This spell transforms unattended foodstuffs into a lavish meal for one medium-size person per level of the caster. The meal is of the highest nutritional quality and tastes wonderful, regardless of the quality of ingredients used (though they must be edible in their raw state, or the spell fails). The prepared foods do not spoil for one day/level of the caster and are perfectly nutritious, with no unneeded calories and a perfect blend of other nutrients. The meal may be of any style with which the caster is familiar.

Pick-Me-Up

Transmutation

Level: Modern 1

Components: V, S, M

Casting Time: 1 action

Range: Close (25 ft. + 5 ft./2 levels)

Target: 1 creature

Duration: 24 hours

Saving Throw: Fort negates

Spell Resistance: Yes

This spell temporarily prevents the target from being affected by fatigue, exhaustion, or lack of sleep. Though the target must keep track of conditions such as being fatigued or exhausted, for the duration of the spell these conditions do not affect him. Not even magic sleep can affect the target. At the end of the spell's duration the target is automatically fatigued for 24 hours. If already fatigued, he is exhausted, and if already exhausted or slept the target sleeps for 24 hours.

Material Component: A mild stimulant, such as coffee, tea, or a caffeinated soda.

Redirect

Transmutation

Level: Modern 3

Components: V, S, M, F

Casting Time: 1 action

Range: Touch

Target: One visual recording touched

Duration: Up to 3 hours (see text)

Saving Throw: Will negates

Spell Resistance: Yes

This spell allows the caster to change one visual recording. This includes video tapes (including security camera tapes), DVDs, digital formats, film, and any other form of recording moving pictures. The recording can be changed in any way the caster wishes though he must somehow describe all changes. If the caster has a script he would like the recording to follow, the change is immediate. Failing that the change must be one that can be described in a single sentence ("The main character always wears a clown suit."), or the caster must watch the recording and state changes as he wants them to occur. The spell can last up to three hours when used in this manner though all changes made are permanent.

Though the recording shows no signs of tapering, and all acting and effects are of the highest quality, bad scripting and contradictory changes can make the new recording obviously fake. Further only the single copy of the recording touched by the caster is changed; all other copies are unaffected. The new recording acts in all ways like a normal recording and can itself be copied or re-edited by normal technological or mystic means.

Material Components: A teleplay script. If desired, the script used can become the new script of the visual recording.

Focus: If elements from another visual medium are to be incorporated into the recording, such as characters from a movie or actors in a magazine, a copy of that visual medium must be held by the caster.

Security Risk

Illusion (Glamer)

Level: Modern 2

Components: V, S

Casting Time: 1 action

Range: Touch

Target: Object weighing no more than 50 lbs. touched

Duration: 10 minutes/level

Saving Throw: None

Spell Resistance: No

Designed to conceal a weapon or contraband item from modern detection devices, the *security risk* glamer prevents an object (weighing no more than 50 lbs) from detection by any device, technology, or indirect method. It can still be perceived by all 5 normal senses by any living creature, but does not show on radar, metal detectors, chemical sniffers, X-ray, security cameras or even in mirrors.

Unseen Assistant

Conjuration (Creation)

Level: Modern 2

Components: V, S

Casting Time: 1 standard action

Range: Close (25 ft. + 5 ft./2 levels)

Effect: One invisible, mindless, shapeless servant

Duration: 1 hour/level

Saving Throw: None

Spell Resistance: No

An *unseen assistant* is an invisible, shapeless force that performs simple tasks at your command. The force takes orders only from the caster unless ordered to obey a second voice (the force can only obey one creature other than the caster). The spell is complex enough to manage tasks an average person can understand and perform. It can run and fetch things, cook simple meals, type written notes, change diapers, make computer reservations, do laundry, and assemble pre-fabricated furniture.

The force can multi-task as well as a normal person and react to new stimulus, but cannot speak. For example it can cook a meal while listening to a baby on a monitor, then go to rock the child to sleep if it hears him crying, leaving the food on simmer. It has an effective Strength score of 2 (so it can lift 20 pounds or drag 100 pounds). It can trigger traps and such, but it can exert only 20 pounds of force, which is not enough to activate certain pressure plates and other devices. It can't perform any task that requires a skill check with a DC higher than 15 or that requires a check using a skill that can't be used untrained. Its speed is 15 feet.

The servant cannot attack in any way; it is never allowed an attack roll. It cannot be killed, but it dissipates if it takes 12 points of damage from area attacks. (It gets no saves against attacks.) Once cast the spell's range is unlimited.

Wardrobe

Transmutation

Level: Modern 2

Components: V, S

Casting Time: 1 action

Range: Touch

Target: 1 creature

Duration: Instantaneous

Saving Throw: Will negates

Spell Resistance: Yes

With this spell the caster can instantly change the clothes worn by one creature. Any clothing, jewelry, armor, or accessories currently on the target can be removed (with an audible "pop"), causing it to lay unharmed at the feet of the target. If the caster has a unworn set of clothes, armor, jewelry, or accessories he can cause these to fit onto the target in the proper manner. Even if the clothes to be put on are not exactly the right size for the target they size to fit, as long as they are designed for a creature within one size category of the target. Items put on in this way always seem custom tailored and well-fit. When removed, the clothes and other apparel return to their normal size.

Pyramid Review

Haven: City of Violence -- A Role-Playing Game of Modern Violence

Published by [Louis Porter, Jr. Design Inc.](#)

Written by Louis Porter, Jr. with Brent Dragoo, Steven S. Long, Angus McNicholl and Simon Rocquette

Illustrated by Rowan Dodds and Jason Walton

208-page b&w softcover; \$30.00

Playing Cops 'n' Robbers is one of the two analogies most often used when explaining the basic ideas behind roleplaying, the other of course, being Cowboys 'n' Indians, so it is no surprise that there have been roleplaying games for both genres. What is surprising is that there have been so few, with FGU's *Gangster!* and TSR's *Gangbusters* leading the way, both focusing upon the genre's classic period of the 1930s. Other games looked at either cops or robbers, with the *Dallas RPG* from SPI combining soap opera and the criminal actions of Texas oil barons, and Task Force Games' *Crime Fighter* exploring the TV cop show. All of these titles are long out of print and the trend for most games is to explore their setting's criminal underbelly through dedicated supplements such as White Wolf's *World of Darkness: Mafia*, though more recent titles such as Guardian of Order's *Ghost Dog: The Way of the Samurai RPG*, the scathing *Violence: The Roleplaying Game of Egregious and Repulsive Bloodshed* from Hogshead Publishing, and *GURPS Cops* have all bucked this trend.

In the wake of such films as Quentin Tarantino's *Reservoir Dogs*, television series like *The Sopranos*, and computer games such as *GTA: Vice City*, it still seems strange that no roleplaying game has appeared based on the organized crime genre. All that changes now, and although several have been promised, the first to see publication is Louis J. Porter Jr.'s self-created and self-published *Haven: City of Violence*. This is set in the fictional setting of Haven, on the USA's East Coast and described in back cover blurb as a cross between New York City, East Central Los Angeles and Beirut. The blurb also describes the RPG as a cross between *Frank Miller's Sin City*, John Woo's *Hardboiled*, and James O'Barr's *The Crow* as well as "... [Y]our worst urban nightmare come to life." (As an aside, it should be pointed out that in drawing from various movies, *Haven: City of Violence* is also going the other way and has been licensed for movies, as this [news story](#) attests.) This blurb states loudly is not a game of good versus evil, but rather one of, "Evil Versus Evil." All of which are high claims for the author to make about his project; so does *Haven: City of Violence* live up to them, or are they all so much hype?

Behind what is an eye-catching cover, the look of *Haven: City of Violence* is something of a throwback. Specifically to the mid-1990s, with a heavy black and white layout that uses a lot of "white text on black background" tables; together with the use of the Courier typeface as its signature font, this is very reminiscent of Eden Studio Inc.'s *Conspiracy-X RPG*. After the opening full-color (and somewhat confusing) 16-page comic strip, the book is illustrated with artwork that captures the gritty feel of the game and the decrepit look of Haven's worst boroughs. Overall, the appearance of *Haven: City of Violence* is well done, especially for a first-time product, though this is not surprising given that the author is also a graphic designer. On the downside, the book lacks an index and could have done with another proofreading prior to publication.

As a setting Haven feels a little forced, being something of an amalgam of the cities and sources listed above. Lying less than 50 miles North of Baltimore, its six boroughs are described as encapsulating America herself within their boundaries -- Arcadia has all the bright lights of Las Vegas, providing entertainment and pleasure; Armistad is Detroit with its empty car factories and the ever-present stench of its meat processing plants; Freeman Hill is 1950s suburbia

striving to hold off more modern influences and an influx of immigrants; Golden Heights is the city's most upscale neighborhood and the offshore Rome Island is its antithesis, being pure slum ghetto; and Haven City is its cultural and commercial heart, much akin to New York City. The city is dominated and riddled by crime and corruption from the top down.

The history explains how the current state of Haven's all-too-overt underworld have come to be over the last five years. From how the coalition of the three organized crime families -- the Carlucci, the Patrone, and the Santucci -- were split by infighting, allowing the Crimson Eagle Triad to move in and build up the Red Wing Tong. On Rome Island, one man united all of the African American gangs to form the Nubian Nation, which not only drove off the City of Haven Police Department, but also was able to decapitate the leadership of the expanding Red Wing Tong. To protect themselves from reprisals, the Nubian Nation allied itself with the Latino Sangre gang, which had earlier wiped out the Freeman Hill based White Aryan Resistance and is now facing a resurgence of Neo-Nazi resistance in the form of the Templar Knights. The Crimson Eagle Triad finally accepted the leadership of the Red Wing Tong by the wife of the late head, after she increased profits four-fold. More recently, the beaches of Rome Island have become home to a horrible mystery, a serial killer known as Milk Baby, who leaves his victims -- including all but one of the S.W.A.T. team sent to stop him -- crucified and reeking of fetid milk . . .

It is into this climate of fear and threat that characters are placed after their creation. Players can select from one of the several prototypes each given their own page or two. There is one each for the various crime gangs and families present in Haven, as well as more typical character types: mercenary, politician, police officer, bounty hunter, bodyguard, and private investigator. Alternatively, 100 character points can be spent to create a character, being spent on Primary Abilities (Strength, Will, Agility, Stamina, Intelligence, and Perception) -- each rated from 1 to 21 plus (9 to 15 is average); plus skills, languages, benefits, drawbacks, and special abilities. From the Primary Abilities a set of seven Secondary Abilities are derived. These are Influence (basically charisma), Movement Value, Accuracy (with firearms and throwing weapons), Fighting Value (in hand-to-hand combat), Subterfuge (ability to deceive or dissemble), Counter Measures (dealing with mechanical devices and security systems), and Health -- split between Concussion and Lethal types.

Characters receives a limited allotment of skills, equal to a fifth of their Intelligence ability. Each of these skills receives a +1 bonus, to which can be added another three levels. That +1 is equal to basic or high school training, while +2 represents a B.A., +3 an M.A. and +4 a Ph.D. Languages come free, with more intelligent characters being able to speak and read more than their native tongue, though no second language can be rated higher than their native. Unfortunately, how a language's rating is reached is not properly explained, while the selection available is a little odd. Mandarin and Cantonese are amalgamated into Chinese, while English is curiously broken up into English (that is, American English), English -- Australian, and English -- United Kingdom (that is, *English* English).

Benefits are the equivalent of advantages and include the usual mix, as does the list of drawbacks or disadvantages. Special Abilities are more outré in nature, such as Sixth Sense, Anti-Hero (this grants the player extra experience points), Berserk Rage, Cop Eyes (the character looks like the Law, even if they are not), Dodge (able to dodge items or bullets up to six times a day), Future Days (precognition), and Predator (the uncanny ability to track). Whether or not these are suited to every game will be up to the referee, as they may not always sit well in some variations of the genre that ***Haven: City of Violence*** is trying to portray. Anyway, the finished result does not take all that long, but it would have been made easier with the inclusion of a full example of the process, and also a character sheet. Nor does it appear that one is provided on the publisher's website.

The game's mechanics are a very simple affair: Take the appropriate skill, add it to the associated Primary or Secondary Ability, apply any situational modifiers, and roll equal to under the result on a 20-sided die. Each skill lists its situational modifiers, with even an easy task -- the equivalent of jumping over a puddle! -- suffering a penalty of -2, and an average task a penalty of -5! The system for gun combat uses the same system, but all modifiers are applied to a character's Accuracy Ability before the roll is made. Damage is determined location -- a leg hit would inflict d8 damage, abdomen d10, and head/neck d12+d8! This damage roll is modified by both the caliber of the weapon and the type of ammunition fired. So a successful hit from a .357 Magnum using Armor Piercing Explosive Tipped rounds inflicts +2 for the caliber, plus +1d4+1 damage for the round that also has penetrative properties.

Where the Accuracy Ability is used for shootouts, Fighting Value replaces it for hand-to-hand and melee combat. Characters receive a number of actions equal to a fifth of their Fighting Value, which can be split between defensive or offensive maneuvers. These are chosen prior to each round and revealed simultaneously, cross-referenced on a set of tables that cover both armed and unarmed combat to get a result. This can be concussive damage if unarmed combat, lethal if armed, and also result in a loss of actions as characters take more damage and thus become less effective. A similar system is used to handle car chases, with both systems feeling similar to TSR's **Top Secret RPG**, a favorite game of the author's. Like the rules for gun combat, the melee combat rules are accompanied by a very solid example that very effectively helps explain their use.

As a whole the rules and mechanics of **Haven: City of Violence** have a less-than-contemporary feel. This is particularly evident in that it favors a character's attributes over their skills, benefits, and special abilities. Further, the game's core statistics -- Accuracy and Fighting Value -- are even more integral to its play when you consider that there are no *direct* combat skills. Despite this, there is a coarse brutality to the game system that matches the genre of **Haven: City of Violence**. This is no more true than with the combat rules, which though effective, are hampered by the constant need to flip between pages to find the desired tables. The lack of an index does not help this, and neither does the fact that the tables have not been reprinted at the rear of the book.

So far **Haven: City of Violence** has lived to all of the claims given in its blurb -- certainly as far as the rules and the setting of Haven go. Where it does not come close to matching them is in the support provided for the referee or "Games Operation Director," this a hangover from the author's initial desire to make an action-orientated game similar to that of **Top Secret**, and ill-advisedly abbreviated to "G.O.D." What support there is comes in two forms; one is a chapter entitled "The Golden Rules," and the other is a scenario, "Emerald Hill." The Golden Rules turns out to be good advice to running a roleplaying game; in fact it is good advice for running *any* roleplaying game because it amounts to what is the standard text on the subject.

Nowhere in the 208-pages of **Haven: City of Violence** is the one claim made in the back cover blurb that sets it apart from other games actually addressed, the claim that the game is one of "Evil Versus Evil." There is no advice for either the G.O.D. or the player on running or playing in a campaign where the characters are either amoral or immoral thieving, murdering, drug dealing, double crossing, swindling bastards. Nor is the issue dealt with effectively in the scenario . . .

Actually, there is nothing wrong with the scenario, "Emerald City," written by Steve Long, except for the fact that it is really designed for investigative characters, as opposed to crooked, violent, or vicious ones. In the 20-page adventure, the characters get wind that a highly adept, ruthless, and infamous gang of thieves -- the Bryson Hill gang -- is about to set up a score in Haven. The job of the players is to stop them, whether as cops (perhaps crooked) or as members of another independent rival gang or as associates of a Haven-based criminal organization. Though there is advice for running the scenario using the latter two groups, it is primary a gritty heist caper in the mould of Michael Mann's *Heat*.

There really is one place in the pages of **Haven: City of Violence** where could be said that the blurb's issues are dealt with, and that is in the author's personal statement that comes after the opening comic strip. This explains what he wanted to do with **Haven: City of Violence**, but mostly he explains both who he is and his personal history, so as to underwrite his legitimate right to create a game as brutal and as violence as this. Several times throughout the statement, he clearly and volubly shouts out that everyone is responsible for their own actions and *not* a game, like say, **Dungeons & Dragons** or even, **Haven: City of Violence**. Likewise, parents are clearly warned to confiscate the book should they not want their children reading or playing the game's content.

This is all well and good, as there is nothing wrong in making such statements, and perhaps he is to be applauded for doing so, but in so doing, what is it *exactly* that he is protecting both himself and his game from? This is difficult to say, as there is such a minimum of background to **Haven: City of Violence** compared to other games and of course, no discussion of its themes or genre. Because of this, the game draws a stronger comparison with computer games like *Grand Theft Auto: Vice City*, as both lack any real depth. That is intentional in the computer game, but in **Haven: City of Violence**, it comes across as a gum shield worn by a toothless shark.

As a rules system, **Haven: City of Violence** presents a slightly quirky set of mechanics suited to the action genre that

the author wanted to emulate. With these in hand, the G.O.D. could run anything from *The Shield* to *The Sopranos*, from *L.A. Confidential* to *Live and Die in L.A.* as his game, but as to the hows and whys of the genre, the author leaves gamers very much on their own. This failure to explore the themes and genre of ***Haven: City of Violence*** give it an old-fashioned feel (as do the rules) and deprives the game of any potential originality and maturity that it could have had, and that the author so clearly desired.

Stargate: SG-1 Roleplaying Game

Published by [Alderac Entertainment Group](#)

Written by Robert Defendi, Scott Gearin, Patrick Kapera, Don Mappin, Christina Kamnikar, Rodney Thompson, Kevin Wilson, Greg Benage, James Maliszewski, Rob Vaux, & Rob Wieland

Edited by Patrick Kapera, Valerie Kessler, & Rob Vaux

Graphic design by Steve Hough, Dave Agoston, & Justin Lawler

Set photography by Steve Hough

488-page color hardcover; \$50.00

The Stargate can take Man to more and wondrous places than he can imagine. It can ferry him across this galaxy and into the next. More practically, it can spin off TV shows, cartoons, and the *Stargate SG-1 Roleplaying Game*.

The TV show builds on the movie and tells the further adventures of Colonel Jack O'Neill and his intrepid band of explorers as they use this large, stony ring, found in Egypt, to pass from this world to the next. Trapped in a never-ending war against the Goa'uld, a sluglike race that possesses the bodies of humanoids and passes itself off as gods to other species, SG-1 and its allies work to find technology and new friends among the stars who will help them fight the good fight.

First off: This is a massive book. Closer to 500 pages than to 400, it does not suffer a lack of thoroughness. "Powered by *Spycraft*," it foregoes *d20 Modern* and uses the base *d20 System* and Alderac's *Spycraft* game as its bases, also borrowing elements from *Star Wars* (like vitality points and Defense).

It opens with a rundown of the setting for anyone who hasn't seen the movie *Stargate* or the TV spinoff *Stargate: SG-1*. Readers are introduced to the evil, parasitic Goa'uld; mankind's allies the Asgard "greys"; the ravenous Replicators; the endless infighting of the Goa'uld System Lords and their subject worlds; and the various races and species that have played a part in the ongoing struggle to secure Man's future. From Jack O'Neill's cinematic first trip through the gate to the desert world of Abydos, the history takes the story up to the end of season 6 of the TV show and the team's encounter with Anubis at that same planet. Throughout the rest of the book, they build a good picture of events outside the scope of the on-screen action as well. Though thorough, they have mercifully forgone the excruciating level of detail found in the *Farscape* game's episode guide.

Players then get a look at the guts of the operation, a description of the Cheyenne Mountain Complex that houses Stargate Command. Security measures, responses to threats, personnel and their reactions, and the cultivating of the right people for Stargate duty are all included. This prevents players from stumping the GM with all (well, most of) those troublesome questions that pop up regarding the whys and wherefores of the process. More importantly, they delineate the meat of the game with all the mission types you can expect to go on: exploration, first contact, diplomacy, etc.

There's a gazetteer of worlds from the series, big and small, important and not so much so, describing who lives where and how much the people of that world would like to help or kill Earthlings. Various important races from around the celestial neighborhood get their own write-ups, and the vile Goa'uld have a whole section set aside just for them, their plots, their history, and how to handle player character interaction with beings who believe themselves to be gods.

Character classes provided are: the explorer, the guardian (alien foot soldiers), the multitasking pointman, the scientist (to be confused with the explorer), the scout (always at home in the wilds), and the generic soldier (so why the separate guardian class?). The similarities between the soldier and guardian, and the explorer and scientist, make the choices feel limited. Worse, most of these have feats that allow you to give other team members the use of your skills, feats, or knowledge during a mission. It creates effective teamwork, but at a cost of some individuality or a sense of any one member's worth. The offending items are the classes' core abilities, after all.

The prestige classes do little to alleviate things. The bodyguard is the imposing escort for teams with delicate missions or personnel (and has nifty feats that let him lend defensive bonuses to, or even trade places with, his charge); the field analyst tries to make sense of new information gathered in the bush (like the explorer or scientist); the field medic heals the wounded; the officer leads the team (another instance of a character that passes benefits to others); the prime, one who follows, or has followed, the Goa'uld and serves as their right-hand man in combat (and thus is an awful lot like a specialized bodyguard); and the self-explanatory sniper. Then again, when your characters are recruited from the Armed Forces, there are only so many places to take your roleplaying career.

PCs have several options open to them, especially where feats are concerned. The book is brimming with feats, all divided into subsections like combat feats; terrain feats that allow you to make the best use of all that strange territory; species feats that make the foreign races more than guys in rubber suits (in addition to the special abilities provided elsewhere); and covert feats -- good for when you run up against the machinations of the mysterious National Intelligence Department during its many plots to hijack matters from Stargate Command.

Stargate takes it easy on readers not deep into military lore. There are weapons, to be sure, but you're not buried in hundreds of different firearms and dozens of vehicle types. On the other hand, there is a huge list of "kits." Kits, or "bundles," are quick and easy ways to select equipment for a mission. If you're going to document a new planet, you can select a kit that includes video gear and the like, and off you go into the wilderness with gun and camera. This list begins to get strange, though, down to minutiae like the arrest bundle, the Internet fan bundle, the movie buff bundle . . . coupled with a lot of rules on who of what rank can get how much gear and you start to wonder if the SGC is more interested in saving Earth from invasion or keeping track of its inventory.

It also doesn't help that the gear sections have some shoddy editing. For the most part the text reads clean, but there are many dropped, added, or switched prepositions, the Os all look like the letter o, some page references are wrong, and the writers can't agree on the spelling of some names or whether to capitalize Stargate. PCs are well-equipped, however, and you do get to use expensive goodies like the UAV to scan planets, so it's not all bad news.

The section on gamemastering Stargate is in some ways a scattered set of odds and ends, but they do establish a logical flow of information. Going from how to adjudicate actions and action dice (which, if you haven't seen them in use in **Spycraft**, can be used to boost bad rolls, activate threats, and restore some health), it then goes to encounters, the world around the PCs, designing new worlds (all of it, from the terrain to the weather, though it leaves out guidelines for creating the star system in which they sit -- for that, it's back to the **Farscape** game), and pitting the System Lords and their minions against the party.

From there, it's GMing advice of the purest kind. Themes, settings, the science and action involved, and the genre used. A lot of this treads old ground and offers little that's new to any but the newest GMs, but the parts about establishing a sci-fi tone are simple, even invaluable. Following that: enough charts, tables, and lists to choke a Clydesdale, all in one convenient, easy-to-find location.

One of the cleverest bits of the book is the crossovers section -- other games, some from other companies, are listed in a brief overview so that referees who want to throw players a curve can send their SG team to another **d20 System** game setting, maybe even one of a different genre entirely. This kind of cross-pollination is one of the game's truly ingenious contributions, and they keep it brief. The book is rounded out by a character sheet and stats for the major

characters from the show. While exhaustive -- there's a low, medium, and high-level version of each persona -- that's about as helpful as they get. It's hard to tell which version represents which time period in that character's past. The low-level O'Neill is a lieutenant colonel, so he's obviously from before the TV series, but how much earlier? If her work at the SGC has made Dr. Frasier "one of the world's foremost experts in chemical and biological warfare," why doesn't she have Perfect Skill Mastery?

The look of the book relies entirely upon photos, so there's no "artwork" per se. The photos are plentiful, but not intrusive. Given the choice between text and graphics, the authors would clearly rather leave out the pretty pictures and give you more to read. The book is heavy, but it's tough, too, and the scope of the material and overall look are stunning.

The bad news when weighing (literally) the size of the book vs. its price tag is the combat section. Big chunks of it come, if not from the core **d20 System**, then from **Spycraft**, and since these books are both touted on the cover (one is required, the other "powers" this volume), anyone who already has those may feel ill-used getting big chunks of it again. Other sections are guilty of this to a degree, but the combat section is the most flagrant violator.

Alderac seems to have learned some lessons from their experiences publishing the **Farscape** game. The **Stargate SG-1 Roleplaying Game** is imposing, and it puts a greater percentage of that bulk to good use. It's thorough but seldom descends into needless or tiring statistics or exposition. Readers might have gotten more from it if it had -- somehow it's hard amid the military material to convey just what makes Stargate Stargate, and it could use more pages like "sci-fi tone" -- but as the game version of the foremost sci-fi show on television, it similarly stands out.

Open Game Content: Alderac cannot okay the use of licensed *Stargate* material, but aside from the particulars of that show and the material that identifies the text as being from *Stargate* or their own **Spycraft** game, most of the material - characters, feats, skills, combat and so on -- is OGC.

Murphy's Rules

by Greg Hyland

Murphy's Rules

Irregular Webcomic

by David Morgan-Mar

Irregular Webcomic

Irregular Webcomic

Yes, We Have No-Win Scenarios

I recently finished the GameCube game *Eternal Darkness: Sanity's Requiem*, having succumbed to my inner conspicuous consumer and picked up a GameCube when the price dropped recently to \$99. *Eternal Darkness*, a *Call of Cthulhu*-esque adventure game, is one of the better adventure games I've played, and it reinforced something that I bring to my gaming adventures as a GM, which I'll share in mere moments.

[SPOILER ALERT!]

Vaguely speaking (so as not to give away too much), the plot of *Eternal Darkness* revolves around an agent of unspeakable cosmic evil binding *another* unspeakable cosmic evil, in preparation for Something Big. Near the adventure's climax (and, again, I hope I'm not giving away too much), you summon a *third* unspeakable cosmic evil to deal with the first one; whether or not this is a wise move is debatable.

[END SPOILER ALERT]

Anyway, the unmitigated pleasure of playing a nice survival horror game and controlling my tank-like lumbering victim has gotten me to thinking: I love a no-win scenario.

There are a number of reasons for this appreciation. I suspect it might have come out of seeing *Star Trek II: The Wrath of Khan*, where the idea of the Kobayashi Maru scenario blew my eight-year-old mind. (For those of you who haven't seen the movie, the Kobayashi Maru is a training simulation Starfleet Academy runs for its recruits which has no successful resolution; it's a test of character to see how they'll react in those circumstances.)

But I suspect my no-win scenario interest comes out of a fundamental paradox in gaming. On the one hand, the general wisdom -- backed by all those "How To Roleplay" sections of gaming books -- states that RPGs aren't like other games, in that there are no "winners" or "losers" in the traditional sense that other games have. Instead, an RPG generally serves as a "simulation" of another world, and its participants can interact with it as they see fit (more or less). On the other hand, c'mon . . . we all know the truth. Most people play RPGs in order to "win," at least by some definition. In the old days this meant accumulating as much loot and power as possible; nowadays this means having your character succeed in his goals, succeed in the game world's goals, or . . . well, accumulating as much loot and power as possible.

Now, if the GM was solely interested in -- and responsible for -- creating a viable simulation, then this would be a pretty straightforward task. But the desire to "win" complicates this, especially since success and failure -- plus the rate of progression -- is primarily determined by the GM:

GM: "All right; you have all created characters for the grim, bleak world of *Blood Sugar Death Magick*. You are huddled in your ramshackle hut, fearful of the dreaded hazards waiting just outside the door."

Players: "We must take arms against the darkness and risk all, by venturing out of our meager quarters!"

GM: "Okay. Right outside your door you see . . . *gold!* More than you ever thought possible! Oh, and there's a caffeinated deity who twitches sideways at you, infusing you with power previously unknown in mortals."

Players: [Long pause] "How many XP is the deity worth?"

The arbitrary nature of the world -- and the delicate balance between challenging players but not frustrating them -- is one of the most difficult tasks for GMs to grasp.

But the no-win scenario is different; it turns those preconceived notions on its side. Rather than being worried about making sure the players have both sufficient risk and sufficient reward to satisfy them, the GM can focus on . . . well, just about anything else.

(To be clear, I define a no-win scenario as one where the heroes cannot achieve all the objectives they perceive; while it's possible to define it as a scenario where the heroes cannot achieve *any* of their objectives, that's a bit too bleak to be of much practical use in a continuing campaign. Thus if the heroes have the option to acquire an object of great import, save the life of a loved one, and preserve their own lives, in a no-win scenario they may only be able to accomplish two of those . . . or maybe even one, in a particularly harsh setting.)

The no-win scenario is perfect in its simplicity because it balances the scale against my desire to give the players what they want. It introduces realism into the game world (on that simulation side of the equation) because no-win scenarios are fairly common in the real world. You *can't* always get what you want: Personal safety can clash with familial or national safety; many people sacrifice happiness for wealth (or vice versa). Guns and butter. You can't be a jockey and a sumo wrestler.

By crafting a no-win scenario, an RPG suddenly acquires a lot more depth and excitement. A no-win scenario forces the PCs to consider their choices carefully; in fact, choice is the core of a no-win scenario, and the knowledge of real lasting consequences is appreciated by many players. After all, in many normal adventures the only "choices" the heroes have are to the order of events; do they want to kill the kobalds in the room to the right or the gnolls in the room on the left? But in a no-win scenario, the choices are that much more meaningful; do the heroes take the chance to thwart the sinister Dr. Alttab, knowing that he will take the opportunity to unleash his death beam on the city and kill hundreds or thousands? Or do they let him go, sparing the city and hoping they can catch him later? It may even lead to in-party roleplaying and conflict that can create a memorable game; in our object of value/endangered loved one/endangered selves example above, if different heroes choose all three options, then there is going to be some interesting PC interaction.

And, finally, every so often as a GM I encounter one of the most delightful surprises of presenting a no-win scenario: The heroes win. The players thought of something so original, brilliant, or otherwise counterintuitive that I can only step back and marvel. And, of course, I let them win. I suspect this is one reason my players don't revolt against me, even though these no-win scenarios are not terribly uncommon in our games; because in those circumstances, the players and characters alike know that they pulled off a seemingly impossible victory. And that victory is not because some benevolent cosmic force was stacking odds in their favor and ensuring success lay right outside their hut. No, the cosmic force was actively designing events so the heroes couldn't accomplish all their goals, and yet somehow they did; the resultant story is one that is truly special, and a delight to players and GM alike.

And that's a scenario where *everybody* wins.

--Steven Marsh

First Contact: We Are Not Alone

by David Morgan-Mar

An enduring theme in fiction is that of initial contact of humans with intelligent alien beings. This contact can take many forms, some of which will be explored in this article for their gaming potential.

Radio Contact

The most realistic means of contact for a present-day or near-future campaign is the reception of an interstellar radio signal. Physical travel between stars is time and resource intensive, whereas cheap radio signals can be detected across vast distances and travel at the speed of light.

The Search for Extraterrestrial Intelligence (SETI) is a blanket term for several ongoing projects being conducted by various research groups and privately funded organizations around the world today. Their lack of success to date is not evidence that there are no alien radio signals to be found. So far only the barest fraction of the possible frequencies, time resolutions, and sky coordinates have been searched. The breakthrough detection could conceivably come at any time, giving GMs great latitude in setting a radio contact campaign. The first alien radio signal might be picked up on a terraformed Mars, or by one of Earth's Orion-drive-settled interstellar colonies. An alternate history could even begin with radio pioneers picking up alien messages on the eve of World War II.

Once a potential alien radio signal is found, it has to be verified and then announced. Verification involves several experimental steps to ensure that the signal is not terrestrial in origin -- including signals from satellites or space probes -- and that other observatories can detect it. The standard communications network of professional astronomers will serve to distribute news of the potential find so that the signal can be confirmed. It is highly unlikely that a stray terrestrial signal, or even a deliberate hoax, could pass muster.

In 1989 a working group of astronomers and other interested scientists drew up a protocol for the announcement of a confirmed signal to the public. The consensus was that multiple researchers would announce such a signal as widely as possible through conventional media. This strategy was designed to avoid the monopolization of knowledge by governments. Some governments will almost certainly, however, attempt to suppress the news. The potential for conflict here can lead to harrowing espionage-style adventures as investigators try to uncover enough clues to convince a skeptical public, or as government agents try to prevent the evidence from leaking out.

If a group of PCs are the first ones to come across the alien signal, their lives are about to become very hectic indeed. This setup can lead in many directions, from public acclaim and its associated problems of getting on with their jobs in the face of fame, to a desperate underground war against their government as they try to spread the news. Alternatively, SETI researchers may approach the heroes for help in either of these tasks.

Public Reaction

Public reaction to the announcement of an alien radio signal will vary widely. For some it will just be another news item that doesn't affect their daily lives. Some will see it as a profound increase in human knowledge, with an impact that might become known only in the fullness of time. At the extreme ends, there will be new age and "alienist" movements seeing the contact as a tangible sign of better things to come, and doomsayers who fear hostile aliens or a trick of the Devil. For the most part, though, an alien signal is likely to have little real impact on the daily affairs of society. Nearly everyone has other things to worry about, things which in the cold light of day are more important to their jobs, family, and health.

Significant impact will only come with the deciphering of any meaning in the radio message -- a task that could take many years. A deliberate message intended for reception by intelligent civilizations will contain clues on unraveling its

meaning, likely beginning with the establishment of mathematical and logical codes. Even with this help, discerning the information contained in the message will take much time and effort.

If the radio signal is not intended for an alien audience, deciphering it may be next to impossible. A leaked television signal is nonsensical unless you know the arbitrary encoding standards used, and even if reconstructed properly we are unlikely to glean much technical knowledge from an alien version of *Gilligan's Island*. Such a leak may provide intriguing insights into the alien society, however.

A possible reaction from national governments is the militarization of the signal decoding effort. Although an alien signal is extremely unlikely to be a prelude to invasion, wary governments will be reluctant to foster public paranoia by releasing anything that could be interpreted as the least bit threatening. However, once news of the signal's existence is out, there will be no way to prevent interested individuals or groups from receiving the signal themselves and launching their own decoding efforts. Who makes the first breakthrough could determine major shifts in public opinion about the aliens and what they mean for Earth.

Once an alien signal is public knowledge, various people from cryptography experts to physicists, engineers, linguists, philosophers, and even clergy will get involved in determining its meaning. Many groups around the world will be working on the problem, and it is likely that rivalries, espionage, and violence will occur before it is cracked. This Cold War style scenario could be further enhanced by setting it in the actual Cold War era, or even during World War II, making for a tense undercurrent behind the more overt actions of global politics. Heroic individuals will find plenty of opportunity for action, as bits of the message are unraveled and lead to technological developments that must be kept from the other side at all costs. This could lead to a full-blown conspiracy style campaign if the very existence of the message is still a secret. This type of action also fits into a gritty cyberpunk setting.

So What's In The Message?

A leaked radio message will at best contain incidental information about the biology, technology, and psychology of the broadcasters. The scientific rewards to be gained will mostly be in fields of knowledge rather than practical application.

A deliberate message, on the other hand, may well present us with a cornucopia of scientific and engineering information, including knowledge of other alien civilizations and of technology beyond the capabilities of our own. Governments will attempt to regulate such knowledge and the research it engenders, perhaps unsuccessfully. Many scenarios are possible, from rapid advancement and enlightenment of humanity to the building of cleverly disguised alien doomsday weapons with which we obligingly destroy ourselves.

There will be debate and social upheaval over any actions initiated by the contents of the message. The usual conflict between scientific curiosity and paranoid or superstitious fear will never have seen higher stakes at risk, fueling correspondingly heated discussions and conflicts. Terrorist actions aimed at sabotaging alien-inspired research projects will become increasingly common, prompting unparalleled security arrangements. Militant anti-alienist groups will need crack operatives to handle dangerous missions, and anti-terrorism forces will need to be alert to anything -- ideal jobs for PC mercenaries or heroes.

A question certain to arise is whether we should respond to the message. There will be military strategists and paranoids who insist that Earth maintains "radio silence," just as there will be those who advocate picking up the phone and saying, "Hello." Given the low likelihood of any expeditionary force crossing the immense gulf between the stars, the risks in replying are virtually nil, and the potential rewards enormous -- although some will point out that any non-zero risk of exposing the entire human race to annihilation is too high (not that this stopped the Cold War assembling of nuclear arsenals). The decision is likely to be taken out of government hands, however, by the first alienist who decides to build a dish and beam out his own response. This sort of response could only be stopped by a martial law crackdown on home technology, and then only for a short time.

Government agents could easily be involved with efforts to prevent unauthorized transmissions back to the aliens. Anti-alien activists might want to prevent an officially sanctioned reply message! People on either side could be

involved with protecting or disrupting work on alien technology. Perhaps some of the information contained in the message is simply too dangerous, or *horrible* that it is suppressed. Even if there is full disclosure, some people will claim a government cover-up and demand to know the truth. Investigators and reporters will have their hands full in such cases.

Physical Contact

An initial contact with alien intelligence is unlikely to be made physically in a setting with radio technology. Physical contact is, however, possible in two circumstances:

First, if the aliens are technologically far superior to humans and can travel between stars without alerting us to their presence by obvious radio signals or starship drive flares. This is the classic "Invasion Earth" scenario, but can also be played with benign aliens or as an encounter among the stars. It also works for historical periods before we had the technology to detect interstellar radio signals.

Second, if the aliens are intelligent but not yet industrialized and we stumble upon them in our own exploration of space. This presents the other alien contact staple: the dilemma over whether to reveal our existence or leave them to develop unmolested.

Physical contact allows alien influences in historically based campaigns. What if the Egyptians and Aztecs really did learn how to build pyramids from "visitors from the sky?" Creative GMs could weave a campaign out of Egyptian courtiers being sent to deal with these emissaries of the gods, learning cosmic secrets and directing the building of pyramids, and leaving behind no more clues to what really happened than we now see today.

An invasion of Earth makes an exciting campaign theme, but some originality is needed to avoid becoming a carbon copy of the many invasion stories in print and on film. To build an invasion campaign, decide on the general genre first. A 1950s Atomic Horror invasion is different from a gritty Cyberpunk invasion, and both are very different from aliens landing in ancient Europe and taking on the might of the Roman Empire. Scale the aliens' technology and power level to slightly superior to what the humans have (unless you want to subjugate humanity and play a game of hopeless resistance). Many classic invading aliens have a weakness that can be discovered and then exploited, whether it be physical, biological, or psychological; consider giving your aliens such a weakness.

The invaders need a motivation. Some just want *lebensraum*, some want to eat us, while others Want Our Women. Inscrutable aliens might not realize we are intelligent, or might need a demonstration of technological prowess, or psychological maturity, before they leave us alone. Invasion methods can vary widely too. The frontal assault approach is good for gung-ho military campaigns, while the insidious infiltration of Small Town America is a recipe for horror.

A different style of game results if the humans are technologically superior to the aliens. Philosophical moralizing might be the order of the day, or there may be action aimed at protecting the aliens from being contacted and exploited by unscrupulous fellow humans. Undercover work on unsuspecting alien worlds

The Fermi Paradox

In 1950, the nuclear physicist Enrico Fermi framed what has become the most debated question in bioastronomy research: "Where is everybody?" Behind this seemingly simple question is the knowledge that there are some 100 billion stars in our Galaxy. If just *one* of those stars gave rise to a civilization capable of interplanetary colonization, that civilization could -- assuming a reasonable rate of spread -- colonize the entire Galaxy well inside 10 million years. Given the Galaxy is roughly a thousand times older than that . . . well . . . where is everybody?

We don't see any obvious evidence of aliens on Earth, or within our solar system. But if there is intelligent life anywhere in our Galaxy, it should be here by now! Earth should be teeming with aliens, but as far as we can tell, it isn't. From this trivial observation, the simplest answer to Fermi's question is that there *isn't* intelligent life anywhere else in our Galaxy. There are other possibilities, however:

1. Intelligent life might wipe itself out before it can set up a sustainable wave of colonization. We have come precariously close to demonstrating this possibility ourselves, and there is no guarantee we won't destroy humanity in a global war

can range from slapstick to tensely serious. If the aliens are to be informed of the existence of humanity, special envoys, ambassadors, and xenologists will be employed to help ease the transition for them. Some aliens might react with antihuman paranoia, requiring careful handling to defuse conflicts without harming interspecies relations. Just the job for an enterprising group of heroes!

Artifacts

A variant on physical contact is the discovery of alien artifacts. These may be present on worlds newly explored by humans, from our own backyard in the Solar System to worlds around other stars. Collapsed civilizations, complete with decaying cities full of still-working scientific marvels, present cinematic settings for star-spanning heroes. More grittily, Martian colonists might find long-abandoned and mostly eroded evidence of a settlement, perhaps only fragments of extremely durable material that survived where all else was weathered by dust storms.

Building on the ancient contact idea, archaeologists might be on the front line of alien research when they discover irrefutable proof that early civilizations had otherworldly help in constructing their impressive monuments. Obscure technological items might be found in dusty tombs, and hieroglyphics deciphered to reveal knowledge beyond modern science. Cliffhanging adventurers would certainly become involved in the global hunt for alien artifacts, research into what might be achieved with them, and the preventing of them falling into The Wrong Hands.

Robotic Contact

Another possibility is that our first alien contact will be with *machines* built by aliens and dispersed throughout the Galaxy.

Von Neumann machines are robotic craft designed to be able to build copies of themselves using raw materials they find in their journeys across space. The number of such machines grows exponentially with time, and every star system in the Galaxy could harbor one (or more) within a few million years of a civilization releasing the progenitor. This time is *much* shorter than the age of the Galaxy. If any civilization has built such machines, then we are likely to stumble across one sooner or later.

A benign von Neumann machine might attempt to establish contact with any alien species it encounters, then beam the information back to its ultimate planet of origin (which may be long dead by now!). Hostile machines, designed to sterilize the Galaxy, are also possible. Such a machine may have vast resources available to it in the form of multiple copies of itself or subservient "fighter" robots. Von Neumann machines need some degree of robotic intelligence to handle unexpected situations. Some may evolve into true artificial intelligences and develop their own ideas about their purpose and how to deal with aliens . . .

Dealing with von Neumann machines requires xenologists, engineers, computer scientists, and possibly AI experts. Some machines may allow themselves to be examined, but they are likely to have defenses against destructive tampering. Threatening robots will need to be dealt with, leading to a "man versus the

or environmental catastrophe in the future. If this is an inevitable result of intelligent life, then there may be other civilizations out there now, desperately trying to get into space or contact aliens, and failing. Sound familiar?

2. Intelligent life might choose not to colonize the Galaxy. This seems unlikely. Human history shows we will colonize rapidly once given the technological capability. Any alien species will be able to get more of whatever it desires by interstellar colonization, and insure itself against extinction by spreading the population. Perhaps philosophy will restrain some aliens.

Points 1 and 2 above might well apply to *some* intelligent species. But if even one alien species manages to avoid blowing itself up, and has the desire to colonize, then it would be here by now.

3. Aliens are out there (or right here), but are deliberately hiding from us. Perhaps whatever alien species has colonized our corner of the Galaxy has a decree against interfering with developing biospheres or civilizations. This is not too difficult to imagine -- we would probably adopt a similar sort of policy ourselves. We do, however, have the ability to detect such a civilization's radio emissions and the most scientifically plausible

machines" type campaign, where military strategists and action heroes will be required.

A more recent idea is that of nanobots -- microscopic robots built with molecule-sized parts and capable of working together in a gestalt intelligence. A swarm of nanobots may be able to disassemble matter on a molecular level and rebuild it into almost anything. They could be shot across space by the millions in small capsules, to be captured by star systems and eventually hit a planetary body. Once landed, they could build a communications station, larger robots, or weapons. With an appropriate level of superscience, they could construct genetic material and a cloning lab . . .

Dealing with a hostile alien nanoswarm would be an intimidating prospect -- just the sort of job for freelance heroes or government agents. The important thing about a nanobot invasion is that it is insidious. The capsules containing the threat can be small enough to evade detection and destruction, and could set up a base of operation anywhere. If the swarm programmers were particularly evil, the swarms might initiate a covert takeover, "possessing" people and rewiring their brains to make them loyal to the invaders. This leads to Atomic Horror style paranoia with anybody potentially an alien invader.

First Contact Campaigns

The material above should provide inspiration for building several different types of campaign story around a first contact scenario. Here are some additional tips on running a campaign based on this premise.

Playing the Aliens

First, the important thing about realistic aliens is that they will be *alien*. They won't look like humans with prosthetics on their foreheads, nor like something from the *Star Wars* cantina. And their motives and psychology will probably be beyond human comprehension -- at least to begin with. Adventuring opportunities will arise from cultural misunderstandings, and the GM can emphasize the difficulties by mystifying the players. Describe seemingly illogical alien behavior and reactions, and let the players debate what's going through their thinking appendages.

In an Atomic Horror style campaign or one with deliberately rubber science, on the other hand, aliens probably will be humanoid and have recognizable emotions and motives. This is easier to play, but be sure to exaggerate some traits to produce stereotypical behavior appropriate to the genre.

Structuring the Campaign

Depending on the planned length of the campaign, the story can play out in a number of ways.

A short campaign, or even one-shot adventure, should begin with the alien contact almost immediately, to set the theme and get the heroes into the action. It may be best presented as part of the GM's opening scene-setting for the players: "It's the present day, and you all lead fairly normal lives . . . until the day CNN breaks the news that an alien radio signal has been received." From here, the protagonists can get caught up in whatever whirlwind events the GM has planned. Whatever problems the arrival of aliens causes should be short-term and able to be solved with some decisive action and quickfire heroics. The adventure can be brought to a satisfying conclusion when the heroes avert

starship drives using current astronomy instruments. A galactic civilization may have developed technology beyond these, so our inability to find them is not proof that such a civilization does not exist.

Each of these three explanations has campaign possibilities. A radio signal from a nearby civilization could indicate that it too is rife with war and struggling to establish space colonies. Or a signal might welcome us into a Galactic community of aliens who tell us there's no point in colonizing very far into space, for some reason. Or a leaked signal or crashed survey vessel may lift the veil of secrecy surrounding alien monitoring of our world.

At any rate, if your alien contact game is going to be based in realism, you will need to come up with a plausible answer to Fermi's Paradox to explain why we *haven't* seen any aliens up to now. If your game is more fantastic, like 1950s science fiction, you don't need to worry so much -- though a little thought will help if a player raises the question.

the immediate dangers and tensions and either usher in a new age of human-alien cooperation, or kick their sorry alien butts with good old Earth know-how.

A medium-length campaign could begin the same way, or alternately it could use much of the first playing session to establish the main characters, in much the same way that many movies have an establishing act. Give them some routine things to do, allowing the players to settle into their roles, interact, and throw some dice. Then, at the end of the session, drop the alien contact bombshell. This makes a suitable cliffhanger ending that should leave your players wanting more, especially if you gave them the impression this was some other sort of campaign and kept the aliens secret until now. Over the next few sessions, prepare problems and encounters that will keep the players on their toes, unraveling one mystery about the aliens at a time. Toward the end, unveil a startling revelation about the aliens -- some knowledge about their plans and goals for humanity, or something that allows their threat to be dealt with. Perhaps another alien species will be discovered, who tell the *real* story about the first contactees, or provide a catalyst for humanity and the first aliens to join forces.

A long or ongoing campaign can develop like a more drawn-out medium campaign. The first contact can develop into a guerilla action campaign against alien subjugators, a series of political machinations in an alien court, or a voyage of discovery into a wide new galaxy of exciting places and cultures. Alternately, the campaign could be built around dealing with multiple alien contacts in sequence. The PCs could be a "first contact strike team" deployed to establish relations with new species as they are discovered. This becomes a series a bit like *Star Trek*, and the challenge for the GM is to keep new contacts fresh and interesting. At this point, use the multitude of alien contact fiction for inspiration.

Further Reading

Non-Fiction

- Koerner, David and LeVay, Simon. *Here Be Dragons* (Oxford University Press, 2000). An introduction to the evolution of intelligent life and how it may be radically different from how it is usually imagined.
- Shklovskii, I. S. and Sagan, Carl. *Intelligent Life in the Universe* (1966; reissued by Emerson-Adams, 1998). The classic academic work on extraterrestrial intelligence.
- Shostak, Seth. *Sharing the Universe* (Berkeley Hill, 1998). An overview of SETI and possible reactions if we find an alien radio signal.
- Von Daniken, Erich. *Chariots of the Gods?* (Bantam, 1974). A pseudo-scientific study of how aliens contacted ancient civilizations on Earth.

Fiction

There are many, many stories dealing with alien contact. A few notable ones:

- Anderson, Kevin J. and Beason, Doug. *Assemblers of Infinity* (Bantam, 1993). Alien nanomachines arrive on the moon and build a strange structure.
- Clarke, Arthur C. *2001: A Space Odyssey* (1968; reissued by Roc, 2000). Explorers find a strange alien artifact on the moon.
- Gerrold, David. *A Matter for Men (The War Against the Chtorr, Book 1)* (1983; reissued by Bantam, 1991). Invasion by aliens using biological warfare rather than military hardware.
- Niven, Larry and Pournelle, Jerry. *Footfall* (1975; reissued by Del Rey, 1996). Apparently friendly aliens arrive in our solar system and turn out to be more than we bargained for.
- Niven, Larry and Pournelle, Jerry. *The Mote in God's Eye* (1974; reissued by Pocket Books, 1987). A manned alien probe leads to an expedition and contact among the stars.
- Sagan, Carl. *Contact* (Pocket Books, 1986). The quintessential story about receiving an alien radio message and its effect on humanity.
- Wells, H. G. *War of the Worlds* (1898; reissued by Bantam, 1988). The grandfather of all alien invasion stories.

Film and Television

Again, merely a sample from a vast number of productions.

- *Contact* (Robert Zemeckis, 1997). The film of the book.
- *The Day the Earth Stood Still* (Robert Wise, 1951). A benevolent alien robot tries to teach Earth a lesson and is tragically misunderstood.
- *Forbidden Planet* (Fred Wilcox, 1956). Alien ruins on a distant planet harbor a strange and dangerous secret.
- *Independence Day* (Roland Emmerich, 1996). Standard alien invasion with big Hollywood budget -- the hackneyed multiple storylines actually look a bit like cinematic RPG character plots.
- *Star Trek* (all the various series). Technologically advanced humans often encounter non-spacefaring aliens and have to deal with the ethical dilemma of not revealing themselves.
- *V*. A stealth invasion of Earth under the guise of friendly aliens.
- *The X-Files*. Aliens are here and dealing with our governments in secret.

The Headmaster's Letter of Invitation to Prospective Students (Hook)

Greetings!

My name is Dr. Paul Timothy; I am the Headmaster of the Polymath Preparatory Institute for Exceptional Students. Simply, because of your academic achievements and intellectual talents, I write to you today to offer you a full scholarship to Polymath Prep, effective immediately. Congratulations!

Please see the included literature for more details on our campus, faculty, courses of study, and student life. If what you see interests you, please return the "Acceptance of Scholarship" form in the included mailer -- or use the online form at <http://www.polymathprep.edu> -- and one of our Administrative staff will contact you, to gather additional information and to answer any questions you may have about our school.

Sincerely,

Paul S. Timothy, PhD, Headmaster

School History (Campaign Setting and Background Information)

Polymath Prep was first established in over 50 years ago by Dr. Leonardo Wilmar, inventor of the Refract-7 electronic circuit, early pioneer of genetic research along with Crick and Watson, famed neurosurgeon, and respected attorney. The term *polymath* is from the Greek, and means "a person learned in many fields"; this word not only describes our founder, but also our overall mission in education: provide all the opportunities possible for budding students of extraordinary genius.

For three decades, the Polymath Prep campus has been located on a small island in the Gulf of Mexico, just off of the Texas coast. For the past five decades, "Poly-M" -- as

"How Did They Pick Me?"

Under special agreement with the US Department of Education, the Admin staff of Polymath Prep begins with the analysis of all standardized tests offered nationwide, beginning in the first grade. Every student showing achievement in the 95th or higher percentile is placed on the Watch List. For students on the Watch List, Poly-M continues to collect their standardized test scores and request further information (quarterly transcripts, IQ test results, progress reports, copies of the student's permanent record, etc.) from the prospective student's school.

Additionally, the staff will begin a "clips file,"

students and alumni fondly call it -- has been the most advanced institution of learning in the United States. A full range of fully-accredited secondary, collegiate, postgraduate, and doctoral coursework is available to students who wish to accept the challenge embodied in our school motto (taken from Aristotle's definition of happiness): "The exercise of vital powers along lines of excellence in a life affording them scope."

Students taking advantage of the full scholarship have their tuition, room, and board paid completely. In addition, they receive generous allowances for books, equipment, and travel between their hometown and Wilmar Island, plus a small stipend for sundry expenses. Additional money can be earned to supplement this stipend by enterprising students through our work-study programs, where they serve paid internships with some of the most brilliant scientists in the world, performing bleeding-edge research in a number of fields.

Sounds almost too good to be true, doesn't it? Where does the tremendous amount of money come from to support our school and students? Polymath Prep is totally funded through a combination of endowments from a number of foundations and donations from alumni. Many assign a percentage of their royalties -- on patents, copyrights, trademarks, product sales, and so forth -- to be paid directly to the institution. Since, as a group, Poly-M alumni hold more patents than any other organization, this is a substantial and stable source of financing. Students will never be asked to pay one red cent for the stellar education they receive at Polymath Prep.

School Prospectus (What Everybody Knows)

Mission Statement: As noted above, the mission of Polymath Prep is embodied in its motto: "The exercise of vital powers along lines of excellence in a life affording them scope."

- *"The exercise of vital powers"*: Students are encouraged to use their talents, skills, and knowledge on a daily basis, on coursework, individual research projects, and special events, both individually and in groups.
- *"Along lines of excellence"*: The faculty, facilities, programs, and mentoring offered at Polymath Prep are without peer, encouraging students to sharpen their abilities to the utmost.
- *"In a life affording them scope"*: Our curriculum has been designed to provide both *theoretical* and *practical* knowledge: Students will meet -- possibly for the first time -- their academic peers in an environment where opportunities to learn and grow abound . . . whether it's learning how to synthesize proteins in the lab or how to safely parachute out of a plane, developing infrared film or basic life skills, hunting out lost research in dusty theses or hunting the best bargain in investment portfolios, Poly-M is there to help extraordinary youths open their eyes to a wider world.

containing all publicly available newspapers, websites, or message-board posts that the student makes or has made about them. All of this information goes into the student's Rainbow File. On a rolling calendar, the Rainbow Files are audited by caseworkers for determination of whether to move the student's file to fast-track (Ultraviolet), retain on intensive watch (Orange), or demote to the slow-track watch list (Infrared). Upon completion of grade 6, all Ultraviolet prospects are immediately issued the standard scholarship letter, Orange prospects are sent the letter after a successful interview with a traveling caseworker, and Infrared prospects are "back-burnered" until the student achieves something that -- in the caseworker's opinion -- illustrates an extraordinary intellect.

The Interview

The traveling caseworker comes to the prospect's hometown and meets with the prospect and their parent(s) or guardian(s), to gather more detail on the student's brainpower and to answer any questions about Polymath Prep. All caseworkers are articulate, affable, insightful, intelligent, and (recent) alumni. They can arrange special medical or dietary needs, campus visits, travel and lodging arrangements . . . anything necessary to ease the acceptance of a scholarship by a prospect.

Campus & Facilities

Poly-M *proper* covers almost the entire northwest quarter of Wilmar Island, where the white marble of the Neo-classical buildings gleams amidst verdant lawns and lush subtropical forest. Much of campus life centers around Tate Commons, home to the Food Court, two dozen study/club rooms, the Archive Arcade (with pinball and videogames from every era), and the "acoustically perfect" Cassidy Auditorium. Most of the year, the verdant lawn of the Commons is packed with students sunning themselves, playing Frisbee, indulging in picnic lunches, or other leisure activities.

In addition to the "bleeding-edge" classrooms and labs on campus, Polymath Prep is the location of one of the finest research and teaching hospitals in the world (Saint Galen's); an interfaith chapel that has hosted talks from such luminaries as Bishop Desmond Tutu, the Dalai Lama, Billy Graham, and Imam Abdul Kazbaev (a former alumni); and one of the most extensive scientific and technical libraries on Earth (the Jefferson Library).

Rapid transit and deliveries across campus are provided by the Loop, an advanced monorail/subway system; there are stations in Tate Commons, all four dormitories, and a number of classroom buildings and labs.

Power for the entire island is provided by the school's Tokamak fusion reactor. This is supplemented by extensive solar- and aero-power installations on the eastern face of Mount Shiras. This mountain dominates the center and southeastern corner of the island; the surrounding forest has been set aside as natural parkland for the enjoyment and edification of students.

Just a short 15-minute Loop ride along the "Townie Spur" is Charles Village -- combining all the best elements of a small college town and a modern vacation resort (special rates for alumni and families or friends of current students). The Poly-M Rec Center, golf course, wharf, market, and airport are all based here. Charles Village takes up most of the northeast quarter of the island. Note that automobiles and motorcycles are permitted only within the city limits of the village, and these vehicles must be either fully-electric or hybrid. Most travel and deliveries between Charles

D-Square, D-Cube, D-Quad, D-Quint. . .

A longstanding tradition at Poly-M is to refer to faculty members by a verbal shorthand representing their number of earned doctorates (honorary doctorates do not count here). Thus, a "D-Square" is an individual possessing two doctoral degrees, a "D-Cube" has three, a "D-Quad" has four big sheepskins up on his wall, and so forth.

Village and Poly-M occurs via the monorail; except in extreme cases, the helipads located near the Administration building (also known affectionately as "Old Main") and atop Saint Galen's see little use.

Faculty

The Polymath Prep faculty is composed of world-renowned scientists and scholars, all possessing doctorates in multiple fields. From sociology to Sinology, from physics to philology, from mathematics to microbiology, from linguistics to logic, students learn from those who are at the top of their respective fields. Small class sizes mean that every student gets personal attention from his instructors.

Student Life

Coursework: First and foremost, incoming students are tested extensively to determine their proficiency in a basic secondary curriculum. They may then test out of courses that they show competency in: at Polymath Prep, we're not interested in boring students by telling them what they already know, but *exciting* them by offering something new.

Each semester, a unique slate of courses is offered at Poly-M, taught by the finest instructors in the world. Registration and scheduling takes place the week before the start of classes. Every student must take a minimum of one lunch period, one independent research/study hall period, one gym period, and three courses from different members of the faculty each semester. (Additional courses may be taken with the agreement of the student, the student's guidance officer/caseworker, and the relevant faculty member.)

Dorms: Polymath Prep's four dormitories -- Truth, Beauty, Charm, and Strange -- have been constructed with the remarkable student in mind. Most dorm rooms are double- or triple-occupancy, but some have up to six students in a suite; there are a very limited number of singles available. *Every* room contains a Refract-7 supercomputer (the same machines used as corporate mainframes by over 42% of the Fortune 500) with two terminals for students' personal use. All are connected by T3 lines to the Internet and the campus mainframe, which is an experimental COGNI hyper-computer developed by our own Comp Sci Department. Additionally, each dorm is co-ed by floor and possesses all the comforts of home -- television lounges, reading libraries, laundry facilities, commissaries -- as well as machine shops and limited chemical and biological laboratories. (Please note that students are not permitted to live off campus in Charles Village until their fifth year of study at Poly-M.)

Clubs: New Polymath Prep students have a lot of options

Robo-Arena

Take *Battle Bots*, add some elements of *Pokemon*, *the Matrix*, and the Boy Scouts of America's Pinewood Derbies, then crank up the Roman gladiator aesthetic -- and you get Poly-M's homegrown obsession: Robo-Arena.

Basically, each dorm supports a chapter of the Gadgeteers' Association. Members of a chapter break into two or more teams to design and construct robots, which will fight other students' robots. There are some broad outlines for robot creation, and generally involve a combination of required (or disallowed) components and materials -- for example, laser pointers and reactive photocells are to be used in place of dangerous weapons. Robots are generally given garish paint-jobs and flashy names (like "The Strange Strangler" or "The Beauty Basher" or "Number 9").

There are three established classes of robot design: Hand, Immersive, and Battlesuit. Hand robots are generally no larger than a shop-vac, and are controlled by a handheld radio remote. Immersive robots can be no larger than a riding lawnmower, and are usually tele-operated by radio by a "driver" in an arena-side simulation unit. Battlesuit robots are enclosed exoskeletons, about the size of compact cars, and are piloted from within. (Given the difficulty of design, the substantial amount of construction, and additional safety requirements necessitated by the Battlesuit class, it's rare to see more than three functioning Battlesuit-class robots per school year, despite the "mothballing" of previous years' efforts.)

In the last two years, a movement has begun to gain favor among the Gadgeteers' Association chapters to include a fourth class of design: that of the Autonomous robot. Built with the best (limited) AI

to pick from when it comes to student clubs and organizations! There are number of musical groups, ranging from Chamber Choir to "the Jazz Fusion"; they share studio space in Strange Dorm with the Thespian Society (whose musical production last year of student Forsythe Jones' epic *Lewis Carroll's Jabberwocky* was a tour-de-force). The Roleplaying and Wargaming Guild has a large collection of games and a spacious, well-lit playing area in the basement of Beauty Dorm. Poly-Fan-doM (the school's speculative fiction society) possesses an incredible collection of rare SF literature, movies, and other media; alas, access to the well-appointed library in Charm Dorm is limited to members in good standing. Student filmmakers should consider joining the Cinematrix Club: their attic meeting space in Truth Dorm has state-of-the-art AVID editing bays, digital and analog cameras for rental (with a valid student ID), and a professional-quality darkroom (for film purists).

Of special note is the campus-wide Gadgeteers' Association, with chapters composed of interested students in each dorm. Each semester, these chapters participate in the Intramural Robo-Arena Tournament (see boxed text), where their mechanical gladiators fight it out for glory and the celebrated Golden Gear.

Many other groups -- like the Entomology Club, the Goldfish Fanciers, the Coin & Stamp Collectors, the student-run cable and radio station (WPOL), and the student-run daily newspaper and website (*the Daily Parrot*) -- meet in the clubrooms of Tate Common; while more physically-oriented clubs (like the Poly-M Bikers, the Croqueteers, the Juggling Club, and the Lazer Tag Commandos) are based out of the Rec Center in Charles Village. Stop by the first week of each semester to see what's available and grab a calendar of meetings.

NOTE: The Individual Flight Society no longer meets in or around Tate Commons after the tragic accident that caused the death last semester of sophomore Wil Koolvord. Faculty-supervised IFS meetings now are based out of the Rec Center in Charles Village. Any student caught flying around campus in a powered or unpowered vehicle or contrivance -- including but not limited to jet packs, rocket packs, heli-packs, personal dirigibles, solo-zeps, etc. -- will face a Class C disciplinary action (please see your *Student Handbook*, Chapter 4, Clauses 2.2.1 through 2.7.2.8 for more details). This is for your own safety, as well as the safety of your classmates..

Academic Competitions: Poly-M fields several teams each year, chosen by campus-wide tournament, to participate in academic competitions like the Sci-Tech Olympiad and the College Bowl. The Chess Team and the Forensics Colloquy are also always on the lookout for new, qualified members.

Sports: Depending upon the interest level, size of the resulting team, and relative ages of participants, Polymath Prep has been able to compete in more traditional sports venues with other schools, albeit on a more sporadic basis than in academic competitions. In the past decade, we have had students involved in a number of sports: Archery, Golf, Ping Pong, Rifle, Tennis, Ultimate Frisbee, and Volleyball. Remember -- a sound mind in a sound body! (If interested in a physical sport, try your hand at assembling a team: visit the Clubs Desk in Tate Commons for more helpful information.)

students can manage, the intent is to let the robots duke it out on their own, with no more interference or control than that of occasional shouted commands from the sidelines (like boxing trainers or football coaches).

At the end of each semester, about a week before finals, is the Intramural Robo-Arena Tournament. This competition is administered by a trio of faculty members selected by lot. The dorm that accumulates enough points in the tournament wins the Golden Gear, preferential treatment at the post-finals Carnival of Science, and the deserved envy of their classmates.

NOTE: Robots should not be employed outside the auspices of a Gadgeteers' Association training or competition or other educational context. This means that using robots for dueling (with live weaponry or laser-tag systems), assault, vandalism, or any other illicit activities are subject to disciplinary action -- please see your *Student Handbook*, Chapter 4, Clauses 2.2.1 through 2.7.2.8 for more details.

(See also below, *Quick and Dirty Robo-Arena Rules.*)

Permanent Record (What Everybody Doesn't Know)

(Secret) Mission Statement: Why would someone go to all the trouble and expense of setting up a facility for geeks? Just to help them be nerdier? Here are some options for what the *real* reason(s) for the establishment of Polymath Prep could be:

1. *Socialization:* Highly-intelligent people - especially adolescent ones -- are often poorly socialized in today's world. Many grow up with a mix of strong feelings like isolation, depression, arrogance, elitism, and awkwardness. The lashes of the words "geek" and "nerd" cut deep on youthful skin, and who knows the negative effect those emotional wounds might have on a genius' future endeavors? Poly-M has been designed as a safe haven and community where the geeks can run free, without the stultifying and injurious jibes of the less-gifted, and develop into socially well-rounded individuals.
2. *DARPA's Watching:* All the "black projects" of the US Government aren't about stealth bombers, orbital missile platforms, or death rays. Horrified by the Big Science being pursued by the Nazis in WWII, the OSS-cum-CIA created Polymath Prep to collect the intelligent crème-de-la-crème of American youth so that we could get there -- "there" meaning advanced technologies and sciences -- first.
3. *Alien Technology Analysis:* The Roswell alien saucer makes our most advanced vehicular technologies -- like the Space Shuttle and the stealth fighter -- look like wheelbarrows pushed by chimps. Poly-M was founded for the sole purpose of learning how to "build the tools to build the tools" to puzzle out the mysteries of the alien craft. But who's behind the effort? The CIA? NASA? The Air Force? The aerospace industry? McDonalds?
4. *Suborn the Future:* After Captain Freedom tracked Dr. Demolisher's mentally sub-par henchmen back to the Lair and knocked the stuffing out of him back in 1936, the Bad Doctor finally called it quits on hiring moronic thugs and giggling imbeciles. What was needed were more intelligent assistants -- call them "apprentice evil masterminds." But how to assemble and properly train them? Why not start a school, nay, a university where they would *not* be called mad?
5. *All of the above.*

The Steam Tunnels

Every building on the Polymath Prep campus (and some of the geological formations, too) possess at least one hidden lab, secret passage, concealed room, weird device, or mysterious architectural feature; additionally, there is a network of underground burrows connecting many of the buildings with the steam and subway tunnels, other buildings, and still more hidden labs, secret passages, concealed rooms, and weird devices. Some may have been sealed for decades.

Students with a penchant for exploration should beware the "moles and trolls" dwelling in these areas. They might be escaped lab experiments, renegade robots, mutated vermin, or fellow students who have freaked-out (see below, *School Calendar*). Use caution!

Behind the Door of the Faculty Lounge

Things for GMs to keep in mind regarding the overall motivations of the Faculty (while some aspects are dealt with in the *Faculty Directory* below, others are left wide-open for customization):

- *Why Are They at Poly-M?:* Undoubtedly, geniuses like these NPCs could be doing important and/or lucrative research somewhere else, right? What are their secret reasons in accepting a teaching position? It might be simply for access to Polymath Prep's facilities, they might be on the run from an enemy, or have a genuine desire to educate the next generation.
- *How Do They Interact with Each Other?:* New students often have no idea of the relationships between Faculty members at first. Discovering those private enmities and amities can be interesting in and of themselves, and may also pay off in "alliances" for the canny pupil (especially if they serve as spies or agents in hidden conflicts between teachers).
- *How Does Their Course for the Semester Support Their Own Research?:* Since Faculty members set their courses based on their fields of academic interest, it only stands to reason that they'll use said course to help themselves out. What happens if a student makes the breakthrough that the instructor was hoping to make himself?
- *What Clubs/Teams/Dorms/Events Do They Serve as Faculty Advisor for?:* Not only does acting as adult oversight on an organization increase the numbers of student-teacher interactions, it also casts light on the personality of the Faculty member. Importantly, how do they comport themselves in this outside-the-classroom role? Does the normally boring Professor Y become a house on fire when counseling her Forensics squad? Does cool Doc T become restless and distracted while coaching the swim team? Either says something about the teacher . . . it's up to the GM to decide just what that is.

Teenage Wasteland

Poly-M was founded to help eliminate the negative effects of social ostracism, isolation, cliques, and bullying suffered by the intellectually elite. Unfortunately, humans being what they are, given the freedom to make their own new society, they've probably patterned it on the old one. Perhaps the details have changed (see *Playing Kids* below and the *Adolescent Alphas & Omegas* textbox), but the school experience stays the same.

Faculty Directory (NPC Backgrounds)

NOTE: Doctorates held by the Faculty member are listed in [\[square brackets\]](#); assume they have Master rank in that field.

D-Square Paul Timothy aka the Headmaster: [\[Chemistry, Biology\]](#) "Follow the rules!" is his catchphrase. Headmaster Timothy is outwardly stern and hidebound, but conceals -- fairly well -- a heart of gold. But he's not a soft touch, gets peeved over violations of the *Student Handbook*, and would never publicly show preference for one student over another. He's a Good Teacher, but has a Poor habit of being too busy to properly aid students outside of the classroom. His administrative duties preclude him from serving as advisor to any clubs or teams.

D-Quint Nancy J. Cochran-Taylor aka Dr. ADHD: [\[Engineering \(electrical, chemical, mechanical, aerospace\), Materials Science\]](#) Dr. ADHD speaks quickly, all her words gushing out like a tidal wave. This hyperactivity probably accounts for both her inability to sleep and her five doctorates. Friendly, (almost too much so) she's an Average Teacher (Good quality marred by Poor ability to communicate), but Expert at being there for students outside

Adolescent Alphas & Omegas

Popularity: the grail of the high school experience.

Popularity at Poly-M builds on different axioms than that at a typical American high school. Here are the factors that operate most strongly at Polymath Prep, from most "cool" to least "cool."

1. *Cleverness:* Whether it's analyzing a tricky chemical compound or figuring out a way to covertly record video of

of class, day or night. She often teaches a Phys. Ed. course in addition to her areas of interest. She's long-time friends with Doc T, and new but fast friends with Professor Y and Doc Spazz.

D-Cube Raven Jones aka Dr. Dreamy: [\[History, Archeology, Anthropology\]](#)

Dr. Dreamy is the beautiful daughter of two adventurer-archeologists who specialized in religious artifacts. Inspired by their example, she often takes her favored students on dangerous "field trips" and Semester Break excursions. An Expert Adventurer, Good Teacher, and (sadly) only an Average linguist, she is quite Poor at recognizing how her appearance affects others (most students despise and desire her simultaneously, and she is totally unaware that other Faculty members are smitten with her). She's good friends with Professor Y, but is a bit intimidated by Dr. ADHD.

D-Cube Topher Knight aka Doc T: [\[Physics, Optics, Astronomy\]](#) He's the coolest teacher on campus. Handsome, witty, and a bit nuts, Doc T is out to make learning fun for Poly-M students (his wackiness and sardonic humor counterbalance his appearance and athleticism in the students' eyes . . . mostly). Currently in deep lust with Dr. Dreamy, he constantly tries to think of ways to impress her. He's an Expert Teacher and Life of the Party, and Poor at Resisting a Challenge. He's not fond of Evil Professor Badger, is long-time friends with Dr. ADHD, and seems to owe the Headmaster a mysterious favor. He often teaches a Phys. Ed. course -- usually Surfing, Skiing, or Skating -- in addition to his areas of interest.

D-Square Scott Myer aka Evil Professor Badger: [\[Psychology, Sociology\]](#) Professor Badger only took a post at Poly-M to avoid prosecution for some gigantic "mind-control" pyramid scheme. To his dismay, he's stuck teaching the Civics classes in addition to his Psych course (he suspects it's some subtle dig of the Headmaster's). He's an Expert Psychologist, which helps cloak his failing of being a Poor Teacher: he makes his students feel like it's all *their* fault when it's really his. He's always scheming to get Dr. Dreamy into his bed and to make Doc T look like a fool. His friendship with Doc Spazz runs hot and cold.

D-Square Garry Wallace aka Doc Spazz: [\[Computer Science, Liberal Arts\]](#) Doc Spazz is a grown-up geek in the Bill Gates mode. Given to wild theories and teaching techniques that have little relation to any form of recognized pedagogy or psychology, he's the favored butt of jokes around campus. Still, he's been right where the students were like no other Faculty member, and thus serves as the Dean of Students. He is a Master at helping students with life issues, but only an Average Teacher. He's got a crush on Dr. Dreamy, yet rarely enters the ongoing competition for her affections -- but when he does, it's generally pretty overboard. He respects but does not like Doc T, and considers Evil Professor Badger a staunch friend (dummy!).

D-Square Charlotte Wye aka Professor Y: [\[Math, Philosophy\]](#) Professor Y is *dull*. Very, very dull. But she knows her stuff: students in her course come out with a complete knowledge of the subject, no matter how much plodding around in circles she has to do to get them there. She's a Good Teacher and surprisingly (Expert) Observant, but has the Personality of cold oatmeal (Poor). She's good friends with both of the female Faculty members, who often try to convince her to get a make-over, which she always refuses.

the girls' locker room showers, ingenious problem-solving is very much respected.

Academic achievement (being first in the student rankings or scoring well on a hard test) counts here.

2. *Memory:* Elephants would do well at Poly-M: rattling off the complete Periodic Chart or the names of every *Star Wars* action figure ever manufactured is a great way to make those geek-hotties swoon.
3. *Audacity:* Fortune favors the brave. The bolder a student's action, the bigger the return (for good or ill). Thus, while an attempt to hijack the dorm feed from WPOL for a pirate broadcast is undeniably audacious, it could turn out quite bad for the offender if he tried it during a *Monty Python* marathon or quite well if it's *Real World* one. Most sport or other non-academic competition achievement counts in this category.
4. *Sociability, Athleticism, & Beauty:* With most Poly-M students being young, quite socially-inept, and still smarting from the outrages of mundane public school, any public displays of friendliness, physical-fitness, and typically "attractive" features are big negatives in the popularity game. Cute students may find themselves shunned simply because they take reasonable pains to look kempt.

Big Students on Campus (NPC Backgrounds)

Andrew Ercan aka Jocko: Jocko is a new student and the Faculty darling. You see, he's the All-American Boy Genius -- handsome, friendly, smart, and athletic. Thus, all the other students hate him: he's probably the most unpopular (and lonely) student on campus. He's really interested in getting a Fencing Team together, and just wants to make friends. He's an Expert Athlete, Good at Math and Science, Average at Liberal Arts and Engineering, and has Poor Popularity.

And remember: popularity requires an audience -- public displays of these factors are the only ways to raise or lower one's stock in the *vox populi*.

Victoria Mason aka Rhymes (With Witch): Rhymes is pretty, in that "alterna-grrl/hipster" way. But she's a total you-know: she takes nothing from nobody (especially if it's deserved). But that's just towards her fellow students; towards teachers, Rhymes is a total suck-up. She's Expert at Liberal Arts; Good at Biology, Chemistry, and Popularity; but Poor at Math. She's President of the Thespian Society.

Liz Grant aka Lou: Liz "Lou" Grant is a nebbly-nose. She claims that it's because she wants to become the first bleeding-edge Flash-Web reporter, but really, she just likes finding out the dirt. Luckily, she's got a good attitude and a sense of decency -- not a yellow-journalist or scandal-monger. She's an Expert in Journalism, Electronics, and Computer Sciences; Good at Being Sneaky, Philosophy, and Popularity; and Poor at Resisting Mysteries. Lou is the star journalist and webmistress of *the Daily Parrot* (and secretly the Headmaster's leading snitch!).

Jackson Mickle aka Mick: He's the insanely arrogant uber-geek who's tops both in the classroom and on the academic competition floor. Mick has no qualms about using his superior intelligence to humble, beat, or break his rivals . . . and for this he is lionized. Rude, cruel, snide, underhanded, vindictive, pedantic, bullying, whiny, smelly, lacking in common decency and kindness; you name it. He's Rank Number 1 in the class standings, and thus the most popular student, the Big Man On Campus. Mick rules the school. He's a Master of Popularity; Expert in Math, Engineering, Computers, and Chemistry; and Good in Biology, Science, and Liberal Arts. His failing is that he's a Poor Excuse for a Human Being.

Forsythe Smith aka AFM ("Alien From Mars"): Even by the standards of Poly-M, AFM is one weird cat. He never eats, sleeps by hanging from the ceiling like a bat, enters labs by a different way each time, wears historical costumes to class reverse-chronologically (that is, he starts the semester in modern clothes and ends it in caveman furs), and while he knows remarkably trivial and persnickety facts, seems to suffer from major lacunae in basic early 21st Century knowledge. Despite -- or because of -- all this, he's an Expert in Liberal Arts, History, and Popularity; Good at Math and Physics; and Poor at Doing Anything In A Remotely Normal Manner. He often writes plays for the Thespian Club and columns for the *Daily Parrot*.

Student Haunts (Notable Locations)

The Mutant Cherry: This 24/7 diner in Charles Village is known for good burgers, milkshakes, and coffee, and is a gathering place for Poly-M students. It's the place to see and be seen off campus.

The Diamond: Located in the forest at the foot of Mount Shiras, this rhomboidal clearing is the site for *affaires d'honneur*, be they fought with robot, foil, or fist. Ignoring an invitation to "see the Diamond" is asking for social death. (Unknown to most students, the Faculty monitors the Diamond . . . but things being as they are, sometimes forget to if they're caught up in tricky research. Also, since most teachers are also alumni, they understand its role in student life.)

School Calendar (Events & Possible Story Arcs)

As a school semester is in-and-of-itself an arc, a short list of important days for students (all rife with adventure and roleplaying potential) is included:

Move Into the Dorms & Meet Roommate(s).

- Course Selection & Registration.
- Athletic & Academic Competitions (Robo-Arena trials, the Madame Curie Look-alike Contest, College Bowl, Swim Meets).
- The Daily Grind (classwork, labwork, homework, cram-sessions).
- Prank Wars and Dueling (just to liven up the monotony).
- The Big Dance (Who's asking who, or are we all going stag, together?)
- Midterms (This will be one-third of your grade . . .)
- Semester Break (Woo hoo!)
- Intramural Robo-Arena Tournament (There can be only one!)
- Finals Week and Freak-outs (Some kids just snap under the pressure . . . unfortunately, some of those students have the technology to crack tectonic plates!)
- Carnival of Science (aka Combining the party from *Weird Science*, the carnival from *Grease*, the luau from *Grease 2*, the Quidditch Cup celebration from *Harry Potter and the Goblet of Fire*, and as many high explosives as possible.)

Letter to Parents (Advice, Opportunities, & Pitfalls)

NOTE: Polymath Prep conflates high school and college elements willy-nilly, to give that full School Hijinks genre flavor.

Playing Kids

There's no real trick to playing adolescents: players and GMs should just try to remember what it was like (or is like, for some gamers still trapped in PS Hell). Fuzzy memories, time to ponder, a good imagination, and (more) mature sensibilities, all mixed with a pop culture patina, should allow every gamer to pull off better stunts in a Polymath Prep campaign that they ever could back in the day.

Some points to remember, though. Generically, most geeky teens have almost zero social graces, and staggering amounts of hormones course through their bodies. They tend to lack extensive life experience and often have weird obsessions. Characters should, most importantly, *feel* everything intensely: so much so that their normally clear reason is overwhelmed by schoolyard angst and melodrama.

Take a page from the *Batman* TV show from the 1960s: choosing whether to go on a panty raid or cram for the midterm will be funnier (and more entertaining to play) if approached with all the seriousness and gravity of deciding to drop an atomic bomb.

Fidelity: Twiddle

The Fidelity level of a Polymath Prep campaign -- that is, how close it hews to the real world -- really depends on how fast-and-loose the GM wants the PCs and NPCs to be able to play with "believability." However, the genre of School Hijinks comes in wildly varying modes . . . often within the confines of the same source.

Associated Institutes of Learning (Spins)

There are several schools that compete with Poly-M in Academic or Sports competitions or otherwise cooperate in exchange programs. (Indeed, many illustrate what Poly-M could be like in other times or other places . . .)

Here's a short list:

- Sunnydale High (Horror, [Buffy the Vampire Slayer](#))
- Hogwarts School for Witchcraft and Wizardry (Fantasy, [Harry Potter](#))
- Excelsior Public School and Xavier's School for Gifted Youngsters (Supers, [PS 238](#) and [The X-Men](#))
- The Staracademy (Science Fiction, [Space Cases](#))
- Illuminati University (High Weirdness, [GURPS IOU](#))
- Transylvania Polygnostic University (Steampunk SF, [Girl Genius](#))

A good example here is one of the touchstones of the science fiction end of the genre: [Real Genius](#). There are moments of somewhat realistic scientific extrapolation (building a better laser), alternating with cinematic science fiction (creating fake credentials to get onto a military base) and pure skiffy looniness (for example, the instant ice-rink and giga-size Jiffy Pop). However, Twiddle doesn't have to purely relate to science fiction tropes -- take a look at the non-science stuff that Saint Matthew of Broderick and Saint John of Cusack pull off in their respective bodies of work.

The Fidelity knob, then, in this subgenre often "twiddles" during play, roaming up and down the scale of "it could happen that way." Here are some benchmarks, using the average Twiddle level of the resource. Check 'em out!

- *Somewhat Realistic* (High Fidelity): Bertrand R. Brinley's [The Mad Scientists' Club](#), [Revenge of the Nerds](#), and [Fame](#).
- *Cinematic* (Medium Fidelity): [Ferris Bueller's Day Off](#), [Real Genius](#), and [WarGames](#).
- *Over the Top* (Low Fidelity): [My Science Project](#), [Weird Science](#), and [Back to the Future](#).

Thesis Topics [Theme(s)]

Friendship: The conflict between friendship and another impulse -- usually popularity, competitiveness, or romance -- is a popular one in School Hijinks. Will a character sacrifice their friendships (or their friends!) to gain something else? Will they stand up for a buddy if that buddy accidentally destroys a Loop station? After a night of bingeing, will they hold each others' hair when bending over the Porcelain God? Will they pursue a relationship with their best friend's Object of Desire?

Quick and Dirty Robo-Arena Bug Rules

GMs should feel free to use their chosen game system to replicate robot construction; extensive details on building robots (or using them against non-robot targets) lies outside the scope of this CiaB. However, for a quick and dirty rules-light system for building and fighting exclusively with other similar robots, the following system can be used:

- All robots possess four Functions: Sturdiness (strength and toughness), Speed (nimbleness and quickness), Weaponry (number and/or power of armament), and Special (whatever wacky thing the builder comes up with).
- Distribute seven dice (1d6s) between the four Functions to reflect the varied strengths and weaknesses of the robot. Every Function *should* have at least one die assigned to it; if not, then the robot does not possess that Function. The builder of the robot should provide a short description or handle for each Function (like Solid Steel, Tractor Treads, Laser Array, or Secret Balloon).
- The robot's class -- Hand, Immersive, or Battlesuit -- probably won't matter in official competition, since only robots of the same class compete against one another. However, in chapter practice or illegal duels where different classes are used, temporary extra Function dice can be added to the "bigger" robot, with 1 die per level difference, to be

assigned wherever desired. That is, an Immersive robot fighting a Hand robot would have an extra Function die to assign for the purposes of that combat, while a Battlesuit would have an extra Function die against an Immersive robot, or two extra Function dice against a Hand robot.

- When fighting another robot, players will each declare their robot's action for the turn. Declarations may be written secretly and revealed together, or players can alternate in declaring aloud.
- Actions are resolved simultaneously. Each player will roll their dice for the Function closest to what their chosen declared action is for the turn, add up the numbers (if there's more than one die), and compare their total to their opponent's total. *Note:* If the GM agrees that it suits the declared actions, the dice from more than one Function may be added together.
- The highest total wins; the loser must then discard one of their dice, from any Function, and describe the damage. In case of a tie, *both* robots lose a die.
- The battle continues until one or both robots are out of dice.

Example Robot 1: "Prince CHARM-ing" has Sturdiness 2d6 (Reinforced Frame); Speed 2d6 (Walking Legs); Weaponry 2d6 (Dual Laser Arrays); and Special (Super-spring Jump) 1d6.

Example Robot 2: "Beauty's Beast" has Sturdiness 3d6 (Armored); Speed 1d6 (Six Stumpy Legs); Weaponry 3d6 (Bigass Claws); and Special 0d6.

Example Robot Combat, by Turns

1. The Prince decides to keep its distance from the Beast -- all-out dodging by boinging around the arena on its Springs (Speed + Special; player rolls 3d6 since the GM agrees the Functions can be combined, otherwise it'd roll 1d6 for Special alone or 2d6 for Speed alone). The Beast attacks with its Claws (Weaponry; 3d6). The Prince's total is 7; the Beast's is 10. The Beast connects with the hapless Prince in the split-second between jumps. One of the Prince's Laser Arrays is now so much scrap (loss of one die; the player chooses to take it from Weaponry).
2. The Beast attacks again with Claws (Weaponry; 3d6), since it worked last time. The damaged Prince goes all out -- his player asks the GM if it can combine all its Functions -- Sturdiness, Speed, Weaponry, and Special -- if the Prince leaps up to plummet down on the Beast. The GM ponders, and offers that such an action would probably not include Weaponry, since it's more a brute-force physics question (Sturdiness + Speed + Special; 4d6). The Beast's total is 9; the Prince's is 12. This risky surprise move damages the Beast, knocking loose some armor plating (loss of one die; the player chooses to take it from Sturdiness).
3. The Prince repeats its jumping attack (Sturdiness + Speed + Special; 4d6); while the Beast gets tricky -- it will wait below for the plummeting Prince, then dodge out of the way while attacking. The GM agrees that this is Speed + Weaponry (4d6). Both robots' rolls total 16, strewing the combat floor with junk (they each lose a die; the Prince reduces Sturdiness to 1d6, while the Beast reduces Weaponry to 2d6).
4. The Beast decides to grab hold of its opponent, draw it in with its mighty servomotors, and claw rake it (Sturdiness + Weaponry; 4d6). The Prince returns to the bouncy dodge (Speed + Special; 2d6). The Beast's 14 beats the Prince's 12. Taking a mighty wound to the transmission, the Prince begins to move slower (loss of a die; the Prince drops Speed to 1d6).
5. And so forth . . .

This construction and combat system requires the players to be creative in their use of Functions and selection of actions, GMs to be fair and unbiased (even if running a fight with an NPC robot), and high-trust from all folks involved.

(OPTIONAL DAMAGE MECHANIC: To better reflect really good rolls in combat, an alternate damage mechanic can be used, where the lower roll total is subtracted from the higher roll total to give a *margin*. For every six points of margin (rounding up), the loser must take away a Function die. Thus, a margin of 1 to 6 is one die, 7 to 12 is two dice, 13 to 18 is three dice, etc. This optional mechanic may help speed robot combat.)

Revised Rules for Digital Intelligences in *Transhuman Space*

by Phil Masters

One of the most interesting features of the *Transhuman Space* setting is the presence of digital intelligences as characters -- and hence the possibility of having sapient computer programs in play as PCs or major NPCs. Unfortunately, some of the rules presented in the line's core book to handle this act to make things harder than they should be. This article offers some optional fixes for these problems.

The first issue involves the rules for taking AIs as "programmed allies" -- characters closely associated with a PC, who happen to be faithful to him because they're software and have been programmed that way. Unfortunately, the rules contrive to suggest that 2100 vintage computers are implausibly unreliable.

Consider; the highest level of availability for an Ally, programmed or otherwise, is on a 3d roll of 15-. A quick calculation shows that this gives a chance that the Ally will be present during any given session of marginally better than 95%. Or, to put it another way, there's a roughly 5% chance that one's most faithful computer sidekick will be out of action at any time.

The book justifies this by suggesting that even an implant or wearable computer may be "tied up dealing with invading viruses, downloading something, doing the PCs' taxes, or whatever." But look at this from a contemporary point of view; in 2003, computers do crash or hang, or suffer virus attacks, to be sure. But they can usually be rebooted or cleared within a few minutes, while routine jobs such as tax calculations can be saved for attention at a later time. If most people's personal computers were unavailable to let them access the Internet, write letters, or play games nearly 5% of the time, they'd want the darned things either fixed or replaced.

The second problem concerns the possibility that a digital intelligence PC could operate more than one body. Even with laws against intelligent software duplicating ("xoxing") itself, it can always transfer between systems, using, say, one static cybershell with a fast Web connection as its "home," a mobile work unit for adventuring, and a humanoid "cyberdoll" for social interactions. Unfortunately, the rule designed to support this -- the Vessel advantage -- makes it prohibitively expensive on points; merely having access to emergency space on a mainframe somewhere costs 21 points, and that cyberdoll would cost 200. This is not a very good deal in **GURPS** terms, considering the practical limitations involved in transferring and the benefits granted.

The Solution

Fortunately, these problems can both be resolved by a pair of simple rules adjustments. First, introduce a new category of availability for Allies and Ally Groups; "Infallibly Present," with a $\times 4$ cost multiplier. This might be limited to *Transhuman Space*- style Programmed Allies; organic sidekicks have more complicated lives and concerns of their own, and do sometimes have to chase off on personal business, or go down with illnesses. On the other hand, the utterly faithful associate is a recognized feature of many kinds of story, so GMs who want to borrow this for other games are welcome to do so.

And second, scrap the Vessel advantage. Replace it with a simple rule; digital intelligences can freely transfer themselves to any cybershell to which they have full access codes -- which will certainly include all of their programmed allies. The only limits are processor capacity and storage, which GMs should monitor. Note that, logically, it's perfectly possible for digital minds to use this trick already -- making Vessel a bit of a white elephant -- although most people would probably accept that it is abusive to do so regularly so long as Vessel is theoretically the standard rules mechanism for the purpose.

In general, digital intelligences who want to maintain a "stable" of reserve bodies will install cheap non-sapient AIs (usually NAI-4 programs) on them to handle routine diagnostics and housekeeping functions. These changes bring the cost of "vessels" down to something more reasonable. A cyberdoll with a simple NAI-4 installed, with 5 points in skills to enable it to look after itself in routine situations, costs 40 points as an Infallibly Present Programmed Ally. A mainframe with similar software costs just 8 points.

As an optional refinement, to prevent one minor possible abuse, a character who wants a Programmed Ally cybershell to have a more powerful computer or more storage capacity than its usual resident AI actually needs (as may well be necessary if it is to be used as a "vessel") should pay the cash cost difference between the minimum (appropriate) computer that can be installed on this type of cybershell and the system actually installed. For example, a cyberdoll running a NAI-4 doesn't need more than a complexity 5 cheap small computer (the minimum processor standard for cyberdolls). If its owner chooses to fit it with, say, a complexity 7 compact microframe, the difference in cash cost to pay is (\$20,000 minus \$100) \$19,900.

There is just one drawback with all this; a player might select a cheap cybershell as his character's "primary body," and then take more powerful shells as Programmed Allies to use as "vessels." However, this is actually possible at present -- merely obscured by the presence of the Vessel advantage. To prevent this abuse, any AI character who wishes to have use of multiple cybershells *must* treat the one with the highest points value to which it could transfer as its "primary body." If players wish to have Programmed Allies more powerful than that, they must find excuses why their characters can't download to them -- such as, say, fundamental hardware/software incompatibilities.

Example: HEUROS-EPSILON is a digital intelligence PC -- a Citizen SAI-7 who is normally resident on a microframe in secure rented storage in Strasbourg, working as a consultant engineer. She (her self-image and preferred digital avatars are female) also owns a Volkspider to perform occasional hands-on tasks, and a cyberdoll to wear to parties and to deal with some less psychologically flexible potential clients. She controls a LAI-7 secretary/assistant, and a simple NAI-4 to manage any unused hardware that needs to be looked after.

Because the cyberdoll is the most expensive of these cybershells (170 vs. -44 or 71 points), the player must treat that as HEUROS's body when statting up the character. For convenience, the LAI-7 is defined to run on the microframe; it has 15 points in skills, giving it a character value of 21 points, and a cost as an Infallibly Present Programmed Ally of 8 points. The NAI-4 is defined to look after the Volkspider by default; it has 7 points of skills, making it a 53-point character when in that cybershell, so its cost as an Infallibly Present Programmed Ally is 16 points. In addition, HEUROS must pay \$39,900 to have a complexity 7 computer on a Volkspider which would otherwise only need a cheap system.

