship and at home. Young Fred went to sea as second mate on a merchant ship in 1847, but already he was becoming interested in soldiering. He spent a term in 1848 at a military school before going back to sea. After voyages to China and Latin America (where he met the exiled Italian revolutionary Giuseppe Garibaldi), Ward became a mercenary soldier. He served under William Walker on an abortive invasion of Mexico in 1852, and fought in the Crimean War in the French army.

In late 1859 Ward arrived in Shanghai just as the city was threatened by the advancing armies of the Taiping rebels. The Taiping movement needed a new base of supply and new sources of loot, and Shanghai offered both in abundance. The Manchu government could not spare troops to protect the city, and the European powers were reluctant to be drawn into a Chinese internal conflict.

The Chinese and foreign merchants of Shanghai weren't about to let themselves be plundered by a rebel army of religious fanatics. The energetic young American Fred Ward offered a solution: he would organize a mercenary force under his own command (but at least theoretically loyal to the Manchu rulers of China) and stop the Taiping forces. The mercenary army wasn't big enough to mount a major offensive against the Taiping forces, but it didn't need to be. By defending Shanghai, it served as the anvil, while a much larger Chinese army moving downriver from Hunan acted as the hammer to crush the Taipings.

During 1860-1862, Ward's mercenary force, known variously as the "Foreign Arms Corps," the "Chinese Foreign Legion," or simply the "Ward Corps," scored a remarkable series of victories against the Taipings. After a bad experience with using European mercenaries, Ward kept his unit all-Chinese, trained and equipped Western style, with American and French officers and British NCOs. The fact that many of his British noncoms were deserters did not endear Ward to the British authorities in Shanghai. By 1862, the force was given the title of "Ever-Victorious Army," and it very nearly lived up to the name.

Ward's battlefield success won him wealth and acclaim. He collected a bounty from his backers for each town captured from the Taipings. The Manchu government honored him by making him a Mandarin and giving him a

A Time Traveler?

Of course, maybe Ward wasn't ahead of his time so much as out of his time. Certainly he had many features which suggest a visitor from the future -- his unusual lack of racial prejudice, his keen grasp of cutting-edge military tactics, and his attention to "winning hearts and minds" as well as battles. The Taiping Rebellion and the failure of the Manchu rulers to adapt to Western encroachments set the stage for the Boxer Rebellion, the Japanese invasion, and the rise of the Communists. Perhaps Ward was a time traveler hoping to change history by making China more stable and progressive. Or maybe Ward was from an alternate future, working to prevent China from becoming a world power too soon by keeping the corrupt and ineffective Manchus in power for another generation -- in which case his death may have been faked once he accomplished his mission.

Illuminated Ward

China in the 1860s was a hotbed of foreign and domestic conspiracies anyway, so it's not too hard to make Ward an agent of one or more Secret Masters. His constant world travel could easily be the movements of a crack field

commission in the Imperial army. Remarkably, in 1861 Ward proposed marriage to Chang-mei, the daughter of his patron Yang Fang. They were married in proper Chinese fashion.

Sadly, the marriage was doomed to be short. Ward was killed on September 21, 1862, during an assault on the town of Tz'u-ch-i. He was almost 31 years old at the time of his death.

Ward's effect on history is potentially large. Without the Ever-Victorious Army, Shanghai's only defense would have been the French and English regular troops, and the campaign would have quickly turned into a scramble for more colonial influence. This could have hastened the collapse of the Manchu dynasty -- ending the Chinese Empire 50 years early and plunging the whole country into chaos.

Alternately, the Taiping conquest of Shanghai might have given the rebellion a much-needed second wind. A more successful Taiping movement might either unify China and kick out the foreign influences a century before Communism, or else provoke a united response from the colonial powers, bringing about a complete partition of the country under foreign rule. The success of Ward's army helped preserve China's rickety Manchu regime for another half century.

Encountering Ward

Player characters in 1860s China can encounter Ward in a number of ways. The most obvious is professional; characters with military experience can join the Ever-Victorious Army as officers or NCOs, especially if they have valuable skills (engineering, artillery, medical, intelligence, etc.)

The swirl of intrigue in Shanghai could also put the PCs and Ward on opposite sides. There are many powerful factions who would like to be rid of him -- the Imperial Court, the British, and of course the Taipings. Shady characters could get hired to kidnap or assassinate Ward. Not that getting past China's best-trained military force will be easy.

Ward makes a great patron or ally for adventurers. Maybe he needs to organize a special-forces unit for the Ever-Victorious Army, and hires the PCs to form the core of his elite force. Characters who stumble into occult mysteries in China can certainly use the help of a tactical genius and a heavily-armed military force.