Note also that, under the present rules, HEUROS could pay 106 points for the Volkspider and microframe as Vessels, and lose the LAI and NAI -- or take them as Programmed Allies, leading to the question of whether or not HEUROS herself could download into the other shells.

Two Fisted Tales Roleplaying Game

Published by [Spectre Press](#)

Written by Matt Stevens

Cover by Christopher Shy

Illustrated by Jeremy McHugh and Matt Drake

124-page b&w softcover; \$16.00

For those wanting to play games set within the pulp genre of the 1920s and 1930s, there are only a relatively small number of choices to be found on the shelves of the local games emporium, and some -- such as Deep7's [Dime Heroes 1PG](#) and its *Jungle Heroes* supplement -- don't even exist there. Perhaps the cream of the crop is the Origins Award-winning [Adventure!](#) from White Wolf Studios and which, like DP9's [Gear Krieg RPG](#), is tied into a particular setting, while supplements such as *GURPS Cliffhangers* provides a more general overview of the genre. The choice is very limited for the **d20 System** with the articles in recent issues of *Dungeon/Polyhedron*, including "Pulp Heroes" in #90, the planetary romance "Iron Lords of Jupiter" in #101, and "Pulp Heroes" revised for **d20 Modern** with additional material for "Iron Lords of Jupiter" in #102, all far outshining the woeful [Forbidden Kingdoms: Master Codex](#) published by OtherWorld Creations. The latest entry to the field also sets out to provide an overview of the genre.

Published by Spectre Press, the *Two Fisted Tales Roleplaying Game* attempts to cover all aspects of the pulp genre, although in some cases it just touches upon certain elements rather than going into any depth. Primary among those is the pulp sci-fi typified by the thrilling adventures of Buck Rogers and Flash Gordon, and though there is nothing to prevent GMs from running that type of game using *Two Fisted Tales*, they will have to develop the game themselves or look elsewhere for further details. The game is also available as a 10.1 Meg PDF for download from [RPGnow](#).

Behind the *Doc Savage*-inspired cover -- also similar to the artist's cover for [All Flesh Must Be Eaten](#) -- the look and layout of *Two Fisted Tales* feels a little old-fashioned. The illustrations are mostly used to depict the various character types, with variations used for the headings of each chapter. Other than this, no art is used to break up the text; this is not as bad a defect as it sounds, as a relatively large font is used throughout and the chapters are themselves all kept quite short. In general, though, the smaller the image, the more effective a piece of art works in this supplement.

Initially the organization of *Two Fisted Tales* is a little disconcerting; the game's 21 character templates are listed before any explanation of either the mechanics or character generation. Part of this is due to there being almost no method of generating a character from the raw numbers and up. Instead, a player selects a template that fits the character type that he wants to play and modifies it with Hero Points, the number of which is determined by the campaign power. The four given are Gritty (H.P. Lovecraft's cosmic horror, or a nice cosy mystery); Escapist (essentially the default level of the hard-boiled pulps); Fantastic (the heroics of perfect characters such as Tarzan, Doc Savage, and the Shadow); and Amazing (the realm of low-powered super-heroes and the works of E.E. "Doc" Smith).

The 21 templates given are the Amateur Detective (Miss Marple et. al.), Brawler, Buccaneer (the Saint), Costumed Vigilante (The Green Hornet), Cowboy, Ethnic Sidekick (Kato), Explorer (Indiana Jones), Feisty Heroine (Wilma Deering), Flying Ace, G-Man (Dick Tracy), Gangster, Hard Boiled Detective, Magician (Mandrake), Professor, Psychic Investigator (Randolph Carter), Reporter, Scientific Detective (Hercule Poirot), Spunky Kid (Nancy Drew and the Hardy Boys), Tough Scientist (Doc Savage or Buck Rogers), Wild Man (Tarzan), and the Everyman. This last

template does actually enable players to build a character entirely of his own design, but this is not really necessary given the comprehensive nature of the templates given. Each character is defined by eight abilities that range from one to 20: Brains, Luck, Mind (mental discipline and concentration), Muscle, Reflexes, Savvy (style and social skills), Status, and Weird. This last attribute is a measure of how different a character is from the average man on the street. The higher its value, the more adept he will be and the higher his ability scores. Another two sub-abilities, Reputation and Wealth, are derived from a character's Status ability. Rather than skills, characters can try their hand at anything, but they can take Specialties and Masteries to reflect their personal interests. Specialties represent their focus upon a particular subject, such as Science, Mental Defense, Swim, and Artillery or Well-Connected. By narrowing his knowledge even further, they can take a Mastery, but he must have the relevant Specialty first. Thus the Hard Boiled Detective, Tommy Trowel might have the Savvy Specialty of Empathy, which he could improve to the Mastery of Detect Lies, or Read Emotions; while his learned counterpart, Lord Wymbourne, might have the Brains Specialty of Forensics and the Mastery of Graphology or Criminology.

Most of the templates have just two or three Specialties, but the more they have, the fewer Hero Points that are available to spend on new Specialties or upgrade to Masteries or on Schticks such as Gadgets, Martial Arts, Maneuvers, Hypnotic Powers, Magical Spells, and Animal Companion. More Hero Points are available if a player takes one or more defects. Players are also encouraged to round out their characters with tags or personal habits, history, personal style and code, and motivations. Once complete, backgrounds and descriptions are passed to the other players for commentary, suggestions, and to help work out the relationships between the characters.

The mechanics of *Two Fisted Tales* are relatively simple at both their basic and advanced levels. The basic rules require the comparison of an Ability with a target or difficulty number, with +4 bonus for any relevant Specialty or +8 for a relevant Mastery. If the resulting Ability level is greater, the character succeeds. This is enough to beat an easy task or lower ability score, but more difficult tasks require the use of dice and possibly cards. Similar to the Yin and Yang dice of *Feng Shui*, two 10-sided dice are rolled and the penalty die is subtracted from the bonus die. Each die is valued from zero to nine and the rolls are open-ended. Rolls are made against the Brains, Mind, Muscle, Reflexes, and Savvy Abilities, but not those of Luck, Status, or Weird, as they have other effects upon the game.

The cards are ordinary playing cards; a player holds one for every two points that his character's Luck Ability is above 10. The ordinary numbered cards are spent and their value added to a roll or check; Aces add 10 straight points to a roll or check as do the face cards, which can also be used to multiply the value of other cards -- Jacks by two, Queens by three, and Kings by four. Cards can also be used to reduce or eliminate damage, or spent to elicit a hint or luck break from the GM. They can even be spent to force a time out in the midst of a game for when the players feel that they need more time -- say, when they are caught within the confines of a death trap.

Under the advanced resolution system the result of the dice roll becomes most important. If the roll is under, the attempt is a failure; a roll of doubles on the dice or a total equal to the target gives a success, but with complications; greater than the target gives a complete success, and greater by 10 is a great success. Cards can still modify this result, but they must be played before a roll.

The basic resolution system handles melee and unarmed combat in a quick and easy fashion. The winner of opposed or contested rolls is the one to hit and inflict damage. Should a character suffer more damage than his Mind score, he will not be on his feet for long, and if he suffers more than 20, then it is curtains for them! The rules for advanced fighting do not add that much more complexity, but do add a reasonable level of detail and also make the game a little deadlier. Characters can be knocked out if they take more than five points of damage from a single blow, and can be killed outright if they take 10 or more. The average person can only inflict two points of damage with their fists; a baseball bat will add +4 to this, while a .38 revolver will do +8 and a Tommy Gun +10. A total success needs to be rolled to inflict these full amounts, while lesser successes will half or even quarter this damage. Though some may argue that the rule allowing for instant death after suffering a single blow or shot of 10 or more damage is unreflective of the pulp genre; the author argues that it is. The heroes or player characters are not meant to take unnecessary risks and should outwit their opponents with their brains and guile rather than pure brute strength or the greater ability to inflict damage.

The experience system is also designed to model the pulps, and although it is possible to pick up Specialties and

Schticks between adventures through training, what and when a character can be improved is very dependent on events in play. Although a character may not have a Specialty, Schtick, or language listed on their sheet at the start of play, all have the potential to be acquired in the midst of a game. For example, our private eye hero Tommy Trowel may not have German as one of his languages, but could select it the first time it comes up as part of an adventure by explaining that he had spent time as a POW during the Great War. If Tommy does not mention this when it comes up, he cannot know German without time spent in thorough study. The same applies to Schticks and Specialties, but Tommy needs to get a result more than twice the associated Ability on the roll in order to purchase a new Specialty. For example, Tommy is in a sticky situation and the only weapon to hand is a bullwhip. He grabs it and cracks it into action and with a roll of 27: twice his reflexes of 13. He is allowed to purchase the specialty of Reflexes (Cowboy Weapons) for the cost of a Hero Point. Another lucky roll later might mean Tommy can take a Mastery in Bullwhip, thus giving him Reflexes (Cowboy Weapons) [Bullwhip]. Conversely, had Tommy been particularly inept at his first few attempts to use the bullwhip, he could not take the Specialty at all. This method of improvement is geared toward building characters with breadth rather than the narrow focus of a Mastery. It is also geared toward *Two Fisted Tales'* design as a skill-light game.

The range of Schticks available for purchase runs the gamut of the pulp genre, and include gadgets, marital arts, hypnosis, magic, and animal-related ones, such as animal companion and being able to speak with our friends of the jungle. The easy gadget rules cover every aspect of the invention process from time and research costs to mystery flaws and reworking a gadget invented by someone else. The list of over 30 examples includes everything from an Anti Gravity Harness and the Brain Case to the Portable Canoe and the Wrist Radio. Martial Arts maneuvers, hypnotic powers, and magic all work in the same fashion: make the appropriate roll against a given target number -- say, Mind 15 for Missile Deflection, Brains [Hypnotism] 24 to make a hypnotic suggestion, or Brains (Occult) 24 to cast Open Gate -- and then pay the appropriate cost in Hero Points. High totals on the resulting rolls will reduce this cost. The effect of these rules is to emphasize the "special" nature of these Schticks and make them more important when they are employed. Thus players need to be more judicious in their character's Schticks, as they are not really powers that can be purchased and used at will.

A character gains more Hero Points by challenging each of their four bonuses: "Cool Idea Bonus," "Experience Bonus," "Roleplay Bonus," and "Virtue Bonus." Each of these values begins at zero and cannot exceed a score of nine. When a player does well in each area -- by doing something challenging in the game or having learned something for the Experience Bonus, playing within the spirit of the game or their character for the Roleplay Bonus, coming up with a clever invention or a scheme to fool a villain or roleplaying their skills rather than relying on rolls for the Cool Idea Bonus, or being heroic for the Virtue Bonus -- they roll a 10-sided die at the end of an adventure. If the result is above their current score of a particular bonus, it increases by a value of one. Failed rolls do not lose a character their current bonus score, and the only way to do that is to spend them on a one-for-one basis as Hero Points. This is an interesting mechanic that encourages and rewards good roleplaying in general, and also good roleplaying within the genre. Doing so provides a ready font of Hero Points and players will need to find a balance between the points they need for powering their existing Schticks and those needed for improving their characters.

The Game Master's Guide presents a pleasing examination of various elements of the genre -- though without the inclusion of a bibliography -- as well as a series of tables to help create the basic elements of the pulp game scenario. These are backed up with a good set of NPCs, a set of location tables, and another for creating MacGuffins. Besides covering these elements, the chapter discusses time and atmosphere, mysteries, and murder (from the simple art of, to the Locked Room Mystery and more), to a final look at ciphers and codes. All of this is good advice, as is that given earlier in the rules and guidelines for handling characters brighter than their players and dealing with NPCs.

If there is a downside to *Two Fisted Tales*, it is a very subjective one; the core mechanics -- the use of the two 10-sided dice, one subtracted from the other -- may result in too wide a result for some players. Countering this by switching to a smaller die would be difficult, since this would reduce the chances of rolling both a great success and of a result double an ability and thus improving a character. This die-rolling mechanic is intricately bound up in the system and changing it might lead to a whole different set of complications.

Putting aside what is really a subjective problem, the only deficit in *Two Fisted Tales* is its lack of a bibliography, because otherwise it is a thorough, if general, treatment of the pulp genre. It is not a particularly innovative design, and

although there are some clever mechanics present, the game does in fact feel a little old-fashioned, as is the layout of the book itself. Yet where it really shines is in how it deals with each element of the game and the genre, particularly the Schticks. That the treatment of each is neatly packaged into a chapter of its own also helps a GM to pick and choose which of them they want in his game. There is also a pleasing modesty to the writing, despite the breadth and ambition of the game's scope, making ***Two Fisted Tales*** a very likeable game and anyone wanting a thorough guide to gaming in the era of the pulps would find no better starting point.

--*Matthew Pook*

Pyramid Review

Fantasy Hero (for Hero System Fifth Edition)

Published by [Hero Games](#)

Written by Steven S. Long

414-page softcover; \$31.99

Fantasy Hero is the latest genre book from Hero Games. The book is 414 pages long; this was something of a shock as few RPG books approach this size. When you add the art-light and text-heavy layout common to all of the books from Hero Games, you get something very large and very dense. As a reviewer, I find these types of products, with broad scope and innumerable details, the most difficult to approach by far. Many reviewers choose to take the work as a unified whole and omit the sections in detail; others choose to pick apart each section in turn. I hope this review covers the basic sections in broad detail, without the "nitpicking" many longer reviews suffer.

Players familiar with the ***Hero System*** in any of its incarnations will feel immediately at home with the book's nomenclature and jargon. However, players new to the system will have a steep -- possibly too steep -- introduction to overcome. In short, the ***Hero System*** is the first, and most complete, Universal system currently in print. Beginning in the 1980s with ***Champions***, ***Hero System*** has been massaged, sliced, and hammered on by legions of playtesters, fans, and developers. This, combined with enlightened management -- by both the original developers and the new owners -- has yielded a system incredibly difficult to break. Characters are constructed using points, and balance is at the very forefront of the system. Whether your character flies through the use of spells, artifacts, or psychic powers, the cost is the same with equal parameters. For players who classify themselves as "gearheads" or "min/maxers," this system is heaven.

Fantasy Hero is one of the ***Hero System*** core genre guides. These books, like ***Star Hero*** and others, cover the basics of broad categories like "Science Fiction," "Supers," and "Fantasy." It also appears there will shortly be a ***Pulp Hero*** and ***Western Hero***. Many of these were previously published in other editions. The ***Fourth Edition*** had both a ***Fantasy Hero*** and a ***Star Hero***; however, these books were much different than the books being published for ***Fifth Edition***. The ***Fifth Edition*** books improve greatly upon their predecessors, and ***Fantasy Hero*** is no exception.

The book begins with a fairly large table of contents and an introduction by the author. Steve Long is both the primary author of ***Fantasy Hero***, and the publisher of ***Hero System***. The "how to use this book" section also helps give a strong feel for how and where the players and GMs should go about looking for what they want. Combined with the table of contents this should give more than enough roadmap even for those unfamiliar with the system. Players who feel that they need more will find additional help in the extensive index located at the back of the book.

Fantasy Hero is divided into seven chapters. Chapter One, "Warriors, Wizards, and Wondrous Worlds," covers the basics of what fantasy is. There is a discussion of common sub-genres: Epic, High, Low, Swords and Sorcery, and Urban Fantasy. It also covers the meta-genres of Comedy, Horror, Tragedy, Romance, and Mystery. The book covers blending ***Fantasy Hero*** with other Hero books like ***Champions***, ***Dark Champions***, ***Ninja Hero***, ***Star Hero***, and ***Western Hero***. Using substantial material from multiple genres and creating "elseworlds" and "what-ifs" is a core strength of any universal system, and the ***Hero System*** is no exception. Finally, Chapter One has a basic listing of fantasy elements -- the tropes or shticks that are common within fantasy. Chapter One is only 25 pages long, making it the shortest section of the book. This chapter seemed short; while much could have been trimmed from the overall size of the entire book, this section should have ultimately been much longer. There is serious discussion here that is not present in any other fantasy RPG. Approaching the fantasy genre with fresh eyes and examining what makes it tick is something many, if not all, fantasy RPGs should seriously consider.

Chapter Two, "Subjects Of The Realm," covers the meat and bones of character creation. There are somewhere north of 50 different Package Deals, though to be honest I lost count. Package Deals are **Hero System** jargon for a grouped purchase of abilities, skills, and disadvantages. Included in the plethora of options are racial, cultural, environmental, and professional Package Deals, which makes for a great deal of information. The different packages can be mixed and matched to create standard fantasy archetypes, and can also be used as guides to build new and interesting archetypes of your own. There is a discussion of both the standard skills and abilities as well as powers and talents. This discussion looks at not only how they commonly fit into the various fantasy genres, but also new ways of looking at certain powers through the lens of fantasy. The complexity of frameworks and package deals leaves two distinct possibilities. One is that all of the players are very conversant with the direction of the game and the clearly communicated vision of the GM, and have a complete understanding of the rules. The other is that all of the players individually create what they want in a character, and then the GM is left with the task of making all of these opinions work together. This second possibility is further complicated by the possibility that the individual players may have wildly differing experience levels with the **Hero System**. Hero products have always tried to mitigate these two opposing possibilities, but **Fantasy Hero** takes almost no time discussing this in detail, instead focusing on the encyclopedic Package Deals. At 111 pages, Chapter Two is also the longest chapter of the book, adding to the confusion.

Chapter Three, "Battles & Blades," deals with the intricacies of **Hero System** combat as it relates to fantasy. Not only does it cover the basics nicely, there are also optional rules for Modifiers and Maneuvers in fantasy settings. There is quite a bit of discussion of what is and is not appropriate in Fantasy settings. While most GMs will find this refreshing and somewhat of a relief with more difficult players, some will feel that this unfairly restricts their interpretations of how various powers and abilities should be represented in "their" campaigns. This concern is generally unwarranted, as Hero has always asserted that the GM is the ultimate arbiter of all disputes. While only 67 pages long, none of the subjects addressed in Chapter Three seem rushed.

Chapter Four, "Arcane Creations," deals with magic in Fantasy Hero. With the chapter weighing in also at only 67 pages, many consumers may feel slighted. However, they should be reminded that all of the vast rules for powers and abilities presented in the **Hero System** are available for spells. What this chapter really deals with is the nature of magic in the specific campaign world. What is the origin of magic? What is its nature? What frameworks are available for it? This is the core of **Fantasy Hero**, and in many ways the most important chapter of the book. The chapter also reviews social and technological issues of magic, addressing the age-old question, "If magic were real, what would change?" There are a dozen magic "systems" presented for use together or separately. Finally there is a discussion of magic items, the "gadgets" of fantasy games. It is here that a lack of examples becomes painfully apparent. While source material of an encyclopedic nature invariably covers some topics in too little detail for some readers, this section is desperately in need of definitive examples for how the systems and frameworks not only work, but also interact.

Chapter Five, "Beyond The Fields We Know," deals with the issues of creating and populating a fantasy world with strange and exotic beings. Many Fantasy RPG GMs feel that world creation is one of the penultimate pleasures of running a game. These GMs, and even those who take a more pragmatic approach, will find ample grist for the mill within these 42 pages.

Chapter Six, "Wonders Of The Imagination," is a discussion of gamemastering **Fantasy Hero**. Like Chapter One, this chapter is entirely too condensed. Subjects as diverse as tone and theme are alongside tips for types of campaigns and more setting advice, all in 40 pages. Running the game, villains, monsters, and NPCs are also shoehorned in. This section alone could have, and in many other games has, merited an entire book of its own. Too little detail and too broad a brush here seriously limit the utility of the information presented.

Chapter Seven, "Drudaryon's Legion," is primarily composed of a set of examples, a bibliography, and an appendix of random settings. The greatest issue here is the complete inadequacy of the Bibliography. To attempt to cover a genre this diverse in only a few pages is criminal. What the players and GMs are left with is (at best) a few highlights in the opinion of a few people. Hero should generally leave this to the individual consumer, unless a specific reference illustrates a specific example in the text. The characters and villains represent a very straightforward and basic view of character construction. None of the finer points or intricacies of the **Hero System** are covered. While these 31 pages

may be helpful for a few players unfamiliar with the system, they will be of almost no utility to more advanced **Hero System** veterans.

Even with its flaws, **Fantasy Hero** is an amazing book. Let us be completely clear on this point. Not only does the book attempt a task no other RPG book has ever accomplished, it clearly succeeds on several levels. Unfortunately, the encyclopedic nature of the finished product is its most disappointing aspect. There is both so much here, and so clearly much more to be covered. It could be that the text required a vicious editor to prune and scrape every ounce of force from every word, while preserving some of the room for other ideas and examples. It could also be that the product is simply too big, and should have been presented in multiple volumes, much like **Hero Games** has done with **Champions**.

I have covered a few dozen products over the last few years; none of those has been nearly as difficult to digest or to formulate an opinion of as **Fantasy Hero**. What the reader is left with are more questions (though also more ideas) than there were before. The largest question is evident from the start. The scope and depth that it covers, or attempts to cover, across the fantasy genre is simply unequaled in the history of RPGs, but is it too big? After a short discussion with Steve Long at GenCon 2003 I was informed that **Hero Games** is also looking to publish four "settings" for **Fantasy Hero**. It is completely possible that judging any game by a single product is too harsh, and that the unified whole will be triumphant. However that is a discussion that cannot be resolved here.

It is my opinion that Fantasy RPGs are the primary driving force behind the growth of the hobby -- but **Fantasy Hero** will never bring new players to the hobby. The level of work, money, and experience investment needed for entry to the world of **Fantasy Hero** is simply too daunting for any neophyte. This is too bad, as there are stories to tell and settings that can only be built in **Hero System**. For the experienced and those familiar with game systems and **Hero System** in particular, this book simply proves that the sky is no limit for this game.

Pyramid Review

Torn Asunder (for d20 System)

Published by [Bastion Press](#)

Written by Steven Creech & Kevin Ruesch

96-page b&w softcover; \$22.95

Basic **d20 System** combat is designed to be fast and furious but abstract. Hit points are whittled away until a combatant drops with all-or-nothing effects once 0 hp is reached. Heroes and monsters can always fight until the last gasp or run away wounded without hindrance under this system. Flashiness is left to the numbers and the DM's descriptions. Maiming is just not part of the base combat system.

Almost since its origin, there have been optional add-ons for doing more than simple hit point damage in combat. *Best of Dragon* had an article for adding critical hits and fumbles to **Advanced Dungeons & Dragons** and **Rolemaster** took critical hit charts to a peak of complexity that at base could still be applied to **Dungeons & Dragons**. Grittier, more specific and crippling criticals make combat more risky and can change the feeling of combat. Players both enjoy lopping the limbs off of opponents and fear the increased risk to their characters.

Bastion Press' **Torn Asunder** presents an optional add-on critical hit system for **d20 System** games. At base the system works on top of the existing abstract **d20 System** critical hit system of threatening hit roll with confirming secondary roll for extra hp damage. For a specific critical, the threatening hit must beat the target's AC by five, 10, or 15. If a normal critical is confirmed, then depending upon the amount of original success a mild, moderate, or serious critical effect will occur in addition to the normal critical hit point damage.

For a specific critical effect a roll is made to determine the affected body part (either from a general chart or a chart specific to the body type of the target) and then the appropriate level of critical is looked up for that body part. For each effect there are different descriptions for bludgeoning, piercing, and slashing weapons although the mechanical effects are usually (but not always) the same. The actual effects of criticals range from attack penalties with a specific limb, movement and Dex AC penalties, skill penalties and -- at the serious level -- loss of limbs or incapacitation and death in a few rounds. The penalties are straightforward and easy to apply.

Since only one extra roll is involved, the combat procedure is not significantly slowed down to resolve the additional effects.

Now mechanically this means that high threat ranges and touch attacks become more dangerous, gaining a slight advantage over low-threat-range but high-multiplier weapons. Also, attack rolls in general have more of a potential bite, so power attack has more of an opportunity cost and weapons and attack spells gain a little power compared to saving throw based effects. Conversely, AC becomes more important than in the standard **d20 System** because, even if hit, a higher AC can reduce the severity of a critical effect.

Torn Asunder takes this base critical effects system and builds upon it bit by optional bit. Whether critical effects can apply to monsters immune to criticals is left up to the DM to decide; you may want to be able to cut off a skeleton's hand, but you might not want to be able to hamstring a stone golem. The determination of what effect happens is based on the random body part charts, but an optional called shot system allows a character to target a particular body part. To make a called shot a character must use a standard action and the target can not have been moving. The character must either have weapon focus in their weapon or make a concentration check to target the body part in combat. Each body part is assigned a specific called shot penalty, but if successful it is a moderate critical to that body part. This

makes concentration a combat skill of use to warriors but leaves a useful feat option open for marksmen fighters and barbarians without the class skill.

Once individual body parts can be targeted, the next step is piecemeal armor that can leave certain limbs uncovered. If 50% of the body is covered by piecemeal armor then the AC applies to general attacks and to covered areas for called shots; if less than 50% then only for called shots. This discourages the use of "chain-mail bikinis." This contrasts with the system from *Diablo Diablerie* where piecemeal armor parts added non-stacking one or two points of general AC.

Once a critical has scored it lasts until magically healed or weeks and weeks of time have passed for recovery. The healing skill can reduce the amount of time it takes for recovery but has DC modifiers depending upon the amount of hp damage suffered from the critical and what percentage of the victim's hit points that accounts for, adding an extra layer of recordkeeping and computation. In addition there are some guidelines for higher DC improved short term healing beyond stabilization that can give hit points back to a character.

Serious criticals, however, can only be healed by magic. This leads to the development of prosthetics and magic prosthetics for those without regenerative magic. Weapon attachments and special gnomish gizmos as well as magical almost cyberware style magic items are presented. Of note, the magic items are presented in the new **3.5** format with detect magic information, etc., but the later appearing monsters are in **3.0** format. Bastion has stated there is a planned web enhancement for updating the monsters and templates to **3.5** along with compiling errata. Complementing the prosthetic equipment are healing rules for dealing with the chafing of prosthetics against limb stumps.

Individual types of new armors such as a mithril cloak as well as new weapons ranging from the very big ogre maul to the exotic sword chain, a seven-foot-long bladed chain with a sword handle. One of the magic armors, the cloak of the kyton, has an amazing full column illustration, matched only by an earlier one of a kyton being maimed by an elven swordsman. Another option is a modification of the armor as DR instead of AC rule from Bastion's *Arms and Armor* sourcebook.

There is a panel of illustrations for many but not all of the new weapons. Some of the weapons are a bit suspect; the sword chain and triple crossbow don't seem to be really workable weapons, and the weighted martial greatsword seems too generous in going up a damage die type in return for only a modest price and weight increase with no other drawbacks compared to a normal greatsword.

For more character options there are two 10-level prestige classes and a new core class. The marksman is a duelist focused on causing criticals and called shots. The spiritual healer gains healing abilities and 1/2 divine spellcasting. The new core apothecary is basically an expert healer with a few potent non-magical healing and skill abilities. The book also collects a number of powerful combat feats, including ones for tripling a weapon's threat range, gaining $\times 2$ strength damage on two-handed attacks, weapon finesse for damage, and full strength with offhand weapons. Spells are split into two sections, healing spells and combat spells including such effects as a magical one-shot vorpal greataxe blow.

Finally there are seven new **3.0** monsters and three new templates. The primal, spined, and threatening templates are quick and easy templates to make things just a touch nastier. The bonecracker giant, combative reptilian humanoid ramzadi, and little predatory lamprey-like bonesaws are nice vicious combatants, but the inclusion of two porcupine monsters seemed a bit duplicative although one is a mysterious humanoid race and one is a small vicious pest that travels in swarms. The dung golem is just gratuitously grotesque and is thankfully unillustrated.

So overall the core of the system is a quick-paced critical hit add-on system that allows for more graphic specific game effects than hit point damage. It shifts the balance a little for power in combat and makes things deadlier for wounded PCs, but if you are looking to add specific criticals to your *d20 System* game so that your Conan-esque barbarian can cut off an opponent's hand while it is still gripping a sword, this is a nice easy to implement system that is worth considering.

--John Henry Stam

Dork Tower!

Dork Tower!

This Looks Like a Job For . . . Superstition!

I'm not a huge baseball fan. I have a reasonable knowledge of the game, and I have childhood memories of bonding through both playing and watching the sport, but those early events never created a lasting love. Nevertheless, I know which teams are usually good and which aren't, and I generally know how they affected the Tigers:

"Do the Tigers have tonight off?"

"Yep; they're playing the Red Sox."

See, the Boston Red Sox, like the Chicago Cubs, have a long-lasting losing tradition, which has been labeled -- at least as far as the Cubs go -- as a curse. But, oh, how times have changed. My own Tigers narrowly avoided tying a record as most losingest team in modern history, and the Red Sox and Cubs both found themselves competing for spots in the World Series, baseball's big enchilada.

So the prospect of a Red Sox/Cubs match-up was too good for a casual fan to ignore. I found myself rooting for both teams, knowing that the ultimate match-up of those two would be a sign of the end times -- Armageddon with chaw.

Alas, it was not meant to be. In fact, *neither* team made it, meaning the world is faced with the prospect of a Yankees/Marlins confrontation, a World Series that will be of interest to almost dozens outside of New York and Miami.

Anyway, the two teams synonymous with "not doing anything in October" will *not* be playing against each other for World Series redemption. My hopes dashed, I started thinking about the events that led up to this event. In particular, I recall an interview on National Public Radio's [Only a Game](#) with one Cubs fan who had this ritual of changing hats depending on how the team was doing. He would switch between three Cubs caps depending on how dire the situation was, in this elaborate ritual I could only begin to fathom. It was left unresolved how much influence he believed his actions actually had over the game.

On another program I heard about the great lengths some sports figures go through to ensure a winning streak (or break a losing one): complicated schemes that dictated how they would eat, step up to the plate, dress, and so on.

All these activities boil down to one common denominator: superstition.

Of course, while superstition may be common in sports, the athletic world is by no means its only forum. Minor rituals designed to align the fates more to our liking are common; one study suggests that 25% of Americans consider themselves to be superstitious, but given the stigma associated with superstition it's likely this number is much higher. (My friend Kathryn and I had a running joke where, whenever discussing plans, I would make a statement like, "What could *possibly* go wron--?" . . . whereupon she would smack me. Personally, I tend to literally knock on wood whenever making a statement about the future.)

Stopping to think about it, there are dozens -- if not hundreds -- of superstitions that are commonplace; while many have "logical" (or at

Random Thoughtlet

So after the Cubs lost, I sent an e-mail to the inimitable Ken Hite, himself a Chicago resident:

SUBJECT: And thus it ends...

Poor damn Cubs.

To which he replied:

SUBJECT: Re: And thus it ends...

On the other hand, that means I have some hope of hitting deadlines for the rest of the month. But what an excuse it would have been: "Sorry I didn't get that piece written, but the Cubs were in the World Series. Won't happen again."

And *that's* why he's a brilliant writer.

least fascinating) origins, the truth is that most of them simply don't make sense nowadays, and have no intrinsic ability to change reality:

- Black cats
- Broken mirrors
- Saying "God bless you" (or "gesundheit," "fahrvergnugen," etc.) after a sneeze
- The number 13 (especially Friday the 13th)
- Rabbit's feet
- Full moons
- Walking under ladders
- Opening umbrellas indoors
- Chain letters
- The groom seeing the bride in gown before the wedding
- Tossing salt over your shoulder after spilling it
- Pedestrians pressing the "Push to Walk" button at traffic intersections

And so on.

Of course, even though we know about all of these common superstitions, and we know logically on some level they don't mean anything, for many of us there is still a visceral reaction to them. I know otherwise rational people who say, "It must be a full moon tonight," or "I'm staying home on the 13th."

And, of course, all of this is ripe material for <drum roll> gaming.

On a macro level, any game world is going to have its own superstitions, which will likely be common to the culture. And it can lead to interesting insights into the game world, showing what minor activities can become major annoyances or even impossibilities:

- It's considered unlucky to be aboard a ship at night. (This would severely limit seaborne exploration.)
- The middle daughter with an older and younger brother is destined for greatness. (This might influence child-bearing choices, as well as the attitude and actions of the middle daughter.)
- The first day of each month is an auspicious time to begin a new undertaking. (This may result in a lot of activity at the beginning of the month, and an encouragement to resolve matters before the end of the month so new deeds can begin.)
- Cyberspace is safer if the computer used is plugged into the top outlet.

Thinking up reasons why these superstitions came to be can help develop the flavor or history of the world; perhaps a series of important naval expeditions all met unfortunate ends at night, or maybe a truly special and powerful woman was the middle child with two brothers. And the reasons behind some of the superstitions may be completely unknown, or lost to the mists of time.

Regardless, any of the big superstitions that will be an integral part of the game world should be introduced early on, so the players don't suddenly learn six years into the campaign that, oh yeah, everyone is terrified of dachshunds. (Of course, games that feature globetrotting can introduce all sorts of new and previously unknown regional superstitions.)

Besides these collective superstitions, many (if not most) people develop their own personal rituals. The reasons behind this are myriad: nervous energy, a sense of helplessness, a need for control, and so on. However, the fact remains that if a dungeon-crawler is near death and manages to successfully conclude a climactic battle while emitting a guttural scream, it's easy to envision that he might believe the guttural scream *caused* him to win. From there, it's no stretch to picture the same warrior screaming his head off before any confrontation.

The "great" thing about superstition is that it's usually self-reinforcing. If our fighter wins a battle while screaming, it "proves" that the screaming caused the victory (or at least helped). If he loses while screaming, it just means he wasn't yelling right, or loud enough (or, least irrationally, it was so difficult a battle that even yelling wouldn't help). If he loses while not screaming, it also reinforces the supposition; and if he wins without screaming, then that merely means

the battle was easy enough. In addition, superstition can also be self-reinforcing by providing the mental impetus necessary to win, or the hindrance to lose.

Of course, a bit of thought reveals the truth behind most superstitions. The universe can be a random and chaotic place; events good, bad, and indifferent can happen at just about any time. Our ability to see patterns where none exist coupled with a desire to survive makes us use *any* advantage -- real or perceived -- to help ensure our continued existence.

As an aside, in a world with magic or other working rituals, many of these superstitions would likely be *true*; starting your ritual during a half-moon may have dire consequences to its outcome, as would using blood from a dog instead of a wolf. But the ironic thing is that, even in this circumstance, people would almost certainly develop superstitions that did *not* affect the outcome. In other words, a ritual might demand the blood of a wolf, but not have any requirements as to how it's obtained; nevertheless, if a mage obtains good results from cutting the wolf with a gold blade at high noon while wearing a fez, he's likely to incorporate some or all of those elements into his next attempt. If that next attempt is also favorable, then those will probably become a part of the repertoire. (The only likely way this wouldn't be true is in a universe where superstitions can mold reality; thus if enough people believe gold knives are the best for sacrifices then it will become true. Such a world is beyond the scope of this article, but I'd point out this type of universe would probably be awash with minor superstitious rituals and rites for everything.)

Most superstitions are harmless, and work to build character and game worlds; a thief who sees significance in the patterns of his flipped coin has an intriguing quirk, as does a diplomat who believes he cannot succeed unless he has the final word in any interaction. But other superstitions can become hindering or even crippling if taken to an extreme. A hacker who never bathes in order to ensure his continued success will not be appreciated by his friends, and someone who feels every day is unlucky except Sunday may be hard-pressed to accomplish much of anything. Many game systems have the means of simulating these limitations.

In all, while it's commonplace to envision our own characters as stalwart empirical observers who would never succumb to superstition, the fact is that many people do. And even people who don't believe in such nonsense would likely still be aware of the world's common superstitions, and may be faced with difficult prospects: Do you risk becoming a social pariah by, say, breaking a mirror in front of others, even if you don't believe? Do you try to force a confrontation during a full moon, knowing that any outcome may be seen in light of that phenomenon?

And if you're a team that is known for losing, do you risk your very identity by actually winning it all?

Fortunately, the last question need not be answered tonight . . . but there's always next year.

Alternate Enchantment

An Expanded Look at Creating Magic Items in *GURPS*

by Sam Young

Lorith moved deftly to set her wares out as the market crowd began to trickle in. With a flick of her wrist, she folded red felt matting into an attractive wave around a Resist Fire amulet. It was one of her finest pieces yet, the kind of work that could gain her recognition and maybe a few commissions. She wanted it displayed prominently. After a few more adjustments, she stood back to appraise her stall's appearance and then, satisfied, turned away.

Taking a deep breath, she began to hawk her wares. "Enchantments! Fire enchantments! Finest quality!"

It wasn't long before she'd attracted a customer. He indicated the Amulet with a bony finger. "How much?" he rasped.

Lorith clenched her jaw to repress a smile. Had to remain professional. The stranger's eyes never moved from the amulet while she went through the figures in her head. After a long silence, she turned to the GM. "Well?"

The GM grimaced and paged through her notes. "Uh . . . are you using Umana?"

* * *

One of the things that sets the enchantment system in *GURPS*' Magic apart is its attempt to explore the economic implications of its mechanics. Unfortunately, the prices in the Basic Set and Magic are based on assumptions that do not hold up in every setting. This article discusses how to alter those assumptions and what effects the alterations will have on the prices of magic items. Five fully-computed examples are provided as well.

There are five basic forces influencing the cost of magic items:

Energy and Fatigue

The standard *GURPS* magic system assumes that all mages are fatigue casters. The amount of energy they can expend is limited by their fatigue scores, and they recover from its use fairly quickly. A fatigue caster with no skill in Recover Strength will recover one point of fatigue every 10 minutes. Quick and Dirty enchantments take 60 minutes per 100 energy used, and use 10 fatigue from each caster. That makes one casting cycle at least 160 minutes long. In an eight-hour work day there are 480 minutes, so three casting cycles can be completed. Three cycles take 30 fatigue from an average caster, so each fatigue point costs 1/30 of the enchanters' daily salary. For example, \$25 per day divided by 30 points comes to \$0.83 per point, which is rounded to \$100 in Basic and Magic.

The best known and most widely used alternative to fatigue casting comes from S. John Ross' "Unlimited Mana" article. Unlimited Mana ("Umana") gives casters access to limitless magical energy, but balances increased power with increased risk, and measures recovery in days rather than minutes. Umana mages recover from energy expenditures at an average rate of eight points daily. Enchanters may choose to exceed Thresh on occasion, but can't make a regular practice out of it. Therefore, they charge one-eighth of their daily salary per energy point they use. With an average salary of \$25, each point costs \$3.125.

The Speed of Slow

Many genres have nearly ubiquitous magical items, which is implausible under *GURPS*' default pricing scheme. GMs looking to keep economic realism alongside cheap and common magic items will want less expensive enchantment options. Simply allowing Slow and Sure enchantments to be cast more than once per day can drastically change the

prices for large enchantments. Likely limits are one casting per hour or one casting per fatigue point per day, but anything is possible.

Powerstones

Not every setting will have powerstones, but their existence in ready quantities is a central assumption of **GURPS'** enchantment rules. Without powerstones (or another external power source -- see **GURPS Technomancer** for the effects of Industrial Enchantment), the amount of energy contributed by each caster will be limited to his own reserves, averaging 10 fatigue normally, or 8 energy points with the Unlimited Mana system. Without extremely high skill and a large number of casters, the size of Quick and Dirty enchantments will be very limited. For the standard group of six enchanters, the normal cap will be a paltry 60 fatigue or 48 energy points -- hardly enough for even basic enchantments. Slow and Sure casting will have to be used for most items of useful size. Of course, if the GM permits a series of Quick and Dirty castings to contribute toward the same enchantment, the resulting items will be extremely cheap to produce!

Large powerstones are very likely to have quirks that will affect their use, recharge rate and conditions, and so on, and enchanting can be a risky business. The risks of summoning a demon, destroying the item (and days if not *years* of work), or perverting the enchantment are great enough without imperfect powerstones contributing additional difficulties. If quirked powerstones aren't adequate for enchanting, the cost of other enchantments will be raised, often very significantly.

When creating large powerstones, the expense of the gems quickly outweighs the enchanter's salary. For example, the labor for a standard 100-point powerstone accounts for only about 1% of its cost! Obviously, use of cheaper gems can alter this ratio, but enchanting frequency and mage salaries will make little difference. Two options exist for making gems cheaper. First, less expensive materials can be used. Second, more energy can be permitted in a smaller gem. The end result of either decision will be similar, and they can be combined to justify virtually any formula the GM wishes to apply to get the unenchanted stone's cost.

A final consideration is the enchanter's expected return on the powerstones used in Quick and Dirty enchanting. **GURPS Basic** assumes 36% per year, or roughly 1,000 days to full recovery of the stones' cost. If powerstones are very common or cheap, there will be less pressure on the enchanters to recover those costs. Conversely, more rare stones will make every enchanter anxious to recoup his costs to ensure they will not cripple his business over the long term.

Enchanter Salaries

At the default \$25 per day with \$1,000 starting wealth, enchanters make quite a nice living. Depending upon the scarcity and efficacy of thaumaturgic knowledge, and societal attitudes toward magic, though, enchanters could range from Struggling to Filthy Rich. Because of their long recovery times relative to fatigue casters, Umana enchanters are especially likely to be dabblers and to have other jobs, which may lower enchanters' salaries across the board.

Enchanter Skill

An effective skill 15 is assumed throughout **GURPS'** enchantment rules. However, by improving by only one level, a powerstone enchanter can greatly improve the quality of his work and his returns compared to less-skilled competitors. And if skill 16 were the expected norm, market prices for both powerstones and enchantments would decrease significantly.

High skill levels also decrease enchantment costs by permitting larger casting circles and more -- hence smaller -- powerstones. Conversely, lower skill will lead to smaller circles, and will drive prices up.

Putting It Together

It would be impossible to list prices for every potential combination of the enchantment variations discussed above. Here are a few tables for selected combinations.

A few notes apply to all the prices below. First, all prices have been rounded to two digits. Second, note that powerstone prices reflect only their manufacturing costs -- typical retail price will be twice the given values. Finally, the prices for enchantments exclude the item itself and any special components (e.g., "a black opal worth at least \$2,000"). To keep magic items especially rare, GMs may want to double the price of the basic items in addition to their enchantment costs. This can also allow the enchanters to better recover their costs.

Unlimited Mana

The standard enchantment guidelines remain in effect, but enchanters use Unlimited Mana and, because they often have short work days, their daily salary is only \$20.

Commonplace Enchantment

Because Slow and Sure enchantments are cast twice a day and energy is stored in powerstones at two points per carat, this variant brings down the prices of enchantments without altering enchanters' skill or salary. The low cost of powerstones allows enchanters to recover those costs at only 20% per year.

Lower-Paid Enchanters

Here, enchanters are paid only \$15 per day, on average, and work 10-hour days. Because highly skilled mages find it easy to make a better income doing more interesting things, lead enchanters typically have skills of only 18, limiting the enchanting circle to four mages. Also, powerstones in this setting are made of less-valuable materials, costing only 80% normal, and enchanters recover their costs at 25% per year.

<i>Powerstones</i>		<i>Unquirked Powerstones</i>		<i>Enchantments</i>

Master Enchanters

This variant assumes that lead enchanters routinely have skill levels of 25, which allows an effective skill of 16 with a circle of 10 mages. Powerstones are also enchanted with skill level 16, and only unquirked powerstones are used for enchanting. Naturally, master enchanters like these are paid handsomely, but the large number of apprentices involved in enchantments keeps the average daily salary at only \$40. Otherwise, the default assumptions apply.

<i>Powerstones</i>		<i>Unquirked Powerstones</i>		<i>Enchantments</i>

Rare Magic

This Unlimited Mana variant assumes that few mages exist, and magic items are rare. Lead enchanters rarely have skill levels exceeding 17, so only three mages work together on enchantments. Powerstones are made from gems costing twice normal, and enchanters use only unquirked stones, so they are enchanted at skill 16 to keep the number needed to a minimum. The rarity of magic allows competent enchanters to command high salaries, averaging \$40 per day, and to recover the costs of their powerstones after only one year.

<i>Powerstones</i>		<i>Unquirked Powerstones</i>		<i>Enchantments</i>	
Size	Cost	Size	Cost	Size	Cost
1	\$160	1	\$160	<50	Size × \$5

80	\$380,000	80	\$1,100,000		
90	\$510,000	90	\$1,700,000		
100	\$650,000	100	\$2,500,000		

Other Times and Places

The prices in Basic and above assume an average starting wealth of \$1,000. To adjust prices for other economies, multiply them by the quotient of the campaign's starting wealth divided by \$1,000. For example, in a campaign with a starting wealth of \$5,000, prices for enchantments and powerstones would be five times their listed values.

Where Do The Numbers Come From?

Brett Slocum's "The Compleat Powerstone" goes into great depth describing the pricing of powerstones. The prices

here were generated with the same formulae, but vary due to labor costs and skill variations. For skill 16, replace "0.9815^P" with "0.9954^P" in the formula for the odds of breaking a stone and "0.9717^P" with "0.9860^P" for the odds of an unquirked powerstone.

To get the cost of an enchanted item, take the total energy required and subtract the amount of energy that can be provided by the casters. Divide the remainder by the number of casters to get the necessary size of powerstone. Fractions mean that two different sizes of stone will be used, in an appropriate ratio. The cost per point of energy from a powerstone is equal to its production cost divided by the number of days required to recover its cost (roughly 1,000 in *GURPS Basic*). The total cost of the enchantment is the cost per point of the powerstones' energy multiplied by their size, plus the cost of the enchanter's energy.

An example:

In the Unlimited Mana setting above, we want to figure out the cost of a 160- point enchantment. With six enchanter's, we get 48 energy. 48 from 160 leaves 112. 112 divided by 6 is 18.7. We'll need four 19-point stones and two 18- point stones.

Doing some calculations, we find that a 19-point stone costs \$6800 and 18- points stones cost \$6000. The cost of the energy from each stone is its size times its cost, divided by 1000 (for 36% recovery), for a total of \$517 for the 19- point stones and \$216 for the 18-points stones.

Because we're using all of the enchanter's energy, labor costs are \$20 times 6, or \$120. \$120 plus \$517 plus \$216 is \$853, rounded to \$850.

The Next 10 Years

by Steve Jackson

Ten years of *Pyramid*. Hard to believe. Few zines in this hobby get anything like that long a run.

That suggests that we did something right. A certain amount of backpatting is in order. So: Yea, Derek, yea, Scott, yea, Steven, yea, everybody else who helped get us this far. Go us. We rule.

Okay, that's enough.

Where Do We Go From Here?

Ten years is a long time, but it's less than half the time SJ Games has been in business. And we plan to be around for a long time yet. When I think of *Pyramid*, I focus, not on where we've been, but what we learned in the process, and where we need to go next.

Start with a few hard truths:

First, our side of the game business is, and remains, a fringe hobby. Sure, the total market expands a bit every year, but when an adventure game company has a breakout success, that success seems to take almost as much away from the rest of the hobby as it gives back . . . and the successful company usually leaves the hobby behind, in spirit if not deliberately.

Second, doing zines is rough. The only truly long-term survivor among hobby zines is *Dragon* . . . and even the "ancient read *Dragon*" made it simply by being The Official House Organ of The First And Most Popular RPG. And, while I don't know any details about its finances, I do know that it was on hiatus for a while during TSR's last days, and that Hasbro decided to sell it, which is how its enthusiastic new publisher got it. (Best of luck to Paizo!)

Third, e-zines are **not** the magic formula to success either. Not even here. Sure, *Pyramid* is a success for us. But its circulation goes up and down, up and down, and I don't think it has quite ever broken 4,000. And our other experiments in that line haven't been overwhelming winners. *Comic Book Life* was stillborn (arguably it was too far away from our core fan base, but it didn't find its own). *d20 Weekly* was a noble effort that didn't make any money. Even *JTAS* is a break-even proposition, justifiable in business terms only because it supports the **Traveller** fan base.

So it would be pretty desperately dumb of us to assume that just because *Pyramid* has made it through 10 years, it's now immortal. *Au contraire, mes amis*, big time. The only way this zine will be around for the next 10 years will be through constant re-evaluation, and, where necessary, change. Never change for its own sake, but change whenever we see that our fans want something new. And change whenever we see that the old ways aren't working any longer.

Sacred Cows Make Great Hamburger

So what do I think might change around here? Other than "whatever it takes," of course?

Regular features. That's something that always has to be tuned and re-tuned. We know you like cartoons, for instance . . . but only if they're the right ones, and cartoons can get very expensive if you have very many. Regular columns are a double-edged sword; once they develop a following, they're very popular, and if they come in on time the editor is happy, and if they don't come in on time, the editor develops ulcers.

Reviews. We know you like reviews. We also know that you mostly like the reviews of the games you were thinking of buying anyway. And with dozens of new products coming out every week, how can a review zine keep up?

Answer: It can't, really, not with the budget allowed by a few thousand readers . . . unless it pays nothing for the reviews and doesn't spend any time editing or checking them. That's the rpg.net model. And rpg.net has a lot of readers. And you **can** make a case for that model. Sure, it leads to a lot of bad reviews: unfair ones, even deliberate hatchet jobs; clueless ones, even some written without actually playing or even reading past the cover; drivelingly stupid and misspelled ones, so your brain hurts just looking at them. But there are also a lot of good, insightful reviews there. And most people can tell which ones are clearly bad, and either read them for laughs, or just ignore them. So . . . should *Pyramid* get out of the review business? Or open up its own sandbox area for free reviews? Or go on as it has, with the philosophy that a **few** reviews every week, by reviewers of known quality, are a useful thing for the readers? It's certainly a question . . .

The house-organ thing. It's an old truism. Adventure game fans will SAY that they want a general-interest magazine . . . but most of them, when they vote with their dollars, really want a house organ that covers their current interests. The majority of our readers here come from the rock-solid SJ Games fan base and might be quite happy if we became more of a house organ. We have always resisted that with *Pyramid* (though house organs *Roleplayer* and *Autoduel Quarterly* had good long runs). But it's easiest to get articles about our own products, because that's what most of our fans are playing. We hope that the deal with Issaries will help that . . . sure, in a sense, it makes us a house organ for **another** publisher, but still, variety is variety!

Editing. We . . . and I mean both Steve Jackson Games in general, and Steven Marsh and I in particular . . . take pride in the quality of the material that appears here. That doesn't happen by itself. Steven spends a lot of time picking out the best articles, and working with the authors who have good ideas but need help on presentation or development. If he didn't do that, you could have about twice as many words in every issue. But fewer of them would be spelled right. We **think** our readers appreciate quality. If we ever become convinced otherwise, we'll have some hard decisions to make.

Playtesting. This has been a feature of *Pyramid* for a long time. But how many of our readers really care about it? And with Kazaa and its ilk out there, and the **certainty** that some weasel somewhere is going to "share" material with his fellow weasels, is there really any point in having a unique feature? Unique to subscribers is good. Unique to subscribers and weasels, but leaving out the honest non-subscribers, is not so good. The whole issue of online playtesting is up for review.

The Concluding Paragraph

It really **has** been a good 10 years. But the only thing we can be sure of is that *Pyramid* will continue to change. I hope you'll stay around and be part of that change, and give us your thoughts on how it should happen. And I hope you've enjoyed the ride so far as much as I have.

Pyramid Pick from the Past

Dark Continent: Adventure & Exploration in Darkest Africa [2001]

Published by [New Breed \(UK\)](#)

Written by David Salisbury with Mandy Smith

Cover by Andy Hepworth

Illustrated by Katherine Lee & Jon Hodgson

Boxed set with three books and two maps; £24.99 (approximately \$41.75)

Darkest Africa holds a certain allure in the Western cultural mind: the mysteries of the interior, the impenetrable jungle, the immorality of the Arabs of the East Coast, the majesty of the beasts abroad the Serengeti, the deadly diseases of the rivers and swamps, and the exoticism (not to say eroticism) of the natives and their tribal practices. Of course, Hollywood has promulgated such myths so that the image of the Great White Hunter paddling up Africa's long rivers beset by hungry crocodiles and barrages of spears and arrows from head-hunting, cannibalistic natives is one to set our sense of adventure racing! Africa in general, is almost, but not quite ill served by the RPG industry. African-set adventures (seen in *Fragments of Fear* and *Masks of Nyarlathotep* for *Call of Cthulhu*, *Heart of Darkness* for GDW's *Dark Conspiracy* RPG, and most recently in the *Feng Shui* scenario anthology, *In Your Face Again*) and supplements (*Rifts World Book 4: Africa* from Palladium, *Magic & Mysticism: The Dark Continent* for West End Games' *Indiana Jones* RPG, *GURPS Voodoo*, and even *Jungle of Chult* and *The Ivory Triangle* for *Advanced Dungeons & Dragons*) are not uncommon, but even despite the recent release of Atlas Games' *Nyambe: African Adventures* for the *d20 System*, there has been no single RPG published that is devoted totally to Africa.

That is, except for *Dark Continent: Adventure & Exploration in Darkest Africa* from the small British publisher, New Breed (UK), released at Gen Con UK in 2001. This is a *straight* Victorian-era RPG: no elves or steampunk here. Indeed, the author advises that such elements as æther flyers would ruin *Dark Continent*, since they would reduce its themes of exploration and Imperial assimilation of the interior. Nominally the game is set during the late 1860s and 1870s, but it also serves as a useful source for games set right up through to the 1920s, from White Wolf's [Adventure! RPG](#) to *Call of Cthulhu*.

Dark Continent is a boxed game that is almost complete, mainly lacking the dice that would increase production costs and the UK retail price with an additional tax. Thus the GM will need to supply 4, 6, 8, and 10-sided dice as well as a set of percentiles. Besides these, a compass and protractor are required if accurate mapping is to be part of the game's play; *Dark Continent* is, after all, a game of exploration. Inside the sturdy box are the 108-page *Player's Guide*, the 140-page *GM's Guide*, the eight-page half-sized Catalogue of Goods available in Zanzibar, and the 22-page Gazetteer of the Island of Zanzibar, also A5-sized. Also included are two double-sized partially filled-in maps. One is of East Africa and the other of North-East Africa or Abyssinia, each to be completed as the players' expedition travels the interior. Both in fact, are for use with the two scenarios found in the pages of the *GM's Guide*.

Both the *Player's* and *GM's Guides* are laid out in dark brown text with just the occasional typographical error. Throughout, both books are heavily illustrated with 19th-century period drawings. The remainder have been specifically done for this game, and while decent, do suffer from possessing a rather brutal or scratchy quality. Neither of the game's two books has an index, which is a major omission given the author's obvious knowledge of other RPGs is not a little odd.

The period art of **Dark Continent** does bring up two of the game's more difficult or controversial aspects: slavery and the treatment of the natives. **Dark Continent** addresses these in a simple manner, without miring itself in political correctness. During the time period of the game, slavery continued to be practiced in East Africa, despite the efforts of the Imperial powers, Great Britain in particular. Since in **Dark Continent** players can create Arabic characters, they can also create slave traders, and the rules provide advantages and awards that they gain in doing so -- at least in the eyes of their own culture. This, however, is an optional rule and the author does not condone slavery, but instead condones us feeling uncomfortable when we come across it in the game. Likewise the GM is welcome to ignore Victorian racism, although as with slavery, it is regrettably in keeping with the time.

Although **Dark Continent** is Anglo-centric, it allows players to create any type of character appropriate to the period and setting. There are 10 occupations included: adventurer, explorer, jungle lord, missionary, officer, scholar, shootist (both of the big game hunter and American cowboy variety), trader, warrior, and Wangwana, free Africans who work as guides, interpreters, and porters. A player selects one of these and a nationality; these are mostly European, but the also includes the American, African, Arabic and Indian origins. A player has six points to spend on Backgrounds, which flesh out a few aspects of a character's past history, faith, social origins and military training amongst other things. At each stage a character gains skills, bonuses to their attributes and renown. Points are spent on attributes, and once settled upon, the scores for a character's attributes, renown, and skills are totaled.

The final step is to purchase Competences. These represent specializations within each skill and points equal to each skill known are spent on them. For example a character with the Faith skill might buy the Protestant and Steadfastness competences if they were Christian, or they may purchase Animism, Divine Guidance, and Faith Healing if they were of African background. Each skill provides a range of competences and these add further depth to the character, reflecting their history and training. In general character generation is easy, but could have been better explained had a full example been provided. A completed example is given for each of **Dark Continent's** 10 occupations, as well as suggestions of how to modify that occupation or create a particular archetype, such as Lord of the Jungle or Great White Hunter or even Masked Avenger!

Dark Continent is described as a skills-light system, simply requiring a roll under a skill or attribute on a 10-sided die. Rolling a one and then making a successful Luck attribute check means that the player has made a critical success. Likewise, a failed Luck roll made after a roll of 10 on the action check is a critical failure. The rules do not get much more complicated than that, but a suggested option (which was popular with the playtesters) is to make the basic system a percentile one, perhaps bringing it in line with **Cthulhu by Gaslight**.

Renown performs three important functions within the game. The total throughout an ongoing campaign is the measure of a character's total reputation -- about 200 points is enough to bring you royal attention and a possible knighthood. The temporary total is spent to improve a character, and, most importantly during the game, to outfit expeditions. Thankfully, an expedition's sponsor invariably provides a large starting sum of renown before players have to dip into their own; personal renown is really for items that a character needs for his own use. The Catalogue of Goods available in the Arab slave trading port of Zanzibar provides a list of most things that a character might want and their cost.

As a game of exploration, a fair portion of the rules and background are devoted to this activity, much of it revolving around the Expedition Sheet. This introduces an abstract war-gaming element to **Dark Continent**, with the players both roleplaying and deciding their expedition's progress and activity on a day-to-day basis. The rules take a party through the process of dealing with a patron, hiring and outfitting an expedition, its travel, the basics of dealing with any tribesman encountered, and potential natural encounters along the march. The section is rounded out with rules for mass combat in case the expedition comes a cropper. These build upon the rules for individual combat.

Rounding out the *Player's Guide* is an excellent bibliography. This details not just the usual books and films, but also RPG adventures, supplements, and articles (most notably from issues of *Dungeon* and *Dragon* magazines), board games, plus numerous **Wargames Illustrated** articles and websites. For the GM wanting more information, this list of suggested further reading is invaluable.

The *GM's Guide* provides yet more background and advice, including animals, disease and a handy guide to Swahili.

[SPOILER ALERT!]

The one section that is likely to perk the interest of those not looking to play ***Dark Continent*** is on the subject of "The Hungry Night." Deliberately left out of -- and not even mentioned in -- the *Player's Guide*, so as to keep the information out of their hands, this is a discussion of the secrets of Africa: Cults, shamans, animism, witch doctors, sorcerers, monsters, supernatural creatures and secret societies. These include not just the African ones, but also those that the Europeans brought with them: Freemasonry, spiritualism, and the Jesuits. The author advises against turning ***Dark Continent*** into a Victorian-era version of *The X-Files*, but whether or not African magic is real is left for the GM to decide. There is no reason not to include it in the game, since it could quite easily be all just smoke and mirrors, just as easily as it could actually be real.

The GM's Guide also includes two long scenarios, both of which make use of the partially filled-in maps provided in the box. "Captives of Abyssinia" sends the players on an expedition of the medieval Christian kingdom of Abyssinia, whose ruler, Emperor Theodore, has taken an American heir hostage. Their mission is to rescue him before the British mount an invasion. This is an interesting adventure, which does contain elements of "The Hungry Night" and comes with advice for running it with "smoke and mirrors" rather than with real magic. This cannot be so done with the second adventure, "Rivals at the Rift," which takes the party into the Kenyan interior hunting for a missing explorer. This is a less impressive adventure; in the main because it strays too far into the fantastic, thus going against the straight historical feel of the game. If the GM wants to run a more pulp action style game, then "Rivals at the Rift" is at least perfect for that.

[END SPOILER ALERT]

With the plethora of Victorian RPGs available that combine the period with other genres, it is refreshing to see a historically straight Victorian set game. That said, it is a pity that the second adventure breaks from this straight take upon the age. Further, in places, the author's own voice shines through more than it should. Not that his comments are unwelcome, but perhaps they could have been placed in sidebars instead of the main text. Overall, this is an interesting, well-written game that should appeal to anyone with an interest in Victorian gaming. Even if ***Dark Continent*** is not played as is, the game still serves as useful source material for the time and setting.

Currently, ***Dark Continent*** is only available in the UK, having never secured US distribution since its initial release. This does not mean that the game is unavailable, as it can be obtained through several friendly local gaming shops here in the UK. [Leisure Games](#) in London provides a decent mail order service, as does [Waylands Forge](#) in Birmingham, but unfortunately the game will not come cheap once the cost of shipping to the United States is factored in.

The Timing of Memories

Wow. *Pyramid* has been around for a decade. And, looking back at my piles of *Aberrant* books, *Man O' War* miniatures, and *Dragon Dice*, I get the idea that this is a less-than-common occurrence.

And, since the years in a decade correspond roughly with the number of fingers and toes we have (not combined), and since a decade is the only unit of time that can be spelled out in musical notation, this seems a noteworthy event to acknowledge.

In thinking back about the past years, however, I came to one firm realization: I can't fully grasp what 10 years is.

In October of 1993 I was starting my third year of college, which I guess puts me at still being a Computer Science major, albeit one who knew his days with the program were numbered. That seems like a long time ago.

However, August of 1991 saw me *begin* college, and I can still remember that with an intensity and anticipation that doesn't seem so far away.

It doesn't seem like that long ago that Bill Clinton entered the White House, but it feels like ages since Ross Perot was a serious candidate (at least, as serious as he ever was).

Fears of Y2K seem like some bizarre caveman times, as does the era of indiscriminate corporate spending and the "new" dot-com economy. But it feels to me like the *Matrix* movie just came out.

And I can still remember seeing that first issue of *Pyramid* on my gaming shelves. I think this was shortly before I started working at the game store; I remember being vaguely disgruntled at it, because it had (in my mind) supplanted *Roleplayer* as the official *GURPS* magazine. "How much did we need another general purpose gaming magazine?" I found myself thinking. "After all, we'll always have *Shadis*."

I still remember my first issue of *Shadis*. I certainly remember it more vividly than the last issue.

That first issue of *Pyramid* is, really, a self-contained nostalgia bomb itself for what's changed in the industry. The inside cover is an ad for GDW's products (including the universally beloved *Traveller: The New Era*). There's a news story about how Palladium was suing upstart Wizards of the Coast for using Palladium's game system in their *Primal Order* book, and another one about the continuing struggle between TSR and Mayfair and TSR over the same issue, only this one involving the *Dungeons & Dragons* game. Eight years later WotC would turn the publishing world on its ear by *encouraging* other companies to publish material using the *Dungeons & Dragons* game system. There's a blurb about Steve Jackson Games' multi-line BBS, just a toll call away! (They even support blazing-fast 14.4k baud modems!) All the computer games reviewed or advertised were DOS-based, although one of them *did* have an Amiga version.

And, frankly, it doesn't feel like much time at all has passed since I first took the reins of *Pyramid*. (This despite the fact that it's been almost four years.) But it feels like forever when I broke up with my first serious girlfriend. (This was about six months before becoming *Pyramid* editor.)

In some ways, 10 years doesn't seem like that long at all. This is when I focus on how life has remained the same: my friends and family whom I still see, my interests and dislikes. There is a part of me tied to my 17-year-old self in 1991, desperately trying to fathom *GURPS* combat five minutes before going off into Game Masterly battle.

But when I think back to what *has* changed - those who I've lost, those who I've grown apart from, hobbies and interests that no longer hold the same interest, or that simply no longer exist - 10 years feels like an eternity. I don't really play *Magic* any more, so it seems like eons ago when I sold those *Unlimited* cards, complete with Forks and Moxes.

In truth, this dichotomy in my perception of time is somewhat frightening to me; where is the consistency of self that a personal history demands? My friend - who recently celebrated the birth of his first child - used to be a DJ. I asked him a couple weeks ago how he looked back on that period, and he said he didn't. When I pressed him on the issue, I suspect I moved him close to my own discoveries; those events that are only a few years old can feel ancient in the right (or wrong) light.

I tend to think of time as a constant thing, when really it isn't. It's irrevocably linked to memory. I suspect that events which reinforce my current view of myself seem very fresh, while those episodes I've outgrown or parted ways with feel like another lifetime ago. Likewise I suspect that time itself is more perceptible the older we get; telling a kid to wait in a corner for 10 minutes is about the worst punishment imaginable, and asking a seven-year-old to envision himself at 17 is an exercise in futility. But as someone who is way too close to being 30, I would view 10 minutes in a corner as a Zen blessing, and I can picture a 10-year goal with reasonable clarity.

And through the magic of the Random Thought Table, all of this, of course, ties into gaming. The most obvious lesson is that, in the same way our perception of our histories is influenced by our current view of ourselves, so too is our perception of our characters' histories. Those adventures that reinforce how we think about our characters are more easily and vividly remembered - and feel more chronologically "recent" - than those which do not. For example, my long-running ***Vampire: The Dark Ages*** character eventually evolved into a damned paladin, using the powers of darkness to further a higher purpose (as he perceived it). As a result, the adventures that reinforce that view - adventures revolving around difficult choices, attempts at self-sacrifice, confrontations with sinister temptations - feel much more recent to me (and no doubt the *character*) than those which do not . . . like, say, the period when my vampire's preferred means of finding drinkable victims involved having his scantily clad ally feign drunkenness around unsavory taverns, so he could attack those who would attack her. In truth that was only a month or so earlier in the character's evolution, but to him - as to me - it must have felt like a "lifetime."

I suspect we all do things in our lives that feel out of place with where we are now, and the memories of which feel much older than perhaps they are. (Paradoxically, I suspect it's possible to have memories that are so out of character that they are *more* vivid than surrounding events.) And it can be tempting to attempt to "overlook" those other episodes in a character's life, either by never mentioning it or actively [revising](#) the history. But I suspect there are hidden gems in those "lost" episodes, even if they do not resonate as loudly in our memories as events that are more parallel with that current view.

Ten minutes can be an eternity, and ten years can go by in an instant. And individual years of that decade can be dissected into day-long hours or eye-blink months.

But even if time is an illusion, our 10 years together with *Pyramid* form a collective chimera that I hope has been as memorable and enjoyable for you as it has been for me.

--Steven Marsh

Pyramid People

It was around dinnertime when I landed in New York. Rick and Suzanne had just moved to Manhattan from Austin and I was going to visit them on my way from California to Europe.

"I got a great e-mail the other day," I told them over dinner. "I've been asked to do a '10-Year Anniversary' piece for *Pyramid*."

Suzanne counted back on her fingers, then stopped herself. "When did it start?"

"1993," I told her. All that the three of us could do was look at each other and nod slowly. "Because it was on its second year when I went to Europe for the first time, when **INWO** came out."

"Quite some time ago," said Rick.

"Remember your early ad campaign for *Pyramid*?" I asked him. Rick shook his head.

"It was genius," I declared. "There was a little icon of, I don't remember, something simple like a lollypop, I think. And it said something next to it like, 'I want a lollypop!' Then a pyramid, and 'I want a Pyramid!' Then an icon of a pony, and 'I want a pony!' Then, at the bottom, '*Pyramid*: Almost Better Than A Pony.'"

We laughed. Steve opted not to use that one. Back in the day, around the time that *Pyramid* was first getting off the ground, I told Suzanne, an old friend of mine so much as a 23-year-old boy can have old friends, that she should interview for a job at Steve Jackson Games. It was very much the kind of place where people worked because they'd talked to their friends and been told that it would probably be cool. She worked out just fine. About the same time that she started, I came to realize that we weren't going to make the insanely tight schedule that we'd set for ourselves with ***Illuminati: New World Order*** unless we hired another art colorist, so I convinced Steve to hire Rick, another old friend of mine. Rick and Suzanne were married within the year. That was eight years ago, and they're still two of my best friends.

Rick & Suzanne

A lot of good things came out of that time at Steve Jackson Games.

Over the course of my life, I've gone back and forth between doing very social things and doing very nerdy things. I like them both, but I've never

Rick & Suzanne

felt as nerdy -- and, strangely, social -- as when I worked for a game company.

Don't get me wrong, I was a big geek in design school. I wasn't an especially gifted designer, but I had a good eye and I was absolutely in love with the tools. *Pyramid* magazine was really the first thing I did out of school, and it was far more about me geeking out than it was about design.

I have a history of being a geek. In my early teens, I managed to convince my parents to let me buy a computer with some money that I'd saved. I set up a bulletin board system, which (for those of you too young to remember) is a piece of software that would answer the phone and give other people, through their computers, access to a number of text files on my computer. I started out with pirated software, but rewrote it all within a year. I called my site *Illuminatus*, after the Robert Shea and Robert Anton Wilson trilogy. Around the same time, a friend of mine introduced me to the game *Illuminati* and it was love at first play. I was already familiar with Steve Jackson Games, from my time with roleplaying games when I was even younger -- I'd gotten in trouble as a freshman in high school for playing *Killer*. Then I found out about Steve's very similarly named BBS located in Austin, three hours and an area code south of where I lived, and it was dialing into that where I learned about *GURPS*, the idea for which -- a generic roleplaying system -- struck me as very appealing. The concept seemed to lend itself naturally to the computer-inclined, in that there seemed to be one processor (the game system itself) upon which different sets of software (the genre) could be overlaid: The geek's game for especially big geeks. They planned to put out a set of core rules and then an expansion book for, well, every genre and then some, which they eventually did and continue, 15 years later, to do still.

Up until then, the roleplaying games that I'd messed with had borne a different set of ill-explained rules for each genre: fantasy, science-fiction, westerns, whatever. I contacted Steve when I was in high school, wanting very badly to write *GURPS Illuminati* and *GURPS Cyberpunk*, both of which were later put together masterfully by people I would meet and call friends -- however briefly, in Nigel Findley's case. Being little more than a kid at the time, I didn't get either job, but I continued hanging out with what was at the time a very strange circle of very strange people when I moved to Austin for college, and where I went after college for my first job.

In this little missive, I will urge you, the reader, to do two things. I'll save the second one for the end, but first let me impress upon you the urgency with which, if you are a geek with any youth or geographic freedom at all, you should move to Austin and work for Steve Jackson for six months. Then get a job elsewhere and continue to hang out with all the friends you made there. You will learn a great deal, and you will earn very little money, but it will be incredibly worth it. I know a large number of people who were given a chance at that shop and who are now incredibly successful people. As Allan Varney put it once, the place throws off some awfully bright sparks. I can't say whether or not I'm bright, but I certainly learned a lot.

Back when I first started as a full-time employee, a number of people -- Dave Searles (sales guy), Chris McCubbin (who was, at the time, editor of *Autoduel Quarterly*), and Loyd Blankenship (managing editor, author of the infamous *GURPS Cyberpunk*) -- had this feeling that they should be doing a magazine, a less-partisan work than some other industry magazines, although naturally our own games would feature heavily in our own mouthpiece, not least of which because they would have to placate the audiences of *Roleplayer*, which was the *GURPS* newsletter-cum-magazine, and the aforementioned *ADQ*, to which a number of extremely avid fans of Steve's *Car Wars* game relied upon for their contact with the outside world.

It would be good, we thought, to continue to put out material for these two audiences, while reporting news and, yeah, selling ads. For the first three issues -- just over six months -- I did the whole magazine: deciding what went in it, writing a big chunk of it, editing all of it, selling the ads, and stressing about it pretty badly. Two nights before the first issue was due to the printer, my girlfriend and I were taking pictures after midnight in my bathroom for the voodoo article. But while the design wasn't great, I was really proud of how I made *Pyramid* affordable to do as a print magazine with a large color section, which was Steve's understandable requirement, and imbued it with a good sense of fun at the same time.

The first three issues, and much of its later personality, were very much influenced by two guys in the office. Jeff Koke was an editor and Andrew Hartsock was the print buyer. They'd know each other for years, and the three of us

spent a great deal of time cracking jokes, spouting off at wildly inappropriate times, and in general mocking death. The general enamored-but-irreverent sense that made the first three issues of *Pyramid* so much fun was very much a representation, in magazine form, of how much fun it was working with those guys, how creative an environment they engendered, and how generally cool the whole situation was. That six months was the best half-year of my 20s.

One of the biggest fans of the first couple of issues was also one of the most prolific letter-writers. When Jeff handed over to me the large accordion folder of all the submissions that anyone had ever made to *Roleplayer* magazine, I discovered that this guy had his own tab -- S, for S. John Ross. It's true: all the submissions around **GURPS Space** went into "T" because there were so many large envelopes of S. John's submissions. They were, in a word, gold, and he went on to be a frequent contributor both to Steve's game line and briefly the editor of *Pyramid*.

For the fourth issue, Steve hired older-school ex-employee Scott Haring to edit the text, and as I arced off to work on *In Nomine*, and later *Illuminati: New World Order*. Scott ended up taking over article selection and other folks even started laying out articles. I don't remember when it happened, perhaps three years after it first began, but I remember when I held the first issue of *Pyramid* that I hadn't had anything to do with. That made me most proud, the feeling that I'd started something that people saw good enough to improve upon.

My geekery drifted into other arenas of technical-but-social nerdness and I ended up leaving the game industry entirely after another couple of years, so I never caught up with the magazine in its electronic incarnation. I hear very good things about it; it won that Origins award for which, while I was working on it, we had only ever received nominations.

The Future Of Gaming

But in the end *Pyramid* was about two things, besides pushing new Steve Jackson Games products: saying nice things in our reviews, because it's easy enough to run things down; and plotting out the future of gaming, because the direction of culture is a very interesting thing. I discovered with this experiment that both of these goals are admirable but unachievable. For example, while it is easy to write negative reviews it is also too easy to examine things without a critical eye and simply be happy with them for no reason that a reader might find compelling. The subtitle of *Pyramid* has always been "The Best In Gaming," but sometimes instead of merely focusing on the best, the reviews -- at least when I was with the magazine -- seemed sort of glad-handing, even some of the ones that I wrote, simply because we wanted to see a good review.

The other thing that I learned is that the future of gaming is a moving target. In one early editorial, I went off on some rant about how cool technology was, that what few people understood back in 1993 was that you could play roleplaying games with people sitting in beautiful parks on the other side of the world with the same efficacy that you could with people within arm's reach, even with the technology at the time, provided that you had enough money. This was pre-Internet boom, back when it had not been so long since I'd had to stop work for two days because a lawyer from the Secret Service wanted to paw through the records in my office for some time, back before we won that lawsuit and reinvented *Illuminati* as an early ISP rather than a BBS for the local area code. We were making the future of gaming, we thought, and I can tell you that those days in Austin it really felt like it, too. And to some degree, our early (failed and flawed) text-based interactive adventures -- our MUDs and MOOs, and our friends' and our friends' friends' -- inspired the folk who later worked on the *EverQuests* of the next age in online gaming.

But back in the first issue of *Pyramid*, the literal future of gaming had already reared its head. Before a single page of the magazine was laid out, a struggling company bought a single-page black-and-white ad from me. I'd spent hours on the phone trying to get to know a bunch of game industry people who I'd never met but who were on at least friendly terms with our company, and finally found some folk who were willing to buy an ad in a new magazine that was very nearly the sole product of an untried design student who was a big fan of gaming but who, while ambitious, had never before done anything of the sort. The company was called Wizards of the Coast, and at the bottom of its very text-heavy ad (with a very terrible piece of line art off to the side, in classic early-80s adventure gaming industry style, like those old ads towards the back of *Dragon*) it announced that the company had something very clever in store, promising a "magical" summer. That summer saw the release of **Magic: The Gathering**, which was and continues to be a phenomenon, and the sort of thing that certainly none of us around the office ever expected when we

talked about the future of gaming. And I should have given up back then and thrown in my "Future of Gaming" towel but instead I continued to worry about it for some time.

One very bright spark that was thrown free of Steve Jackson Games, the immensely successful Warren Spector, thinks that gaming may well be to this upcoming century what cinema was to the 20th century. At first, this article was little more than a very long and very droll rant about what I find to be inherent roadblocks to such a world -- things like the entry-level restrictions imposed by the growing complexities of avatar interfaces, or the fact that most people would rather watch a movie than struggle through acting in one, especially a free-form one.

But if I were to be honest with myself, I think that those roadblocks exist to be knocked down, and it's stupid to talk about the future of gaming if it's just for pontification's sake. Someone, somewhere, is working right now on the future of gaming -- and it'll be great, and magical, and much of it will seem obvious in retrospect, but it won't happen unless some big geeks get up off a couple of asses and does it.

"The very early 20s," Rick told me last night, "is like a star, pulling people in with its enormous gravity." This is a very clever way of saying that people in our culture -- American culture, for those of you reading this outside the US, or perhaps more broadly geek culture from any country -- have a tendency to avoid responsibility and put off growing up.

Listen: you can grow up and still play, as long as you keep growing. Play! Experiment. Don't ever stop. Take the tools that you've got sitting around and say, "What would happen if I made a game out of this?" You have more influence over the future of gaming than you might think.

Myself, I'm off doing other things. I love the problems posed by interactivity, but I'm only so much into games nowadays. But I have to say, that the best thing I ever did was to get up off my ass and work really hard to make something real, from scratch, with no plan or experience. When you do that, you either learn very fast or you get burned so badly that you have to lie low for a little while. I've had both experiences. When it was good, it was almost better than a pony.

But even if you do get burned, keep at it and you'll learn something. If you're really lucky then you'll have made something that other people will like so much that they'll want to help with it, to make it better, to take it to the next level, to carry it forward to the future.

--*Derek Percy*

Extinction Is Evolution, Too

Gosh, that's a pretty downer of a thing to say, isn't it? I mean, this is supposed to be the Happy Happy 10th Anniversary Celebration of *Pyramid* Magazine, and I should say wonderful things about the magazine, both the old paper edition that came out every two months for the first half of that decade (30 issues in all) and the electronic edition, published every week for the second half of that decade. No, I have no idea how many issues that is* -- but I know that the little auto-counter that assigns an ID number to each new thing that's posted is up in the 4,000-and-somethings . . .

So I gotta be impressed, right? And I am, no doubt. And I would dearly, dearly love to take a huge chunk of the credit for this rare success in the game magazine field. But *Pyramid* has done so well these 10 years due to not just a lot of good people working on it, but an uncommon combination of fortunate circumstances, and the singular will of the guy at the top of the food chain around here, Steve Jackson.

Fortunate circumstances? Let's start with an explosion in the industry that started about the same time *Pyramid* was launched -- collectible card games. Suddenly, lots of companies had new games and a lot of money. Ad revenues went through the roof, and when we started including magazine exclusive promo cards, circulation went bonkers, too. When distributors heard that an issue would have a promo card for a hot CCG game that wouldn't be available anywhere else, pre-orders leapt into the five-figure range. It was very profitable, and it was quite a heady time.

And then, of course, it was over. Ad revenues didn't collapse right away, but circulation came right back to where it was before we started putting cards in the mag. Every issue, revenues dipped just a little more. Eventually, we couldn't sustain it as even a break-even proposition. That's where most game magazines die; but Steve wouldn't let that happen. He looked for an alternative, and decided to take the magazine on line. The rest, as they say, is history.

Pyramid was lucky. The game magazine business is tough. Without a special edge, I would submit that a game magazine is doomed to eventual failure. There are only three magazines in gaming still out there today with a better run than *Pyramid* -- *Dragon*, *Dungeon*, and *White Dwarf*. They, of course, enjoy the advantage of being published by the two largest companies in the industry, and they are devoted exclusively to their companies' line of products.

So we have three magazines hanging in there, a tantalizing standard for the others to shoot for. And on the other side . . . well, the list is long and distinguished. And just last week, another one joined the roll call of the dead -- Fast Forward's *Campaign*, devoted to **d20 System** support. Technically, they announced they were putting the magazine "on hiatus," but I can't think of a single magazine that ever came back from there. So with another example of game magazine evolution in action fresh in my mind, I devote the rest of this column to the memory of some fine gaming magazines that died too young:

Another magazine that went "on hiatus" but never came back was *Shadis*, by Alderac. They got up into the 50 or 60 issue range before they cashed it in. *Shadis* was where Jolly Blackburn introduced the world to the *Knights of the Dinner Table*, and they were also *Pyramid*'s own Steven Marsh's big break into the field when the editors looked at a letter he wrote them with his vision of the kind of articles a perfect gaming magazine should have. They took his suggestions to heart, and produced the ["Steven Marsh Issue"](#) of *Shadis*. It was pretty good, but it ultimately couldn't save the magazine.

Different Worlds was published by Chaosium, and mostly covered their own games, particularly the original **Runequest** and **Call of Cthulhu**. The thing many folks remember most about *Different Worlds* was the back-page gossip column penned by the pseudonymous "Gigi d'Arn," which actually dealt real dirt about many of gaming's leading personalities of the day. The identity of the writer behind Gigi has remained a closely guarded secret to this day.

Sorcerer's Apprentice was published by Flying Buffalo, who were doing quite well with **Tunnels & Trolls** in the early days. *Sorcerer's Apprentice* was, I believe, the first place Mike Stackpole was ever published and, thanks to the large

SF writer's community Rick Loomis was tapped into in the Phoenix area, one of the more literary of the early magazines.

TSR UK had a fine magazine called *Imagine*, that lasted some 40 or 50 issues, I believe. But it was one of the first things to go when TSR started having money problems in the mid 1990s, and never returned.

A lot of people who play the various *Storyteller* games probably don't realize this, but White Wolf got their start as a gaming magazine publisher. Their first product was *White Wolf* magazine. They had a real nice run, too, but about eight or 10 years ago, they faced the same inevitable decline that claimed nearly everyone; their choice was to remake the gaming magazine into a general culture mag that covered traditional gaming as just one element of a lifestyle that included LARPs, movies, computer games, books, raves, goth culture, and any of a number of other things. They called it *Inphobia*. I really liked a movie column ex-SJ Games writer Chris McCubbin did for them, but that was about the only thing. Particularly grating to me was a graphic design that looked incredibly cool, but rendered many articles each issue practically unreadable. *Inphobia* lasted less than a dozen issues.

And *Pyramid* is certainly not our first stab at magazines -- Metagaming published *Space Gamer*, a general-interest gaming magazine with a small emphasis on their own products. After Steve Jackson left Metagaming to found his own company, one of the first things he did was buy *Space Gamer*. There was an ill-advised spinoff mag, *Fantasy Gamer*, that only lasted six issues. And, of course, there was 10 years of **Car Wars** support in the pages of *Autoduel Quarterly*, which was my way in to this industry 20+ years ago. Steve was also in the wargame magazine business for a while, with *Fire & Movement*.

Wargame magazines were a special duck, because several of them included complete games in every issue, making them part magazine and part Wargame-Of-The-Month Club. Avalon Hill supported their wargame line for years with *The General*, and *The Courier* was (and still is) the Bible of miniatures wargaming. Other wargame magazines leaned toward reviews and commentary on the games -- the king of that genre was Richard Berg's *Berg's Review of Games*, which is also still being published.

And joining *Campaign* as a victim of the **d20 System** slowdown is our own *d20 Weekly*. I really liked *d20 Weekly*, and thought it had a good chance to make it because online publishing kept the costs so low; but with so much fan material out there for free, not enough people became convinced that they should pay for what *d20 Weekly* offered -- even though it was better than the free stuff, it wasn't better enough to overcome the price resistance.

Gateways was a magazine that showed a great deal of promise; the editor/owner (whose name escapes me) had an interesting vision, and a great way of communicating it. But he only got a dozen or so issues out before the business side crashed. My last memory of *Gateways* was attending a GAMA Trade Show and discovering that the *Gateways* people had a booth. I went over there to have a friendly chat about some money they owed us for advertising, only to discover that the guy in charge had sent his poor sister to work the booth for the show. I don't think he even warned her there would be a bunch of people there looking for a piece of his hide; he just served her up. Sad story.

But a story I know very, very well. I had my own magazine for a while, you know. I was living out in Los Angeles, desperately looking for something I could do in the game industry so as to avoid getting a real job. The one thing I felt I really knew was game magazines. (If I was in that boat today, I'd probably go for an online mag. Or a PDF house. Or both.) Anyway, I got together with a guy who had also been burned by the company we were working for out in L.A., and we started *The Gamer*. *Space Gamer* was my admitted role model; we were going to be general interest, covering all aspects of gaming, with tons of reviews. It went pretty well for a little while, but we never did get the circulation and the ad revenue up over the hump, and we quit publishing the big glossy version after about 12 issues. We tried to switch over to a newsletter format, and then a tabloid format whose hook was we would give them away to retailers and depend on advertising. That didn't work either, unless our goal was to put us deeper in debt and make my bankruptcy more spectacular. I did real good at that.

But *The Gamer* was a great learning experience, and I was proud of the work we did. I also have one claim to fame with *The Gamer*, when I published a game review written by a Wisconsin editorial cartoonist and newspaper feature writer named John Kovalic. It was his first published credit in gaming, and I do my best to remind him of it pretty much every time I see him, and whenever I need a favor from him. Fortunately, he's such a nice guy it tends to work

out.

We made some spectacular business mistakes with *The Gamer*. The biggest two were a) going in undercapitalized, and b) insisting that we needed a struggling Wizards of the Coast to pay their advertising bill, instead of taking their offer of company stock to settle the account. Not our smartest move . . .

And I'm sure I've just barely scratched the surface. There are many more examples, some of which you might remember as a personal favorite. You'd think we'd have learned by now, but a few undeniable facts keep bringing people back to the game magazine business: First, it's a relatively cheap and quick way to get into the industry. Magazine articles are a lot easier to write, acquire, and edit than complete games or even game supplements. Second, there are three revenue streams -- distributor sales, subscriptions, and advertising. At first blush, that's got to be better than the one stream of traditional game products, right? Third, always sitting there as an example of What Could Be if things break just right are wildly successful magazines like *White Dwarf* and *Dragon*.

And then there's the fourth reason -- game magazines are *fun*. Every issue is a new set of challenges and chances to be creative. You can do hard news, opinion columns, roleplaying adventures, boardgame strategies, reviews, comedy and satire, sample CCG decks, genre fiction . . . and anything else you can think of. No matter how many times Darwin comes along and slaps a magazine down, there will always be people willing to step up and give it another try. Me included. I guess we're just funny that way.

Notes From The Gantenbrink Passage

"It took ten years' oppression of the people to make the causeway for the conveyance of the stones, a work not much inferior, in my judgment, to the pyramid itself. This causeway is five furlongs in length, ten fathoms wide, and in height, at the highest part, eight fathoms. It is built of polished stone, and is covered with carvings of animals. To make it took ten years, as I said -- or rather to make the causeway, the works on the mound where the pyramid stands, and the underground chambers, which Cheops intended as vaults for his own use: these last were built on a sort of island, surrounded by water introduced from the Nile by a canal. The pyramid itself was twenty years in building."
-- Herodotos, *History*, II:124

Since we're already well ahead of Cheops, let's take a little break and look back down the slopes of our pyramid. I can call it "our" pyramid, because by gum, I helped cover the causeway with animal carvings, and if I haven't exactly dragged my share of ten-ton limestone blocks, I always had a doctor's note to explain why. I even helped pay for some of those blocks; I've been a buyer of *Pyramid* since issue Number 1, and I'm fairly sure I subscribed to it for a year or two in there as well. I've still got every single paper issue, including the first one I appeared in, stacked on a shelf in my basement. (But it's a proud shelf.) That issue was Number 21 (September/October '96), and the piece was the **GURPS Alternate Earths Designer's Notes** (with the admirable Mike Schiffer and Craig Neumeier, whose dorm room we wrote them in). Thus, this is also my seventh anniversary with *Pyramid*. (That piece was later collected, no doubt to fill an unwieldy page count, in **Best of Pyramid, Vol. 2**, where it appears as "23 Skiddoo.") Technically, however, my first appearance in *Pyramid* was in Number 18 (March/April '96), where someone named Daniel Eastland said any number of very flattering things about my first game publication, in the "Pyramid Pick" of **Secret Societies**, a work still available (unlike *Pyramid* issue Number 18) in used-game shelves and fine remainder bins everywhere.

Conspiracy Theory: How I Came To Write *Suppressed Transmission*

*"You know I hate it when you stick your hand inside my head
And switch all my priorities around
Why don't you go pick on someone your own size instead?
Go on without me, I'll just slow you down
Go on without me, I'll just slow you down . . .
I'll just hold you up
When I fall behind
I'll just throw your schedule off
So you get going if you're so inclined."*
-- Warren Zevon, "I'll Slow You Down"

And precisely two years after that hint (in a review of a book of conspiracy theory, yet, by someone whose name combines prophecy -- Daniel -- and disaster -- Eastland), that issue's editor, Scott Haring, asked if I'd like to write a regular column for the new electronic incarnation of *Pyramid*. In retrospect, I should have noticed the "coincidence," but at the time, I was still a starving freelance game writer, eager for any crumb of work or attention from Industry Greats such as Scott. Writing and developing **Nephilim** books hadn't quite become the full-time gig that it had seemed, back in the palmy days of 1996, when I bade farewell to offices and other people's word processors forever. (Knock wood.) In fact, besides **Nephilim** books, in April of 1998 my only professional credits were with Steve Jackson Games, who had tossed chunks of **In Nomine** work my way on occasion (at one point, Scott asked me if I'd like to be the **In Nomine** line developer, but alternate history is the next section), and said nice things about **GURPS Alternate Earths**. Nice things such as, "We'll publish this."

I'd gotten into game writing thanks to Chaosium, of course, in my case by running **Call of Cthulhu** back in Oklahoma City during my college years for a friend, Donald Dennis, who went on to great things working for Iron Crown. He got a playtest copy of **Nephilim** from Chaosium thanks to his industry connections, sent it to me for comments, and I sent Chaosium 10,000 words of notes and back-sass that wound up (mostly) incorporated into the core rulebook. Suddenly, in 1994, I was a Chaosium writer. And that was thanks to Don, and to **Call of Cthulhu**, which burst onto my

consciousness in August of 1981, when I still maintain that I bought the first copy sold in Oklahoma City. And why was I so receptive to that glorious game? Because a couple of years before that, I found, in a box in the garage, a paperback collection of H.P. Lovecraft short stories that rewired my brain. I *think* it was my dad's book. But I've never found out for sure; my dad is less maniacal a bibliophile than I am, and seldom kept books long. Mysteriously, that book has now disappeared; I can't even remember its title, or anything much about it, except that it had a lurid green cover. And, of course, that it set off a memetic bomb that flung me onto the slopes of a pyramid, where Scott Haring was "coincidentally" waiting for a columnist.

Alternate History: Other Columns I Might Have Written

"[H]e could not establish a connexion in his mind between the the absurd trivialities which filled the day and the serious business of putting words to paper. . . . But that was all right. He would not have written well, and so he would have got no pleasure from it. And even if what he might have written had been good, how many people would have known it? It was all right to speed into the desert leaving no trace."

-- Paul Bowles, *The Sheltering Sky*

At that time, Scott and I didn't have any idea what the column was going to be. I was already writing "[Out of the Box](#)," so we knew the new column couldn't be gaming news or reviews. After some back-and-forth, we hammered out an official mission statement, as follows: "Ken will rattle on about whatever he feels like, so long as it isn't gaming news or reviews." This helped me not much; even I knew that I needed a little more structure for a weekly column than that. Scott was still too canny to show his hand, and in the weeks before the first column's deadline I came up with a number of possible column ideas. Such as:

- *The Garden of Forking Paths*: This would have been an alternate history setting and design column. Every column would start with some historical change point and rambled on in a James Burke *Connections* kind of fashion to illustrate one, or many, possible consequences of its alteration. I still do this kind of column in *Suppressed Transmission* every great once in a while, but not in the fashion I had intended.
- *The Library of Babel*: Simple, easy, and a great way to scam free books. I'm still kicking myself for not going with this one. This would have been, pure and simple, a book review column of books suitable for gamer adaptation. One week I might have done a setting or historical work like *London Under London*, a study of the rivers, tunnels, and so forth beneath London by Richard Trench and Ellis Hillman; the next week fiction such as Avram Davidson's brilliant steampunkery-of-manners *The Adventures of Doctor Eszterhazy*; and the third week some wonderful piece of madness such as *Mazzaroth*, by Frances Rolleston, a brilliant (and completely misguided) exposition of stellar magic in fundamentalist Biblical terms. None of which I've managed to work into *Suppressed Transmission* yet.
- *Clio's Footnotes*: This would have looked at some strange, little-known event, location, or person in history with an eye toward being adaptable for gaming. This kind of material I wind up lifting for *Suppressed Transmission* every now and again, but I always need to make sure I'm not just writing a *Terra Incognita* entry instead. I would have had the same issues with a column like this, too.
- *Tentacle Tracings*: This would have been a pure conspiracy column, either "explaining" current events or past history, mostly tied into one of the 10 **INWO** Illuminati. I'm not sure a pure diet of this would have lasted after 9/11 (if that long), but I still toss the odd nugget past the conspiracy plate even now.

I had a few other, even less coherent, notions such as a game design or GM advice column, but who, in those days, would have cared to hear my opinion on either topic? (Or now, for that matter?) I still sneak some GM advice into *Suppressed Transmission* when nobody's looking, and as the next section will indicate, *Suppressed Transmission* can be viewed as a kind of meta-GMing advice column. Or GMing meta-advice column. Or GMing advice meta-column. But I finally took most of the best parts of the above ideas (except the scamming free books one, darnit) and boiled them all into one mess, a column that took as its ambit my random thoughts on the fields of conspiracy theory, alternate history, secret history, and horror. Now, all it needed was a name.

Secret History: What I Think I'm Doing

"And it is utterly true that he who cannot find wonder, mystery, awe, the sense of a new world and an undiscovered realm in the places by the Gray's Inn Road will never find those secrets elsewhere, not in the heart of Africa, not in the fabled hidden cities of Tibet."

-- Arthur Machen, *Things Near and Far*

Suppressed Transmission was almost named *Thirteen O'Clock High*, but rather more people (including Scott) preferred the first title. And, as names will, it wound up not only describing but prescribing. What [began](#) as a kind of inventory column, taking a topic and looking at it through all four lenses (you can still see me taking this approach clearly as late as the [Antarctica](#) column), with the dream of someday *competently* ripping off Avram Davidson's "Adventures in Unhistory," eventually became something else. The [bisociation](#) column set it up; holding two contradictory ideas about Truth is a technique, not a fallacy -- and I notice it popping up in the [Roanoke](#) column, the [manticore](#) column, and the [hollow history](#) column -- but with the [Coke](#) column, I think it began to take over. In many ways, the first "real" *Suppressed Transmission*, (almost a year after my debut), the Coca-Cola piece really bought into the conceit that the column was looking at an ongoing stream of -- well, Something Else.

Or somethings else. Although I jokingly blended all 200 columns into [one background](#) for my anniversary issue back in May, I've only purposely identified (or tried to chart) four or five subterranean streams through the madness:

- *Bronze Age Madness*: My endless fascination with history before history springs to life here; the terrifyingly irrational Greek gods (before logicians like Hesiod rewrote the myths), and their associated monsters, dominate this stream. One could also call this the "Cybele" stream, as she effectively combines both godhead and monstrosity, and I love to name-drop her for effect. This is also the "bestiary" stream, since it began with the [manticores](#) (though it draws on the [hollow history](#) and [mirror](#) columns), and its most recent hookup was in the [unicorn](#) column. It's this series, specifically, in which my craven desire to incarnate, or at least seamlessly rip off, Avram Davidson makes itself most manifest.
- *India Ultraterrestria*: If the last stream was about murky history, this one is about murky geography. The notion of a hidden country "in India" is as old as the word "India," and it, too, supplies much of the oomph for (and overlaps with) the "bestiary" stream mentioned above. This specific attempt to chart the boundaries of the Imaginary starts with, of course, the [Mandeville](#) column and its most recent conurbations include [Sheba](#) and perhaps even sunken [Dunwich](#).
- *London Gothick*: This is the product of my endless fascination with the city of London. I suppose if I wanted to give it a high-sounding justification, I could cite it as an intensive example of the endless, fractal weirdness available in any location, but it's really just an excuse to read more books about London. It either began with the [urban adventure](#) column or, more likely, with the first [Spring-Heeled Jack](#) column; its most recent clear appearance is in the [Pepper's Ghost](#) column. This stream ties into the "John Dee" sub-stream, and into the occult Shakespeare columns I produce for Valentine's Day and Christmas, both of which began with ["Surfing Bohemia."](#)
- *The Matter of America*: I am an American mythographer. Meaning both that I am an American, and that I mythographize America. Part of this is a reaction to the pernicious notion that "ancient wisdom" and magical history all have to happen in the Old World; part of it is my share of that American mythomania that goes back to Cotton Mather and Sir Walter Raleigh. (Who ties into John Dee, and thence to London.) Either way, I've tried to add, or explicate, or tie in, various elements of the American Mythos to the subterranean stream. The first one of these might have been the choice of Los Angeles (instead of London) in my [urban adventure](#) column, but the stream doesn't really get started until the [1897 Airship](#) column and the [Emperor Norton](#) column the next year. Its most recent appearance is the [Lewis and Clark](#) column two weeks ago.

Each stream has its own gestalt Truth, somewhat compatible with the others, but qualitatively different. Whether you do or don't wind up using any given Secret Truth or column topic, or any one crazy idea, I hope that *Suppressed Transmission* helps illuminate the overall concept of secret history in a gaming context. Secret history is vast, it contains multitudes. All narratives reflect it, distort it, and contradict it -- and each other. This is not a bug; as Lovecraft realized when he created the distorted and contradictory Cthulhu mythos as a reflection of mankind's real mythologies, it's a feature. Real myths work that way, so does (to an alarming degree) real history, or at least real historians. Thus, more stories (and more games) and more facts and coincidences can connect to it. Using this habit of seeing, this facility for finding wonder and connections everywhere, can add an X factor or a fourth dimension to any

game world you build. And hopefully, I've done most of the heavy lifting for you.

Horror: How I Actually Write *Suppressed Transmission*

"I awakened each morning in a fever, sometimes frantically trying to verify or discredit such information as fell within the range of modern human knowledge. Traditional facts took on new and doubtful aspects, and I marvelled at the dream-fancy which could invent such surprising addenda to history and science."

-- H.P. Lovecraft, "The Shadow Out of Time"

And heavy lifting it usually is. The easiest columns are the multi-setting columns, where I take a single theme or schtick and run setting-riffs on it, usually through a series of alternate histories. Once I come up with the premise (which is no easy feat, now that I've used most of the obvious ones), finding those header quotes is usually the hardest part. (Although, looking back at ["Six Flags Over Roswell,"](#) still my highest-rated column, it only has the one header quote at the front. Hmmm.) Sometimes, of course, the quote triggers an even cooler idea for the mini-setting, which is a nice payback. And every now and again, I get a setting idea rich enough to support an entire column; a "setting in a box," if you will.

But for a more "normal" column, I have to come up with a basic topic, run a few riffs on it, and then tie it into the larger subterranean stream. Or at least to something secret, archetypal, or Deeply Kewl. The basic topic, as I have learned to my cost, can't be too recondite or nobody (possibly including me) will care. On the other hand, it can't be too broad or general, or I'll never fit it into one column. (I'm still amazed that I thought I could write one column on faeries.) Sometimes, I'll get an idea from something I'm reading anyway (like Laurie Winn Carlson's *Seduced by the West*) and I usually give a shout-out to that book. Other times, I'll want to write about a given topic (like manticores) and have to read up on it. Either way, this involves a hunt through my library (no trivial task itself) and plentiful Google searches on promising keywords. Sometimes, the Google search turns up the perfect book on a topic, and I have to wait for Amazon to send it to me, and then I have to come up with *another* topic in the interim.

Research done (although it never is; I'm usually Googling like mad up to the last 500 or so words of a column), I have to turn it into a column. This means "iceberging" it; taking the 10% or so of the facts that are the shiniest, sharpest, and most dangerous, and sinking the other 90% of the research underwater. Often, a fact is amazingly cool by itself, but doesn't fit with any of the other stuff, and I have to excise it and all the stuff dependent on it. (Sometimes I realize this *before* I email the column to Steven.) Anyhow, I usually spend a paragraph setting up the premise, or introducing the anomaly or figure or concept the piece is theoretically about. Then another paragraph giving the Real Explanation, if any, just so we all know it's just make-believe. The rest of the column is variations on a theme, with one or another crazy lens bisociated onto the facts to build dimension and effect. Finally, the big payoff, which ideally ties into one of the subterranean streams I mentioned before, but not always. Hopefully, these last paragraphs give the craziest, coolest, most madly persuasive "explanation" ("interpretation" might be the better term) yet. And for just a second, before rationality kicks in and you go off to read *Dork Tower*, you've heard the hum of the Suppressed Transmission.

And with any luck, we'll both be hearing it for a few more years.

Growing Older

I am 30 years old.

It isn't an admission of weakness. It is simply a fact. It is 2003, and I am 30 years old.

I have been gaming for more than half of my life.

My first brush with gaming was at age 12 in a friend's basement at a sleepover. All girls. Someone bought the old red box introductory ***Dungeons & Dragons 1st Edition*** box set -- whose and from where, no one knew. We didn't understand the rules, and we weren't terribly sure how to play, but we had fun. Someone killed something and someone else set off a trap and someone found treasure, but we weren't sure what the treasure was or why we cared. Quick . . . roll the dice!

For years, that was my entire conception of tabletop gaming.

After the sleepover, we put the game away and never played it again. It didn't appeal to anyone in the group -- not even to me. Besides, we had computer games. Middle school and into high school came the fevered pitch height of an endless parade of bad computer roleplaying games, all purporting to be of some major RPG significance. I finally learned ***Dungeons & Dragons*** rules -- ***Advanced Dungeons & Dragons 2nd Edition*** this time -- through SSI's *Pool of Radiance*, and the other infamous gold box games. My first real brush with gaming was not sitting at a table at all, but reading through the truncated SSI-produced rulebook and looking up what the heck a Glaive-Guisarme was in the library encyclopedias.

With high school came ***Battletech*** -- oh, the ***Battletech*** arguments! -- and some introductory tabletop gaming. We could talk ***Dungeons & Dragons*** but . . . but the *mechs*! Have you seen the mechs? Have you read the latest "technical readout" sourcebook? Did you hear about so-and-so and how he was in a Panther and he leapt up with jump jets and landed on someone's Battlemaster? *So very cool!*

Gaming didn't really begin until college when we had an online community and a dorm full of gamers and people who sat around before, in, and after class talking about gaming. We played, and played, and played, because when you're a poor college student and your budget is in the negative, one rulebook and some Doritos go a long way. We were open to many different games and systems, as long as those games and systems were *Shadowrun* or, later, *Amber Diceless*.

We were narrow-minded about that sort of thing. Although, hidden in the dark recesses in my mind, my secret love, my darkest desire, was *Call of Cthulhu*. Ah, beloved ***Call of Cthulhu***.

After college, in the warm red afterglow of graduate school, the great meeting of the ultimate gaming consumer came to pass: the juxtaposition of *money* and *time*. Running games! Buying games! Playing games! My shelf, which originally included a tiny collection ***Advanced Dungeons & Dragons 2nd Edition*** books from a game in college, ***Call of Cthulhu 5th edition***, three ***Shadowrun*** books including the core rules, and a copy of ***Amber Diceless*** exploded. I bought anything that had death in the title. I bought the entire run of ***Nephilim*** with all its juicy goodness. I bought the full run of *Kult* -- first and second editions. I bought ***HoL***.

Then, finally, I got old.

That is my life in gaming.

There's a lesson here, somewhere.

A brief audit over my last 10 years of game playing produces a big arc in interest and productivity with the hump hovering over that blessed conflux of events -- having enough time to play and having the money to buy. That's the magic quotient, the philosopher's stone of gaming, the true gold-encrusted head of John the Baptist: having time and

having mad disposable cash.

But now I'm 30, and I am on the skinnier end of the arc. I walk into game stores, and I am no longer thrilled. I no longer buy games because they have cool covers. I no longer buy games because a friend of a friend told me it was *neat* and the *coolest thing*. I buy a game or a supplement because, for some reason, it is the absolute best of the best, or it appeals to some deeper need.

I would not say that I have outgrown gaming.

I would say my taste in gaming becoming refined, like an old wine or a fine cheese.

Not that many gaming production companies are aiming at the 30-year-old market -- although flush with disposable income, we're not much of a demographic -- but out of curiosity, I ask myself (since I am sitting right here): What do I look for in a game? What do I want out of gaming?

Two different questions with two different answers.

First things first. Ideally, new games fall into two categories. The first is a game either so unique or weird or appealing it knocks my socks off -- and I am not known for wearing socks, so that's quite the feat. The game makes me say, "Woah." It makes me blink in surprise. I lift it off the shelf in the game store because I'm staggered it exists. Someone with great foresight looked into my soul and pulled forth the essence of amazing. I bow down before the creator and, duly, fork over my cash. A rare event, but a true one. (This recently happened, although I have not bought it yet, with Paul Czege's excellent ***My Life with Master***. The game is available for purchase online.)

I want to pick up the core book and be surprised. I'm not terribly interested in re-releases of old games under new systems. I'm not terribly interested in books full of lists of objects and items. I'm generally looking for new, fresh ideas, something easy enough to learn that it's fun to play on the first outing, and something lasting enough to turn into a small campaign. My ideal holy grail of games. The quest and search for perfection.

The second category is a game that is easy to learn and fun to play. I recently played ***Baron Munchausen*** and realized that game is about the level of rules complexity I want. As I've grown older, my patience with tables and charts and rules for every niggling situation has grown short and I grow weary. I know, and realize such a beast is popular, and many arguments rage on about game theory and game design and how much is too much when it comes to rules. My belief is almost any rules are too many -- this day in age, with so much going on and time short, spending hours learning new systems is an experience in frustration, not discovery. A game should have just enough rules to consider it a game, no more, and certainly no less. Interestingly, I will buy *old* games I suddenly discover over new because they are easy, fun, and gamey.

But buying a game is less interesting than *playing a game*. Once, a long time ago, my interest in gaming was simple: killing things. Blowing the left leg actuator off the Jenner facing me down across the map. Swarms of Locust Light Mechs. Delving a dungeon. Shooting down hordes of unnamed mooks with an Ingram Smart Gun like a named character from a John Woo Hong Kong Action flick. I can do all this with video games on my own time. What I want is *story*.

Age has taught me many things, and one thing I have learned is the importance of the engrossing, all-encompassing story. The story transcends the system. The story pulls players in, and turns a group from just another tabletop gaming group into a collective tale that spans star systems and races across time. It makes the game last. It makes the game *mean something*. With limited time and resources, *meaning* counts for everything.

I want the game to last even after the session for the night is done.

I now have years of experience to draw upon -- years of reading, writing, thinking and doing. A question was posed recently: Do you draw upon your past experience when playing or running a game? I hope so. With all the years of experience, it's now no longer guessing and flailing about. It is all about knowledge and understanding, and using that knowledge to fill in details, add to plot, and make the story more real. The game is still a *story* and it is fiction, but

now it's not just "kill the foozle." It's kill the foozle and feel emotionally connected to the foozle while doing so.

The big question, the question unasked, looms. The games, after all these years, after the orgies of buying and playing and doing: Are they better? Certainly no one fumbles through rules in a basement, and does not blow apart little stand up action figures on a hex map. Yet, are they fundamentally better? Years of experience in gaming and reading and thinking is brought to the table, along with a refined sense of *what is good*, and knowledge of how a world should work. Yes, I would say games, now, are better than they were 10 years ago, and better during the height of feverishly buying and playing any games that looked even remotely promising. They're better because the plots are better, the stories are better, the people are better, and the experience is better.

But, not as often. The great trade-off comes with growing old: the games are better, richer, and full of goodness, but the sessions meet less often. Everyone is beholden to jobs and family and real life. In my life, full of adults long grown and moved on from the college gaming scene, we plot our games so they happen with less frequency but with more substance. The games have more bang for the buck. They're simply better, but fewer. This is a different conflux of events; instead of money and time, it is time and quality.

And thus is the trade-off of growing up.

It gets better with age. Less frequency, but more substance. A better, more refined taste.

It's not so much the growing old. We all grow old. Many of us grow up, and others simply move on and leave gaming behind. Times change. It's growing better with age. It's becoming more refined, more intelligent, and knowing what we want and how to spend our time and money. It's not about being good, but about growing *better*.

This is the way of most hobbies. And 10 years -- and nearly 20 years -- is a long time for change.

Obelisk Online

by [Chad Underkoffler](#)

Genre: Alternate World

Style: Mildly Cinematic Journalism

Fidelity: High, except for prime conceit

Themes: Investigation

Campaign Setting and Background Information

It is an Earth much like ours, with one major change: The roleplaying game industry is bigger and better in all ways. More market penetration, more popular appeal, more money, more *respect*.

Yeah, it's pretty alternate, as alternate worlds go.

What Everybody Knows

In this continuum, the RPG industry is slightly larger than our world's computer gaming industry, with all the commensurate changes to the landscape. For example:

- The customer population supports not only numerous standalone game stores, but all of the mega-chain bookstores have extensive RPG and board game sections.
- There have been at least a dozen Hollywood blockbusters filmed with a direct connection to RPGs -- but nobody really expected *TROLL: the Movie* (see boxed text) to get that Oscar nomination for best special effects.
- RPG-related news and events (especially tournaments) occupy roughly the same television footprint in America as the World Series of Poker, Billiard Championships, or sumo wrestling -- it's on the tube a lot, but at strange hours.
- The Gazebo Casino in Las Vegas has created a new style of gaming called the Gambling Roleplaying Game (GRPG) which is becoming very popular. A cross between proposition bets and performance art, gamers play against the "house GMs" through devilishly clever adventures, to win real money in addition to their experience point awards. As challenges are faced, parleyed with, or beaten down, cash accrues to or is deducted from the player's account, depending upon how well they do. State of the art holograms, computer animation, and animatronics unite to provide a stunning multimedia display of the in-game action. Within the game room, it's pure entertainment for the observers as they revel in the roleplaying of the gamers and GM, both out-of-game and via the in-game graphics.

Outside the game room, an extra dimension is added. In the betting room, every action and reaction made by the gamers or the GM blossoms into computer-organized side-bets with calculated odds based on the difficulty of the scenario and the experience level of the gamer and his PC. For each scene, bets like "2-1, Hektorius gets past the Minotaur; 3-2, the Minotaur kills Hektorius; 5-1, Hektorius outwits the beast; 10-1, he kills it outright." (Betting is also available long-distance, much like off-track betting.)

- More and more young, hip celebrities openly admit their love of the hobby. A number have done commercials or promo items for their favorite games, or have fought tooth and nail to be part of one of the big-budget gaming flicks. They wear game-related t-shirts and ball caps in their movies, TV shows, and music videos. They are also big spenders in the GRPG circuit (see above), and help make GRPG tournaments more telegenic.

With all this going on, how is the average gamer expected to keep up with what's happening in the industry, the hobby, the phenomenon? That's easy: just get a subscription to *Obelisk Online*.

Obelisk Online is a subscription-only weekly webmagazine published by Jack Stevenson Games, one of the giants of the field. With a circulation of over 75,000 subscribers, it's *the* place to go for all of your gaming news. Its crack team of journalists, photographers, columnists, cartoonists, and editors (see *NPC Backgrounds* below) are seen as the consummate professionals of the RPG journalism industry. *OO* publishes stories covering all aspects of the gaming life: GM advice, new supplemental rules, quality gaming fiction, sneak peaks at new games in development, handling small group dynamics, product reviews, adventures, designers' notes, gaming celebrity watch, sales reports, publishing industry news, and even entire minigames!

How much longer can *you* live without a subscription?

What Everybody Doesn't Know

URGE Cyberpunk & the U.S. Secret Service

Most people are unaware of the assistance JS Games gave the Secret Service back in the Nineties; it's known of, but not talked about, in the upper echelons of both government and the game industry.

On March 1, 1990, the offices of Jack Stevenson Games, in Austin, Texas, were approached by the U.S. Secret Service as part of a nationwide investigation of data piracy. They came to JS Games because they knew that the work being done on the latest *URGE* supplement -- *URGE Cyberpunk* -- had brought them into contact with the hacker underground, and thought that the game company, being a step removed from it, could offer useful insights on the subculture.

The Secret Service asked JS Games for help in separating the fact and fiction of datacrime, assistance in assembling profiles of hackers, and advice on how to enforce online Intellectual Property law without going overboard and wasting time, money, and manpower chasing down false leads. With JS Games' help, they were able to focus on real cyber-criminals, take *appropriate* measures against underage hackers, and learned numerous tricks on improving computer security.

One tangible benefit that JS Games received from this aid was an ongoing string of consultancy projects for the Secret Service (and, later, other parts of the U.S. Government) where roleplaying would be used in various types of training (acceptance of diversity, sensitivity, threat analysis, sexual harassment, emergency simulations, etc.). The company provides such services on an ad hoc basis at reasonable rates.

PC Opportunities

Players can have characters take on numerous roles in the setting of *Obelisk Online*. Here are some examples:

- *Stringers/Cub Reporters*: The news may make itself, but finding it as it happens is a necessity. PCs can be freelancing stringers, roaming the gaming countryside after hot, breaking stories that

Jack Stevenson Games

Jack Stevenson Games was founded in 1980 by (no surprise here) Jack Stevenson. It publishes books, games, and magazines for game fans.

Their best-known games include ***Rosenkreuz***, the card game of world domination; ***URGE*** (the Unilateral Roleplaying Game Engine); ***Pax Mechanics***, a post-apocalyptic board game where those who can keep the world's aging machines running rule; ***TROLL*** (Tank, Robot-Operated, Laser-Laden), a fresh look at future war; ***Chalet Nerd***, the wacky card game of fannish obsession; and many others.

They publish *Obelisk Online*, which covers "The Best in Gaming," be it news, reviews, systems, tournaments, or the gamer lifestyle.

For more general information about JS Games, see their website at <http://www.jsgames.com>.

Other Game Companies

C'mon, you can fill these in yourself.

...

Okay, I'll get you started:

- *Magi of the Plains*: Creators of the d02 System and the "Closed Game License"; publishers of

- will catapult them into a staff position. Whether it's covering a book signing party at the local game shop or snooping around on a celebrity's game night, they have their ears to the RPG ground.
- *Research Assistants*: The columnists and editors help turning that news into interesting and accurate stories, and that's where the PCs come in. Tracking down pre-computer gaming stories in the "morgue," running to libraries and online reference sites to fact-check columns, analyzing trends for their bosses, fetching coffee and crullers . . . the possibilities are endless!
 - *Foreign Correspondents*: PCs could be dispatched by the Editor-in-Chief to far-away lands, to learn of exciting new developments in the worldwide gaming industry. Expense accounts, exotic locations, and getting the story when you barely speak the language enhance the fun.
 - *Industry Insider*: The players take the roles of the staff of a game company, focused on getting into *OO* as often as possible. Adventures could focus on buttering up reporters, columnists, or editors or otherwise coming to the attention of the webzine for that sweet, sweet "free advertising."
 - *Corporate Spies*: The characters could secretly be spies for a small game publisher, seeking to ride *Obelisk Online*'s coat-tails into a juicy pre-release review of their competitors' work. In a world of NDAs and noncompetes, the secrets of rival game companies can bring big bucks . . .
 - *Sponsored Player(s)*: Perhaps *OO* has decided to back a talented player (or players) as he works the GRPG circuit. They help defray travel costs and entry expenses in return for up-close, behind the scenes exposes of this new style of gaming.

Hospitals & HMOs, the nurse-novel genre RPG.

- *Black Lion*: Publishers of that groundbreaking RPG *Shiny Happy People: Holding Hands* and its supplements (including the fantastic *Clanbook: Fuzzy*).
- *Warders of Chaos*: This Canadian company hit the big-time with their licensed game based off of pirate comic sensation *Tales of the Black Freighter*.
- *Hercules Games*: With their best-selling heroic game of seafaring/gadgeteering action (*Mysterious Navies*), this St. Paul, MN company garnered rave critical reviews.
- And so forth . . .

Items & Locations

The Obelisk Offices: Located in Austin, TX, this red-brick, 13-story building is the home of Jack Stevenson Games. Many of the staff is based out of this looming tower, while others simply connect to the company's private website ("rc.com") remotely. JS Games does all of their own writing, playtesting, layout, printing, finishing, warehousing, and distribution from this one site. The building itself has a high tech basement R&D complex dedicated to creating new "bleeding-edge" gaming (also, unknown to anyone but the Editorial staff, the place is honey-combed with secret passages and hidden rooms).

NPC Backgrounds

Ivan Cilavok (*Cartoonist*, "Geek Spire"): Ivan Cilavok is a right bastard. Vituperative, rude, and just downright mean . . . especially to the fans of his acclaimed strip "Geek Spire," which heaps disdain, condescension, and outright scorn on the gamer lifestyle and mindset. The kids, they love being insulted, though, and so Cilavok's popularity just continues to grow. (Secretly, Cilavok is a *huge* fan of the Black Lion "World of Shininess" and owns at least one of every product Black Lion has created. If this got out, he'd be subject to the contempt he dishes out himself.)

Pierce Derrick (*Editor Emeritus*): The first editor of *OO*, Derrick vanished into the South American jungles in search for a rumored ancient RPG played by the Oingo Boingo tribe. He's been missing since 1995. (Taken by alien space brothers and taught extraterrestrial gaming techniques? Who knows?)

R. Sam Johns (*Editor-in-Disgrace*): They're pretty sure he cracked from the strain. The third editor of *OO* went on a rampage after one late night too many trying to beat the upload deadline. He was apprehended before he could successfully light the building on fire using a case of Liquid Paper. Unfortunately, he escaped police custody; his current whereabouts are unknown. (Johns is living in the secret passages of the Obelisk Offices, sneaking out only at

night.)

Henry Kite (*Columnist*, "Promulgated Broadcasts"): Henry Kite works for the government as a Roleplaying Exercise & Training Coordinator. He also writes the well-respected column "Promulgated Broadcasts," which talks about current government uses of RPGs and initiatives regarding the game industry. (Unknown to most, Kite is a retired Secret Service agent who served as GM for more than one President.)

Mark Morgan-David (*Cartoonist*, "I'm A Regular Comic"): The latest addition to the OO staff, Morgan-David works mostly in oils . . . which, while a work intensive way to do a cartoon strip, has garnered him world-wide acclaim. (He's really a Bollywood spy; the Indian movie studios want part of that gaming movie ka-ching, but only want to pursue the hottest, newest products on the horizon.)

Jean Mèche (*Former Columnist*, "Play Nice!"): Jean Mèche is a kindly old grandmother who lives in Dubuque, IA. Her much beloved column about dealing with gaming group disagreements in an open and sensitive manner no longer appears in OO... because it's been syndicated for the Hearst Newspaper chain as a gaming-focused advice column! (They call her the "Dear Abby of Adventure Gaming." Isn't that sweet? She has no secrets.)

Thad Overcliff (*Columnist*, "Crusades in the Field"): This intrepid soul hits the streets every other month, searching out the stories of how games are being played out there in the real world. Sometimes, he goes undercover, to game incognito in stores and at conventions across the country. His expose of "House-Rules-Gate" shocked the game industry to the very core, and toppled at least two publishers due to lack of customer confidence. He's driven to find the truth, at any personal cost. (Unknown to Speed, Thad Overcliff is secretly his brother, Rex Racer . . .)

Esteban Pantano (*Editor-in-Chief*, "the Whimsy Chair"): This hot-blooded Cuban-American rules OO with an iron fist. Contributors to the webzine fear his slashing blue and red edit-marks, which seems to sear into their very souls. An international playboy and member of the jet-set, he is never seen with the same woman on his arm twice. (Curiously, Pantano has *never* met Jack Stevenson -- his boss -- in person. Even stranger, he's discovered no one else has, either. Time to dust off those reporting shoes and get the story!)

Harry Scotting (*News Editor*, *Former Editor-in-Chief*): Scotting took over the Big Chair when Pierce Derrick vanished, and served a long and successful tenure. Uncomfortable with the awesome power of Editor-in-Chiefdom, however, he stepped down to run the News Desk. Nothing gets by this guy . . . (. . . Except for the stories he's paid to bury by other publishers. And he's paid well.)

Amelia Thorndress (*Former Columnist*, "Gaming by Women"): Thorndress wrote a year-long series for OO which focused on the female writers, artists, publishers, and other professionals of the gaming industry. Currently, she's taking time to assemble the columns into a single critical work of analysis, and no longer contributes to the webzine. (Thorndress shot a man in Reno, just to watch him die.)

Events & Possible Story Arcs

- **Avast Ye!:** Some internet hacker has been committing IPiracy on soon-to-be released games from major companies, and producing bootleg copies. The economic impact on the industry has been enormous. Find out who it is and how they're doing it. The only lead is that Christine Littlebee, owner and operator of the Magic Cowboy Range bookstore/gamestore, has discreetly let Esteban Pantano know that she's been approached by an individual with illegal copies of the much-awaited reboot of Black Lion's *World of Shininess* corebook manuscripts . . .
- **Missing Columnists:** One by one, OO columnists are disappearing, blowing their deadlines, and causing Pantano gnash his teeth in rage. He calls in the second-stringers and gives them their marching orders. First, PCs must step up to the plate and fill the wordcount shortfall with something -- anything -- that's game-related. Second, they must go and seek out their lost coworkers. Where will this mystery lead?
- **Exclusive Coverage:** Las Vegas. The Gazebo Casino. The World Championship GRPG Tournament. Six gamers, ready to risk it all for the big bucks. Then, the night before the first session, one turns up floating face-down in the Casino's pool. Who did it? More importantly to the tournament, who will take his place? The Navy Captain?

The Klutzy Dolt? The Millionaire (or his Wife)? The Movie Star? The Respected Scientist? The Corn-Fed All-American Kid?

- *Recursion Roleplaying*: The PCs are Secret Service agents who are testing a new virtual reality RPG for JS Games, in the high-tech basement complex of the company's headquarters. Equipped with HUD sunglasses, earpieces, laser wands, a Cray Supercomputer, and several GMs (both offsite humans and onsite AIs), the agents play characters trapped in a world under siege by aliens. Then, unaccountably, their communications links to the human GMs go dead, the AI GMs become eccentric, and the doors to the playfield are sealed shut. What do they do? And who has trapped them so fiendishly? (Paging R. Sam Johns, white courtesy phone . . .)

Using the *Obelisk Online* Setting

Just Passing Through: The *OO* setting works well as an alternate Earth for dimension-hopping games. It's enough like the real world so as not to be too ridiculous, but if played subtly, its differences can have a humorous impact around the gaming table.

Campaign Seed: Or, this setting can be used as the basis for an entire campaign based in a thinly-veiled "real-world," with the added benefit that many players will already have a greater or lesser grasp of how the game industry works (or doesn't work). However, note that the concept of this world might be a bit precious for some players -- be warned!

*Happy Anniversary, **Pyramid**! Here's to another decade of the Best in Gaming.*

Pyramid Pick from the Past

Demons (for Use with Advanced Dungeons & Dragons) [1992]

Published by Mayfair Games Inc.

Written by Mike Nystul

Boxed set with consisting of 192 b&w pages; \$20.00

Demons are fun to develop in RPGs. Spirits of evil summoned by sorcerers, they are a source of corrupt power as well as personifications of malign forces. They raise questions about a campaign world's divine cosmology and the nature of souls and the afterlife. Or they can just be a set of big bad evil guys for the PCs to whomp on. In 1992 Mayfair Games started a set of demon products for their Role Aids line of *Advanced Dungeons & Dragons* compatible RPG sourcebooks. These demons are not based on any real-world religions but provide a useable cosmology for using demons in an RPG fantasy world.

The flagship of this product line was titled *Demons*, a folio containing 48 three-hole-punched individual monster entry sheets, an 80-page DM sourcebook on demons, a foldout map of the product's demon dimension, and a 64-page in-character treatise on demons appropriate for use as a player handout.

The treatise is a fun starting point. It details a legendary history of the universe, including the rising of the gods, creation of the world and men, a split into good and evil gods who war, and the divine discovery of demons as a distinct-but-heretofore-hidden corrupting element of the divine aspect of the universe. It briefly describes the divine casting out of demons into a dimensional prison, and the Compact that is later made allowing them out of their prison to tempt mortals, so that pure souls go to the good gods and corrupt ones to the evil gods. The treatise continues with a discourse on the breakdown of the hierarchies of the demons, and how they are individually associated with various sins associated with the heart, soul, blood, flesh, mind, and their interactions. Demon lords are named and described along with their associated sins, and some of their powers. There is a list of terms of the Compact that the author has deduced through study, along with conditions that create exceptions to these limitations on demonic interactions. It finishes off with a number of ritual components for sample spells, including what appears to be Latin verbal components.

Throughout the text there are notes and commentary from a subsequent researcher challenging many of the conclusions and exclaiming on the implications of the author's theories. As a handout it works well, providing challenged theories and deductions that feel right in context, as well as providing substantive information for a character. The nature of demons as deceivers means that the information is valuable, but also not necessarily correct. Only one divine city and the demon lords are named, otherwise gods are only referenced vaguely as "the gods of law," or "the gods of evil." This means that it is easy to fit the book into most any campaign.

The DM's sourcebook presents the same history with advice on how to integrate the story into a DM's own campaign. Demons are defined as evil extra-planar spirits that gain power from mortal sins. Standard demon abilities are defined including the power to manifest circumstances related to their associated sin to tempt mortals, and the ability to possess mortals. Demon lords gain additional abilities such as gating in minions and teleportation at will. Great advice is given on creating campaign or demon specific indicators for demonic presence and on different personality types for role-playing demons. The Compact is discussed and possible limitations on demonic interactions for the DM to decide upon.

There are a number of player options presented. A half-demon race, a demon slayer class, and a thaumaturgist specialization for wizards who

Demons was followed up by:

focus on dealing with demons are introduced. The wizard specialization would work fine in versions 3.0 or 3.5 of the **d20 System** and the slayer could be worked up fairly easily after determining skills and saves; the existing guidelines give them warrior attacks, d8 hit dice, bard spell progression, and a limited spell list of demon-related wizard spells, along with some demon-fighting specific class powers. A number of spells are introduced both for protecting against demons, and summoning and making pacts with the various types of lesser horde demons all the way up to demon lords. The summonings usually take hours to accomplish, but pact spells can lead to services, queries answered, or lesser demons being available for single-round calling spells. There are also three evil archmagics (epic spells higher than 9th level originally introduced in Mayfair's **Archmagics** book) for banishing an entire race to an extra-dimensional prison or snuffing out the sun; there is also *lesser apocalypse*, a 13th-level spell that will destroy an entire country or even a continent after a certain number of months.

The demonic hierarchy of lords is explored a bit more in-depth with alliances and hatreds spelled out. The nature of the various demonic demi-planes is described along with a number of unique magical items, each presented with an in-depth and evocative history. There are a number of adventure seeds for using demons in a campaign and advice on how to integrate demons from the sourcebook into an existing campaign. Also there is a full short adventure investigating the ruins of an old demon summoning cabal, where the players can find a copy of the annotated treatise handout.

Finally there are the monster entries, hole-punched in the **Advanced Dungeons & Dragons 2nd Edition Monstrous Compendium** format. Stats for the various demon lords, including ability scores ranging up to 25 and class levels ranging from a duke who is a 16th-level wizard, to the king of demons who has 54 class levels split among three classes. There are also entries for the lesser horde demons, including a new set of Type 1 to 5 demons, gatekeeper guardian demons, and magically active venomous demonic dragons who breathe negative energy.

If you are playing **Hackmaster**, the conversions are quite easy: Throw on a 20 hit-point kicker and you are ready to go. For players of the **d20 System** or **Arcana Unearthed** there is a bit more work, as the base monsters need stats, feats, skills, and saves determined. The lords will require some judgment calls as well, although they will probably do well as outsiders with lots of class levels. Their hit points will end up being seriously upped, but after conversion they would make great Epic Level opponents. It will take some time to stat them out to the full **d20 System 3.5** format, however.

So what does **Demons** provide for today's gamer? First it provides a good cosmology, providing base of answers to what is are demons, and what their relationships are to the gods and mortal souls. Also, the demon lords form a unique pantheon, described well, with evocative associations to individual sins. It would take a little conversion work to bring them up to full **d20 System** compliance, but provide a great set of antagonists once the work is put in.

--John Henry Stam

Demons II: a boxed set that provided an inquisitor class, rules for demonic taint, information on demonic cults, and more adventures and items for using demons.

A series of monster folios for some of the demi-planes of the demons (**Denizens of Diannor, Denizens of Og, Denizens of Verekna, Denizens of Vecheron, Denizens of Thanis**) exploring the lesser hierarchies of sub-rulers including individual demonic marshals, governors, and thanes. **Denizens of Verekna** came with the *Grey Grimoire*, a sourcebook of demon spells. These were good but could have used more descriptive text for the individual demons.

Sentinels: a boxed set with the angelic counterparts to demons, including a little discourse on why it is an evil act to summon an angel and bend them to your will.

Apocalypse: A boxed set to bring on an end of the world.

Finally there was *Seed of Darkness*, a novel by Nigel Findley set in a world using the **Demons** cosmology.

Pyramid Pick from the Past

Fluxx 3.0 [First Edition in 1996]

Published by [Looney Labs](#)

Created by Andrew Looney

84 cards, rules, in a tuck box; \$12.00

***Fluxx Blanxx*: \$3**

In 1998, Iron Crown published the "first" edition of ***Fluxx*** -- a full distribution of the game Icehouse had released in limited quantities themselves in 1996. Icehouse licensed it to I.C.E. and later took it back when they started Looney Labs. That company has recently seen the publication of the third edition of ***Fluxx***.

The object of the game is to be the first player to fulfill a Goal card, but at the outset there aren't any Goals on the table -- only the basic rules. Those rules are as follows:

Draw one, play one.

That's it. Those are all the rules in the game -- until such time as someone plays a New Rule card. Each of these cards alters the rules in some way. They may ask that players now draw two cards instead of three, or impose a limit on how many cards a player can keep in his hand. If a contradictory card is played (Draw 4 is played when Draw 2 is already on the table), the old rule is discarded and the new one enforced, even if it alters how the current player plays during that same turn.

A Goal card, like a New Rule card, is played on the table and affects all players. It tells everyone what Keeper card or cards are needed to finish the game. As soon as someone plays the necessary Keeper cards in front of him, he's declared the winner. Keepers embody thoughts, ideas, and objects like War, Peace, Taxes, Love, Coffee, and Television. So if the current Goal is "All You Need Is Love," having the Keeper card "Love" in front of you is enough to win. If the Goal is "Hearts and Minds," you'll need both the Brain and Love Keepers. Then again, a couple of cards will turn things on its head and ask that a certain card not be out at all; The "Brain" Goal only works if you have the "Brain" (no relation to the Cheapass game) and no player has "Television" in play.

So while you're trying to keep up with all the New Rules as you play your hand (if the New Rules allow you to have a hand) and try to get the right Keepers and Goals out at the same time, the Action cards will be making your life simultaneously miserable and downright entertaining. The Actions are quick plays, usually with a temporary effect or a circumvention of the current rules. The order of play may be reversed. You may be able to sweep a number of New Rule cards from the table. You may be able to fish cards out of the discard pile, or out of an opponent's hand. Some Actions let you jumble up those Keepers already on the table and redistribute them, or steal a Keeper from someone, or draw cards from any number of sources and play them immediately.

What this all adds up to is a quietly controlled chaos. One player's turn may be the work of a moment, and the next player's turn might spiral, card by card, into a laughably exasperating flurry of contradictory rules and additional plays. Games (you will play more than one) are often brief; few go past the 10-minute mark, but they can go further if events conspire to allow it. It's all part of ***Fluxx's*** delightful unpredictability. Not only is play fast, the tuck box actually deserves the oft-misused designation "pocket-sized," and a few square feet of playing space suffice to get things underway.

Not only has the game been one of the most popular and notable card games on the market since the "original"

edition's release in 1998, it has served as both a mechanical and thematic basis for other Looney Labs releases (most recognizably **Chrononauts**). Changes in this edition range from the cosmetic to the complete. About one quarter of the cards have been altered in some way. In some cases it's as simple as a different illustration for the same Keeper card, a switching of the images on a Goal, or even just a renaming of the same Action card. There are fewer Keeper cards, but more Goal cards. New Rule cards deal a lot with bonus cards offered to players depending on how many Keepers they have in front of them. They may also allow two Goals to be in play at once, or change all numbers in the game to X+1 (anytime a card says "draw this many cards," for example, players draw one more than that). You won't be hiding Keepers anymore, and the New Rules that depended on having certain Keepers are gone.

The new cards take up the game's full allotment, so there is no longer a blank card included in the deck. Looney Labs still sells **Blanxx** in packets of 15. These aren't entirely blank but rather have the Action, Keeper, Goal, and New Rule imprints, leaving the rest of the card open for you to write in your new house rules and create new effects. (One of the 15, oddly, is a promo card for the aforementioned **Chrononauts**.) Most of the game's cards make common sense assumptions about how the game should play, so players coming up with new variations on their own shouldn't be too hard.

It's hard to find a game that works this well and holds up for as long as **Fluxx** has, but it has amazing backward compatibility and it's a hard system to bust. The price has gone up two bucks for the new edition, but when one considers that in spite of all the fluctuations, the game's playability has, if anything, increased, that's one more alteration worth making.

--Andy Vetromile

Pyramid Pick from the Past

The Realm of Shadows (for Call of Cthulhu) [1997]

Published by [Pagan Publishing](#)

Written by John H. Crowe III with John Tynes

Illustrated by Blair Reynolds

204-page b&w softcover; \$20.95

Editor's Note: Although this review has a defined "Spoiler Space," much of the review talks about elements that make this adventure special and noteworthy. Read at your own risk.

How you rate the many **Call of Cthulhu** campaigns, scenario anthologies, and supplements that have come out over its two decades of life would make for a potentially lively debate. But for the sake of argument, here is how I rate the various campaigns:

Certainly, Chaosium's **Masks of Nyarlathotep** deserves its much-lauded status alongside **The Enemy Within** campaign for **Warhammer Fantasy Roleplay** as one of the best ever published -- at least up until the last few years or so. It is still very good and still best typifies the archetypal "onionskin" format established with the publication of the very first **Call of Cthulhu** campaign, **Shadows of Yog-Sothoth**, back in 1982. Two of Chaosium's more recent campaigns, [Beyond the Mountains of Madness](#) and [Unseen Masters: Modern Struggles Against Hidden Powers](#) -- both Origins Award winners in their own right -- are also amongst the best. Joining them would be at least two books from Pagan Publishing, the first of these being the equally award winning **Delta Green** campaign setting, along with its equally as good (and better in the eyes of some) supplement, [Delta Green: Countdown](#), which breathed new life into the **Cthulhu Now** or 1990s setting for the game. Pagan has also published their own fine example of the onionskin campaign in the form of the highly regarded **Walker in the Wastes**.

If these then, are the best, what of the rest? Certainly Pagan Publishing's **Golden Dawn** supplement did as much for the 1890s of **Cthulhu by Gaslight** as **Delta Green** did for the 1990s. And yet titles like these have eclipsed another campaign penned by John H. Crowe III, the author of **Walker in the Wastes**. Although it owes a little to the onionskin format of campaigns that came before it, **The Realm of Shadows** is in many ways very different to the typical **Call of Cthulhu** campaigns that came before it. Of course, this should come as no surprise to devotees of Pagan Publishing. Published in 1997, **The Realm of Shadows** is set in 1940, against the backdrop of the war in Europe and in particular, the fall of France to the Axis Powers. This is an era little explored by any publisher of **Call of Cthulhu** supplements and really, it is only recently that a few supplements have begun to expose the 1930s to the threat of the Mythos. Further, the threat faced by the investigators -- the player characters being literally that in the form of Private Investigators -- is very far from being typical. It is not some grandiose scheme to end the world and replace mankind's domination of the planet by having some cult return their alien master to his rightful place once again, whether by raising the island of R'lyeh or launching a rocket to destabilize the orbit of the moon or the setting free of the Wind-Walker from his prison above the Northern latitudes. Rather, the threat they face is that of the humble Ghoul.

Always relegated to minor status, the Ghoul has always been regarded as something akin to an entry-level Mythos foe or creature for both the neophyte investigator to face and the neophyte Keeper to run. They have never been seen as a serious threat, content to serve a more powerful figure such as that of the witch Mercy Booth, in the scenario "The

Wail of the Witch" (most recently published in Chaosium's *Curse of Cthulhu*), or as oddities as in "Paper Chase," the single-player scenario first seen in the *Cthulhu Companion: Ghastly Adventures & Erudite Lore*. Or they are content to reside alongside and below humanity, dining upon our recently departed and buried nearest and dearest.

Although *The Realm of Shadows* is Mythos-based, John H. Crowe III does not draw as much upon the works of H.P. Lovecraft, but rather from the works of one of his respondents, the artist, sculptor, and painter, Clark Ashton Smith. Best known among Mythos circles for the "Zothique Cycle," Smith's stories are set in the far future, upon the last continent of mankind, known as Zothique. It is from one of these stories, *The Charnel God*, and its setting of the city of Zul-Bha-Sair, that Crowe draws his most direct focus and inspiration for *The Realm of Shadows*. The city, located in a far-off part of the Dreamlands, is both home and prison to Mordiggian, worshipped by Ghouls and human cultists alike, both in the Dreamlands and in the waking world, where the Cult of Charnel God is also known as the Cult of Mordiggian and the Charnel Cult. Like any of the Great Old Ones, Mordiggian possesses great patience; surprisingly, so do his worshippers, unlike the cults of other Great Old Ones and Elder Gods. Detailed in the Mythos tome, "Cultes des Gouls," described both here in *The Realm of Shadows* and in more detail in [The Keeper's Companion](#), the Cult of Charnel God fled France at the end of the 18th century to find sanctuary and then establish a very secret headquarters deep in the jungles of France's least regarded colony. Even into the 20th century, French Guiana remains a backwater located on the Northeast coast of South America, surviving only on handouts from Paris and best known for being home to the infamous Devil's Island penal colony. From their isolation in the jungle, and their true headquarters in Zul-Bha-Sair, the cult's high priests seek to spread their influence and corrupt humanity such that necrophagy and cannibalism are an accepted practice. Only then, they believe, will Mordiggian be able to cross from the Dreamlands through the gate that connects the cult's headquarters in Zul-Bha-Sair to the one in French Guiana. Thus another Great Old One will be returned to the world, but one that seeks domination through social change rather than through destruction.

Of course, the investigators know nothing of this at the beginning of *The Realm of Shadows*. They have found work in post-depression Massachusetts as private investigators. Rather than create characters using the Private Eye occupation found in the *Call of Cthulhu* rulebook, the author (and Pagan Publishing) encourages the players to work to create more rounded investigators, their skill and personal interest points distributed across a range of skills to reflect a character's background that could easily stretch as far back as the Great War. This discussion also includes a fully worked example that could be used a Player Character. The default set-up for the campaign also casts the investigators as completely ignorant of the Mythos, as there is no real reason for them to have had any experience of it. This does not mean that *The Realm of Shadows* cannot be played with more experienced investigators, and indeed one option discussed is that of using the campaign as a sequel of sorts to another previously published by Pagan Publishing, *Coming Full Circle*, also penned by Crowe. For the player characters this may be advantageous, as both campaigns are set in Greenfield, Massachusetts, and the author takes time to indicate the links between the two.

[SPOILER ALERT!]

The Realm of Shadows is broken into four parts. The first is "Kith And Kin," in which a local doctor, Franklin Quigley, asks the private investigators to locate his wife Katherine, who has absconded with their daughter Anne. This seems to be just a missing persons case and should be run and played as such. At the end of this scenario, the investigators will have gained their first exposure to the Mythos, as had Katherine Quigley prior to her flight. Deeply religious, she has discovered that her husband is not human, but in her eyes, a demon. Of course, Franklin Quigley is nothing of the sort, but rather is a Ghoul, making his daughter a crossbreed or Hu-Ghoul. Successful exposure of Quigley will also give clues to the existence of others of his kind, some coming from those in his possession, others not.

The second chapter, "Provender of the God," contains the first hints that the Ghouls are in any way organized and given their bent, have found a home in one of the local funeral homes. The task of investigating any of these establishments found in Greenfield is not an easy one and demands no little subtlety if the cult is not to become aware of the characters. As with "Kith and Kin" this part of the campaign places the investigators in a very proactive role and works them hard in their efforts to follow up all of the clues. Should the cult based in the town become aware that they are under investigation, they will also have to react with some care lest they expose themselves. Since they happen to operate a funeral home, they also have some status in society that gives them some protection, and which they wish to

keep. If the investigators can get inside the funeral home, major clues indicate that some of the staff are in the process of preparing for a trip to French Guiana.

Another clue comes in the form of a drug to be ingested or injected. Doing so sends the consumer straight into the Dreamlands, but rather than descending the stairs to the Cavern Of Flame as in any other journey there, they travel directly to Zul-Bha-Sair! What they discover there is revealed in the third chapter, "Charnel House," that really allows the investigators to explore the nature of the cult at its source, rather than via its highly dispersed network of cells across the waking world. Curiously, this part of ***The Realm of Shadows*** is almost tangential to the needs of the main plot and it is not absolutely necessary to play through it to complete the campaign. Of course, not playing through "Charnel House" would mean that the investigators (and therefore the players) miss out a major aspect of ***The Realm of Shadows***, one that lies at its core. The formula that actually allows the imbiber to travel to Zul-Bha-Sair -- which also enables cult members to get orders directly from its headquarters -- is only a recent development, and the campaign includes details of who has created it, and where, should the investigators wish to follow it up.

The final part of ***The Realm of Shadows*** is "When Darkness Falls," which gives the investigators the opportunity to foil the long-term plans of the cult. It involves finding safe passage to French Guyana; the chance of their boat being torpedoed by a German U-Boat is remote, but still a possibility. Once there, they must make their way deep into the interior. Nothing about this is easy, from planning and outfitting the expedition to the hiring of a decent guide -- several are fully detailed -- and dealing with the local corrupt bureaucracy. All this before they make the trip up river and trek through the jungle. Once the investigators get to the cult's secret headquarters their job is no less easy, as there is no simple way to discern how exactly to foil the cult's plans. This can be seen as a disadvantage to the campaign, as it may frustrate the players, but at the same time, it makes sense; why *would* the cult make it obvious?

[END SPOILER ALERT]

In addition to the four main parts of ***The Realm Of Shadows***, several addenda allow the investigators to follow upon side plots as well as organizing each part's handouts. These are all very well-done, and previously available separately in the now out-of-print ***The Realm of Shadows Player's Aid Kit***. They add greatly to the atmosphere and feel of the campaign as Pagan Publishing goes to some lengths to make each individual handout feel like the genuine article.

The campaign is also supported with extensive details on the cult and its goals, the nature of the Ghouls, adding the Greater Ghoul and the Hu-Ghoul crossbreed to the Lesser Ghoul type described in the ***Call of Cthulhu*** rulebook. The Mythos tome "Cultes des Goules" is described and expanded upon to include several *Nostradamus*-like prophecies. These have a somewhat gruesome anatomical theme to them and the last few will only really be appreciated by the players with the benefit of hindsight. To help with the time frame and feel of the campaign, a calendar is given for 1940 (marked with both days of the full moon and new moon) and, in an appendix, a timeline of world events from early 1939 through to the end of 1940. Used judiciously, they can impart a sense of ominous apprehension as the players have an awareness of the significance of the listed events and where they lead, one that the investigators most certainly do not.

Unfortunately, and despite the well-organized contents of ***The Realm of Shadows*** that includes a contents page for each part of the campaign, the book as a whole is let down by a lack of an index. Given the wealth and depth of information found in this campaign, the inclusion of an index would have proved not just useful, but nigh-indispensable. This is the only major let down in ***The Realm of Shadows***, the minor being a single spelling mistake. Otherwise this is a beautifully produced book, the look of which would be further evolved for future Pagan Publishing releases, ***Mortal Coils*** and ***The Resurrected III: Out of the Vault***. The pages preceding each chapter are done in dark gray and near black tones, again with a strong anatomical feel --both of humans and Ghouls. Their effect is to enhance the sense of uneasiness that pervades the pages of ***The Realm of Shadows***. There is also a sense of the anatomical in the attention to detail of Blair Reynolds's sublime and subtly disturbing illustrations that run throughout the book.

As much as ***The Realm Of Shadows*** owes to the previous campaigns done in the traditional onionskin format, it goes beyond that format to present something not so sharply divided into separate chapters, each of which is set in a different location. Instead, it is more fluid and natural in feel, with its events really only taking place in two main locations: Greenfield, Massachusetts and French Guiana. The mood is also very different, with the strong sense of

foreboding coming not from the plans of the Cult of the Charnel God, but from the external events of the real world -- the spread of the war in Europe to the rest of the world. The writing style is also not as stiff as in previous ***Call of Cthulhu*** books, with the author taking the opportunity to step into his own voice and regale the reader with tales of playtests held for ***The Realm Of Shadows***. Ever wondered what happens if an investigator stomps too hard on a grave they think is being looted by ghouls? Or how one group finished the campaign? Or what happens if you dope a goat with the cult's recently developed formula and send it to Dreamlands? Not only do the answers greatly enliven the book, they also provide interesting suggestions and options for the Keeper.

Eclipsed by subsequent releases from Pagan Publishing and regarded as perhaps too different from other more traditional ***Call of Cthulhu*** supplements, ***The Realm Of Shadows*** works so very well because of its differences. Indeed, it can be seen as almost a celebration of such differences within the format of the onionskin campaign. Perhaps set too far from the decade of the 1920s and too close to WWII for most campaigns, the eventual and hoped-for arrival of Chaosium's ***Pulp Cthulhu*** supplement may turn ***The Realm of Shadows*** into something that can be used to cap a long-running campaign as the war approaches. But until then, ***The Realm Of Shadows*** is a campaign of a singular mood and flavor that casts a little-regarded independent race in a whole new light. For that, ***The Realm of Shadows*** deserves special attention, but the superb and subtle campaign that the author builds around them is the reason that ***The Realm Of Shadows*** deserves to sit alongside the best that ***Call of Cthulhu*** has to offer.

--Matthew Pook

Pyramid 10th Anniversary Spectacular

by Steven Marsh

As you may have noticed, this is *Pyramid's* 10th Anniversary issue. (Actually, we declared October 23rd as the "official" Anniversary -- 10-23, get it? -- but we figure October 24th is close enough.)

To celebrate our milestone, we wracked our brains to figure out how to celebrate. Our first inclination was to invite the Beatles to reunite for our special issue. But after two of them didn't return our calls, we had to come up with something else.

And that's when we hit upon the happy thought of having our *own* reunion, of sorts. We invited just about everyone who's been a part of the *Pyramid* family -- along with everyone else who's still a part of our posse -- to come over and say, "Hi!"

In addition we've tweaked our review format for this week into "Pyramid Picks from the Past," highlighting some noteworthy games over the past decade or so that somehow escaped our all-seeing gaze the first time.

We hope you enjoy this super-sized trip down memory lane. Thanks to all our contributors for making our magazine a reality, both this week and over the past decade. And thanks to you, our readers; whether you've been with us for the whole 10 years or just joined us this week, you have our gratitude for making this milestone possible.

As ever, we welcome your comments and suggestions. You can send them to us directly by e-mail at pyramid@sjgames.com, or drop by our [discussion boards](#) if you'd like to engage in discourse with the masses.

It's been a great journey so far, and we hope you'll stick around to see where we go for the *next* decade. And the next. And the next . . .

No, Really, What's in a Name?

Making a Name Mean Something in *d20 System* Games by Owen K.C. Stephens

Yes I'm revisiting the subject of my first *Pyramid* article and spinning it into a *d20 System* article. But first, an aside to explain how I came to be able to celebrate *Pyramid's* 10th anniversary beside many more well-established contributors. If you don't want to read my anniversary-themed thoughts, skip the next two paragraphs.

My first *Pyramid* article (["What's In a Name?"](#)) went up on May 12, 2000. I was thrilled when that happened, as my published professional credits up to that point were limited to a few issues of *Dragon Magazine*. Getting published in *Pyramid Online* represented a real step forward for me -- and it meant one of my favorite articles was finally getting published. Its history included "successful" submissions to the short-lived *Troll* and then *Shadis*, both of which went out of business shortly after sending me an acceptance letter. I actually considered not submitting it to *Pyramid*, for fear the article was cursed and would doom one of my favorite magazines to termination.

Happily *Pyramid* was stronger than any mere article curse, and as proof here we are celebrating its 10th anniversary, and the third year since my first article went up. Although I ended up being too busy to follow up that first article for several years, a series of events recently put me in the position of being asked by SJ Games if I'd be interested in producing a biweekly *d20 System* article, and I immediately accepted. I have no idea what the next several years will bring, but expect to happily raise a glass to toast *Pyramid's* 20th anniversary of great articles and community.

Okay, on to the article.

Names with Meaning

It's all very well to have a great character name, but *d20 System* players tend to focus on things that give them real game-mechanical benefits. A cool name, background, or honorific is less important than the best combination of skills, feats, and class levels. Of course, this is a broad stereotype, but there is some truth to the idea that what gets rewarded gets duplicated. GMs looking to change the tone, feel, or sound of their games can use this to good advantage by rewarding the behavior they'd prefer to see more of. Subtle rewards such as engaging role-playing opportunities and positive NPC reactions are fine . . . but sometimes a direct game benefit is better and faster.

If you want to encourage players to give character names more thought, tie game effects to them. Players are far more likely to consider whether their wizard is Larken the Blue or Larkin Sharkslayer if that distinction makes a real difference. It's important to set one ground rule for such names regardless of what method is used to introduce them -- only names that sound appropriate to the campaign are rewarded with game benefits. Bob the Mighty may meet the technical requirements for a name of renown, but the GM is well within his rights to refuse any benefit be granted by it.

One method for adding such names is to allow characters to take a feat (see *Name of Renown*, below). This balances the advantages of such names, and puts the power to choose one in the player's hands. Other options are to allow players to buy such names with experience points (a cost of 100 XP is balanced), or even simply assign bonuses to the best names in a campaign without requiring those players to make some sacrifice. This last method is the least balanced, since it grants a benefit with no cost, but it's also the one most likely to encourage players to stretch their imaginations looking for a good, appropriate character name.

New Feat

Name of Renown

You have a name or title that is important, granting you real advantages.

Prerequisites: Character level 1 or performing a noteworthy action related to the name selected (GM's discretion).

Benefit: You gain a name with game-mechanical advantages (as defined below). It may be your full name, or an honorific applied before or after your name. Anyone who recognizes you through your reputation knows this name.

Anything of approximately the same power level as a typical feat can be turned into a name-based benefit. GMs should be cautious about allowing players to define their own name benefits, instead matching a good name with a benefit appropriate to the style of the campaign. In some cases it may be reasonable to require a decent name to take existing feats or prestige classes (such as those that include membership in an organization of increased fame). Some suggestions for name benefits for fantasy *d20 System* games are given below.

Most of the following suggestions assume the name granting these benefits is a tacked-on nickname or honorific. It's equally appropriate to use the character's birth-name, especially if the Name of Renown feat is taken at first level. In these cases it may be the meaning of the name that's most important. For example, Abdiel is a Hebrew name which means "servant of God," making it perfect for a blessed name benefit.

Arcane Names

The character has a name that represents his connection to or aptness with arcane powers. This may be a mystic-sounding descriptor ("Star-Eyed," "the Seer," "Spellweaver"), a reference to arcane materials and symbols ("Runebearer," "the Owl," "Ironstaff") or a color associated with arcane magic (often blue, red, or yellow).

Choose one arcane spellcasting class. This class is now considered an additional preferred class for your character. Additionally, you may select three 0-level spells from this class, each of which you may cast once each day using your character level as the casting level.

Blessed Names

These names indicate the character is particularly well-regarded by one or more divine power, and has the grace of the gods with him. This may be a variation on a particular god's name (Balderi, Hela, Lok, Thora, Wodin), or a word with associations to good luck or positive traits (Able, Charity, Gallant, Hope, the Blessed).

Select one clerical domain (if you worship a god, it must be a domain that clerics of that god may take). You gain the granted power of that domain. In some cases, this may not benefit the character (such as a fighter choosing the healing domain).

Divine Names

The character has a name that represents his connection to or aptness with divine powers. This represents not the character's high favor with some god, but his ability to draw upon holy powers. The name may be a religious-sounding descriptor (the Holy, Heavensent, Angelic), a reference to divine materials and symbols (Oakenbranch, the Chandler, Pallbearer) or a color associated with divine magic (often black, gold, silver, or white).

Choose one divine spellcasting class. This class is now considered an additional preferred class for your character. Additionally, you may select three 0-level spells from this class, each of which you may cast once each day using your character level as the casting level.

Noble Names

The character's name is noble, suggesting high courts and chivalrous behavior. The name may evoke courtly virtues

("the Fair," "Pureheart," "Dauntless"), a noble-sounding birth-name ("Baron," "Laird," "Lady"), or a nickname based on some tool or symbol used by nobles and knights ("the Shield," "Stagheart," "Cupbearer").

You always have access to the Diplomacy and Ride skills as class skills. If these are already class skills for you, you receive a +2 bonus to both skills.

Alternatively, you gain a +1 circumstance bonus to any bonus granted by a non-magical masterwork item.

Racial Foe Names

The character's name indicates his enmity for a particular race or a reputation for killing them. The name may be a simple combination of the race and a harsh-sounding term (-bane, -death, -fighter, -foe, -hammer, kill-, -slayer, -spear), or it may be something associated with enemies of the race ("the Lion" for a slayer of were-rats, "the Holy" for a slayer of undead, etc.).

Choose any one creature type. The character gains a +2 bonus on Bluff, Listen, Sense Motive, Spot, and Survival checks when using these skills against creatures of this type. Likewise, he gets a +2 bonus on weapon damage rolls against such creatures. If the character chooses humanoids or outsiders as a favored enemy, he must also choose an associated subtype.

The name may refer to one particular example of a creature type (Boar-Killer), but the advantages of the name still apply to all creatures of the selected type.

Racial Friend Names

The character has a name indicating his acceptance or alliance with a particular creature type. The name may be a simple combination of the race and an allied-sounding term (-blooded, -brother, -friend, -sister), or it may be something associated with the race ("the Spider" for drow, "Rockthrower" for giants, etc.).

Choose any one creature type. The character gets a +2 bonus to all Charisma-based skills with creatures of this type. Additionally, creatures of this type normally have an initial reaction of no worse than "neutral" toward the character. The character counts as a member of this race for purposes of meeting racial prerequisites for prestige classes, feats, and item creation.

The name may refer to one particular example of a creature type (Goblinblood), but the advantages of the name still apply to all creatures of the selected type or subtype.

Scoundrel Names

The character's name is roguish, suggesting back alleys and shady deals. The name may be evocative of stealth or the night ("the Shadow," "Nightstalker," "Midnight"), a street-name ("Knuckles," "One-Eyed Jack," "the Butcher"), or a nickname based on some tool or symbol used by thieves and knaves ("the Dagger," "Icepick," "Footpad").

You always have access to the Hide and Move Silently skills as class skills. If these are already class skills for you, you receive a +2 bonus to both skills.

Trait Names

These names are simple statements regarding the character's prowess in some physical or mental arena. The honorific may be a simple description of the trait ("the Strong," "the Nimble," "the Clever"), a descriptive term ("Mountainheart," "Ironwill"), or simply something that evokes the trait ("the Bear," "the Weasel").

Select one ability. You gain a +3 bonus whenever making a check for that ability, and a +1 bonus to all skill checks

based on that ability score.

Creating Fear in Horror Roleplaying Games

by Paul M. Frazier

GM: *"The floorboards creak as you walk down the dark hallway. Your flashlight plays across portraits of old, dead men. A rat scampers across the top of your foot and you jump involuntarily. You come to the last door in the hallway. You pause before opening it, wondering what might lurk behind it. You slowly open the door and a foul creature, dripping ichor, reaches out to claw your heart from your chest."*

Player [stifling a yawn]: *"I pull my UZI out and blast it back to hell."*

* * *

Monsters, no matter how nasty, just don't frighten most roleplayers.

They've seen 'em all. Characters kill monsters and sometimes monsters kill characters, but once a combat starts, roleplaying games often become little more than crap games with color commentary. To really scare players, hit them where it counts. This article presents a technique that a GM can use to scare the players (not just the characters) in any horror roleplaying game.

At one time or another, everyone who plays horror games has tried to create an eerie atmosphere. Candlelight is good, but it's hard to read dice in the dark. Spooky music is always a good choice (the soundtrack from *The Omen* is a personal favorite), but monotony can quickly set in. These techniques, and others, can help create the proper mood, but they won't create fear *in players*. To do that, the GM must design a character-based roleplaying situation that presents a threat to the player characters that also means something to the players.

The best way to do this is to develop the PCs' personal relationships in some detail. Have each player answer the following questions before the campaign starts:

1. Describe your character's relationship with his or her family in detail. Include their parents, spouse or significant other, and children.
2. Describe their relationships with their closest friends in detail.
3. Describe their relationships with their professional associates in detail.

Convince the players to give these questions some thought and write short essays in response instead of one or two word answers. Every bit of detail they provide will supply fodder for the referee's imagination, which will improve the quality of the game. If a player is having a problem answering these questions, don't pressure them too much. Someone will write answers in sufficient detail for the GM to use the technique described below.

The answers to these questions will be the seeds used to create fearful situations for the players. By basing the upcoming horrific elements on material that the players have created themselves, they will have some control over the situations their characters will face. No one who has genuine phobias will offer them up as fodder for the game. So, for instance, a player who has a real fear of rape will not provide answers in her essays that would lead a GM to include that event in his game.

Start by selecting two or three candidate NPCs from each player's essays that can be put in harm's way in the course of the campaign. Design these NPCs carefully. They must match the description given by the player and be useful as possible victims in the future.

The next step is to roleplay mundane events in the lives of the PCs and their candidate NPCs. Don't spend too much playing time on these scenes at first. Roleplay a 10- to 15-minute scene with each PC and one of their candidate NPCs once every second or third play session. Possible scenes include a conversation over breakfast, a trip to the grocery store, or looking in on the kids while they sleep.

These short scenes serve two important purposes. First, they establish the "normal" world in which the characters live as the baseline reality that will be shattered by the horror to come. Second, these scenes bring life to the candidate NPCs. Once they have a presence in the lives of the PCs, threats to them will have a strong effect on the players. Both of these purposes are crucial to the goal of creating horror.

At first, these scenes may need to be scripted carefully until the players become familiar with these potential victims. As these scenes continue, some of these candidate NPCs will resonate with the players. They may talk about them or initiate scenes with them. These candidates have graduated to victim status.

The next step is to select one of these NPCs and start working them into the primary plotline of the campaign as the victim of a horrific enemy. Do this slowly at first and gradually increase the threat level. Children can become mysteriously sick, girlfriends can start hinting about marriage, or spouses can become oddly distant.

This strange behavior worsens until the character realizes that an enemy is harming their loved one. This is the point that real horror sets in. By building slowly toward this crisis, the players will develop an emotional investment in the victim. Threatening that investment will have a genuine emotional effect on the players.

Here is an example of this technique from a *Vampire: the Masquerade* campaign. One of the players chose to play Tiny, a Nosferatu (a hideously ugly vampire). He decided that Tiny had a mortal young daughter, Angela, who was still living in the city. Tiny still had feelings for her and would observe her from hiding frequently. He watched her during a late birthday party, while she played quietly with a doll he had gotten her for his last Christmas with her, and while her mother read her a bedtime story, as well as other mundane family activities. As Tiny watched this candidate NPC, the player became more interested in her fate.

After Tiny had learned about a particularly ancient and nasty vampire NPC, Angela became strangely ill. One night, Tiny went to watch her from outside her bedroom window as he had done in the past, but all he saw was the dried, bloody vomit she had left on the floor. Angela and her mother were gone.

Tiny tracked them to a nearby hospital, where he learned that her doctors could find nothing wrong yet could not stop the vomiting. Angela was being sickened by the ancient vampire as an indirect attack on Tiny. Tiny (and his player) became quite upset over Angela's illness. He frantically tried to discover what was happening to his daughter, abandoning his other responsibilities.

Eventually, Angela improved and was sent home from the hospital. Tiny, relieved, went to watch her secretly while she slept. She was awake when he arrived, however, and she spoke to him for the first time since he became a vampire. "Are you my Daddy?" she asked. In the conversation that followed, Angela told Tiny about the big, blonde man who has been giving her candy every night. Tiny knew that the ancient vampire was a big, blonde man. She told Tiny that she started feeling better after eating the candy for a few days and that she "really, really likes the candy." Tiny asked to see a piece of this candy, and Angela reluctantly gave one to him. He tasted the candy and was overwhelmed with the taste of vampiric blood. Tiny's enemy has turned his daughter into a Ghoul (a human that is addicted to vampiric blood, has some supernatural healing powers, and is enslaved by the vampire that created her). As Tiny left in a rage, she said to him, "Daddy, the big, blonde man wants to talk to you . . ."

The moment the player realized what had happened to his character's daughter, a look of pure horror crossed his face. Taking vengeance on his enemy was all the *player* wanted to do. (His muttered, "You bastard!" made me a very happy GM.) If he had simply been told that his daughter had been turned into a Ghoul, without doing any of the previous groundwork, he would not have had this reaction.

Many game systems have mechanics for creating NPCs that are dependent upon a PC for protection on a regular basis. The technique discussed here works well for these characters, but everyone has family, friends, or associates that can be endangered once or twice in a campaign. Don't be limited to using those characters with dependent NPCs as a part of their character design. Put all of them through this emotional meat grinder. It will create a much more horrifying roleplaying experience.

With the appropriate groundwork, real fear can be brought to horror genre roleplaying games. Urge the players to provide details about the people in their characters' lives. Once they have written these short essays, decide which people described in them are good candidates for becoming victims in the campaign. Bring these characters into play, first in mundane ways and later in more horrific ways as the players begin to think of them as real people and not just numbers on a character sheet. When the players realize just what is happening to the important people in their characters' lives, fear will set in. This process will take time and effort, both on the part of the Game Master and the players, but the payoff will be worth it.

The Jaws of Defeat

There's a point in many console video games -- particularly the exploratory adventure-type ones -- where I confront fear. It's usually around the time of the bosses at the end of the level; over the course of the battle I'm dealing it damage and it's damaging me. My eyes flicker back and forth between the raging battle and my current health level. Usually -- cruelly -- I don't know how many more hits I need to defeat the boss, so the only option is to keep attacking.

There's a point where I know the battle will end soon; I'm at a point where I cannot withstand many more hits, and all I can do is keep attacking and hope for the best. In my mind, ideally, the best moment of that gaming situation is when I literally cannot be hit once more . . . and I land the final blow that fells the foe.

At that moment, I feel a sense of surging relief and triumph. The moment *before* that moment is a mix of anticipation, dread, and concentration. And that entire experience is, in my mind, one of the most satisfying sensations of any gaming pursuit. It is a projection of survival without a literal saber-toothed tiger nipping at my heels. It is a triumph over adversity at the precipice of failure, augmenting the feeling of survival with the knowledge of victory.

Of course, this moment exists in other pursuits. Athletes talk about breaking past the wall, where they find the reserves and focus necessary to triumph at the moment when they should collapse. And, obviously, it's also common in gaming; John Wick discusses this very issue in his [first column](#), where he talks about players enjoying being knocked down, only to get up shakily and prevail.

Of course, in gaming this can be a difficult moment to achieve. For one thing, by definition the thrill of victory necessitates the risk of failure. For each boss fight where I manage to barely win, I probably fought the *same* fight at least a half-dozen times where I got my butt kicked. And while many athletes get that burst of energy necessary to win, far many more find their second wind . . . only to lose anyway.

In RPGs, on the other hand, there is often a temptation to let the heroes survive and even win (or at least, there's been that lure with me and my gaming associates). This obviously undermines the effects of the horror quite a bit. And I've also realized that RPGs are often dealing with the statistical anomalies; they're focused not on the 10,000 previous victims the Eater of Souls has claimed, but on the one party lucky and stalwart enough to thwart them . . . maybe.

In my games I've found a few ways around these opposite considerations, and it seems appropriate to bring them up on Halloween.

First I note that secondary goals can bring the PCs to the brink of failure -- and even beyond it -- without placing their characters in direct danger. I brought up this possibility a [few years ago](#) by musing about the *Indiana Jones* movies. Although you know Indy's going to survive, it's never a given that he'll win every time. Furthermore, those movies are rife with secondary goals -- protect a certain person, keep a certain object out of the Nazis' hands -- that, again, Indy may succeed or fail at. In this week's article "[Creating Fear in Roleplaying Games](#)" the author shows that one of these "secondary goals" in a horror campaign can be the friends and loved ones of the PCs themselves. Of course, any of the standard secondary goals -- keeping the Big Evil Plan from succeeding, saving other innocents -- can apply here, giving the good guys a yardstick against which they can measure their success or failure.

As another possibility, there are several games that allow the players more control over their fate, either by using some kind of "hero point" system, cards (a la *Torg* and *Masterbook*), or the like. These systems give the player an edge, but it doesn't change the underlying situation; much like [Voltron](#), it's hard to come up with a reason that the heroes don't use those points early and often. In that case, the curve of desperation drops off fast. As the heroes take damage, so too do they burn the things that give them an edge; by the end of the battle, the good guys are hurting *and* they don't have any tricks up their sleeves left. Unless the players are clever or the GM has planned very carefully, they will probably either defeat the baddies too soon and not achieve that blissful "jaws of defeat" feeling, *or* they'll become PC salsa.

As a variant on this, it might be possible to structure the game so that the protagonists get more able and capable of

survival the more they fail. The rush of adrenaline is a marvelous thing, and can help those about to die to amazing things. To simulate this, whatever "hero points" the hero might receive may be doled out as the battle progresses. For example, White Wolf's Storyteller games have a tiered health system with seven levels, ranging from "Healthy" to "Incapacitated." Perhaps each level of damage corresponds to a number of "bonus" dice the PC gets (maybe equal to twice the damage bonus) that can be expended to add dice to the dice pool for important rolls. Thus at the "Crippled" health level the character normally is at a -5 penalty, and can barely *move*; under this system he would get 10 bonus dice; if he used them all at once, he would actually be at a +5 bonus for one roll only.

This system could work for other games, of course; it would primarily be a matter of designing a tiered health system for any game that doesn't have them (for example, the alternate **d20 System** [hit point rules](#) that appeared in *d20 Weekly*), and figuring out what to give the PC for each level of damage taken. (Generally speaking, a good place to start is the system's Luck ability, if it has it.)

Of course, the GM will need to make sure this is regulated; I would probably say that each health loss "bonus" can only be gained once per adventure, so that a hero who drops a few health levels and gets the bonus in an earlier battle can't get the bonus again in the final battle, even if he heals up in the interim. And the GM may want to enforce the "don't be a smartass" rule, so that heroes don't try to shake the system by saying things like, "Hey, Lou! I need a bonus; can you stab me a couple times?" Still, this system should work pretty well, especially if there are already negatives for being injured; after all, the bonus only offsets the damage penalties a limited number of times, and after that the hero is hurtin'.

In all, that climactic moment -- where success seems just out of reach and utter failure is a real possibility -- is a magical moment. Keeping the heroes focused on how things can go wrong *or* right in those times will hopefully keep them on the edge of their seats, and filled with anticipation and dread.

Genre: Dark Fantasy/Horror

Campaign Setting and Background Information

This mini-CiaB is more an adventure scenario than a full-blown setting, but may contain seeds for an interesting campaign.

What Everybody Knows

It's just the world around us. . .

What Occult People Know

. . . Where only a few can see the secrets writhing in the deepest shadows. Knowledge of magic and monsters is occulted -- hidden from most. However, there are some who have trailed their fingers in this undercurrent of history. . .

Sorcerers

A sorcerer (also known as witch, wizard, magician, or mage) commands spirits through various means to create supernatural effects. Their rituals vary from hoary ceremonial productions handed down from time immemorial to pop-culture chaos magick rites created yesterday.

If chased, a sorcerer could jam a door shut behind him by whispering to the spirit within the door, cause a red light to turn green by entreating the *genius loci* of the crossroads, or leave a fog of daemons to sow confusion in his pursuers.

There's no particular in-born talent required to be a sorcerer: great concentration, a modicum of knowledge, and strong faith can pay mystical dividends. . .

The "Rules" of Sorcery

. . . Once the basic rules of sorcery are understood:

1. *Magic best changes the Unseen, not the Seen.* Fireballs and levitation are right out; magic is not good for that sort of thing. What magic is good for is subtle things like affecting luck, emotions, thoughts, and -- over the long-term -- health. Magic may make minor alterations to the Seen World, so long as the sorcerer's desires: a) lie within the bounds of the probable; and b) involves things that are unseen. Thus, a sorcerer has a better chance at healing a sprained back or a toothache than a knife wound or black eye.
2. *Magic requires faith to work.* The reason more people are not sorcerers is because they lack enough concentrated belief to hold a magical mindset during a ritual. Any flicker of doubt kills the magic. Few are single-minded enough to control their thoughts to that extent. Furthermore, actively skeptical (not the same as doubting) people generate supernatural "static"; the disbelief of a Skeptic counters the faith of a Sorcerer, on a one-for-one basis.
3. *The spirits have minds of their own.* Sorcerers can ask for a desired end, and if their ritual is effective, have a decent chance at getting it. Yet, the spirits choose the means to that end. Any attempt to dictate means or methods reduces the efficacy of the magic. And, due to #1, the path these desired ends will almost never be verifiably unnatural -- who's to say if the curse a sorcerer casts at his foe or stress at work causes the enemy's

migraine?

4. *The spirits respect rituals, sacrifice, and symbols.* Spirits are drawn to regular patterns, and the most potent tools a sorcerer has are the elements of *ritual* -- mystic circles, chants, magical words (almost always palindromes), runes, glyphs, etc. (Also, strong patterns also help the sorcerer open concentrate.) The length of a ritual is important only in how strong a pattern it sets up. With an amiable spirit, a simple word may do; a recalcitrant spirit may need to be swayed via the whole ritual circle, robed attendants, athame, wand, incense, and blood route.

Sacrifice is important, in that spirits must consume the mana, life force, luck, or inherent quality of something from the Seen World to affect it; the emptied "shell" of the sacrifice remains, but all integrity has been taken from it. For example, if a crystal chalice is offered as a sacrifice, after the ritual it will soon break -- probably by an accidental bump and fall, someone gripping it too tightly, or other "random mishap."

Symbols -- especially those of life or luck (blood, eggs, pennies, rabbit's feet, lucky shirts) -- make excellent sacrifices to the spirits, but may also affect them directly, as their qualities extend beyond the Seen into the Unseen. Thus, highly-charged symbols can serve the sorcerer as both carrot and stick.

Under the cyclic pattern of the year, one of the best times to work sorcery is. . .

Samhain

. . . When the Veil is thin. A harvest festival celebrating summer's end, *Samhain* (SOW-an) is celebrated on October 31st, between the Autumnal Equinox and the Winter Solstice. Some ancient peoples believed this date was a powerful time for communication with the spirits; indeed, the dead were often invited to return to feast with their living loved ones. Which brings us to. . .

The Circle

. . . An eclectic band of magicians, pagans, and friends have gained permission to use a prehistoric ceremonial site to perform a Samhain ritual. However, they've bitten off more than they can chew this time.

The Players and the GM

The players will play one of the roles of members of this Circle, with the GM playing those left over; the Circle should have at least four characters involved. Six potential character write-ups appear below; the GM may add more if desired.

Each character has a brief description, things they're *Good* or *Bad* at, a *Fear*, and a *Goal*. Feel free to use your chosen game system to further flesh out the characters.

Pre-generated Characters

***Moonflower Nolan*, Crunchy Pagan (male version, *Sunbeam Nolan*):** Nolan believes in peace, man: you should give it a chance. Maybe she and her friends can summon up some groovy spirits to help everyone feel the good vibrations. Friends with Vic Hades and a customer of Alex Barnagat. Owns an old VW van. *Good*: Music and Sorcery. *Bad*: Fighting and Debate. *Fear*: Extreme violence. *Goal*: Act as a peace-maker.

***Alexandra Barnagat*, New Age Bookstore Manager (male version, *Alexander Barnagat*):** Sibling of Chris Barnagat, and acquainted with Nolan, Kirby, and Vic Hades. Alex runs a New Age bookstore with a sizable used-book section. This puts her in touch with much of the local occult subculture, some of which have become her friends. Alex sold the Indigo Tome to Vic Hades. Owns an SUV. *Good*: General Knowledge and Occult Knowledge. *Bad*: Pedantic and Style. *Fear*: Looking stupid. *Goal*: Offer proof to Chris that the spirits exist.

Christopher Barnagat, *Conflicted New Age Catholic: (female version, **Christine Barnagat**)*: Chris is a conflicted New Age Catholic, the sibling of Alex Barnagat, and the friend of Kirby. He more or less believes in supernatural forces, but is unsure about how they work, or if they're just human projections of some kind. Chris comes to the ceremony looking for answers. *Good*: Fighting and Debate. *Bad*: Style and Romance. *Fear*: Being made fun of. *Goal*: Experience a supernatural event.

Donna Bella, *Perky Goth: (male version, **Donald Bella**)*: Friend of Vic Hades. Donna comes to the circle for fun, friendship, and hanging out. And squealing cutely whenever possible. *Good*: Goth Knowledge and Cute. *Bad*: Attention Hog and Being Quiet. *Fear*: Being treated like a nut. *Goal*: Have someone tell her she's cute.

Victor Hades, *Angsty Goth Pagan: (female version, **Victoria Hades**)*: Vic's a little chubby, but still very attractive, especially when all dolled up in Goth finery. He's the leader and organizer of this Circle, an acquaintance and customer of Alex Barnagat, and a friend of Nolan and Donna. Vic arranged the campsite and owns the Indigo Tome, which he feels must be used somehow in the Samhain ceremony. Owns an old hearse. *Good*: Sorcery and Goth Knowledge. *Bad*: Music and Debate. *Fear*: Confronting or being confronted with any failure of his own. *Goal*: Speak with the Dead.

Kirby, *Urban Hipster Skeptic: (male version, **Kirby**)*: Friend of Chris Barnagat, acquainted with Alex Barnagat. Kirby's just tagging along tonight with Chris, looking for a good time. *Good*: Skeptic and Style. *Bad*: Hiding Disdain. *Fear*: Looking uncool. *Goal*: Sleep with "a hottie."

Edwin Ronald, *Slumming Sorcerer: (female version, **Edwina Ronald**)*: Acquaintance of Vic Hades and Nolan, and customer of Alex Barnagat. Ed wants desperately to contact a powerful spirit, and wishes to hijack Vic's little shindig for personal goals. *Good*: Sorcery and Lying. *Bad*: Spending Money. *Fear*: Being caught in a lie. *Goal*: Bind many spirits in order to win the lottery.

What Everybody Doesn't Know

There's a bunch of stuff even the clued-in occultists don't know:

No Spirits, Just the Dead

There are no spirits -- no powers residing in wind, dirt, flame, water, whatever -- other than the ghosts of the Dead. And they're angry, every last one of them. After a few decades of standing around immaterial, powerless, only able to interact with the other Dead, being drawn like a moth to any regular pattern, and having to watch the living have all the fun. . . even the kindest soul gets a little bent. And some of the crueler souls get positively twisted.

Ghosts help sorcerers with sorcery so that they can, if but for a little while, affect the material world. They prefer to receive sacrifices (since they can use the energy bound up within them to change things in the Seen World *and* take back the extra mojo in a spiritual doggie-bag) rather than be forced by the pattern of a ritual or a symbol to use their own power. However, when the Veil is thin, they can reach across with greater ease and conserve their force.

Tonight, the Dead are not satisfied to be given sacrifices; tonight, they will *take* them . . .

The Veil Walkers

Luckily, the Veil Walkers are there to protect humanity. From birth, Veil Walkers have been marked as being spiritually powerful, and stride along the boundaries of life and death. Once a month, they have terrible dreams or nightmares, when their astral form sallies forth into the Unseen World. Only if told by another Walker or particularly insightful will a Walker realize that they are not just having vivid dreams.

Good Walkers fight off angry ghosts, exorcise the possessed, and disrupt spiritual probability shifting. *Bad Walkers* use their abilities to command and strengthen spirits, without recourse to the patterns of Sorcery.

The "Rules" of Veil Walkers

Veil Walkers:

- *Can see a short distance into the spirit world.*
- *Can physically interact (grab, lift, punch, fondle, etc.) with ghosts.*
- *Uncontrollably project their astral form into the spirit world each month.*

Any Walkers who die in that narrow window of monthly uncontrollable astral projecting become *Vampires*, the Dead who easily stride the boundaries of death and life . . . but that's another column. (GMs should feel free to make one or more characters into unrealized Walkers -- possibly Chris or Kirby.)

NPCs

The Dead: Ticked-off ghosts. *Good:* Mayhem. *Bad:* Too crazed to think straight. *Fear:* None. *Goal:* Wreak Havoc.

Items & Locations

- *Indigo Tome:* It appears to be your basic tome of Sorcery, full of invocations and rituals to bring and bind the spirits for service (love spells, luck spells, curses, etc.). Unfortunately, it's poorly-written and full of broken patterns and mistaken symbolism . . . enough to attract ghosts, but not enough to command them. If one of the Dead sees the Tome, it will focus all its rage on its holder.
- *Prehistoric Site:* Be it an Indian Mound, a megalith ring, or an ancient grove, this remote site once thrummed with the chants and hymns of spirit worship. Within the ring, the Veil is thin, giving it an eerie atmosphere. On certain sacred nights, it's positively supernatural. Add to this a powerful magical ritual, and the Veil may tear, allowing the Dead to pour through and into the Seen World . . . Luckily, they won't be able to bodily move beyond the Site, but their spiritual powers outside it will be stronger now that they they've secured a beachhead.

What Will Probably Happen

Here's a brief outline of how the scenario might unfold, given the concept that this is a short camping trip and ceremony where weird events happen. This will change, depending upon the actions of characters within the scenario, as they pursue Goals, avoid Fears, and react to events:

1. *You're Going Camping!:* Basic layout of the concept of the trip: camping at a Prehistoric Site with a ritual to celebrate Samhain. What will the characters bring along as camping and ceremonial supplies?
2. *Driving to the Site:* Note that only Nolan, Alex Barnagat, and Vic Hades possess vehicles, so all the characters must be divvied up between them. Plenty of potential for roleplaying between passengers in each vehicle.
3. *Hiking In:* The Site is about two miles from the parking area, and about five miles from the nearest bits of civilization (park office in one direction and a gas station in the other). The Site itself is in a mostly flat clearing, between a low rise and a deep gully with a small creek.
4. *Set Up Camp:* How close or how far from the actual site will the camp be pitched? Note that the closer they are, the more dangerous it will be later.
5. *The Ritual:* Agreement and discussion of the ritual ceremony to be undertaken might be amusing, given the agendas of many of the characters (the overt heckling skepticism of Kirby, the peace 'n love ethos of Nolan, the need for verification of Chris, etc.). Stage-dressing will also be necessary -- torches or candles, robes or garb, and so forth.
6. *The Veil Rips:* Unless Vic is forced to exclude the Indigo Tome in some way (and, even barring that, Vic'll still try to slip spells or elements from the book into the ceremony), during the ritual, the Veil will rip, and angry ghosts will appear.
7. *Swarmed by the Dead:* If going for the fleshy manifestation option, the Dead should be all zombified and ravenous. If going with the ectoplasmic option, they'll stick with glowing slime, terror, bad luck, possession, and

mental attacks. In any case, they cannot visibly or physically manifest beyond the limits of the Site, but their spiritual powers can reach beyond it for about a mile in all directions.

8. *Now What?:* Do the characters run away at night through unfamiliar woods, try to strike a bargain with the Dead, or attempt to seal the tear in the Veil? How do they do that? Can it *ever* be closed? (Even Sorcerers shouldn't be sure.)
9. *Daybreak!:* At dawn, the Veil will reknit itself, and all will be well. Or will it? If a spirit has successfully possessed a character and not been exorcised, does it get to keep the body, or is it kicked out? Do characters that were killed get up and brush themselves off? Will bargains made with the Dead still need to be honored?

Advice, Opportunities, & Pitfalls

- This mini-adventure might work very well as a Live Action Roleplaying Game (LARP), with players taking on each of the roles above, and the GM -- and any assistants -- playing the angry Dead.
- The interaction of Sorcery, Spirits, and Skepticism can be played with for great effect: can Kirby's skepticism help protect him from spiritual assaults, or just make him more willing to do something unwise, since ghosts "obviously" do not exist, or both?
- The character interactions of this scenario are key. Attempts to steal and use the Indigo Tome before being caught, flirting and romance, philosophical in-character conversations, avoiding Fears while trying to achieve Goals, and so forth.
- The GM's watchword should be "creepy," though for some, "gory" has its charms.

Play Dirty . . . Again

Hi. Remember me? I'm the kid who had an article called *Play Dirty* a while back. Then, I disappeared. Some of you may be wondering where I went, what I've been doing with my time. More than a few of you probably either don't remember me or couldn't really give a d4 where I've been. But, for those who are curious, let me just say that I've been busy getting paid to write. It's good work, if you can find it. I *did* find it, so I've been doing it, because as Robert Wuhl in *Bull Durham* so sagely observed, "It beats working Sears."

In the meantime, I've rediscovered an old flame. For a long time, I gave up on gaming. Just gave up on it. Wrote a novel, wrote for a video game company, kept a journal of my adventures . . . but I just didn't do any gaming. Not until I bumped into a group who reminded me why I love it so much. These wonderful folks who reminded me why I love gaming and I return the favor by doing absolutely awful things to their characters.

And so now, in celebration of Pyramid's 10th anniversary, Mr. Marsh writes to me and asks, "John, we'd really like a *Play Dirty* for the 10th anniversary. Can you send us something?" Well, I'd walk on fire for Mr. Marsh (as long as they gave me asbestos boots), and for such a big event, I should give him something *huge* -- like Atlas huge, like Zeus' libido huge. But, instead I've got something very *small*.

I share with you now one of the little tricks I've used in that time since we last talked. I say "little," because it is, really. A trifle. Barely a mechanic at all. Can't even call it a technique. It's just this tiny, little thing I did for a tiny, little player of mine. The smallest thing in the world. But, then again, as my Grammy used to say, "It's the little things that make the soup."

And who knows . . . if Marsh digs it, maybe I'll send him another one. But only if he sends me those boots . . .

Happy Fun Ball Meets the God of Murder

There's a new girl in my life. I say "girl," because that's what she is. Barely out of high school, but smart and cute as a button. And bouncy. She's gained the Secret Superhero Nickname of "Happy Fun Ball." Cute, bouncy, and full of potential disaster. "Do not taunt Happy Fun Ball" is what everyone says whenever someone gives her a hard time. 'Cause you just don't know what she's capable of.

Happy Fun Ball works with me at my current place of employment (which shall remain nameless . . . until the bio section of this article) and when she found out I was running a ***Dungeons & Dragons*** game, she jumped at the opportunity.

(Yes -- believe it or not, a ***Dungeons & Dragons*** game. One of the not-so-dirty secrets I've learned of being a good GM is you run what the *players* want to *play*, not what *you* want to *run*. Remember this rule, and, as the Umpa Lumpas sing, you will go far.)

The game isn't your standard hack 'n' slash campaign, though. Oh, no. I've got something much more interesting in mind. At least, interesting to me, and hopefully, interesting to the players.

Thieves. Just thieves. No, not "rogues." Thieves who call themselves rogues are like Trekkies who call themselves "Trekkers." *Lame*.

All of them -- all six of them -- have taken at least one level of thief. And the game takes place in The City. They're all members of the guild, and they have to pay dues, and they have to watch out for members of rival guilds, and dodge the town guard. Carrying a weapon is illegal . . . without a permit. Using magic is illegal . . . without a permit. Doing just about *anything* is illegal . . . without a permit. So, even being *adventurers* is illegal without paying the proper taxes to your local representative and carrying around a nifty piece of paper that says it's okay for you to do it. This is the campaign setting, filled with mystery, intrigue, and plenty of places to loot and get rich.

Like I said, everybody's got at least one level of thief. We've got the thief-ranger (he's a city ranger), the thief-sorcerer-noble, the thief-monk, the thief-thief (that's Happy Fun Ball), and the thief-paladin.

Yeah. A paladin of the Goddess of Thieves. Pardon me while we take a very long aside here.

* * *

I can get away with a thief-paladin this because I've ditched alignment. Funny how many ideas that liberates, eh? Besides, if you think about it, the whole thing makes perfect sense. It all came to me after a conversation I had with Jess Heinig (who gets mentioned here because this is half his idea anyway).

Paladins tend to have a high charisma. The high charisma tendency indicates someone with a lot of flair and panache. The paladin archetype we gamers are all familiar with is a chivalrous soul who adopts righteous causes, helps the helpless, thwarts the wicked, all that good stuff. When applied to a medieval character, we get images of Arthur, Lancelot, and the like. But, what if we applied it to a Renaissance figure, or a Restoration figure? And why don't we just throw on a little bit of roguery on to that paladin . . . and *voila!*

As a "goodly soul," the paladin-thief is a gentleman of high character who inspires others and gives them the courage to survive. When he "lays on hands," it's not "I lay on hands and heal you with divine power," it's "I sweep you into an embrace and kiss you and tell you that you can't go" The thing to remember is that the ideas of "virtue and vice" here are the Renaissance or Restoration-era ideals, not the early middle ages ideals we commonly associate with ***Dungeons & Dragons***. Thus, the paladin-thief does in fact smite evil -- but that's because he casts down villains and has the strength to fight against people of low character -- cheaters, robber-barons, people who abuse women, liars, etc.

Conversely the paladin-thief is an example to others of how to be a courtly figure: You can still be witty, be involved in romances, even be involved in some "nocturnal hijinx." The difference is that the paladin-thief does things with a pure heart and conscience. He rendezvous with his secret sweetheart out of a pure love and romantic ideal, not out of some treacherous desire to possess her and destroy his rivals. He races across rooftops at night helping his larcenous friends because he hopes to lead them into worthwhile causes -- tweaking the nose of an overbearing church, throwing down unjust rulers, inspiring the populace to find their own inner heroic strength. He is not a man with a rigid and inflexible dogmatic code that says "I can't have fun, I can't steal, I can't be in romances." He's a man with a romantic code that says "I must inspire others, I must never let the wicked rest, I must abide by law in public but in private I am driven by charity and compassion for my fellow man, especially those who are downtrodden by a wicked society."

That's the thief-paladin. Feel free to use him. Just make sure to thank Jess for him, because without Jess, he wouldn't exist.

* * *

Anyway, one of the antagonists our party encounters is a priest of the God of Murder -- Ikhalu. See, he and his brother had a bet at the beginning of time about who would be the God of Death. Each made a house for men to rest in when they died. Ikhalu made his difficult to get into -- so only the worthy would enter. His brother, Khalee, made his easy to get into -- so *anybody* could enter. The men chose Khalee, and Ikhalu got pissed. Now, he's the God of Murder, and his priests use daggers that steal men's souls and send them to Ikhalu. So, when an assassin-priest of Ikhalu kills you with one of his magic daggers, you go off to that black fortress in the sky. What's more -- the guy who killed you? You and (everybody else he killed) get to serve him when *he* enters the House of Ikhalu. The assassin-priests of Ikhalu. They'll be seeing your ***d20 System*** shelf any day now.

These guys, they're one of the first antagonists my party meets. Now, Happy Fun Ball, she's never played a roleplaying game before (she says I'm ruining her for other GMs; a gross miscalculation of my skills, I assure you), and we're playing ***Dungeons & Dragons*** . . . but a slightly modified version. A "wicked" version you might say. Because I've introduced a little mechanic called Hero Points into the game. Not a new idea, not even a novel one. Just a way for the players to get little bennies now and again and modify really bad die rolls.

Well, our Happy Fun Ball has chosen her thief to be a specialist in knives. So, while they're all fighting these assassin-priests, she sees one of those magic knives in the dead hand of an Ikhalu Priest . . . and I tell her to make a Willpower Save. She looks confused at me. "What for?" she asks.

"Just do it," I tell her, firmly, but with a smirk and a wink, just to let her know nothing's gonna kill her. So, she does. And she fails. And I say . . .

"The next thing you know -- you've got the dagger in your hand."

Happy Fun Ball jerks in her seat. "I've *what*?" she asks.

"And," I continue, "there's an Ikhalu priest with his back turned to you." The smirk stays on. "That means if you attack him now, you'll get your full sneak attack damage bonus."

She nods. "Okay," she says.

"You don't need to roll to attack," I tell her. "Your strike hits perfectly. Roll for damage and assume you got a critical."

She's smiling now. She's not too much of a noob to know what that means. She rolls a whole handful of dice and adds up the damage. She tells it to me. I don't even consult the guy's hit points. Why bother? The moment is the moment, and it's moving fast. No need to ruin it with number checking now.

"Your knife enters his back, slips between two ribs and finds his heart. You feel the pointed blade slip into the muscle there, and you feel something *cold* rush down your arm, into your chest, and down into your own heart . . . before it slips away."

The thief-paladin asks, "Was that his *soul*?"

I say nothing. Okay. That's a lie. I do say something. "Annie," I say to Happy Fun Ball. "You get a Villain Point."

The whole table gasps. We've been playing for many months now, and they've *never even heard of Villain Points*.

"What's a Villain Point?" she asks me.

"It can't be anything good," says Evilzug, the thief-sorcerer-noble.

"Wanna know what it does?" I ask Happy Fun Ball.

She nods. I smile. "Then *spend it*," I tell her.

She shudders and hides under the hood of her sweatshirt. Poor little thing.

Happy Fun Ball has had that Villain Point for a few months now. Every time she's in trouble, every time one of the other characters is in trouble, every time they could really use a hand, I always turn to her and say, "You know, you *could* spend your Villain Point."

That's when she shrinks down and pulls the hood of her sweatshirt over her head.

Poor thing. One day she'll find out what a Villain Point does. And so will the other PCs. But, until that day, they'll just have to sweat it out . . . knowing that one of them has a Villain Point. And could spend it at any moment.

Now, you may be asking, just what *does* a Villain Point do? Faithful Reader, the answer to that question should be obvious! It *is* obvious to all those astute GMs out there who have used the same technique. It isn't a new one. It's a very old one. Something I picked up a hundred years ago in Tibet from a wise old GM who taught it to me in exchange for a d16 -- a rare artifact, indeed.

What does a Villain Point do? My friend, you just *saw* what it does. It sits on Happy Fun Ball's sheet and stares at her. Reminds her that she's capable of doing something awful . . . something dreadful . . . something -- dare we say it? -- *EVIL*.

That's what it does. It mocks her, torments her, and yes, even *taunts* her (do not taunt Happy Fun Ball). And I don't have to do anything at all. Just ask her once a session, when she's rolled really cruddy and someone's at ?9 hit points and really needs help *right the hell now* . . . and it says to her, "*I could help . . . all you have to do is ask.*"

Just one little Villain Point. It's changed the face of the game. Gave it a depth it didn't have before. Brought to focus what all the other PCs are capable of becoming. *Villains*. And it teaches them something else, too. That not all villains are born evil.

Some are smart, cute, bouncy girls who duck under the hood of their sweatshirts when things get hot. To hide from that little point at the top of her character sheet.

* * *

John Wick gets paid to do this. His current employer is www.neopets.com where he writes Neopedia stories for children. In the meantime, he runs a D&D game on Tuesday nights, a Vampire game on Friday nights, and an L5R game on Saturday nights. Between all that, he's writing his second novel. You can follow his adventures at <http://www.livejournal.com/userinfo.bml?user=wickedthought>.

Urban Legends: Reed Park Zoo

A d20 Modern Campaign Resource

by Daniel Bronson

* * *

A tall, hooded figure solemnly strode out before the hushed group, turned to face the stone arch, and threw his hands to the sky. He held his pose for a dramatic moment, then intoned: "Oh, Great and Mighty Spirits of the Jungle, hear us!"

Joan rolled her eyes. Did they have to put on their little show every time? Sure, you want to give the customer what they paid for, but how many of them really believed in this stuff?

"Hear us, and grant us passage by Your Great Power!"

Yes, she thought to herself, the concept was impressive enough, but she'd seen stranger things before. Besides, she'd used the portal so many times now that it was really just a tool to her anymore. It didn't matter to her how it worked; it simply worked. These kids and their productions had nothing to do with it. Heck, she'd walked through the portal twice today already, just getting everything ready for tonight's safari group . . .

Joan resisted the urge to sneeze as clouds of machine-produced fog rolled past her and around the arch. She'd forgotten they were adding that touch to the ceremony this time around. It was just as well; it might distract the "guests" from the hooded figure's rather uninspiring performance. And there was her cue: the flash of fire at the center of the arch, courtesy of some other gadget. Joan walked out from the jungle border as the hooded figure left the clearing.

It was time to go to work.

* * *

Reed Park Zoo was established in 1959 when wealthy businessman and world traveler Wallace Reed not only donated the land for the project but also enough money to add elephants, crocodiles, and a giraffe to the existing city zoo's domestic animals. By the mid-1970s the zoo had reached the limits of what the land would support due to the expansion of the exhibits in an attempt to make them more naturalistic and to the large numbers of new animals being brought in. Further expansion was not possible because in the years after the park was originally established the city grew around it, blocking it off on all sides.

Wallace Reed passed away in 1982 but the zoo continues to flourish thanks in large part to his generous donations. Efforts are constantly made to keep the zoo exhibits modern and ideal for their inhabitants, and the zoo has become a popular education and recreation facility within the city. One area of the zoo that has been deliberately left unchanged, however, is the section known as the Garden. The existence of this section of the zoo was one of the few stipulations attached to Reed's contributions; Reed designed it himself.

The Garden, which is located right in the middle of the zoo grounds, is encompassed by a nine-foot tall chain link fence. The fence is hidden from the rest of the zoo by a thick hedge and from the inside of the Garden by a 10-foot thick band of dense jungle vegetation that grows along it. Surrounded by this jungle growth is a grass glade and a pair of sculptured pools populated by exotic fish. Partially hidden throughout the jungle growth are several incredibly lifelike stone statues of animals, the most obvious of which is a large tiger standing at the edge of the west pool. Last, but far from least, a stone arch stands on the jungle/grass border at the north end of the glade. It is 8 feet tall, 10 feet wide, and has jungle animals and landscapes carved all along its surface.

Reed mostly used the Garden for the occasional family get-together and for evening soirees with his many well-to-do and influential associates. That wasn't all it was used for, however, as the arch in the Garden is more than it appears. When allowed to properly charge up it opens a temporary portal to a sister arch carved into a rock outcropping not far from where the Brahmaputra crosses the India/China border. Reed acquired the arch for his Garden from a foreign acquaintance and used it to excellent effect smuggling weapons and other goods into that region of the world during the border wars of the early 1960s.

The arch takes 70 days to charge up, absorbing a set amount of primal life force each day. This life force cannot come from humans or domesticated animals but can come from animals that are, in their hearts, wild. The amount of life force needed each day is approximately that of a medium-sized animal but it can be drawn from multiple sources within 1/8 of a mile of the arch. Thanks to the size of the zoo, enough animals are within reach of this arch and sharing the life force loss that they show no ill effects. At the end of the 70 days the area inside the arch begins to shimmer faintly, as if heat were rising there. Anyone stepping through the arch will find themselves stepping out of the other end of the portal. This two-way transportation effect remains open for 48 hours, at which time the shimmering vanishes. Another 70 days must then pass before the portal re-opens.

Reed stopped making use of the portal in his later years and the few who knew of the arch eventually passed away. When Reed himself died the secret went with him but the arch remained at the zoo. The Garden remained largely closed to the public, used only on special occasions and when it was rented out for weddings and the like. Then, in 1993, one of the groundskeepers found a monkey inside the gates of the Garden. The zookeepers quickly realized that it was not, as they had first assumed, an escapee from one of the exhibits and they began trying to figure out where it came from. When one of them, a young man by the name of Tony Leeuwenhoek, investigated the Garden for clues he discovered the active portal.

Just as before, the portal was and is largely kept a secret. These days, however, it sees a bit more use than in the past. Once the pattern of openings was determined someone had the idea of quietly offering mini-safaris to the rich and adventurous. For a sizable fee individuals can join an exclusive group of peers in not only taking an fantastic 10-hour tour of the lush jungles of India but in doing so using an amazing and neigh-unbelievable mode of travel. As part of the preparatory work travelers-to-be must sign confidentiality agreements as well as forms waiving the zoo of any responsibility should something go wrong on the trip.

The safaris begin in the evening in the Garden with Tony Leeuwenhoek and two other zookeepers performing a dark and mysterious magic ritual, complete with incense, hooded robes, and chanting. According to what they tell the customers, this opens the portal. In reality the portal opens of its own accord at some point during the day, usually in the afternoon. No one at the zoo understands how or why the portal works, but they feel their safari guests are paying as much for a show as they are the trip itself and simply saying, "Okay, walk on in," seems a bit anti-climatic. On the other end of the portal the guests find a small "base-camp" where they are provided with food, water, and gear. After spending the day being guided around the jungle they return to the zoo in time to leave just as morning visitors are beginning to arrive.

Dramatis Personae

Tony Leeuwenhoek, Zookeeper

"It's a pity you never had the chance to meet Mr. Reed; he was an incredible man."

Dedicated Ordinary 3: CR 2; Medium-size humanoid; HD 3d6+3; hp 13; Mas 12; Init +3; Spd 30 ft; Defense 11, touch 11, flat-footed 11 (-1 Dex, +2 class); BAB +2; Grap +4; Atk +4 melee (1d3+2 nonlethal, unarmed strike); Full Atk +4 melee (1d3+2 nonlethal, unarmed strike), or +1 ranged (1d2 piercing, air rifle); FS 5 ft. by 5 ft.; Reach 5 ft.; AL the memory of Wallace Reed, Reed Park Zoo; SV Fort +3, Ref +0, Will +4; AP 0; Rep +1; Str 14, Dex 8, Con 12, Int 13, Wis 15, Cha 10.

Occupation: Zoological (bonus class skills: Handle Animal, Knowledge [earth and life sciences], Research)

Skills: Craft (pharmaceutical) +3, Handle Animal +6, Knowledge (arcane lore) +2, Knowledge (earth and life sciences) +10, Knowledge (physical sciences) +9, Knowledge (popular culture) +6, Listen +4, Perform (act) +1, Profession +6, Research +5, Ride +1.

Feats: Animal Affinity, Defensive Martial Arts, Educated (Knowledge [earth and life sciences], Knowledge [physical sciences]), Improved Initiative, Simple Weapons Proficiency.

Possessions: Air rifle, assorted tranquilizer darts, zoo radio, dark gray fedora, zoo uniform, and personal possessions.

Tony Leeuwenhoek idolizes Wallace Reed and does all he can to be like him. To Tony, Reed was a masterful man: wealthy, clever, and generous. He has copies of everything ever written by or about his hero, numerous photographs, and a couple pieces of clothing Reed once wore. He has made one of these items, an olive-green fedora, a permanent part of his wardrobe. Regardless of what else he is wearing, he will have the fedora with him as well.

The discovery of the portal only increased Tony's adoration of Reed, as the man became even more interesting and more impressive. Tony is certain that Reed used the portal to rescue animals and to show his associates the glory of the jungle. Anyone suggesting to Tony that Reed had other motives, i.e. smuggling, will be aggressively refuted. Continued investigations along these lines will make Tony outright hostile.

Much as Tony falsely believes he is very knowledgeable about Reed's life, he also incorrectly assumes he is well-acquainted with the occult. Again, he has done a great deal of reading on the subject, but few of his sources were correct to begin with. For the most part he hides this side of himself, just as Reed did, but he opens up and offers what he knows in order to help people . . . as he is sure Reed did as well.

Dr. Christie Gram, Zoo Veterinarian

"I wouldn't expect a human to understand."

Smart Ordinary 2/Dedicated Ordinary 3: CR 4; Medium-size humanoid; HD 2d6+2 plus 3d6+3; hp 22; Mas 12; Init +1; Spd 30 ft; Defense 14, touch 14, flat-footed 13 (+1 Dex, +3 class); BAB +3; Grap +3; Atk +3 melee (1d3 nonlethal, unarmed strike); Full Atk +3 melee (1d3 nonlethal, unarmed strike), or +4 ranged (1d2 piercing, air rifle); FS 5 ft. by 5 ft.; Reach 5 ft.; AL animals, nature; SV Fort +3, Ref +2, Will +6; AP 0; Rep +2; Str 10, Dex 13, Con 12, Int 16, Wis 14, Cha 8.

Occupation: Zoological (bonus class skills: Craft [pharmaceutical], Handle Animal, Treat Injury)

Skills: Computer Use +7, Craft (pharmaceutical) +14, Craft (chemical) +9, Handle Animal +9, Knowledge (earth and life sciences) +13, Knowledge (physical sciences) +13, Knowledge (technology) +8, Profession +8, Research +8, Ride +3, Search +10, Sense Motive +7, Treat Injury +13.

Feats: Animal Affinity, Educated (Knowledge [earth and life sciences], Knowledge [physical sciences]), Medical Expert, Simple Weapons Proficiency, Surgery, Weapon Focus (air rifle).

Possessions: Air rifle, assorted tranquilizer darts, zoo radio, medical kit, pharmacist kit, surgery kit, zoo uniform, lab coat, and personal possessions.

Christie Gram was badly burned as a teenager and still lives with horrible scarring on her face, shoulder, and back. Treated as a freak by those around her, she found companionship with animals instead; they loved her despite her appearance. Though she had once dreamed of being a doctor, after the accident Christie decided that it was more worthwhile to help animals rather than people so she became a veterinarian instead.

Those who are as close to Christie as she will allow any human to get were somewhat surprised by her choice to work at a zoo given her feelings that animals should be free. More than once she has made it clear that a zoo should only be for injured, ill, or otherwise endangered animals needing protection, with the intention of setting them all loose when they can fend for themselves. Christie sees her choice of employment as a necessary evil, however. She realizes that she would have difficulty maintaining clientele as a private veterinarian; this job lets her help animals without having to deal too much with other people.

Christie was only recently hired by the Reed Park Zoo. (She lost her previous zoo veterinarian job due to an incident involving herself, a tranquilizer gun, and a zookeeper who like to throw rocks at the animals when he thought no one was watching.) She currently knows nothing about the portal. If she should ever learn of it she will see it as a wonderful chance to release some wild animals back into their natural environment. Should she also learn that it is powered by the life force of animals, however, she will do everything she can to see it destroyed.

Joan Salk, Safari Guide

"Some things are more exciting to hunt than others."

Fast Hero 4/Wildlord 2: CR 6; Medium-size humanoid; HD 4d8+4 plus 2d8+2; hp 35; Mas 12; Init +2; Spd 30 ft; Defense 18, touch 18, flat-footed 16 (+2 Dex, +6 class); BAB +4; Grap +6; Atk +6 melee (1d3+2 nonlethal, unarmed strike) or +6 melee (1d6+2 slashing, machete); Full Atk +6 melee (1d3+2 nonlethal, unarmed strike), or +6 melee (1d6+2 slashing, machete), or +6 ranged (2d6, Colt Double Eagle), or +6 ranged (1d8+2 piercing, compound bow); FS 5 ft. by 5 ft.; Reach 5 ft.; AL chaotic; SV Fort +5, Ref +4, Will +6; AP 3; Rep +2; Str 14, Dex 15, Con 12, Int 8, Wis 14, Cha 10.

Occupation: Rural (bonus class skills: Handle Animal, Survival)

Skills: Handle Animal +10, Hide +11, Listen +4, Move Silently +11, Navigate +5, Ride +4, Spot +8, Survival +12.

Feats: Alertness, Animal Affinity, Archaic Weapons Proficiency, Combat Reflexes, Guide, Personal Firearms Proficiency, Simple Weapons Proficiency, Stealthy, Track.

Talents (Fast Hero): Evasion, Uncanny Dodge 1.

Abilities (Wildlord): Animal Empathy, Animal Companion.

Possessions: Colt Double Eagle (10mm autoloader), 50 rounds of 10mm ammunition, compound bow, 50 arrows, air rifle, assorted tranquilizer darts, machete, survival knife, urban and jungle camouflage fatigues, mesh vest, assorted survival gear, and personal possessions.

Joan Salk considers herself to be a specialist in animal acquisition, and rightfully so. She's tracked down and captured all manner of beasts, some of which most people can't see for what they really are. The normal creatures are either provided to zoos or are released back into the wild. Joan has yet to find a good market for the creatures of Shadow, however, since few people believe they exist even after being shown one. She has heard rumors of [a man who might pay well for them](#), but she's also heard he might be too caught up in his own machismo to buy then from a "girl." Thus, she tends to let them go as well. For her the thrill is in the hunt and capture, not the kill, but she is not above taking creatures out permanently if she feels it is necessary.

Joan was surprised to discover she could see the more bizarre creatures when everyone else seemed to think they were just normal beasts, but quickly accepted her ability as a tool. She doesn't know why or how she came to have it, and she doesn't really care. The same goes for her connection to her animal companions. When she does ask a creature to travel with her for a time she chooses something that won't be too out of place, and a hunter if she can. She particularly enjoys the company of eagles.

Like her take on other strange things, Joan takes the existence of the portal in stride. She loves the chance to travel and hunt through the jungle enough to agree to act as baby-sitter for a bunch of city slickers for part of the time she is there. That and she is well paid for the service. On the days that the portal is scheduled to open, Joan waits in the Garden watching for the event. When the portal does open she spends as much time as possible on the jungle side, usually coming back through only a few minutes before it closes. She did enjoy the one time she spent the 70 days on the jungle side but has yet to make doing so a habit.

Occupation

Zoological

Anyone who works closely with animals fits within this category. This includes veterinarians, zookeepers, trainers, and animal handlers.

- **Prerequisite:** Age 18+
- **Skills:** Choose three of the following skills as permanent class skills. If a skill you select is already a class skill, you receive a +1 competence bonus on checks using that skill.
 - Craft (pharmaceutical), Handle Animal, Intimidate, Knowledge (earth and life sciences), Knowledge (physical sciences), Research, Ride, Search, Spot, Treat Injury.

Adventure Seeds

- Something has been disturbing the zoo animals at night but the staff's attempts to discover the source have been unsuccessful. Also, an epidemic of a weakening illness has been spreading through the animal population. A very important party for the zoo's benefactors is coming up soon and will be held in the Garden, with a private tour of the zoo being part of the festivities. It is imperative that these problems be taken care of before then.
 - The cause of the trouble is a feral haunt of a jaguar that recently died at the zoo under suspicious circumstances. When it wanders around at night it is upsetting the other animals and its effect on its hosts is creating the "epidemic."
- A small, wounded monkey was dropped off at the zoo by County Animal Control after someone found it in their garage. Christie Gram has been nursing it back to health and would like to see it returned to its natural habitat if possible since it didn't come from the zoo. She is having difficulty determining just what kind of monkey it is and where it originally came from, however.
 - The "monkey" is a cololuna in its docile stage. It may have originally been wounded in a battle with the heroes or perhaps it was hurt by something or someone else. Christie will do whatever she can to protect the monkey from anyone trying to hurt or capture it.
- The group that went through the portal on safari should have been back almost seven hours ago, but there is still no sign of them. Someone needs to go through and make sure everyone gets back before it closes, trapping them on the other side. There are 24 hours left before that happens.
- An individual who took a safari in the past is planning to smuggle something in through the portal when next it opens. Since he is only aware of the portal being open during the safaris he has associates who will be in place on the jungle side when the time is right. He will be on the safari as well, so as to have a reason to be on location.
 - Given the effort involved, the smuggled items need to be of great worth. Some possibilities are magical items or ingredients, drugs, military-grade weaponry, people, or beings of Shadow.

Creature Cast

Feral Haunt

A feral haunt is a spirit that possesses only animal hosts. Each night it leaves its current host, taking some of the creature's life force with it. When seen outside of a host a feral haunt appears as a semi-translucent version of its original self. As daylight approaches it seeks out a new host (which can be the one it just left if necessary), merges with it, and takes control of its body. As is the case with most undead, animals are unnerved by the presence of a feral haunt. It therefore tends to target sleeping creatures as hosts or to sneak up on its chosen host by sliding through solid objects and coming up behind it.

Feral haunts have all of the traits of a possessing spirit with the differences that they are not invisible, that they cannot travel through glass, that they can only attempt to possess animals, and that they cause a temporary loss of 1d4 Con to their host when they leave it.

Feral Haunt: CR 4; Medium undead; HD 4d12; hp 26; Mas -; Init +8; Spd 30 ft.; Defense 15, touch 15, flat-footed 11 (+4 Dex, +1 deflection); BAB +2; Grap -; Atk +6 melee touch (1d6, corrupting touch); Full Atk +6 melee touch (1d6, corrupting touch); FS 5 ft. by 5 ft.; Reach 5 ft.; SQ undead, incorporeal, corrupting touch, possession (DC 11), rejuvenation, +4 turn resistance, imprisonment, darkvision 60 ft.; AL none; SV Fort +1, Ref +5, Will +2; AP 0; Rep +0; Str -, Dex 18, Con -, Int 2, Wis 12, Cha 4.

Skills: Hide +12, Listen +9, Search +4, Spot +9.

Feats: Improved Initiative

Advancement: 4-7 HD (Medium); 8-11 HD (Large).

Cololuna

When in its docile state a cololuna appears to be a small arboreal monkey, albeit a very ugly one with row of tiny bone-spurs down its spine. On the night of a new moon it shifts to its aggressive state, bulking up tremendously and entering a blood-thirsty rage that drives it to kill and consume anything it can bring down. When in this form the

cololuna is roughly the size of an ape, standing nearly eight feet tall and weighing about 600 pounds. It has long, nasty claws and incredibly sharp teeth, and the bone-spurs on its back grow into thick, curved spines.

For a cololuna in the docile state, use stats for small monkey. For a cololuna in the aggressive state, use stats for an ape.

Map

Map of Reed Park Zoo

G. The Garden: See map insert.

1. **Tigers**
2. **Asian bears**
3. **African grasslands:** This exhibit includes cranes, storks, antelope, zebras, and ostriches.
4. **Tortoises**
5. **Macaques**
6. **Polar bears**
7. **Information / Education areas:** A variety of zoo displays and children's activities are located in these areas. Zoo docents are often available to answer questions and may have an animal out for people to meet.
8. **Rest rooms**
9. **Flamingos**
10. **Llamas and assorted water fowl**
11. **Veterinary building:** Veterinary offices, a surgery room, a food preparation area, and animal pens can be found in this building.
12. **Zoo offices**
13. **Service entrance / Maintenance buildings:** The buildings immediately north and south of the service entrance are used by the maintenance crews as offices and storage buildings.

32. **Monkeys**
33. **Zoo exit**

Higher Magic Version

Reed Park Zoo was designed with a low-magic setting in mind but it can be turned into a higher magic one. Some changes that could be incorporated are:

- One section of the zoo is used to display strange and magical animals not of this world. Powerful magics allow visitors to see the creatures for what they really are.
- Thanks to spells allowing comprehension, zoo visitors can get the chance to speak directly to the animals.
- Shapechanging magics are used to give people the ability to see what it is like to live in the zoo as an animal.
- Spells that charm and hold animals allow visitors to see normally very dangerous animals up close and personal, petting zoo style.
- There is more than one portal. Either the arch has multiple destinations to choose from (if properly adjusted) or there are multiple arches in the Garden. Exit locations should have enough wildlife near them to power up that end of the portal as well. Portals that are unable to charge sufficiently at both ends will not open.

Pyramid Review

Torches & Pitchforks

Published by [Green Ronin Publishing](#)

Concept by Adam Conus

Designed by Luke Matthews

Developed by Adam Conus & Luke Matthews

Illustrated by Rich Werner

200 cards (108 Mob, 30 Townsfolk, 60 Monster, two reference) plus rules (requires one six-sided die, not included); \$24.95

Night falls, and the moon rises. A thick fog billows across the glen. As you and your fellow townspeople step gingerly into the mist, a raspy growl reaches your ears. It's Vlad the Inhaler, one of the asthmatic undead, and the sound makes it easier for you to bury a stake in his chest. That's unlife in Green Ronin Publishing's *Torches & Pitchforks*.

The object of this swollen-tongue-in-decaying-cheek card game is to fend off the monsters attacking your tiny hamlet -- but when the sun rises you'd rather the town remember you as the man of the hour, so you want to be the first villager to reach 30 points.

Each player (two to five of them) gets six Townsfolk cards. Each one of these is a personality from your burg, ready and willing to lend a hand. (How much help you can expect from the likes of Luke the Inconsiderate Ass and Howard the Village Idiot is questionable, but they're all you've got.) For your turn you get a hand of five Mob cards. This deck contains everything the effective monster hunter needs for a night of supernatural tail-kicking:

Enhancement cards will give you a leg up in your fight. The first kind of Enhancement is Weapons, most of which, in true cinematic style, are various farm implements like cudgels, shovels, and the eponymous pitchforks and torches. Fancier items include pistols and the exotic boar spear. The other Enhancements are Leader cards. A leader is a slightly smarter townspeople that attaches himself to your band, and they usually have a special ability to make your life easier. The Occult Librarian increases your hand size to six, for example, while the Night Watch lets you draw two Monster cards and pick the one you'd like to deal with.

The rest of the Mob cards are Action and Defense cards. Action cards, as in most card games, are played as you please to alter the play of the game. You can make a monster easier to kill, or give an opponent's monster a sudden boost of power. You can look at another player's hand (or cancel the card they were going to use to ruin your evening); steal a card from them; alter the mob's effectiveness up or down; or add or remove weapons from play. Defense cards provide protection against monsters. Some are generic, allowing you to slip past any monster whose abilities fall into the range listed on the Defense card, while others are geared toward specific monsters. The Antacid will target the Glob if he pops out of the Monsters deck at you, and the Harpoon Squad will protect you from the Creature from the Tide Flats.

Once you've got a hand of cards, it's go time. The player flips the top card in the Monsters deck. If it's an Event, players play out its effects. It may target one person or it may affect everyone at the table. It may force you to lose your Leader card, or your weapons, or your highest-scoring monster to date. Many Events seem to affect your hand --

players have to shuffle what they have and divvy the cards up again, or switch hands with others.

If it's not an Event, that means it's a monster and you're going to have to beat the sap out of each other. Each creature featured on the cards has two stats, Power and Kill. Power is the number you have to beat to defeat the beastie. Each Townsfolk card adds +1 to your total. You start with six Townsfolk, so if you want to take out more than Giant Rats, you're going to have to start stocking up on shovels and rakes and implements of destruction. If, through Action cards and Enhancements, your band of poorly organized warriors manages to destroy the fiend, you get to add them to your Score Pile. The Power you had to beat now adds to your point total.

Of course, sometimes the unthinkable happens and a group of untrained, sleepy-eyed villagers armed with farm equipment are no match for a Killer Clown. The monster's Kill number is the number of Townsfolk killed in the battle. You flip that many Townsfolk cards face down, and the monster wanders off to the Moor. If you flip a monster and find yourself face-to-muzzle with something you know you can't beat, you can try to flee.

To flee, roll a six-sided die (not included). The result is the number of Mob cards you have to discard from your hand. Once you do that, the Monster heads for the Moor. If you don't have enough cards to discard, you don't have to discard any -- but now you must fight the beast and take your lumps. Once done eating your friends, it also joins its friends on the Moor.

The Moor is a face-down discard pile of Monster cards in the middle of the playing surface. All the undefeated critters end up here. If you didn't get to attack something during the Attack! phase (usually because you turned over an Event card or fled), you can fly in the face of common sense like so many movie heroes do and go looking for something to kick around. During this Hunt! phase, you shuffle the Moor deck, pick a card at random, and let the fur fly -- only this time flight isn't an option (hey, you asked for it).

Having dispatched another ghoul to your Score Pile (or been sent home with your tail between your legs), you can Recoup. Here you can play new Defenses and Enhancements, and you may flip one of your dead Townsfolk cards face up again (there's always another eager soul ready to join up). When you've finished outfitting the troops for next turn's bloodbath, discard any Mob cards you find displeasing and pass play to the left. This continues until someone amasses 30 points.

Torches & Pitchforks is easy to learn and quick to play, though it is another of those games that can go either way -- someone may win in short order, or the cards may fly fast and furious, hampering anyone's ability to reach the goal. Successes and failures even out nicely; you won't get constantly beaten down by superior forces, nor will you get bored from easy rewards. Clever mechanics spice things up: If your villagers die at the hands of a werewolf, you go through the Monsters deck and get more werewolf cards to add to the Moor. It's a good bit of fun, and there are little strategies that aren't immediately obvious to anyone who hasn't played a few rounds (though having some of them spelled out might also avoid some rules-lawyering). The Defense cards that send a monster off to the Moor instead of the Score Pile need not be placed on the user's own forces . . .

The cards have a tendency to sprawl in no time. There's a Monster deck, Mob deck, a discard pile for both, the Moor, and six Townsfolk per player. Each of these folks will probably get a Weapon card, and then there are Defenses . . . you need a lot of space for even a two-player game. A bigger hindrance to play is trying to read the cards -- the descriptive text is small, and thick to boot (the font listing the cards as Weapons, Leaders, etc. is smaller still). But the greatest tragedy is that the cards aren't in glorious color; maybe they were going for that black and white retro look. Rich Werner's comical cartoon illustrations scream for fancy treatment, especially given the level of loving care that went into the cards, and the basic black only adds to the difficulty of reading the cards (but probably also keeps the price down).

Green Ronin's atypical foray into card games may be a mixed bag, but it's got a quirky sense of humor born of an on-target grasp of its source material. In short, fire bad, ***Torches & Pitchforks*** good.

--Andy Vetromile

Pyramid Review

Sauron Expansion (for The Lord of the Rings Boardgame)

Published by [Fantasy Flight Games](#)

Designed by Reiner Knizia

Illustrated by John Howe

\$24.95

A postulate, humbly submitted:

There are two types of gamers in this world: those who love the *Lord of the Rings* boardgame and those who hate it. (Never played it? Never heard of it? That's okay -- you still love or hate it on a theoretical level. You just don't know it yet.) All right, maybe nothing is so unambiguously polarizing, but if anything is, it's probably as unconventional, unprecedented, and unique as Fantasy Flight's purely cooperative boardgame based on Tolkein's magnum opus. The *Sauron* expansion for *The Lord of the Rings* will likely be just as polarizing for the boardgaming audience, but not in the way one might expect. The *Sauron* expansion makes a cooperative boardgame competitive, scripted events more unpredictable, and a friendly (though challenging) experience doubly harrowing.

To start with, though, there are probably a few things everyone can agree on about the *Sauron* expansion. Like the first expansion for *The Lord of the Rings* -- called *Friends & Foes* -- it is ingeniously integrated into a core game that, on its own, is carefully crafted, finely tuned, and strikingly elegant. The central mechanic of the expansion is this: there is an added player who, instead of taking the role of one of five Hobbits, plays Sauron himself, the great enemy that in the basic game is controlled by scripted movements and a handful of random events. When the game's die would normally be rolled by a Hobbit (signified on the board and certain cards by a black square), the Sauron player takes a turn in the form of card plays from two special decks of cards, called the "Sauron" deck -- filled with dark consequences mirroring those often suffered from the basic game's die rolls -- and the less numerous "Nazgûl" cards -- ferocious special effect cards that, played at the right time, can quash a Fellowship's hope of reaching Mount Doom. It's worth noting that because *Friends & Foes* uses the same innovative "swap-the-mechanic" system, you can play *The Lord of the Rings* with both expansions simultaneously.

Another quality of the *Sauron* expansion everyone will recognize is the continued excellence in production values, from the evocative illustrations by John Howe which adorn every card, to the new felt bag that can be used for drawing the basic game's Event Tiles, to the sculpted Black Rider pawn which, almost heretically, rivals the red-eyed Sauron marker for fearsomeness. The Black Rider is a wholly new feature for the game. Controlled by the use of Sauron cards, the Black Rider starts each of the four Scenario Boards in Mordor (the fifteenth space of the Corruption Track upon which Sauron and the Hobbits slowly converge as they move in opposite directions). In addition to managing his other methods of bringing doom to the Fellowship, Sauron can try to move the Black Rider from its starting space to the current location of the Ring-Bearer. It's a trip that, inevitably, gets shorter and shorter as the game progresses. Not only do bad things happen when the Black Rider encounters the Ring-Bearer (Sauron hits him with a Sauron card and gets to draw a new Nazgûl card) but if the Rider can return to Mordor before the Scenario Board is completed by the Fellowship, that's it -- game over, Sauron wins.

You'd have to be a strange kind of gamer not to appreciate the craftsmanship that went into the *Sauron* expansion's game design and production, but that doesn't make *The Lord of the Rings* any less divisive because your ultimate opinion of the expansion will depend on your reaction to the original game. Were you perplexed by the idea of a purely cooperative game where the "enemy" was the board and most of gameplay was near-endless chatting about what to do

next? If so, then Sauron turns the tables dramatically. Now the enemy is intelligent and he hears your plans as you make them. He can respond to your good fortune and smart decisions with fortune and decisions of his own. No longer is the outcome of the game either happy-joy-joy for all involved or a kind of depressing fruitlessness; now, at least, there's a winner when the Fellowship loses. You don't feel quite as much like you were beaten by German game designer Reiner Knizia, who, after all, couldn't even be bothered to show up in person.

Did you cringe at the heavily scripted nature of the basic game, where (quite unlike the Hobbits of the novels) you knew when Shelob would attack and could do something to keep it from ever happening? Well, Sauron steals much of the control bestowed by foresight and tosses it in the Dead Marshes. You may know a great strategy for blazing through Helm's Deep before the Orcs storm the gates, but if Sauron decides to put the pressure on with his Black Rider, Helm's Deep may look hopeless once again. The Sauron expansion also adds a couple new random factors in the form of player incentives -- new feature cards like Gwaihir and the Star of Elendil that are shuffled and placed on the secondary Activity Tracks of each Scenario Board. Because these compensate for some of Sauron's new power, they tempt the Fellowship to spend more time on the secondary tracks, which don't get them on to the next scenario and closer to Mount Doom. And being random, they throw a kink in experienced players' well-honed strategies that take advantage of the scripted sameness of the basic game.

Perhaps you thought ***The Lord of the Rings*** was just too difficult? A dreadful turn of luck can turn fun for five into a retrospectively wasted hour and a half. For players of this persuasion, the ***Sauron*** expansion includes two special one-use cards, "The One Ring" and "A Watchful Peace." These cards are like tuning knobs on the game's difficulty level since the rules allow them to be added to the game at the players' will, whether the Sauron expansion is being used or not. The One Ring lets the Fellowship instantaneously determine a new Ring-Bearer, instead of having to wait until the end of a Scenario Board. It gets the Ring out of harm's way when used intelligently. A Watchful Peace is the only thing that can ever move Sauron backwards on the Corruption Track. For all intents and purposes, it's the "we meant to start with Sauron on 15 instead of 12" card. Regardless of your opinions about the original difficulty of the game, these cards -- once you'd tested them out to measure their impact -- are a welcome addition for when you are showing the game to new or younger players.

So, what if you liked the ***Lord of the Rings*** boardgame? What if you relished the rare experience of a truly cooperative game? Despite its careful design and lush appearance, the ***Sauron*** expansion might bring to ***The Lord of the Rings*** everything you didn't miss from those other, more conventional games. Letting a friend take over a role that used to resemble a force of nature more than a foe profoundly affects the atmosphere around the table, to say nothing of the internal conflict that the Sauron player feels if he happens to be a connoisseur of the cooperative gameplay of the basic game. Sauron is the ultimate bully and always fights from a position of vast advantage. Watching the Hobbits cobble together an admirable strategy knowing that your next Sauron card will tear it to pieces is, frankly, heartbreaking if you're an empathetic type (especially one who has himself traveled many a Scenario Board in those hairy feet).

If you particularly enjoyed the careful planning, hedging, and hoping of the basic game, you also may feel that something has been lost by the addition of the ***Sauron*** expansion. While luck is always a big part of the game, the odds that ruled the random elements in the unexpanded version always seemed generally measurable. With Sauron's hidden hand of cards, all bets are off. (It is significant, I should note here, that the dreaded Nazgûl cards in Sauron's hand are displayed face up for all to see. Sauron cards are kept hidden.) Perhaps after a lot of experience facing Sauron across multiple games, players might better comprehend his capabilities and be able to predict them with some efficacy, but even then, a Fellowship must always assume a far more dynamic landscape with Sauron than they will ever see in the basic game.

The long and the short of it is this: the ***Sauron*** expansion for ***The Lord of the Rings*** has many of the qualities of its foundational game -- great art, inspiring components, clever mechanics, and subtle strategies. Yet, perhaps ironically, it essentially undermines, at nearly every turn, the underpinning premise of the original. It's that basic premise that you either love or hate (yes, even those of you still muttering, "Lord of the *what?* Reiner *who?*"). If you wanted to love ***The Lord of the Rings*** but just couldn't grasp the appeal of a non-competitive boardgame, the ***Sauron*** expansion may be just what Gandalf ordered. If Reiner Knizia's grand experiment was the best thing to happen to your gaming group since cheese curls, you may not find yourself setting an extra chair for the Dark One at the gaming table very often. And, hey, who can blame you.

Pyramid Review

The Collectors -- the burning house

Published by [Rogue Publishing](#)

Written by Thomas MacKay

Illustrated by Eric Lofgren with Todd Downing

84-page perfect bound book; \$17.95

At one time or another, we have all held jobs that we consider to be Hell, or at least an aspect of it. So imagine if your job really is Hell? This is the premise for *The Collectors -- the burning house*, one part source book and campaign setting, three parts scenario for the *Fudge* system. From Rogue Publishing, who have released a number of other *Fudge* sourcebooks as well as a pair of similarly themed card games in the form of *Den of Thieves* and *Rival Den of Thieves*. In *The Collectors -- the burning house*, the players take the roles of demons with a job: collecting souls that are owed to Him . . . and he is the Master, the Chair, the Executive, or the Home Office. Since the business of calling in contracts made decades or even centuries before has got bigger than any one minion can cope with, Home Office sends out pairs of Collectors to do the job. Assigned Contracts by a Receiving Officer, the Collectors must fulfil this Contract and return their Client to Processing. Of course, no Collector in his right mind likes to give any thought as to what happen once a Client has been Processed . . .

Every Collector gets a suit, a set of wheels for the pair -- highly durable, never needs refueling and built like a Volvo whatever the shape (even if that of an ice-cream van!), a Contract pertaining to the Client, and a Locator to help find said Client. This Locator can take almost any form, but always provides clues to the Client's location. As demons, Collectors are formally supported by fellow Collectors through the Network and informally supported through the Union. They are nearly unkillable, and possess a supernatural biology, wings, a limited amount of wealth and -- of course -- are vulnerable to the Sacred. They are also assimilated into human society, and are able to operate within it as easily as you or I.

Yet while this degree of assimilation and the very Skin or human form they inhabit is false, to a degree it is also more important to a Collector than that of being a demon. This comes from a demon not actually being able to remember what Head Office or Hell is actually like, except in snatches and flashes. Yet these are enough to ensure that no Collector will ever, never want to go back.

Which of course, sets up a dilemma and a dichotomy in each Collector. In order to keep from being recalled to Head Office, they have to fill their Contracts as they are assigned, but suffer the consequences for doing so. This manifests as their Follow -- also known as their Baggage -- which is not just the recalled flashes of Hell, but also the memories of their past (probably in Hell itself) and of the souls they have returned to Processing. Their Follow is a method by which a GM can slip hints to the players as to the pasts of the Collectors and even allusions to their current Contract. Not every Collector can withstand the strain of their job and their Follow, and these break their Contract and become Watchers, ever hiding from Head Office. The Head Office, in return, is very interested in these rogue demons and send out "Enim" -- demons that lack a Collector's Skin and are literally pieces of Hell -- to capture any Watcher they locate. In addition Collectors may face competition when pursuing a Contract in the form of Counselors, their Angelic counterparts.

The character generation of Collectors follows the normal pattern for the *Fudge* system -- purchase three levels of Attributes, 40 levels of Skills and five of Gifts, with more points available should a player take up to three Faults for their Collector. Gifts can come from the core *Fudge* rules, as well as the new ones listed in *The Collectors -- the*

burning house. These are in addition to a Collector's basic default Gifts, and need to be purchased as normal. They include the ability to mask worn or carried items with the signature of their flesh, so that with "All Things Are My Flesh," a gun would not trigger a metal detector and so on. With "Dragon's Talons," a Collector can manifest iron hard claws, and completely hide their wings, even when naked with "Hidden Wings." Other Gifts enhance roleplaying, such as "Wicked Grandeur," that makes a Collector enticing to anyone attracted to a certain kind of bad people.

Further, a Collector can have an affinity with the powers of Hell and be able to physically express them. Each of these three-point Gifts includes a range of spell-like abilities that each needs to be purchased in a manner similar to that of skills. For each affinity, there is one ability given that also requires the expenditure of Fudge Points to fuel. The six given provide affinities with the hideous fires of Hell, with human appetites for both food and sex, with the inescapable labyrinths of Hell, with hates and grudges, with the filling of empty spaces with the unsettling and the insubstantial, and with enhancing the flaws of others and snuffing out human creativity.

The guide to creating Collector characters is backed up with quick and dirty guide to the **Fudge** system, given in the appendix, "Bite Sized Fudge." This is supported with an extremely utilitarian character sheet that adds only function to the game. In general, **The Collectors -- the burning house** is decently written, with only the occasional piece of odd phrasing. Eric Lofgren's artwork is sparse and perhaps not as well handled as it could have been, being a little pixellated throughout. If the book is let down by any one factor, it is the lack of an index, and of two ready-to-play Collectors. Their inclusion would have served as worked up samples of the character generation and inspiration for players wanting to create their own. Even so, several character concepts for creating a pair of Collectors are discussed, both in the campaign and setting section, further in the scenario itself.

[SPOILER ALERT!]

If **The Collectors** is one part campaign and background setting, then it is three parts scenario with **the burning house**. This opens with the Collectors awakening in a big black S.U.V. with a body in the back seat, which turns out to be their Locator -- the means by which they will find their Contract. By following the clues found on this corpse, the Collectors will follow a trail through the seamy side of New Orleans nightlife and up into its world of the *nouveau riche*. Players that enjoy taking the role of detectives will certainly enjoy this process, as all of the clues are nicely detailed and well handled. The difficulty for the Collectors comes when they locate the Client, as not only is he expecting them, he also has a deal for them. Instead of his own, he can offer Head Office another three souls -- quite the coup for the Collectors! It becomes even more complicated when it becomes apparent that the Client is no longer in possession of his own soul, and that the new "owner" is an innocent that the other side is very keen to protect and ensure does not get processed . . .

[END SPOILER ALERT]

As a potential campaign setting, **The Collectors -- the burning house** does a very good job of establishing everything a GM might want. Equally, it works just as well as a one-off scenario that should provide two good solid sessions of roleplaying -- perhaps more if the players like to roleplay. The given guide on how to use the effects of the Follow to enhance the scenario particularly underpins this, graded upon the depth of roleplaying the players prefer and tied into the several suggested Collector concepts. The seamier side of the scenario (several of the characters being homosexual) may be distasteful to some, but it is in keeping with the mature nature of the campaign setting. Though potential sequels are discussed, the GM will find the author of **the burning house** has set them a challenge if they are to match its standards. Whether as a one-off adventure or as the basis for a campaign, **The Collectors -- the burning house** presents an interesting and challenging roleplaying experience for a pair of players, and further, would work just as well were the GM to run it under either version of Steve Jackson Games' **In Nomine RPG** or **Demon: The Fallen** from White Wolf Studios. And the **Fudge** system would allow easy conversion to either set of rules.

--Matthew Pook

House of Clio's Nightmares

*"He thought: 'Somewhere there's thunder,' as he strove
To shake off dread; he dared not look behind him,
But stood, the sweat of horror on his face.
He blunder'd down a path, trampling on thistles,
In sudden race to leave the ghostly trees.
And: 'Soon I'll be in open fields,' he thought,
And half remembered starlight on the meadows . . ."
-- Siegfried Sassoon, "Haunted"*

Every Halloween, Clio herself races to leave the ghostly trees. She hopes for open fields, but blunders down wrong paths, where history takes horrific turns. She comes to fields unknown, worlds (in this case) where the dark magic of location becomes paramount. In places like these, under the lowering skies of dread and thunder, she sees starlight on the meadows -- but feels the sweat of horror on her face. And then -- hopefully -- she wakes up . . .

*"I said: 'O Circe, who shall steer my course
To Pluto's kingdom? Never ship had force
To make that voyage.' . . .
'The fresh North Wind shall waft ye through the seas.
But, having crossed the Ocean, you shall see
A shadowed shore, that to Persephone
Puts up a consecrated wood, where grows
Tall firs, and willows that their fruits soon loose.
Cast anchor in the gulfs, and go alone
To Pluto's dark house, there, to Acheron."
-- Homer, *Odyssey*, X:620-631*

Two and a half millennia after Odysseus, another expedition crossed the Ocean, wafted by the North Wind into an unmapped shore. Columbus was searching for the Indies -- but he discovered Hades. Just as the Greeks (and Gauls, and Irish, and Romans, and Egyptians) had believed, the land of the dead lay across the Ocean to the West. The "new" continents held the souls of all the pagan dead (and, to Their Most Catholic Majesties, at any rate) an uncomfortable proportion of the Christian dead, as well. The islands Columbus had mapped were home to squabbling remnants and refugees -- the soul-subjects of Sicilian tyrants, Viking thanes, Carthaginian grandees -- driven out of the Hegemony of Alexander in the northern continent, and rebuffed by the Saturnian Empire under Vespasian along the southern shore. Although the battle was hard (especially against an enemy that can't be permanently killed), Cortez and Torquemada managed to conquer Ramesses' kingdom in the middle of the continent, and sack its gilded pyramids. The Inquisition's enchantments enslave the dead to mine gold and silver from the mountains, even as the sound of church bells protects its borders against Attila to the north and Saladin in the south. Conquistadors and freebooters seek new lands to exorcise, whether the legendary realm of the Great Khan in Calyferne, the Lost Island of King Arthur, or the New Bagdad rising over the Missouri's banks; mystics hope to find dead souls who knew Jesus or Moses; necromancers and adventurers seek the dead for knowledge, secrets, and power.

PCs in this **GURPS Swashbucklers-Riverworld-Undead** crossover can be Spanish conquistadors looting the treasure-houses of Cleopatra or English pirates sailing with Leif Ericsson or Themistocles. The exact flavor of undead PCs will be up to the GM; perhaps the more evil the soul was in life, the more rotten or disincorporate he is in death. Undead heroes might be part of a band of Tartarean Templars, questing to save Christian souls in the lands of the pagan dead, or a ragtag band from all across history (before 1500, anyway) trying to carve out kingdoms or just survive the onslaught of the living.

"[W]e came in sight of a noble pile of building, which . . . I conceived . . . to be the Lord Mayor's Palace, for I could not imagine so stately a structure could be designed for any quality inferior. He smiled at my innocent conjecture, and

informed me this was Bedlam, an hospital for mad folks. 'In truth,' said I, 'I think they were mad that built so costly a College for such a crack-brain society . . . It was a mad age when this was raised, and no doubt the chief of the City were in a great danger of losing their senses . . . ' 'You must consider,' says my friend, 'this stands upon the same foundation as the Monument, and the fortunes of a great many poor wretches lie buried in this ostentatious piece of vanity; and this, like the other, is but a monument of the City's shame and dishonour, instead of its glory.'"
-- Ned Ward, *The London Spy* (1703)

In 1674, Robert Hooke saw a strange, operatic adaptation of *The Tempest*. Shortly thereafter, he began his design for the Bethlehem Hospital for the insane -- Bedlam -- just outside the London Wall. While building Bedlam, Hooke was also laying out the new streets of London after the Fire, gazing through lenses only he could comprehend, and drinking pure mercury. Is it any wonder that the geometries of his new hospital opened not only onto the green and pleasant Moorfields, but onto dimensions and planes that shimmered and glistened at the edge of his vision? The people of London saw their new hospital and exulted at its finery; they danced and capered before the statues of Madness that somehow appeared at its gates, they painted its angles and spirals on walls and doorways from Kensington to Deptford, adding bricks and railings here and there, always in the corner of their vision. Slowly, all of London became Bedlam, a mad vertex of eldritch planes -- the King wore a yellow mask in Whitehall, and Isaac Newton sang to angels in St. Paul's bulbous domes. But the Royal Society was not selfish -- no, they promulgate the new architectures, the blasphemous calculus that opens up fresh angles and perspectives, the threnodies of knowledge that seep down from the ever-closer stars. They send these gravid truths in letters, written in ever-more frenzied scrawls, all across Europe. Soon, other savants will return from London, having Seen. Soon, other kings will hear the Call. Soon, other Fires will Burn . . .

This **GURPS Swashbucklers-Horror** setting is one of slow disintegration; London (and probably all of England) has fallen to the Outer Ones, but stodgy Europe remains immune -- for now. As in any good cosmic horror game, the PCs (who may be mathematickall savants, stern Puritan divines, alchemists, architects, or mercenaries) must seek to comprehend the new knowledge in order to combat it. From intrigue in court and church to night patrols on haunted coasts to harrowing expeditions into Great Bedlam, no risk is too great to keep the things from Robert Hooke's hallucinatory visions from emerging into the light of a new Europe -- or a New England.

"You have bought a fine land, Brother, but a cloud hangs over it, and you will find it a dark and bloody ground."
-- Chief Dragging Canoe to Richard Henderson of the Transylvania Company, March 16, 1775

Although it had killed his son James, Daniel Boone was determined to colonize Transylvania -- the land washed by the Kentucky and Tennessee Rivers. Richard Henderson's Transylvania Company had bought the land from the Cherokee Indians in March of 1775 at the Sycamore Shoals Treaty conference. The Continental Congress and His Majesty's Government both declined to recognize the treaty; Colonel George Washington writing in his diary that there was "something in that affair which I neither understand nor like." Settlers there "lived without law or gospel," and listened to the music of the wolves. The Cherokee knew it as the land of the Shawano, a fearsome tribe half man, half sorcerer; but Dragging Canoe knew that it held the dark heart of Cherokee power, the Uktena, a mighty horned serpent who bore the Ulunsuti -- the bloody crystal -- in its brow. But Daniel Boone and the whites moved in; into the land of the raven mocker that devours the heart, and of Utlunta whose stone spear-fingers carve out the liver. They somehow placated Walasiyi, the giant froglike beast who eats mankind, and blinded Astildihyegi, whose eldritch glow moves over the mountains when the stars are right. Rumors drifting back over the Cumberland Gap hinted that they had come to some other agreement with Ulagu, whose insectile spawn hummed in the shadowy places in Transylvania's deep forests. Then a shot heard round the world was fired half a continent away, and everyone forgot about Transylvania . . .

Everything in the above paragraph is historical (or folkloric) fact. The alternate comes in the treatment you give it. It can be a standard (if dark) **GURPS Old West-Horror** game of brave pioneers fighting the monstrous nightmares of Cherokee legend, as well as the "sons of the Dragon," the Chickamauga who followed Dragging Canoe into war over the land. (Surely it's just a coincidence that that *other* Transylvania has its own "son of the Dragon," or as the locals there call it, *dracula* . . .) Or, it can be a creepier alternate history, in which the settlers come to terms with the darkness, and all the Gothic horror of the antebellum South from "land pirate" serial killers to brutal slave factories concentrate in the State of Transylvania. In this **GURPS Voodoo-Old West** sort of world, the Transylvanian regiments fight fiercely for the Confederacy, or Transylvanian senators conspire with necromancers to drain the blood of slaves

for vile alchemies in Washington. Or the flow of Western settlement might have left Transylvania behind, and those woods and mountains still rise wild in the center of a prosperous ***GURPS Atomic Horror*** USA, where shadows stretch back in time to Daniel Boone's bravery and Dragging Canoe's curse.

Dork Tower!

Dork Tower!

Designer's Notes: Spooks

by Jason D. Wittman

*Once, my love and I were meeting
For a night of trick-or-treating
When a storm arose and drove us
To an old house on the moor.
Through an open door a-fleeing,
What on earth should we be seeing
But all sorts of ghostly being.
Spiders crawled across the floor.
Bats and Spooks and Skeletons
And Goblins rose up by the score
In this old house on the moor . . .*

Halloween has always been one of my favorite holidays. Aside from the costumes and trick-or-treating, I've always liked ghost stories (in my other career as a fiction writer, I've even composed a few). The quiet suspense, the creaking floorboards, the flashes of lightning providing snapshots of things best left unseen-ghost stories contribute a lot to the atmosphere of Halloween. So it should come as no surprise that, as a game designer, I would want to create a game with the feel and atmosphere of a Halloween ghost story.

So what sort of game should it be? Well, since Halloween is a kid's holiday, I thought the game should be fun, the sort you would play at a Halloween party, so I decided on a card game. "Haunted Palace," as it was first called, started out as a trick-taking game, similar to Hearts, played with an ordinary deck of cards. The Hearts were the good ghosts, which you tried to collect, and the Spades were the evil ghosts, which you tried to avoid. And, because I thought a little gimmickry would spice the game up a little, I gave each Heart and Spade a card-specific rule, which would only take effect if that particular card was led to start a trick-things like, "All players give their hands to the player on their left," or "Take one Spade from your trick pile and put it in another player's trick pile." It looked good on paper, but you don't know if a game is good until you play it. Fortunately, I had a handful of gamer friends on hand, and in exchange for a few pizzas, they were gracious enough to playtest it.

*From the Spooks and Goblins fleeing,
In the dark we groped unseeing,
Running blindly for our lives
Across the creaking wooden floor.
My love screamed when one big Spider
Scuttled on the floor beside her,
Then leaned toward her neck to bite her
In this old house on the moor.
I watched helpless as she struggled
With the Spider on the floor
In this old house on the moor . . .*

Well, they liked the idea at first, but as time wore on, problems began to surface. Trouble was, the game was too similar to Hearts. Trick-taking games have been played for centuries, and it was hard to come up with something new in that field. The card-specific rules, which were supposed to spice the game up, instead slowed it down a lot. That, and I couldn't come up with a point system that worked right . . . what it all boiled down to is that the game did not have the atmosphere of Halloween. One of the playtesters suggested using a five-suited deck (which certainly sounded like a good idea, since four-suited decks have been done ad nauseam), so we jury-rigged one by cannibalizing two ordinary decks with the help of a magic marker and tried it. But the game still didn't work out quite right.

So "Haunted Palace" was shelved -- for the time being.

*Trapped inside this mansion manic,
Both of us quite close to panic,
I espied a Cat that huddled
In a corner on the floor.
Seizing this feline, I threw it
At the Spider, though I knew it
Would be angry at me. (True, it
Could not be entitled more.)
Cat and Spider fell to fighting,
Leaving my love free once more.
She fled screaming through the door . . .*

The creative impulse is a weird thing. A lot of it is non-volitional: Ideas come to you more often when you're not trying to come up with them. It's almost as if the idea decides to show up in your mind. (I've heard other creative types say things along these lines, so no, I'm not crazy.)

Such was the case here. I was in bed, it was around midnight, when the idea finally came to me (see what I mean?) of how to improve this game. A lot of the more popular card games (especially those for kids) are of the get-rid-of-your-cards-first variety. (Trick-taking games, like Hearts, Spades, and Bridge, are more for adults, so that might have been where I was going wrong.) Since getting rid of your cards is often referred to as "going out," that would fit in nicely with the Halloween theme: all the players would be trapped in a haunted house and trying to escape. And that led to a great idea for the Ghost cards: I would add an element of danger to the game by assigning a penalty to any player who could not discard on a Ghost (of course, you would not have to discard on a Ghost if someone else hadn't already played one, which fits right in with those stories and films where the ghosts are only able to wreak havoc when some idiot lets them out).

This left the problem of the method of discard. I didn't want to make it too difficult to discard on a Ghost, but the easiest method of discard, matching the suit or the number of the card in play, was too common to be interesting (one popular card game, which is really just a glorified version of Crazy Eights, depends solely on this method of discard). But I couldn't think of any other method that would work well with this game mechanism.

And then another idea hit me: what if I used, not one discard method, but two? The above easy method would apply to the Ghost suits, and would carry a stiff penalty for inability to discard. The non-Ghost suits would be more difficult to play on, but if you couldn't discard, the turn would simply pass to the next player. I wanted to keep the idea of good and evil Ghosts, so I invented a different penalty for each of the two Ghost suits. And I also kept the idea of five suits, because of the novelty.

But when I sent this version to the playtesters, they said there was no need for five suits; the game played identically with four. So I was faced with a decision: either ditch the fifth suit (at the time called Stars), or invent yet a third method of discard for it. This was when I found a way to bring a little bit of trick-playing back into the game: anyone playing a Goblin (as the suit is now called) would start a trick-playing round, with the winner of the trick playing the next card.

The friends who playtested this version said they liked it. So I pitched it to Steve Jackson, and when he said, "Send it over, we'll playtest it," I sent him a jury-rigged 67-card deck, with five 13-card suits, plus two Jokers. Steve Jackson and Company did some tweaking-the deck was reduced to 56 cards, with only 11 cards per suit (the suits now being Spiders, Spooks, Goblins, Bones, and Bats) and one Joker (here called the Cat), plus the penalties for the inability to discard were modified-and we at last had the finished product before us.

I would like to take this opportunity to compliment Alex Fernandez for the artwork he did on Spooks. The images he put on each card, particularly the Cat, contribute much to the Halloween atmosphere of the game.

So I hope you enjoy Spooks, especially around Halloween. Think of it as a ghost story told through playing cards.

*My escape by Spooks impeded,
My dark doom I now conceded.
Then a hooded Spook approached me,
Seven feet in height or more.
Hood removed, dark hair cascaded
To the floorboards unabated.
And she said, "You now are fated
To stay here forevermore.
But it's not all screams and anguish.
Here, come through the kitchen door.
Would you care to have a S'more?"*

Grenada In The Age Of Sail

by Mark Gellis

The Island Of Grenada From Columbus To Napoleon

The island of Grenada lies at the southern end of the Windward Islands, the string of islands that mark the eastern edge of the Caribbean Sea. It is a small island, roughly oval in shape, 21 miles long and 12 miles wide. The island is volcanic in origin and its 133 square miles are mountainous. The highest peaks are more than 2,000 feet above sea level. The terrain includes rain forests at the middle altitudes, dry forests of scrub woodland as one moves closer to the coast, and mangrove in the coastal regions themselves. The climate is tropical, but regular trade winds usually keep the heat from being oppressive.

To the south lie Trinidad and Venezuela. Port of Spain is about 100 miles south of the island; Caracas is about 300 miles to the southwest. To the north lies the rest of the Windward Islands. St. Vincent is about 100 away, Martinique is about 200 away, and Guadeloupe is about 300 away. To the east is open ocean; Africa is more than 2,000 miles away.

The island was spotted by Columbus in 1498, but Europeans were not able to make any permanent settlement until more than a century later. The native Caribs ferociously resisted early attempts to colonize the island, driving off the English in 1609 and the French in 1638.

Around 1650, however, Jacques-Dyel du Parquet, the French governor of Martinique, established a settlement of about 200 men on Grenada. Aware of the threat posed by the Caribs, du Parquet gave his men a secret weapon: a prefabricated fort. J. David Zimmerman explains that the fort was probably "transported in sections just small enough to be floated ashore and rapidly manhandled into position" and adds that it was surrounded by "a palisade and a ditch"; the initial fort was soon replaced by larger and more permanent structures. This offered the settlers enough protection to establish their colony, and they set about growing crops like indigo and tobacco. Later, sugar plantations were established, and by the 18th century it was one of the most important crops on the island.

Originally, the Caribs had allowed the French to settle in return for trade goods like knives and glass beads, but within a year they had decided to force the Europeans to leave the island. They killed some of the settlers, but du Parquet organized an attack against the Caribs which left more than 100 of them dead, including about 40 who, when they realized they were unable to defeat the French or escape, leaped to their deaths from a cliff rather than surrender. Some remaining Caribs continued their fight against the French for years, but by the end of the 1650s the conquest of the island was effectively complete. The island would remain French territory for the next century, although in 1675 it was briefly occupied by Dutch privateers who had to be driven off by French warships. French domination of the island ended when the British occupied Grenada in 1762 and the French formally ceded it to England in 1763.

By this time, sugar had been an important crop on Grenada for decades. Sugar, being a labor-intensive crop, meant that the Europeans needed a large number of slaves for its cultivation. In the late 18th century, however, natural disasters had taken their toll on the sugar industry. In 1770, the island was beset by an infestation of ants which severely damaged the sugar crop. Then, in 1780, the island was hit by a hurricane, which again devastated the sugar industry on the island. In the early 1780s, Sir Joseph Banks, botanical advisor to George III, initiated the cultivation of nutmeg on the island. As it turned out, the island's volcanic soil was quite suitable for growing nutmeg. In addition, Grenada was much closer to England than the Dutch plantations of the East Indies. Nutmeg eventually became one of the island's most important crops.

The island also saw its share of military action during the late 18th century. In July 2, 1779, Count Charles-Henri d'Estaing sailed into view; Zimmerman tells us that he had 24 ships of the line and more than 1,300 troops. There were only about 150 British troops on the island. Although the Grenada Militia added another 400 men to their force, and another 200 men volunteered (or were simply drafted into service), the British were still seriously outnumbered. After four days of fighting, Grenada was once again in French hands. It would remain so until the island was returned to the

British in 1783 as part of the Treaty of Versailles.

In 1795, Grenada witnessed a full scale rebellion. Julian Fedon, a Catholic plantation owner of mixed ancestry, inspired by the French Revolution, led an uprising and quickly took control of most of the island, thanks in part to assistance from French-controlled Guadeloupe, which provided the rebels with arms and ammunition. Only the town of St. George's and Fort George remained under British control. It was not until 1796 that the British were able to quell the rebellion. General Sir Ralph Abercromby fielded a large force and crushed the insurgents, although some "brigands," as they were called, remained on the loose on the island for years afterwards.

No one knows what actually happened to Fedon. Some believe he drowned while trying to escape the island in a small boat, but it is possible that he somehow managed to escape; in fact, one report made to the Council of Grenada in 1814 claimed that he was living in Cuba. A GM could assume he had not only escaped but that by the turn of the century was working secretly to further Napoleon's ambitions in the Caribbean.

Swashbuckling Campaigns

There are a number of options for using Grenada as a locale in the 17th century. One could begin with the initial settlement of the island. French adventurers, hired by du Parquet, would have to survive the rigors of a tropical wilderness, manage their indigo or tobacco plantations, and fend off Carib attacks. Eventually, of course, there will be a full scale military campaign between the natives and the French, and the GM could start at this point if the players are not interested in running a plantation.

And there are pirates. One might reenact the historical attack by Dutch privateers in 1675; the Franco-Dutch war lasted from 1672 to 1678, so to keep things lively a GM might bend history a little and allow more than one such attack. In addition, genuine pirates might show up at any time during this period. These outlaws might attack the settlement, hoping to take the gold or other valuables of the plantation owners. Or, they might be looking for a safe harbor and offer the colonial governor a substantial bribe to look the other way while they make repairs, replenish stocks of food and fresh water, and so on. This should be a profitable situation for everyone involved, but if the pirate crew does not behave while they are on shore, things might get ugly; if the governor backs the pirates rather than his own people, the player characters might find themselves caught up in (or organizing) a rebellion.

Another aspect of the campaign could be exploration. This would not be so much a matter of scientific curiosity as seeing if there is anything valuable (not to mention the tactical advantage of having good maps). Grenada does not have any native species that are more valuable than the tobacco and indigo the settlers are already trying to grow, but the GM does not have to tell the players this.

It might seem that there would be much to explore on Grenada, but one needs to consider the situation. Grenada may appear to be a tiny island to persons living in our time (cycling around the island on modern roads only takes a few hours), but 100 square miles, especially when it consists of rugged terrain including mountains and dense forest, is a tremendous area to explore if one has to do it on foot, particularly if one does not have a complete map (or any map) of the area.

The real excitement for characters exploring the interior of the island will be the Caribs. In the early months of the 1650 settlement, the Caribs will not be hostile, but this will change, making any attempt at exploration risky. In fact, a good adventure could be built around having the players becoming the target of one of the initial Carib attacks as they explore the island; surviving and getting back to the fort to warn the rest of the settlement would be the main challenges of this particular scenario.

The Caribs

The Caribs originated in South America. By the time the Europeans had reached the New World, the Caribs had colonized some of the islands of the Caribbean, where they had seized the territory of the more peaceful Arawaks. According to Hughes, they were a well-built people with high cheekbones and almond-shaped eyes. Their weapons of

choice appear to have been war clubs, javelins, and bows with poisoned arrows.

Assuming that we are using **GURPS**, it is likely that most Caribs had some degree of skill in Fishing, Boating, Poisons, Survival (Island/Beach), Tracking, Stealth, Bow, Axe/Mace (for their war clubs), and Spear Throwing. The tribal leaders may have had Leadership, Tactics (Guerilla), and Bard. Some would have had Agronomy. Common Advantages would include Alertness and Fit; Disadvantages would include Sense of Duty (To tribe) [-10] and Intolerance (Anyone outside the tribe) [-10].

Most accounts claim the Caribs were cannibals, although there is some conflicting evidence on this issue. Assuming that they were cannibals, it may be treated as a combination of Odious Personal Habit (Cannibal) and either Social Stigma (Barbarian) when dealing with Europeans or Reputation (Cannibal) when dealing with other tribes. The exact value does not need to be calculated because the combination would be worth at least -20 points, giving the average Carib a total of at least 40 points of Disadvantages, the maximum allowed under **GURPS**.

One may presume that their weapons correspond to the javelin and short bow (pp. B206-207), and the knobbed club (p. LT107). (Many clubs are covered under Broadsword skill, but primitive war clubs are clearly an early form of the mace, and as such are covered under Axe/Mace skill.) The poison appears to have been some kind of tree sap and is reputed to have been quite deadly; it may be treated as a Type A venom doing 2D-1 damage per failed HT roll.

It should be noted that while most of the scenario ideas in this article assume European characters, and that a "Swashbucklers and Indians" campaign has a lot of potential, this is a sensitive issue for many people. The European settlement of the New World involved two of the greatest crimes ever committed in human history: the genocidal mass murder (and sometimes enslavement) of native peoples and the enslavement of Africans. Europeans were often -- although not always -- guilty of the worst kind of bigotry. The Caribs were brutal, but they were also defending their territory from invaders. GMs and players should balance their desire to portray characters in a historically realistic manner with sensitivity and good taste.

Campaigns In The Age Of Napoleon

Grenada is in British hands during most of the late 18th century. Historically, the two major periods of action on the island are during the American Revolution and Fedon's rebellion.

Because the French take control of Grenada so quickly in 1779, this battle may not work well as the basis of a campaign, although it might work well as one battle in an ongoing campaign for military characters moving from setting to setting. Fedon's rebellion, which takes place over more than a year, might be a better option. Player characters could again be British soldiers or plantation owners or ordinary people caught up in the chaos. The action might even start before the rebellion breaks out, with rumors of sedition and French spies, and attempts to root out the leaders of the insurrection before it even takes place. Then, when Fedon makes his move, the player characters would need to fight, perhaps making their way through the jungle, desperately trying to reach the capital with the insurgents in hot pursuit. Over the next several months, player characters might be involved in scouting missions or attempts to prevent the French from getting supplies to Fedon and his men. Once Abercromby arrives, player characters would be able to join his troops and bring the fight, at last, to Fedon. And finally, even after the rebellion is over, it is not really over. Fedon may have escaped Grenada and may be working mischief from his new home in Cuba. In addition, many of his supporters will plague the island for years to come (one was not captured and executed until 1808).

Finally, players could run a group of plantation owners or merchants who are simply trying to make a living (and, perhaps, find suitable marriages) in the face of ant plagues, hurricanes, invasions, rebellions, competition from other landowners and merchants, local politics, corrupt officials, yellow fever, and the transition from growing sugar to growing nutmeg. (And they said buying Agronomy-17 was a waste of time . . .)

Grenada Gone Wild

Most of this article has assumed a campaign based on the historical Grenada, more or less, but one really does not

have to do this.

First, one can simply ignore various little details of history. Grenada really was not critical to any of the major wars during the second half of the 18th century, but there is no reason why this should interfere with a good campaign. Perhaps new gold mines have been established in French Guiana in the 1790s, mines that spies have learned will provide enough gold to finance a dozen major wars. British-controlled Grenada now serves as a base for adventurers whose mission is to keep that gold from reaching Paris and the minions of Robespierre. Our intrepid heroes will hunt for spies on Grenada and then sail to Guiana where -- by stealth and open battle, boarding ships with knives between their teeth and seducing the wily mistresses of government ministers so they can steal the secret plans for invading Jamaica -- they shall save the Empire.

Yes, this is utterly ludicrous, but it sounds like a rousing good story, so stop worrying about the history and have a good time.

This doesn't even include various supernatural story elements a GM could bring into a campaign. Voodoo is mostly associated with Haiti, but there is no reason why Fedon might not have studied it or why he could not be building an army of zombies to help him in his fight against the British. The island is small, but it is certainly large enough for a werewolf or three (fighting pirates was bad enough, but at least they died when you shot them). And no island campaign would be complete without something unnatural (or, at least, something very old and very angry) coming out of the sea . . .

Alternate Earth: Taxila

for *GURPS Time Travel*

by Paul Drye

Taxila is a Quantum-7 timeline recently discovered by Infinity Unlimited. In it, Alexander the Great lived not quite two decades longer than he did in the Homeline. While he was unable to extend his conquests to the west as far as he did to the east (partly due to endless rebellion in the former Persian Empire, and partly a Carthago-Roman alliance opposing him), his son Alexander IV was old enough on his father's death to prevent the Macedonian Empire's complete collapse. It would last another 100 years, and bring far more of Greek culture to India than occurred in Homeline.

History

In 326 BC, Alexander the Great passed into India and conquered the three main states along the Indus River: Porus, Taxila, and Abisares. Shortly thereafter, on the banks of the Hyphasis River, his army declined to move any further into India and demanded a return to Macedonia. The point of divergence is that, after three days, it was the will of the army's ringleaders that cracked, not Alexander's. For two more years Alexander roved northern India, conquering as far as the headwaters of the Ganges.

With the birth of his son, the future Alexander IV, the king decided that he had done enough, and returned with much of his army by ship through the Red Sea, debarking near Homeline Suez before returning to Macedonia via Fayum and Alexandria. There he based himself for another fourteen years, though much of this time was spent on campaign resubjugating portions of the Persian Empire that sought to break free of Macedonian control.

When he died in 310 BC, parts of the empire rose in upheaval, particularly Persia, and while most were eventually brought under control the Gangian territories were lost to Chandragupta Maurya. Unlike on Homeline, however, the Greek territories on the upper Indus were retained, and a substantial Greek colony grew around the cities of Taxila (near Homeline Islamabad), Peshawar, and eventually the Vale of Kashmir.

When the Mauryan empire collapsed following the death of Ashoka during the Kalinga War (261 BC), Taxila expanded south into the Punjab and east along the Upper Ganges as far as Benares. For two generations, the eastern end of the Macedonian Empire flourished, and tens of thousands of Greeks came to live in the lands of the Hydaspes.

Unfortunately, except where the elevation was greater than a thousand feet (essentially only the northwest around the original core of the state), the disease environment in India was lethal to European Macedonians and Greeks. Taxilan control over the new territory was weak, and when Philip IV of Macedon died in 223 BC, they were cut off by a successful Iranian revolution in Persia. The borders of Taxila were rolled back to their original extent, and by 50 BC it had been conquered entirely by the upstart Haryanan Kingdom. It has popped back into existence every now and then as one power or another collapsed, and is even independent in the present day (1710 AD, by Homeline standards), but intermarriage between Greeks and Indians has turned it into no more than another Indian state.

Hellenistic India

Taxila's major influence on India was not its political power, but in the realms of thought and religion.

Greek mathematics and philosophy sparked the Golden Age of Indian thought several centuries before it occurred in the Homeline, and positional "Arabic" notation was invented six centuries earlier in Taxila. Most of the mathematical developments that took place in the Muslim world and Europe of Homeline instead happened in India here. Taxila's

"Isaac Newton," Rajendra Chawla developed calculus and a theory of gravity some 100 years ago, and India is on the verge of the Industrial Revolution.

Similarly, the Greeks were responsible for the importation of Persian religion, with a variant on Zoroastrianism named "Theosimos" being developed by the prophet Xenares when Taxila was at its height. Fusing Zoroastrian dualism with aspects of Buddhism, Greek polytheism, and Hindu worship he produced a syncretic religion that swept the subcontinent. By 200 AD, Theosimos was unchallenged in India, with only a small minority hanging on to pure Buddhism.

Theosimos was a useful gift. By positing a continual war for the world between Theos ("God," identified with Zeus and Brahma) and Kakourgos ("The Evil Doer," identified with Hades and Shiva), in which humans played their part, Xenares set his converts on a continual quest to upgrade themselves and make things better. As well as encouraging economic growth and quasi-scientific investigation, it set many Indians against the subcontinent's formerly dominant caste system, and within a few centuries India had far greater social mobility than it did before.

Since then, India has resembled Homeline Europe of the Middle Ages and Renaissance, with a welter of states competing against one another and never one empire ruling the whole. For the last three hundred years, the two countries with the greatest power have been Tamilham (consisting of most of India south of the fifteenth parallel) and Sinhala on the island of Ceylon.

These two, however, have been exhausted by their latest round of wars, and the northeastern kingdom of Utkala (corresponding roughly to Homeline Orissa) is advancing quickly. It is the most technologically advanced nation in Taxila, and their overseas empire is slowly pushing out Sinhalese trading posts as far away as Europe and Manchuria. The first true Indian colony, Dokkhandess, was founded by Utkala some 50 years ago in South Africa, and is now home to 250,000 people.

Technology and Society in Taxila

The most advanced societies in Taxila are those of India and China, which are both at TL4. China is stagnant, however, and India is advancing. Utkala is closing in on TL5, having invented the steam engine and laid down the first railway tracks at the country's central coal mines. Mathematics is quite advanced, with several fields that were not touched until the early 20th century on Homeline already being explored. Medicine is similar to that of Homeline in the mid-18th century: neither germ theory or many effective medicines have been developed.

Both Tamilham and Sinhala are monarchies, with the former being extremely centralized and autocratic, while the latter is slowly developing into a constitutional monarchy. The Sinhalese king still wields considerable power. Utkala is an oligarchic society revolving around the richest merchant families and nobility, with a powerless king. The franchise is expanding as the legal requirements for gaining a voice (based on monetary grounds) are not increasing, while overseas trade and technological development are making Utkalans richer every year.

Elsewhere, the world is much as it was in the 10th century on Homeline. Africa and the Americas are home to petty states or entirely uncivilized. Central and South America's empires have suffered a great deal from successive plagues of smallpox, typhoid, influenza, and others brought by Sinhalese trading posts in the last few centuries, but are finally starting to show signs of recovery as disease resistance has been built up the hard way. North America's native civilizations have collapsed entirely.

Europe has done somewhat better, and at late TL3 has some ability to resist Indian expansionism while it is in its early stages. In Taxila's Europe, the Roman Empire never became particularly large (being restricted to Italy, Spain, and Provence, while the north African coast from Tunisia to Morocco was Carthaginian). North of the Mediterranean, migrating Germans pushed the Celts into the ocean, then in turn were pushed into the fringes of Europe by Turks, who were then displaced by Kirghiz in Eastern Europe. Western Europe is settled by sedentary people speaking Turkic languages, while the Germanic kingdom of Staurin, based in the British Isles, is noted for its piratical depredations on Indian traders to the region.

Australia was discovered ten years ago by the Utkalan mariner Nirendranath Talapatra, who sailed south from Timor down the western coast past the location of Homeline Perth. While India's central location and easy access to spices and Chinese goods has slowed colonization of the rest of the world, southwestern Australia is now attracting some attention, as is the mouth of the Rio Plata in South America.

Outtimers in Taxila

As a Quantum-7 world, Taxila is more easily accessible to the Centrum than Infinity Unlimited. Normally the Centrum would be uninterested in a world that is more than a century away from nuclear weapons and parachronics, but the continuing existence of Greek as a minor language in India has balanced that. Instead of the usual communications difficulties encountered by the monolingual Centrum agents, they had sufficient knowledge of Ancient Greek to eventually puzzle out this world's Indo-Greek (which is heavily influenced by Panjabi).

While Infinity Unlimited only discovered this timeline last year, it is believed that the nation of Taxila is shot through with Centrum agents. As a result, this world has been selected as a good site to try and take up the offensive against the Centrum. Unfortunately, things are not going well so far, and several Infinity Patrol agents have disappeared while investigating the Centrum organization. Taxila has also recently allied itself with Utkala, a combination that could lead to its rapid ascent on the coat tails of the Orissans. In many ways, this particular move has the fingerprints of the centralizing Centrum all over it.

By allying with Utkala's junior partner, however, an opening has been left for Centrum's enemies. A post has been set up in Bhubaneswar, capital of Utkala, and Bengali Infinity Patrol agents are learning the local language, Oriyan, at a feverish rate. It is hoped that, if secrecy is maintained until Taxila is too entwined with Utkala to back out, Infinity's client can dictate policy to Centrum's rather than the other way around.

Adventures in Taxila

Lucky Strike: The settlers in Dokkhandess have just discovered the diamond and gold fields of Southern Africa. Riches have begun flowing back to Utkala in unprecedented amounts. Not only are they further fueling that country's heated economic growth, they are making Tamilham and Sinhala jealous -- the latter especially so, since their trading posts in the region were destroyed by the Utkalans not too many decades ago.

There is also the disturbing fact that both fields were found within a year of one another, and are hundreds of miles north of the still nascent Utkalan colony. Were the colonists merely very lucky, or has outtime knowledge been used to draw them to their attention?

Heart of Darkness: An expedition is being sponsored by the Shonaanawd Tolli ("Gold River Company") to explore the region between the Parana and Uruguay Rivers (a rectangle of land about 400 miles long and 100 miles wide). For the first 200 miles or so after leaving the mouth of the river, the Parana has many swamps along its banks, with grasses head high providing many hiding places. Unfortunately for the explorers, the region has been well-prepared by Sinhalese traders, who've been monopolizing the trade here for two centuries. The natives are certain that they must be killed or else another round of dreadful plagues will start. They may not be wrong.

The explorers will also make one other discovery: the Centrum is involved too. A few of the locals will be found with high-quality (if tech-appropriate) equipment that will prove to be Centrum made.

Playing Both Ends Against the Middle Ages: So why is the Centrum interested in opening gold fields and propping up the Sinhalese trading empire? A mission to the city of Taxila will eventually prove (should the agents survive, unlike their predecessors) that Centrum is trying to provoke a war between Utkala/Taxila and the alliance of Tamilham and Sinhala. They don't like war very much, but think that one is necessary before their Indian clients will be in a position to expand over the whole world. Better to have the war now when it's going to be limited, rather than risk it not coming for a century and turn into this timeline's equivalent of World War I.

The task, then, is to foil their scheme to buttress the two southern nations just enough that war breaks out only to have the Centrum pull out the rug from under them once hostilities are under way.

Oh Holy Day

Make The Holidays Special For Your *d20 System* Campaign

by Owen K.C. Stephens

In typical fantasy *d20 System* campaigns, the gods are real and their power to influence the mortal coil is equally real. The gods have powerful tools to protect their worshipers and express their wrath, including clerics, avatars, angels, and other outsiders. It follows that these gods might also have more subtle ways to act on mortal events. Certainly their ability to express religious desires to their worshipers through clerics can mold the shape of societies. If a goddess makes it known apple trees are holy to her, communities that depend on her protection will plant and maintain orchards of apple trees. Seen in this light, a religion's tenets can easily be interpreted as instructions to make the world a pleasing place to the god.

One common religious concept is that of a holy day -- a time of ceremony and special deeds proclaimed by the deity. For most gods however, holy days don't normally help remold the world. Certainly some holy days can be viewed as reminders for when it's best to undertake a given activity ("The god Arr demands one quarter of the fields be reaped by the feast of Harvest Day!"), and some may be nothing more than an excuse for the faithful to gather and enjoy themselves. Indeed, some gods may wish a happy population simply because that is a pleasing change to the world in their eyes. But the remaining holy days seem useless in the grand divine plan.

In a game where magic is real, this need not be the case. The gods can easily be viewed to have the power to make certain days *different*, and these differences can be expressed in game terms. Since most games have numerous deities, many of whom oppose one another, each god is assumed to be able to affect the world only a few times in a year. These become holy days -- times when the god's worshipers know it is auspicious to undertake difficult tasks, and when the agents of other divinities know it is wise not to disturb the worshiper's important ceremonies. A list of possible holy days and the game effects of each allow a GM to quickly and easily incorporate this idea into a campaign.

A GM may make these holy days and their effects common knowledge among the players, or keep some information hidden. Some religions and cults may consider their holy days to be secret. If players know holy days have real power, but don't know when these days are for a death cult, they may think twice about raiding an annual ceremony (or at least wish to gather more information, leading to additional opportunities for adventure). Players who know when holy days are, but have no specific knowledge of the game mechanics of these days, may grow intrigued when their fire spells work best on holy days to fire gods, and their summoned animals are particularly ferocious on the holy days of a druidic divinity. This can add depth and mystery to a campaign, and give players another dimension of the world to explore.

Holidays and Competing Religions

One potential problem with this system is how to integrate it into a campaign setting with different regions holding different cosmologies. If the Greek Pantheon is worshiped in one country and Buddhist monks are predominant in another, it seems odd for the monks to be concerned about the power of pyromancers on Apollo's holy Sun Day.

One way to handle this is to make holidays regional, depending on the beliefs of the local population. Thus Sun Day, a holy day to Apollo, may only have real power in places where Apollo is actively worshiped (or at least recognized). This can make for interesting games of religious politics, as the priests of a given deity have a vested interest in spreading his worship to new lands. The power of a holy day (see below) could also be tied to the number of worshipers he has, making the conversion of new faithful an important part of the mystic power of a given clergy.

It's also possible to decide the holy days are not caused by the gods, but by astrological conjunctions the gods take

advantage of. In this scenario, the day devoted to the Sun occurs at a given time, and every religion with a sun-god claims it as their holy day. In this case the monks are concerned about the power of pyromancers on Sun Day, but they may attribute it to the action of some local pagan god, rather than far-off Apollo.

A third option is for holy days to only apply to the faithful of that god's religion. In this case worshipers of Apollo gain the listed benefits on his day wherever they are, and worshipers of other gods gain no benefit. Of course not all the benefits are geared around this assumption (why would Earth elementals ever worship an Air god, as they only suffer for it?), but a GM can easily work around this. He may have holy days be assigned per pantheon rather than a specific divinity (thus all Elemental gods are of the same pantheon, and have one holy day dedicated to each element in a year), or rework the benefits to be more creature-specific.

The Power of Holy Days

Each holy day is listed as having a minor, intermediate, and major effect. These effects are cumulative -- on a day with major effects, the intermediate and minor effects also apply. Bonuses from holy days stack unless they are given a specific bonus type (in which case they follow normal rules for stacking).

The rarer the day, the more powerful its effect should be. Thus if our theoretical Sun Day occurs once a week, its minor effect should be used. If it's a monthly feast (perhaps corresponding to the first week-end of the month) the intermediate power is appropriate. Only holy days which occur no more than once a season should use the major effects. A GM may also decide to have holy days have different effects based on location (perhaps Sun Day is a monthly feast, which uses its minor effect outside the Greek kingdoms, its intermediate effect within them, and its major effect in the city of Apollis, which is dedicated to the god).

The holy days are all listed below so they can be randomly determined. A GM may either use this to decide where to place them on a calendar, or in games where a calendar isn't kept, randomly determine if a holy day is near, then roll to determine what it is. This can also be useful for a quick check of holy days in foreign lands if PCs are traveling in lands the GM hasn't fully developed.

All of the following holy days are based on standard **d20 System** domains, tying them closely to the powers of clerics. A GM can easily add new holy days tied to a deity's portfolio of concerns, or even on classic fantasy tropes (days holy to the moon, or silver, or a particular creature).

All these powers are only active during the holy day (usually defined as lasting from midnight to midnight or dawn to dawn, depending on the religion). At the end of the day, all bonuses end and those unused are lost.

Holy Days

Air

Minor: All spells with the Air descriptor are cast at +2 caster level.

Intermediate: All creature's flying abilities have their maneuverability increased by one class. Creatures that already have perfect maneuverability have their fly speed increased by 10 feet.

Major: All creatures with the Earth descriptor suffer a -2 morale penalty to all attack and damage rolls, skill and ability checks and saving throws.

Animal

Minor: All animal-related skill checks (Handle Animal, Ride) and Animal Empathy or Wild Empathy checks gain a +1 bonus.

Intermediate: All creatures of the animal type gain a +1 bonus to their natural armor.

Major: All creatures of the animal type gain a +2 bonus to all attack and damage rolls, skill and ability checks and

saving throws.

Chaos

Minor: All spells and abilities that have a percent chance to be effective (such as *displacement* Or *confusion*) add +10 to all percentile rolls.

Intermediate: All creatures with lawful alignments suffer a -1 morale penalty to all attack and damage rolls, skill and ability checks and saving throws.

Major: All spells cast from magic items (including wands and staves) have a 10% chance of acting like an ability from a *rod of wonders*, instead.

Death (Evil)

Minor: All creature's chance to stabilize when bleeding to death is reduced to 5%.

Intermediate: All creatures of the undead type gain a +1 bonus to all attack and damage rolls, skill and ability checks and saving throws.

Major: All undead count as double their hit dice for purposes of being turned.

Death (Good)

Minor: All spells of the necromancy school are cast at +1 caster level.

Intermediate: Any creature that dies cannot be raised as an undead by spells of less than 6th level or creatures with fewer than 13 levels or hit dice.

Major: All turn undead checks are made as if the turner is +4 levels higher.

Destruction

Minor: All objects have their hardness reduced by 2.

Intermediate: All saving throws made to avoid hit point damage suffer a -1 penalty.

Major: All damaging attacks deal +1 hit point.

Earth

Minor: Creatures with the earth descriptor and worshipers of the earth god have their DR increased by 2/--. Such creatures with no existing DR gain DR 1/--.

Intermediate: All creature's burrowing movement rate is increased by 50%.

Major: All creatures with the Air descriptor suffer a -2 morale penalty to all attack and damage rolls, skill and ability checks and saving throws.

Evil

Minor: All spells with the evil descriptor are cast at +1 caster level.

Intermediate: All creatures with good alignments suffer a -1 morale penalty to all attack and damage rolls, skill and ability checks and saving throws.

Major: All creatures with evil alignments gain a +2 morale bonus to all attack and damage rolls, skill and ability checks and saving throws.

Fire

Minor: All spells with the Fire descriptor are cast at +1 caster level.

Intermediate: Existing fires take twice the normal time to extinguish, to a maximum of an additional ten minutes.

Major: All mundane and magic fire attacks deal +2 hit point of damage.

Good

Minor: All spells with the good descriptor are cast at +1 caster level.

Intermediate: All creatures with evil alignments suffer a -1 morale penalty to all attack and damage rolls, skill and ability checks and saving throws.

Major: All creatures with good alignments gain a +2 morale bonus to all attack and damage rolls, skill and ability checks and saving throws.

Healing

Minor: All creature's chance to stabilize when bleeding to death is increased to 50%.

Intermediate: All spells with *cure* in the name heal an additional 1 hit point per die.

Major: All spells of the *cause wounds* line deal 2 fewer hit points of damage per die (minimum 1 per die).

Knowledge

Minor: All divination school spells are cast as +2 caster levels.

Intermediate: All Knowledge skill checks and Bardic Knowledge checks gain a +2 bonus.

Major: All research done on this day (including researching and learning spells) counts as 5 days worth of work.

Law

Minor: All skill checks made in furtherance of a crime (potentially including Hide, Move Silently and Sleight of Hand) suffer a -1 penalty.

Intermediate: All creatures with chaotic alignments suffer a -1 morale penalty to all attack and damage rolls, skill and ability checks and saving throws.

Major: All mind-affecting spells are cast at -2 caster levels, and all saving throws against them gain a +2 bonus.

Luck

Minor: All creatures may add a +1 luck bonus to one roll made on this day.

Intermediate: All luck bonuses are increased by 1.

Major: All creatures may reroll one d20 roll made on this day, taking the better of the two rolls.

Magic

Minor: All castings of the spell *detect magic* have double normal range and duration.

Intermediate: All spell penetration checks gain a +2 bonus.

Major: All spells are cast at +1 caster level.

Plant

Minor: All plant-related skill checks (including profession: herbalist and Wilderness Lore or Survival) gain a +1 bonus.

Intermediate: All creatures of the plant type gain a +1 bonus to their natural armor.

Major: All creatures of the plant type gain a +2 bonus to all attack and damage rolls, skill and ability checks and saving throws.

Strength

Minor: All Strength ability checks (but not skill checks) gain a +4 bonus.

Intermediate: All Strength-based skill checks gain a +2 bonus.

Major: All creatures with a 16 or greater Strength gain +2 enhancement bonus to Strength.

Sun

Minor: All light sources shed light in a 25% larger area.

Intermediate: All saves against spells with the fire descriptor suffer a -1 penalty.

Major: All spells with *sun*, *light*, *fire*, or *flame* in the name, that produce fire or light, are cast a +3 caster levels.

Travel

Minor: All Constitution checks made for a forced march gain a +2 bonus.

Intermediate: All overland movement is increased by 25%.

Major: All terrain penalties to overland travel are reduced by one step (from trackless to road or trail, and from road or trail to highway).

Trickery

Minor: All illusion school spells are cast at +2 caster levels.

Intermediate: All Cha based skill checks gain a +2 morale bonus.

Major: All Wis based skill checks suffer a -2 morale penalty.

War

Minor: All successful attacks with a weapon deal one additional point of damage.

Intermediate: All creatures fighting with an ally adjacent to them gain a +1 dodge bonus to AC.

Major: All morale bonuses are increased by +1.

Water

Minor: Creatures with the water descriptor and worshipers of the water god gain a +2 bonus to all Reflex saves

Intermediate: All creature's swim movement rate is increased by 20%.

Major: All creatures with the Fire descriptor suffer a -2 morale penalty to all attack and damage rolls, skill and ability checks and saving throws.

Sprawl Survival Guide (for Shadowrun)

Published by [FanPro LLC](#)

Written by Rob Boyle, Elissa Carey, Drew Curtis, Lance Hawvermale, Eleanor Holmes, Adam Jury, Robyn King-Nitschke, Peter Taylor, Alexandre van Chestein, and Jakko Westerbeke

Cover by Jim Nelson

Illustrated by Dave Allsop, Eric Desideriu, Marko Djurdjevic, Chris Lewis, Larry MacDougall, Klaus Scherwinski and Karl Waller

144-page b&w softcover; \$24.99

The recent run of releases for the *Shadowrun RPG* has tended to focus on the "Gee-Whiz!!" factor of the Sixth World. They have also been accompanied by a campaign of interlinked scenarios that have tied into events of 2062 and 2063, so that [Dragons of the Sixth World](#) worked as a complement to [Survival of the Fittest](#) and [Wake of the Comet](#) involved the shadowrunner player characters in the events described in [Year of the Comet](#). Not so the latest sourcebook for the game, the *Sprawl Survival Guide*, which takes a look at the everyday aspects of life in the North America of 2063 from both inside and out of the shadows.

Unlike most *Shadowrun* sourcebooks, which should never fall into the hands of the players, both players and GMs can use the *Sprawl Survival Guide* as it presents them with a handle on life in the Sixth World, all given in a number of differing voices. These voices are not the commentary common to all *Shadowrun* sourcebooks, which is delivered by the on-line denizens of the Shadowland BBS -- though they are still there -- but rather more authoritative ones delivered in a more journalistic style. Of course, the mundane particulars of any game world may not be appetizing to all players, or indeed every GM, but for those of us in the know, the mundane can be good, the mundane can be interesting, and the mundane can be ripe with roleplaying possibilities.

The format for the *Sprawl Survival Guide* is the same as for other *Shadowrun* sourcebooks and there is a pleasing lack of errors in both the typography and layout. The illustrations are sparse and in places a little too cartoon-like, though the pieces by Larry MacDougall really stand out as the best on show here.

The book is broken up into four chapters, the last providing new and relevant game information, again which the players can reference as much as the GM -- unlike other *Shadowrun* supplements. The first chapter is entitled "Living in the Sixties" and has been lifted from the pages of the "Looking Towards 2064" issue of *LiveWire* magazine.

Published on April 30th 2063, this has been posted to the Shadowlands BBS to be dissected and commented upon what is an overview of the state of modern life. This is actually a corporate piece directly aimed at the wage slave or wannabe wage slave. It looks at the state of the art home for the middle class and its climate-controlled environment, and its facilities (electronic, media and even their cleaning bots), before going out into the jungle of the great urban sprawls. Places to stay, travel, shopping, personal finances and an explanation of how credstiks work, and entertainment including nightlife, music, Tridees and Simsense, sports, corporate events, advertising and sports are all covered. Also detailed is how a "System Identification Number" or SIN works, how the law applies to both those with a SIN and the SINless without one (in answer to the latter, it applies to the SINless badly), before it goes on to look at

the religious and social mores of 2063. This is very much a change of pace from compared to recent *Shadowrun* supplements, where the voice is invariably that of someone within the Shadows rather than that of someone outside of it. "Living in the Sixties" provides lots of little details that be used to add color to a campaign, whether to a player character's domicile or that of an NPC, or just to a campaign in general. In this, the chapter also works as a companion and extension to the contents of the *State of the Art 2063* supplement.

The second chapter takes on more worldwide point of view to explain the ins and outs of travel beyond the 'runner's local 'burbs, not just the next town, but also the next nation and the next continent over. This is not just by ordinary means, but also the methods favored by those who must travel more surreptitiously along with their gear. The second part of this chapter is entitled "Global Report," and provides a good rundown on some of the global hotspots that might be potential sources of work and rumors for runners of all calibers. Each entry serves a good starting point for these various locations, ranging from Auckland and Calcutta to New Monaco and Buenos Aires. However, they deserve further expansion and support to be given them in future supplements.

The third chapter is written from a more personal point of view, though no less journalistic. In "Life on the Run," a young journalist decides to investigate the seamier side of life in 2063. Including interviews conducted with those in the biz, and those opposed to it -- mostly recorded without their knowledge -- plus a set of VoxPop, along with the journalist's personal recollections. These are well written and should help the prospective player grasp the basics of the game they are about to play in.

The last chapter expands in the main upon the main *Shadowrun* rulebook, plus the *Matrix* and *Rigger 3* sourcebooks. It provides rules for dealing with the electronic items within and about an average wage slave's apartment as described earlier in "Living in the Sixties." This includes home telecom systems (and also street dataterms if the runners happen to be in the kind of upscale neighborhood where they do not get vandalized) plus their household drones, mostly cleaning drones. These are accompanied by a gruesome image of a cleaning drone attempting to vacuum up a corpse, but these rules will no doubt be the source of some clever use of the various types of drones.

Perhaps the most fun aspect of the *Sprawl Survival Guide* are the expanded guidelines for designing a character's lifestyle. In the core book, these are simply packaged as a particular type with a set price for maintaining it from one month to the next. Under these new rules, a player can select factors for area, comforts, entertainment, furnishings, security, and space that when added up provides a total number from which can be determined a character's lifestyle costs. These can be further modified with edges, such as "Easygoing Landlord," "Manaline/Power Site in the Basement," and "Roommate from Heaven," and Flaws, such as "Ambush Friendly," "Gnomes Under the Floorboard" (characters lose small and shiny things, plus their socks with ease), "Living with Parents," and "This isn't Sam's Pizza" (the home LTG is associated with another business). These are added up to get a percentage modifier that can reduce or increase a character's lifestyle costs. Though these rules are optional, they really are worth using, as they are not only fun, but also ripe with possibilities from which the GM should be able to extract plenty of game situations.

The *Sprawl Survival Guide* serves as an excellent introduction to the basics of life in the Sixth World, one that both the GM and players should enjoy reading. Both experienced and the new GM will want access to this supplement as it will enhance the game, while players will want the introduction and the room to detail their characters' lifestyles. While the mundane nature of this supplement might prove uninteresting for some gamers, the *Sprawl Survival Guide* definitely earns its place both on the *Shadowrun* GM's shelf and within *Shadowrun* canon.

Crooks! (for Mutants & Masterminds)

Published by [Super Unicorn Design Studio/Green Ronin Publishing](#)

Designed by Erik Mona, Kyle Hunter, & Sean Glenn

Edited & Developed by Erik Mona, Rob Smolka

Art by Axel Ortiz, Andrew Hou, Arnold Tsang, Brian Stelfreeze, Corey "Rey" Lewis, Cully Hamner, Ed Tadem, Eric Canete, Heather Martin, Jake Parker, Jason Martin, Karl Waller, Kyle Hunter, Leonard Kirk, Ramon Perez, Sean Chen, & Steve Scott

Maps by Christopher West, Robert Lazzaretti

128-page full-color hardcover; \$27.95

With the proliferation of superhero games, especially those geared toward use of the *d20 System* and the OGL, your champions of law and justice are going to need more bad guys to beat on. You're going to need, simply, **Crooks!**

The Super Unicorn/Green Ronin cooperative effort (for the OGL) is a rogues' gallery of scum and villainy for the *Mutants & Masterminds RPG*, with some annoyances and faceless mugs thrown in for good measure. The city of Arcadia has its fair share of problems when it comes to super-powered sleaze, and these some-odd three dozen plus enemies are ready to be dropped into any campaign.

Each villain comes with a tiny box that lists his (or her, or its . . .) vital statistics like age, height, true identity, and, most critical for the heroes since they'll be on the receiving end of the power blasts, power level (they range from level-1 losers to the 21st-level powerhouses that always seem to have a spare doomsday device and a thirst for vengeance).

Some are loners like the super-fast super-Nazi Blitz; or the wrestler-turned-mutated-freak Spasm, whose body is an ever-changing tapestry of blood, bones, and pain. Others are linked up to other names in this book or (occasionally) the original *Mutants & Masterminds* rules. Sovereign is a tough and tusked alien leader, an outcast from his people who sees himself heading a new empire at our end of the galaxy. He calls upon the multilingual Waymaker to herald his forces and demand surrender when he descends on his next conquest. The Earthman Sulemain, with a cask of demon spirits at his side, makes sure Sovereign has plenty of planets to plunder by offering the use of his geometrically perfect crystals to teleport armies wherever he pleases.

Other groups enjoy even tighter knitting. The Clique consists of teenaged girls with a mad-on for clothes, a bohemian lifestyle, and the intermittent affirmation of grrrl power. The animal-themed Bestiary wants payback against the government that tried to kill them for knowing too much about a mysterious archaeological dig. And the globe-spanning Unitrol, advertising itself as an alternative to the United Nations, offers Third-World nations a chance to live the good life -- when "revolutionaries" conveniently pop up in their ranks, they need only give up their control and their coffers, and eliminate all parahumans within their borders.

Otherworldly visitors such as the beautiful and rotting Carrion Queen try to give our world a taste of death, but some, like Vagabond, whose villainy is tempered by the fact that our world is just a better place to be given his oppressive home dimension, are less villains than just fish out of water (fish with the power to travel through time, mind). Still others are just a good hook to bigger adventures, like Tag Team. These streetwise graffiti artists, with the ability to make spray paint do everything from disintegrate concrete to shapeshift inanimate objects, don't have the stones to go toe-to-toe with any but the greenest superguys -- but they're only one of many NPCs here whose abilities are a gift courtesy of the mysterious Mr. F.

Each entry has a bit of background on the person, some flavor text on their powers and how they use them in a fight, how the GM might be able to put the character to work in a game, and a block of game stats. Several entries also have Capers, a sidebar that offers a quick adventure hook, the sort of things the villain can be expected to do or the kind of heists they're likely to pull. Some also get a few lines about their special equipment, headquarters, or vehicles.

To populate the panels of your comic-book exploits, GMs get a passel of low-level thugs and mooks. These are the faces in the crowd that make up goon squads and useless minions the heroes always have to mop the complex floor with before the mastermind brings out the big guns. There are ninja, mercenaries, and soldiers for paramilitary groups like Unitrol, as well as expendable homegrown terrorists and activists with more slogans than brains. For the mystical enemies, there are supernaturally inclined critters like vampires, demons, and zombies.

The gamemaster gets a couple of sections bookending the supervillain entries; these are intended to help him bring the funny books to life in his game. There's a primer on the history of parahumans from World War II to the present, describing the several ups and downs they've suffered throughout the decades. GMs wishing to set a game in another time period will have a clear idea what things were like in Arcadia during that timeframe.

The back of the book has a section on new rules and extras for use in the game. Players can play the villains (or play reformed ones as heroes). New feats offer neat new effects (the Motif feat, for example, gives you a bonus to perform capers with a particular theme, like crimes carried out on national holidays). Variable Effect is a new catchall power that creates different effects on the fly, activated with Hero or Villain Points. There are expanded rules for Devices, more Weaknesses, and a template system (now your speedster can also be one of those werewolves from the front of the book). A quick and easy system for deciding what happens to captured villains turns a trial into a few dice rolls. These determine whether they end up at the Big House, and how long it will be before they return to vex the heroes.

The niftiest addition is a system for crisis levels. Using points gained from beating villains, heroes can alter the conditions of the game world -- sort of like the parameters system from Mayfair's *Underground RPG* -- to improve things or even change the style of game play if the group is feeling that motivated. Is the setting sliding into dystopia? Use some points to improve social conditions. You can raise the public's opinion of superheroes, making it easier for them to work with the populace. On the other hand, this system also offers the chance for failure on the part of the good guys to lead to the complete destruction of mankind

While *Crooks!* occupies a standard niche in the progression of releases for a superhero game line, the book isn't a half-hearted whack at a villains collection, built just to fill customers' expectations. The characters all have fresh, colorful backgrounds, and the volume works as a whole. The many connections among different foes make the city of Arcadia come to life. No one character need exist in a vacuum unless the GM wants it that way. Not only does the book offer ways to match this release to the core rulebook and its characters and organizations -- or those of your own campaign -- each personality has its own areas of deliberate ambiguity so plots and connections can be made to fit events in your game.

The book makes some bad font choices that work against the text in places. The vital statistics blocks have Ks that look like Hs and Gs that could be Cs, and these stats are written painfully small in hard-to-read colors. Only the odd pages are numbered, and they're written small enough you almost think they don't want you to know what page you're on. And a few of the logos are so stylized you'd think they were a word balloon. On the other hand, the artwork is done by recognized names from the comics biz so most of the character portraits are terrific, ranging from Ramon Perez's simplified "Ambush Bug" style to Sean Chen's smooth four-color masterpieces. There's even a brief-but-enjoyable nine-page comic book piece at the beginning that, instead of being page filler, tells a good story while at the same time

establishing the relationships and motivations for some of the figures from the rest of the volume.

Crooks! is a great resource for GMs, even if they're not using the ***d20 System*** or the OGL; it's that easy to customize, and chock full of good ideas. These are solid designs for use with any game, and with only minor drawbacks, GMs will soon find the book's utility doesn't end with what's printed inside.

The Navies of Kralorela

by Mark Galeotti

This article is development work for the Kralorela book series -- the final version may be different. It may also appear in *Men of the Sea*, the future Sailors' book.

Kralorela is not a renowned maritime power, for its ships rarely travel far beyond the so-called Harmonious Waves, the waters that wash its shores. However, its fleets are mighty and varied, reflecting the interests of the empire.

Kralorela has three great navies, each manifesting as a War Dragon. **The Peaceable Embrace of Divine Amity** is responsible for patrolling the inland sea known as Suam Cho, while the **Vigilant Expression of Imperial Caution** controls the coastal waters as far as Koromondol. Both navies contain a mix of vessels, from the great turtle-barges whose decks are fortresses, to flotillas of smaller junks. The turtle-barges are mighty battle platforms, huge oared barges designed so that they can be lashed together to form floating islands on which mighty rituals can be enacted and men can fight as if on land. The largest barges even have their own unique cults. Some say that the larger turtle-barges have zombie oarsmen, although it would be difficult to distinguish such undead crew from the dazed and driven convicts generally used. A favored tactic is to harry corsairs and intruders with junks and oared dragon-boats, which seek to bring *hangzu* [marines] to boarding range. Many marines use *hsunchen* magic to transform themselves into orcas to reach or even ram enemy ships. Eagle *hsunchen* are also favored as scouts and raiders. Meanwhile, as many as a thousand *duzhe* [lectors] on board such a floating island read out the fearsome Imposition of Correct Order on Maritime Disharmony. From his flagship's pagoda, the fleet's commanding exarch can then shape the waters to his will. Impious interlopers may be smashed on suddenly dry sea beds and then the mangled wreckage washed far out to sea on a mighty tidal wave that nonetheless gives obeisance to each of Godunya's Bridges as it safely passes beneath.

Even when becalmed in the fogs of the Kahar Sea, Kralori sailors rely on the distant clangor of the great brass Presence Bells that dot the Kralori coastline to remind them of their homeland. The rather smaller **Vigilant Envoy of Imperial Attentiveness** is crewed by heroes, criminals, free-thinkers, and other misfits, because its duties may take it even out of range of these bells. This navy ranges far out to sea, often escorting merchants and emissaries to Vithela or even the barbarian West. As such, instead of lumbering turtle-barges it relies more on larger junks, primarily the five-sailed wave-tiger but also ships of more adventurous designs. Its present exarch, Lord Tanzhou Seven-Lung, is especially eager to use his new fire-lizards (squat junks bearing banks of crude rockets) and fire-wasps (manned rocket-boats that streak across the waters in a suicidal rush to ram enemy vessels).

Kralorela also has a huge merchant fleet, although most such ships merely ply the waterways of the Suam Chow or Kralorela's mighty rivers, which are choked with all variety of junk, barge, sampan, and punt. The typical Kralori *shuishou* [sailor] is thus a low-prestige professional working in relatively safe conditions for a modest income (tariffs are strictly controlled by the Office of Agreeable Transaction). They affect outlandish earrings and left-hand tattoos, and many learn the distinctive Hopping Sea Crane martial art, which apes the rolling gait of an experienced mariner. Since all barbarian shipping is confined to the port of Lur Nop, there is also a specialized trade in superior Kralori goods to that city for export and of entertaining foreign trinkets from it to the rest of the empire. In order to minimize the risk of pollution, the task of dealing with barbarian merchants in Lur Nop is entrusted to the Yellow-and-Yellow Shippers, a clan of notoriously close-mouthed merchants whose lucrative monopoly must be repurchased every fifth year. There are, however, more audacious Kralori merchants who travel to the East Isles, Teshnos, and even Teleos. While wealthy, they are regarded with scorn and derision by many of their peers.

Sample Magic Keyword for Kralori Sailors

Thrunhin Da, the Blue Dragon of the Deep

Thrunhin Da is the great Blue Dragon of the Deep, Queen of the Kahar Sea and mother of the zabdamar mermen. She is also known as Harantara when she appears not as a dragon. In that form, she was the daughter of Hangyath the Three-Browed and the gentle water goddess Ivaro. No shrinking innocent, she assisted in the drowning of her kidnapped brother Palachath's captor, the antigod Kratapol. She bore the god Metsyla (ruler of Abzered) to Angen the Green, and was then courted by the storm god Kahar, who won her by learning Perfect Stillness. When Angen's watery kin destroyed Abzered in their fury at the union, she and Kahar escaped and fought back. The other sea gods surrendered or were subdued one by one, until Thrunhin Da and her peaceable husband acquired overlordship over what is now the Kahar Sea.

Entry Requirements: None.

Abilities: Communicate with Zabdamar, Deep Swimming, Devotee of Thrunhin Da *or* Initiate of Thrunhin Da, Mythology of Thrunhin Da, Sense Way in Fog, Soul Vision.

Virtues: Constant, Unforgiving, Wise.

Affinities and Feats:

Appease Sea Dragon -- Appease Storm with Kowtow, Honor Sea Dragon ritual, Mist-Thinning Eulogy, Sense Approaching Storm.

Shiphandling -- Fortify Oarsmen, Hold Course, Know Bearing to Nearest Kralori Coast, Master Water, Wrangle Rudder.

Secret: Majesty of the Waters (Acts as an affinity, with the feats *Breathe out Fog*, *Breathe Water*, *Dispel Storm*, *Raise Waves*, and *Smash Boat*. No feats may be improvised from the affinity, although others might be discovered through heroquests.)

Other Side: Thrunhin Da and her husband reign in splendor in the Coral and Cosmos Palace, deep under the Cobalt Water Dome in the Summer Land Heaven. From there, her worshippers can pass to the Golden Age or to the palaces of any of the other Dragons.

Note: The *Honor Sea Dragon ritual* feat has a similar effect to Dormal's Opening rituals, allowing the ship to pass safely on the waters without triggering the destructive effects of the Closing.

Hero Cults of Thrunhin Da

Most worshippers of Thrunhin Da who live a life on the sea also worship one of the Ninety-Nine Waterfarers, maritime heroes of Kralori culture. They generally select one who is most relevant to their own role on board ship or else who is linked with the waters that they sail. Some examples include the following:

Eru the Riverboatman

Affinity -- Riverboat Sailor (Boat through Mud, Hold Patch, Part Reeds).

Jing Ji the Rigger.

Affinity -- Rigging (Knot Rope, Strengthen Rope ritual, Surefoot Climb, Swing on Rope, Untie Knot).

Po Keng

This hero mastered the ways of the Rozgali Sea.

Affinity -- Sail Rozgali Sea (Greet Ludoch, Know Rozgali Ways, Smell Typhoon on Wind).

Younger Lu

This hero provides no magic but teaches the Hopping Sea Crane martial art.

Murphy's Rules

Creating and Saving the World in Three Easy Sessions

I run few gaming series with the intent of having it be an indefinite, long-term, 'til the stars burn out kinda game. Instead, I tend to run them as a miniseries, perhaps with the possibility of expanding it into a long-term game later.

This has a number of advantages:

I get to try out lots of games, systems, worlds, and settings that I otherwise might not get around to. Let's face it; there are more snazzy RPG settings out there than I'll ever be able to flip through, let alone run for any length of time.

I can also try out house rules or different systems. If I have a beloved game system or world, but I'm looking to tweak some elements (or try a new system altogether), a miniseries lets me explore those without the stakes being *too* high. This was the technique I used during a mid-1990s *Star Trek*, when I used ***Fudge*** rules alongside FASA's ***Star Trek*** skill names, since FASA's system seemed incompatible with my style (and Last Unicorn Games had foolishly decided not to exist for five years yet).

There's a lot less pressure in a miniseries than an ongoing campaign, so I generally feel free to try things I otherwise wouldn't. I find more resistance to outlandish plots in an ongoing game than a miniseries (such as, say, starting an adventure by having the players escape from the Bad Guy's prison, or having them "wake up" in a haze from some kind of mind control, just as they hear about the Emperor's assassination).

They're satisfying. Unlike campaigns that just sputter out due to other obligations and complications, miniseries have a definite beginning, middle, and end. This allows for interesting storyline resolution, and can make even risk-averse players take more chances; after all, if they don't accomplish their goals now, they may never get another chance!

And, perhaps the biggest advantage for me currently, **miniseries are the ideal means for me to try out new players**, lest I commit to an ongoing campaign with people whose gaming styles are incompatible with my own.

I've fallen into this trap before; I've invited people to be part of an ongoing campaign without fully realizing what I was getting into. And once a player is part of an ongoing campaign, I personally have great resistance to getting rid of either him or his character. ("Okay; when we left off last time, you were in the bottom of Le Dungeon Indéniable, and you were deciding . . ." "Waitamminute; what happened to Carl and his character?" "Carl isn't here, and Stabby the Assassin was et by wall gnomes when you weren't looking. We'll speak no more of them.")

But I can put up with anyone for two or three sessions. And if run a miniseries with six players, and forget to invite two of them back for an ongoing campaign based on that miniseries, then so much the better!

On the flip side, there are a number of downsides:

Commitment: For some reason many players I've tried to recruit are resistant to the idea of a miniseries. I suspect it's because much of the effort that goes into playing in an RPG - character history, emersion, and the like - is at least as difficult in a miniseries as an ongoing campaign, only the players know they probably won't have their characters for very long. If you're going to invest in creating a snazzy character, why do so for a game you know will be limited?

(As a random digression, I'll actually turn this on its side and use it as a selling point. The limited scope of a miniseries allows players to create different characters; if a player usually makes, say, brooding loners, perhaps they he can try out a bard/entertainer-type for a change. The stakes - and emotional investment - aren't as high! It's fun watching the light bulb go off above players' heads when I mention that.)

Derailability: (Okay . . . somewhere Noah Webster's turning in his grave; it's his fault for dying.) In an ongoing campaign, it's almost impossible for my players to completely derail a campaign; I can always guide things back on course after a few adventures, and very often the derailment can *become* a new campaign focus. But in a miniseries, there are generally two possibilities: heavily constrained, or complete derailment. If the PCs decide not to investigate

the Emperor's assassination but instead decide to steal a spaceship and sell ice cream star-to-star, then the carefully scripted three-session adventure you had planned can become entirely moot, unless you're willing to beat the players with a broom until they search the Emperor's body for clues.

In general I get around this one by making it clear out of game to the players that, c'mon, there's a certain linearity in miniseries; go with it. (And then I'll often have a section of the miniseries that's *completely* freeform, where the PCs need to come up with what to do next entirely on their own. That's always interesting for players more accustomed to nose-pulling convention games.)

Things I try to keep in mind when crafting a miniseries:

Pacing: In a miniseries, I consider the time I have to establish my tone and pace is *much* less than in an ongoing campaign. As a result, I'll usually start out the game as fast as possible, emphasizing whatever themes will be played out. The stakes don't need to be high, and very often it helps if they *aren't*, but I still try to give the players an idea of what it's about ASAP. Thus if it's going to be a miniseries centered on political intrigues and manipulations, then I might start the game at a noble's birthday party, informing the PCs that they accepted a sizable bet to determine who at the party the noble is having an affair with. In the *Exalted* miniseries I ran, I basically started the PCs out with:

"The giant bear is directly across from you in the pit. The bad guys whose camp you infiltrated surround the outside of the pit, and the old man whose advice you were following has just been gutted by the bear. You were following him; he was the only one who knew the full extent of the plan. However, as the bear approaches, you know it would be dangerous to reveal your *true* nature now. Roll for initiative."

The *Exalted* game was about cinematic combat, difficult choices, and figuring out what the heck was going on. In both examples, the stakes for success or failure are meaningful but not all-consuming, and the challenge isn't so great that the PCs need to break much of a sweat. Instead, that initial scene set the tone for the rest of the miniseries, with a microcosm of the greater story.

This isn't an essential method, but - especially with new players - I've found it invaluable to give them clues as to how to handle the adventure.

Plot: With a standard adventure, I'll generally have a strong idea of how the adventure will begin and how it will end, with the middle being fuzzy. In a miniseries, I tend to take this further; I'll usually know how I'm (hopefully) going to start and end each session, with *really* firm ideas for the series beginning and the series ending.

Rules: If I'm running a game system I've never used before, I'll generally try to keep it simple, with most plot points and climactic moments stemming from player decisions and roleplaying instead of dice rolls. After all, it's pretty lame to ruin a four-hour gaming session with a climactic battle that I mess up because I don't know what I'm doing rules-wise.

If possible, I'll also try to prepare a "cheat sheet" of the rules for the players as well. After all, if it's my first time playing a game system, it's probably *their* first time as well. (Of course, in my nightmares, I learn that several of the players are gurus of the game system I chose, waiting to pounce leopard-like on any mistakes I make.)

In all, miniseries give me a lot of flexibility to do the kind of gaming I like. I can try new systems, I can meet new players, and I can run storylines and adventures without the prison of an ongoing campaign. While they have disadvantages and limitations - and can't match the power and splendor of a good long-running campaign - miniseries can provide a satisfying and worthwhile experience.

This, of course, assumes the miniseries isn't *Amerika*.

--Steven Marsh

Australian Aboriginal Magic

by David Morgan-Mar

Australian history is not a commonly used setting for roleplaying games. Most gamers are unfamiliar with the details of both Australian prehistory and recorded history, so the potential for original and intriguing adventure in a stone age setting or the European colonial era has mostly been overlooked. Australia's history is, of course, just as rich and interesting as that of other continents, and a little research can go a long way when presenting games to players just as unfamiliar with the setting.

An integral part of a game set in historical Australia is Aboriginal religion, mysticism, and magic. This article describes Aboriginal magic, as it is the aspect of Aboriginal beliefs most likely to be utilized in a game. A full description of Aboriginal religion would be prohibitively long, so only a brief introduction to necessary concepts is given.

The most important decision in an Australian campaign is whether Aboriginal magical effects are real or not. Either way, the Aboriginal tribespeople will believe in them. In a realistic campaign, some abilities, although mundane in origin, may *appear* magical, certainly to Aborigines and possibly to Europeans unfamiliar with the art. In a fantastic campaign, the magic is well and truly real.

Introduction to Aboriginal Religion

Aboriginal religions are intimately tied to the concepts of spirits, rituals, and magic. The basic principle is that spirits are eternal, existing in the past, the present, and the future equally. Humans -- and animals, plants, landscape features, and phenomena such as wind and fire -- are temporary incarnations of spirits which have always existed and will continue to exist after the material form is gone. These beliefs form the foundation of all Aboriginal religions.

Spirits have an original, primordial form, possessed during the Dreamtime creation. A spirit not currently incarnated exists only as a formless entity in the eternal Dreamtime. (The Dreamtime is more akin to a spirit world or "astral plane" than a literal "time.") Such a spirit is incarnated as a new human at the moment of conception. All humans therefore have an associated primordial form, or *totem*. A person's totem is more than just a symbol; it is an essential aspect of their being. Someone with a goanna (a type of monitor lizard) totem is as much a goanna as an actual lizard sunning itself on a rock. The totem thus represents the person and can be used to refer to that person. A totem symbol can also be used in artistic representations and magical rituals to refer to a person with that totem.

Historically, this state of affairs was natural and self-evident to the Aborigines. Belief was unquestioning -- it was known to be true with the same certainty that night follows day. Indeed, in most documented tribes there was no linguistic differentiation between the concepts of belief and knowledge. Skepticism was unknown until Europeans introduced the concept along with their ideas on religion.

A Magical People

Australian Aborigines traditionally believe that all of their people possess some magical powers. In general, these are minor powers, not consciously controlled, and with little effect on daily life. A typical example is seeing the totemic symbol of a person in a dream. This indicates that something is to happen to the indicated person, or that person will do something significant to the dreamer. A more specific interpretation may be supplied by one trained in magic -- a *karadji* (see below). All Aborigines who have undergone the tribal initiation rituals granting adulthood can also perform thought transference, love magic, and sometimes sorcery (all described below), but most powers are restricted to the use of *karadji*. Non-Aborigines -- i.e. people who have not undergone a tribal initiation -- do not possess any magical abilities.

The distributions of magical powers across the Australian continent, and the manners in which the rituals are performed, are immensely varied. Not all tribes practice all of the powers listed, so GMs who wish to restrict access to some of the powers may use this as justification.

Karadji

Karadji is a term taken from the Dharuk tribal language and refers to Aboriginal "medicine men." These people combine the roles of doctors, wise men, religious leaders, and sorcerers in Aboriginal communities. To people of the tribe, and to themselves, they are imbued with special knowledge of the Dreamtime which allows them to perform magical rituals for the benefit of the tribe, or the ill of their enemies.

Karadji (the plural is spelled the same) are always males who have undergone a special initiation into the deepest secrets of the Dreamtime. They hold a place of status and power in the tribe and are respected and admired despite their somewhat aloof nature. Apart from this, they are not treated different from other male tribe members. The *karadji* participates fully in the daily life of the tribe, hunting, taking part in group ceremonies, marrying, and having children. In effect, the *karadji* is simply a normal man with a more highly developed awareness of the powers present in all Aborigines.

The sheer normalcy of the *karadji* is worth noting. In other tribal cultures it is common for people with conditions such as epilepsy to be selected as shamans, or for shamans to seek mystic knowledge via drugs or violent dance. None of these apply to the *karadji*, who is a paragon of his tribe and practices his art through quiet contemplation, application of knowledge, and deliberate decision.

Each tribe will have at least one (possibly more) *karadji*, since he is essential to the well-being of the tribe. His main role is to maintain good relations with the spirits of the land and the dead, the Rainbow Serpent and the sky-being, and *karadji* of other places. This ensures good weather, food supplies, and peaceful relations with neighboring tribes.

The Importance of Rituals

Rituals are an essential part of the *karadji's* art, but they are easily misunderstood by non-Aboriginals. For example, a healing ritual might involve removing a "poisoned bone" from the patient's abdomen. The *karadji* palms a bone beforehand and uses sleight of hand to "extract" it from the patient, displaying it with a flourish to observers. European observers might interpret this bit of deception as charlatanry aimed at making the audience believe something magical has occurred. The *karadji* himself, however, earnestly believes that the deception is a necessary part of a truly magical ritual. The sympathetic nature of the magic is such that making people believe in it is a crucial component of getting it to work.

The *karadji* believes in his own magic, of course. When a *karadji* falls ill, he has no hesitation in calling on another of his profession to heal him. He knows that the ritual involves sleight of hand, but he also knows that this is part of what makes the magic work and so expects his comrade to heal him by performing it. If a cure fails, it means the *karadji* was summoned too late, or the patient had broken a dire taboo, or the spirits of the dead did not wish to be

Everyday Aboriginal Magic

Many tribes define a mapping of various body parts to classes of people, such as an arm corresponds to fathers, while a foot represents sisters. Anyone who feels an involuntary twitch or muscle spasm can concentrate briefly, then be certain in the knowledge that a specific person from the indicated class will arrive soon. This, and the dream revelations mentioned in the main text, are seen as normal events, evidence of the connection between living people and the spirits of the Dreamtime.

GMs running Aboriginal campaigns may wish to incorporate such minor magics into their games. While precognitive knowledge is problematic in most campaigns, there are enough limits on these effects to avoid most difficulties. First, they cannot be consciously controlled. Any precognition is entirely at the whim of the GM, so can occur only when the GM wishes to use it for dramatic effect. Second, the interpretations are vague. A wallaby seen in a dream might represent a person's totem, or it might simply be a wallaby. An arm twitch might indicate one's own father, or grandfather, or might simply be caused by a mischievous spirit. Such symbolism can also be used by the GM as the method of implementing some exotic abilities such as danger sense.

deprived of the company of the patient's spirit. These reasons are generally accepted by the tribe, providing the *karadji* explains them convincingly.

In a non-magical world, all this can be explained in psychosomatic terms. If Aboriginal magic is real, however, then this is simply the way it works. Bypassing a sleight of hand meant to be part of a ritual weakens the magic, probably causing it to fail. And outside forces can sometimes be too strong for a *karadji*'s magic to overcome.

Becoming a *Karadji*

Tribal elders and the existing *karadji* select young men to be trained as *karadji*. The selection is made on the basis of the youth being thoughtful, enjoying the company of the elders, and showing an interest in the tribal lore. Being the son of a *karadji* is an advantage, but not a determining one. In some cases, the youth will have experienced a spirit vision or noticed other powers manifesting in his presence. Some aspirants deliberately seek such visions by sleeping in isolated or magical places. The visions must be interpreted by a *karadji* as significant to count in favor of the boy's selection. In general, an existing *karadji* does not choose his apprentice unilaterally -- it is a decision of great import made by all the elders.

Once chosen, the postulant is trained in the lore necessary for him to perform in his future profession. At some point in this training, he undergoes a special psychic experience, which validates his skills and admits him to the position of *karadji*. This experience is overseen by existing *karadji*, who perform a ritual around and upon the postulant. This ritual is an enactment of the Dreamtime experience of the *karadji* initiation, an experience which seems real to the postulant, caused by the spirits around him.

The exact form of the initiation experience varies from tribe to tribe, but most share remarkable similarities. Generally, spiritual beings perform alterations to the postulant's body. Most often, this involves an abdominal incision, through which magical substances known as *maban* are inserted. *Maban* is usually quartz crystals, but tektites and mother-of-pearl are also used in regions where they are found. The wound is magically healed without scarring. Either during or after this procedure, the postulant is taken to the sky-world to interact with the spirits of the Dreamtime and of the dead, in an introduction to the powers the ritual will grant him. Often he will be assigned a small number of spirit familiars, taking the form of his totem, who will assist him in his work.

Variations on this experience include: *Maban* being rubbed and "sung" into the body without requiring an incision (south- western and north-eastern New South Wales); the intestines being removed and replaced with *maban* (Sydney region); organs and bones being removed and cleansed before being re-inserted (northern Western Australia); little rainbow snakes being inserted along with *maban* (Kimberley region); *maban* also being inserted into the wrists, ankles, and other joints (western South Australia). In coastal regions the subject enters a trance while these ordeals take place, while in most of the interior of the continent this spiritual journey is considered a literal death followed by the rebirth of the postulant as the new *karadji*. In a few regions, such as the Kimberley, the Rainbow Serpent descends from the sky and swallows the postulant, while in western Queensland he is killed by being pointed at with a magical bone. The ritual performed by the supervising *karadji* in such cases includes that of mourning the dead.

In a realistic campaign, these experiences are visions seen in the trance state brought on by fasting and the rigors of the ritual. The postulant has been conditioned by being told what to expect. In a more fantastic campaign, the procedure may take place literally. GMs running such a *karadji* initiation ritual may wish to use the event as a prelude to planned events in the campaign, perhaps running the ritual as an entire gaming session involving communication and interaction with the Dreamtime spirits.

Following the initiation ritual, a new *karadji* novice learns more details of his craft from the tribal elders and current *karadji*. He is not yet fully qualified and must usually wait a full year before first exercising his new powers. If this taboo is not kept, the power of the *maban* will desert him and he will be unable to perform as a *karadji*.

If a tribesman might seek guidance from a *karadji* on the meaning of a dream or other premonitory event, the GM can prepare a suitable statement in advance, couched as cryptically or as plainly as desired. If the GM knows the neighboring tribe will attack tomorrow, he can give an accurate and helpful warning, whereas if the events depend on player actions he can be more vague.

Magical Rituals

The following rituals are described in a generic fashion for use in any game, but are ordered and given statistics for use with the spirit magic system from **GURPS Spirits**. In all cases, the GM should customize any necessary details, such as the time required for the ritual, based on the description, if required. Notes are also given for how these abilities may be played in a realistic campaign, where magic does not work.

GURPS Mechanics

In **GURPS**, initiation into Aboriginal adulthood confers an advantage that may be called Aboriginal Initiation. It is worth 2 points, and is equivalent to Ritual Aptitude 5 (Path of the Aboriginal People only) (see p. SPI75). Such initiation is a prerequisite to learn the Path of the Aboriginal People, and to perform all of its rituals.

Initiation as a *karadji* confers the advantage Karadji Initiation, worth 5 points and equivalent to Ritual Aptitude 5. It is a prerequisite to learn the Path of the Karadji. *Karadji* also learn skills in Theology (Aboriginal), Sleight of Hand, Diagnosis, Weather Sense, Psychology, Fire Walking, and possibly Hypnosis as part of their training. A typical *karadji* will also likely possess some of: Charisma, Empathy, Reputation, Status, and Strong Will.

Non-Aboriginals may be able to learn Aboriginal magic, but will require the appropriate initiations. Aboriginal Initiation may be granted in rare cases, and will require an Unusual Background (Accepted as a member of a tribe), while *Karadji* Initiation is unlikely ever to be granted to a non-Aborigine.

The Path of the Aboriginal People

This path is available to any Aborigine who has undergone tribal initiation into adulthood.

Love Magic

Defaults to Path of the Aboriginal People

Love magic is commonly practiced by all adult Aborigines. The ritual is designed for two distinct purposes: To attract a marriage partner; or to attract a partner for a sexual liaison, possibly extra- marital. In any one geographic area, the same basic ritual is used for both purposes, but is performed publicly or privately as befits the intent. A few common forms of the love ritual are: singing over a piece of hair from the desired mate; dropping a string tied with feathers into the mate's basket; unwinding a string from the mate's campsite to one's own, then reeling it in; or performing a ceremony with a small bullroarer carved with two snakes and the totemic mark of the desired individual. Such rituals are said to induce irresistible desire in the target. Public rituals may attract a marriage partner through flattery and the expectations of the audience if there is no real magic, while failures of the private ritual are not discussed.

Sorcery

Defaults to Path of the Aboriginal People-4

Sorcery is the use of black magic to make a person sicken and die. Any Aborigine wishing to kill another person can use sorcery. Sorcery rituals vary but are often long and complex. A common example with minor variations is given here.

First the sorcerer must prepare in advance by observing certain taboos. While doing so, he prepares a pointing bone, carved from a ritually cleaned and scraped human, kangaroo, or emu femur, or sometimes simply a stylized stick. In some cases a string is attached, connecting to a small receptacle. During the ritual, the bone is ceremonially pointed at the victim, who is usually not physically present. Depending on the local tradition, this ritual either causes a poisoned bone or other object to enter the victim's body, or draws out blood, kidney fat, or the person's spirit into the receptacle. Either way, the victim now becomes sick. The bone may be buried, wrapped in emu feathers, for several months, resulting in a long illness. If the bone is heated by fire, the victim's condition becomes worse and when it is finally

burnt the victim dies.

There are many variations on this across the continent. Other notable methods of sorcery include enchanting a spear to inflict a lethal wound at the slightest scratch; creating a magical powder from the ground bones of a woman or a dried placenta, which is then either introduced to food or placed on the ground where the victim sleeps; making an effigy of the victim, either sculpted out of clay or beeswax, or made of tied grass or paperbark, which is stabbed or burnt. In some cases an object associated with the victim is required -- hair, nails, urine, food scraps, or anything belonging to the victim.

The victim of a sorcery attempt becomes aware of his problem when he becomes sick. Often the victim falls ill upon learning that he is the subject of sorcery -- sorcerers will actively try to make the victim aware that he has been targeted. An Aborigine who believes himself the target of sorcery can sicken and eventually die from no causes discernible to modern medicine apart from psychosomatic ones. Modern medicine thus has no cure and the victim's only hope is to obtain the aid of a *karadji*.

Thought Transference

Defaults to Path of the Aboriginal People

Aborigines can communicate by mystical means over long distances. In a typical example, a tribesman standing on a hill wishes to summon a friend, out hunting on the plain below, perhaps a mile or more away. He concentrates and, when his friend turns to look at him, says softly, "Come here, quickly." His friend does so.

In a realistic setting, this sort of communication is accomplished by subtle shifts in body posture, which Europeans overlook in their search for obvious gestures. In a fantastic game the power is real and might be used to send more complex messages, even to someone looking away or hidden behind a landscape feature (assess penalties for such extended uses).

- The Path of the Karadji

This path represents a deeper understanding of and connection with the spirit world, and is only available to people who have undergone the initiation ceremony to become a *karadji*.

Fast Traveling

Defaults to Path of the Karadji-2

Karadji can run at tremendous speeds for long distances without tiring. They can also appear almost instantly in another place after disappearing suddenly. Being tribal wanderers, most Aborigines naturally display good walking and running endurance, as well as camouflage and stealth skills which could contribute to European bewilderment. The powers of *karadji* in this field may stem from suggestive self-promotion and European exaggeration.

Healing and Easing of Death

Defaults to Path of the Karadji

A *karadji* will usually only be called on for healing purposes when it is clear that an illness is magical or spiritual in nature -- caused by the actions of a malevolent person or spirit. Injuries and mundane illnesses are tended to by the elder women of the tribe, who will administer standard herbal remedies.

Once a *karadji* has been summoned, he examines the patient. An experienced *karadji* knows the signs of various types of illness and the likelihood of recovery, given proper treatment. If he is confident the patient can be made to recover, he performs the healing ritual in front of witnesses. This usually involves ceremonial sleight of hand or mime to "extract" a poisoned bone, stick, stone, or "bad blood" from the patient, or to call for the wandering or stolen spirit to return. The patient gains confidence from this display of power and a renewed will to recover.

If, however, the *karadji*'s prognosis is that the patient will likely die, the ritual is different. It is a ritual to contact the spirits of the patient's departed relatives and learn why they wish to be rejoined with the patient. The *karadji* relays the spirits' messages to the patient, explaining that they are preventing him from performing the healing. He cries and bids the patient farewell, then summons the patient's relatives and friends to do the same. They comfort him in his final hours and so the *karadji*'s job of easing transition into the spirit world is done.

Karadji Sight

Defaults to Path of the Karadji

A *karadji*'s power of sight is not limited like most people's. He can see things at great distances, or which are hidden from view. He can look inside and through people's bodies and minds, and can see a person's thoughts -- not only current thoughts but those of the past as well. The reading of minds is considered an aspect of this visual power by the Aborigines. Such sights are usually produced by deliberate meditation, or perhaps a dream ritual in sleep, but may also come involuntarily. In a realistic game this is a manifestation of the *karadji*'s wisdom and empathic perception of human relationships and the environment. With real magic, the *karadji*'s spirit or totem familiar travels and allows the *karadji* to see distant places. In either case, it is a power beyond the ability of the average tribesman.

The Magic Rope

Defaults to Path of the Karadji-3

At initiation, a *karadji* is imbued with a magical rope which resides in his body. It is invisible, but able to be extracted and used at any time like a real rope. The rope is typically used to support the *karadji* in the air, or from a tree in an impossible position. It can also be used to reach upwards and ascend to the sky-world to commune with the spirits that live there. In a realistic setting this is merely a conceit promoted by the *karadji* and believed by the tribe (and probably by himself, though in a less literal sense).

Rain Making

Defaults to Path of the Karadji-4

In a land where drought is common, the power of rain-making is an important one. A *karadji* usually consents to making rain only when the tribe agrees it is necessary. A typical ritual involves singing over mother-of-pearl or small white stones to attract the attention of the Rainbow Serpent. The *karadji* performs sympathetic actions such as spitting or drawing blood and letting it drip on the ground. Some *karadji* use their magical rope to climb to the sky and obtain rain directly. In a world without magic, the *karadji*'s insistence on waiting for the right time to perform this ritual is based on good weather sense.

Ritual of Inquest

Defaults to Path of the Karadji

Death is the passage of the incarnated spirit which is a human back to the spirit world of the Dreamtime. Such a spirit may later be incarnated again, but the immediate loss is mourned with an outpouring of grief by the tribe.

Death is seldom regarded as entirely natural, except for the aged. The usual assumption is that death is caused by an active agent, either a spirit or by sorcery. Even when the immediate cause of death is, say, a crocodile attack or a fight, it is assumed that a hostile being has magically arranged for the victim to be in the "wrong place at the wrong time." Accordingly, deaths are normally followed by a ritual inquest to determine the guilty party. This involves examining the ground around the grave site or parts of the victim's body for mystical signs, and interpreting them. Often a totem is indicated, which might refer to a group of people. In many cases the identification of a group or individual responsible is enough -- emotions have cooled during the lengthy rituals and knowledge may be all the closure required. Revenge takes place rarely, and may lead to ongoing feuds or inter-tribal warfare.

The Strong Eye

Defaults to Path of the Karadji

The strong eye is the ability to see spirits, of the living and the dead. In some traditions this power is used to diagnose the sick, since spirits sometimes wander freely or are drawn from the body by sorcery, thus causing illness. More commonly it is used after a death by sorcery, to divine the murderer. The *karadji* uses his strong eye to look for the spirit of the dead person around the murderer, or the spirit of the murderer around the victim. Without magic, the *karadji's* knowledge of the tribal group dynamics may suggest a suspect. It is likely that someone who wished ill of the dead person, but did not take conscious action against him, will come to believe he *unconsciously* caused the victim's death and, if accused by the *karadji*, will not profess innocence. In a magical campaign, the strong eye is naturally even more reliable.

Strong Thought Transference

Defaults to Path of the Karadji-2

This is a stronger version of Thought Transference. The *karadji* typically fixes the gaze of a subject with his and bends the person's will to his own. The subject can be made to behave responsibly rather than carry out mischief. This can be played as assertion of authority or simple hypnotism, or it can be a fully-fledged magical form of suggestion, with the possibility of using it for evil.

Walking on Fire

Defaults to Path of the Karadji-4

The skill of fire walking, known to exist in our mundane world, is practiced by *karadji* as a demonstration of magical power. Related to this is the more mystical ability of projecting flame from the body, setting fire to objects at a distance. It is difficult to justify this in a non-magical campaign without resorting to some deliberate trickery, but it could be a real ability in a fantastic setting.

Using Aboriginal Magic in a Game

Aboriginal magic can be used in two styles of game: pre-contact stone age, and European colonial. Resources for a stone age game can be found in ***GURPS Dinosaurs*** and ***GURPS Low-Tech***. Possible campaign themes include the struggle against nature and the harsh climate, conflict with neighboring tribes, exploration of new territory, or trading with other communities.

A colonial campaign will most likely pit Aborigines against Europeans as the major source of conflict. The Europeans have access to higher technology, so the Aborigines might need the benefit of their magic. ***GURPS Age of Napoleon*** and ***GURPS Old West*** are set in the appropriate time period, so can be used as guidelines for technology and colonial attitudes, though they provide no information on Australia. The excellent adventure "The Son of Cheeroonear" ([Part 1](#) and [Part 2](#)) is set in colonial Australia and could provide a starting point for a campaign.

An interesting campaign could be built around the first contact of stone age Aborigines with colonizing Europeans. Communications difficulties, misunderstandings of intent, and potential hostilities will occur initially. As the Europeans settle in to the strange new world, they will face crop failures in the unfamiliar climate and will need to negotiate for help from the natives. Amid this tapestry, many stories can be told: the missionaries aiming to learn from the tribes and teach them Christianity; the explorers breaking new ground and coming across new tribes; the natives simply trying to understand it all and using their magic as a means of preserving their world.

The incessant rainfall creates a dark and disturbing atmosphere when he discovers active tribal magic at work and a prophecy of Armageddon by water.

Parallel Plots and Multitrack Games

by William H. Stoddard

Movies and television are one of the most common models for running roleplaying games. Sometimes it's the content that's the model, with campaigns set in the world of *Star Wars* or *Buffy The Vampire Slayer*. Sometimes it's the style, with "cinematic" games that offer fast-paced action and hypercompetent, colorful characters. But sometimes it's the vocabulary and the storytelling technique. If a roleplayer says "cliffhanger" or "fade to black" or "special effects," everyone understands what that means in a game setting.

But there are other cinematic techniques that aren't exploited in games as often . . . and some of them can be useful additions to a GM's repertoire. One of these is cross-cutting. In film, this means that the camera follows one character or group of characters through a number of actions, and then another camera follows another group of characters through a set of parallel actions. The point of view shifts back and forth when one group's actions depend on the results of another group's actions, or when one track has reached a point of high suspense.

Roleplaying gamers are cautious about this sort of thing. "Dividing the party" is usually considered bad; everyone has seen horror movies where the character who goes off alone becomes monster bait. And many players dislike having sequences where their characters aren't involved in the action. But there are payoffs for running games with multiple plot tracks, for a GM who's willing to learn the techniques involved.

Problems to Be Solved

The biggest single issue raised by multiple plot tracks is making sure everyone gets play time. The big payoff of roleplaying, for most people, is getting to describe their characters' actions or speak their lines. There's no more effective way to produce unhappy players than making them sit and watch while somebody else's characters do everything. Theater and film give us a lot of expressions for this: upstaging, being in the spotlight, having camera time, and so on. To run a multiple-track game, a GM needs to keep track of who's on camera, and how long, and shift the point of view to other characters. Ideally, every character should have extended camera time in every session; most players can tolerate going short in one session, but two in a row is asking for trouble.

Of course, single-track games aren't a total cure for this problem, either. Many gamers have experienced sitting through long sessions, not getting to say or do anything, because their fellow gamers who talk faster or louder or know the GM better are getting in first. Multiple-track gaming can actually help solve that problem; sending a less vocal player's character off alone can help the character emerge into visibility and give the player more play time.

The other big problem is making the game interesting to players whose characters are not involved in the current action. Some players enjoy watching what other players do, especially if the other players are good roleplayers (or suffer entertaining mishaps!); some find it tedious. Two basic guidelines will minimize the strain on such players' patience:

- Keep it short! (At least until the players are used to crosscuts, and until the GM has tested the players' tolerance.)
- As much as possible, have separate action sequences affect the fate of the other players. If Fred's thief or ranger is sneaking into the enemy camp to overhear their plans, it's a lot more interesting than if he's going to church to confess and receive the sacraments. (Though perhaps not any more entertaining, depending on how good Fred's roleplaying is.)

For players with known levels of tolerance for separate action, various approaches are possible:

How Far Can You Go?

Solo Mission. One adventurer (or a small group) has to descend into a pit while the others hold the ropes, or visit a noble patron and brace him for funding. The separate action lasts only until the specific task is accomplished. This is an easy sell, if it's done infrequently: the solo mission is obviously relevant to the team's overall goals, and it's a special case that doesn't come up very often. Many players will enjoy the extra challenge once in a while.

Prologue. Before the campaign proper starts, each character goes through an introductory sequence that shows how he got involved in the team and/or the plotline. Players gain familiarity with the world and with each other's characters. White Wolf Games strongly encourage prologue sequences in most of their game systems, and they work well in character-driven or storytelling campaigns. Given the assurance that everyone will be together when the prologue ends, many players will find this a natural extension of character creation, especially if character survival through the prologue is guaranteed (usually a good idea).

A Day in the Life. As a special exception in a continuing campaign, give the players a session devoted to their characters' personal business. If they want to stay together, they can; if they want to wander off by themselves, they can do that too. Everyone gets equal camera time, whether their actions are important or trivial. This is a way of getting to know the characters better, and of lowering the tension, especially after a major conflict. Strongly action-oriented players may not enjoy this; others often find such sessions memorable, especially if they have only one in a campaign.

Tactical Division of Forces. Put the characters in a situation where they have to accomplish two or three things at once, forcing them to split up. Follow each subgroup as they pursue their separate goal. If possible, divide each subgroup's action into two or three phases, and crosscut to the next group in between tasks. Among other advantages, this gives the GM a little more time to think about how to handle each group's adversaries or challenges! This is an action-oriented approach to dividing the party; the main issue is whether the players trust that splitting up won't get their characters killed by excessively challenging foes.

Branching Campaign. It actually is possible to run an entire campaign where all the player characters never get together, or where they do so only in the final confrontation (assuming the campaign is planned to terminate at a specific point). For this to work, the player characters have to have a common focus of attention; possible examples are a goal they are all pursuing (perhaps as rivals), a problem they all have to solve, or a fairly small area they all inhabit. Each character's actions should affect the other characters in various ways and make the times when they do meet meaningful.

This is the hardest kind of multitrack gaming, not least in keeping the attention to various player characters in balance. If the player characters aren't all together, they probably won't all be doing interesting things at the same time; the GM needs to watch for players who are getting skipped and think of situations to inflict on them. The GM also needs to watch for actions of one player character that affect another player character; for example, a police officer's raid on a sacrificial ritual conducted by worshippers of some dark elder god could result in a new investigative assignment for a reporter.

Keeping Secrets

One of the big questions about running separate action sequences is whether the players whose characters aren't involved should get to watch. A common practice is to say to one player, "Let's step outside," and then privately resolve the character's actions, telling the other players only whatever results their characters see. This works neatly for solo missions, but in a branching campaign, it's awkward to spend every moment of play with some players in a waiting room while others are in the GM's office.

One somewhat radical answer to this is not to try to do things privately. Let every player witness everything that happens to other characters. Players have to understand the difference between what they know and what their characters know, and not push at the boundaries to gain advantages . . . or be willing to back off when the GM or another player spots them doing so. But in return, they gain a fuller view of unfolding events; in effect, they get to see the whole movie, not just the scenes shot by one camera. This is particularly important for "day in the life" sessions,

where much of the enjoyment is seeing what kinds of things other adventurers do when they're not adventuring.

One trick that can help with this is to have each player run two or more characters -- perhaps one main character and the sidekick or confidant of another player's main character. This increases the fraction of play time that each player (as opposed to character) is on camera. And if a player's two characters have different loyalties, the player is less tempted to be partial to one side in a conflict. This approach isn't quite the same as the troupe-style play that *Ars Magica* pioneered, but certainly is compatible with it.

The "no secrets" style isn't for everyone; a few players can't or won't maintain the separation, and others find it distracting to do so. Since a branching campaign almost has to rely on this style (at least in tabletop games; a live action game with multiple GMs is a different story), it's best not to start out at that level. Run something shorter term such as a "day in the life" episode and see if the players like it.

Ideas

So suppose you want to follow this approach in a campaign. What kinds of things could you do? Here are a few specific examples:

Masquerade. The player characters' employers or patrons have identified the source of many recent troubles: a hidden conspiracy of wealthy aristocrats, crime bosses, powerful wizards, or whatever else fits the setting. But they need more information before they can strike back. One of the player characters is asked to assume a false name and seek recruitment as a new agent. Naturally, if anyone uncovers his real purposes, he's in deep trouble.

Circus of Madness. A classic superheroic motif is sending a hero team to the circus . . . as performers. In a superheroic world, there is a traveling circus that's more than it seems; it's run by mutants, or ancient mystical beings, or someone else with mind control powers. Some members of a superhero team either go to it voluntarily or are led there by a trail of evidence. They get their memories erased and take their place in the circus as performers (in the freak show, for the more exotic ones). Eventually they'll regain their memories, or their teammates will come and get them out; but once the framework is established, it's a perfect chance for a "day in the life" session with the heroes living different, "might-have-been" lives.

Succession Wars. The ruler of a medieval kingdom has just died, and his heirs are disputing the right to succeed him. As a campaign episode, this can draw in a group of adventurers as agents or allies of one or more factions. As a campaign theme, perhaps the adventurers are the heirs, or the heirs and their best friends. For a simple example, a two-person campaign might have one person portraying the son of a dead king and the trusted advisor of the king's successor, his younger brother; another person might portray the successor himself and the son's best friend and confidant.

Aftermath. Civilization is collapsing, and Roman Britain has been left on its own. One of Rome's legions is abandoned there, cut off from pay and any higher command structure, and struggling to survive; and Britain's native Celtic aristocracy, partly romanized but still with their own traditions, are reclaiming the right to rule Britain in their own name. Heroes in both factions are involved in a common story, based on a common catastrophe, and they'll certainly affect each other, but they may not have the same agenda for Britain's future.

Merian C. Cooper

by James L. Cambias

History

Merian C. Cooper's life was a **GURPS Cliffhangers** campaign. Born to an affluent family in Florida in 1893, he spent a couple of years at the Naval Academy before going into journalism. When the U.S. began expanding its armed forces in 1915, his National Guard unit was called up and Cooper was selected for training as a pilot. He saw service in Mexico, and then in France after the U.S. entered WWI. In September 1918 he was shot down behind German lines, and the Armistice found him still in a German military hospital recovering from severe burns to his face and hands.

The very next year he went to Poland with the American relief operation there, then helped organize the volunteer Kosciuszko Squadron, fighting in the Polish war against Soviet Russia. It was in Poland that Cooper met his lifelong friend and collaborator Ernest B. Schoedsack, who was there with the Red Cross. Cooper commanded the aviation unit at the siege of Kiev in 1920, but later was captured by the Bolsheviks and imprisoned in Moscow. With two other Polish officers, Cooper escaped and made his way to Latvia.

After his stint in Poland and Russia, Cooper went back to journalism as a reporter for *The New York Times* in 1920-21. His particular beat was eastern Europe and the Middle East. After finishing work at the *Times* each afternoon Cooper spent hours at the American Geographic Society headquarters in New York, poring over maps of exotic lands and learning techniques of mapping and surveying.

The following year he joined Captain Edward Salisbury's expedition to the Indian Ocean, where he and Schoedsack planned their own journey to a remote region of Iran where traditional nomad tribes still preserved their ancient migratory way of life. They raised funds to make a movie of their expedition, and contacted the explorer (and occasional spy) Margaret Harrison to come along. The film they made, *Grass*, was released by Paramount in 1924 and immediately established Cooper as a hot property in Hollywood.

Cooper and Schoedsack went to Thailand for their second movie, *Chang*, about elephant herders in the jungle. He met Prince Yugol, younger brother of the King of Thailand, and they remained friends for decades afterward. After *Chang*, the pair went to the Sudan and Ethiopia to film *The Four Feathers*.

After *The Four Feathers*, Cooper took a break from moviemaking and switched to the aviation business for a time. He invested a lot of what he had made from his movies in a new company called Pan American Airlines. He served on the board of Pan Am until 1936.

In 1931 Cooper returned to Hollywood as Director of Production for RKO Studios. There he made dozens of movies, including his masterpiece *King Kong*. His frantic pace slowed in 1933 after a heart attack, and he left RKO in 1934 to go on a year-long honeymoon with his new bride Dorothy Jordan. On

Other GURPS Settings

GURPS Traveller/GURPS

Space: With a few minor alterations, globe-trotting moviemaker Merian Cooper can become a star-hopping holo documentary producer. Turn his flying skills into Astrogation, Piloting (starship), and add Vacc Suit for a spaceworthy Cooper. He could be a veteran of the Imperial Navy or Scout Service. Either way, he can turn up in any starport bar looking for some old friends willing to join an expedition.

GURPS Time Travel: It's a safe bet that the man who brought the world King Kong would jump at the chance to get footage of real live dinosaurs. A slightly redesigned Cooper could be a video producer risking life and limb in any number of past eras. Change his aviation skills into Parachronics and give him Area Knowledge for lots of past times and places. Alternately, use the historical Cooper described here as the leader of a 1930s Weird Science time travel expedition.

Illuminated Cooper

Cooper's connections among America's business elite make him a natural operative for the Anglo-American Insiders or the

his return he made a few more pictures for RKO, and put together the immortal dance team of Fred Astaire and Ginger Rogers.

In 1935 he left RKO and worked for David O. Selznick, producing many of John Ford's great Westerns. He also got involved in the company developing the Technicolor film process.

With the coming of war in Europe, Cooper sold his aviation interests and rejoined the Army Air Force in 1940. He spent a year traveling as a civilian before officially reenlisting in early 1941. Assigned to India, he flew refugees out of the areas occupied by Japan, then became the intelligence chief for the Army Air Force in China. In 1943 he was transferred to New Guinea, and was aboard the battleship *Missouri* for the Japanese surrender. He ended the war as a colonel but became a Brigadier General in the Air Force Reserve in 1950 upon retiring.

During the 1950s Cooper produced more John Ford movies, and helped develop the wide-screen Cinerama process. He got a special Academy Award for his many innovations in the field in 1952. He retired from the movie business after 1960, and remained fairly active until his death in 1973.

Encountering Cooper

Merian Cooper's globe-trotting habits and wide circle of acquaintances mean he can turn up almost anywhere and meet almost any characters in a **GURPS Cliffhangers** or **Atomic Horror campaign**. As late as 1968 he traveled widely.

In the campaign he can function in several different roles. His business connections at RKO and Pan Am make him suitable as a Patron -- while the resources at his disposal are relatively modest, he has substantial "reach," making him worth a base 15 points. His strong loyalty to friends means he's perfectly capable of leading a rescue expedition himself if characters working for him get into trouble. During World War II he could be commanding PCs doing special reconnaissance or espionage work.

More independent characters can have Cooper as an Ally or Contact -- as a Contact he probably should count double because he has a foot in both Hollywood and the aviation industry. He could even be a player-character in a historical game.

Merian C. Cooper in GURPS

Lived 1893-1973.

ST: 10 [0] **DX:** 12 [20] **IQ** 12 [20] **HT** 12 [20].
Move 6.

Advantages: Ally (Ernest B. Schoedsack, 150-point character, quite often) [20]; Charisma +1 [5]; Composed [5]; Contact (David O. Selznick, studio president, fairly often) [4]; Contact (Juan Trippe, president of Pan Am, fairly often) [4]; Contact (Lowell Thomas, newsreel journalist, fairly often) [3]; Courtesy Rank 4 (Captain, US Army Air Corps Reserve) [4]; Patron (Jock Whitney or RKO Studio, powerful individual/group, quite often) [20]; Status 2 [10]; Versatile [5]; Wealth (Comfortable) [10].

Disadvantages: Code of Honor (Gentleman's) [-10]; Hard of Hearing [-10]; Reduced Manual Dexterity -2 [-6]; Sense

Gnomes of Zurich. In this light, his film expedition to Iraq and Persia (the homeland of the Assassins) at a time when American oil interests were beginning to supplant British firms there is highly suggestive. It's also noteworthy that he was on an expedition exploring the Indian Ocean -- the very place he put King Kong's island home. Just how fictional was Kong?

It's also interesting to note that Cooper rejoined the Air Corps fully a year before Pearl Harbor, and immediately did a lot of traveling. With his Middle Eastern and Southeast Asian experience and his knowledge of photo reconnaissance, Cooper may well have been gathering intelligence for America's growing military. In a less prosaic campaign, Cooper would be a great operative for the nascent OSS to send after occult treasures or ancient mysteries. (He's a dead solid perfect commanding officer for an Asian-based "Detachment 23" campaign, as outlined in **GURPS Weird War II**.)

of Duty (friends) [-5]; Workaholic [-5].

Quirks: Bored by desk work [-1]; Congenial [-1]; Fascinated by new technologies [-1]; Never without his pipe [-1].

Point total: 155

Equipment

On his expeditions, Cooper is equipped with a hand-cranked movie camera, a still camera, and a pistol. In Hollywood or New York he dresses like the successful businessman he is. He always has a pipe and tobacco.

This is Merian Cooper about 1930, a successful documentary director and explorer. His Hard of Hearing disadvantage reflects a common problem for open-cockpit fliers, and his Reduced Manual Dexterity is the result of serious burns during World War I. His languages are conjectural, based on places he spent considerable time in.

In the following decade his wealth increases to Wealthy and he gains a +1 Reputation as a well-known movie director and producer; he also gains his wife as a Dependent and his HT drops to 10. During World War II his wealth drops back down to Comfortable, he gains Military Rank 5, improved Strategy, a smattering of Chinese, and the Intelligence Analysis skill, along with a Duty to the Army Air Force.

After the war his physical attributes start to decline with age, but he regains his Wealthy advantage. At any time during his life he could have many more Contacts -- Cooper was extremely well-connected in many segments of society (the New York business world, old Southern families, Hollywood, the military, the aviation business, and probably others).

Class Action: The Cozener

"Trust Me On This . . ."

by Phil Masters

Adventurers' worlds are full of all manner of dubious characters, whose techniques and tactics range from the crude to the subtle. This article describes a prestige class for characters who choose to concentrate at the subtle end of the scale. In Elizabethan London, con artists were called "cony-catchers"; a "cony" is a rabbit, and also slang for a confidence trickster's victim, especially the sort of rural gentleman, up in town for the first time, who makes such tempting prey. This may be used as an alternative, more colorful name for the character class.

The Cozener Prestige Class

A cozener is primarily a confidence trickster and expert in non-violent crime. While many of these people are ruthless if nonviolent criminals, the category also encompasses clever spies, "honorable fixers" who use wits and cunning to balance out social injustices, and all sorts of professionals who specialize in greasing the wheels of society, sometimes even legally. In settings dominated by excessive laws and mutually hostile factions, a "cozener" may actually be an invaluable arranger, persuading other people to do what's in everyone's interests despite pointless rules or old suspicions.

Attributes

At first glance, cozeners may seem to be merely rogues, and most (though not all) started in that basic class, and share most of its attitudes and tendencies, albeit with a fast-talking, quick-witted sort of twist. However, a cozener has much more of a focus on intellectual, social, and verbal skills than on physical violence or snatch and grab. (Of course, surviving on the streets, and sometimes having to deal with angry victims who prove quicker than expected, a cozener may also possess some significant competence with weapons.) Cozeners may also become quite adept at other ways of turning a non-violent but questionable profit. They are adept at judging potential victims; because they not only rely on trickery for their livelihood, but risk extreme and often terminal retribution if they are caught, they are *especially* good at judging whether or not a trick has succeeded.

Background

Cozeners need a little bit of education and passable manners, so probably only a minority of them grew up in the lowest depths of the gutter. Failed priests, fallen gentlefolk, and witty street kids who somehow talked their way in and out of partial educations, can all end up in this career. While few have previously concentrated on raw combat skills, some have past training in arcane magic, having decided that they could achieve more by trickery and misdirection than by the hard work of mastering magical forces.

Personality

Cozeners have to have a knack for charming people, either by overt good manners and style, or by cultivating a more subtle aura of trustworthiness. The outright, ruthless criminals among them are cold-hearted manipulators whose behavior never reveals their true nature; others may be more genuinely likable and even possess some kind of private sense of honor, although it's unwise to trust them with your money unless you know them *very* well.

In settings where such things are significant, cozeners can be of any alignment, but their activities tend to the chaotic - especially if they are good. If they are lawful, they are usually also distinctly evil; a few of them are involved in organized crime of a sort. Good cozeners may either be highly skilled secret agents working for some specific faction,

or "Robin Hood" types using words rather than weapons to extract funds from the rich to help the poor.

Religion: In worlds where the existence of deities is taken as plain fact, cozeners mostly combine lip service to the formalities of faith with a nervous caution about the actual higher powers. However, they aren't great churchgoers, as a rule; being fully aware of the arts of verbal trickery, they tend to be cynical about the sayings and claims of priests. (Sometimes impersonating priests themselves, they mutter that it's too easy.) In a Christian-ruled setting, they go to church on some Sundays; in polytheistic fantasy worlds, they will worship whichever god seems to have the most flexible rules. Fortunately for them, in the latter case, they can often find trickster gods to revere.

Adventuring

Cozeners are natural adventurers -- of a sort. They don't much like fighting, but sometimes, in their uncertain world, violence is unavoidable. Anyway, a good, subtle scam may demand all sorts of prior preparation, or picking up the payoff may involve something complicated. Adventuring parties may welcome a cozener, if they decide that they can trust him; someone who knows how to talk his way out of trouble without violence, or who can raise funds by glib words and a sharp eye, can often be useful.

Table 1: The Cozener Level Progression

Lvl	Base Attack Bonus	Fort Save	Ref Save	Will Save	Special
1	+0	+0	+1	+1	Judging the mark
2	+1	+0	+2	+1	Knowing the games
3	+1	+1	+3	+1	Reading the mark
4	+2	+1	+3	+2	Double or quits
5	+2	+1	+3	+2	Extra class skills
6	+3	+2	+4	+3	Trustworthiness (casual bluff)
7	+3	+2	+4	+3	Extra class skills
8	+4	+2	+4	+4	Trustworthiness (silent bluff)
9	+4	+3	+4	+5	Extra class skills
10	+5	+3	+5	+5	Trustworthiness (on sight)

Class Rules

The game rules for playing a cozener are listed below.

Requirements

To qualify for this class, a character must fulfill all the following criteria:

Literacy: The character must be literate.

Skills: 3 ranks in Appraise, 5 ranks in Bluff, 4 ranks in Diplomacy, 1 rank in Listen, 4 ranks in Sense Motive, 1 rank in Spot.

Abilities

Charisma is the key to success as a cozener, supported by Intelligence to run complex games, and maybe Dexterity for effective sleight of hand. A successful minority also have the Wisdom to know when to back off.

Race

Confidence trickery requires quick wits, charm, and some self-control. In game worlds where multiple races exist, half-elves, halflings, and gnomes may do well in this career, and half-orc cozeners may be able to exploit their own reputation for stupidity, but dwarves and elves *usually* lack the necessary flexibility and empathy with humans. Still, there are always exceptions to such rules.

Other Classes

Cozeners get along with rogues, but clever tricksters tend to secretly regard "ordinary" footpads and burglars as unsubtle thugs. They don't mind fighters and the like, providing that the fighters don't try to throw their weight around. They are prone to addressing clerics and other priests with too much cynicism (unless currently running a game on them), seeing them as the biggest professional liars of all, but may be persuaded to act otherwise. Cozeners treat wizards and sorcerers cautiously, as a potential source of great profit, interesting options, and deadly danger.

Health

In games using hit points, cozeners use d6 for their hit dice. In games using variant health systems, they should follow the guidelines for rogues (or the nearest equivalent).

Skills

The cozener's class skills (and the key ability for each skill) are Appraise (Int), Bluff (Cha), Diplomacy (Cha), Disguise (Cha), Forgery (Int), Gather Information (Cha), Hide (Dex), Innuendo (Wis), Intimidate (Cha), Listen (Wis), Move Silently (Dex), Oratory (Cha), Perform (Cha), Pick Pocket (Dex), Read Lips (Int), Search (Int), Sense Motive (Wis), and Spot (Wis). As they advance in level, cozeners gain extra class skills; see below.

Skill Points at Each Level: 8 + Int modifier.

Weapons and Armor

Cozeners can employ whatever weapons and armor their previous classes made them proficient with. Although they quite often do wear at least light, simple weapons and armor, in case of emergencies, they don't *habitually* study combat beyond that (although a few acquire further proficiencies as feats, if only to look more credible when pretending to be gentlemen with swords at their sides). However, cozeners are keenly aware that heavy armaments tend to frighten off potential victims.

Special Abilities

Judging the Mark: All cozeners depend on being able to select wealthy, gullible victims. There's little point in conning a poor man, after all, and some targets require special care, or should just be avoided altogether. Thus, any cozener learns to size people up accurately at a glance. To use this ability, the cozener must observe the subject for a period equal to (16 minus levels in the cozener class) seconds, from within ten yards. Roll Sense Motive against a DC equal to the subject's Charisma to get a general sense of their personality and mood, Appraise (with standard DC values) to evaluate their clothes and any jewelry or similar they are wearing, Listen to identify their accent if they are speaking (base DC 12, modified for short or long speeches, background noise, etc., at the DM's discretion), and Spot to notice anything odd about them, any possible hints as to their origins, and whether they are wearing a disguise (DC at the DM's option). Any character can attempt this sort of thing with a little thought, of course, but cozeners do it quickly and almost automatically.

Knowing the Games: Cozeners know all about lying, and hence spot it more easily. From 2nd level onwards, a cozener can add half his level as a cozener to any Sense Motive roll which is made to oppose a Bluff attempt (but not for other uses of Sense Motive). The character may also add the same bonus to any other roll to recognize standard confidence tricks and similar lies, at the DM's option.

Reading the Mark: Cozeners have to learn to recognize whether or not their lies are being believed. At 3rd level, the cozener gains the ability to make a Sense Motive check *immediately* after making a Bluff or Diplomacy check, to determine whether the first skill used was successful, or whether the intended victim is just playing along. This is opposed by the victim's own Bluff check if the skill failed, or is DC 10 otherwise. (Other characters can try similar observations, but usually have to take a moment to assess the victim's responses; the cozener can tell straight away if the speech worked.) Note that most sensible cozeners will usually keep a lie going for a moment, even after it has failed, as this usually helps cover an attempt at escape or other backup plans.

Double or Quits: A cozener of 4th level or higher whose speeches are not believed due to a failed Bluff or Diplomacy check can attempt to turn the problem round and convince the victim that he was wrong after all, despite his suspicions. This permits *one* retry for failed uses of these skills, at a -5 penalty, contrary to the usual rules.

Extra Class Skills: Cozeners take their profits where they find them, sometimes even through honest employment, and learn a bit here and there about the way things work. At 5th, 7th, and 9th levels, a cozener can add any two skills normally available to other classes in the campaign to his list of class skills. He still has to pay skill points to learn them, but at the lower rate.

Trustworthiness: Practiced cozeners have such fluent, natural charm that they barely have to try to convince strangers of their honesty. At 6th level, the cozener can make another person trust him without saying or doing anything that looks at all like an attempt to inspire trust, just by manner; this requires a Bluff check with a -3 modifier. At 8th level, the cozener can achieve a similar result without even saying *anything*, at least directly to the intended victim, just by adopting body language and expressions which somehow inspire trust; the Bluff check for this is at -5. And at 10th level, a cozener can simply walk into a room and somehow have the strangers there immediately take him for an upright, honest fellow, albeit after making a Bluff check at -8. Note that none of this is magical; the victims get to make Sense Motive checks to oppose the trick, and they will change their minds (albeit perhaps unhappily) if presented with strong evidence of the cozener's dishonesty. They are simply induced to form a strongly favorable first impression.

New Skill

Oratory

This is the skill of delivering stirring or persuasive speeches to large audiences, holding people's attention, and convincing them to believe in (or fight for) you. It isn't actually magical, and can't convince people to do the impossible or to switch allegiances in the middle of a fight -- apart from anything else, the user has to speak more or less uninterrupted for some time to achieve a result -- but with a good enough roll, a fine orator can achieve impressive results.

Check: Roll once per short, simple speech (no more than about five minutes, and usually delivering just one straightforward idea), at the end. For longer or more complex speeches, roll after every five minutes, and again at the end, to see how the speech is going, and take an average of all the rolls at the end to assess the overall effect. The DC depends on the task in hand: 10 to hearten willing troops before battle, or to make a point to a mass meeting where most people broadly agree with you already, 15 to convince worried troops facing seemingly superior foes to rally and make a stand at some defensible point, or to make people who disagree with you at least *think* about your point of view, 20 to sway a large group over to your side temporarily or to make retreating troops rally in the face of the foe, and 30 or more to persuade a small force to make a near-suicidal charge or to induce widespread changes of political allegiance. Add +5 to the DC if your audience actively dislikes you, and +10 if they are on the point of throwing things at you. Public political or theological arguments may sometimes be resolved by opposed uses of Oratory.

Retry: If you fail with a short, simple speech, you may be able to try again (assuming that your audience hasn't turned physically hostile or wandered off), but with +10 to DC. If you roll a failure while making a longer speech, make an Int-based roll with DC 15 to realize; you can then either carry on and hope that your subsequent efforts compensate, or go back over the previous point in an attempt to improve your effect, re-rolling at +5 DC.

Special: If you have 5 or more ranks in any type of Perform skill related to speech or singing, you get a +2 synergy bonus on Oratory checks.

The Talented Mister Reilly

"James Bond is just a piece of nonsense I dreamed up. He's not a Sidney Reilly, you know!"

-- Ian Fleming, to Robin Bruce Lockhart, author of *Reilly: Ace of Spies*

There are those who say that James Bond is more than just nonsense -- that he is a living myth, as real as Superman or Sherlock Holmes or John F. Kennedy. But there's nothing but fiction written about him, people will protest. It's all romance and reverie, smoke and mirrors; Bond is just an invention. Of course, one could say much the same thing about Bond's putative model, Sidney Reilly, the "ace of spies." Except that Reilly seems even more fictional, even more of an invention, than Bond does. To resolve such a riddle, one traditionally begins at the beginning. Which Sidney Reilly invented . . .

"It should by now come as no surprise that the surviving Foreign Agency [Okhrana] records from this period contain no mention whatsoever of Salomon or Sigmund Rosenblum, or any name even close. Nor does his name, as either Rosenblum or Reilly, obviously show up in the massive and elaborately cross-referenced card index compiled by the Paris office right up to 1917."

-- Richard B. Spence, *Trust No One: The Secret World of Sidney Reilly*

Most biographies of Reilly give his "real name" as Sigmund Rosenblum, and confidently assert that he was born on March 24, 1874, in the city of Odessa, in the Ukraine. This depends jointly on the testimony of Reilly and the OGPU - two less than reliable sources. Rather more careful biographies, such as the Spence effort cited above (the only biography of Reilly written by a professional historian) tend toward the theory that Reilly was born Salomon Rosenblum in a provincial city of Russian Poland, perhaps Grodno, likely in 1874. However, as Spence admits in frustration, there is no solid evidence for Reilly's existence *anywhere* before he turns up in 1895 on a dock in Portsmouth, England, using the name Sigmund Rosenblum, with a small fortune in his pocket and some professional training in chemistry. The "Rosenblum" identity may be one that Reilly (who probably was a Russian Jew of some sort, although he also claimed Irish birth) borrowed from any one of the millions of refugees from Czarism who choked the ports and university towns of Europe in the late 19th century.

Reilly later claimed to have been sponsored by one Major Fothergill, whose life he had saved in [the Brazilian interior](#), where Reilly had fled after faking a suicide in Odessa to escape the Okhrana. Spence inclines to the theory that Reilly had hooked up with Russian anarchist sects either in Odessa or Paris, become a double agent, and then double-crossed the Okhrana and absconded with its payroll. Either way, he soon showed a remarkable affinity for duplicity, working with Polish bibliophile and antiquarian Wilfrid Voynich to "discover" unknown medieval manuscripts (chemical training being quite useful in forgery), romancing Voynich's wife Ethel (the daughter of the mathematician George Boole), and fingering the occasional anarchist for Scotland Yard.

All three hobbies -- art, adultery, and espionage -- stuck with him. Reilly collected art and rare books his whole life, with special attention to works related to Napoleon Bonaparte. He graduated from Ethel Voynich to one Margaret Reilly Callahan Thomas, and married her immediately upon the mysterious death of her elderly (and wealthy) husband, taking her grandfather's name as his own. During the pre-war era, Reilly traveled widely on the Continent, in Russia (where he bigamously married another man's wife) and China (where he may have gained the enmity of the [Black Dragon Society](#)), and eventually to the United States. These trips resembled nothing so much as a series of "long cons," enmeshing the criminal and espionage underworlds of three continents in mysterious arms deals involving several governments and the infamous "merchant of death" (and alleged Satanist) Sir Basil Zaharoff, who like Reilly seemingly had no past.

"It's sometimes easier to bribe armies than it is to shoot them."

-- Sidney Reilly (Sam Neill) in *Reilly: Ace of Spies*, "Gambit"

Through Zaharoff and his other connections, Reilly prospered in America, selling phony or antiquated arms to the Russian government, and hiring German spies to destroy them before the fraud was revealed. But the Russian Revolution changed all that; Reilly's old contacts were purged or exiled, and America's entry into the war energized

U.S. MID investigation into Reilly's scams. He had to fall back on his friends in the British government. By January of 1918, at the very latest, Sidney Reilly was agent ST.1 of the British Secret Intelligence Service (later MI-6). Ironically, almost the only hard facts we have about Reilly's life and career come from the four years he spent formally working as a British spy.

The pinnacle of that career came that summer -- Reilly was sent on a mission to evaluate the new Bolshevik government in Russia, and to get Russia back into the war against Germany. Working with Robert Bruce Lockhart, a British diplomat-spy, Reilly decided that Lenin and Trotsky would never fight the Kaiser, and plotted to suborn the Bolsheviks' Lithuanian bodyguard regiment using British silver. Reilly spent the summer planning his coup, scheduled for a Politburo meeting on August 28. Unfortunately, the meeting was postponed to September 6, and in the meantime, a radical named Dora Kaplan shot Lenin. The panicked Cheka moved against everybody, massacring thousands of people in a "Red Terror."

Authorities differ on Reilly's scheme. Previous Soviet histories maintain that the "Lockhart Plot" was a genuine threat to the Revolution; some modern espionage writers theorize that the Cheka had already penetrated Reilly's ring and used it as an excuse to launch its reign of terror. Whether the Red-sympathizer Lockhart (or his Soviet lover, who later became the mistress of Maxim Gorky) gave the game away, or whether Reilly's run of luck simply ran out, the man without a past very nearly changed the future of Russia, Europe, and the world. But in the meantime, he had to escape to Finland. Reilly worked for Winston Churchill in counter-Bolshevik schemes in Poland and the Crimea, and may have played some role in leaking the "Zinoviev letter" to the British press in 1924. Although it must have felt good to flex his old forgers' muscles, the ensuing scandal made England too hot to hold him. Reilly went back into the cold.

"The Bolsheviks at first wished to conceal his arrest but the English somehow or other found it out, and the Bolsheviks in order to escape the possible demands by the English of his release murdered him when he was taken out for exercise."

-- anonymous letter in MI-5 archives, dated Mar 9, 1927

The British government always steadfastly denied that Reilly's final mission into the Soviet Union was in any way official. (This attitude saved MI-6 a good bit of money, as Reilly's many wives tried in vain to claim pensions after his disappearance.) However, it's hard to believe that someone as clever as Reilly would actually fall for the crude "false flag" that supposedly drew him back into Russia to support a nominal counter-revolution, this time against Stalin. Be that as it may, Reilly probably left Germany for Finland in September of 1925, never to be seen again by Western eyes. Soviet sources reported Reilly shot on the Finnish border on September 28th. And also, executed for terrorism in June of 1927. And alive in Lubyanka Prison in 1932. His exit, it seems, is just as murky as his entry.

The official OGPU internal report (which dates the execution on November 5, 1925) never uses Reilly's name, calling him only "Prisoner # 73." Rather than a simple bullet in the prison, Prisoner # 73 was driven into the woods and shot in the back. According to the report, his body arrived at the morgue with a black bag over its head, effectively concealing its identity -- was Reilly a Bolshevik [Man in the Iron Mask](#)? Some evidence exists of an Englishman traveling under the name of "Rosenbaum" escaping from Shanghai to Hong Kong in 1938. The Gestapo had Reilly on their "Black List" of people to arrest in England in 1940. The last reported sighting of Reilly was in 1947, when he would have been 73 years old. Final rumors place Reilly in the hidden ranks of Mossad, or in the KGB operations against Britain, or simply living off his confidence games in South America. The man without a past had vanished into the future.

"Mundo nulla fides"

-- personal motto from Reilly's stationery

"Put no faith in the world," or, as Spence translates it more evocatively, "Trust no one." That was Reilly's personal motto, emblazoned on his stationery beneath a two-headed (two-faced?) eagle. Reilly became a universal joint in conspiratorial engineering, with contacts in all strata of Russian and British society (to say nothing of Germany, France, Japan, China, and the United States). Reilly knew the players in both the assassination of Rasputin and the murder of the Romanovs (and has been tagged as part of the conspiracy to rescue the latter, if such a conspiracy existed), and hinted that the truth in both cases was stranger than it seemed. He was present at the creation of two of the great forgeries of the modern era -- the Protocols of the Elders of Zion and the Zinoviev Letter (and if the latter

was not, in fact, a forgery, Reilly may have been the conduit for its transmission) -- plus, just perhaps, the [Voynich Manuscript](#). Reilly conspired with oil magnates in Persia, Japanese admirals in Port Arthur, and heroin kingpins in New York. He met fellow SIS informer Aleister Crowley in London in 1898, in Russia in 1913, and in New York in 1915. He was everywhere and anywhere.

His way was smoothed, first of all, by his Freemasonry -- both British spies and Russian revolutionaries had this brotherhood in common. But for Reilly, Masonry would have just been the tip of the conspiratorial iceberg. He claimed membership in the "League of the Enlightened," a shadowy group in Odessa (and elsewhere) that might have included Stalin and Lenin as its lodge members. Reilly's ex-wife Margaret described Lenin as an "illumine" in a 1931 letter to SIS; she claimed specialized knowledge of "certain facts" relevant to Reilly's disappearance. Was she hinting that the Illuminati stood behind both Reilly and the Revolution?

"To know another language is to possess another soul."

-- maxim of Charles V, as quoted by Sidney Reilly

Reilly spoke at least seven, and possibly as many as 11, languages with some fluency, perhaps including Hebrew, suitable for the kabbalistic manipulation of names. The kabbalistic value of ST.1 is 70, "silence," an excellent sobriquet for a confidential agent. Equally appropriately, the alias Reilly used most often, "Sidney George Reilly," adds to 710, which can mean "shadow" or "secret." Reilly himself seems more like a shadow, or perhaps an identity-shifting dybbuk, than he does a normal man. Still more interestingly, "Sidney Reilly" adds to 414, "azoth," the alchemical Mercury, ever-changing emblem of the god of lies and travelers. Perhaps Reilly, who once bankrupted himself to acquire Napoleon's signature, and hinted of descent from Napoleon's mistress, was a Hermetic tulpa sparked by Napoleon's bizarre Russian -- and Egyptian -- ambitions.

Fans of Tim Powers' *Declare* can only slaver in frustration at the fragmentary information about Reilly's seemingly magical escapes from Manchuria, Leningrad, and Berlin, and his mysterious doings along the Turkish borders in 1897, 1900, and 1905. With these peculiar connections to the Caucasus and Persia, as well as his nigh-hypnotic power over women, he resembles the mystic George Gurdjieff, who described the ascended master as "the One Who Knows." An apt description of Reilly, echoed by his superiors at SIS. Could Reilly (who studied the works of Gurdjieff's disciple Ouspensky) have been such an ascended master? Reilly associated closely with Polish Agharti-cultist Ferdinand Ossendowski, and claimed to have been initiated by a Chinese guru in Shenxi, one Tso-Lin, after fleeing Port Arthur in 1904. Would this explain his mysterious companion "Anna," described as a "woman in black" who never ate in public? Would it explain the mysterious visions of his third (or fourth) wife Pepita Bobadilla, who saw a "grim reaper" before his final trip to Russia; and of his paramour, the mystic Caryl Houselander, who saw him on the astral plane after his alleged death in Moscow?

"This is an astounding degree of confusion from the same general source [the Soviet records] over what should be a simple fact to establish. A man can die only once. Moreover, the OGPU dossier, in its current, edited form, contains a photo of a living Reilly allegedly taken in 1925. It is a picture of Sidney, all right, but one obviously taken years earlier . . . Men do not grow younger, either."

-- Richard B. Spence, *Trust No One: The Secret World of Sidney Reilly*

We are left with a mysterious man, of no clear nationality, who appears in England just before a time of global crisis. He goes under many names -- Sigmund Rosenblum, George Rose, Leon Rosenblatt, Pavel Relinsky, Constantine Massino, Sidney Roberts. He has ready money and chemical training; he seems to know everyone's history, and is accepted by the Masons as one of their own. He has mysterious contacts at the court of the Czars. He tries to avert a great Revolution, and is seen in visions afterward. He dabbles in the arts. He is part confidence trickster, part spy, part industrialist. He does not visibly age. He vanishes without a trace. [Saint-Germain](#), Ace of Spies?

The Marsh of Madness: NecronomiCon Tales

I was a guest at NecronomiCon in Tampa, Florida a few weeks ago (October 24th through the 26th, for those of you making your own Marsh timeline). This was due to a few fortuitous circumstances. First, I was already out of town in Orlando, visiting my parents for a vacation at the various Orlando Resorts Tied to Three Osculating Circles. And I realized that perhaps the only thing better than one vacation is *two* vacations; since Tampa was only an hour's drive away from Orlando, it seemed like the right con at the right time. Second, none other than Steve Jackson -- president of a well-known Austin-based RPG company -- was going to be at this convention. Seeing as how I've been one of his minions for almost four years, it seemed like a good opportunity to see him again for the second time. (This is especially true given that Steve had absolutely no recollection of our having met the *first* time . . . Clearly I make an indelible impression on all those I encounter.)

Anyway, I made it to Tampa for my first time ever on Friday afternoon. After having checked myself into the registration desk, I started to explore both the convention and -- after getting the urge for some lunch -- Tampa itself.

It was at this point that I discovered Tampa -- or at least the portion I was at -- consists entirely of Interstate. I also came to the painful realization how pitiful my navigational ability was; if I were a migrating bird, I would be the one burrowing into the Earth, convinced that this mythical "north" lay at most one or two miles further down. These two facts combined into a maddening automotive funhouse experience, where I would find myself driving in the wrong direction at least four times a day. Despite the fact that my hotel and the convention hotel were about one mile away, I suspect I spent six hours of the weekend looking for my next destination (my exit, my hotel, a McDonald's, a pawnshop without a waiting period for guns) and shouting expletives at my dashboard.

Anyway, the convention itself was a lot of fun . . . perhaps more fun than I was expecting, truth be known. I suspect this is because NecronomiCon, much like my beloved [Dragon*Con](#), is a mixed convention. Unlike a gamers-only con, this convention had gaming, genre authors, artists, and other goodies. Crossover conventions tend to have more diverse elements, such as women.

I played a game of the still-being-tested-and-revised ***Snits' Revenge***, where I got my butt whomped. For those unfamiliar with ***Snits' Revenge***, one of the elements of the game has one side searching for a game-winning piece of the other side's, sort of like *Stratego* as illustrated by Tom Wham. This led to a situation that I always find disconcerting in these kind of strategy games, where I know I'm going to lose *long* before my opponent realizes this. So the last 20 minutes of the game had me continuing to survive not by any brilliant maneuvers, but by his failure to roll the requisite "1, 2, or 3" necessary for him to reveal that he had chosen to attack the correct hidden target. It's an odd sensation, where my opponent was panicking (and other observers were assuming I was about to win), and only I knew the horrible truth.

I was a guest at three panels. My first one was about electronic publishing, where I do believe I made upwards of two relevant points. My second one was a "What's New in Gaming" panel, where there were approximately 8.46×10^{17} game-related guests relegated to a raised panelist platform designed for an absolute maximum of five people. This panel was noteworthy because of the fact I totally froze when asked, "What games have you liked in the past year?" (making me realize fully how little I actually get to *play* any games); I also made a few waves by disagreeing with *everyone* else on the panel on the final question, including the person sitting next to me who happens to sign my monthly paychecks.

The final panel I was a guest on had to do with magazine publishing, both paper and electronic. The person who was to serve as our moderator did not show up, so the rest of the panel decided that I should moderate it. For someone with only two previous panel experiences (one where I spoke twice and the other where I went "duh" or "wrong!"), this was really only one step shy of finding myself at another final exam without any pants.¹ Fortunately I *do* have buckets of experience in the mag biz (including a few drops on the paper side), so I actually think I did okay.

I attended one of the late-night dances, and came to the conclusion that I am *not* cut out for an anime-music rave. (I

also ended up feeling like a tomb-escaped dusty shambling Methuselah amid the younger dancers . . . which is not a good sign for my future boogious prospects.)

I tried participating in two LARPs. The first I attended didn't look promising due to bad luck on the GMs' part (although it was apparently salvaged into something pretty cool), while the second one was slightly more linear than a conveyer belt. (I eventually snuck out, which is not a classy thing to do and which I heartily recommend against. Unless the game is really bad.)

The art rooms were particularly well-stocked, with a lot of amateur and semi-pro artists. Alas, I was defeated on all three items I placed auction bids for, not that I'm bitter grr grr grr. There were also an unexpected number of pictures of dragons with kittens; I find this to be a disturbing trend, mostly because I'm not sure I like the symbolic ideal of dangerous, majestic evil mixed with dragons.

The dealer rooms weren't particularly large, but there was a surprising variety therein, with jewelry, gaming stuff, costumes, anime, books, weapons, and miscellaneous goodies. I didn't find any rarities or remarkably priced must-haves, which was sad for the treasure-hunter in me but good for my checkbook.

And, finally, on the last day, I got to play lots of games of [Are You A Werewolf?](#) I cannot express how incredibly fun this game was. The premise, for those who don't want to click the review, is that everyone is a villager, except for two players who are werewolves and one who is a seer (able to learn the truth about others). The object is for the werewolves to survive and destroy the villagers, while the villagers lynch someone everyday in hopes of finding the werewolf. The first two games were very bad for me, since I drew the Werewolf card and didn't know any strategies for survival. ("Steven can't stop snickering! *He's a werewolf!*") I was literally lynched in the first two minutes of each game.

But the fourth game . . . ah, the fourth game I was a werewolf again, and I'd figured out a strategy (which included, among other things, seconding the nomination that my werewolf partner was a werewolf). In short, we both survived and devoured the village, and I even ended up receiving the Overall Winner award from the moderator for that game.

(I ended up playing another five or so games, but I shan't bore you any further.)

For those of you able to attend a convention or otherwise amass a large group of people, I emphatically recommend that you try this game. It combines roleplaying, social psychology, strategy, and villager mutilation, all in a game that was enormous fun (when it's played right, that is . . . as I shall discuss in a future column). And, since a deck is only four or five bucks from Looney Labs (or free, if you'd rather download the rules and make your own cards), it's hard to come up with a reason *not* to give it a shot.

The staff and volunteers for the convention were top-notch, and even the occasional hiccup (such as our moderatorless panel) was trivial. This convention had a con suite which had the most scrumptious breakfast spread I'd ever seen: bagels, muffins, and cinnamon rolls. Mmm!

The victory from that one game of ***Are You A Werewolf?*** made me eligible for one of eight grab-bag drawings at the end, which I actually won. With that bag of loot I was able to trade with other winners, and ended up with, among other things, a bunch of cool ***Call of Cthulhu*** stuff.²

Which, ultimately, seems like a fitting ending to fun little shindig called NecronomiCon.

* * *

¹ Yes, that's a joke. However, one time I did incorrectly record the time I was to be at a crucial computer science final exam. So when I showed up an hour early, lemonade in hand (with which I acknowledged the instructor waiting in the doorway), I was informed that I was actually an hour *late*. It was quite humbling to go from totally confident to blind panic, struggling to finish the final in the remaining half-hour.

² Among the "cool stuff" was parts two and three of the ***Nocturnum*** series from Fantasy Flight Games. If anyone knows of where I can get part one, and/or if there are any differences between this series and the compiled ***Nocturnum d20*** book (besides ***d20 System*** stuff), I'd love to be [dropped a line](#).

Pyramid Review

Redline -- High Speed Road Duels In A Post-Apocalyptic Future (for d20)

Published by [Fantasy Flight Games](#)

Written by Jeffery Dobberpuhl, Darrell Hardy and Will Hindmarch

Illustrated by Ed Bouelle, Jim Brady, Allen Douglas, David Griffith, Chris Keefe, Patrick McEvoy and Scott Schomburg

64-page b&w softcover; \$14.95

Several RPGs have explored the post apocalypse genre over the years, most of them set some time after the new world ending events that are their origins. *Gamma World* -- derived from the [Metamorphosis Alpha RPG](#) and now having returned under the *d20 System* -- is probably the best-known example, but others such as DP9's [Tribe 8](#) and Palladium's *Teenage Mutant Ninja Turtles And Other Strangeness*-inspired *After The Bomb* campaign setting also fall into this category. Fewer games are set in the few years after the apocalypse; GDW's *Twilight 2000* is the best-known, other examples being FGU's *Aftermath*, Palladium's [Systems Failure](#), and *GURPS Y2K*. Of course, the most familiar of post-apocalypse movies has to be the *Mad Max* trilogy and it is this series that inspires the latest entry in this genre, *Redline -- High Speed Road Duels In A Post-Apocalyptic Future*.

A favorite of many gamers, the *Mad Max* films have had their influence upon gaming, notably the "Chassis & Crossbow" article for *Car Wars* first published in *Autoduel Quarterly*, and the *Operation Morpheus* and *Sydney: The Wilderness Campaign* supplements for *Aftermath*. *Redline* differs from all of these in that it is not so much influenced by the *Mad Max* trilogy as directly inspired, and that it is for the *d20 System*. Further it is the first in Fantasy Flight Game's Horizon line of self-contained genre books that require no more than the *Player's Handbook* or *d20 Modern* rulebooks. Much like Deep7's *1PG* titles and Politically Incorrect Games' GENREdiversion line, each Horizon book is designed as a diversion between other campaigns, or as the basis for a short campaign by itself.

Redline makes use of nothing more than the core *d20 System* rules and is compatible with the recent 3.5 revision of *Dungeons & Dragons Third Edition*. It is tightly and neatly laid out with no space wasted, and illustrated with a range of uniformly dark and grainy art that captures the feel of the genre perfectly.

The setting takes place a few years after the outbreak of a war that involved nuclear, biological, and chemical agents. Their effects linger on, seeping slowly through the environment and also sweeping occasionally across the landscape in furious rad storms and the like, collectively known as the "Creep." It affects people of all ages, but especially those who venture into the areas where it stains sites rich in salvage from the age before the war. What society exists often establishes itself near such places, as well as sources of water and fuel. The former is necessary for survival, the latter for the vehicles and trade caravans that keep communication and supplies running between settlements. Along the roads and routes run the marauding gangers, Muties, Red Zombies, Red Vamps, and Sand Sharks that threaten what little civilization that remains. Although there is no geographical setting as such, Australia is inferred in passing, but there is nothing to stop *Redline* being set in America or elsewhere. Of course, you may not get the killer mutant kangaroos or mutant racing camels in America that you do in Australia, though giant carnivorous rabbits are another matter.

As with other *d20 System* games, *Redline* replaces the concept of race with that of background, providing details of six examples. The Bornagain can provide answers to questions of a spiritual or religious nature, and while their answers might actually be spurious rubbish, their conviction can make them great leaders, natural speakers, and give them the

strength to smite mutants. Bygones have knowledge of the time before the apocalypse, whether by dint of age or access to records or libraries. Drifters wander the wastelands and have learned to survive its hazards. Ferals have abandoned what remaining semblance of civilization there is to survive by their instincts in the wilderness, knowing how to handle themselves and be sneaky, but not how to deal with machinery. The effects of the bombs have made Rejects big and dumb, immune to the effects of Creep and gifted with a savage nature or sharp bug eyes or crusty skin, but penalized with poor hearing or being myopic or inflexible legs. Savants have blocked off the horrors of the current state of affairs, focusing on a particular skill at the cost of others.

The six backgrounds fit seamlessly in with the five new classes. Marauders are naturally tough, rage-filled brawlers and thugs; Redliners are natural drivers at home behind the wheel; Riggers are gifted technicians and mechanics; Traders are characteristic wheelers and dealers as well as hoarders of goods to barter; and Walkers rely on their wits and stealth to make their quiet way through the wilderness. Each of these classes possesses a special ability that improves as a character experiences, the improvement being given as a better die to roll and add to particular skill checks. Thus the Redliner's Hard Core Driving ability adds to every Driving check from second level onwards, rising from 1d4 to 1d6 at 6th level, 1d8 at 10th level, and so on. The Marauder's Hard Core Fighting works the same way and adds to their melee attacks; Hard Core Repair to a Rigger's Build/Repair skill checks and so on. Both the backgrounds and classes are well-designed, possess a simplicity that gets to the heart of the genre, *and* it is easy to recognize them from their sources.

This simplicity continues with the skills and feats. While new skills are introduced, **Redline** reduces many also. Thus Appraise and Diplomacy becomes Barter, and Balance, Climb, and Jump become Clamber. Build/Repair is divided between simple and complex skills, the first for fixing the plumbing or a gun's magazine, the latter for the actual mechanism, a vehicle transmission or a field irrigation system. Chatter replaces Persuasion, Fake Out is the art of deception and knowledge comes as seven types -- Big Picture (philosophy, theology, logic and the twisted muddle they have become), Creep, Folks, Lay of the land (area knowledge), Olden (history), Subfarming (subsistence farming) and Tech. In general the new feats are geared to vehicle use and vehicle combat.

Equipment is roughly divided between the simple and the advanced. Whatever its age, a simple device has few moving parts if any, while advanced devices have many. For example, a simple firearm will fire one shot per round, while an advanced one will fire in bursts. For melee weapons, whatever its type and effect, it may not actually be of that exact type as described by the **Player's Handbook**, but an adapted item. For example, a golf club makes an effective club and a George Foreman grill makes a fetching flail. Melee weapons invariably come to dominate the game given the scarcity of ammunition.

Since this is a *Mad Max* inspired game, there is a full chapter devoted to vehicular combat. This is run at a scale of 50-foot squares as a tabletop game in which the map, not the cars trucks SUV, bikes and vans is the *moving* element. The idea is not to play the system on a map as per **Car Wars**, but as an abstraction in which speeds are relative between the various vehicles. They are treated to some extent as monsters, but ones that can be clambered onto and over, ridden in and on, all while providing a degree of protection to their occupants. Of course they possess an Armor Class value, but high attack rolls can inflict damage upon the target vehicles and their occupants at the same time. Vehicles can be fitted with weapons, from guns bolted to its body, crossbow batteries, spear guns, turret flails, and more advanced weapons such as machine guns, flame throwers, and tank guns. The rules cover most eventualities from maneuvers and losing control to making boarding actions.

The Creep comes in a wide variety of forms; it might be a gas, sludge, or ooze, a powder or metallic flakes, but it is still known as the Creep. It can appear as wind borne dust clouds or showers of rain, or in particular locations or zones. Some Creep is strong enough to linger on the bodies of those who enter the zones as well as on their possessions, such that they leave a trail of Creep behind them after leaving the zone. As characters grow increasingly contaminated, their chance of suffering mutations also grows. This is measured by points of contamination gained by failing saving throws and to a lesser extent making those saving throws against contamination. A new mutation is acquired each time a character's contamination points pass a threshold number equal to his Constitution score. The effect of reaching the sixth threshold, or six times a character's constitution, is to make a character nearly unplayable, and at the seventh threshold it will render them down into raw gloopy Creep!

Mutations can be determined randomly; there are 20 given each for the first two thresholds, with fewer for higher thresholds. Alternatively, mutations can be linked from one threshold to the next, as the Creep just effects one part of the body. Presented by a chain of mutations, this is an interesting method of handling the dangerous evolution of the Creep poisoned. Several of the mutations point to the wackiness of those at the heart of ***Gamma World***.

Since ***Redline*** is a genre book, the information about its setting is not geographically specific, instead dealing with its elements. This includes the folks you can meet -- warlords, gangers, zealots, rebuilders, nomads, savages, and survivors -- along with examples of each that also serve as scenario hooks; resources, water, food, fuel, artifacts, and salvage; and regions and their hazards. All of this points to a game that revolves around acquiring and trading scarce resources and salvage. The supplement is rounded out with a short section on four new monsters -- the Mutie, the Rad Vamp Template, the Rad Zombie and the Sand Shark, similar to the Bulette of ***Dungeons & Dragons*** and the Sep of ***Gamma World***. A list of creatures from the ***Monster Manual*** provides the GM with more encounters along with their threshold levels and there is nothing to stop the GM from plundering the very many other bestiaries available at their local gaming emporium.

There is a very pruned feeling to ***Redline***, the authors having stripped down to fit the game. In a minor way, this has led to just a pair of omissions. One is a lack of a character sheet, the other being the lack of a bibliography. Yes, it is obvious that ***Redline*** is the ***d20 System*** treatment of *Mad Max*, to which have been added elements of *Z For Zachariah*, *A Boy and His Dog*, and *Damnation Alley*, but further reading and viewing is always, *always* useful. And also true, the *Mad Max* trilogy lacked either Rad Vamps or Rad Zombies, their place in the game is legitimate and this game would not be half as much fun if they were not included.

Redline has plenty of potential use as well beyond its pages as a one-shot campaign. The most obvious is as a precursor to the ***Gamma World RPG***, while that game's tech sourcebook, ***Out Of The Vaults***, could provide all of the artifact and salvage ideas that a GM would want. Add in dinosaurs, say from the [Dinosaur Planet: Broncosaurus Rex](#) setting, and ***Redline*** could form the basis of a *Tales from the Xenozoic Age* campaign done ***d20 System*** style. And of course, it could be used in a campaign set in the Cursed Earth of Mongoose Publishing's [The Judge Dredd Roleplaying Game](#).

Redline, despite the two omissions given earlier -- the effect of which makes it feel slightly incomplete and a little overpriced -- is *near* perfect. It sets out to get in there, present a genre, and get out again without fuss or fripperies -- and this is exactly what ***Redline*** does. While there may be no *Mad Max* RPG currently on the market, this is the closest that any game or supplement currently gets to giving you one.

--Matthew Pook

Pyramid Pick

BANG!

Published by Mayfair Games and Da Vinci Games

Designed by Emiliano Sciarra

Illustrated by Alex Pierangelini

110 cards; \$10.00

BANG! is a raucous, quick-playing card game that recreates the melodrama and action of a classic spaghetti western film. This deadly shootout between the law and the outlaws is rife with close calls, mistaken identities, and vicious vendettas, all packed into about half an hour. For six or seven players, you will find few games so fun-filled and satisfying, as long as you are willing to spend a couple games learning its unique dynamics.

The deck is made up of 110 cards and requires nothing else to play; leave your dice and pads of paper aside. When random numbers are required, players reference the poker values on the corner of each card (10 of hearts, king of spades, etc.). Wounds are tracked by covering and uncovering the appropriate number of bullet symbols on one card with your character card. With this scheme, you'll rarely have to ask anyone to tell you how hurt they are -- just count the big, shiny bullets. The cards are illustrated primarily with some lively colored pencil sketches that effectively evoke the spirit of the cinematic West. They also sport titles and rules in Italian (the native language of the designer as well as that of the spaghetti western genre, of course) and English with the most complex rules illustrated via a language-independent set of symbols that works well once you've overcome a few confusing vagaries of the system. A handy reference card will clear things up quickly in your first play.

The game starts by determining each player's persona -- a combination of a character and a role. The four roles are Sheriff, Deputy, Outlaw, and Renegade. These determine the player's goals and their teammates: the Sheriff and his Deputies win if they kill the Outlaws and Renegade, the Outlaws win if they kill the Sheriff (in both these cases, even those who end up dead are winners if their team prevails), and the wily Renegade wants to be the last man standing. Since killing the Sheriff ends the game, this means the Renegade needs to let the Deputies and Outlaws whittle each other down until it's just him and the Sheriff and he can put the final bullet in his righteous nemesis. The key to making all this interaction really interesting is that only the Sheriff's role card is revealed when the game begins, and the true identity of the others are only uncovered when they are killed. Only by watching actions carefully (and making some judicious guesses) can the Sheriff sort out his Deputies from the Outlaws. It's no easy task, especially once everyone gets the gist of the dynamic after a game or two. Typically, everyone talks and acts like a Deputy, taking shots at their neighbors and collecting useful cards until an Outlaw finally takes the first shot on the Sheriff. Even then, a smart Renegade will keep playing innocent, protecting the Sheriff and hoping a Deputy or two gets eliminated before the Outlaws' assault is finished. Without the secret identities, **BANG!** would be an entertaining and action-packed diversion; with them, it becomes a deeper game of bluffing and second-guessing.

For a game that tops out at seven players, 16 character cards is pretty generous, guaranteeing a different spread on every deal. The characters -- bearing colorful names like Vulture Sam, Sid Ketchum, and the feared Slab the Killer -- each have a unique special ability, be it defensive, death-dealing, or deck-stacking. When combined with the four possible roles, there's not only a lot of variety, but also some fun characterization to be found in the combinations. Who'd have thought the meek Calamity Janet would turn out to be the treacherous Renegade? And who appointed Slab the Killer as Sheriff anyway?

Combat itself is a breezy and cleverly constructed affair, its greatest accomplishment arguably being how it quickly

makes the table feel like a dusty town square at high noon -- the site of an escalating firefight. The simple but original range rules provide an evocative sense of space, limiting shots by the number of seats between you and your desired target. The default gun of every player has a range of one; you can only shoot the two scoundrels who sit to your left and right. Better guns are drawn from the deck, played out in front of your character, and might provide a range up to five seats away which, even in the largest game, will let you hit everyone at the table (unless he happens to have a trusty stallion, which adds one to the normal range calculation).

Once you can hit your enemy, blasting away is as easy as playing a "BANG!" card. Defending yourself from such a shot is just as simple: a "Missed!" card played from your hand will cancel out a "BANG!" Other defenses are available, like the "Barrel" card which provides a chance (if you draw a heart-suited card from the deck) to send a BANG! ricocheting off harmlessly. This quickly resolved combat scheme, fueled by the commonness of BANG!s and Misses in the deck, paints an exciting scene as bullets fly willy-nilly, lucky cowboys barely avoid injury, and a concentrated round of fire on one victim can spell certain death if his hand is depleted of Missed! cards by the first shot or two. Getting hit doesn't just put you closer to death (and an exit from the game), but also reduces your valuable hand size limit; each turn you draw the number of cards equal to your current health score, which is never higher than four (five for the Sheriff).

All this excitement is spiced up by some handy, sneaky, and sometimes just plain devastating special cards. Characters can get thrown in Jail, the local Schoolmarm might seduce a trusty Winchester out of your possession, Injuns will interrupt the shootout with a raid of their own, and someone may whip out the Gatling Gun and spray the whole crowd with bullets. A lucky draw is a powerful boon in this game, although teamwork and enemy recognition is generally your most powerful weapon.

It can get a little chaotic, and it's not unusual at all for the Sheriff to tragically gun down a Deputy or for Outlaws to trim their own number early in the game when pot shots are flying. Being the Sheriff isn't all it's cracked up to be and can sometimes be downright frustrating. Getting hung up on the possible identities of the other shooters is easy to do, but not recommended when the game only lasts 30 minutes. When in doubt, a randomly doled out shot is more in the spirit of the game -- and thus, more fun -- than a hesitant or conservative play. In fact, hesitancy and an unwillingness to face the consequences of a blind guess can kill a game of **BANG!** quicker than anything else. It's best to keep in mind that the Old West is a place where lives are cheap, but bullets are even cheaper.

Interestingly, strategies for each role can change significantly with the number of players, since, for instance, the odds of having an Outlaw sitting next to you changes drastically when there's only two of them instead of three. Unfortunately, this also means that the difficulty for a given role, especially the Sheriff, is dependent on the number of players -- with six players the Sheriff faces the same threat as with seven, but with one less Deputy to back him up. Overall, **BANG!** plays much better with more players than with fewer. It's a drawback that is more forgivable when you take into account that many games work the opposite way. **BANG!** may not be your first choice when a few pals drop by for the evening, but it's a great quick party game, which is a true rarity.

It's a powerful package, especially for the \$10 price tag -- a fast, almost flippant, card game, elegantly designed with plenty of challenge and an evocative atmosphere. The cards are nice to look at, the variety of game situations is both broad and deep, and each endgame is almost guaranteed to be memorable -- all of which are great qualities in a game that you'll want to play again and again.

--Christopher Floyd

Dork Tower!

Dork Tower!

A Little Job for the Patrician

A *GURPS Discworld* Scenario

by Phil Masters

This scenario for *GURPS Discworld* also requires *GURPS Discworld Also*, as it involves one of the settings detailed in that book. It starts in Ankh-Morpork, and the PCs must have some reason to agree to undertake an unofficial mission on behalf of the Patrician, Lord Vetinari. Actually, most characters have a large number of such reasons (starting with a fondness for breathing, if push really comes to shove), but some are more specifically likely to get stuck with such missions than others. Fortunately, it's usually pretty easy to find excuses for involving PCs in this sort of thing.

If they should happen to work for the Watch, well, orders are orders, though it may seem most appropriate if they've done something to annoy someone official lately. (As if any PC would.) If they're criminally inclined, they may well have carried on this profession somewhere near Ankh-Morpork without ensuring that their relationship with the Thieves' Guild (or, in some extreme cases, the Assassins' Guild) has been properly formalized -- and the players shouldn't then be too surprised to learn that the Patrician has somehow found out all the details, whatever their characters think. In general, some kind of blackmail, favors owed or traded, or other excuse is pretty easy to come by in these cases.

So they get an invitation to come along to the palace and find out more about the task which they have found themselves volunteering to perform.

Prologue and Scene One

The PCs gather in the Oblong Office. This is a chance for them to introduce themselves to each other, if they haven't met before, and to talk, or at least to size each other up, although if they only meet in the office itself, they may feel slightly constrained by the fact that the Patrician is sitting behind the desk, going through some papers and apparently paying them no attention whatsoever. The GM may like to mention that a large red-haired Watch captain and an ash-blond Watch sergeant (looking slightly embarrassed and amused respectively) are standing at the back of the room, if only to act as a calming influence on the high spirits of some players.

Eventually, just after the last PC arrives and sits down, Vetinari looks up from his paperwork and begins talking as if all necessary introductions have already been made.

"You have all undertaken to do some work for the city, for one reason or another," he says, "and now is the time to discuss that work. Have any of you heard of a gentleman named Leonard of Quirm?"

It's likely that at least some of the PCs will be able to say yes to this (matching the fact that their players may have read the relevant books); the GM might permit IQ-2 or Appreciate Beauty rolls for anyone else to at least know Leonard's name and reputation as an all-round creative genius. (See *GURPS Discworld Also*, p. DA12-13, and novels such as *Men At Arms*, *Jingo*, and *The Last Hero* for details if the players or GM need help), but even if everyone claims ignorance, the Patrician will simply raise an eyebrow and say "Oh well, I'm sure that you can find out anything that you'll need to know."

"Unfortunately," Vetinari will continue, "some of Leonard's work -- his *intellectual property*, one might say -- has come onto the open market, despite his own wishes. It's all very incomplete, I'm told, but to avoid loose ends, it really does need to be recovered.

"It takes the form of a leather-bound notebook, full of Leonard's characteristic handwriting -- he writes as if in a

mirror -- and his very detailed drawings. It has been traced to a second-hand bookshop, whose owner now remembers selling it only recently -- to a nautical fellow named *Ruscoff Jomzring*, in fact. Mr Jomzring in turn was last heard of setting sail for the Brown Islands. Unfortunately, Ankh-Morpork law doesn't technically run that far, so we can't send any sort of *official* mission . . . but perhaps some public- spirited folk, who seem by chance already to have booked passage for a holiday in those parts, could look into this?"

Then he will look at the most reliable, trustworthy member of the party (who needn't be *very* reliable), and add "I think you may want to look after this." (He hands over a packet, containing some tickets and a sealed envelope.) "There are, I believe, some one-way tickets in there, and also a letter to our trade representative in the Brown Islands, asking him to make sure that you all get a return passage when you've finished your holiday."

Then, he turns back to his paperwork. If anyone tries to ask him further questions, he will be polite, straightforward, and terse, primarily suggesting that the PCs should be able to find out anything else important from whatever their usual sources might be.

The Ship

When the PCs look at the tickets, they will realize that their ship departs the next day, on the morning tide. (Just to keep them on their toes.) Specifically, they're being given (very) second-class passage on a ship named the *Indolence*. It's easy to locate down at the city docks, where the crew are doing plausible just-before-departure things. The PCs have those last few hours to sort themselves out and make personal arrangements. If any of them oversleep, well, someone from the Watch or the Patrician's Office will drop by soon enough to wake them up, and it's easy enough to catch up with the vessel in the first few hours of its voyage; it will be lurching stickily down the Ankh, after all. Getting aboard may involve a flying leap off a dock, mind you -- and falling in would mean, well, an encounter with the "waters" of that river.

This ship is mostly a cargo hauler. If anyone asks the captain or crew, or just scouts around, they can easily determine that there are no other passengers, and they will be told that it's carrying "Important cargo" -- here, the speaker taps his nose -- "much prized by people out there, or so we're told." Beyond that, any sailor will turn silent, seeking to maintain his nautical mystique. However, *if* the PCs push hard enough, which probably means sneaking below decks, the cargo turns out to be turnips and cabbages, for sale to the Ankhian community in Port Duck.

The trip to the Brown Islands (which are on the map of the Disc in ***GURPS Discworld***, p.DI22-3, and discussed in ***GURPS Discworld Also***, p.DA74-82) takes some three to four weeks. The GM should probably try to whip through this time as fast as possible, unless the players have specific (good) ideas for things to do, but GMs who so choose can always fill things out with a few gratuitous jokes about seasickness, suicidal albatrosses which have to be dissuaded from diving into the path of warrior PCs' weapons practice, sea shanties which don't rhyme, scan, or indeed make any sense, nautical jargon, and anything else that comes to mind.

It's also possible that some of the PCs will use this time to attempt to get a look at the contents of Vetinari's letter to the city's representative on the Brown Islands. This means lifting the (large, intricate, and carefully applied) wax seal from the envelope; characters with Streetwise or Administration skills will know techniques for achieving this, using a slim, hot knife, but it will probably require a roll against DX at a significant penalty. GMs can make it as hard as they like, within reason, and assess the results of failure as they see fit. In any case, even if they succeed, or use some other method (such as magic), all the PCs will find is a fairly predictable note, saying that these people (listed by name, complete with unflattering personal descriptions) are to be given passage back to Ankh-Morpork if they show up with Leonard's book in hand.

Optional scene: One little joke can be run near the end of the trip, and will work best if the players *haven't* investigated the cargo. As it makes its way past the first few islands, the *Indolence* is approached by a pirate ship. (One can tell by the terribly menacing flag, as well as by the multi- national crew wearing assorted colorful costumes with a lot of headscarves and tricorne hats, waving cutlasses, and talking especially impenetrable nautical jargon to their parrots.) Let the PCs work out their initial responses to this, while a few of the crew disappear below. Then, those crewmen reappear -- holding cabbages and turnips, which they wave at the pirates.

Exactly what follows can depend on whether the GM feels like running a fight scene, and whether the players insist on such things periodically. Most likely, the pirates will veer off with audible cries of disappointment and the odd apology -- "Should 'a known 'ee, lads, arrrh -- sorry ta have bothered 'ee." However, they may still come on aggressively, to the surprise and annoyance of the *Indolence*'s crew ("Stap me vitals, they must be desp'rate men, or much given to cabbages.") It's also possible that the pirate ship will pause for a while as the ruffians take a vote as to whether they are indeed such truly desperate men or not, giving the *Indolence* time to start fleeing, and any especially talented PCs (especially wizards) time to show off anything that might help them decide.

For that matter, if the players are the sort who aren't happy with *some* gratuitous violence, but the GM doesn't feel like running a full battle, they can fight a few rounds of combat, until the *Indolence*'s crew, pelting the attackers with cabbages and annoyed remarks, persuade them to depart.

(If anyone actually asks why the pirates should not attack just because the *Indolence* is carrying agricultural produce, the crew will shrug. "There's not much of a black market for root vegetables. Or so we're told. Arrrh.")

Port Duck

This bustling if slightly underdeveloped-looking town is described in *GURPS Discworld Also*, p.DA79-82, and the GM should describe the PCs' first sight of it in detail, mentioning the many shaky-seeming wooden houses and the incomplete fort overlooking the bay. Then, once the ship has docked and the PCs have recovered their land legs, they can start to explore, and eventually look for clues.

The GM (and the players) can spin this out for a while, or cut to the chase, according to taste. Obviously, tracing Ruscoff Jomzring is the task in hand; the PCs can try what they like, but a fair amount of hanging around in bars and making Streetwise rolls is probably inevitable. This can lead to various diversions, barroom brawls, and encounters with nautical characters with parrots, drunken expatriates dreaming of cabbages, Agatean tourist parties (all neatly and formally organized, and quite capable of trampling someone who falls over or is lying drunkenly in their path when they are looking to one side at something their guide has pointed out), crossbow- packing Agatean cops and gangsters, and other such features of the setting.

Some PCs might also seek out Ankh-Morpork's official representative in the city at this point. This is of course Lord Bulack (p.DA80-1), who will probably be off surfing on a nearby beach. Once located, Bulack will usually be amiable and may help a little, but Vetinari's letter doesn't actually tell him to provide assistance other than those return tickets, and there is a limit to what he can really do.

The Clue

Sooner or later, the PCs should be able to determine that Jomzring was last heard of working as a legman for someone called *Dooli the Arranger*, down at Brick's Café Ankh-Morporkian (p.DA82). Unfortunately, Jomzring isn't around any more -- something about trying to extract the recipe for blonde hair dye from an Amazon tribe on an outlying island. ("Poor chap. Poor chap. It's a very secret recipe, apparently. We don't like to talk about it. Well, *they* didn't like to talk about it . . . Amazon tribes, you know -- staying in to wash their hair is very important to them . . .") But perhaps Dooli can help?

The Bar

Visitors to Brick's will of course first be struck by its resemblance to the Mended Drum -- although it's slightly too new, clean, and tidy -- assuming that they are not first struck by Brick, or by one of the patrons. Once they're over any of that, Dooli, a dark-skinned fellow of Klatchian extraction, is easy to locate. He's a man who prides himself that he can arrange *anything*, and he is currently usually to be found conducting the Café's house band in an intricate, subtle, instrumental version of a traditional Sto Plains tune ("Gathering Rhubarb"). Once that's finished, he *can* be persuaded to help the PCs with information, but it will take cash, trickery, or perhaps some kind of appeal to his finer

sensibilities.

(If details are required, Dooli has IQ 13, other attributes 10, and the skills Conducting-13, Detect Lies-12, Diplomacy-13, Flower Arranging-14, Leadership-12, Merchant-13, Musical Composition (specialized in arrangements)-12/18, Musical Instrument (Piano)-14, Musical Instrument (Trumpet)-14, and Streetwise-13. Brick is an ordinary sedimentary troll whose skills are normally Brawling-12, Merchant-6, Streetwise-8, and 2-Handed Axe/Mace-9 -- but note that his troll brain is badly affected by the local heat, reducing his IQ and mental skills.)

What Dooli knows is that Ruscoff Jomzring traveled to Ankh-Morpork for him to acquire some books which a client wanted. The client's name is *Soso Sung*. If asked about this client, he shrugs and smiles. "Fellow has a place in the jungle a little outside town. Keeps to himself, mostly." (Really shrewd PCs might guess or determine that Sung did not request, or pay quite enough for, total anonymity. He was just plain careless in this.)

If the PCs aren't getting enough help here, one way or another, Brick the Troll will overhear something of the conversation and blunder in (to Dooli's mild annoyance). "Oh yeah," he says, "you sent Mr. Jomzring out to dat place inna jungle wid my many-an'-two cousins." If asked, Brick will say that his cousins were "big old-type trolls from der old country." (This extra clue isn't required, however; Dooli can offer quite enough help to be going on with, and the GM may prefer to keep some surprises in hand.)

Given this start, shrewd PCs may ask around and find out more about Sung from rumors. They can determine that he's a wealthy Agatean (as his name and activities suggest), and that he has an interest in getting people to bring him all sorts of Cool Stuff, but not much more. Sooner or later, a trip into the forest will be inevitable.

Out of Town

The trip to Soso Sung's house can be quite simple, although it may be hot and miserable. The GM may determine that the place is on or near the coast, in which case the PCs could take a boat.

The "house" is actually a fair-sized if rather flimsy pagoda in a small clearing. (There's also a small well nearby, and there *might* be other structures around, at the GM's option; see below.) It has several floors, linked by a narrow but rugged spiral staircase which runs all the way up the center.

Working from the bottom up:

The ground floor is of course the largest, and is divided into an entrance hall, a small kitchen, and a typically minimalist Agatean- style room where Sung receives visitors. The next floor up consists of two rooms, Sung's private dining room/library, and a small chamber for washing. (Leonard's book is usually shelved here -- along with dozens of other books and scrolls on various themes, albeit mostly related to engineering. There is no clear logic to the ordering, and searching would take burglars a while.)

The next room up is rather different, although the decoration is again very simple -- in fact, non-existent. An intruder who sneaks or peers in here in daytime is likely to get the impression that the floor is covered in boulders, at least until he catches the sound of very slow, deep snoring, and sees something move a little. In short, this is a troll dormitory; see below for details of the occupants.

Soso Sung sleeps on the floor above that, in yet another Agatean- style room, complete with a wooden pillow and a few chests filled with fine silk garments. Lastly, the top floor and room belongs to Igor (see below), with a straw-filled mattress and a rough wooden box acting as a dressing table, on which are perched some jars and pots. Intruders peering too closely at those should definitely be in for a fright check. Igors will be Igors, wherever they are.

(If anyone asks at any stage, the pagoda has no toilet because its occupants go outside for such purposes. No mystery, and no, the writer didn't forget.)

There's also a large basement, which is entirely occupied by Sung's workshop and the thing he's been building . . . but

we'll come back to that. If any PCs manage to sneak down there, they should be interrupted fairly soon by Igor, Sung, or a troll, though they'll get a glimpse of Sung's masterpiece first.

Optional Additional Feature

GMs who want to complicate things and throw in an additional problem -- which clever PCs or dramatic convention may turn into an advantage -- can add another feature to this site, thanks to Sung's habit of collecting Cool Stuff.

Specifically, the clearing may contain other structures. Most of these are small, but if the PCs investigate, one of them will prove to be a *big* pen. A very little more inspection will determine that this is occupied by something large, scaly, and toothy. The players, if not their characters, will recognize this as a dinosaur. One finds such things on lost tropical islands, if one looks hard enough.

See below for game details. It would take a great deal of determined PC ineptitude, or a particularly convoluted cunning plan, to release this creature immediately, but shrewd PCs may bear its existence in mind for later.

Entry and Encounters

Whether they knock on the door or sneak in, PCs will be greeted first by Igor, who is pretty typical of his kind -- except that he has implanted purple hair. (PCs who haven't met an Igor before might suffer a fright check.) He seems oddly pleased to see them.

"Ith about time. Have you got pitchthworks? No? No sense of tradition, thome people . . . "

He prefers not to talk about the hair, but if pressed, or if the conversation moves the right way, he may talk a very little about the mathter.

"He thase we all look alike to him, tho he hath to hath color- coding."

In truth, this is one of the many things that slightly annoy him about Sung (along with having to do virtually all the servant work around the house). He's a bit irritable, and planning to leave soon; he senses that this job is winding down.

Eventually, the PCs will meet the mathter, whether they break in and come face to face with him unexpectedly, or knock on the door and are invited in for tea. GMs should try and play this out without violence; if the PCs seem likely to stab first and talk later, some of the hired trolls might be around to deter them.

Soso Sung

Sung is Agatean, slim, with *very* androgynous good looks and a distinctive glossy black hair style; see below for his character sheet. He is evasive but polite -- except that he *will* always ask dwarfs what sex they are. If someone asks outright, he will admit (with a degree of polite circumlocution) that, yes, he does own that book. He will offer to sell it back for what he paid for it -- actually a fairly low price, \$400 (AM\$20) -- if *specifically* asked, "As I have now finished translating and transcribing the material." But he isn't giving up the content. (Whether the PCs regard this as a problem or not is presumably a matter for their consciences.) If anyone even hints that they might resort to violence, he will announce that "Your threats matter little. My masterwork is complete." He will not actually say what he wanted the book for, but if asked outright, he will offer to *demonstrate*.

(Well, he's going to anyway.)

The fact is, his main concern right now is to show off the wonderful machine which he's been building. The PCs are pretty sure to provoke him, one way or another. If they don't, well, the merchants in town have been overcharging him, and he has decided to take revenge.

("They think that I do not realize. Ha! Even an honorable aristocrat knows that five dollars for a cabbage is excessive. And not even a good cabbage. Well, now I will go and discuss the grocery bill, if you delivery boys will excuse me.")

The Rest of the Staff

Sung also has five trolls around the place, each with a different color of moss growing on his head; green, blue, orange-brown, black, and yellow-white. They are typical trolls -- see the character sheet below -- rendered especially stupid by the local heat and accustomed to jumping to Sung's orders. They're here primarily to provide a power source for Sung's great invention, but GMs can also use them for other purposes.

Sung's workshop is in that basement. The trolls will trek down there on command -- that is, when Sung decides to show off his creation.

The Mechanism in Action

Anyone in earshot at this point will hear a lot of clanging and bumping, and then a pause, and then a series of calls in deep trollish voices. Sung has the trolls well drilled, and they indicate readiness for action verbally:

"One arm troll, put it together!"

"Other one arm troll, put it together!"

"One leg troll, put it together!"

"Other one leg troll, put it together!"

"Troll inna middle, put it together!"

This will be followed by a lot more clanking and grinding. Then the cellar door will burst open, closely followed by the pagoda door (which will also lose its frame). Then Sung's machine will be on the rampage.

The Climactic Mindless Violence Scene

What Sung has built, based on the detailed drawings in Leonard's book, is nothing less than a five-troll-powered gigantic humanoid legged vehicle -- a walking statue. It's impressive in its way, though not without teething troubles. See below for the technical details. Sung himself rides in the head, steering it.

Sung will pursue anything in sight that has annoyed him recently, probably including the PCs, but he is *definitely* planning to head down and devastate Port Duck eventually. Fortunately, the design has a problem; putting five trolls together in a cramped metal box in tropical conditions gets very hot, very quickly -- hot enough for the trolls to stop working altogether. Hence, the mechanism will occasionally have to take breaks to cool down; Sung will try to steer it to the nearest river (or the sea) and make it lie down in some shallow part. After a few minutes, it will then be ready to return to the fray. (This will give it rust problems, of course, but not in time to help the PCs.) Exactly how often this heat problem kicks in is up to the GM; the best idea is probably to roll a few dice in secret, smile thoughtfully, and then apply dramatic license.

PCs can use tactics, ingenuity, brute force, or a dinosaur to stop Sung. (In the latter case, if the dinosaur wins -- rather than merely helping wear down the mechanism -- dealing with it afterwards is another question. But no PC would release a dinosaur without a plan to make it safe again later, to be sure.) Of course, it's also possible that they'll just run away -- but they're not going to get home very easily if Port Duck is stomped to splinters, so some kind of solution does seem required.

This should lead to a lot of running round the jungle, pursued by an inexorable if slow machine. Igor is likely to be around somewhere with a sack full of his possessions (and the odd valuable acquired in passing). He may make some

suggestions, such as using pitchforks. *"Ith traditional."*

The Wrap-Up

To come out of this ahead, the PCs will need to acquire the book, defeat Sung's machine, and get back to Port Duck intact. They probably won't be hailed as heroes there, but good self-presentation might accomplish something. Anyway, they can certainly use that letter (assuming that they haven't lost it) to get a trip home. They could even consider staying in the Brown Islands for a while, although it would be safest in that case to find a way to get the book safely back to the Patrician.

Major NPCs and Equipment

Soso Sung

ST 11; **DX** 13; **IQ** 15; **HT** 12

Speed 6.25, Move 6

Dodge 7, Parry 11

Advantages: Combat Reflexes; Composed (+2 to Fright Checks); Fashion Sense; Gadgeteer; Handsome ("Bishonen Look": +3 Reactions from both sexes); Hard to Kill +4; Literacy; Status 3; Very Wealthy.

Disadvantages: Broad-Minded; Curious; Obsession (building mecha); Reputation -3 (among Agatean aristocracy); Social Stigma (Overdressed Foreigner); Stubbornness; Xenophilia.

Quirks: Always polite, except when asking about a dwarf's sex; Assertively heterosexual (if anyone asks); Has a weird thing about color-coded hair; Subtly but intensely camp; Wears gold silk kimonos with red embroidery.

Skills: Abacus-15; Alchemy (Discworld)-12; Appreciate Beauty-14; Artist-14; Bow-10; Calligraphy-11; Detect Lies-12; Driving (Mecha)-11; Engineer (Low-Tech Mecha)-15; Fast-Draw (Katana)-15; Games (Shibo Yangcong-san)-13; Heraldry (Agatean)-14; Katana-15; Mathematics-13; Mechanic (Clockwork)-13; Mechanic (Primitive Machines)-13; Naturalist-13; Origami-13; Philosophy (Classical Agatean)-13; Research-15; Riding-11; Savoir-Faire-17; Tea Ceremony-13; Thaumatology-11.

Languages: Agatean-15 (native); Ankhian-15; Ephebean-14.

Notes: The "Bishonen Look" version of Handsome is described in *GURPS Mecha* (p. ME33); it indicates androgynous good looks which manage to be equally appealing to both sexes. If forced into personal combat, Sung uses a katana two-handed (p.CII26, or treat this as a fine bastard sword, and give him Two-Handed Sword-15), and he might sometimes wield a composite bow (actually a *daikyu*, for Japanese weapon fans).

Igor

ST 11 (13 in right arm); **DX** 11; **IQ** 13; **HT** 12/14

Speed 5.75, Move 7

Dodge 5, Parry 5

Advantages: Composed (+2 Fright Checks); Literacy; Modified Arm ST (+2, right arm only); Night Vision, Patchwork Man; Toughness (DR 1).

Disadvantages: Broad-Minded; Disturbing Voice; Hunchback; Sense of Duty (to employer, until things fall apart); Ugly; Unnatural Feature (purple hair).

Quirks: Waiting somewhat impatiently for mathter to be overthrown.

Skills: Axe/Mace-11; Architecture-11; Blacksmith-12; Carpentry-12; Mechanic (Clockwork)-13; Mechanic (Primitive Machinery)- 13; Running-10; Savoir-Faire (Servant)-14; Scrounging-13; Stealth-13; Weird Surgery-13.

Languages: Uberwaldian-13 (native); Agatean-11; Ankhian- 12.

Notes: If forced to fight, Igor hefts a hammer with his stronger arm.

The Hired Trolls (Rented Rubble)

ST 25; **DX** 10; **IQ** 8*; **HT** 14/18

*But currently with severe temperature problems.

Speed 6, Move 4.

Dodge 6.

Advantages: Sedimentary Troll; Disease-Resistant; Fearlessness +5; High Pain Threshold; Night Vision; Strong Will +1.

Disadvantages: Illiterate; Intolerance (dwarfs); Odious Personal Habit (Hitting People With Rocks: -1 reactions); Status -1; Struggling; Troll Brain; Ugly.

Skills: Brawling-11; Two-Handed Axe/Mace-10.

Languages: Ankhian-8.

PD 1, DR 4 (6 vs. crushing).

Notes: If they fight in person, the trolls will usually simply punch opponents.

The Mechanism

This is the sort of thing that happens when people get hold of more technology than is good for them, expressed in **GURPS Vehicles** terms. It takes the form of a 24' tall humanoid figure, with enough room in the head for a human operator, enough in the torso for three trolls all pedaling and cranking furiously, and enough in the legs for another hard-working troll each. The rest of the interior is taken up with chains, wires, cables, gears, drive rods, and cogwheels.

Subassemblies: Body +3, Turret (head: limited rotation) +1, two Arms +2, two Legs +2.

Power & Propulsion: Five 0.5 kW Muscle Engines (each require ST 25) w/2-kW legged drivetrain.

Occupancy: 1 NCS [Tur], 3 TCCS [Bo], 2 TCCS [Leg]

Armor: 3/10 (all)

Equipment

Arms: Arm motors, bad grip, ST 50.

Statistics

Size: 24'x11'x9' **Payload:** 2,700 lbs. **Lwt.:** 18,310 lbs.

Volume: 432.8 cf **SizeMod:** +4 **Price:** \$141,586 (AM\$7,079.30)

HT: 12

HP: 612 [Body] 174 [Tur] 354 [Arm] 309 [Leg]

Design Notes

As it's the creation of two Discworld technological geniuses, the tech level of this contraption is more or less indefinable. It has a TL5 Heavy frame, metal armor, and mechanical controls, the muscle engines are TL4, and the arm motors and legged drivetrain use the rules for TL(5+1) technology from **GURPS Steampunk** (p.STM72). Cramped Crew Stations for trolls (abbreviated TCCS) are 60 cf, 60 lbs., and \$200, while the trolls themselves are assumed to weigh 500 lbs. each.

For most purposes, this "vehicle" can be treated as a ST 50 creature with a Move of

gSpeed: 4 *gAccel*: 2 *gDecel*: 20 *gMR*: 1.5 *gSR*: 1
Low Ground Pressure, Off-Road Speed: 3.

Captive Tyrannosaurus

ST: 100, **DX**: 14, **IQ**: 3, **HT**: 15/50

Speed: 7.25, **Move**: 17

Size: 13

Dodge 7, **PD** 2, **DR** 3

Attacks: Bite for 5d+2 imp (reach C,1,2)

2 and the same Basic Speed as its driver. It can punch for 5d+2 cr damage, and has PD 3, DR 10. Use the operator's Driving (Mecha) skill in most cases when a roll is required; the arms have the equivalent of the Bad Grip disadvantage, giving a -4 penalty on many tasks including weapons use (but not punching).

This is a cinematic carnivorous dinosaur, more stop-motion than CGI. (Details are borrowed from *GURPS Dinosaurs*.) It's hungry, aggressive, and dumb as a rock; its redeeming feature is an active willingness to pick on things approximately its own size. It's about 30' long, including its tail, and weighs four tons. It's also an effective predator; all its sense rolls are 14. It does have a certain instinctive talent for tactics, and will use speed and agility against a lumbering mechanical opponent, running rings around it, jumping on its back, and using retreating dodges.

Master Twillik's Academy

An Adventure for the *Dying Earth* RPG

by Matt Riggsby

In addition to monsters, potent curses, and wily rogues, the *Dying Earth* contains a most ancient horror: secondary education. This adventure, which pits PCs against the faculty, staff, and students of a remote boarding school on a search for a legendary magical plant, is suitable for a group of Cugel-level characters.

Back To School

The PCs, who are certainly desperate rogues, acquire certain knowledge that an important item awaits them undisturbed at the ruins of a hilltop castle, the manse of Trael the Fat (a famously wealthy and gluttonous aristocrat), in the wilderness a week's travel from wherever they are now. Perhaps they are compelled to retrieve it by a magician they have offended. Perhaps they simply lost a bet. Whatever the reason, the item in question is a specimen of the garentum, an herb brought to Earth aeons ago from Alpheratz. The garentum exudes a healing sap, and it can be coaxed into forming lovely blossoms of enormous value. The garentum is said to await them rooted in the Well of the Blue Lady, which may be found on the castle grounds.

The trip is difficult; pelgranes and grues infest the woods, but safe lodging may be found at villages along the way. When they arrive at Trael's castle, however, they find it occupied. Instead of an overgrown ruin, the manse is in good repair and a large, well-painted sign over the gate reads "Master Twillik's Academy of the Naophian Quadrivium." The PCs' information is out of date; Master Twillik's grand-uncle established his school here over 60 years ago. Fortunately for them, if they decide to pursue their quest, there's a "Help wanted" notice pinned next to the main gate. Even if they don't want to pursue the treasure, they may want to rest and regroup for a while before heading back, and a few days of light labor might be just the thing.

As the PCs enter the gates, they will be given cursory questioning by Moch Haddox, the gardener, who also acts as an unofficial gatekeeper. Moch doesn't actually care what the PCs have to say for themselves and will, if asked, briefly answer any questions they may have. The school is in need of gardeners, and an assistant or two to the cook, nurse, and housekeeper. If they express any interest in specific positions, he'll direct them to an appropriate staff member (see Faculty and Students below). The school is desperate for staff, and so long as they don't appear immediately dangerous, the PCs will get the jobs.

The PCs will quickly gather that the Academy is a boarding school for children of wealthy parents. The old manse constitutes the core of the campus, but it has been repaired and extended considerably. The campus consists of a number of semi-detached buildings forming a complete enclosure around a courtyard; some are remnants of Trael's old stronghold, others fill in gaps along the line of the old curtain wall. From the north, going clockwise, the buildings include:

- **The Old Tower:** A five-story circular tower, containing individual rooms for the teachers and apartments and offices for Master Twillik and his assistant.
- **Long Hall:** A long two-story building. The lower floor is a large assembly hall set with long tables and benches, used for meals and presentations to the student body. The upper floor contains seven classrooms of varying sizes and a long, narrow room used as a studio for dance instruction. Long Hall is connected by sheltered walkways to Old Tower on one side and the refectory on the other.
- **Refectory:** This squat brick building contains the kitchen and a large cellar for storage.
- **Girls' Dormitory:** A round three-story structure built on the foundations of a long-destroyed tower, with a square addition protruding into the courtyard. Accommodations range from two large rooms on the ground floor sleeping 12 girls each to several small rooms on the top floor shared by two girls each. Older girls are assigned

to the smaller rooms, gaining a bit of privacy, if not any more actual space to themselves. The addition contains a large shared laboratory and an office for the Dean of Girls.

- **Stable:** An aging wooden structure, the stable and carriage house stands empty most of the time, but it is kept in readiness for the occasional notable visitor. PCs will be given accommodation here.
- **Library:** The library is an octagonal structure made from a now-decaying marble, once a shrine to an unknown deity and now converted to use as a repository of knowledge.
- **Gymnasium:** A long, narrow building crossing the line of the old curtain wall at an odd angle, protruding well away from the main campus. The gymnasium is divided into boys' and girls' sides, with large lockers containing appropriate to each side.
- **Short Hall:** Originally a cluster of small buildings which, through construction of new walls, has become a single structure. Short Hall contains nine more classrooms.
- **Boys' Dormitory:** A relatively new (and somewhat ramshackle) construction of wood and brick, the boys' dormitory repeats the girls' dormitory's pattern of large common rooms at the bottom and small, semi-private rooms at the top.

Outside the campus proper are a small garden shed (close to Short Hall) and a wide, deep crater used as a diving pool (near the refectory). The courtyard contains two wells, one of which is dry.

Although the wilderness around the school is hazardous, the campus itself is rather safe. Training with arms is part of the curriculum, and while individual students may be unskilled, they are together enough to intimidate the boldest individual monster.

The curriculum is the Naophian Quadrivium, a set of four subjects (each named for a primal nymph) including:

- **Physical culture (Ghazena):** Dance and callisthenics for all students, plus stilt-racing and archery for girls and fencing and diving for boys.
- **Geometering (Moana):** Arithmetic and geometry. Students draw a great many graphs and figures.
- **Poesey (Lametta):** Poetry, drama, and music.
- **Spiritual culture (Parsene):** Prayers and general moral instruction. Historical figures are often held up as exemplars of moral or immoral behavior.

In time, it will become clear that few of the students and faculty enjoy being at the academy. The students would rather be in their more exciting home cities than this tedious school. Being bored, they get up to mischief when not closely watched. PCs will find themselves subjected to disdain, practical jokes, and even, if they are attractive enough, naïve but dangerous flirtations from more precocious students. The faculty, knowing the difficulty of finding a paying job, are a bit more resigned to their lot. However, because they don't have wealthy parents sending armed carriage caravans for them over summer holidays, they nevertheless feel a bit trapped in their current position, and several would happily leave if they knew they could do so safely.

Faculty and Students

All told, there are about 150 people in residence at the Academy. They include:

- **Master Twillik (Intimidating 1.25~, Lawerly 1.5~):** Short, bald, officious, prickly, and precise, Twillik is the unquestioned master of the school. Except for Marzetta and perhaps Perulo, Twillik has no favorites and doesn't socialize outside of official functions, which is difficult in such a small community. He enjoys terrorizing the staff and students, pointing out small infractions in dress and deportment.
- **Marzetta, Master Twillik's secretary (Wary~, Ferocity 1.5~, Dodge 1.25~, Health 9):** Marzetta is pretty with her smooth, pale skin, violet eyes, and cap of short, black hair, but she is cold and distrustful of everyone but her master. A similarity of facial features suggests that they are related. Which they are, in a peculiar way. Far from being human, Marzetta is an unnatural hybrid of kree (a vicious lizard found far to the south) and Twillik's own flesh. Periodically, Marzetta sheds her skin and must consume a considerable quantity of human flesh and blood to regrow it.
- **Doctor Perulo, Dean of Boys (Obfuscatory 5, Lawerly 8):** A more boring man could hardly be imagined. If

one lets him, Perulo will go on for hours about obscure points of history and poetic structure in a droning monotone. Perulo is primarily responsible for the education and activities of the male students, but he also functions as head of the school during Twillik's rare absences.

- **Dame Selle, Dean of Girls (Eloquent 6, Penetrating 8):** Selle is head of girls' studies as Perulo is head of the boys, and quite possibly the best-read member of the faculty. Despite her prominent position, she feels ill-treated by Twillik and believe she, not Perulo, should be his right hand. Selle is reasonably pleasant if treated with respect, but has a sharp temper.
- **Maggo, the cook (Forthright 5, Contrary 7):** A ruddy, beefy man, shrewd Maggo keeps his eye on the account books. As a result, food at the Academy is served in sufficient quantities to keep one perfectly healthy, but no more. Maggo also takes a hard line against after-hours snackers. As a result, there's a strong student black market in small treats, and how best to raid the pantry is a frequent topic of discussion in the dormitories.
- **Illite, the housekeeper (Forthright 4, Pure-Hearted 4):** Illite is a small, quiet, pleasant woman charged with washing, sweeping, and all other aspects of taking care of the inside of the school which don't require heavy lifting (for hard work, the gardeners are called in under her supervision). She's a surrogate mother for many of the children, listening to their problems and offering well-meant advice.
- **Taulia, the nurse (Charming 5, Obtuse 3):** If Illite is a surrogate mother, big, blowsy Taulia is a surrogate favorite aunt. Taulia is loud but friendly; she is funny but hasn't a thought in her head. When she isn't telling silly little jokes, she's singing. Fortunately, she's got a passable voice.
- **Moch Haddox, the gardener (Forthright 6, Contrary 6):** Moch Haddox just wants to take care of the plants. He ignores both faculty and students as much as possible. He doesn't hate them (although he doesn't particularly trust them either); he just thinks they're more trouble than they're worth.
- **Botu-tsan, the librarian (Obfuscatory 6, Obtuse 1.5~):** Botu-tsan is very old, very slow, and very protective of his library. He is only seen away from the library at meals, and by the same token none are allowed past the gate to the stacks.
- **Teachers:** There are 16 teachers, four for each part of the quadrivium. Persuade styles are largely Eloquent or Obfuscatory, whereas rebuff styles are mostly Lawerly, with scores in the 4 to 8 range. Most have combat skills of no more than 2, save the resident swordmaster with a Speed or Finesse of 10.
- **Students:** There are 122 students, equally divided between boys and girls, ranging in age from 13 to 18. Their backgrounds range from mercantile middle class to venerable aristocracy, but all come from money. Otherwise, they are typical youngsters. Rebuff and Persuade scores cover the full range of possibilities with scores ranging from 2 to 8. If it matters, boys' attack styles are Speed, Finesse, or Caution; girls should only have Caution, but a few may provide surprises. At any rate, scores will be no higher than 4. In terms of personality, the students tend to take after their parents, who are often arrogant aristocrats. However, there will be a sprinkling of dutiful toilers, hellions, sensitive poets-to-be, religious zealots, flirts, dullards and so forth.

Hitting the Books

Wise PCs will pursue the fabled garentum carefully instead of attempting to dismantle the Academy while classes are in session. If they ask around, it will quickly become apparent that none of the students or staff have ever heard of the Well of the Blue Lady or the garentum. Finding the garentum will be a desperately difficult task.

The library may immediately suggest itself as a source of information, but there are considerable difficulties to using it. It is divided into two uneven parts: the open library and the stacks. The open library contains general reference works, a peculiar smattering of other books (ranging from technical works on phrenology to humorous poems in languages not spoken at the Academy), and an index to the stacks. Anyone may read books in the open library, but they may not be removed by students. No one, though, may enter the stacks but Botu-tsan and Twillik himself (Botu-tsan has firmly resisted efforts to appoint an assistant). Anyone wanting a book from the stacks must look it up in the index and present its index designation on a slip signed by a teacher to Botu-tsan, who sits at the gate dividing the libraries through the day. Botu-tsan then moves his creaky bones up and down the aisles, fetching the required books. The stacks are indexed according to a system only Botu-tsan understands. The shelves are supposed to be labeled according to his scheme, but he is lax in updating the labels.

Researching botany is unlikely to get them anywhere. If they can search the open library, they will find a book on the

Star of Alpheratz, a light-loving flowering plant of purely terrestrial origin, which is easily distinguished by its spade-shaped leaves and an unfortunate stench. No such plants are to be found on campus. If asked about plants from Alpheratz, Moch Haddox will mention the Star of Alpheratz but will not know where any may be found. But the question is academic; the Star of Alpheratz is, unfortunately, a purely terrestrial plant.

Researching the history of the castle may be a bit more fruitful, but difficult. Most of the students will deny any knowledge, although a few will indicate that one habitual troublemaker had recently complained of being assigned an essay on Trael the Fat as a punishment. Once identified, the student (Contrary 6) will initially deny the assignment but will eventually own up. He will remember little, save that Trael claimed to be born miraculously of four divine mothers (Ghazena, Moana, Lametta, and Parsene, as it happens). However, it was some months ago, and he threw the book he used for research into the latrine to protest his treatment. Characters desperate enough to track down the essay will find it, unread, among the papers of the teacher for whom it was written. The essay describes bloodier portions of Trael's career, including having enemies roasted and served at gala feasts and his employment of a fierce monster locked in the dungeons under the castle's storerooms. Characters who brave the latrine will eventually find the book with some parts still legible. They should be rewarded with the same information, with the additional item that the "monster" was from another world as well as the tale of a siege of the castle in which Trael and his followers defended the keep for a month before aid arrived.

Research into Alpheratz will prove extremely difficult. One or two of the teachers may be able to describe the location of the star in the sky and its position in certain constellations, but no more. The library index contains a book on Alpheratz. However, it's in the stacks, and since the PCs are neither teachers nor students, Botu-tsan won't fetch them books. They must either convince a student to get it for them or break into the stacks to find it themselves. Should they find the book, it will tell them nothing about the garentum itself. Rather, it details the feudal society of Alpheratz. Of notable interest is a section where it discusses the gem-like flowers borne by the stony Alpheratz vegetation and the ranks of the warrior-gardener caste who guard the precious gardens.

In the course of their research and veiled interrogation, the PCs are likely to stumble across all manner of rumors. They should hear several of the rumors here (the truth behind them is for the GM alone):

- *There is a treasure hidden somewhere in the school.* This is true (from the PCs point of view), but no two people will agree on where it is: the garden, the assembly hall, the potato bin, etc.
- *Arillio, the swordmaster, is a drunkard who regularly breaks into the school's small wine cellar.* This is mostly true; he only starts drinking once classes are done for the day, and he only *occasionally* breaks into the wine cellar.
- *Mistress Laepanna, an arithmetic teacher, is having a covert, improper affair with Doctor Perulo.* This is true. By way of keeping her options open, she is also having an affair with Maggo, who is in turn consorting with Dame Selle. Before taking up with Laepanna, Maggo had a liason with Mistress Phaerati, a teacher of poetry. There is little to keep one entertained at the Academy.
- *Moch Haddox is the true master of the school, a reclusive, eccentric wizard; Master Twillik is a magical automaton he uses as a puppet.* False, but a near miss.
- *Master Twillik keeps his school filled by blackmailing certain wealthy parents of Kaiin into sending their own children and persuading the parents of others to do the same.* This may very well be true, and could be an interesting side-issue.
- *There is a ghost who walks through the classrooms at night, moaning faintly.* False. Taulia is sometimes afflicted with a toothache and, unable to sleep, walks about where she thinks she is unlikely to be seen and unlikely to disturb anyone. She may have been seen from a distance in the dark and, clad in a flowing nightgown and cap, been mistaken for a spirit.
- *A tribe of grues lurks in the wilderness, picking off the unwary and plotting a massive attack on the school.* Largely false. There are grues in the woods, but they're incapable of organizing.
- *The Reverened Mistress Vanax, a spiritual culture instructor, subscribes to a different cult from Dame Selle and wishes to displace her.* This is true, and the feelings are mutual; she was hired by Twillik and Perulo over Selle's objections.
- *One of the students (the person repeating the rumor will point one out) is actually the illegitimate child of the housekeeper and a minor nobleman of Almerly; this is the only way the child can be close to the mother, and*

- tragically the student doesn't know about it.* There is such a student, but he has probably been misidentified.
- *There's a monster in the potato bin.* This rumor will be revealed with a smirk; sufficient persuasion will reveal that this is a school legend. An amorous boy will warn his intended that she needs protection from the monster in the potato bin and will attempt to whisk her away to a suitably "safe" corner.

A Closer Examination

Sooner or later, the PCs are likely to undertake a closer physical examination of the Academy campus. What they find depends on how hard they look.

The grounds feature two wells (one working, one dry) as well as the diving pool. A third well may quickly be found in Short Hall, preserved as the base of a small indoor shrine. If the PCs manage to dig through the muck at the bottom of the wells, they'll find colored marble statues of women: one yellow, one green, and one red. A clever character may realize that there may be yet another well covered by renovations. Particularly clever characters may realize that there is no known well in the keep, which would be the part of the castle most in need of an independent water supply.

A random search of the tower might lead them behind the well-locked door of Twillik's chambers to his private study. There they will find a well-stocked magical laboratory with several vats, each containing an immature variation of the Marzetta hybrid. Twillik will fly into a rage if his study is breached, but sticky-fingered PCs may find a number of magical adjuncts in his cabinets.

There is, in fact, a monster in the potato bin. A bit of investigation will reveal that, under several hundred pounds of potatoes, is a wood plank floor which will sound hollow if knocked. Under the floor is an ancient chamber containing two square stone slabs, each about two feet high and seven feet on each side. Pressed between them is a peculiar figure whose head, feet, and hands protrude from the sides. This is Gixgix (Forthright 5, Wary 7; his combat ratings are Cunning 9, Intuition 9 as soon as he's up to it), one of the fabled warrior-gardeners of Alpheratz. Between his elastic construction and the relatively nourishing air of Earth, he has survived here for an untold period of time.

Though fierce in appearance and initially suspicious, Gixgix is not hostile by nature. He is willing to discuss the matter of the garentum if the PCs undertake to release him. It will take some force, but the application of a few prybars, which may be found in the garden shed, can lift the upper slab enough for someone to pull him out. He will be too stretched out to move much on his own power, but if left to rest for a few days, he'll pull himself together.

Gixgix's story is this: he came to Earth to tend a garentum, given as a gift to an Earthly ruler by a mandarin of Alpheratz. He followed the plant as it passed from father to son for several generations until it was seized, along with the gardener himself, by Trael. Because Trael had taken the garentum contrary to the sacred conventions of Alpheratz warfare, Gixgix refused to reveal the secrets of making its gem-flowers bloom. Trael had him imprisoned in a small storeroom. Gixgix doesn't know how long he remained a prisoner (he spent most of the time asleep), but more recently, although still some years ago, someone else came to demand the secret of blooming the gem-flowers. Gixgix, who doesn't grasp Earthly lifespans, believes that it was an agent of Trael, but from his description it will be clear that the person in question is Twillik. Twillik has returned several times with tortures he hoped would coax Gixgix to reveal his secrets, but he did so in vain; Twillik's grasp of the biology and sensibilities of Alpheratz are as weak as Gixgix's grasp of Earthly matters. Finally, if he hasn't mentioned it yet, Gixgix will mention that the garentum grows in a well in the tower. It will resemble a thick vein of black rock more than an Earthly plant.

If they follow Gixgix's instructions, or if they decide to explore the tower on their own, they may discover the missing fourth well, hidden underneath more floorboards. The well is both wide (more than a man's height) and deep. If they climb down to the muddy bottom, they'll find a statue of a woman made from blue marble. If they haven't spoken to Gixgix, they may not notice the 12-foot-tall veins of black stone running along the inside of the well or realize their significance.

Unforeseen Perils

Tearing around the school during the day will be difficult. PCs will be expected to attend to their duties during daylight hours. Their masters will burden them with endless responsibilities, and they must contend with a horde of students who are used to taking their resentments out on those who they see as beneath them. It goes without saying that any actual assault or even overt threat on any of the children will result in immediate dismissal at best, and possibly the ongoing enmity of a parent. PCs working in the kitchen are in an advantageous position to obtain delicacies with which to bribe students, but will run afoul of the tyrannical Maggo if he finds out.

Once night falls, the school is full of covert activity: Doctor Perulo, Laepanna, Maggo, and Dame Selle may be found creeping about pursuing various liasons; Mistress Vanax might do the same in hopes of catching Dame Selle in rumored mischief; Arillio could be making another attempt on the wine cellar; Taulia might be suffering the effects of her toothache; and Marzetta may be on the prowl again. Marzetta is a particular danger to the PCs, since she and Twillik will regard them as expendable. Further complications are also possible. Any of the teachers may be afflicted with insomnia or sonambulism, and students might leave their dormitories for assaults on the pantry, innocent but amorous liasons, or practical jokes.

Graduation

Assuming the PCs find the garentum before they are turned out for poor job performance, eaten by Marzetta, or forced to flee a scandal, they must figure out how to get it out of the school. Through great effort, the PCs may be able to detach the stony plant from the walls of the well, dig up its fortunately shallow roots, and maneuver it out of the well. Doing so without Twillik learning of it, however, will be extremely difficult. If he learns of their efforts, he will have them ejected from the school forthwith and may covertly send Marzetta and her less developed sisters to attack them. Particularly clever PCs may think to ask Gixgix about the possibility of taking cuttings so that they don't have to take the entire plant with them. Gixgix may be persuaded to help them, but he will only do so if the PCs agree to undertake certain ritual procedures, and the transplanting will require substances which are in short supply around the campus.

With Special Guest Star X!

by Brian Rogers

Occasionally guests turn up unannounced. The heroes are in the middle of tracking down the weapons Lord Crustacean stole last week before his nefarious plan can come to fruition when Dr. Eerie's astral form crashes into their base begging for help. Suddenly their current concerns have to take a back seat as they help their friend find his stolen physical form. At other times the PIs have to leave their usual city of operation to track a killer onto someone else's turf. Now they're in a different city, where the law may be the same but the rules are a little different and the local maverick cops probably feel they have better things to do than help out the gawking rubes.

Most superhero comics take place in shared worlds, where each hero has his own book with its own discrete plots. Sometimes characters leap from book to book. These events are team-ups, and they are a main reason why comic books universes feel so wonderfully active and alive.

*"For those more familiar with conventional literature, try to imagine Dr. Frankenstein kidnapping one of the protagonists of **Little Women** for his medical experiments, only to find himself subject to the scrutiny of a team-up between Sherlock Holmes and Hercule Poirot."*

--Alan Moore

Of course, this isn't entirely limited to comics: television shows are another media that can support shared worlds with the potential for overlap, and all of us are familiar with the concept in real life. Only people with a solipsistic worldview expect everything that happens to center on them. Thus while classic crossovers are best described using the example of superhero comics, a clever GM uses it anywhere to strengthen the sense that the game world is a real and active place. Foolish crossovers are needless distractions or part of an endless morass that prevents the series from developing any momentum.

Still, quirky and distracting as they are, they can be a great deal of fun.

"It's my third issue: time for an obligatory guest star!"

--She Hulk, cover of *She-Hulk* volume 2 #3.

The most common team-up is the appearance of another hero or group into the PCs' lives. These people turn up in the heroes' backyard, dragging their own plotlines and problems behind them. These have a standard structure, almost a buddy cop movie on fast forward:

1. The heroes are doing whatever they normally do when the visitor does something to attract their attention, from performing an apparent crime on their turf to trying to arrest them.
2. There is an obligatory misunderstanding which leads to a conflict between the heroes and the visitor. The heroes have the upper hand when this misunderstanding is cleared up.
3. The visitor explains what brought them into the heroes' backyard; this is always something with a certain degree of time pressure. The heroes, no matter how little they care for the visitor's ethics, tactics, origin story, color scheme, etc. feel obligated to acknowledge the old school tie and lend a hand.
4. The visitor works with the heroes to vanquish his foe or otherwise resolve his problem. If the visitor is a visiting team, the situation calls for the teams to split up into two groups: half local heroes, half visitors.
5. The visitor departs with the heroes having formed a close friendship, or at least a grudging respect. The heroes are then free to return to their own plots, but they may have made the visitor's adversary their own.

In the world of comic book publishing, these crossovers are 75% financial and only 25% plot. That three-quarters financial incentive serves as advertising for a title -- a first issue sells well because it's labeled "Issue #1," the second issue sales start to drop and then there's issue three, in which a big name superhero turns up appearing prominently on the cover. The hope is that fans of Omniman will pick up this untested "Amazing Men" title just to see Omniman and will get hooked on the new series. (This is also used on established series whenever flagging sales have ushered in a

[new creative team](#).) The remaining one-quarter is actually plot-related, cementing the book into the larger world, showing how the heroes interact with it, and perhaps laying threads for a the book's main story arc.

A GM can use these sorts of crossovers in the same way. In the first gaming session the heroes and their campaign are new and untested -- they're still learning how to [interact with one another](#). By the end of the second session the players and GM probably have the team dynamics hashed out to a workable level. That means it's time to see how the heroes interact with the larger world. Enter the crossover hero.

"This must be some kind of team up . . . so I guess I should lead off with the obligatory misunderstanding!"
--Valor, *Ambush Bug Nothing Special* #1

For some players just getting to meet the crossover hero a real thrill: shaking hands with Superman, trading quips with Spider-Man, and hearing their childhood icons say "you've got the right stuff" can really make a player's day. For these players, the point of the crossover is the second half, where they work together and part as allies in the good fight.

Other players aren't that sentimental. They want to know that their hero is just as good, tough, and powerful as any other, if not more so. For these players, the point of the crossover is the first half -- the one where they were kicking Wolverine's butt before someone worse popped up and they were forced to work together. Such players take joy in the fact that their PC's names on the cover means that they "win" the obligatory misunderstanding. While not immutable, the "it's your book/he's an NPC," concept puts you ahead of the game. This makes sense on a tactical level (you have the home court advantage) and on the marketing level (the new heroes have to look cool enough for readers to keep buying the book).

Finally, there are the players for whom the point of the crossover isn't the beginning or the end, but the middle: a chance to pump the visiting hero for information. These will be more common in supers worlds with conspiracies, secret histories, or other strangeness, or in games set in worlds where the players simply don't know the world yet. The visitor acts as an infodump, explaining to the players things that their PCs might already know ("I haven't seen anything this bad since earth was invaded by the Centauri-Plasm in '93." "Earth was invaded?" "It was in all the papers . . .") or things that they wouldn't. ("Do you really want to know [why](#) you have super powers?")

In any case, the GM should judge his players and pick the visitor accordingly: since this is the first contact the players have to the larger campaign, give them what they want. The GM's goal in a crossover is the same as the publishers -- keep the audience's interest. The players should finish the session more engaged in the game for having had a taste of the wider world.

"But defending a planet and cleaning up a city are two very different things . . . Gotham city isn't your turf. It requires a different approach."
--Batman to Superman, *Man of Steel* #3

Of course, sometimes the heroes will be the ones crossing over into someone else's adventures. This generally happens when events take the PCs on the road, where their concerns are suddenly in someone else's city. In general, this plays out exactly the same way as when a visitor comes into the PC's town, but the positions are reversed. Unlike the Third Issue Team-Up, these generally happen once the heroes have established themselves as being part of the greater universe. Another classic in this sense is the team crossover where the action starts in one title and concludes in the other. Both sides get a chance to shine fighting either a long-planned or totally improbable combination of their adversaries.

One thing to keep in mind on a meta-plot level is that in this sort of a team-up the PCs are appearing in the resident heroes' story. They are the visitors and the underlying theme and tone of the resident book can be quite different from their own. They should expect to be at a momentary disadvantage to the resident hero when the obligatory misunderstanding is resolved, but they may also receive a feeling of hero worship if the resident hero is young and experienced. In some ways being the visitors in a crossover brings a sense that the heroes have arrived. They're "It" now, either as the flavor of the month or as the continuity's new core series.

"Y'see, I was minding my own business when I, uh, sort of got shot into orbit. I would have been one way-out wallcrawler if you hadn't come along and zapped me back -- home? Holy Cow! I'm on the Moon!"
Spider-Man to Adam Warlock, *Marvel Team-Up* #55

Team-ups are usually special events, but for some heroes they're regular occurrences. Both of the major publishers have books dedicated to the concept of team-ups. In these, one of their popular characters teams up with a new or less popular hero every month, taking the idea of sales boosting crossovers to a whole new level. If Omniman is the hero of "Super Two-For-One," Omniman fans will pick it up every month and constantly see heroes from the publisher's other books. Maybe this will boost sales in the other books, maybe not, but it does keep characters visible. Some of these visitors have had their books canceled, and putting them in team ups keeps them under copyright and in the public eye. If their appearance in the team-up book does well, maybe they're ready for another shot at a title. And the central character? Well, he tends to get around a lot

So how could you use this as a campaign style?

If you have group that consists of a single reliable player and a group of not-so-reliable ones, have that player's hero be the star of a team-up title. Everyone else plays other new or returning heroes whenever they can attend. The core hero will quickly become a nexus point for the campaign world, and might do well to have some points in Contacts: Heroic Community and Weirdness Magnet to both explain and his exploit his having partnered with every other heroic type out there.

More common is the group that has a core of reliable players and one or two people who can only attend intermittently. This is a good group structure for modeling the adventures of a contract hero group such as private investigators, a team of mercenary do-gooders, or other agents moving from case to case. The core player group makes up the agency and the intermittent players are the special guest stars. Sometimes the agency won't have another heroic type as their client or contact (when none of the intermittent players turn up) but in most cases they'll have a revolving cast of other adventurous types pulling them into new scenarios.

Sometimes you have a stable player group, but one player just likes making new characters. While this can be a pain if you aren't prepared for it -- as soon as you structure a neat subplot around Mr. A, player becomes more interested in his new hero, Bee-Man -- it makes a great way to set up a team-up title. Just let your new-character-happy player go nuts, setting up one- or two-session plots that have some connection to his new character. Once the plot that started with Bee-Man's appearance finishes he flies off into the sunset. Next month, however, our core heroes meet Captain Sea in a battle against modern pirates. So it goes.

Such a team-up structure is a good way to balance screen time between the core players and the ones who can only make it once in a while: the core heroes are the focus of any advancing subplots, but the visitors are the focus of the team-up adventure. This keeps them from getting marginalized by the characters whose players are there every week, but their lack of any ongoing sub-plots prevents them from dominating the game themselves.

Of course, constantly developing the guest stars and their attendant plotlines can be a drain on even the most interested GM. One way to handle this is to harness the enthusiasm of the players: as stated above, some players just like developing new heroes. Such heroes will probably have their own hunters and dependants, and probably something of a backstory. The GM can just take that backstory and use it as inspiration for this session's plot. This partial ceding of world generation over to the players can be a good way to cultivate players into trying their hand as GM (they produce an idea, you show them one way it could be done) and it would certainly develop more interesting visitors for the team-ups.

Such player-generated team-up heroes has a synergistic effect with the regular team-up outcome of cementing the heroes in the larger world: by letting your players develop backstories for their visiting heroes, they take over some aspects of campaign creation. Once they've turned up in the game their history, enemies and plots are now a part of the game world, which can produce anything from a single wandering fugitive hero to a member of an international superspy organization fighting the mixed offspring of Moriarty and Fu Manchu (who all wear silly uniforms) to a member of an intergalactic super-team who just happened to be stopping by. Depending on how this backstory is received by the core players you can pick up on it again later or not. One of the joys of the comic book shared universe

is that only the parts that the creative team like filter from book to book.

Usually in the third issue.

Magic on the Cheap

Very Minor Permanent Items For *d20 System* Fantasy Games

by Owen K.C. Stephens

The *d20 System* assumes a specific level of magic is available in typical fantasy game. The balance of character classes to one another, as well as the ability of characters to handle encounters of their level, is dependent on close to this level of magic actually being in play. If character have significantly too much magic, encounters become too easy. If they don't have enough, not only are encounters difficult, many characters find themselves useless in certain encounters.

The core rules provide a table showing how much money in goods and coin a character should have at each level. GMs sometimes run into trouble at low levels, however, because it's difficult to give characters the right amount of treasure without either giving them numerous one-shot magics (scrolls and potions), or throwing in a single valuable permanent item the party can't divide evenly. There aren't that many cheap, permanent items, and once everyone has masterwork weapons and equipment, there's a gap before they can afford useful permanent items.

While there's nothing wrong with some one-shot items, they don't really build a character's total wealth in the long run. Once a one-shot item is used, the character has lost all its value. Minor magic items, however, can be sold for half their value, allowing a character to recoup half their cost when buying a more expensive and useful item. By giving characters minor magic items more regularly, a GM can more easily keep them in the appropriate treasure range, without handing out a major hoard each time characters go up a level. Such treasures also spice up low-level play, allowing characters to have new and unique items earlier in game play. They can also be made available to low- and mid- level characters who have taken item creation feats, but cannot afford the exp and monetary costs of more major items, and may not meet more obscure creation prerequisites.

For purposes of this article, cheap magic items are those priced at less than 2,000 gp, with a focus on those priced at 1,250 gp or less. Items with many charges (20 or more) are included despite not being "permanent," as they can be used much more often, and are likely to have charges (and thus value) left by the time a character wants to trade them in for better equipment. Many of the items presented below are useful even to high level characters, though often only in limited circumstances. For low-level characters, the bonuses granted by these items can have a real benefit, on par or better than with masterwork equipment, if not as good as more expensive magic items.

Greater Mastercraft

Though not technically magic, greater mastercraft items can make excellent low-level treasure. Greater mastercraft items are like masterwork, but even more so. Whatever benefit (generally a bonus or reduction in a penalty) a masterwork item gives, a greater mastercraft items has double that benefit. Greater mastercraft items cost as much as an average item, plus four times what it costs to make that item masterwork.

Thus a greater mastercraft weapon grants a +2 enhancement bonus to attack rolls, but none to damage, and costs 1,200 gp more than an average weapon. A greater mastercraft set of artisan's tool grant a +4 circumstance bonus to appropriate Craft checks, and cost 205 gp. Only items which have masterwork versions have greater mastercraft versions.

Greater mastercraft armor is an exception to the normal rule. Instead of giving double the bonus of masterwork armor, it increases an armor's maximum Dex bonus by +1 in addition to the normal masterwork bonus (lowering the armor check penalty by 1). Greater mastercraft armor costs 1,000 gp more than a typical suit. Thus a greater mastercraft chain shirt costs 1,100 gp, gives an armor bonus to AC of +4, has a maximum Dex bonus of +5, and an armor check penalty of -1.

Talisman Armors and Shields

Talisman armor is magically enchanted armor which is not powerful enough to grant an AC bonus by itself, but can do so in conjunction with a talisman shield. A set of talisman armor and shield together grant a +1 enhancement bonus to AC, which does not stack with enhancement bonuses from other armor or shields.

A suit of armor or shield does not have to be masterwork to receive a talisman magical aura, but it cannot have any other magical benefit. The cost of a talisman enhancement is 250 gp per item, and it can be done by character with either Craft Arms and Armor or Craft Wondrous Item. A set of talisman armor and shield never grant more than a +1 bonus to AC.

Rings

Hearth: Designed for people who spend a lot of time around hearth, campfires or forges, this ring grants its wearer fire resistance 1.

Faint abjuration; CL 1st; Forge Ring, *endure elements*; Price: 1,200 gp.

Language: Each ring grants the wearer the ability to understand one additional language. If the character wearing the ring is literate, he gains literacy in the language as well. Some rings grant two or more related languages, such as Abyssal and Infernal, or Aquan, Auran, Ignan, and Terran.

Faint divination; CL 1st; Forge Ring, *comprehend languages*; Price: 100 gp (1 language), 400 gp (2 languages), 900 gp (3 languages), 1,600 gp (4 languages)

Lights: A ring of lights can be activated as a standard action, creating four lights as bright as torches. The lights move as directed by the wearer (no concentration needed), though they must stay within 10 feet of each other and 110 feet of the ring wearer. They lights last until they exceed their range, or are dispelled by the ring wearer (a free action).

Faint abjuration; CL 1st; Forge Ring, *dancing lights*; Price: 900 gp.

Vim: These extremely minor rings are generally thin bands of silver, and are often given to noble children to help them with bruises and scrapes. The wearer of a *vim ring* gains 1 hit point. The ring must be worn for a week before this benefit is gained, and if it is removed it must be worn for another week before the benefit is restored.

Faint transmutation; CL 1st; Forge Ring, *virtue*; Price: 1,200 gp.

Rods

Deathbane: This is a simple rod of black iron two feet long. The wielder may activate the rod as a standard action, firing a beam identical to that of the *disrupt undead* spell.

Faint necromancy; CL 1st, Craft Rod, *disrupt undead*; Price: 900 gp.

Staves

Acolyte: These staves are made of polished white birch, and have a candle holder mounted at their end. They are generally carried by the most minor member of a religious procession, though they are also sometimes passed out to young crusading clerics. They allow use of the following spells:

- *cure minor wounds* (2 charges)
- *guidance* (2 charges)
- *mending* (2 charges)

Moderate varied; CL 8th; Create Staff, *cure minor wounds*, *guidance*, *mending*; Price 1,687 gp, 5 sp.

Student's: These simple staves of gnarled wood are often made by master mages for their apprentices, and are popular with young adventurers for providing minor offensive capabilities in damage types not common in lower level spells. They allow use of the following spells:

- *acid splash* (2 charges)
- *mage hand* (2 charges)
- *ray of frost* (2 charges)

Moderate varied; CL 8th; Create Staff, *acid splash*, *mage hand*, *ray of frost*; Price 1,687 gp, 5 sp.

Wondrous Items

Arcane Stones: These fist-sized rocks are smooth stones with a single rune ("sight") carved into one side. A character holding an arcane stone may *detect magic* at will.

Faint divination; CL 1st; Craft Wondrous Item, *detect magic*; Price: 900 gp.

Boots of Ducking: These plain buskins change color to match the style of the wearer. Anyone wearing them gains a +1 to +2 resistance bonus to all Reflex saves.

Faint abjuration; CL 1st; Craft Wondrous Item, *resistance*; Price: 350 gp (+1 Reflex), 1,350 gp (+2 Reflex).

Eldritch Spectacles: A pair of these spectacles is generally made from gold wire and greenish glass up to a quarter inch thick. Anyone wearing the spectacles can read magical writings as if under the effects of a *read magic* spell.

Faint divination; CL 1st; Craft Wondrous Item, *read magic*; Price: 900 gp.

Everbright Lantern: This small, ornate hooded lantern sheds light out to a 20 foot radius (and shadowy light out another 20 feet) without flame or the consumption of oil. When shuttered it is entirely dark, bursting into full illumination immediately when it is opened. Because there is no flame the lantern is cool, and may be clipped to a belt to shed light without being held.

Faint evocation; CL 1st; Craft Wondrous Item, *light*; Price: 900 gp

Gloves of Stoutness: These tight-fitting leather gloves are either plain brown or black, attaching at the wrist with a strap. Anyone wearing them gains a +1 to +2 resistance bonus to all Fortitude saves.

Faint abjuration; CL 1st; Craft Wondrous Item, *resistance*; Price: 350 gp (+1 Fortitude), 1,350 gp (+2 Fortitude).

Headband of Will: This simple band of black cloth has a single iron disk mounted to the front. The wearer gains a +1 or +2 resistance bonus to all Will saves.

Faint abjuration; CL 1st; Craft Wondrous Item, *resistance*; Price: 350 gp (+1 Will), 1,350 gp (+2 Will).

Iron Cup: This heavy iron cup is scarred and dented, with simply etchings of entwined snakes covering the outside. Any time a poisonous material is placed within the cup, or the cup is pressed against a poisonous creature or item, the cup turns slightly greenish.

Faint divination; CL 1st; Craft Wondrous Item, *detect poison*; Price: 900 gp.

'Prentice Gloves: These simple working gloves grant a competence bonus to one Craft or Profession skill. Most grant only a +1 bonus, but some (10%) grant a +2 bonus instead. Determine the Craft or Profession skill randomly.

Faint transmutation; CL 1st; Craft Wondrous Item, *guidance*; Price: 100 gp (+1 to one skill), 400 gp (+2 to one skill).

Reliquary: A reliquary is a small wooden box, often adorned with carvings and inlaid stones, designed to carry a holy relic. Though such relics may have powers of themselves, most are powerless bits of preserved flesh or scraps of metal, cloth or wood supposedly once belonging to a powerful religious artifact. The constant faith poured into a reliquary does give the vessels themselves real power, however. A character able to turn undead may do so one additional time per day if holding a reliquary.

Faint conjuration; CL 1st; Craft Wondrous Item, *disrupt undead*; Price: 1,250 gp.

Shirt of Comfort: The remarkable garment is extremely comfortable, giving the wearer some of the benefits when resisting situations of discomfort or fatigue. The wearer receives a +1 bonus to the following checks and saves: Swim checks made to resist nonlethal damage, Constitution checks made to continue running, Constitution checks made to avoid nonlethal damage from a forced march, Constitution checks made to hold your breath, Constitution checks made to avoid nonlethal damage from starvation or thirst, Fortitude saves made to avoid nonlethal damage from hot or cold environments, and Fortitude saves made to resist damage from suffocation.

Faint abjuration; CL 3rd, Craft Wondrous Item, *bear's endurance*; Price: 1,250 gp.

Pyramid Pick

My Life With Master

Published by [Half Meme Press](#)

Written by Paul Czege

Cover by William Terrell

Illustrated by Colin Theriot

64-page 7-by-8½-inch book in PDF format; \$8.95

The advent of the PDF format has given rise to both a number of publishers who wholly release in that format, and a proliferation of self-published games written by those who want to share their game with the hobby. Not possible without the Internet, this has coalesced into something of a sector of "Indie-RPGs," a counterpart to the mainstream of the hobby as much as the independent film sector is to Hollywood. This counterpart and the format is also the space in which to experiment and explore the nature of the RPG without the expensive costs of production, publishing, marketing and distribution. One such example of this is ***My Life With Master -- a roleplaying game of villainy, self-loathing and unrequited love***, published by Half Meme Press.

Originally released at Gen-Con 2003, ***My Life With Master*** is perhaps the most interesting RPG of the year. As the title suggests -- and if you did not pronounce it with something of a groan or moan in your voice, not to say a touch of Peter Lorre's role of Joel Cairo from *The Maltese Falcon*, then go back and try again -- ***My Life With Master*** is a game about roleplaying the minions of a Master or mistress. More specifically, and in the default setting for the game, they are the malformed, malnourished, and misunderstood servants that serve the desires, demands, and wants of their Master, resident to a middle-European town of the year 1805 (roughly). They are all that stands between their Master and the townsfolk, who are often the minion's victims in the course of carrying out their Master's orders, as well as a source of fascination for the minions; in the end, those villagers are a likely cause of the PCs' death and that of their Master's, as the townsfolk, sickened by his predations, storm his domicile -- pitchforks in hand and torches aflame.

Thus ***My Life With Master*** is a game set within the gothic horror genre, or at least, one small part of it. At first sight it appears to be a comedic game, as evidenced by the artwork that echoes that of Charles Addams, Edward Gorey, and even Tim Burton. Yet these references hint at a darker side to ***My Life With Master***. Yes, there are comedic elements to this setting, but it sidles further and further through melancholia into outright tragedy. The genre of the game is also enhanced by the layout of the game. Available as a 64-page 3.1 Meg PDF document, ***My Life With Master*** could easily be half this size had the author plumped for a standard layout. Instead the text is organized into a centrally placed single justified block of text on each page, leaving a swath of white to surround it. This does much to enhance the appearance, making it look something akin to a treatise or manuscript, as well as serving to improve the writing's accessibility.

Although a Master character is very much a NPC controlled by the GM, the players have just as much input in defining and conceptualizing his nature and wants. These are summed by his Aspect and Type, plus his Wants and Needs. Aspect is either Brain or Beast, the former indicating that the Master dwells in the world of thoughts, words or of sensation, and that he can be influenced by such worlds; the latter that he is physical in nature, influenced by primal, physical sensation and contact. In both cases they also indicate how a Master primarily influences the world. Needs are what a Master desires from the townspeople -- and will help define what each minion does for him as they pursue his needs, while Wants are what he desires from the outsiders. It is from this group that the Master desires recognition, so

that for example, the aging actor Bertrand Khurtzov may *Need* the blood of the young to maintain his youthful good looks, but *Want* the recognition of his great acting talents.

A Master can be one of four types: Feeder, Breeder, Collector, or Teacher. The vampire is the archetypal Feeder, Dr. Moreau the archetypal Breeder, P.T. Barnum the Collector, and Dr. Hannibal Lecter the Teacher. Their Aspect can also influence each Type, so that Dr. Lecter would be a Beast-aspected Teacher, while Dickens' Miss Havisham from *Great Expectations* would be a Brain-aspected Teacher. A Master is defined by two statistics that act as a balance to each other, but do not counter the other. They are "Fear," which measures a Master's hold over his minions, and over the populace of the town; and "Reason," how far this populace can slip free of the Master's hold over them.

Equally, minions possess a minimum of Statistics and Traits. The first two Statistics both empower and victimize a minion, "Self-Loathing" measuring how much a minion believes himself or herself to be a monster and "Weariness" how dissatisfied they are with their lot in life. Self-Loathing prevents a minion from resisting a Master's monstrous commands, while helping in carrying out violent acts against the townspeople. Conversely Weariness will help resist a Master's demands, but increase the possibility of failure and injury in carrying them out. They are simply defined by spreading three points between the two statistics, so that they can range from zero to three.

A minion's Traits reflect their monstrous nature in two simple statements -- a "Less Than Human" and a "More Than Human" one. The first is an excessively crippling disadvantage, qualified by an equally excessive exception, for example: ". . . is mute, except when singing hymns," while the second is a powerful and almost surreal ability, again with a limitation, such as "always charismatic and seductive, except between midnight and 2 a.m." In either case the GM interprets the effects of these Traits strictly to the letter of their meaning, and further, these effects trump the game's mechanics. For example, the minion Jorge, who "walks with a slow scraping shuffle from his clubbed foot, except when swinging from the ropes and rafters of the belfry," will always be caught by a pursuing town constable despite the wound in his leg; but should Jorge take to the tower, he will be able to escape.

A minion has two Connections each to a member of the town out of Love, a desire to protect or from a sense of curiosity. Much like the Tethers that keep a ghost returning to the world of the living in ***Wraith: the Oblivion***, Connections are a reason for keeping a minion going back to the town besides the orders of their Master. A Connection might be, "My eyes are those of the deceased portrait painter whose model still lives in the town" or "I love the little boy who plays ball in the woods" or "I want to protect the blind wet nurse who is the mother I never had," and for each connection, a minion has a Love score, which is initially at zero and therefore unrequited. As a minion makes successful overtures of Love to their Connections, they can gain Love Points and increase a minion's chance of resisting their Master's dark demands and of even breaking free from them. If their overtures of Love fail, a minion will suffer yet more Self-Loathing.

The core mechanics use a series of opposed rolls of dice pools to determine the outcome of an upcoming scene. A player describes what they want their minion to do during the scene -- carry out their Master's orders and perform an act against the townsfolk, resist their Master's orders or make an overture of Love to a Connection -- and these are then resolved according to one of three simple formulae. For example, if a minion wants to resist their Master, they roll their Love, minus Weariness against the Master's roll of Fear plus the minions Self-Loathing. The resulting value for both Master and minion are rolled on four-sided dice, with any scores of fours discarded and the rest added together; the highest score wins the contest and the scene is played out according to the outcome.

For some this may seem backwards, rolling to determine the outcome and then gaming it rather than the other more expected way around. But this is intentional, as ***My Life With Master*** is geared towards constructing a narrative structure that emulates its genre and drives the story to its Endgame, which almost cries out to be operatic in its denouement.

The mechanics are the game's engine that drives ***My Life With Master*** to this Endgame. Initially minions will find themselves unable to resist the commands of their Master as they lack enough Love for their connections. Once their Love grows, they have the chance of doing so, and should a minion successfully resist a Master, then the Endgame will come about. To counter a minion's high chance of failing their dice rolls, one of three types of bonus dice can be added if they make the appropriate emotional display. Another four-sided die is gained for Intimacy (perhaps shared

physical proximity, touching, comfort, or a gift of food), a six-sided die for Desperation (for example, begging for mercy or fighting for their very life) and an eight-sided die for Sincerity. This last emotional display is literally a minion opening himself or herself up to everyone to show their true character and is something that a Master is truly incapable of.

The Endgame is itself a series of scenes that culminates in the dramatic death of the Master at the hands of their now-treacherous minion. This occurs when the minion resists a Master's command, and the total of the minion's Love is greater than Fear plus their Weariness. The other minions have an opportunity to deal with their own scenes, inevitably leading to their violent death -- though other outcomes are possible -- after which the resisting minion gets to fight and defeat their Master. After this each minion has an epilog scene, the results of which can vary from the minion fleeing, being killed, or destroying himself; becoming a model member of society; or even becoming a force of Fear, a Master in his own right.

Despite the simplicity of the mechanics in *My Life With Master*, they are not as clearly written as they need to be, because the various values throughout the game change as dictated by the outcome of the narrative events. The GM will need to make a close read of the otherwise well-written text to help grasp how the outcome of a scene will alter a minion's statistics. The author does provide tips for running both the game and the Master, plus tips on creating interesting minions and how to effectively utilize the roleplaying hooks that both Master and Minion should give the referee. A solid sample of play is also included and this should help the GM cement his grasp of how the almost computer-program-like structure of *My Life With Master* should run.

This highlights how *My Life With Master* is a very different game from what might be found on the shelves of your local gaming store. From its setup it forces both player and GM along a very narrowly focused narrative structure -- that of the sub-game it is emulating. Outwardly both are roleplaying out a tragic opera over several sessions, but one in which the minions have some input as to when and what they can do in relation to the desires and demands of their Master. That is only up until the Endgame occurs. In a radical move, the minions have a greater relationship with their Master than with their fellow minions and this is reflected by the authors' description of *My Life With Master* as " . . . [A] game in which the player character minions are an ensemble of individual protagonists, not as a group working together, but independent characters whose stories happen to interact at time". Thus their scenes will rarely be with each other, something that not every player will find to be to their liking, and which at best can only be countered by having those players not involved in a scene take the roles of the NPCs involved. Indeed this could itself lead to a troupe style of game in which the players take the roles of a minion and another minion's Connections or of ordinary townsfolk. This though, lies outside of the scope of *My Life With Master*.

Underneath the tragic operatic play of *My Life With Master*, the participants are obviously playing out a series of relationships -- between Master and minion, minion and Connections, townsfolk and Master, minion and townsfolk and so on. There is an element of the abusive in those relationships, more so with the essentially dysfunctional -- and doomed -- Master, but primarily the nature of the relationship between Master and minion, and that of theirs with the townsfolk is one of co-dependency. An the ultimate aim for the minion is to break free of this co-dependent relationship by finding the Love outside of it through one or more of their Connections.

Given its highly structured narrative and form of play, and its emotional themes, this is not a game for everyone. There is a potential danger for those who are not mature enough to deal with these themes, despite the author handling them so deftly within the structure of the sub-game and narrative. The closed nature of the game does not lend itself to repeated play, but that is clearly not the purpose of *My Life With Master*. That said, anyone with an interest in roleplaying as more than just a game will find this to be worth their while.

Just as interesting is the fact that *My Life With Master* could be stripped of its genre and the mechanics replayed elsewhere. The most obvious and immediate example is that of Grima Wormtongue and his relationship with his Master Saruman from *The Lord of the Rings*, while any of the villainous sidekicks from the *James Bond* series of films would also do as examples -- though the character of Jaws from the films *the Spy Who Loved Me* and *Moonraker* shows a minion who gains Love for his connection and breaks free of his Master. Television series such as *Dastardly and Muttley in their Flying Machines* with Dick Dastardly, Muttley, Clunk and Silly following the orders of the Colonel, and *The Simpsons* with the relationship between Smithers and Charles Montgomery Burns also lead

themselves to the narrative structure of ***My Life With Master***.

Although not going to be everyone's cup of tea, ***My Life With Master*** is the most interesting roleplaying game released this year and perhaps the most challenging. It makes greater demands on the players and GM in terms of contributing to and building the narrative structure, and rolling for resolution prior to playing out a scene is further proof that this game is almost pre-plotted and acts as one more part of its program script. In terms of design and writing, ***My Life With Master*** shows an exquisite artistry in the way it neatly strips the game to its core and lays bare a tragedy in a way that none of the *World of Darkness* family -- this game's nearest set of neighbors -- have quite yet reached.

Pyramid Review

Out for Blood (for d20 System)

Published by [Bastion Press](#)

Written by E.W. Morton

96-page b&w softcover; \$22.95

Vampires. In the core **d20 System** these are blood-sucking and energy-draining undead with very specific powers, weaknesses, and restrictions. However, there are a lot of vampire traditions, ranging from *Dracula* to Anne Rice's books to *Buffy the Vampire Slayer* that present different flavors and versions of archetypal vampires that do not necessarily mesh with the standard core monster.

A number of **d20 System** sourcebooks have jumped in to offer variants or upgrades to the standard vampire. The **Ravenloft Campaign Setting** provided add-on age templates to power up vampires as they become ancient. **Denizens of Darkness**, the Ravenloft monster book, added a good dozen or so variant vampire or vampire-like creatures complete with age category modifications. Green Ronin produced **Fang and Fury**, a whole sourcebook on vampires, and Bottled Imp Games created **Lords of the Night: Vampires**. Kenzer's Kalamar setting introduced their variant in the adventure **Harvest of Darkness**, the **Book of Templates** had a fear vampire among its pages, and I even wrote two alternate vampire entries for **Gaming Frontiers: Monsters**.

Bastion Press enters the **d20 System** vampire field with **Out for Blood**, a three-part sourcebook with prestige classes, vampire variants or vampire-related creatures, and a campaign section of easily inserted organizations and general campaign advice.

Out for Blood is mostly a toolbox of vampire-related options to add to your campaign mix as opposed to a cohesive single vision view of how vampires are. For example, the monster section contains 18 variant vampires or vampire-like creatures, but there is no overarching story of how the various bloodlines originated or how they tie together. The individual components are there for a DM to pick and choose from to get the right one for the particular feel he wants for his campaign or for a particular individual villain.

The 18 prestige classes cover vampire hunters, vampire wannabes, vampire servants, and vampire class options. They mostly take vampire-related characters and file off the serial numbers to create classes. Some concepts are done more than once but with variations, such as the investigator mage and faux vampire concepts. The classes are:

- **Arcane Pathologist:** A skilled van Helsing half-caster focused on gentle repose and cure disease spells who can eventually use charmed victims to get into the minds of their charmers.
- **Blood Hunter:** Rangers who can track by blood spoor and get ranged weapon bonuses.
- **Deathguard:** Tomb guardian warriors who need little sleep, see in the dark, and smite undead.
- **Dubbelsauger:** Five-level vampire class that can establish sympathetic supernatural links to victims and drain them through this link.
- **Exterminator:** Warriors who gain bonuses against creatures of a type they have killed within the last 24 hours, designed to track down hordes or nests of similar creatures, not limited to undead.
- **Fist of Light:** Holy monks with turning and critical undead staking martial arts, plus Ki strikes.
- **Fortune Teller:** Gypsy fortune-telling class description but class powers as a Telepathic and Clairsentient focused psion with uncanny dodge abilities.
- **Gothic Pretender:** Creatures that have drunk vampire blood and gained some vampire powers and weaknesses.
- **Knight of the Dragon:** Vicious lawful evil knight warlords supposedly dedicated to a lawful good god who

eventually become undead. They get powers based off of inflicting harsh examples.

- *Knight of the Phoenix*: Reincarnated souls of good knight clerics from a lost civilization that fell to evil forces. They get 2/3 spell casting, full turning some extra domains, and warrior stats.
- *Kresnik*: Good divine full casters with wildshaping and magic fang abilities. Allows a cleric to turn into a faux druid with full cleric casting, essentially multiclassing without giving up spell progression.
- *Master of Sacrifice*: Evil full divine caster who gains a new blood domain and can do *Indiana Jones & The Temple of Doom*-style heart rippings.
- *Soul Catcher*: Positive energy clerics who can bottle up incorporeal undead.
- *Soul Collector*: Negative energy clerics with 3/4 casting who focus on death knells.
- *Vamp*: Another fake vamp, this one with sneak attack, charm, and biting abilities.
- *Vampire Seneschal*: Insane Renfield-like dominated servitor who can be a scrying device for his master and subject to emergency ranged draining by the master vampire who gains healing from doing so.
- *Vampire Slayer*: Buffyverse-style slayer, these warriors gain some bonus feats and specific anti-vampire powers.
- *Watcher from Shadows*: Full spellcasting skilled wizards (or other casters) with bardic knowledge about evil over a hundred years old. Reminiscent of the watchers in the *Highlander* TV show and the secret society in Anne Rice's *Tale of the Body Thief*.

The 18 new monsters include 10 variant vampire templates, a new type of spawn template, a half-vampire, some vampire-like creatures, elemental grave soil, incorporeal spirits, an iron maiden construct, and a positive energy beast template for vampire hunting wolves and such. The half-vampire is PC ready with only 1 HD and 0 ECL; their powers include *detecting undead* at will.

The vampires are all +2 CR and either +7 or +8 ECL with good bonus stats and feats, which is basically the same threat level of the core vampire. They have a wide variety of vulnerabilities, resistances, and attack form variations. Some have electricity resistance while one is only harmed by electricity; many are harmed by sunlight while some are immune; and there are different allergies and supernatural restrictions upon them as well as methods for destruction. Some need to attack by biting, others by claw or slam to drain, while the more deadly ones deal damage with touch attacks. Many require special methods of destruction or they will reform in their graves some days later. This is not taken to the level of esoteric specificity as some of the ones in *Denizens of Darkness* where, for example, a dwarven vampire requires staking on a natural stalagmite, but some will reform if holy water is not applied, while others can be prevented from reviving by impaling the heart, decapitation, or cremation.

Visually there are a good variety. Barbed tongue ones are physically monstrous aberrations; while the death ringer vampires are graphically gruesome, showing their death wounds -- the illustration shows a cloven headed one with exposed brain matter ripping into his own bloody wrist. The Kuang Shi are interesting Asian vampires based on demon possession that uses the best abilities of either the subject or the possessing demon before adding on the vampire template. The book presents a good variety to challenge a party, with increased necessity of researching specific foes for their particular weakness.

The organizations presented are nicely developed but still easily inserted into most standard campaigns easily. They include the Order of the Dragon with their history, current leaders, and current typical activities. The stories and traditions of the Knights of the Phoenix are still vague about what the old civilization was and who the evil that overcame them were, but there is plenty to work with and it sparked ideas for me about ancient high-magic reincarnation spells. The Shadow Kingdom, unfortunately, seems merely a light adaptation of the World of Darkness' Camarilla. A thieves guild (more like a gang) specializing in corpse procurement and the shadowy knowledgeable Watchers round out the organizations. Each of these can be independently inserted into a campaign, although advice is offered for how the various groups would likely interact. A quick 25 vampire adventure seeds, some notes on vampire lairs, and a few spells (mostly evil cleric ones) round out the volume.

In all, *Out for Blood* is a good fleshed-out toolbox for inserting a lot of different vampires and vampire elements to a DM's campaign.

Play Right, Darn It!

Last week I mentioned the fun I had at NecronomiCon playing ***Are You A Werewolf?*** with a large group of people, and I recommended that everyone try the game. Savvy readers - or those who routinely pay attention to political speeches - will note that I did not offer any promises about the game. ("I guarantee you'll have fun!" or the like.) This was intentional; although I am certainly not above Barnum-esque showmanship to plug something I believe in passionately, I also have an aversion to flat-out lying unless it's absolutely convenient.

"But gosh!" I hear you cry. "Does that mean ***Are You A Werewolf?*** isn't a fun game?"

Not at all, O Disembodied Audience Member. In fact, it can be an incredibly fun time . . . if you play right.

And, indeed, if I'd written the column a week earlier, I probably *would* have offered some kind of mountaintop proclamation of said game's entertainment. But in the interim, something happened that colored my perception of the game.

I played it with other people.

So enthralled was I with my post-***Are You A Werewolf?*** high that, for days after the convention, I was spotted staggering down Monroe Street, reeking of printer's ink and asking passersby if they could spare a Seer card. Desperate to recreate my high, I showed up at our biweekly LARP two hours early with the hope of drumming up interest in a session. Eventually I did, in fact, manage to wrangle 11 others into a game. And, in fact, at least three of the others *knew* the game already, in its original incarnation as ***Mafia***. So we played.

And it stank.

But first, let me back up a second, and offer a sample transcript from the NecronomiCon sessions:

[Everyone stops clapping and opens their eyes]

Carl: All right; everyone who's a villager, raise your hand.

[Everyone eventually raises their hands]

Carl: Okay; well, it took Tan a few seconds longer to raise his hand there . . . that's not a good sign.

Tan: Have you ever noticed how quick Carl is to try to lynch anyone else?

Peter: I don't know if I can use this information, but I *did* hear Tan clapping arrhythmically . . . as if he were pointing to a victim!

Judy: I don't think you can use that . . .

Carl: Sure you can! I nominate to lynch Tan!

Peter: Second!

[And so on; Tan manages to escape the crowd's ire for at least a few more minutes . . .]

Flashforward to our Saturday night group:

[Everyone stops clapping and opens their eyes]

[Everyone points randomly at someone else; Chris is lynched without a word being spoken.]

The NecronomiCon games lasted about an hour apiece. The Saturday game lasted five minutes. I refused to feel guilt about people not having a good time, since I figured they'd stolen more than 300 seconds from me over the years.

I was flabbergasted. I didn't have much room to make them play "right" because I was acting as the Moderator, and frankly one of the appeals is the "anything goes" aspect of the game. But, dagnammit, they just weren't playing right!

I'm not sure how many of us fully grasp how important "playing right" is to the spirit of certain games. For example, I have read columns about computer programs that play the card game bridge (a game about which I know the basic rules, but am not an expert by any stretch). One common complaint I've seen about many of those programs is that they don't bid right; the intricacies of proper bridge bidding are fairly subtle, and it doesn't matter if the proper bid is reached ultimately if it did so in an inhuman fashion. (In poker, it's similar to the computer holding a royal flush, bidding one dollar the first round and then \$100,000 the second. Yes, \$100,000 may be the proper level to eventually bid, but not in *that* way.)

And, of course, there's playing right in roleplaying games.

The magic of roleplaying games really only works when they're played right. In a typical game there's so much that experienced players can take for granted, but that neophytes can get wrong, thus potentially making the entire experience pretty unenjoyable. Character creation, motivation assignment, scenarios construction, acting, probability analysis, and pizza-topping selection are just some of the myriad of decisions facing those who wish to partake of this hobby. If any of them go horribly awry, the whole experience can go to Helena Handbasket.

For example, I consider 1991 - when I went away to college, and thus had infinite free time unfettered by mandatory classes - to be the "official" beginning of my gaming life. But I did some gaming earlier, usually in school cafeterias or bus stops. Very early on, when I was deep in my Clueless Newbie stage (although after my era of "Gee, I happed to roll all 18s"), two of us had cajoled someone into running classic ***Dungeons & Dragons*** adventure ***Isle of Dread***.

In this adventure there's a plesiosaur in a lake with a ring of regeneration (which then - as now - was considered a pretty cool magic item). Now, our gaming group had no real idea what a plesiosaur was, but in the classic olde ***Dungeons & Dragons*** tradition we had stumbled onto the philosophy that if it had stats it could be killed.

So we killed it, with no regard to the technicalities of how to kill a creature in a lake (I guess we had the *really* long sword), nor dealing with a bloody huge aquatic dinosaur. And since the DM had let slip before the encounter that there was, in fact, a ring of regeneration in the critter's belly, we knew to attack it with a savage intensity usually reserved for Senate debates.

So far, we have not strayed too far into nutter land; strap in.

Now, we had successfully killed the ples- . . . pless-e . . . the thing, and had acquired the ring of regeneration. But there were two of us in the gaming party, and only one cool ring of power! How were we going to resolve this?

After several long minutes of furled brow and pudding-snack consumption, I hit upon a brilliant idea: Couldn't we just leave the area housing the thing-with-the-ring, and then come back? The adventure says it's in that area, so if we came back, it would still be there with another ring, right? Our DM mulled this over for a few minutes and determined there was nothing in the rules that prevented this, so he allowed it; minutes later, we had dead plesiosii and two rings of regeneration.

Clearly, We Did Not Get It.

In my defense, this was at an era when my classmates were sneaking swigs of their parents' Southern Comfort and licking toads, so I refuse to feel *too* much guilt.

Amazingly, our gaming group - nascent though it was - broke up right after that adventure. My memory is weak on the specifics, but I seem to recall that we had decided ***Dungeons & Dragons*** was a dumb game. I went back to my ***Fighting Fantasy*** books.

(As an aside, ***Isle of Dread*** has the distinction of being the most common adventure in our FLGS' Used Game bin when I worked there; we usually had 20-30 copies. Clearly many people had great difficulty parting with such a classic.)

I have other anecdotes about "playing right," but I think I'll keep them to myself for now. In all, I do believe most games have the power to bring hours of entertainment to their players. But many games require the participants to play "right" for the games to be as much fun as they can be . . . or, indeed, to work even at all. Hopefully game manufacturers will realize this, and remember that everyone has a "first game." Giving those players a fighting chance at figuring out how to play right can help ensure that everyone has fun.

* * *

As an aside, I had several people ask what the question was where I disagreed with my peers at NecronomiCon last week. Given the interest, I do believe I shall turn it into a column topic before year's end.

Feign interest and ye shall receive!

--*Steven Marsh*

Men In White

for *GURPS*

by Stephen Dedman

Scientists traditionally get a bad rap in the mass media -- depicted as nerdy and ineffectual, or insane and evil, rarely emerging from their white coats and ivory towers except to endanger their souls and possibly the world. While there are scientists whose ethics and sanity could be questioned, few have devoted their lives to adding up potential megadeaths on their slide rules while they wheel their chairs across labs full of bioweapons and unreliable robots. At least as many are young, fit, and prefer trekking through jungles and over cliffs in search of fossils, relics, good places to set up telescopes, and other clues to the mysteries of life.

In the interests of fairness, this article attempts to include all these types of scientists in this collection of NPCs. Some are suitable as Enemies or the "before" stage of a metavillain; others may be Allies, Contacts, Patrons, or even Dependents. Scientists do occasionally need rescuing from places most people would prefer to avoid -- but their abilities may also make them the ideal people to rescue PCs, particularly when they're being attacked by a radioactive amoeba the size of LA. They can also be used (with a little tweaking) when the GM needs a random group of scientists in any campaign: the board of the TSF or similar body, expert witnesses in a court case, hostages in a hijacking, explorers who've defrosted something man wasn't meant to know, or just the first people on the scene when a Martian cylinder lands near a university town.

Abraham Van Diemen

The soft-spoken son of a librarian and a music teacher, Abraham Van Diemen is modestly famous among his fellow biologists as a botanical illustrator and discoverer of previously unknown plant species. He's less successful as a teacher, and much prefers to be out in the field without even a packhorse as a companion. Unfortunately, his utter incompetence as a navigator means that he frequently becomes lost, and often unknowingly wanders into the territory of hostile Native American tribes. His usual reaction in a tight spot is to remove his false teeth; if that fails, he'll juggle rocks or cooking utensils. A surprising number of dangerous people have taken pity on him and directed him back to civilization, but sometimes he's had to run -- usually into even more dangerous places, picking up specimens as he goes.

Campaign uses: When Van Diemen fails to return in time for classes, his university hires a posse to go looking for him -- or they may try to preempt this by hiring the PCs as his minders. Alternatively, Van Diemen may be able to save the PCs if they are captured by a hostile tribe that has already learned to trust him: because of his knack for becoming lost, he may turn up unexpectedly in the most unlikely places.

Other settings: This version of Van Diemen is intended for an *Old West* or *Deadlands* campaign, but with only minor changes, he could become lost in any TL4+ world with some unexplored territory. Give him a time machine or a one-man starship, and the PCs could be searching for him forever.

Abraham Van Diemen (25 points)

Attributes: ST 9 [-10]; DX 10 [0]; IQ 14 [45]; HT 11 [10].

Speed 5.25; Move 5 (Run 6).

Dodge 5.

Advantages: Acute Vision +3 [6]; Charisma/1 [5]; Manual Dexterity +2 [6]; Pitiable [5]; Plant Empathy [5]; Reputation (+2, sometimes recognized, small group of people).

Disadvantages: Curious [-5]; Honesty [-10]; Loner [-5]; Obsession (discovering new plant species) [-10];

Overconfidence [-10]; Pacifism [-30].

Quirks: Always speaks quietly; Attentive; Incompetence (Cartography and Navigation); Thinks alcohol is only good for preserving specimens; Undiscriminating.

Skills: Administration-12 [1/2]; Artist-13 [2]; Boating-9 [0]; Botany/TL5-16* [8]; Climbing-10 [2]; Cooking-13 [1/2]; Ecology/TL5-12 [0]; First Aid/TL5-13 [1/2]; Fishing-13 [1/2]; Gardening-14* [1/2]; Gesture-13 [1/2]; Juggling-10 [1]; Naturalist-15 [6]; Research-14 [2]; Running-9 [1/2]; Savoir-Faire-13 [1/2]; Survival (Forest)-13 [1/2]; Swimming-9 [1/2]; Tracking-13 [0].

* receives bonuses from Plant empathy

75-point version: Cultural Adaptability [25], Disease-Resistant [5], Serendipity [15], and Single-Minded [5]; replace Attentive with Humble.

Gear: Pocket knife; Simple first aid kit; Telescope; Paper, pencils, paint set; Levis, shirt, overcoat, Stetson, shoes; Small backpack; Bed roll; Canteen; Mess kit; Personal basics.

Appearance: Unassuming, with tanned complexion, curly brown hair, brown eyes, and light brown wooden teeth; early 40s, 5'9", 140 lbs.

Dr. Alan Silver

Alan Silver found his first dinosaur bone on his father's Montana ranch when he was only five; since then, he's spent most of his time out in the open, searching for fossils -- not counting a few horrible months spent in the trenches during the Great War, followed by more months in hospital recovering from his wounds. He studied geology, natural history, and savate in France and England, but he was also learned as much as he could about military logistics and engineering.

Silver loves travel for its own sake, paying his way with poker when necessary, but everywhere he goes -- either looking for fossils or giving his popular lectures -- he gathers useful information about troop strength, military leadership, and anything else that might affect the outcome of a war. His hope is to protect the lives of civilians and American soldiers - by preventing wars, if possible, but failing that, by helping them to be resolved as quickly and bloodlessly as possible.

Campaign uses: Silver makes a useful ally or patron for the PCs, but even he may need rescuing occasionally -- especially if he's arrested on suspicion of espionage. Despite his noble aims, he might also become an opponent if he uses his influence to try to keep the US out of a war the PCs regard as just or necessary. The PCs may also be given the job of preventing him from smuggling some valuable relic out of its native land, or in a race to grab it first.

Other settings: With minor changes, Silver can fit into any setting where there is treasure to be found and a threat of war.

Dr. Alan Silver (100 points)

Attributes: ST 10 [0]; DX 12 [20]; IQ 14 [45]; HT 12 [20].

Speed 6; Move 6 (Run 6).

Dodge 6.

Advantages: Cool [1]; Voice [10].

Disadvantages: Curious [-5]; Obsession (finding fossils) [-5]; Overconfidence [-10]; Pacifism (Self-Defense only) [-15]; Sense of Duty (victims of war) [-10]. Reputation: +3 as adventurer and scientist, occasionally recognized, most readers (large group); -3 as suspected spy, thief and smuggler, sometimes recognized, (small group). Total, 0 points.

Quirks: Unable to settle down; Likes flying, hates sailing; Distrusts military officers (reacts at -1); Likes women with foreign accents; Caffeine addict.

Skills: Administration-12 [1/2]; Anthropology-11 [1/2]; Archaeology-12 [1]; Area Knowledge (World)-13 [1/2]; Artist-11 [1/2]; Bard-15 [1]; Boxing-12 [2]; Cartography-12 [1/2]; Climbing-12 [2]; Diplomacy-14 [1]; Driving/TL6 (Truck)-12 [2]; Engineer/TL6 (Military)-12 [1]; Fast-Talk-13 [1]; First Aid/TL6-13 [1/2]; Gambling-15 [4];

Geology/TL6-14 [4]; Guns/TL6 (Rifle)-15 [2], (Shotgun)-13 [0]; Holdout-13 [1]; Intelligence Analysis-10 [1/2]; Karate-12 [4]; Knife-11 [1/2]; Language (Arabic)-12 [1/2], (English)-14 [0], (French)-12 [1/2], (Hindi)-12 [1/2], (Mandarin)-12 [1/2], (Russian)-12 [1/2]; Naturalist-12 [1/2]; Packing-11 [1/2]; Paleontology-15 [6]; Photography-13 [1]; Research-14 [2]; Riding (Horse)-11 [1]; Running-10 [1/2]; Savoir-Faire-16 [1/2]; Savoir-Faire (Military)-16 [1/2]; Scrounging-14 [1]; Sex-Appeal-13 [1]; Spear-10 [1/2]; Stealth-11 [1/2]; Strategy (Land)-11 [1]; Streetwise-12 [1/2]; Survival (Desert)-14 [1], (other)-11; Swimming-11 [1/2]; Teaching-12 [1/2]; Throwing-11 [1]; Writing-13 [1].

150-point version: Absolute Direction, High Pain Threshold, +1 to DX, IQ, and all skills (except Running and Sex Appeal).

Cinematic version (200 points): another +2 to ST, Combat Reflexes, and Daredevil to 150 point version. *Supers version (500 points):* to Cinematic Version, +2 to DX and ST and +1 to HT; Danger Sense, Immortality, and Trained by a Master; increase Karate and Boxing to 16, change Savate to Pao Chuan, and spend 10 points on Pao Chuan skills and maneuvers.

Gear: in the field, Winchester '94, trench knife; Ford Model T Truck loaded with adventuring gear. Wears heavy leather jacket, slouch hat, khakis and boots.

Appearance: Mid 30s, tanned complexion, black hair, gray eyes; 6'1", 170 lbs.

Edgar Westhill

Edgar Westhill's rise from obscurity to utmost secrecy began at the start of World War II, when he tried to enlist in the RAAF as a navigator or radio operator. He was found unfit for active service and assigned to the Pay Corps, where a perceptive officer discovered that his talents went beyond accountancy and chess and recommended that he be sent to Station X as a code-breaker. When the war ended and he was demobbed, he joined the London TSF (p.AH30) as an archivist and computer programmer.

As much as Westhill enjoys his work, he is quick to volunteer for any duty which gives him a chance to see more of the world (or better still, the universe). Though undeniably geeky, he has a quirky sense of humor, and has volunteered to be buried in the tomb of the unknown soldier.

Campaign uses: In a wartime setting, the PCs are most likely to be assigned to Westhill as bodyguards -- or assassins, if they're on opposite sides. Between wars, they may be able to call on his services to help crack codes or solve other mysteries.

Other settings: Westhill's skills will become even more valuable as computers become more important, and his technophilia may inspire him to buy as many implants and biomods as he can afford. In a *Cyberpunk* or later setting, he may be a powerful hacker -- either a valuable ally or patron, or a very dangerous enemy.

Edgar Westhill (25 points)

Attributes: ST 9 [-10]; DX 9 [-10]; IQ 15 [60]; HT 10 [0].

Speed 4.75; Move 4.

Dodge 4.

Advantages: Eidetic Memory [30]; Mathematical Ability [10]; Single-Minded [5].

Disadvantages: Curious [-10]; Epilepsy [-30]; Impulsive [-10]; Oblivious [-3]; Skinny [-5]; Unfit [-5]; Workaholic [-5].

Quirks: Alcohol intolerance; Forgets to eat; Loves crosswords and mystery novels; Mild phobia of dogs; Untidy, but fastidiously clean (has his best ideas in bath).

Skills: Accounting-18 [1/2]; Astronomy/TL6-13 [1/2]; Chess-17 [1]; Computer Programming/TL6-17 [1]; Cryptanalysis/TL6-18 [2]; Cryptography-13 [0]; Cryptology-13 [0]; Electronics/TL6 (Computers)-14 [1]; Intelligence Analysis-13 [1/2]; Language (English)-17 [0], (French)-16 [1/2], (German)-16 [1/2], (Russian)-16 [1/2]; Linguistics/TL6-13 [1/2]; Literature/TL6-13 [1/2]; Mathematics/TL6-18 [2]; Meteorology/TL6-13 [1/2]; Physics/TL6-13 [1/2]; Research-15 [1].

75-point version: Gadgeteer (Realistic), +2 to DX, and 5 points of Armory, Engineer, or similar skills.

Gear: Usually wears heavy overcoat with pockets stuffed with books and pens (DR 2), over old but clean suit. Later (TL7+ versions) will also carry enough gadgets (but not weapons) to count as medium encumbrance.

Appearance: Gawky, looks 20ish regardless of his true age. Pale complexion, untidy white-blond hair, light blue eyes; 5'9", 100 lbs.

Dr. Simone Brandt

Dr. Simone Brandt is a lab assistant at the TSF, a job she enjoys much more than teaching. Though attractive, she hasn't socialized very much since her fiancé died in a plane crash. Instead, she became terrified by the threat of nuclear war, and fascinated by the ability of some insects to survive levels of radiation that would quickly kill humans.

After many nights in the lab, Brandt believed that she'd discovered the chemical that enabled insects to survive, and extracted enough of it to test on mice, then on monkeys. When they survived with no apparent ill effects, she injected herself with the formula . . . and slowly began to metamorphose. Though she looked the same, she found that men seemed more strongly attracted to her. She began dating again, but when she tried to end a relationship with a naval pilot, he made the mistake of slapping her. She blacked out momentarily; when she revived, she found his corpse at her feet, stung to death by wasps.

Since then, Brandt has become more cautious, and better at reading people's intentions -- but she's also killed two would-be muggers and the lecherous dean of biology from a major university, and she's beginning to enjoy the feeling of power.

Campaign uses: The 25-point version of Brandt may be useful whenever the PCs need scientific assistance for defeating giant bugs, or hordes of ordinary sized ones, or a forensic entomologist to estimate how long someone's been dead. The more powerful versions might be a monster in an **Atomic Horror** campaign, or a superheroine or metavillain in a **Supers** campaign.

Other settings: With a little tweaking, the 25-point version of Brandt can serve as a generic scientist in any TL7+ campaign. A slightly modified 100-point version might fit into a **Cyberpunk** world as an industrial spy/assassin with bionics or biomods.

Dr. Simone Brandt (25 points)

Attributes: ST 9 [-10]; DX 10 [0]; IQ 14 [45]; HT 11 [10].

Speed 5.5; Move 5.

Dodge 4.

Advantages: Attractive [5]; Fashion Sense [5].

Disadvantages: Curious [-15]; Impulsive [-10]; Necrophobia [-10]; Workaholic [-5].

Quirks: Attracted to men in uniforms, especially military (reacts at +1); Collects amber jewelry; Incompetence (Teaching); Really hates being called "Honey"; Uncongenial.

Skills: Acting-12 [1/2]; Biochemistry/TL7-13 [4]; Chemistry/TL7-13 [2]; Driving (Car)-10 [2]; Ecology/TL7-11 [1/2]; First Aid/TL7-13 [1/2]; Genetics/TL7-13 [4]; Guns/TL7 (Pistol)-11 [1/2]; Nuclear-Biological-Chemical Warfare/TL7-13 [1/2]; Poisons-12 [1]; Research-14 [2]; Savoir-Faire-13 [1/2]; Sex-Appeal-10 [1]; Zoology/TL7 (Specialty: Insects)-19, (other)-13 [4].

100-point version: Berserk [-15]; Cast-Iron Stomach [15]; Control Animal/4 (Insects Only, -60%; can controls a 4-hex horde or 4 hexes worth of giant insects) [5]-13 [8]; Discriminatory Smell (Special Enhancement: can detect emotional state, +50%), (Special Limitation: offended by smell of insect repellents, -1) [23]; Gluttony [-5]; Hard to Kill/4 [10]; Pheromone Control [25]; Sanitized Metabolism [5]. For a more villainous version, replace Necrophobia with Bloodlust.

Supers version (Mantissa, 500 points): increase ST to 14, DX and HT to 14; Altered Time Rate/1 [100]; Clinging [25];

Elastic Skin [20]; Hyper-Reflexes [15]; Hyper-Strength [30]; Invulnerability (Radiation) [75]; and Resistant to Poison [5] to 100 point version.

Gear: White lab coat over fashionable costume; FN HP35 (at home); Radiation Suit, Geiger counter, rations, etc. in backyard fallout shelter; '42 Ford V8.

Appearance: Late 20s, light golden complexion, blonde hair in ponytail, green eyes; 5'7, 120 lbs.

Dr. Thomas Mernok

Thomas Radu Mernok fled from his native Transylvania at the end of World War II, graduated from Harvard with an economics degree five years later, and by 1957 was already one of the world's best-known economists, regularly consulted by politicians and think-tanks. His fame and influence increased over the next 40 years, but so did the number of his detractors.

As an economist, Mernok is almost as good as he thinks he is; it's just unfortunate that his model for a perfectly balanced global economy requires reducing the world's population by 80-90%. Mernok, however, sees this as a temporary setback, easily remedied. His expertise in other fields isn't as dependable, but many politicians and businessmen are swayed by his reputation and the force of his personality, and have supported some of his crazier schemes despite the objections of other advisors.

Campaign uses: Mernok doesn't think of himself as a villain or mad scientist, but he rarely thinks of people that he doesn't like as anything but numbers. He has cheerfully proposed using bioweapons to destroy the world's rice crops in order to increase the price of wheat and corn, burning down art galleries to collect the insurance, or making it legal to run down pedestrians in selected cities. The 100-point Mernok is worth -10 points as an Enemy, but he can also become a 15 point Secret Patron if the PCs are doing something that suits his ultimate goal.

Other settings: Mernok is designed for a modern-day *Supers*, *Illuminati*, *Espionage*, or *Covert Ops* campaign, but political puppet-masters with their own agendas are probably as old as politics, and are likely to survive into the far future. In a *Cyberpunk* setting, he may become the CEO of a free trade zone; in a galactic empire, he may be governor of a planet or entire sector.

Dr Thomas Mernok (100 points)

Attributes: ST 10 [0]; DX 10 [0]; IQ 16 [80]; HT 11 [10].

Speed 5.25; Move 2.

Dodge 5.

Advantages: Contact (Business, skill-21, available on a 12 or less, somewhat reliable) [8]; Contact (Military, skill-21, available on a 6 or less, completely reliable) [12]; Favor (Political faction; Patron, very powerful organization, appears on 12 or less) [10]; Reputation (+2 to political supporters, small group of people, always recognized) [4]; Status +1 [0]; Tenure [5]; Very Wealthy [30].

Disadvantages: Bad Sight (nearsighted, wears glasses) [-10]; Bad Temper [-10]; Fanatic [-10]; Fat [-10]; Intolerance (all other races) [-10]; Greed [-15]; Jealousy [-10]; Megalomania [-10]; Reputation (-2 to political opponents, large group of people, recognized on 10 or less) [-3].

Quirks: Careful; Expensive tastes, especially in liquor and women; Likes most forms of instrumental music, but not singers; Mild agoraphobia; Paranoid drunk.

Skills: Administration-14 [1/2]; Area Knowledge (Washington D.C.)-19 [6], (World)-16 [1]; Chess-15 [1/2]; Conspiracy Theory-14 [2]; Diplomacy-14 [1]; Driving/TL7 (Car)-9 [1]; Economics/TL7-18 [8]; Genetics/TL7-12 [1/2]; Guns/TL7 (Pistol)-13 [2]; History-16 [8]; Intelligence Analysis-13 [1/2]; Performance-17 [2]; Politics-16 [2]; Psychology-14 [1]; Research-16 [2]; Savoir-Faire-18 [0]; Strategy (Ground)-13 [1/2]; Teaching-14 [1/2]; Writing-14 [1/2].

150-point version: Danger Sense [15]; Diplomatic Immunity [20]; Resistance to Poison [5]; and Voice [10].

Gear: Second Chance Standard vest under good gray suit; Walther PPK in briefcase; 5'8", 218 lbs.

Appearance: Jowly, inscrutable face, wavy silver hair and bushy eyebrows, dark blue eyes behind thick glasses.

Dr. Mai Kitamura, ME

Mai Kitamura claims to have chosen her specialization when she was an pretty intern because she was tired of patients making passes at her -- something that hasn't yet been a problem in the morgue. Her E.R. experience made her expert at identifying types of wounds, and after publishing some well-received papers, she was offered the position of medical examiner in a major city. After receiving death threats because of her testimony in a murder case, she was issued a kevlar vest and carry permit, and learned to shoot.

Campaign uses: Kitamura is a useful ally (and unfortunate choice of enemy) for any modern-day cop, superhero, or vampire-hunter. She may also be encountered at a dojo, bike race, or rifle range, lending medical assistance if needed. The PCs may be assigned as her bodyguards if she continues to receive death threats.

Other settings: A coroner with most of Kitamura's skills may be encountered in any setting from the Roaring '20s into the far future.

Dr. Mai Kitamura, ME (100 points)

Attributes: ST 10 [0]; DX 12 [20]; IQ 15 [60]; HT 12 [20].

Speed 6; Move 6 (Run 7).

Dodge 4.

Advantages: Alertness +1 [5]; Cool [1]; Resistant to Disease [5].

Disadvantages: Curious [-5]; Dependent (girlfriend; Average quality, loved one, appears on 15 or less) [-36]; Workaholic [-5].

Quirks: Hates violent movies; Lesbian; Loves Mexican food; Macabre sense of humor; Skeptical of anything supernatural and paranormal.

Skills: Administration-13 [1/2]; Biochemistry/TL7-12 [1]; Brawling-11 [1/2]; Chemistry/TL7-12 [1/2]; Computer Operation/TL7-14 [1/2]; Criminology/TL7-14 [1]; Diplomacy-12 [1/2]; Driving (Car)-11 [1]; Genetics/TL7-13 [2]; Forensics/TL7 (Specialty: wound pathology)-20, (other)-14 [4]; Guns/TL7 (Pistol)-15 [2], (Shotgun)-13 [1/2]; Judo-12 [4]; Languages (English)-15 [0], Japanese-13 [1/2]; Law-13 [1]; Motorcycle-12 (2-wheeler)-12 [2]; Photography/TL7-13 [1/2]; Physician/TL7-16 [6]; Physiology/TL7-12 [1/2]; Poisons-13 [1]; Psychology/TL7-12 [1/2]; Research-15 [2]; Running-9 [1]; Savoir-Faire-14 [1/2]; Savoir-Faire (Dojo)-14 [1/2]; Sex-Appeal-13 [2]; Streetwise-13 [1/2]; Swimming-11 [1/2]; Thanatology-12 [1/2]; Writing-13 [1/2].

Maneuvers: Arm Lock-13 [1/2]; Knee Strike-11 [1/2].

75-point version: reduce HT and ST by 1, remove Resistant to Disease.

Gear: White lab coat over business suit and running shoes, or leather jacket, jeans, and boots; Second Chance Standard vest; Swiss Army Knife; Glock-17 (in car); Remington M870 (at home); unmarked police car; Kawasaki Ninja; forensics gear.

Appearance: Late 30s, compact muscular build, golden complexion, spiky short black hair, dark brown almond-shaped eyes; 5'2", 115 lbs.

Father Ramon Chavez, SJ

Ramon Chavez of the Society of Jesus is a devout Catholic who, like many other Jesuits, turned a fascination with astronomy and geophysics into an academic career. He teaches physical sciences and physical education at a small Catholic college in the desert, spending as much time as possible between vespers and compline in their small but well-equipped observatory.

Campaign uses: Chavez is designed as an ally for a **Horror** campaign, where the advantages of having a boxing

astrophysicist who can perform exorcisms should be obvious. He's unlikely to become an enemy unless he's convinced the PCs are doing something terribly wrong, but he may come to their aid (or vice versa) when they're stranded in the desert.

Other settings: With only minor changes (mostly to TL), Chavez may be found in any setting from the early 19th century to the end of the universe.

Father Ramon Chavez, SJ (75 points)

Attributes: ST 10 [0]; DX 10 [0]; IQ 14 [45]; HT 11 [10].

Speed 5.5; Move 5.

Dodge 5.

Advantages: Charisma/1 [5]; Claim to Hospitality [5]; Clerical Investment/1 [5]; Collected [5].

Disadvantages: Compulsive Generosity [-5]; Disciplines of Faith [-5]; Honesty [-10]; Sense of Duty (all humanity) [-15]; Unattractive [-5].

Quirks: Distrusts electronics -- prefers optical telescopes, film cameras and analog watches; Responsive.

Skills: Administration-12 [1/2]; Astronomy/TL7 (Specialization: Planetary formation)-20, (other)-15 [8]; Bard-13 [1/2]; Body Language-13 [2]; Boxing-11 [4]; Computer Operation/TL7-13 [1/2]; Diplomacy-12 [1]; Driving/TL7 (Car)-10 [2]; Exorcism-11 [1/2]; First Aid/TL7-13 [1/2]; Geology/TL7-12 [1]; Languages (English)-14 [0], (Latin)-12 [1/2], (Spanish)-12 [1/2]; Mathematics-12 [1]; Mechanic/TL7 (Car)-12 [1/2]; Physics/TL7-12 [1]; Research-13 [1]; Savoir-Faire-16 [1/2]; Scrounging-13 [1/2]; Sport (Basketball)-10 [2]; Streetwise-12 [1/2]; Survival (Desert)-13 [1/2]; Swimming-11 [1/2]; Teaching-13 [1]; Theology (Catholic)-13 [4]; Tournament Law (Boxing)-13 [1/2].

100-point version: +1 to ST, DX, and Physical skills; replace Charisma/1 with Voice.

Gear: Priest's habit and hiking boots.

Appearance: Late 40s, rangy with broad shoulders, well weathered complexion, gray hair receding in widow's peak, blue eyes; 6'2", 155 lbs.

Jaya Seth

Jaya Seth came to Winterjewel as a rather plump and unattractive planetology major on a field trip. She left as a head in a cryo-case, after whisper wolves ambushed her and devoured much of her body. Instead of cloning, she opted for a total cyborg body that few predators would even sniff at. She also began studying kempo and improving her weapon skills then, after graduation, applied to the Survey Service.

Her record with the Survey Scouts is impressive, but not impeccable; she is terrible at guard duty, because of her absent-mindedness. When bored, she retrieves data files from her computer memory and spends her time reading. Her other hobby is using her micromanipulators to paint extremely small reproductions of artworks -- a talent that also enables her to forge travel documents when needed.

Campaign uses: Seth is designed to serve as a science officer in a starship crew, but she may also be encountered in startown trying to charter a ship for an expedition, or recruiting people for an expedition, or just trying to raise money for research by fair means or foul.

Other settings: With some ultra-tech weapons and more points spent on combat and law enforcement skills, Seth might be a useful ally for a superhero in a pre-TL10 world.

Jaya Seth (75 points)

Attributes: ST 19, Arm ST 15 [80]; DX 11 [10]; IQ 13 [30]; HT 12 [20].

Speed 8.69; Move 8.

Dodge 8. **Advantages:** Absolute Timing [5]; Basic Communicator with Medium-Range radio [16]; Eidetic Memory 2

[60]; Lightning Calculator [5]; Mathematical Ability [10]; Metal Armor, PD3 DR7 [40], reflective surface [2]; Microscopic Vision x100k [4]; Micromanipulator arms [15]; Night Vision with Radiation Detector [10].

Disadvantages: Absent-Mindedness [-15]; Curious [-5]; Nightmares [-5]; Overconfidence [-10]; No Sense Smell/Taste [-5].

Quirks: Broad-Minded; Incompetence (Poetry); Intolerance (Technophobes); Not interested in sex; Paints face and body (any color but red) on social occasions.

Skills: Accounting-18 [1/2]; Appreciate Beauty-11 [1/2]; Archaeology-12 [1/2]; Armoury/TL10-13 (Beam handguns) [1/2]*; Artist-13 [1/2]*; Astrogation/TL10-14 [1]; Astronomy/TL10-15 [2]; Beam Weapons/TL10 (Laser)-14 [2]; Computer Hacking/TL10-14 [1/2]; Computer Programming/TL10-15 [1/2]; Driving/TL10 (ATV)-10 [1]; Electronics Operation/TL10 (Sensors)-14 [1]; Engineering/TL10 (Robotics)-14 [1/2], (Stardrive)-14 [1/2]*; First Aid/TL7-15 [1/2]; Forgery/TL10-14 [1/2]*; Freefall-12 [4]; Judo-9 [1]; Karate-10 [2]; Literature-12 [1/2]; Mathematics-15 [1/2]; Mechanic/TL10 (Robotics)-14 [1]*; Speed-Load (Power cell)-10 [1/2]; Paleontology/TL10-12 [1/2]; Physics/TL10-12 [1/2]; Planetology (Earthlike)-16 [2], (other)-13 [0]; Philosophy (Zen)-12 [1/2]; Photography/TL10-13 [1/2]; Research-14 [1]; Savoir-Faire-14 [1/2]; Scrounging-14 [1/2]; Xenobiology (Terrestrial)-15 [2], (Hostile Terrestrial)-13 [1/2]; Xenology-12 [1].

Maneuvers: Arm Lock-10 [1/2]; Kicking-9 [1/2].

* Receives +2 bonus on skill rolls requiring very fine control.

100-point version: increase IQ, DX, and all skills by 1 OR increase DX and physical skills by 2 and add a concealed light laser torch to right arm.

Gear: Heavy Laser Pistol with variable beam and dazzle setting; Dinosaur Laser; Multiscanner; Electronics and Mechanics mini-tool kits; Utility Belt.

Appearance: Asexual shiny white-metal humanoid ("Omicron-15" General Purpose Humanoid Robot, p. RO119) with a bulging utility belt; 6' tall, 128.67 lbs.

Adventure Seeds

Chinese Take-Out (Cliffhangers): When Abraham Van Diemen fails to return from an expedition to the Russian-Chinese borderlands, Alan Silver and the PCs are paid to go looking for him. For Silver, it's a perfect opportunity to spy on both countries, and maybe even steal the collection of ancient skulls and alleged yeti scalp from one of the warlords.

Them Bones (Horror, Atomic Horror, or Supers): Father Gray, a priest accused of child abuse, goes missing. After Father Chavez asks the PCs to help find him, they find a skeleton with the bones picked clean, but without any visible bite-marks. Dr. Kitamura identifies it as Gray's, but can't establish either the cause or the time of death. Dr. Brandt says that insects would have taken weeks to strip bones that thoroughly, but witnesses claim to have seen Gray six days before.

Chavez and Kitamura team up with the PCs to investigate, but the closer they get to the truth, more likely they are to be next on the menu.

Purge (Illuminati, Supers, Psionics, or Cyberpunk): After Mernok leads a campaign calling for the conscription, detention or elimination of all metahumans (or psionics, or hackers, or the Cabal), MiBs are dispatched to round them up. The PCs and many of their friends, forced into hiding, are approached by former enemies who want to assassinate Mernok. Westhill has a scheme to discredit the economist and also wants the PCs' help, but his plan is less likely to succeed. Do the PCs try to save Mernok, or kill him?

Headhunters (Space): The PCs find themselves in a race against Silver, Seth and Kitamura to retrieve the computer from a Planetary Explorer robot lost in the jungles of Zelyoni. Both groups soon discover that Zelyoni is more dangerous and less uninhabited than they'd been told, and after finding the robot, they may need to team up to fight their way back to their landing craft.

Designer's Notes: GURPS SWAT

by Brian J. Underhill

It was a Tuesday. I was sitting at an Elmer's Pancake House on Hayden Island having lunch with Lieutenant Martin Rowley, former team leader of the Portland, Oregon Special Emergency Reaction Team (SERT). I'd started the interview with basic questions about tactics, weapons, room entry techniques, and was ignoring my omelet while hammering out notes on my laptop.

Lt. Rowley was telling me about recent SERT operations -- a barricaded suspect in a rural neighborhood that had built an "insulation nest" for himself in the attic to resist the 30+ tear gas grenades the team fired through his windows; the gunmen that took over the KOIN Tower in downtown Portland; a suicide-by-cop hostage situation at the Washington Mutual bank inside the Gateway Fred Meyer. The latter of the three had resulted in officers taking friendly fire as their teammates shot through the suspect and an intervening wall, putting one bullet in a teammate's hip, the others in body armor.

"So what happened here," I asked, pointing at the rough map he'd drawn on my legal pad, "after they spotted the suspect?" The suspect had been holding a woman hostage, and had her at gunpoint as two SERT officers rounded the corner next to him.

"Oh, they killed him," he said. He went on to explain how one SERT officer had grabbed the girl and yanked her to safety as the other continued to cover the critically wounded suspect, and how the officer with a friendly slug in his hip had vaulted over the teller's counter to get out of the way of his teammates.

He kept talking, but I wasn't really listening. I kept thinking about Rowley's words. *Oh, they killed him.* Just like that.

To me, **GURPS SWAT** had been nothing more than another **GURPS** book, a chance to create a roleplaying game to bridge the gap between **Cops** and **Special Ops**. A chance to run games loaded with tabletop tactics and big guns.

To Lieutenant Martin Rowley and the men of the Portland SERT, it was meant risking their lives -- and sometimes taking lives -- on every mission.

"Oh," he'd said. "They *killed* him."

From Sierra to Game Storm

I'd spent many years playing first-person shooter computer games, and both Ubisoft's **Rainbow Six** and Sierra's **SWAT 3** had gotten me thinking about running them as **GURPS** games. I leafed through my copy of **Special Ops** and went out and bought **Cops**, looking for solid information on how to run a SWAT campaign.

Not much there.

After weeks of research, I fired off an email to Sean Punch, asking if SJ Games would like to see a proposal for **GURPS SWAT**. His reply was less than encouraging, but he gave me the go-ahead. I started work on an outline, and put together a playtest for *Game Storm* in the spring of 2002. The game was a hit.

After several more con playtests, a lengthy proposal, and hints of a SWAT movie due out in the summer of 2003, **GURPS SWAT** got the greenlight.

I called in all the favors I could, hitting up a local hostage negotiator friend to hook me up with the Longview, Washington Tactical Response Team entry team. I randomly approached police officers in restaurants with questions that must have inwardly frightened more than one:

Brian: "Excuse me, I don't mean to interrupt. Can I ask you a couple quick questions?"

Unsuspecting Cop: "Uh . . ."

Brian: "I'm writing a book about SWAT, and I wondered what kind of deployment vehicle the local team uses. Do you know?"

Bewildered Cop, now raising an eyebrow: "Uh, no, not really."

Brian: "Is that Glock on your hip department issue, or do you get to choose your own?"

Suspicious Cop, laying a hand on said Glock: "Can I see some ID?"

Oh, yeah. Life as a writer is fun.

Finishing Up

Despite the occasional misunderstanding, my "random cop questioning technique" proved very fruitful. Many patrol officers know a surprising amount about their SWAT teams, and most were more than happy to answer a dumb writer's questions, once I'd showed them some ID, my **SWAT** contract, and a copy of **GURPS Cliffhangers** or something.

It was, in fact, the "random cop questioning technique" that led me to Lt. Rowley of Portland SERT. I had spotted a female cop in the Gateway Quizno's, in northeast Portland, and approached to ask her if Portland had any female SWAT officers.

"My husband would be the one to ask," she said, handing me her card and writing their home phone number on the back. "He was the SERT team commander for 10 years."

As the book came together, I learned more about SWAT than I could fit into the book, even after it got expanded from 48 to 64 pages. I went to gun shows, police departments, and donut shops; I made friends with patrolmen, motorcycle cops, negotiators, and entry personnel; I played with guns and gear, read books, and watched *The History Channel*. At one point I was even asked if I wanted to be flash-banged, but Steve isn't paying me enough for *that* level of reality testing.

As I write this, the playtest is winding down and the book is nearly finished. For weeks I've thought about Lt. Rowley and his men. For me, **GURPS SWAT** started out as nothing more than a diversion, a game. But through the course of researching and writing it, that changed. The men and women of SWAT aren't pixels or character sheets. There's no *restart* button or a GM encouraging them to create another character. They don't shrug off bullets; the officer at the Gateway Fred Meyer shooting still carries a slug in his hip to this day.

I've got a new level of respect for men like that. As I mention on the credit page of **GURPS SWAT**, it is to the men and women of today's SWAT teams that the book is dedicated. I hope it lives up to that dedication.

Additional Material

Because the book got bumped from 48 to 64 pages between drafts, not a lot ended up being left out. But as has become the norm for Designer Notes articles, here's a sampling of what got left behind. Thanks to Kenneth Peters for the Uzbekistan SNB writeup.

Uzbekistan SNB Counter-Terrorism Department

The National Security Service (SNB; former KGB) is tasked with hostage rescue, direct action, and unconventional

warfare missions against security threats. The agency formed a counter-terrorist (CT) brigade consisting of a command element in Tashkent and 12 assault teams spread throughout the country. They have the lead role in operations involving aircraft, the subway, and most government buildings (including nuclear sites). Each regional detachment consists of between 30 and 90 men, half of them actual field operators. The Tashkent headquarters group comprises over 350 personnel, including special explosive ordnance disposal teams and sniper/observer teams. SNB teams are not strictly police officers, but are often tasked with the same missions as U.S. SWAT teams. They are roughly analogous to the FBI HRT teams, but with more emphasis on direct action and support of military operations (including operations outside Uzbekistan).

SNB CT teams have priority access to military assets in the performance of their duties and can even request support from T-80 main battle tanks and Mi-24 attack helicopters. Individual teams have little in the way of organic transport and must request movement from other government services (use of city buses is common).

The SNB has acquired a significant amount of foreign gear for its personnel, including Level III body armor from a manufacturer in South Africa, Motorola radios (unencrypted) from the U.S., and EOD robots from Europe. Although not lacking in military hardware, the SNB does not have access to many items SWAT teams often take for granted, such as bomb suppression blankets, fiber optic devices, extendable ladders, and even door rams. Most door breaching is done using explosives, with an emphasis on tamped explosives and line charges.

SNB CT teams prefer the Izhmekh PM pistol (often fitted with suppressors, pp. MF15-17), TsNIITochMash SR-1 Vektor pistol (see *TsNIITochMash P-9 Gyurza*, p. MF19), TsNIITochMash KS-23 Drozt shotgun (p. MF21), AK-74 assault rifle (p. HT114), AK-104 assault rifle, and SVD Dragunov sniper rifle (p. SO114).

Mini-Campaign: Murder, Incorporated

The following is a sample linked-mission SWAT campaign. GMs may wish to intersperse unrelated missions as he sees fit, though some scenes should be played back-to-back to maintain a sense of urgency. The campaign is largely cinematic and is designed for a full-time metropolitan SWAT team.

Business as Usual?

The SWAT team is called on to serve a warrant on a suspected clandestine drug lab. Upon entry, the team discovers that the lab is not turning out anything so mundane as methamphetamines, but rather has been used for biological research. In the aftermath of the raid, investigators report that sufficient material was on hand to produce two biological weapons, but most of it remains. It is likely, however, that a single biological weapon has already been created. Weapons and equipment found on-site point to black market weapons dealers around town. Police mobilize to bring all of them in for questioning.

It's Who You Know

A tip from a black market weapons dealer links the guns used at the bio lab with Tomik Jozka, a Czech national now living in the U.S. and working as an investment banker. He is rich, and his home is in a very nice neighborhood. He has a wife and four-year-old daughter. The SWAT team is tasked with bringing him in for questioning; the event should be uneventful, though Jozka will protest vociferously. He pleads diplomatic immunity, but seizure of his computer and cell phone records link him to a substantial banking deal with city councilman David Ballantine. The D.A. refuses to move on Ballantine without additional information. Research will turn up basic information on Ballantine; he is a native of New York, who relocated to the PCs' city in March 2002.

Search and Seizure

The team is sent to intercept a major weapons shipment (at the local docks, a rural airstrip, or a major truck-stop) based on information discovered in Jozka's computers, PDA, etc. The shipment is heavily guarded by experienced

mercenary soldiers armed with some of the latest military gear. It will prove a tough fight for SWAT.

After the firefight, investigators discover a street address and GPS instructions to take part of the shipment to a warehouse owned by a Mexican import company. That company is, in turn, owned by a parent corporation -- Global Securities, Limited -- of which councilman David Ballantine is a majority shareholder. It is enough to convince the D.A. to make a move.

The Time for Vengeance

SWAT is called out to Ballantine's house (or penthouse downtown) and bring him in for questioning. He does not resist. Research (done now, or earlier) indicates that Ballantine lost his wife and children in the World Trade Center tragedy. He began calling for a full-scale war against Islam, but was belittled and soon found himself of the loop. He relocated in 2002 to start anew, and has been planning his revenge. The research reveals ties to anti-Muslim organizations, as well as emails to the various mercenaries around the region (including some the SWAT team encountered in the last mission). Extensive information about the upcoming International Peace and Goodwill Conference (to be held in two days) leads police to believe Ballantine was (is!) planning an attack on that conference. The delegates are already in town, most staying in a large hotel near the convention center where the event is to be held.

The Final Takedown

In an attempt to thwart Ballantine's plan, SWAT sweeps all surrounding airports, docks, train stations. The PCs' team is assigned to search a small commercial airstrip outside of town. What starts as a routine sweep turns deadly when they encounter heavily-armed mercenaries and the missing biological weapon. The bomb has been loaded onto a small plane that will attempt to take off when SWAT arrives. The weapon is equipped with an altimeter; once the mercs get it airborne, it will detonate if the plane drops below 200 feet (a safety measure in case the plane is shot down).

The mercs are going to bomb -- not the convention center -- but the nearby hotel containing the delegates. Notes and hotel information will clarify the details of the plan once SWAT has neutralized the mercs and the device.

Dr. Ludwig Javosky, Evil Genius

by Mark Gellis

Born in 1907, Ludwig Javosky was 10 when his father, a doctor in the German Army, was killed by British artillery. For years, he, his mother, and his two brothers endured poverty. His talents as a scholar were sufficient, however, to earn him admission to a prestigious university, where he studied science, and eventually took a doctorate in Physics and a second doctorate in Electronic Engineering.

By 1937, Javosky's fortunes had improved. Hitler was in power. His brothers had become officers in the German Army. Javosky's genius had attracted the attention of the Nazi government, and he was hired to head a secret "Special Tasks" research laboratory. Here, he and his team worked on projects that included computational devices, encrypted radio and telephone equipment, and jet engines. The late 1930s and early 1940s were a time of great personal satisfaction for Javosky.

By the end of the War, all that had changed. Javosky's brothers were both killed at Stalingrad. His mother, weakened by the shock, passed away in 1944. And Javosky had by that time realized that Germany was unlikely to win the War. If they had stopped in 1940, with France and Poland conquered, and come to terms with Britain and America, a Greater Germany might have stood forever, but now the Allies were committed to the utter defeat of the Nazi regime. But there was little sense in regrets and recriminations. Javosky continued to work for Hitler, but he carefully laid his plans for an escape should worst come to worst. After all, if he had learned anything from life, it was that in time the worst always came to worst.

He was disgusted by the concentration camps, but it was not because he was horrified by the incredible loss of life. The tragedies in his own life had left him rather callous. Why should he care about the millions who perished? Had anyone saved his father from being blown to bits? Had anyone saved his mother from dying alone in her house because the shock of losing two of her sons had broken her heart? Javosky did not wish misfortune on anyone, unless they had crossed him somehow; on the other hand, he could no longer bring himself to care very much if misfortune did befall them. Tragedy had made a stone of his heart. What annoyed Javosky about the concentration camps was simply that he thought they had been unnecessary; they were wasteful and stupid and a blot on the dignity of his country.

Just before the Allies entered Berlin, Javosky escaped to Argentina. He had kept very careful notes of his research and by 1946 had patented some of his inventions (the Nazi regime no longer needed them, so Javosky felt no guilt about using them to make himself rich). By 1950, he had sold enough of his inventions to industry to make himself quite wealthy. He purchased an estate near Corrientes, in northern Argentina, and began a new phase of his life . . .

The Javosky Project

Wealthy, and free to pursue his own research, Javosky turned to cosmology. He was attempting to develop a means to study the fabric of space and its various interactions with energy and gravity. He described it as "listening to the true music of the spheres." Eventually, he developed what he simply called the Detector, which allowed him to see how space was affected by gravity and energy, the myriad bodies of the distant universe engaged in an enormous cosmic dance. The device had little practical use, of course, but Javosky was endlessly fascinated. He became quite adept at reading patterns.

And then he noticed something. Invisible channels in space seemed to be opening and closing, as if someone or something was somehow disrupting space to form conduits between distant astronomical bodies. However, the location of the end points of these channels were bizarre. Some appeared to be in the middle of interstellar space. And others did not appear to be anywhere at all.

The breakthrough came when he changed the system. Using a six-dimensional matrix, instead of the conventional three-dimensional one, he could map the signals. Suddenly, it was clear to him that these tunnels in space were not

crossing interstellar distances but creating conduits between what had to be entirely distinct universes. Fascinating!

More important, the regularity with which some of the tunnels were created indicated that they were artificial rather than natural. Someone was opening those tunnels in space. And that meant he could do it, too.

He began by building the Communicator. He had seen enough of how human beings treated one another to know that to simply open a door to whatever world these creatures lived in might have unforeseen and disastrous effects. He would see if he could contact them first, find out what they were like before inviting them over for coffee and strudel.

In building the Communicator, Javosky discovered that channels between universes could only exist if there were portals (or receivers and transmitters for communication) at both ends. Unless someone was listening or transmitting, his Communicator would prove useless.

Javosky spent months exploring the cosmos with the Detector, mapping dimensional channels, a process that involved such complex mathematical calculations that they often left him exhausted and with blinding headaches, and listening on his Communicator for signals from other worlds. In time, he identified several broadcasts that appeared to be intelligent in origin. But they were so different, so alien. Buzzing and clicking and eerie musical tones. They were clearly languages, but translating them seemed an insurmountable task.

Those who knew him saw that he was changing. He had never been an overly friendly man, but he had become restless and irritable. He complained frequently of headaches. He also seemed unusually suspicious, even going to far as to claim that a new servant was really a spy for some enemy he refused to name. Eventually, the other servants convinced him that the boy could be trusted.

A young physicist working with Javosky suggested that the older man should take a few months off, that he was working himself too hard. The next day, the young man and his belongings were gone.

Javosky was not going to give up. During the war, he had used his abilities as a mathematician to break Allied codes. He took the same approach with the alien signals and, in the end, his efforts paid off.

The creatures called themselves the Ngszet. Javosky spent several more weeks listening to their buzzing and clicking voices, honing his translation skills, learning as much as he could of the nuances of their language. And then he sent a message of his own, and was delighted when they responded. For weeks, they corresponded. Finally, the aliens taught him how to build a Portal.

On October 17, 1954, Dr. Ludwig Javosky opened a doorway to another world. Once he saw what lay on the other side, he would never be the same again . . .

Javosky Today

Javosky is 6'1" and weighs 175 lbs. He is an imposing man, tall but a bit thin, with a narrow, angular face. He has fair skin, slightly curly silver-blond hair, and light gray eyes.

He owns a 1,000-acre estate on the Parana River near Corrientes (which allows easy access by river to larger cities to the south and is also close enough to the border that he could escape into Paraguay if he ever needed to do so). Most of the land is undeveloped wilderness. The estate has a large house, stables, a garage, a dock and a large boat house, and a staff of about ten servants. They are loyal, but some of them are also frightened.

The terrain surrounding the estate is dominated by the Parana river and the enormous Ibera marsh. It is warm and humid here. Local fauna include marsh deer, river otters, spoonbills, and caimans. Anglers (or anyone pretending to be an angler because they need a good cover story) will be pleased by the presence of the dorado, a large (about six to ten pounds, although some get much bigger) and aggressive fish (it eats piranhas) that lives in these waters. Javosky does not spend a great deal of time outdoors, although he does enjoy riding and boating when he has time for it, but he has spent nearly ten years in this country and knows it well enough that he could survive in the wilderness if he had to do

so. He is also a fair shot with both pistol and rifle. His weapons of choice are the Walther P-38 and the Karabiner 98k (pp. W92-95).

It is worth noting that the Parana River -- which runs for more than 2,000 miles through parts of Brazil and Argentina, and provides access to the cities of Ciudad del Este, Corrientes, Santa Fe, and Rosario before flowing into the Rio de la Plata near Buenos Aires -- would make a terrific setting for a wide variety of campaigns.

Using Dr. Javosky In A Campaign

There are a number of ways in which Javosky can be used in a campaign. First, one can simply use the story described above. The player characters get involved because they are either lost in the wilderness and blunder onto Javosky's property or they have gone to investigate rumors that the good doctor is involved in something very odd indeed.

The Big Secret is that the Ngszet intend to establish their own dimensional Portals in isolated regions of our world as staging points for an invasion so they can enslave the human race as food animals. An advance team has come through the Portal (located in Javosky's laboratory) and is presently camped out in the countryside near Corrientes while the aliens gather intelligence about our world. They have modified some of their communicators to transmit and receive on a short-wave band, allowing them to keep in touch with Javosky, who has a short-wave radio at the house. They also sometimes visit the boat house under cover of darkness so they can meet with Javosky.

They have told Javosky that they are collecting biological samples and have asked him not to inform the authorities because they believe humanity is not ready to accept the idea of life on other worlds. So far, Javosky believes them, and believes that eventually he will receive both wealth and fame for his part in contacting an alien civilization. For this reason, he is willing to do just about anything to prevent people from learning about the Ngszet or telling the authorities about them.

The GM should decide how much progress the Ngszet have made. It is possible they have not yet built any Portals of their own. If so, once Javosky's Portal is destroyed and the alien advance team is dealt with, our world is safe (at least until someone else builds a Portal). GMs who want a longer campaign should assume the Ngszet have completed at least one Portal, possibly more, that they may have moved one or more Portals to other places on Earth, and that through Javosky they may have developed additional contacts. As long as the real mission of the aliens remains a secret, many people will be willing to help them. Even if it was revealed that the aliens intend to enslave humanity, there are many people who would serve them in return for the promise that they will be spared.

The Ngszet advance team consists of ten individuals. They are skilled technicians and competent fighters, the alien equivalent of CIA field operatives. They are armed with gauss weapons (see *GURPS: Ultra-Tech* p. 53 and p. 126 and *GURPS: Space* pp. 75-78 for details) and survival knives (treat as "Small Knife," from *GURPS: Basic Set*, p. 206, if they are used in combat).

The Ngszet are actually collecting some biological samples while they make plans to build new Portals. They are also indulging in a little harvesting, ambushing humans and eating them when they get the opportunity. Local newspapers will have a few stories about odd disappearances. The Ngszet have been careful not to eat human flesh in the boat house itself, but a careful search of the river shore might reveal some remains (such as bones with very unusual tooth marks, unusual because they were made by giant insect mandibles rather than teeth) or pieces of clothing or jewelry that might identify a particular victim.

Obviously, PCs should not initially know about the Ngszet. There should, however, be subtle hints that Javosky is up to something. Perhaps some of the servants have seen things. They may be too frightened to do anything themselves (many of them remember the young assistant who disappeared . . . Javosky says he went to work at a university in Rosario, but they also saw the doctor taking a heavy burden in a tarp out to the river that night) but they may speak to the player characters about their suspicions. Some of Javosky's servants, of course, are quite loyal, believing that they work for an important man, and will try to stop any attempt to harm him or pry into his secrets. Of course, none of them know what the Ngszet are planning.

One interesting twist would be to have Javosky see the error of his ways and try to help the player characters. After all, it is one thing to be callous; it is quite another thing to be stupid. If Javosky figures out the Ngszet are killing people, it might occur to him that he could be next. The aliens no longer need him. They have agents on Earth and they know how to build their own Portals. So it might only be a matter of time before he is on the dinner plate, too. Javosky is very unlikely to switch sides, however, unless he believes he is in danger. He really does not care if anyone else is eaten. (It is important that one does not make Javosky too sympathetic, even if he ends up helping the player characters. He is a former Nazi, after all.) If the Ngszet believe he is going to betray them, they will kill him.

The Ngszet

The Ngszet are humanoid but insect-like aliens who stand about 4'0" and weigh about 75 lbs. They are covered with tan chitin. Their genitals are internal unless extended for mating, so it is usually impossible to tell if one is male or female. With their mandibles, bulbous black compound eyes, and short, stiff antennae, they look something like gigantic humanoid locusts; they resemble giant grasshopper-people. (This may require a Fright Check, depending on the individual.)

Their metabolism and internal organs are actually similar to reptiles, rather than insects; they have lungs and an efficient three-chambered heart. They are also cold-blooded, making them sluggish in temperatures below 50 degrees Fahrenheit; in temperatures below 32 degrees Fahrenheit they must roll vs. HT to avoid taking damage (p. CI101). Since Corrientes is at about the same latitude as Tampa, FL or Laredo, TX (that is, in their respective hemispheres), the temperature has not yet been much of a problem for them.

On their own world, they wear simple clothes, mostly one-piece coveralls of light synthetic fabrics. Ngszet on Earth wear human-style clothing tailored for their alien bodies. This is not a fashion statement but an attempt at camouflage; dressed this way, with broad-brimmed hats hiding their faces, one might at first assume they are children if they are encountered at night, in bad light, or in bad weather, or if they are seen at a distance.

Because they come from an alternate universe, rather than another solar system, their biochemistry is similar to our own and they can eat human flesh and gain nourishment from it. This is unfortunate, as they find human flesh delicious. Being utterly amoral creatures, they see nothing wrong with enslaving the human race and using us as food animals. They have already done this in a number of other alternate universes.

Ngszet are chummy and tend to travel in groups of four or five. As a result, while they are weaker than most adult humans, they can often overwhelm solitary individuals in a melee by sheer force of numbers.

The Ngszet can easily be adapted as alien adversaries for a wide variety of campaigns.

Racial Template For Ngszet

ST: -3 [-20] **DX:** +0 [0] **IQ:** +2 [+20] **HT:** +1 [10].

Advantages: Chitin (PD 2, DR 2) [56]; Faz Sense [10]; Night Vision [10]

Disadvantages: Chummy (With their own kind, at least) [-5]; Cold-Blooded [-5]; Intolerance (Total xenophobia) [-10]; Odious Racial Habit (Enslaves and eats other intelligent beings!) [-15]; Reduced Hit Points (-3) [-15]

Template Cost: 36

Additional Campaigns

The campaign can continue, centering on exploration after PCs have dealt with the Ngszet menace. Once Javosky and the Ngszet are vanquished, if the heroes do not destroy the Portal, they would be able to use it travel to other universes. Here, the GM has a great deal of freedom. Javosky spent years building and experimenting with the Detector, the

Communicator, and the Portal. It is possible that he opened doorways to other universes, perhaps even stepped through and did a little exploring himself. If the investigators find his notebooks, they will find notes on one world that developed Portals and then slipped back into savagery, perhaps because of some cataclysmic war or natural catastrophe. A few of their Portals are still working, kept functional by automated maintenance equipment. The native population is too scattered to make invasion worthwhile to the Ngszet, so they have left it alone. The GM will have to decide what Javosky learned about this world on his own and what he learned from the Ngszet.

There is also the universe from which signals of an eerie musical nature emanated; Javosky was never able to translate these signals and the Ngszet claim to know nothing about that universe.

And there is no reason why suitably skilled adventurers might not use the Detector to find entirely new worlds of which even Javosky had not dreamed.

Finally, it is possible to drop the Ngszet plot entirely. Javosky could have developed the Portal on his own, although this does raise his value as a character by quite a bit; p. STM44 suggests that a dimensional Portal would probably count as a 50-point invention and this means Javosky would have to have Electronics (Matter Transmitters)-25 [18]. If this is done, however, the GM can use him as a starting point for any alternate universe campaign one desires.

Other Time Periods

Javosky is designed for an **Atomic Horror** campaign, but using him in other settings is easy. Hardly any changes are required to use him during the **Cliffhangers** era or **World War II** except that he will be 10 or 15 years younger and working for Germany instead of living on his own estate in Argentina. There is no reason, after all, why the Javosky Portal could not be a secret Nazi project, with Hitler hoping to gain atomic weapons or other advanced technology from the Ngszet. Perhaps the mission would be to capture or destroy the Portal (and kidnap or eliminate Javosky) before the Nazis can do this. Here, Javosky would gain the Nazi regime as a powerful Patron, available on 12-, worth 60 points, although serving them would also involve a 10-point Duty disadvantage (the Nazis would often, that is, on 12-, demand that he work on some additional projects, possibly involving dangerous chemicals, radiation, kidnapping or assassination attempts by enemy agents, etc.).

If one wanted to run the Ngszet campaign in South America during the **Cliffhangers** era, one can assume that Javosky was born in 1885, that he had served Germany as a research scientist in World War I rather than fighting on the front, that his brothers had died serving their country in that war, and that his parents had both died in the influenza epidemic of 1919. This version of Javosky emigrates to Argentina around 1925 and makes contact with the Ngszet sometime in the 1930s. He would have a great deal of sympathy with the Nazi cause and, after Hitler comes to power, might be working on developing new equipment for Germany along with his other projects. He would be in contact with German agents working in South America during this period. This might even be the reason the player characters end up dealing with Javosky - - they might be investigating him or they might be following an agent who ends up on his estate. This version of Javosky would, after 1935, have some degree of the Age disadvantage, and Nazi Germany again counts as a Patron (and a Duty), but only on 9-, for a total of 30 points and -5 points respectively.

For a modern campaign (or a late Cold War one set in the 1970s or 1980s), one should assume that Javosky is born in 1940, with his father dying in World War II, his brothers serving as Intelligence Officers for East Germany and being killed during the Cold War by British or American agents, and Javosky himself working for the Soviets as a research scientist. Here, add Area Knowledge (Soviet Union)-16 [1], Computer Operation-16 [1], and Computer Programming-17 [1] to his skills. If the campaign is set during the Cold War, treat the Soviets as a 60-point Patron (and a -10-point Duty); the campaign might now involve Javosky developing his Portal for his Communist masters (who may or may not know what the Ngszet intend to do once they gain access to our world).

A modern day campaign would assume that, after the collapse of the Soviet Union, Javosky would settle in South America and sell his talents as a technical consultant to the highest bidder (and make huge profits from his patents) while working on his Detector and Communicator. With the Internet allowing easy communication with clients around the world, he would be able to work for any government, corporation, or terrorist group without ever having to leave his estate. In any campaign set after 1990, this version of Javosky would have some level of the Age disadvantage.

"Technical" Notes

The devices described in this article are adapted from technology described in *GURPS: Ultra-Tech*. Anyone wishing to recreate these devices in their own campaigns should simply use the ones described in that book, keeping in mind that these devices provide access to other universes rather than to other places in our own universe. (Of course, there is no reason why they could not do both.)

The Detector and the Communicator should both be treated as versions of the Transtellar Tachyon Communicator (see *GURPS: Ultra-Tech* p. 37), as far as weight and cost are concerned; the Portal should be treated as a teleport booth or telegate in terms of weight and cost (see pp. UT117-118).

The reason for using these variant devices instead of those in *Time Travel* was to provide a limiting factor on the Ngszet; if they had parachronic conveyors, they would not need Javosky to build a Portal for them and destroying (or controlling) his Portal (and any others that had been built by the aliens) would no longer be a critical part of the plot. In fact, unless building conveyors was hideously expensive for the Ngszet, having this means to travel to other universes would have allowed them to quickly overwhelm our planet. While this might be useful if someone wanted to run a deeply pessimistic campaign, it was not what I wanted to do here. GMs are free to decide whether or not both Portals and parachronic technology function in any particular campaign (after all, just because the Ngszet never developed conveyors does not mean that no one else will).

Javosky's Portal can be used to search for other universes; the Ngszet design includes an integral Detector, Communicator, and hyperspace mapping equipment, so the process only requires some Electronic Operations rolls, with a penalty for using very unfamiliar equipment to be determined by the GM (also, all the dials, etc. are in German). If the Portal has been destroyed, but the original Detector is still intact, one could attempt to determine coordinates for other Portals. This, however, would require not only Electronics Operation rolls for the Detector to gather data but also require several rolls for Mathematics and Hyperspace Physics, at significant penalties, and with the whole process taking days or even weeks; the GM should determine if HT rolls are necessary afterwards to avoid migraines or more serious effects.

Ludwig Javosky In *GURPS*

ST: 12 [20] **DX:** 10 [0] **IQ** 16 [80] **HT** 11 [10].
Move 6.

Advantages: Ally Group (House and grounds staff, and laboratory assistants, Medium Group, 15-) [60]; Charisma +1 [5]; Gadgeteer [25]; Invention (Cosmic Communicator) [15]; Invention (Cosmic Detector) [15]*; Mathematical Ability [10]; Status +2 [5]**; Filthy Rich [50]

*Javosky pays no points for the Cosmic Portal because he did not invent it; he simply assembled it from instructions provided by the Ngszet.

**includes one free level from Filthy Rich

Disadvantages: Callous [-6]; Migraine (On 8-, only when working on complex problems involving six-dimensional geometry, -50%) [-5]; Paranoia [-10]; Secret (In league with aliens!) [-20]

Quirks: Keeps family photographs on his desk [-1]; Loves coffee [-1]; Loves strudel (and hired a German cook because it was impossible to find an Argentinean one who knew how to make good strudel) [-1]; Occasionally seduces attractive maids [-1]

Skills: Administration-16 [2]; Area Knowledge (Argentina)-16 [1]; Area Knowledge (Germany)-16 [1]; Astronomy-16 [4]; Boating-10 [2]; Cryptanalysis-17 [1]; Cryptography-15 [2]; Driving (Automobile)-11 [4]; Electronics

(Communications)-20 [8]; Electronics (Sensors)-20 [8]; Electronics (Matter Transmitters)-16 [1]; Electronic Operations (Communication)-15 [1]; Electronic Operations (Sensors)-15 [1]; Electronic Operations (Matter Transmitters)-15 [1]; First Aid-16 [1]; Guns (Pistol)-13 [2]; Guns (Rifle)-13 [2]; Hyperspace Physics-15 [4]; Intelligence Analysis-14 [1]; Leadership-17 [2]; Linguistics-16 [4]; Mathematics-18 [2]; Nuclear Physics-15 [4]; Physics-17 [6]; Powerboat-11 [4]; Research-15 [1]; Riding (Horse)-11 [4]; Survival (Swampland)-15 [1]*
* skills includes bonuses for Mathematical Ability, Charisma, etc.

Language: English-15 [1]; French-15 [1]; German (Native)-16 [0]; Ngszet-13 [1]*; Russian-15 [1]; Spanish-15 [1]
* treat this buzzing and clicking alien language as a M/VH skill

Zombies!!! 3.5 Not Dead Yet (for Zombies!!!)

Published by [Twilight Creations, Inc.](#)

Written by **Todd A. Breitenstein and Kerry Breitenstein with Mark Bordenet, Dr. Bedlam, Robert Yarborough, Tony Fryer and Steve Donohue**

Illustrated by **Dave Aikins**

50 cards and rules; \$9.99

The history of Twilight Creations, Inc's popular [Zombies!!!](#) board game reads like that of a cadaver, or even a bad zombie flick. It was originally designed and published by Journeyman Press, a division of The United States Playing Card Company. Their parent company's unfortunate decision to close them down left the game in limbo, but the designers resurrected themselves as Twilight Creations, Inc. and released several new games of their own, including the more broadly focused horror roleplaying/board game, [When Darkness Comes: The Awakening](#) and its various supplements and expansions, and the board game [Dante's Inferno](#). They also regained the rights to publish their original creation, **Zombies!!!**

Since then the game has not only won the 2001 Origins Award for "Best Graphic Presentation of a Board Game," Dave Aikins' work on the cards was, and continues to be simultaneously deliciously sly and gory, but also had its "love" (to steal a phrase from [All Flesh Must Be Eaten](#)) spread through another two supplements. Both provided more Map Tiles and Event Cards, the first [Zombies!!! 2: Zombie Corps\(e\)](#) adding an army base and special government "glow-in-the-dark" zombies, while the second, [Zombies!!! 3: Mall Walkers](#), answered every zombie fan's demand and added a shopping mall to the game. Neither changed the way in which the basic game is played, although with **Zombies!!! 3: Mall Walkers**, a smaller and shorter game of **Zombies!!!** could be played, being just limited to the halls and stores of the 16 Map Tiles mall.

With the release of **Zombies!!! 3.5 Not Dead Yet**, the way in which **Zombies!!!** can be played almost changes -- one half-change, the other not. Hence the designation, "**Zombies!!! 3.5**." There are no Map Tiles in this supplement, which describes itself as an "all event card expansion," the slim, flat book containing some 50 new cards and a set of new rules.

The new event cards are actually 25 pairs of identical cards, all graced with Dave Aikins' gloriously gruesome full-color artwork, and marked with a handy "Z3.5" to indicate the set they originate from. This last a useful feature that runs throughout the entire line.

If there is a common theme running through these 25 new additions, it is one of movement between tiles, both of players and zombies, as well as filling tiles with the latter. For example, "Did you hear that?" moves all zombies from one player's tile and onto an adjacent one; "They're Coming For You, _____" fills an opponent's tile with zombies and is nicely illustrated with a homage to the opening cemetery scene from *Night of the Living Dead*; and "What could possibly be behind that door?" has an equal chance of emptying a building of its zombies or completely filling it up. Other cards place a temporary blanket upon normal movement ("Too . . . tired . . . to . . . run . . ."), the use of bullets in combat ("No Guts, No Glory") and even on picking up tokens ("Power Outage").

Some enable direct interaction between one player's pawn and another's. "Lots of Running and Screaming" lets one

player steal the movement of another; "Why Don't We Go Some Place More Private?" allows a pawn to piggyback the movement of another; and "There You Are!" sends a player's pawn directly to the square containing the nearest opposing pawn. Conversely, some cards are playable under only certain conditions, such as "That's Not So Scary," which can only be played when a player only has a single Life and a single Bullet token left, giving that player another turn immediately. Samples of the cards from ***Zombies!!! 3.5 Not Dead Yet*** can be found on the publisher's [website](#).

Such limitations on card play may be one reason that players will not use them with the new rules found in this expansion. Simply laid out on a small sheet of heavy paper, the Customized Deck rules turn out to be rather short. They simply suggest a way around the huge mound that would result were you to combine every card from the basic game and its supplements into a single Event Deck. Instead, each player can select from the hundred or so designs available -- amounting to roughly 160 or so cards in total -- and design a 50-card personal Event Deck of their own. During a game each player draws from his or her personal deck rather than from the common deck as in normal games, but once this personal deck is exhausted, it cannot be reshuffled.

There are only a few limitations upon customized deck design, and these amount to restricting the number of a particular card allowed in a personal deck to just two, and one only from the list of six of the more powerful cards given on the back of these new rules. The only other restrictions are those decided upon before a game -- say, deciding not to use a particular card or cards from one expansion -- and those chosen by the players in the actual deck building process. During the tryout of these new rules, those cards containing fewer restrictions proved to be more popular.

But the real problem with the Customized Deck rules is the lack of cards. Even if you possess everything for the game it only gives some 160 cards, and that is only enough to build three 50-card personal decks, clearly not enough if there are four or more players and even less useful in light of the fact that ***Zombies!!!*** is designed for as many as six players. Even at a limit of the three 50-card personal decks, the choice for personalization is very restricted.

One half of ***Zombies!!! 3.5 Not Dead Yet*** does pretty much what the previous expansions have done -- add more Event Cards and push the scope of basic mechanics in an unexplored direction or two. This expansion adds more interaction directly between player pawns and between tiles. The other half, the Customized Deck rules, is an initial push upon the part of the designers' intention to shake the game up and move it in a new direction. As an option, they are different from what has gone on before, and do allow the players a little more input in deciding the events that can be added to the game. Yet radical they are not, and really, only those that own everything for the game are likely to get the most out of this option, and even then for a limited number of players. But then ***Zombies!!!*** has always been one of those board games with the capacity that allows its fans to tweak the mechanics. It is devotees of this aspect of the game that will get the most out of ***Zombies!!! 3.5 Not Dead Yet***, but to really and fully explore these new rules, the designers need to give us a lot more cards -- *a lot more*.

Pyramid Review

From the Files of Matthews GenTech (for Silver Age Sentinels)

Published by [Guardians of Order, Inc.](#)

Written by Bruce Ballon

Edited by Mark C. MacKinnon

Artwork by Matt Harpold

32-page b&w softcover; \$9.95

It makes a good change of pace, seeing a book for a superhero game that uses something other than a parade of costumed freaks. *From the Files of Matthews GenTech* is such a collection, offering bizarre beasts with weird powers (and dual stats, for Tri-Stat and *d20 System*) to challenge the do-gooders of *Silver Age Sentinels*, Guardians of Order's superhero RPG world.

The book is a collection of ravings by Samuel Matthews, as he spews his venomous hatred for all things superheroic. Believing metahumans to be responsible for the death of his mother, he labors tirelessly in his lab to create hybrid monstrosities that spew some venom of their own. He takes parts and DNA from one animal and another and splices them together. He makes liberal use of genetic material stolen from superheroes, or reagents scored off the black market. Most of his handiwork is bound to him by dependence on a special serum that keeps severe, rage-inducing pain at bay.

Creature write-ups are paired with entries from Matthews' scientific journals. Each entry discusses a different type of superhero and a specific example of each. Matthews dissects the combat tactics of his foes, and investigates a weakness he can exploit with one of his mutations. The speedster Slipstream can move faster than the speed of sound, but not faster than thought, so the good doctor is prepared to sick the mind-scrambling Alpha Ape on him. If a hero's powers are psychic or depend on balance, they'll need to concentrate or stand upright -- something they can't do with Cackle the hyena-woman shrieking in their ear. Bricks -- the female ones, anyway -- aren't immune to the chemical charms of Valentino (a rat-skunk-man hybrid), and the light-absorbing murdermoth collective will blind most any hero.

Not every character in a category has the same vulnerabilities, of course, so Matthews makes suggestions as to how he (read: the GM) might modify his tactics or combine his creations to account for such blind spots. Once he's got a beast clawing at the inside of its cage, he comes up with a method for introducing it into the community that's sure to draw the attention of the intended super-victim. And for reinforcement, he has amorphous blobs and headless abominations, and his collection of godbeasts and (de?)evolving link-men.

There is another nice touch in the concomitant journals kept by the doctor's enhanced pet bear Montgomery as he gains self-awareness. It's a shame he isn't expanded for his own adventure instead of, ultimately, being left as one more critter entry at the back of the book. That's just a reviewer's greed . . . the sidebar is remarkably concise and poignant, and any GM worth his dice bag will be able to develop his own idea.

The diaries Matthews keeps for his grand plan -- the "Day of Wrath" -- are a little less rigid in their attention to style . . . or are they? Matthews is quite mad, that's clear, but he seems to lack a distinct voice. It's almost as though he's being written by committee -- one moment he's the erudite scientist, the next he's like a mob thug engaged in DNA

manipulation. It's not enough to break the character, but it's also unclear whether this is deliberate characterization or the author's difficulty in maintaining the tone.

Along the way, we're also made privy to Matthews' sick obsession with his partner in crime Alice, the Queen of Hearts. Once she's served her purpose, the doctor intends to make her his concubine, and there's some seriously icky material hinted at there. The twisted journal entries are in good company, with artwork shoved between the writings depicting the creatures in question. The descriptions will make your skin crawl, and the pictures aren't going to do much to put your mind at ease. They're thick, watery-looking representations by Matt Harpold, reminiscent of Christopher Shy. They lack that degree of sophistication, but they're what the book needs. A series of four-color comic covers wouldn't have served as well as these darker, more inscrutable shadows.

The adult material is surprising but not graphic. There are few editorial issues (though three spellings of Matthews is two too many), and everything is straight to the point. With no fat to speak of, ***From the Files of Matthews GenTech*** is a slim but weighty product with insight and evil enough to make serious headaches for your Silver Age Sentinels.

--Andy Vetromile

Pyramid Review

Soul Harvest (for d20 System)

Published by [Khan's Press](#)

Written by Garth Wright

85-page PDF download with b&w and color illustrations; \$6.95

The demons are coming! The demons are coming! In Terry Brooks' novel *The Elfstones of Shanara*, the heroes quest to turn back an army of newly unleashed demons set on conquering the world. Raymond E. Feist's *Serpentwar* saga opens with the remnants of a race forced to travel dimensionally because a theocracy allowed demons access to their world to prevent being conquered, and the demons quickly destroyed the entire world. A demonic invasion by the forces of evil can turn a campaign apocalyptic as hell is unleashed and runs wild.

Soul Harvest is a **d20 System** sourcebook set on providing a toolkit for demonic invasions and the mini-campaign setting of Sinder where a successful invasion has occurred. All of the discussion of issues raised by a demonic invasion, however, are tied into the specific cosmology of the world of Sinder. Individual elements such as the classes, spells, monsters, and groups can mostly be used in any campaign easily, but discussions of the various race reactions to the invasions, for example, are tied directly to the particular world of Sinder and its proposed history and cosmology.

In Sinder there is the Light and The Dark. Gods do not enter the picture, just two sides of Good and Evil (with neutrals and druids worshipping an incarnate nature earth goddess who does not intervene). There is one Hell (also called the abyss) at the center of the world deep underground where bad souls go upon death to be tormented by demons and devils. On the flip side there is one heaven where good souls go upon death.

All standard fiends are called demons, while all individual demon lord level fiends are called devils (who rule the demons). DMs are encouraged to use whatever **d20 System** sources they like for the endless variety of demons. All demons and devils can possess, make use of souls, and try to command evil creatures including sentient ones. If killed on the world, they just reform in Hell and can come back again and again.

Alignment is more important in Sinder than in normal **d20 System** settings. It is a binary decision at death whether you go to hell or heaven. Being evil means you might be dominated by demons anytime you meet them. Evil creatures, however, can gain power from aligning with demonic patronage and selling their souls. Also, the Light and the Dark reward those who follow their paths, granting random powers or blessings on high level characters, a little bit like the alignment rewards in *Dragonlords of Melniboné*.

Strangely, a dream plane is also a big part of Sinder, with a high proportion of the spells and feats as well as a prestige class and some templates devoted to the subject. The tie-in to demons is not readily apparent, it simply appears to be part of the world of Sinder.

The current timeline of Sinder is 50 years after the gates to hell were opened and the invasion began and succeeded. Most of the world's population has been killed in the overthrow, although devils keep groups of mortals alive in "flesh farms" to breed more new souls for their use and consumption. A few groups remain free and defiant in the post-apocalyptic world, trying to survive and salvage their lost world. Flesh farms are a great creepy idea that would also work for vampires, illithids, and others who prey upon sentient beings.

While several moral issues are raised, this sourcebook does not answer them. For instance, it states that after the invasion began the vulnerability of evil people being dominated was discovered, and paladins and clerics had to

grapple with whether they should kill people who detected as evil on sight. Some felt this justified instant death sentences, others felt it would not be good to kill solely for being evil instead of *doing* evil. In the end, the demons overran all the cities regardless of the positions taken. This does not answer whether this is an evil action that would strip a paladin of his powers, an important question for the DM to answer when PC paladins detect evil in the world of Sinder.

This comes up again when survivalist groups are described later in the book. One of them is a lawful-good-based religious military group that has prejudices against nonhumans, women, and arcane casters. They conduct witch hunts and genocide as well as practice torture on evil creatures to get them to accept the light before killing them quickly before they can backslide. Justifying the paladins in this group is an exercise left to the DM.

A new core class is introduced -- the vampiric mage. They know spells as a sorcerer but power them through draining life forces (3hp/spell level) from the closest living creature. Unwilling victims get a will save of 10+level+Con modifier, with success meaning no hit point damage and the casting is foiled. This provides the mage with an incentive to either have willing donors at hand and use minimal spells, or position themselves alone near their foes and unleash their most potent spells every time.

Another 11 prestige classes flesh out the different survivalist groups and paths of dark power in Sinder. A couple follow the fighter format of giving plenty of class appropriate powers or options to choose from at each level, so you can make individual dwarven hellstormers, with different dwarven war powers and different wielders of sapphire who have different arcane supernatural abilities to choose from. One of the classes, the fiend-touched, establishes relations with demons and gains power over those they have sex with, earning this product a mature audiences warning for its content.

The classes are:

- Apocalypse warrior, supernatural dark champions spawned by the upcoming end of the world
- Avenger, paladin-esque bigoted witch-hunters for the Light
- Dream Weaver, master of dream manipulations (with a good color picture evocative of Neil Gaiman's *Sandman*)
- Fiend disciples, high powered demonic servants with 8/10 spellcasting, full BAB powers, and eventually becoming a fiend
- Fiend Slayer, chosen by celestials they smite fiends and gain some other fiend targeting powers
- Fiend-touched, slightly magical (1/2 spellcasting) fiend companions with sex-related powers
- Hellstormers, dwarven crusaders who stand against the encroachment of hell on earth
- Perditionite, clerics who bring back soulless, alignmentless bodies to fight demons
- Planar rider, bonds with mount that gains the ability to plane shift
- Raider, member of a mercenary band that survived the invasion, they gain death attacks and bonus stealthy and specific weak warrior feats along with warrior BAB
- Wielders of Sapphire, arcane order dedicated to fighting demons, they use gem foci that tie into an array of class powers they pick from in addition to full casting

The prestige classes show both a good connection to the world and are decent classes on their own.

The monster section has seven demons and templates for dream and nightmare creatures, devils, demonically touched mutants, a form of undead for those slain by magic, and one for the shell that remains after a soul is removed but a body keeps going. Of the demons, the fiend mother is a neat Cthulhu-esque huge tentacled horror that can consume living creatures and spit out fiendish versions of ones it has eaten. Also of note are lesser succubi, a 1 HD variety that appear as comely mortals, do not register as any alignment, can dominate at will, and drain levels and souls through sex; they have an ECL of +3 which seems low combining their powers with the normal demon immunities, resistances, and telepathy. The devil template advances a demon to double its hit dice, gives massive ability boosts, natural armor, DR, and immunities for turning normal demons like a balor into an epic demon-lord powered devil. The demonic mutant is interesting because it allows advancement as a class gaining deformities and demon-themed powers.

The book finishes off with some adventure seeds for gaming in Sinder. These complement the advice in the beginning

about how to use demonic invasions in your campaign and how to have powerful PCs struggle against the onslaught and survive if you play through the conquest.

In all, there are nice elements to ***Soul Harvest***, with the prestige classes and some of the monsters standing out. It falls down as a general toolkit because while it raises a number of issues, it only deals with the specifics for the nonstandard world of Sinder. Sinder is interesting but not detailed enough to use "out of the box" as all you have are the interesting post-apocalyptic survival groups and the ideas of hostile demons everywhere along with a few flesh farms, it is left to the DM to flesh everything out.

Dork Tower!

Class Action: The Scholar

Master of Knowledge

by Phil Masters

Knowledge is very often important; even if it isn't, some people get very obsessed with it. Such individuals are the natural denizens of libraries and colleges, spending years of effort reading and debating to locate, reconcile, and refine facts, for specific uses or just because they are interested. The best of them are very impressive people indeed, in their specialized way; they combine intensity of study and discipline of thinking with breadth of interest and curiosity.

Such individuals may not always seem to be natural adventurers (although the pretentious among them are prone to saying that they are on the greatest adventure of all), but their specialized abilities can sometimes prove *very* important. This article presents a new core class to represent the expert in pure knowledge.

The Scholar Class

The scholar is a true intellectual -- someone for whom study and learning are the whole point of life. Gamers may think that this simply means high levels of certain skills, but the process of acquiring and refining knowledge shapes a character in many subtle ways.

Other standard *d20 System* classes, such as the wizard and the cleric, may well be quite learned people, and the expert NPC class can be used to represent a workaday sort of book-learner, but the scholar class has the unique concern with knowledge for its own sweet sake that justifies its name. Ironically, this unworldly narrowness of focus can lead characters to acquire deep or unusual knowledge which may prove invaluable to practical adventurers.

Attributes

Scholars read as much as possible about their fields of interest, study other sources of information when they are available, and discuss what they learn with each other and anyone else who will listen. They also work as teachers, for the money, out of a sense of duty to scholarship, or as a way of finding new people to discuss their ideas with. When they need another source of income, they often find employment where specific aspects of academic knowledge or just plain literacy are important -- keeping accounts or other records, translating foreign languages, and so on. They are generally poor in combat (though not necessarily totally useless), but they may pick up all sorts of odd knowledge and skills in passing.

Background

Scholars often claim to be members of a great brotherhood of learning, although their rivalries and feuds can be bitter, and they may also owe allegiance to other groups. In many medieval or Renaissance-style settings, most start by learning from a single teacher, but advancing in the class means attending some great university. Progress in academia beyond a basic level may sometimes mean taking at least partial religious vows, and some noted scholars are also priests.

Personality

Scholars may well be obsessive, and some become socially inept as a result, but others are amiable, chatty characters who appreciate good company and fine art. Although not usually physically violent, and often strikingly broad-minded, scholars can become embroiled in ferocious academic disputes, or simply display open disdain for less learned folk.

In settings where alignment is significant, scholars tend to be intensely aware of the underlying philosophies, and may often discuss them at length. Some take such subjects *extremely* seriously, dedicating themselves to ideals such as freedom, order, justice, virtue, or the triumph of strength; others regard these things as abstract matters of no great concern to themselves. In game terms, scholars can be of any alignment, although most, being tidy-minded characters who like quiet lives, tend slightly towards law. Few tend to be *strongly* evil, less out of any natural virtue than because the opportunity to behave very badly doesn't fit with the scholarly lifestyle.

Religion: In worlds where the existence of deities is taken as plain fact, most scholars regard it as only sensible to pay due respect to superior beings. However, they tend to be analytical about their beliefs, insofar as that is safe (and sometimes even if it isn't). The wiser ones usually seek out land where their own specific beliefs won't get them into too much trouble. In worlds with complex pantheons, they usually worship gods of knowledge or truth (or quite often, simply whatever their parents worshipped).

Adventuring

Scholars don't, as a rule, go looking for adventure -- but when you are the only person qualified to discuss some subtle, obscure, and potentially important topic, sometimes excitement comes to you. Also, adventurers who feel the need to be very knowledgeable on specific subjects may choose to pursue multiclass careers, as scholars and something else.

Table 1: The Scholar Level Progression

Lvl	Base Attack Bonus	Fort Save	Ref Save	Will Save	Special
1	+0	+0	+0	+2	Bonus Language
2	+1	+0	+0	+3	Obsessive Focus, Bonus Language
3	+1	+1	+1	+3	Academic Allusions, Broad Reading (-3)
4	+2	+1	+1	+4	
5	+2	+1	+1	+4	Intense Debate (+1)
6	+3	+2	+2	+5	
7	+3	+2	+2	+5	Obsessive Focus
8	+4	+2	+2	+6	
9	+4	+3	+3	+6	Broad Reading (-2)
10	+5	+3	+3	+7	Intense Debate (+2)
11	+5	+3	+3	+7	
12	+6/+1	+4	+4	+8	Obsessive Focus
13	+6/+1	+4	+4	+8	
14	+7/+2	+4	+4	+9	
15	+7/+2	+5	+5	+9	Intense Debate (+3), Broad Reading (-1)
16	+8/+3	+5	+5	+10	
17	+8/+3	+5	+5	+10	Obsessive Focus
18	+9/+4	+6	+6	+11	
19	+9/+4	+6	+6	+11	
20	+10/+5	+6	+6	+12	Intense Debate (+4)

Class Rules

The game rules for playing a scholar are listed below.

Abilities

Intelligence is the defining feature of the successful Scholar, ideally supported by Wisdom, which is useful when deciding what ideas to pursue, judging the value of conflicting sources, or giving advice to those who seek it. (Scholars

like to claim that their studies bring wisdom, even to students who lack it at first.) Other abilities are rarely considered important, although Charisma can be handy in teaching or academic disputes.

Race

Members of most "PC races" can become Scholars. Elves are famous for their lore (albeit as much from personal experience as from reading), and half-elves may pursue such interests in an attempt to fit in with the thoughtful elves among their relatives. Dwarves may have a few specialized scholars in the depths of their mountain fastnesses, who *may* cooperate (rather cautiously) with their human counterparts. Gnomes and halflings are less given to sitting down and reading -- the latter especially are energetic, practical folk -- but any large enough group will include some who discover a love of learning, for its own sake or for the sake of good stories. Only the barbaric, tribal humanoid races may disdain pure learning entirely; half-orc scholars must surely be rare.

Other Core Classes

At the worst, scholars regard other, more venturesome classes as thugs and ruffians, and are regarded in return as feeble and detached from reality. However, when an adventurer needs some crucial snippet of specialized ancient lore, or a scholar needs guards and assistants for some field research, the two perforce come together -- and anyway, in many settings, scholarship is quite widely respected for the insights it brings to religious debate, navigation, magic, and other important fields.

In any setting with scholars, a few of them will decide that they enjoy getting out and about, testing their theories and digging up new facts; multiclass scholar-adventurers are always possible. Scholars may enter the priesthood for social reasons and then rise in the cleric class, or pick up basic knowledge of magic in the course of their studies and then gain a few levels as sorcerers or wizards.

Health

In games using hit points, scholars use d4 for their hit dice. In games using variant health systems, they should follow the guidelines for whichever class has the poorest ability to survive damage.

Skills

The Scholar's class skills (and the key ability for each skill) are Alchemy (Int), Appraise (Int), Bluff (Cha), Decipher Script (Int), Diplomacy (Cha), Forgery (Int), Heal (Wis), Innuendo (Wis), Knowledge (Int), Perform (Cha), Poetry (Int), Profession (Wis), Search (Int), Sense Motive (Wis), and Use Magic Device (Cha).

Skill Points at 1st Level: $(8 + \text{Int modifier}) \times 4$.

Skill Points at Each Additional Level: $8 + \text{Int modifier}$.

Weapons and Armor

Scholars aren't usually supposed to get into fights, but in fact, many university towns are notorious for brawls between locals and scholars ("town and gown"), and in worlds without reliable law enforcement, few people get by without having to defend themselves occasionally. Hence, Scholars are proficient with the club, dagger (all types), light mace, and quarterstaff, and with any *one* of the longsword, rapier, or short sword. They are not proficient with any type of armor, nor with shields.

Starting Cash

A character starting at 1st level as a scholar starts with the same level of funds as a sorcerer or wizard.

Special Abilities

Bonus Languages: A scholar gains use of one extra language for free at 1st level, and a second at 2nd level. The DM may limit these bonus languages to those standard for scholarship or scholarly discourse in the setting; for example, in Renaissance Europe, the options might be Arabic, Aramaic, Classical Greek, French, Hebrew, High German, Italian, or Latin.

Obsessive Focus: A 2nd-level scholar may define any one Knowledge Skill as his field of intensive specialization. He gains +1 to all skill checks with this subject, and is *not* limited by level in how many skill points he can spend on it. Every five levels thereafter (at 7th, 12th, and 17th level), the scholar may define another Knowledge Skill as another such Obsessive Focus.

Academic Allusions: From 3rd level onwards, a scholar may add half his level in the class (rounded down) to any Innuendo skill check, to send, receive, or intercept messages -- but only if all the other people involved are scholars of at least 2nd level. This reflects the fact that subtle scholarly references can be woven into the secret communication.

Broad Reading: Scholars read -- a *lot*. This is mostly reflected in their skills, but the breadth of their studies means that they also pick up snippets about virtually anything else that is mentioned in books. Hence, from 3rd level on, a scholar may attempt an *untrained* use of any Knowledge Skill which may, in the DM's opinion, be covered by relatively ordinary book available in the scholar's culture. (If the only text on the subject is hidden in the library of a secret temple in a faraway land, the scholar won't know anything about the subject!) This roll is at a penalty of -3, rising to -2 at 9th level and -1 at 15th, and the scholar cannot take 10 or take 20 on the roll.

Intense Debate: Scholarship isn't quite the pure pursuit of unambiguous truth which some scholars like to claim; there are always conflicting theories, which must be settled by more-or-less formal debate. This discussion may be even subject to highly formal rules. Advanced scholars usually argue by wrapping opponents up in nit-picking logic, burying them under a mass of references, or reducing opposing ideas to absurdity. The benefit is that really thorough debate *does* enable scholars to resolve difficult questions.

In game terms, a 5th-level scholar gains a +1 bonus to any skill being used to settle a verbal dispute over a question of knowledge or interpretation. This can sometimes include use of Bluff, Intimidate, and Sense Motive skills, as well as use of appropriate Knowledge skills to produce relevant facts. This bonus rises by 1 for every 5 levels which the scholar gains, to +2 at 10th level, +3 at 15th, and +4 at 20th. Furthermore, and more constructively, if a group of characters get together to "brainstorm" a problem, and spend at least 30 minutes discussing it, the *total* Intense Debate bonuses for every scholar involved who possesses a relevant Knowledge skill are added to *every* skill roll made by members of that group relating to the subject while the discussion continues.

New Skill

Poetry (Int)

They may say that they are inspired by a Muse of Fire, but in honest moments, good poets confess that their works result as much from perspiration as from inspiration -- and this is the skill that they must master by hard work. It grants the ability to produce poetry which a moderately cultured character will accept as worthy of the name.

Check: Roll once per poem (or per chapter of long poetic epics). A short, informal poem takes a few minutes to compose, a sonnet takes 1d6 hours, and longer works take weeks or months. The result of the roll indicates the quality of the verse. Results less than 10 produce doggerel, fit only to be discarded; a result of 20+ is good work, and 30+ is technically breathtaking, perfect in rhyme and meter. Users of this skill cannot take 20, and if they take 10, the result is dull, formally correct verse of no artistic value.

Working in haste takes a cumulative -2 penalty for every 10% reduction in time taken, to a minimum of two minutes per line. Taking longer gives no bonus, but merely counts as a retry.

Retry: Yes, as often as you like, but from the third attempt onwards, you take a -5 penalty as boredom and over-familiarity with the subject take their toll.

You may also take as long again to revise a poem after spending at least a week away from it. Roll again; if the result is better than before, then the poem improves to the new value. However, if the new result is 10 or worse below the previous value, the poem's quality drops by 2, as you tinker with it too much.

Special: Untrained use of this skill is possible, but a little difficult for anyone who doesn't pay a lot of attention to poetry. Untrained characters who don't have levels in a class for which it is a class skill suffer a penalty of -3.

"C" Is For "Cookie" -- Or "Catastrophe"

It's Thanksgiving as I write this, the annual American tradition borne of a magazine editor's desire to create a holiday whose citizens all stuff themselves with poultry and pie. Earlier today I was preparing for my annual "bum dinner off friends" ritual, opting to remain local since my family lives either 500 or 1,000 miles away, depending on which family I am not visiting.

Anyway, I don't like to go to these affairs empty-handed, so I set out to make something for the hosting household. Last year I went to the same friend's, and brought a couple loaves of homemade bread and ice cream. The bread was a hit, though the ice cream was not, since the freezing process left something to be desired, crafting a dairy dessert the consistency of overly soft pudding.

(Long-time readers will recognize this paragraph as the cue to let you know that I will, honest-to-Gumby, tie this into gaming shortly.)

This year I wanted to do something different, and decided to make a batch of chocolate chip cookies. I was using a recipe taken from another friend, whose cookies are the stuff of legend.

Now, this friend in question was also out of town (a 750-mile drive, should I instead decide not to visit her), and I was going it alone on this first-time recipe. Now, I recalled talking with her previously, where she would make references to "double batches" or "quad batches" of these cookies; these phrases obviously referred to the iterations of the recipe in question, with the infamous "quad batch" reserved for those times when she would bake enough cookies for her entire office. Or, say, Ecuador. Well, I decided that I would make a double batch, since this - if I could get the recipe to turn out - would make a nummy big trove of cookies. Sure, the double batch would be a bit more unwieldy to work with than a normal, but I figured I could handle it (despite my never having baked cookies before that didn't come out of a tube).

So I doubled the recipe, and started prepping the cookies.

I had a realization about midway through, somewhere between mixing a Herculean amount of sugar, brown sugar, butter, and shortening and adding seven cups of flour:

The recipe she gave me was already doubled.

Everything in the recipe was already some even multiple of two: two eggs, two-thirds a cup of butter, and so on. As I thought back, I realized that I never saw her make anything *less* than a double batch. So it would make logical sense for her to give me the recipe that was most convenient for her, which was a double batch.

By the time I realized it, however, I was knee-deep in the baking process; there was no turning back, unless I wanted to waste the ingredients I had already used. And so I baked. And baked. And baked, pausing only briefly to deal with the repercussions of having hacked at magical dancing brooms with an axe earlier in the procedure. Anyway, I was an hour late to dinner because of the excess preparation and baking. I also ended up making 48 cookies in total, each the size of a compact disc.

So as I thought about this -- mulling over the column I would be writing later and grasping for a topic through a tryptophan haze - I pondered: What if this recipe had been, instead, the ritual necessary to save the world?

I mean, all kinds of adventures revolve around a precise ritual or recipe necessary to accomplish Something Big. And this recipe needs to be followed to the letter by the Good Guys (or Bad Guys).

Perhaps the most obvious and famous example is from the movie *Army of Darkness*, where the protagonist Ash forgets and misspeaks the precise words he needs to complete a ritual, thus bringing about darkness and evil, and ensuring he would never be called upon as a cast member for a remake of *The Day The Earth Stood Still*. But there are other

rituals; they're often common in computer RPGs ("You must assemble the five parts of the Fooble Chamber . . .") or glossed over in adventures. ("The PCs need to make a Stop Darkness roll to complete the ritual.")

But what if it's not that simple? What if the ritual has some hard decisions that need to be made? What if the fate of the world falls down to a *guess*? The cookie recipe called for brown sugar, but our store only sells light brown sugar or dark brown sugar; which one did the recipe crafter mean? Suppose a ritual calls for "blood from a cat," without any further guidance - Tabby? Tiger? Tigger? In a pinch, will a few drops of catgirl vitae do?

What happens if the recipe goes wrong? In my case I ended up with twice as many cookies as I'd intended. What if a ceremony was necessary to rid an area of evil taint, and it was accidentally "doubled"? Could the formerly cursed kingdom be "tainted" by extreme good, causing pain and injury to anyone who isn't unrealistically pure of heart? Suppose the Forces of Evil are shunted back to their dimension, only to create a breach into the opposite Dimension of Good; the heroes might be in the odd situation of needing to complete an *evil* ritual, just to keep Judgment Day from coming early?

These kind of incidents need not be limited to a fantasy setting. Envision a pirate treasure map, measured in "paces" - if you knew the burying pirate was incredibly short, how do you adjust the pace? (What if the captain's mate already adjusted it for *his* leg length?) In modern or science-fiction settings, it's arguably even *more* likely for instructions to go awry; while magical rituals have the wiggle room of "It's *magic!*", the laws of physics are notorious for unforeseen consequences from incorrectly followed orders. A Mars lander crashed not too long ago because of a [mix-up](#) between English and Metric units. The lack of a [hyphen](#) also brought a rocket to a disastrous end. Mix in a little pseudoscience, and suddenly your attempt to fix the time stream results in a temporal satellite crashing into a field of chaos butterflies.

Cinematic heroes are called upon all the time to fix problems, often by following some procedure. But directions can be difficult to follow in ideal circumstances; when the stakes are high, the odds of something going wrong may well increase also. So if you're looking to shake up the usual "complete the ritual, save the world" plot, consider making the hows and whats of the ritual itself important; just because it was written by a wise sage in a tower doesn't mean it's foolproof. If nothing else, the heroes may end up with too many cookies.

Klaatu Varata Berliner.

--Steven Marsh

The Seven Lovely Sins

by Elizabeth McCoy

***Author's Note:** Despite being couched in **In Nomine** terms, this organization is quite portable to other settings. All it requires is a powerful, frequently ruthless, and likely corrupt group that meets on a regular basis and rotates the people responsible for organizing the party. Players can be members of the group, their security, their enemies, or random bystanders (innocent or not) who get caught up in events. Adventure seeds and suggestions for some other genres follow the **In Nomine** ones.*

Just as Malakim have their Eighth Virtue (see **You Are Here**), so do Lilim have a floating "party and family reunion," called, traditionally, "The Party," "The Family Reunion," and, most formally, "The Seven Lovely Sins."

The Seven Sins, unlike the Eighth Virtue, is decadal -- it's generally held about every 10 years (give or take a year for extenuating circumstances). Also unlike the Eighth Virtue, there are traditionally seven organizers. This is not a hard and fast requirement, of course, but it is traditional: with that many people on the "ConComm" -- as the Vapulan Daughters often call it -- private grudges are less likely to be settled by a sister with too much power. ("Oh, you haven't gotten that little Discord problem settled? I'd never have gotten the All-Oyster-Buffer arranged if I'd known you were still . . . sensitive. I'm sure you'll stop hiccuping pearls soon.")

Organizing the Seven Sins is both a status job and a pain in the neck, depending on a Lilim's personality and current jobs, tasks, and Geases. Some Lilim seek the job out, while others get stuck with it via a well-placed Geas or unofficial debt that they owe someone else.

The responsibilities of the organizers are assigned with formal wording. For example, saying "Tabitha will take Lust, while Lillian is Sister Gluttony" doesn't mean that Tabitha is a Lilim of Lust, and Lillian a Servitor of Haagenti -- it just means that Tabitha is in charge of providing the entertainment while Lillian has to get the refreshments set up. Naturally, if there are not seven Lilim on the committee, some will have to double up.

It should also be noted that the Seven Lovely Sins committee is supposed to arrange the event with the maximum amount of favor trading and the least amount of actually *paying* for things. It's considered gauche to write a check -- unless the money was acquired via favors, that is. There's no penalty, per se, for using mundane means to set things up; if you get caught doing that, your sisters will just laugh at you for a few decades and make snide remarks about "the sister who has to *work* for a living."

Other Bands, or humans, are permitted to attend if they are in the company of a Lilim. Princes and Princesses are naturally permitted to go where they will, Lilim date on their arm or not. Hell's lesser nobility might or might not get in -- it's said that when a Duke of the War attempted to crash the party, he was ejected by the Princess of Freedom herself. It's also rumored that Lilith once brought an incognito Archangel Marc to a Seven Lovely Sins gathering . . .

Non-Lilim are, however, definitely second-class guests (unless they're Princes). They're likely to be shooed off to the bar while sisters "do girl talk" -- i.e., deal-making -- or quietly auctioned off as gigolos or courtesans to Lilim siblings. In general, the Seven Lovely Sins is one of the few places outside the Guildhall in Hell where Lilim are in the majority. And Lilim like it that way. There is no stigma attached to coming unattended.

In deference to the longer duration of the hiatus between Family Reunions, most of them will last two to three days. (One was arranged at a hot-springs resort and lasted a full week, each day with entertainment devoted to one of the traditional seven sins!)

A typical Seven Sins will draw anywhere from a few dozen to a few hundred Lilim, depending on location, duration (not everyone stays the full time), and who got invited. The more sisters there, the more status accrues to the organizers, provided it's not a total disaster with angelic raids.

The Organizers' Titles

The following three are the minimum that a Seven Lovely Sins event is deemed to require.

Gluttony: Responsible for catering and one of the simplest of the duties. Sometimes the location of the event gets designated to Sister Gluttony. (If there's no Sister Covetousness or Sister Envy, Sister Gluttony is expected to be the "neutral party" of the Seven Sins.)

Lust: Responsible for providing any live entertainment (male strippers are popular, no matter how much the Tempters claim they only attend to keep in touch with their sisters), and often the location of the event. (If there's no Sister Pride, Sister Lust usually handles check-in as well, unless Sister Wrath isn't feeling overworked.)

Wrath: Security. Sister Wrath organizes bouncers and any other security measures required. She may handle check-in, in the absence of a Sister Pride, if she thinks she can handle it and her other duties. Typically, it's passed off to Sister Lust.

The following are not as vital, but make things easier.

Sloth: Since Lilim need a place to lay their heads (or at least a private room for private deals) for the two to three days the Family Reunion will last, Sister Sloth is in charge of finding a location. Superficially the easiest job, this is complicated by the "pay no money" ethic. Rarely, Sister Sloth will also handle check-in -- if she's bribed enough.

Covetousness: This Daughter is responsible for "holding the pot," either literally if there is actual gambling going on, or figuratively if there are any deals made which require a neutral third party. If she's arranged for a full gambling room (with cards, dice, roulette wheels, etc.), then she's expected to share duties with Sister Wrath for security and spotting cheaters.

Pride: Ironically, Sister Pride is the catch-all gopher for the group. This puts her either in the role of "Cinderella," running around doing the scut-work, or provides a wonderful opportunity to get her sisters owing her unofficial favors. Or both. She handles check-in at the Reunion proper, and is expected to provide little tokens which can be kept as souvenirs (a cross between event badges and party favors).

Envy: Sister Envy is primarily responsible for communications between the organizers, and being a central source of data for the Sisterhood as to the whereabouts and date of the Seven Lovely Sins this decade. (The latter is often delegated to Sister Pride.) Her duties also include making sure that the other Sisters are providing the basic requirements of entertainment, refreshments, and housing. At the event proper, she's the primary coordinator and Lilim to go to if something goes wrong. (If there is no Sister Covetousness, Envy is also deemed responsible for being the neutral party.)

In Nomine Adventure seeds

Demonic

- The PCs are all on the "ConComm," and have a scant decade to get everything in order and send out the invitations, while still preserving their own Roles and accomplishing their own duties. Enough said. (Yes, this demands an all-Lilim cast, or at least enough Lilim that they can "hire" the rest of the PCs as gophers for their projects.) For more urgency, one of the ConComm has been called away suddenly to another full-time task, and has called in a Geas (or bargained extremely well!) to have the PC Lilim take over her job at the last minute!
- The Game has heard that Sister Wrath has a plan to frame a high-ranking Asmodean at the Seven Sins (perhaps

Staciel, Demon of Intrigue; perhaps someone else; perhaps Staciel is the one rumored to be doing the planning!). They want a team to infiltrate the event and follow the target around. When whoever-it-is makes her (or his) move, the PCs are expected to A: thwart it, B: provide testimony to clear the target's name, and/or C: take the would-be framer captive.

- It was a bad idea to have three Vapulans, two Nybassians, and a Lustie with a furry fetish on the "ConComm." They've arranged to have the Seven Lovely Sins at the same hotel and same time as a science fiction convention. Is this a social disaster, or a grand opportunity for mayhem disguised as SFX and costumery? Well, the world is what you make of it . . .

Either, or Both

- A 10-Force Kyriotate has managed to jump into the party, and is bouncing around, causing minor havoc. So far, it hasn't grabbed anyone with a Force Catcher, and Sister Wrath isn't sitting still and waiting for that to happen. The PCs are, naturally, on the security team. (Or this can be a solo-session for the Kyriotate . . .)
- This year, the Eighth Virtue and the Seven Lovely Sins . . . are in the same city. In fact, they're both downtown, in hotels across the street from one another. (For even more tension, they're in the *same hotel*!) This was discovered far too late to actually change the location safely. Fortunately, Sister Pride has managed to make a deal with the coordinator of the Eighth Virtue: See no Evil, Seek no Evil, Smite no Evil. The Lilim don't go harass the blackwings, and the Malakim don't go hunting for greenies. PCs are either the committee, or recruited by Sister Wrath to keep the Daughters out of trouble.

Angelic Seeds

- A newly-redeemed demon was a lackey of Sister Covetousness for this decade's Seven Sins -- a Lilim of Mammon. The ex-demon swears up and down that the Mammonite Daughter is going to auction off a real live angel to her sisters as a slave, one who was thought dead. (The *truth* is . . . that the Lilim certainly believed it when she told her minion about it.) The angelic team must infiltrate the event and spirit away the prisoner. Can they accomplish this without being captured themselves, in a rural resort, surrounded by several dozen Lilim, whose personal power ranges from newborn Daughters to ancient Duchesses?
- The Bright Lilim in the group (or an NPC, if necessary) receives an invitation to a forthcoming Seven Lovely Sins, by means that suggest the invitation was sent by someone who doesn't know she'd redeemed! Is it a trap? (If they do the sensible thing and hand this up to a Seraph of Judgment or Revelation, then it'd better be carefully worded, or not a trap . . . at least according to the sender.) This is, of course, a priceless opportunity to spy on Lilim gossip, identify demonic vessels, and scout for redeemable Lilim. Now, how many of the group can the Bright manage to smuggle into the party as escort(s), entourage, pets, or luggage? (Better make sure that Malakim are ordered not to blow the group's cover, and that no one leaves explosives in a public place.)
- In a flip to the Game-seed above, Judgment has heard that there is a collaborating *angel* attending a Seven Sins. (How? That's Dominic's business. Probably by interrogating someone. Really.) This angel is high-placed and previously had a spotless record. Which angel is it, and is it due to free will or Geas? That's what the PCs have to find out. First, though, they have to discover when and where the convention will be held, and figure out how to wrangle invitations or crash the party. (This also works for any other Archangel, sending a team in to take care of "internal matters" *before* Judgment gets wind of it. It might be most discomfiting to Servitors of Creation to have to police one of their own who *has* somehow "turned traitor" without yet Falling!)

Other Adventure Seeds

Crossovers

These are ***In Nomine*** crossovers, pitching humans -- or other beings -- into the divine and infernal War. It can be played for horror quite easily by emphasizing the inhuman abilities and mindsets of the beings involved. Do they shoot someone who purrs, "You needed to do that; remember I let you kill me"? Do they fire and fire at a slender beauty queen who Just Keeps Coming And Doesn't Die? Does someone vanish from a locked room when their back is

turned? Alternatively, it can be played as suspense, comedy (best in a one-shot), or a deliberate introduction for a crossover campaign as Soldiers. (Which doesn't really rule out the horror potential . . .)

- **GURPS Cops** officers have gotten a tip-off that a number of known criminals will be attending some kind of "family get-together." A sting operation is sent in to discover and bust the place if they catch people breaking laws against prostitution, illegal gambling, underage partners, and anything else they can discover. (Is that a demon of Lust in a 14-year-old vessel? Is that a Lilim betting its services, next to the roulette wheel? Did Sister Wrath's pet "look the other way" police contact call in sick at just the wrong day, so she's unaware that the cops *aren't* going to let the party go un-remarked?)
- **GURPS WWII** spies report that there will be some kind of strange party going on in the middle of Nazi territory. With a partial guest list, this looks like a great place to -- you guessed it -- spy, learn information, kidnap people, rescue people, assassinate people . . . Of course, at this party, the rumors of secret Nazi demon-summoning rituals are vastly *underestimated*. On the other hand, the player characters may have access to more weaponry.
- Considering the similar parallels between **In Nomine** characteristics and those of **Big Eyes, Small Mouth**, Pretty Warrior SpangleStar and her Shooting Stars might be at home sneaking into the mansion where the Seven Sins is being held! Can they rescue their animal mascot, Princess Pony, from the racetrack where she's been pitted against I'm Going To Hell, the Lilim Demon of Gambling Debts?

Variants

- In a Cyberpunk campaign, this affair takes place inside computers, of course. It's a party for elite netrunners; if you can't hack in, you don't belong. (The theme may still require *everyone* to have a superficially female image!) Naturally, aside from whatever forms of electronic debauchery the GM permits, there will be deal-making and trade in illegal goods. Rival factions may be just as dangerous as law enforcers, and Sibling Wrath will have its work cut out for it.
- For **Transhuman Space**, the party's sponsors must provide . . . *suitable* bioshells for the guests, to help preserve their anonymity. Consent is optional, of course, but some people want the equipment back in good condition. Security will have the additional task of making sure that no one's doing anything *too* destructive in their loaner body -- or too traceable back to the group!
- For fantasy or modern horror, vampires are the obvious choice -- but who says that the Unseelie Court doesn't have gatherings now and then? They'd be hidden away, sure, but you have to get your supply of "toys" brought in from somewhere, and that leaves clues to discover, or cover up.
- Another fantasy option, suitable for many **d20 System** worlds as well as **GURPS'** Yrth, suggests that perhaps dark elves and the usual breed aren't so different as they'd have you believe. Every decade, there is a Rite of Passage for those who've reached a suitable age. It might be quite a shock for a PC to be indoctrinated into the Elvish Illuminati, and learn the point-ears' *true* opinion of their short-lived companions. (But will the promises of a life-long loyalty spell upon the rest of the group sway the PC's mind?)
- Alternatively, take the above. Hint at elvish involvement. Use dwarfs instead, underground masters of their pointed-eared minions. (This option will probably work well for **Hackmaster**, as the final confrontation *must* be in the middle of a deep, boobytrapped dungeon. And yes, it *is* an all-female group of organizers . . .)

Shadow Wolves

for *GURPS*

by Hans-Christian Vortisch

"In brightest day, in darkest night, no evil shall escape my sight, for I am the Shadow Wolf."

? Motto of the Shadow Wolves

The Shadow Wolves are a unique unit of the Bureau of Customs and Border Protection (CBP). Formed in 1972 as part of the U.S. Customs Service, the Shadow Wolves are exclusively Native Americans with an exceptionally specialized skill set: the 21 members (two supervisors and 19 agents, two of them women) are expert trackers. The unit is headquartered in Sells, Arizona.

Their main job is to track smugglers transporting contraband (mostly drugs such as marijuana) over the U.S.-Mexican border on the Tohono O'odham Nation Indian Reservation (the second largest reservation) a few miles west of Tuscon, Arizona. The Shadow Wolves originally all came from the Tohono O'odham tribe (p. OW61), but today they include Chicasaw, Kickapoo, Kiowa, Lakota, Navajo, Oglala Sioux, Omaha, Pima, and Yorock.

The trackers learned their skills from their elders and while hunting or herding free-roaming farm animals. They refer to tracking as "cutting sign" or "checking spore," and are exceedingly adept at it. They are reported to "hear" things that are silent and to "see" things that are invisible -- at least to urbanites. While usually tracking in pairs, they work like a pack of wolves; once one finds a trail, he will call in the others. Backup is also available in the form of tribal police, border agents, and customs officers. They are exceedingly effective; the Shadow Wolves net an average of 60,000 lbs. of drugs every year, more than a third of the entire amount of confiscated illegal drugs in the whole of Arizona.

Since 2001, Shadow Wolves have also been to several countries in South America and the former Soviet Union (including Estonia, Kazakhstan, and Uzbekistan) to train local border agents and police to prevent smuggling -- not the least of nuclear, biological, and chemical weapons.

Typical monthly pay of a Customs Patrol Officer is \$3,300.

Customs Patrol Officer "Shadow Wolf"

75 points

Attributes [10]: ST 10 [0], DX 10 [0], IQ 11 [10], HT 10 [0]

Advantages [35]: Alertness +2 [10]; Code of Honor (Police) [0]; Legal Enforcement Powers [5]; and 20 additional points in Acute Hearing [2/level], Acute Taste/Smell [2/level], Acute Vision [2/level], Alertness [5/level], Animal Empathy [5], Combat Reflexes [15], Contacts [varies], Fit [5], Patrons [varies], Police Rank 0 to 2 [5/level], or Strong Will [4/level].

Disadvantages [-30]: Duty (15 or less) [-15]; and 15 additional points from Addiction (Tobacco) [-5], Alcoholism [-15], Bad Temper [-10], Bully [-10], Cannot Harm Innocents [-10], Insomnia [-10 to -15], Intolerance [-5 to -10], Overconfidence [-10], Overweight [-5], Secret [varies], Sense of Duty [-5 to -10], or Stubbornness [-5].

Primary Skills [42]: Area Knowledge (Tohono O'odham Nation Indian Reservation) IQ-2 [2]-10; Brawling (P/E) DX+1 [2]-11; Criminology (M/A) IQ [1]-11; Driving (Automobile) (P/A) DX [2]-10; First Aid (M/E) IQ [1]-11; Guns (Light Auto) (P/E) DX+1 [2]-12*; Guns (Pistol) (P/E) DX+1 [2]-12*, Guns (Rifle) (P/E) DX+2 [4]-13*; Hiking (P/A) HT [2]-10; Law Enforcement (M/A) IQ [1]-11; Orienteering (M/A) IQ+3 [8]-14; Stealth (P/A) DX [2]-10; Survival (Desert) (M/A) IQ [2]-11; Tracking (M/A) IQ+4 [10]-15; Writing (M/A) IQ-1 [1]-10.

* Includes +1 bonus for IQ

Secondary Skills [13]: Camouflage (M/A) IQ [1]-11; Climbing (P/A) DX [2]-10; Fast-Talk (M/A) IQ [1]-10; Holdout (M/A) IQ-1 [1]-10; Intimidation (M/A) IQ-1 [1]-10; Running (P/H) HT [4]-10; Streetwise (M/A) IQ-1 [1]-10; and either Motorcycle (P/E) DX+1 [2]-11 or Riding (P/A) DX [2]-10.

Background Skills [5]: A total of 5 points in Administration (M/A), Animal Handling (M/A), Computer Operation (M/E), Guns (Shotgun) (P/E), Handcuffing (A), Language (Spanish or a Native American language), Psychology (M/H), Scrounging (M/E), Spray (A), or Traps (M/A).

Equipment: Camouflage uniform with a gray feather on one shoulder (silent reminder of a dead officer and the dangerous nature of the job), tropical boots, and a floppy bush hat (see p. SO103 for these items).

Weapons include a 9×19mm Glock 17 pistol (p. HT108) with two spare magazines and either a 9×19mm H&K MP5A5 submachine gun (pp. C64, HT116, SO117, and SW00) or 5.56×45mm Colt M16A2 (pp. C64, MF22) or Steyr AUG A1 assault rifle (pp. HT115, SO115) with three or more spare magazines -- officers have been shot at by both drug smugglers, fugitives, and the [Mexican army](#). All shoulder arms fire single shots or three-round limited bursts only (p. MF19).

Other equipment includes a loadbearing vest (p. SO105), 3-quart Camelbak hydration system (p. SO105), binoculars (p. CV40), flashlight (pp. C67, SO108), night vision scope (pp. CV45-46, MF14, and SO110), global positioning system (pp. CV35, SO108), handcuffs (pp. C67-68), latex gloves, and portable radio (pp. C62, CV39).

Vehicles include [pickup trucks](#) and Polaris 4×4 ATVs (the latter having almost completely replaced the horses used previously). Sikorsky UH-60A Black Hawk helicopters (p. SO124) of the CBP Special Aviation Unit in Tuscon are available for support.

Campaign Ideas

The Shadow Wolves can be used in a fairly straight-forward [Cops](#) campaign, either on their own or coordinated with DEA or [FBI](#) agents on some special case. Such cases can even be unrelated to their primary task of preventing smuggling, but require their specific skills. They have safely recovered children who wandered in the desert, and might do similar things with murderous fugitives or Things from Outer Space that crash-landed somewhere in the border area . . .

However, what if the Shadow Wolves have more in common with wolves than just the name, the way they operate in a "pack," and their excellent tracking abilities?

Here are some variations on the theme:

Wolf Inside

The most obvious avenue would be to make the Shadow Wolves shapeshifting werewolves of the "good" type. They would simply be officers with more options -- more powerful, less vulnerable, and especially more adept at tracking prey . . . of course, in such a campaign, the stakes should be higher. Instead of Mexicans smuggling marijuana or illegal immigrants, the Shadow Wolves could be matched by supernatural foes. See the Benandanti in [GURPS Shapeshifters](#) for an example of such a race of werewolves in the service of good. Sergeant Angua von Überwald (p. DI79) of the City Watch in Ankh-Morpok, despite the difference in tone and setting, is a pretty good example for a werewolf wearing a police badge.

Wolf Totem

They can hear a cloud pass overhead, the rhythm of your blood. They can track you by yesterday's shadow. They can tear the scream from your throat.

-- Poster blurb for *Wolfen*

Wolf has always been one of the more powerful totems in Native American legend and lore (p. OW71). Wolf is the hunter. Wolf is the warrior. In a [Horror](#) campaign, the Shadow Wolves could be in league with the wolfen, wolf spirits in the form of large wolves preying upon the weak and defenseless. Depending on the campaign, the stats of normal wolves (p. BE82) or certain werewolves (p. H00) could be used for the wolfen.

In an essentially "good" campaign, their CBP superiors could know of this connection, the Native American agents harnessing the wild spirits in the interest of law and order, helping them to track down criminals (and, perhaps, getting the occasional bite . . .). However, due to the likely unwillingness of the wolfen to openly cooperate with "The Man," their superiors probably have no clue who they are working with. The Shadow Wolves might still have harnessed their wild soul mates, preying on "evil men" in order to protect their pack (their tribe, their nation).

Alternatively, either the Shadow Wolves or the wolfen might have a secret agenda, perhaps to bring back the old ways (like the Wendigo werewolves in [Werewolf: The Apocalypse](#), p. WTA106), or simply to survive.

For a darker atmosphere, the wolfen could be *mai-coh* (p. SH9), evil wolf spirits that use the Shadow Wolves as a cover for their evil deeds against humans.

Homo Sapiens Lupus

In [Technomancer](#), the Shadow Wolves could be *Homo Sapiens Lupus*, one of the rarer chimeras. In fact, considering that the reservation lies within Trinity's Shadow (p. TM6), it is very likely. The Shadow Wolves would not only benefit from the unique abilities bestowed on their race by the unleashing of mana by the Hellstorm (especially their markedly improved senses), but almost certainly also attract the odd wizard into their ranks.

Relevant spells would include Find Direction, History, Pathfinder, Plant Sense, See Invisible, See Secrets, Seeker, Seek and Create Water (to survive in the desert), Sense Life, and Trace.

Homo Sapiens Lupus

25 points

"Wolf people" are humanoid with distinctive canine features, such as a muzzle, sharp teeth, pointed ears, a furry body, and a tail. They are stronger, larger, and far less common than Coyote chimeras (p. TM53).

Attributes: ST +1 [10], HT +1 [10].

Advantages: Acute Hearing +2 [4]; Discriminatory Smell [15]; Fur (Very thin) [0]; Magery 1 [15]; Penetrating Call [5]; Sharp Teeth [5]; Speak with Animals (Canines and Wolves, -30%) [11]; Ultrahearing [5].

Disadvantages: Dependency (Mana, common, constantly) [-25]; Lunacy [-10]; Social Stigma (Minority Group) [-10]; Vulnerability (2d from silver and DN) [-10].

Cowboys and Indians

The thinly populated area of the Tohono O'odham Nation Indian Reservation has been used for illegal border crossings ever since the creation of the U.S.-Mexican border by the Gadsden Treaty in 1853. Consequently, with some tweaking (mainly concerning the official attitude towards Indians, who historically were not granted U.S. citizenship until 1906), the creation of the Shadow Wolves could be pushed back in history.

In an [Old West](#) campaign set in the 1890s, the trackers could try to prevent Chinese immigrants from entering the USA. In a [Cops](#) or [Cliffhangers](#) campaign in the 1920s or early 1930s, they might be employed to enforce the

prohibition (p. C11) and prevent smugglers from transporting tequila over the border . . .

Freight Leads to Suffering

In a recent discussion with [Warehouse 23](#) Manager Michelle Barrett, we found ourselves disagreeing over the usage of one particular freight shipper over another. These are the kind of minutia discussions you can have when you're both in charge of shuffling boxes from one person to the other, as she is at Warehouse 23 and I am at my Day Job.

Some of her complaints about this company centered on usual shipping difficulties: boxes taking too long to get there, things sometimes getting lost, and so on. (I argued that *our* customers liked the stomped-on-by-gorillas frivolity of our deliveries, but I don't think she was swayed.) However, she began her complaints by saying that, "Our local driver will not get it through his head that we are a business which means that 1) he needs to deliver before 6 P.M. and 2) it is not appropriate to leave a \$1,000-product order sitting on our front doorstep on a Friday evening."

Now, my experience with this shipper was completely the opposite of Michelle's; sure, we have had a few hiccups along the way, as we have had with any shipper. But I realized something; whereas Michelle's local representative for this shipper seemed mostly incompetent, *my* local shipper was an Elemental Force of Shipping Goodness -- he was responsive to calls, worked to pick up our packages promptly, solved problems we hadn't realized before they became an issue, and just generally went above and beyond the call of duty. Obviously the difference between the Austin and Tallahassee branches were considerable.

(Hey, you, yawning in the back! Wake up! I'm tying this into gaming shortly . . . honest!)

Anyway, in talking with some *other* mail-order folks regarding their shippers, I noticed a trend. Most people said something along the lines of:

1. Shipper X sucks, and I refuse to deal with them.
2. I say this because of one bad experience . . .

I don't think there's anything wrong with this; my Day Job stopped using one popular shipper for four years because of a disastrous experience in the late 1990s. However, it got me to thinking about various other reactions I've seen, especially as they tie to the gaming industry.

In my (admittedly limited) time in this business, both as a retail monkey and a gaming guru, I've run into this phenomenon a lot:

- "Game Store X sucks, because one time I was there and was ignored . . ."
- "RPG System Y sucks, because I was in one awful game with someone one time . . ."
- "Gaming conventions suck, because one time I went to one that wasn't fun, and . . ."
- "LARPs suck, because one time I was with a bunch of posers who . . ."
- "Gamers suck, because one time I knew this stinky guy who . . ."

Now, most multinational shippers can probably withstand any small company's boycotts. But given how small and tight-knit the gaming world is, I wonder how much damage even a few incidents like this can do to the community.

There's a marketing theory called "viral marketing." The idea is simple; if you can get certain key people enthused about your product -- or tailor your product so that those people like it -- then those people will spread word about it, using their status as "key person" to boost the product's appeal. (One marketing campaign had researchers asking kids, "Who's the coolest kid you know?" When they had the name of a child, they went to that person and asked the same question. They knew they were at the top of a ladder when the person said, "I am." Those were the alpha kids.) Really, this is an elaborate codification of a concept we're all familiar with -- some people's opinions carry more weight than others. When President Kennedy confessed that he loved the James Bond novels, that endorsement had a significant impact on Bond book sales . . . much more so than a similar level of enthusiasm from Bart Basementdwellers.

Once you realize this, it stands to reason that the opposite is also true; if the right people can spread good words about

a product, the wrong people can spread bad word about it as well.

This is all a long-winded way of saying that I wonder how much of the gaming industry is at the hands of a small number of people or events . . . events that we may not have any control over. Could one belligerent game shop owner despoil an entire region for new gamers? Can a surprisingly small group of too-fanatical fans be keeping some game from being more popular? Would a cross-company "Don't Be a Jerk to Newbies" campaign sow the seeds for future growth?

I have some anecdotal information based on my own experiences. For example, when I was in charge of ordering game in our Friendly Local Game Shop, there were a few small press games that I promoted the heck out of because I loved them so much. In talking with one of the companies (I can't remember which one . . . I think I was trying to get promo material for a holiday sales campaign), I learned that our one store was responsible for 10% of the total market of the game!

In another incident, there was a collectable card game being demoed at a local convention. The cards looked interesting enough, and the premise was reasonably fresh despite the glut of CCGs coming out at the time. There was a brisk line of those partaking of demonstrations, and on the outside it looked like great publicity for the game. However, there was a problem. The demonstrator was using his long-time experience and expertise to utterly defeat all comers. And he wasn't gracious about it. ("This is how you play the game. Ready? Let's go. Ooooooh! I win; you lose! Buh-bye!") The game had some slight success early on, although it *never* reached any level of popularity in Tallahassee; when it died a year later, I wondered if it wasn't because of this one demonstrator, convincing person after person that the game wasn't fun.

So, for those looking to glean lessons from this, I would note two things:

- Just because you had a miserable time at one game or another doesn't mean that you should necessarily write it off altogether. Unless you can assuredly separate the experience from the game itself, you may *really* hate the former but not the latter; if you find yourself with the opportunity to try again, you may want to give it a shot.
- If you're a fan of the gaming world, remember that your words and actions may have more weight than you realize. For example, if you run a smaller press game with enthusiasm and vigor, you might end up boosting its popularity in your area significantly; given the print runs of some games, as few as a dozen or so of the right dedicated fans might be single-handedly responsible for a game's survival or failure.

And if you're a shipping company, please don't crush any of my packages in retaliation for this column . . . especially if it's filled with gaming goodies.

--Steven Marsh

Coming Soon

Gin and Chthonic

*"This day in pomp she takes her leave of all;
Already has she made the tour of Smithfield,
Rag-Fair, Whitechapel, and Clare Market: Now
To broad St. Giles's she directs her steps."*

-- Henry Fielding, *The Deposing and Death of Queen Gin* (1736)

The death of Queen Gin, it turned out, was greatly exaggerated. Not so her power. For the better part of half a century, she ruled London with joy and terror alike. She brought lovers together, raised high the poor, and slaughtered those unlucky enough to cross her path, all with the impartial madness of a Dionysian Maenad. From "broad St. Giles," she stretched out her arms to clasp the largest city in the world to her poisoned breast. And it all began with a shift in the wind.

"The cry of wickedness, I mean excessive drinking gin, and other pernicious spirits; is become so great, so loud, so importunate; and the growing mischiefs from it so many, so great, so destructive to the lives, families, trades and business of such multitudes, especially of the lower, poorer sort of people; that I can no longer doubt, but it must soon reach the ears of our legislators in Parliament assembled; and there meet with . . . effectual redress."

-- Sir Daniel Dolins, Chair of Middlesex Quarter Sessions (1725)

The "divine wind" of 1688 blew King William of the Netherlands into power in England, and he brought with him not only a taste for Dutch gin but a burgeoning war with France. A patriotic ban on French brandies, and a lucrative market for excess grain, combined to open London's throats to gin. Opening a gin-shop needed no license, no apprenticeship, and no graft to the Royal Company of Distillers, who lost their monopoly in 1690. And London went mad for the stuff. Gin-sellers became ubiquitous throughout the city, as did stiffening drunks. An emblematic sign on a gin-mill in Southwark boasted "Drunk for a penny, Dead drunk for twopence, Clean Straw for nothing." Tens of thousands of small distillers cranked out an endless stream of hooch, feeding an endless stream of poor people with no other prospects, which fed an endless stream of lascivious behavior and sudden wealth, especially for single women. So, naturally, the government tried to ban it.

Although a first attempt in 1726 went nowhere, an even more stringent law passed in 1729. It, too, had no effect, so the government tried ever-harsher measures in the Act of 1733, finally banning the retail sale of gin outright in the Gin Act of 1739. Despite the record numbers of prosecutions and convictions by both corrupt constables and "untouchable" crusading magistrates like Thomas De Veil and Henry Fielding, the gin trade continued unabated. In fact, gin consumption increased (along with contempt for the law, double-dealing informants, organized crime rings, and the other predictable side effects of drug wars) and Parliament ceased enforcing the Gin Act at all in 1739. The Gin Act of 1743 reversed course, lowering license fees, effectively criminalizing informants, and putting an excise duty on distillers. To everyone's surprise, the law worked -- taxing legalized gin raised money, lowered street crime *and* gin consumption, and took criminals out of the gin business.

One final Gin Act in 1751 massively increased the duties on distillers, driving the trade firmly into respectability. Gin drinking continued to decline by over 75%. In her book *Craze*, Jessica Warner blames price increases and poverty; in his more engaging *Gin*, Patrick Dillon alludes to the newly bourgeois "spirit of the times" -- both agree, however, that after 1757, the Gin Craze was over. England would not consume that much gin again for over a century, by which time the population had tripled. In per capita terms, the average Londoner in the 1730s probably drank four or five times as much gin as a modern Briton does, with the additional handicap of a much lower body weight and income. So, what were they drinking, exactly?

"Mother Gin was of Dutch parentage, but her father, who was a substantial trader in the city of Rotterdam . . . came to settle in London, where . . . he married an English woman, and obtained an Act of Parliament for his naturalization."

-- from the anonymously-published *The Life of Mother Gin* (1736)

By modern law, gin must contain extract from juniper berries, which is where its name comes from -- *jenever* being

"juniper" in Dutch. One Franz de la Boe (also known as "Dr. Sylvius"), a doctor in Leiden, first flavored distilled spirits (which date back to the 1100s and the "Devil's School" at Salerno) with juniper in 1650, well after the Dutch distillery industry got started. The original Dutch genevers were triple, or even quadruple distilled before being infused with juniper -- potent stuff. Most gins (then as now) also have coriander seed; other botanicals commonly used in gins include angelica root, ginger, nutmeg, orris root, sweet orange peel, and aniseed or licorice root. The most common "Old Tom" style English gins during the period of the Craze included glycerine and sugar syrup, for a punchier mouth feel (to say the least). The clear, dry, astringent gin that writers and other modern folk enjoy descends from a Plymouth distillery variant from the late 18th century, still with us as Plymouth Gin.

"Beer Street and Gin Lane were done when the dreadfull consequences of gin drinking was at its height. In Gin Lane every circumstance of its horrid effects are brought to view; in terrorem nothing but Itleness, Poverty, misery, and ruin are to be seen; Distress even to madness and death . . ."

-- William Hogarth, *The Analysis of Beauty* (1753)

But punchy and nasty as "Blue Ruin" or "King Theodore" may have been, its taste was not what drove social reformers to ban it. Gin was blamed for crime, poverty, and death -- and modern demographic research bears the last of the three out. During the last three decades of the Gin Craze, London enjoyed good harvests, cheap bread -- and an unprecedented death rate, especially for children. Stories of gin-soaked women endangering children spread through the press. One Judith Defour, drunk on gin and encouraged by a chance-met stranger, strangled her child and left her to freeze to death in January 1734. In 1736 the *Daily Gazetteer* told the tale of Mary Estwick, who drunkenly watched her child roast in the fireplace. (The parallels with modern "stoned babysitter" urban legends are astonishing.)

Anecdotes and songs about nursemaids and mothers quieting their children with gin abounded. Other writers worried about the effect of gin on nursing mothers, and on the babies who drank gin with their mother's milk.

The great artist and propagandist William Hogarth depicted the horrifying spectacle in his 1751 print [*Gin Lane*](#), prepared for the campaign to pass the Gin Act that year. A syphilitic crone drunkenly allows her baby to fall to his death -- in the background, a madman impales a child on a pike and a naked woman is lowered into a coffin. A skeletal bard looks on as London convulses and destroys itself, all under the inverted cross of the pawnbroker, which surmounts even the church. (The steeple visible in the print is that of St. George's, Bloomsbury, for you Hawksmoor fans.) Hogarth was drawing a scene anyone could see, the riotous squalor of St. Giles' Rookery, the center of London's gin trade. Not only gin, but the Great Plague of 1665 spread out from St. Giles', as did conspiracy. Five Jesuits executed for the Popish Plot of 1678 lie buried in the churchyard of St. Giles-in-the-Fields.

"[St. Giles] there found a pit, and a little well, and a fair hind, which without doubt was purveyed of God for to nourish him, and at certain hours ministered her milk to him. And on a time servants of the king rode on hunting . . . espied this hind, and they thought that she was so fair that they followed her with hounds, and when she was sore constrained she fled for succour to the feet of St. Giles, whom she nourished. . . . [A]nd when the hounds were on the place whereas the hind was, they durst not go forth as they did before, but then they all environed the bush for to see what there was, but that bush was so thick that no man or beast might enter therein for the brambles and thorns that were there. And then one of the knights drew up an arrow follily for to make it afear'd and spring out, but he wounded and hurt the holy man, which ceased not to pray for the fair hind."

-- Jacob de Voraigne, *The Golden Legend* (1275)

So let's look a little closer at St. Giles, while we're in his neighborhood. "Giles" was used as a name for both men and women in the medieval era; it has been backformed into a variant on "Jules," although St. Giles himself was supposedly actually named Aegidius, which is Latin for "goatskin" or "kid." (In medieval French, "Aegidius" becomes Egilles, apparently.) Although he probably never existed, Giles' cult was very popular; he was the patron saint of beggars and blacksmiths. Thanks to his arrow wound, he was the patron of cripples; thanks to his intimate relations with the deer, he watched over nursing mothers. That whole deer story reeks of Greek myths such as Artemis and Orion, or Actaeon and Diana. (Intriguingly, Princess Diana died on St. Giles' Eve). Even moreso, Giles recalls the Irish myth of Oisín, whose name also means "kid" and is also the son of a female deer, and is also hunted down by hounds.

Pursuing Giles ourselves, we reach his feast day, September 1, opening a month of some significance in our pilgrimage. By the Celtic "tree calendar," the month is Muin, sacred to vines and brambles and intoxication. (St. Giles'-in-the-Fields traditionally offered a "cup of charity" to beggars and the condemned.) September is also the month of

sapphire, to keep this on a relatively gin-soaked level -- and more significantly, it's the month when juniper berries ripen. Before the reformation of the calendar, St. Giles' Day coincided with the "Barleysel" harvest feast in rural England, letting us meet barley coming back the other way, on its road to the distillery. And September 29, 1736, of course, was the day the Gin Act went into effect.

"The Exit of Mother Gin . . . has been enough bewail'd by the Retailers and Drinkers of it . . . Such has been the Lamentation, that on Wednesday Night her funeral Obsequies was perform'd with Formality in several Parishes, and some of the Votaries appeared in ragged Cloaths, some without Gowns, and others with one Stocking . . ."
-- London Daily Gazetteer, Oct. 5, 1736

On that day, in Bath and in Bristol, and in many parishes across London (especially including St. Giles'), distillers and their customers staged full-dress funerals for "Madam Geneva," the spirit (as it were) of gin. This embodiment of gin, also called Queen Gin, or Mother Gin, resembled nothing so much as the old image of the witch, a crone crouched over her basket of mysterious elixirs, offering delight and poison -- often in the same bottle. In *Craze*, Jessica Warner suggests that this witchcraft imagery led to an urban legend of gin-drinking old women spontaneously combusting, as fire and witches met again. The cackling hag on the steps of St. Giles' in Hogarth's print may well depict Madam Geneva herself, a queen of corruption stretching back to Hecate (whose sacred days fall in the midst of September) and forward to the brothel-keeping "Mother Gin-Sling" from von Sternberg's bizarre noir *Shanghai Gesture*.

*"Fierce as Armenian tigers Shrews that bawl,
Subjoin'd in love, GIN taught to Catterwal;
GIN taught 'em to revive the Bacchian rite
To dance stark-naked the Black Joke and White . . ."*
-- from the anonymously published *Mother Gin, A Tragi-comical Eclogue* (1737)

And if so, perhaps Mother Gin has an even darker side. Reformers wrote that gin "murders infants in the womb," just as Lilith did. Was the mysterious woman (intriguingly, never found) who urged Judith Defour to kill her baby another such manifestation? Lilith, after all, strangled her tiny victims. Does St. Giles' patronage of breast-feeding somehow mask a darker deity, whom women placate in fear, rather than supplicate in love? The preacher Thomas Wilson's words about Madam Geneva, "How many have unhappily drunk this deadly Poison with their Nurse's Milk!" can apply equally to the Lamashtu, a Babylonian spirit with poisoned breasts, whose milk kills nursing babes. As Lamia, she moved through classical Greece and Italy; as the eerily-named Jenny Greenteeth, she "drowned" the babes of medieval goodwives -- and as Queen Gin in the 1730s, she helped to kill three quarters of London's children before their fifth birthday. Mother Gin, the hag with poison in her breasts, may also have something in common with the murderous "wicked stepmother" from such fairy tales as "The Juniper Tree." Juniper was a bramble plant that masked the gateway to the Otherworld, and its burning (again with the burning) "drove away" witches. Or did it simply weaken their patroness Mother Geneva, along with the slaking of her "liquid fire" by the Acts of 1743 and 1751?

Gin, and death, and the fetid rookeries of London's East End find their final echo in 1888. Jack the Ripper, a myth even stronger than Mother Gin, stalked the streets, killing four gin-soaked whores between St. Giles' Eve and the end of Madam Geneva's unholy September. ("Old Woman's Summer," to the Polish immigrants in Whitechapel.) The Ripper killed his last victim, Mary Kelley, on November 9, St. Theodore's Day -- a tribute to "King Theodore," one of Queen Gin's many market pseudonyms? Although the Ripper worked in Whitechapel (some miles to the east of Mother Gin's old haunts), there were threads and trails he might have followed. Liz Stride was, after all, married in St. Giles'-in-the-Fields, and Polly Nichols lived for a time at the St. Giles Workhouse. Many of the anti-gin reformers, such as James Oglethorpe, William Hogarth, and the tireless Thomas De Veil, were Freemasons. (Although the suggestive "one stocking" at her funeral suggests that Queen Gin, too, had her Masonic court.) Was the Ripper summoned by the Masonic London police to hunt Madam Geneva down in her new Whitechapel haunts, and dilute her gin with blood? Did well-meaning authority once more call up a greater evil than it sought to put down? Did the shadow of the Gin Acts fall knife-sharp, carving up a prostrate -- and now motherless -- London? Or does Madam Geneva still survive, in some East End council house or squat, watching with her thirsty eyes the babies at play? Cheers.

Designer's Notes: Transhuman Space: Broken Dreams

by **Jamais Cascio**

There are, for me, few more appealing tasks than coming up with plausible and interesting scenarios of the future. It's something I do professionally as well as in my gaming life. Since the mid-1990s, I have worked as a scenario designer, a kind of strategic planner that focuses on future environments for present-day organizations (ranging from tiny non-profits and start-ups to global corporations and governments). Part of this work entails talking with very smart people about where they think the future is headed, paying close attention to emerging ideas and technologies, and thinking about the implications of all of these potential changes.

I'm also a long time roleplaying gamer. A few years ago, I started running a **GURPS** game set in a near future populated by technological and social changes that, through my work, I had come to believe would shape the 21st century and beyond. It was a world of sentient computers, radical biotechnologies, and nanomachines. It was fairly dark, and definitely not traditional sci-fi. When I first heard about **Transhuman Space**, I had a moment of *deja vu*; while the scenario was clearly original and new, it had significant parallels to what I had been working on. Although I had never done professional game design, I started looking for ways that I could contribute to the development of the series.

I couldn't imagine a better first game book for me than **Broken Dreams**.

The theme of the book -- the darker side of the **Transhuman Space** future -- was immediately intriguing. While many readers find the main **Transhuman Space** scenario somewhat disturbing, it is a far more optimistic vision of the next 100 years than many futurists would describe. The climate is bad, but not devastatingly out-of-kilter; terrorists have access to more dangerous technologies, but the world has avoided significant attacks; machines are intelligent, but in a way that (by and large) enhances human capabilities rather than completely replacing them. Moreover, the traditional future dystopias of the cyberpunk genre are out of place here.

The immersive cyberspace of that genre is missing, as well. In most respects, the information technology in **Transhuman Space** is fairly prosaic, with plausible improvements over current systems. One area of development is the realm of intellectual property. **Broken Dreams** includes rules for accessing, controlling, and hacking the intellectual property rights systems commonplace in 2100, as well as a discussion of pervasive advertising (and adviruses). One section, dropped for space but included below, provided some options for GMs wishing to add complexity or detail to the means by which the adventurers access the global web.

Getting Online

Web service providers, or WSPs, are the gateways through which a user's virtual interface implant, wearable augmented reality system, or hand-held cybershell gains access to the web. In most of the developed world, this access is uniform, inexpensive (or free), and easy. For the most part, typical web users need not worry about their WSPs, which tend to function as reliably as any other utility service. Adventurers tend not to be typical web users, however, and may wish to take advantage of the strengths and weaknesses of alternative service providers. They are also likely to travel to more exotic locales, some of which use non-standard web access technologies.

Most computer systems are designed to have constant wireless access to the web. Cybershells need to be authenticated and identified, however, and this is where WSPs come in. In their most basic form, web service providers supply a unique web identification for the digital system and a rudimentary check to make sure that the computer is who it says it is. Other forms of authentication may be required for access to other systems (see Fifth Wave, p. 124-130).

In parts of the world with a single (usually official) WSP, basic authentication is typically the only level of service available. In areas with competing WSPs, however, providers will often have additional features beyond simple identification. Some may provide free virtuality node services (see p. FW30), virus filtering, or remote data storage

facilities; the more expensive services often tout security and (relative) anonymity as key selling points. Larger corporations will sometimes offer private WSP access for employees. Entirely private webs (with or without connections to the broader global web) are commonplace, usually requiring specialized hardware for connection.

With few exceptions (most notably Kazakhstan and Iran), commercially-available cybershells and other web access hardware use global standards, and will have no problem contacting the web wherever wireless networks are available. Global web service providers can be reached across all Fourth and Fifth Wave nations (except the Transpacific Socialist Alliance, where access is usually blocked by other nations). Third Wave countries (particularly those referred to as "transition states" in *Broken Dreams*) may not have the necessary cross-connection agreements in place; in these cases, the visitor's infomorph will automatically negotiate a temporary web access connection using the country's free service.

Most Earth governments provide very basic service at no cost to citizens, and at very low prices to visitors. These free WSPs usually have little intrinsic security, no virus or advertising filters, and no added features. Users of these services must acquire appropriate security software on their own. Computer Hacking attempts against systems connecting to the web via a free WSP will be at +2 in addition to any other modifiers. Access fees for non-citizens are usually fairly low, averaging about \$5/month.

There are a number of competing global WSPs available to citizens of Fourth and Fifth Wave nations; many of these also provide service in the more populous off-world locations. All can handle the usual web functions, but each provides its own unique additions to the standard package. Subscription fees are generally reasonable. It is possible for a single user to subscribe to multiple services, although most computer systems may only connect via one WSP at a time. The ability to connect to multiple WSPs adds 10% to the cost of digital hardware for each added channel.

The top five global WSPs in January, 2100 are:

- *WOW! (World On the Web)*: WOW! is aimed at consumers looking for a step up from free utilities. WOW! is very popular, and usually holds the number one or number two spot in terms of current users. Its added services include 10 free hours of digital kingdom access per month and somewhat weak advirus filtering (eliminates need to have advirus filter running on cybershell; treat as one upgrade generation behind, fails to filter on a 17 or 18). \$30/month.
- *HANWEB*: Originally specializing in Asian-language services, HANWEB has worked over the last decade to build up a following in Europe and the United States. The main competitor to WOW!, it slipped from the number one spot recently because of persistent hardware difficulties (on an 18, a HANWEB user will lose web access for 3d minutes; check once/day). HANWEB management is beginning to suspect internal sabotage. Services include 15 free hours of digital kingdom access and standard advirus filtering (eliminates need to have advirus filter on cybershell; fails on 18). \$35/month.
- *Bundesnet*: In 2098, Germany privatized its state-run WSP, which quickly became one of the more popular service providers in Europe. Bundesnet is now seeking to expand to other parts of the world, and has achieved a measure of success in the nations of the Pacific Rim Alliance. Bundesnet offers little in the way of extraneous services aside from advirus filtering (as HANWEB) and an aggressive policy of seeking out and eliminating Free Memes (see p. FW122). \$25/month.
- *ProReality*: Aimed at professionals, ProReality emphasizes security and virtual services, at a price. Computer Hacking attempts against systems connecting to the web via ProReality are at -2 in addition to any other modifiers, and any Computer Hacking attempts coming *from* systems connecting via ProReality are at -1. ProReality subscribers have unlimited access to virtual conference room services and standard advirus filtering. \$100/month.
- *Aegis*: Based in Australia, Aegis claims to have the best security features of any WSP. Computer Hacking attempts against systems connecting to the web via Aegis or from systems connecting via Aegis are at -3. Aegis provides standard advirus filtering, but no virtual services. \$50/month.

On additional WSP of note is Mainliner. Not well known, it is nonetheless popular in certain circles. Its security features give a -1 to any Computer Hacking attempts against Mainliner-connected systems, but its real attraction is the built-in advertising filter. Those who connect to the web via Mainliner rarely see any advertisements; the effect is the

equivalent of running ad-filter software. Advirus filters are also standard. Aimed at technology and information professionals, Mainliner also claims to have one of the fastest networking systems available. There are persistent rumors that Mainliner is a front for the Transpacific Socialist Alliance; there are also persistent rumors (usually not among the same people) that it's actually run by the CIA. \$200/month.

Dr. William Winthorpe Whipporwill

for 1920s Call of Cthulhu

by J. Edward Tremlett

*"Yes, **suh**. I can proudly relate that I did indeed stand at the side of the esteemed, late Dr. Carlton as we strode shoulder to shoulder through the ancient halls of King Wikkiwakkiwookie of the Island of Dagon. And I only wish that mah dear friend -- may God rest his noble soul -- could be here today, so he could share in the telling of what we found . . . of which this ancient crown -- the Crown of the King of the Fish People, I would remind you -- is the least bit!*

*"And I would wager that were he here today, he could tell of the dire importance of funding to mount yet another expedition. Yes, **suh** . . . "*

* * *

The 1920s were rife with con artists, flim-flam men, and hucksters, all trying to exploit the gullible, the credulous, and the lost with new philosophies, "ancient" secrets, and suspicious cure-alls. In that sense, the tragic figure of Dr. William Winthorpe Whipporwill -- ne William J. Simmons -- isn't too different from his other contemporaries.

However, mixed in with the usual flim-flam, astute Investigators may notice that Dr. Whipporwill adds a few words of interest into his carnival barking. They are dreaded, abhorrent words that they may have already heard, or else might learn something of in the future, and then have cause to wonder how much that con man at the county fair knew . . .

A sad man with the gift of gab -- and a few connections to the Mythos -- Dr. Whipporwill makes for an interesting piece of local color for 1920's Investigators to encounter.

Background

Dr. Whipporwill was born William Jasper Simmons in Jacksonville, North Carolina. He is among the last, sad remainders of a family that was once well-off, but lost it all to the Civil War, hard times . . . and, as some would say, a family curse.

The Simmons once held a handsome corn plantation, well within view of the Ocean. William's grandfather, Balathazar, had settled it after a few, profitable years of working as a sailor in the South Seas. He owned many slaves, all of whom were treated kindly and with true Christian compassion.

No one knew why Balathazar had made the change from sailing to farming; he used to say that if he'd stayed with his ship another three years, he might have been able to make three more plantations. But every so often he would start from his bed, afflicted with bad dreams he would confide to no one. There were certain logbooks in his library that he let no one -- not even his wife -- read, saying that there were some things in the strange, unchristian world that no one should ever have to see.

But however he came into the trade, Balathazar had a good sense of how to make money from it; between the money they brought in, the investments they'd made, and the grace of God, the Simmons were one of the more successful families in Jacksonville. They raised several fine children -- including William's father, Marcus -- who then married well and brought their own children into the world, too. William's birth in 1860 was cause for a family celebration; his eldest sisters would sometimes reminisce at how many people were there, what they wore, what they ate, and how proud Grandpa Balathazar seemed to see all this. It was almost as if he were relieved at something.

And then, a year later, the South seceded. When North Carolina finally joined its fellows, all of Balathazar's sons went off to fight in it. He lost every one of them but Marcus at the battle of Bentonville, and the strain sent his wife to her deathbed. The sudden, horrid loss broke his mind. He ran into the Ocean, begging God to take him home. And God must have heard, because they never did find his body . . .

Marcus -- who came home from the war missing a leg -- did his best to hold onto matters. However, he didn't have his father's sense for making money, much less how to hang onto it, and the plantation's fortunes dwindled. They had to sell the property when Winthorpe was seven and a half years old, and took up residence in a smaller, but still stately home in downtown Jacksonville.

His father went into shipping by day, and crawled into the bottle by night. He was really only good at handling the latter, but he somehow made just enough money to keep his five sons and two daughters in clothes and food. His children followed into the new family business once they were old enough, and his sisters -- put to work at bookkeeping -- were able to turn the family's finances back around.

William was bright, and shared his late grandfather's interests in nature, the sciences and exploration. He read and reread every single book in his Grandfather's old library, writing his own marginalia and even creating his own book on local insects. He could often be found combing the coastline and the woods for things of interest, such as old rocks, fossils, and other *strange* things that floated ashore. He also developed a knack for rhetoric -- one that often got him into trouble when his speech exceeded his manners.

Once he was old enough to learn a trade, William was taken and put to work in the shipping business. Given his talents at writing, his father let him join his sisters at bookkeeping, instead of sailing with his brothers. William was not pleased with this, as he wanted to go out "exploring" like his grandfather must have done. He spent his days pretending to work, and daydreaming of the far-off, amazing places he'd read of in his grandfather's logbooks.

His father's decision proved to be fortunate for him. When he was 16, his four older brothers all died when their ship was wrecked at Cape Hatteras. His mother became a babbling wreck and his father crawled even further into the bottle, not bothering to even pretend to work anymore. So his older sisters took immediate control of the family's finances, and decided that William -- the last son -- should attend college. Getting William into the University of North Carolina in Raleigh, was difficult, since he'd hardly attended school. However, his intelligence and book-learning -- plus, one supposes, a reasonable family donation to the college -- brought him in. He became a model student, applying himself to his studies in Natural Sciences, and going on to receive a Masters Degree.

Unfortunately, William was his father's son, and also developed a love of the bottle. Just after turning in his papers to apply for Doctoral studies, he got blind drunk and made several "ungentlemanly" suggestions to an attractive, young lady. It just so turned out that she was the daughter of a major contributor to the University, and a lifelong friend of the head of the Life Sciences department. William was promptly expelled, and the department head saw that he was blackballed as well; Any potential employer asking for a character reference received the worst kind possible sort, and any other doctoral program that asked for his information got the same. After a few abrupt and brusque rejection notices came his way, William realized that his Masters Degree was all but useless.

He knew that he could not return home; his sisters would be distraught, the shock might kill his mother, and his father would probably kill him. So, once his money ran out, he wrote home to ask for a sizable amount, claiming that he'd managed to get a position west of North Carolina and would need funds for travel. He had intended to make his lie the truth, but there would be no doing that with what he'd done thus far. So he stumbled through town after town in the South, taking odd jobs where he could and drinking his money away.

After spending nearly all of his cash, and wondering what to say to his sisters to get more, strange luck reared its head. He chanced across a medicine show's demonstration and, realizing that this was most likely a con, asked a lot of pointed questions about what was in the little bottle. When the show was over, and his questions unanswered, he went up to the proprietor to demand some answers. Instead, he got an offer to help bark for the show.

"You sound like you know what you're talking about," the fellow said: "So you can make this all sound real. How about a 50/50 split?"

With no better prospects available, and dreading having to lie to his family once more, William said yes. He learned quite a few tricks of the trade from his newfound friend, and together they made a reasonable profit from the "cure-all" business.

That was more than 40 years ago. Since then, William -- who's taken to calling himself William Winthorpe Whipporwill, among other aliases -- has been making a name for himself in just about every dodgy scheme southeast of the Mississippi. He's been a barker for several medicine shows, the "professional viewpoint" for many frauds, and the impresario for any number of other con jobs that have required someone with a scholarly bent.

He's also had to do some time in one jail or another for fraud, which led his family to discover the trail of lies he made. They promptly disowned him for his disgrace. He tried to come back home and ask for money of his sisters once, but discovered that they'd removed all traces of him from any family photos, and thrown his things away. The only thing they'd kept was his grandfather's library, which they handed to him on his way out the door: the sight of his handwriting in the books was too much for them to handle.

Since that awful day, Winthorpe has been hanging around Raleigh and Jacksonville in the hopes of somehow redeeming himself in his sisters' eyes. But so long as he continues to do what he does -- and there's really no danger of that stopping anytime soon -- this will remain an impossible quest. His sisters close their curtains when he ambles on by and pray he doesn't come up the steps to ask for money again.

And every so often, his parents' graves are visited by a sad old man who drops a rose on each, stumbles for something to say and, finding nothing, walks away quietly, sipping from a hipflask all the while.

Using William

The doctor makes for a good source of red herrings for Investigators. He lends his "credentials" to something maybe once or twice in every six months in one Southern state or another. These scams run the gamut from medicine shows to tacky "discoveries" which, when looked at, turn out to be pure fakery dressed up with large words (some of them could have a Mythos connection, of course).

He has other uses as well: in spite of his phony doctorate and drunken demeanor, he still has his scientific knowledge and skills, and is quite an expert in Natural History. He also has an amazing gift for flim-flam, which would make him a wonderful ally to have in case the Investigators need to convince someone of something rather . . . outlandish. His services won't come free, but money -- or, more preferably, liquor -- can secure immediate help.

On a related note, he knows the location and passwords for every speakeasy, basement bar, and gentleman's club in North Carolina, which may come in extremely useful at times.

Mythos Connections

William's only knowledge of the Mythos comes from his Grandfather's log books, which he read after both his paternal grandparents passed away. Balathazar Williams wrote down the islanders' tales of fish men from the sea who took human wives, and the strange children that resulted from such couplings. However, William has always regarded them much in the same way that he took stories of fairies and old Native American legends: amusing tales to make hay out of while trying to make a buck.

And then there is the matter of the family curse. Balathazar was convinced that one of the islanders' priests put a hex on him, which was what prompted him to leave the seas and take up farming. Losing almost all his sons to the Civil War convinced him that the curse had followed him onto the land; had he been living when William's brothers all died at once on Cape Hatteras, he would have suspected the curse was at work there as well.

But what if the curse was not bad luck, but a change in his bloodline? Consider that all but one of Balathazar's

children were lost to the war, and not more than a few scraps of each came home for burial. Also consider that all but one of Marcus' sons were lost in the crash on the cape, and none of their remains were ever found in the wreck. There is no way of knowing what truly happened to them.

Is it possible that Balathazar's male children carried the potential to change into the same fish-men that he heard those tales of? Could all the children have come into the change around the same time, somehow, and faked their deaths in order to go rejoin the sea? Were Marcus and his only surviving son William somehow genetic throwbacks, who carry the gene but will not make the change?

Maybe, even now, Dr. Whipporwill is being watched by strange, aquatic eyes as he rambles down the beaches of Jacksonville. Maybe his family takes some kind of strange, alien pity upon him, and arranges for items of interest to "wash ashore." And maybe the Investigators realize that these items are much more than what Dr. Whipporwill says they are . . .

Name: "Dr. William Winthorpe Whipporwill" -- ne William Jasper Simmons

Born: 1860 in Jacksonville, N.C.

Age in 1926: 66

Occupation: Charlatan, drunk

Degrees: Masters of Natural Sciences, University of North Carolina, Raleigh.

STR 12 **DEX** 12 **INT** 17
CON 9 **APP** 12 **POW** 14
SIZ 14 **EDU** 20 **SAN** 55

HP: 11

Damage Bonus: +1d4

Skills: Accounting 20%, Anthropology 37%, Archaeology 23%, Bargain 55%, Biology 59%, Chemistry 27%, Credit Rating 15%, Cthulhu Mythos 02%. Dodge 40%, Drink himself blind 85%, Fast Talk 55%, Geology 53%, History 46%, Library Use 65%, Natural History 80%, Other Language: Latin 67%, Other Language: Spanish 30%, Other Language: French 40%, Persuade 85%, Spot Hidden 25%

Spells: None

Tomes Read: His grandfather's logbooks contain strange tales of the South Sea islands, including some rather suspicious glimpses of Deep One interaction amongst human villagers. (San Loss 1/1d6; Cthulhu Mythos +2%; One week to read; No spells)

Weapons: Fist/Punch 55%, 1d3 + 1d4, .25 Derringer 35%, 1d6, cane 40%, 1d4 + 1d4

Mental Disorders: Alcoholism

Description: The good Doctor is both tall and stout, standing around 6'3 and weighing about 270 pounds. He wears iron-gray muttonchops and has bushy, expressive eyebrows. He tends to wear dark, somber suits, using suspenders to hold up his ample waistline, and a tophat covers his balding pate. All this adds up to give him a rather imposing appearance -- one that doesn't totally evaporate when he's drunk.

Items Carried: broken, silver pocketwatch on a long, silver chain; a gentleman's cane he uses to pound the floor for emphasis while talking; tin hip flask full of bootleg whiskey; rusty .25 Derringer; a large magnifying glass; pocket-sized "ancient artifacts" of dubious origin; a bottle of "Doctor Wilbur's Cure-All"

Income: Between \$5000 and \$2000, depending on how many scams he can pull off that year.

Savings: None.

The Two-Times Unfortunate Encyclopedists of Barbaric Deviltry

for *HeroQuest*

by Mark Galeotti

"Let the new world understand the failings of the old."

It is a fact beyond question that the land and people of Kralorela are uniquely blessed and that the rest of the world is inhabited by barbarians, devils, and figments of an over-active imagination. However, voices have been raised in disputation even in the Hall of Tranquil Harmony as to the precise degree to which the Kralori are so blessed. Thus, the Abbot of the Phoenix Terrace Monastery took it upon himself to send a picked delegation of monks out into this imperfect realm to chronicle its very imperfections and above all the false, partial, and self-deluding knowledge of the world around them. Their task is to complete an encyclopedia of the tales and flawed knowledge of the barbarians, but they know that this is more than a life's work. Every season, they send a new caravan containing their latest writings and reports back to the monastery.

The monks are doubly unfortunate. Not only have they effectively accepted exile, but it has been decided that this is not a mission that ought to be entrusted to or required of any who have a close relationship with the Divine Draconic Powers. Thus, none of the Encyclopedists have true dragon magic, although they are able to recognize its traces in others. Seeking novelty and imperfection and attuned to draconic powers, it is hardly surprising that they have come to Dragon Pass. They have been there for over a decade, but appear to be nowhere near completing their research.

Although these monks are not without their own physical and magical defenses, they use the wealth they receive regularly from Kralorela to hire locals as guides, interpreters, guards, and bearers, calling them the Mister Barbarians. This is a practical necessity, but it also allows them to carry out their second, secret role. The Kralori giant hero Kui Hui is recruiting for his "War of Stupidity against Ignorance," in which select foreigners (the "Stupid") will battle the hordes of the Kingdom of Ignorance. The Encyclopedists are one of many secret recruiting parties. They find those whose skills, magic, or hidden draconic affinities suggest that they may be assets for the war; then persuade, entice, or trick them into travelling to Kui Hui's great mustering points along the Kralori border. Heroes may well be recruited into the Mister Barbarians as a first step towards inviting them to join the War.

Common Names: Those Eastern Weirdoes with the Deep Pockets.

Form: Wandering scholar-monks.

Cultural Origin: Kralori.

Cultural Context: Curious yet superior travelers and scholars, with local mercenaries.

Ideology: "We are here to chronicle the errors of the barbarians, that we may appreciate Kralorela's wondrousness."

Look and Feel: Curious, charming, and patronizing scholars.

Purpose: To record and assess barbarian knowledge; to secretly recruit warriors and heroes.

Headquarters: Although they set out from the Phoenix Terrace Monastery, the Encyclopedists are an itinerant group, with no home. As they would say, "the entire barbarian world is our monastery."

Reactions: Most people are bemused by the Encyclopedists -- however, their willingness to pay well for local

assistance means that they are usually greeted with enthusiasm.

Resources

Leader: The Egregious Jiung, whose whisper is as commanding as a warlord's shout.

Renowned Members:

Master Seventeen Quills Blue, the chief scribe, who seems to be writing and sketching every waking moment.

Pin Don, who speaks a little of every language known (and a few not yet known).

Master Two Heron, the unfailingly polite yet unconquerable martial artist.

Membership: The Encyclopedists number the propitious figure 49. When one dies or is otherwise removed from their number, a new recruit arrives within a week, mysteriously dispatched months before from the Monastery.

Other Contacts: The Encyclopedists have no formal contacts outside Kralorela, although their desire for knowledge and travel and their willingness to share information (about their travels, not Kralorela) has allowed them to make connections with many other scholars.

Organization

The Encyclopedists have a rigid hierarchy, from The Egregious Jiung (and Sharan Cho, the band's guardian) to the other senior Blue Hat Masters, through the middle-ranking Yellow Bonnets (who do most of the record-keeping), and down to the novice No Hats. The "Mister Barbarians" come at the bottom, where all barbarians should. They are treated with polite disdain, although Mister Chief Strongarm and Mister Chief Strongback (head of the guards and porters, respectively) may be afforded a degree of respect.

Encyclopedist Membership Keyword

Membership Requirements: Selection by the Abbot of Phoenix Terrace Monastery.

Mundane Abilities taught: Cope with Barbarian Ways, Get By in Barbarian Languages, Literate, Martial Arts (any one of a variety of bizarre Kralori forms), Polite Smile, Walk Tirelessly.

Typical Personality Traits: Curious, Patronizing, Superior.

Magic: All of the Encyclopedists (even the No Hats) are devotees of either Vashanti (see the "Homeland: Kralori" article that appeared in Pyramid on *date*) or his subcult of Ho Den Ho the Observant (*affinities:* Literacy, Observation, Precedent). Only these full members benefit from the guardian being's magic.

"Mister Barbarian" Membership Keyword

Membership Requirements: Appear relatively trustworthy and useful at whatever job the Encyclopedists need done at the time.

Mundane Abilities taught: Basic Kralori Commoners' Manners, Pidgin Kralori, Work Hard.

Typical Personality Traits: Any.

Magic: None taught or prohibited. Mister Barbarians do not gain the benefits of the guardian's magic.

Sharan Cho (Guardian)

At first glance, most assume that the band's guardian is just one of their number. However, the Venerable Sharan Cho

is actually an otherworldly ally. He is the manifested soul of the Kralori ambassador to the Second Council at the time immediately before Nysalor was born (about 1250 years ago). He is still bound to Glorantha as a result of the consequent spiritual pollution. His form can be destroyed, but he invariably reappears within a week, cackling and rueful. In life, Sharan Cho was sedate and serene, prone to peaceful meditation. In part, he believes it was this passivity that led to his failure, and he now consciously seeks to be more active and life-affirming. He laughs and cries a great deal, tells off-color jokes, and freely berates friends and foes alike. The monks' tolerance of such unusual and unseemly behavior is often one of the first clues for outsiders that Sharan Cho is not what he seems to be.

Method: Manifestation.

Form: An ancient but spry Blue Hat Master, leaning on a twisted peachwood staff.

Communication: Sharan Cho may speak in flawless Kralori or -- entertainingly accented -- any other tongue. However, he often lets a laugh, glower, or whack with his staff do his talking for him.

Guardian Requirements: Never pass up an opportunity to point out the entertaining inadequacies of barbarian societies, albeit in a friendly and tolerant manner. Every year, produce a poem, calligraphic composition, or painting commemorating an aspect of Kralorelan perfection and present it to a suitable barbarian in the hope of spreading enlightenment.

Functions:

Awareness -- Sense Draconic Virtue. (Sharan Cho can see whether barbarians are *kralo-nei* -- "Kralori inside" -- and thus potentially worthy of acceptance into the Finest People, or *hei-doh* -- "Useful Idiots" -- and thus prime candidates for recruitment for the War of Stupidity against Ignorance.)

Blessing -- Affirm Kralori Superiority. (Sharan Cho is equally comfortable presenting a convincing case during a debate or whacking some Encyclopedist experiencing temptation round the head, with loving sternness.)

Defense -- Negate Barbarian Magic. (Sharan Cho simply claps his hands with a command to "stop this foolishness," and all non-Kralori magic in the area must resist this power [no multiple target modifier is applied] or be interrupted. This effect is momentary -- it briefly dulls enchanted swords and banishes daimones, but after a moment the sword regains its magic and the daimon can return. However, the resumption of magic may be little comfort to the barbarian who was fighting some ravenous beast or flying.)

More Budget Treasures

by Owen K.C. Stephens

This article presents yet more permanent items with costs below 2,000 gp, focusing on those with costs of 1,200 gp or less. It is a continuation of the ["Magic On The Cheap"](#) article, and the items presented can be used in the same ways. They can also be used in games designed to have a lower level of prevalent magic (so more powerful items are very rare), or in games with very high magic levels (as minor items that even commoners can afford).

Adorned Items

Though not technically magic, adorned items can make excellent low-level treasure. Adorned items have had great skill and care taken to increase their aesthetic value. This is not a simple matter of adding gems and precious metals (the cost of which should be tracked separately), but high quality sculpting, etching, needlepoint, embossing, and similar techniques for adding beauty to an item without changing it's basic material or properties. Any amount of money may be spent on adorning an item, though 50 gp to 150 gp per item is fairly standard.

A character with many adorned items looks better, and has an advantage when making an initial impression. This is represented by a competence bonus to Diplomacy checks made to affect an NPC's attitude for the first time (future Diplomacy checks made with the same NPC have no bonus, as the initial impression is over). A character with 50 gp of adornment gains a +1 bonus, a character with 200 gp of adornment gains a +2 bonus, a character with 450 gp gains a +3 bonus, and a character with 800 or more gp gains a +4 bonus.

Making an adorned item works just like making masterwork items (price and construction time is handled separately with a DC of 20 for the adornment). It generally takes a separate Craft skill to adorn an item (Craft: Metal Etching to adorn weapons, for example).

Quality Items

Though also not technically magic, quality items can make excellent low-level treasure. Quality items are like masterwork, but have different benefits. Quality items that are stout gain +1 hardness and a 10% increase in hit points (minimum +1). Quality items that are sheer have the same uses as normal items, but weigh 25% less. Each quality added to an item costs as much as making that item masterwork, or 50 gp, whichever is greater. An item can have multiple qualities and be masterwork, with all costs calculated from the base cost of the item.

Thus a set of quality sheer half-plate has all the game stats of normal half-plate, but weighs only 37.5 pounds and costs 750 gp. A masterwork, quality sheer and stout greatsword is +1 to hit, weighs 6 lbs., has a hardness of 11 and 11 hit points, and costs 950 gp. A quality sheer silk rope weighs 3.75 lbs. and costs 60 gp.

Making quality items work just like making masterwork items (price and construction time is handled separately with a DC of 20 for each quality to be added). In many campaigns, it would be appropriate to have the secrets of construction quality items held by a particular race or guild. Thus only dwarves might know how to make stout weapons, while elves have the techniques for making sheer rope. In such cases, a character must learn these secrets before attempting to construct such items.

Campaigns using the Greater Masterwork rules from the "Magic On The Cheap" article should also treat the construction of such items the same way, with a Craft DC of 25.

Talisman Bows and Arrows

Talisman bows are magically enchanted weapons which are not powerful enough to grant an attack or damage bonus by themselves, but can do so in conjunction with talisman arrows. A set of talisman bow and arrows together grant a +1 enhancement bonus to attack and damage rolls, which does not stack with enhancement bonuses from other bows or arrows. Any style of bow or crossbow (and corresponding arrows or bolts), or even a sling and sling stones, can be made as talisman items.

A bow or arrow does not have to be masterwork to receive a talisman magical aura, but it cannot have any other magical benefit. The cost of a talisman enhancement is 500 gp for the weapon and 10 gp for each piece of ammunition. Like magic ammunition, talisman arrows, bolts, and stones are destroyed when fired, even if they miss their target. Talisman items can be created by character with either Craft Arms and Armor or Craft Wondrous Item. A set of talisman bow and arrows never grant more than a +1 enhancement bonus.

Rings

Garbing: A character wearing a *ring of garbing* may change his clothing to be of any style and type he wishes, including cleric's vestments, or an artisan's, cold weather, courtier's, entertainer's, explorer's, monk's, noble's, peasant's, royal, scholar's or traveler's outfit. Jewelry and similar non-clothing items are not added or changed, but the style, cut, color and decoration of the clothes is entirely at the will of the ring's wearer. If an item is put in a pocket that ceases to exist, it falls to the ground. Though this does not add any bonus to a character making a Disguise check, it may prevent the character from taking any penalties.

Faint conjuration; CL 1st; Forge Ring, *alter self*; Price: 1,800 gp.

Restfulness: The natural heal rate of a character wearing a *ring of restfulness* is increased as if he were one level higher. Thus the character recovers one additional hit point after eight hours of rest, and one additional point of nonlethal damage per hour. If the character gets 24 hours of bed rest, he gains 2 additional hit points.

Faint conjuration; CL 1st; Forge Ring, 5+ ranks of Heal; Price: 450 gp.

Timeliness: A character wearing a *ring of timeliness* always knows what time it is (to the nearest second), how many hours it is until dawn or sundown (whichever is next), and the date (according to the calendar of the spellcaster who created the ring). The wearer may choose to be alerted when a set amount of time has passed. This alert is silent to anyone except the ring wearer, though it is loud enough to awaken him from mundane slumber.

Faint divination; CL 1st; Forge Ring, Wis of 15 or higher; Price: 450 gp.

Vicious Blows: A character wearing a *ring of vicious blows* gains a +1 or +2 luck bonus to attack rolls made to confirm a threat, making it a critical hit. This has no effect on normal attack rolls, only those to confirm a threat.

Faint divination; CL 1st; Forge Ring, *true strike*; Price: 1,000 gp. (+1), 4,000 gp (+2).

Rods

Auras: A *rod of auras* is a glass or crystal rod a little more than two feet long that glows with a dim illumination (less bright than a single candle). A character holding the rod who casts *detect chaos*, *detect evil*, *detect good*, *detect law*, *detect magic*, *detect poison*, *detect secret doors*, *detect snares and pits*, or *detect undead* causes the auras or objects revealed to glow lightly. This allows observers to gain the same information as the spell caster, though spells that take several rounds to reveal data (such as *detect magic*) still take multiple rounds to reveal a specific object and its strength.

Faint divination; CL 1st, Craft Rod, *detect magic*, *faerie fire*; Price: 1,800 gp.

Dowsing: A *dowsing rod* is a wooden forked stick, two to three feet long. The wielder holds the forked ends, and may find water by following the tugging of the rod. It guides the wielder to the nearest natural source of potable water within 440 feet (including underground springs, but only if the actual water of the spring is within range). If no natural source of potable water is within range, the rod points to the largest concentration of potable water in range (including water in barrels, waterskins, and so on).

Faint divination; CL 1st, Craft Rod, *create water*; Price: 900 gp.

The North: A rod of the north always points north when held.
Faint divination; CL 1st, Craft Rod, *know direction*; Price: 900 gp.

Staves

Staff of the Sproutings: These simple staves are generally made from a single, flexible branch of a small tree. They are made by senior druids to pass out to younger members of a circle. The spells bound into such staves are selected not because they are used often, but because they are needed only rarely, but are important when they are. Because they can depend on the staves for such moments, young druids can prepare other spells they use more often. The staves allow use of the following spells:

- *detect poison* (2 charges)
- *flare* (2 charges)
- *purify food and drink* (2 charges)

Moderate varied; CL 8th; Create Staff, *detect poison*, *flare*, *purify food and drink*; Price 1,687 gp, 5 sp.

Wondrous Items

Animated Abacus: This minor item is identical in appearance to a standard abacus, save that it has a curved handle on one side made of bone or ivory. When held, the abacus automatically performs mathematical calculations spoken by the holder, instantly performing addition, subtraction, division, multiplication, and finding square roots. Up to 10 numbers at a time may be named by the holder, then called up later ("the amount of gold in the group fund," "the number of orcs we've killed," and so on).

Faint divination; CL 1st; Craft Wondrous Item, *prestidigitation*; Price: 900 gp.

Crimson Shirt: These magic shirts are a bright red color, and are generally unadorned with trim or patterns. The wearer of a *crimson shirt* automatically makes any roll or check to stabilize on the second round of bleeding to death. This does not allow a chance to prevent bleeding if one is not normally allowed (such as when struck by a weapon of *wounding*), but it does mean the character will not bleed to death from mundane injuries unless dropped to within 1 point (1 round) of death.

Faint conjuration; CL 1st; Craft Wondrous Item, *cure minor wounds*; Price: 900 gp.

Gripping Gloves: These tight-fitting leather gloves have black palms that seem to be coated in tree sap, though they leave no residue on other objects. A character wearing these gloves gains a +1 enhancement bonus to Climb and grapple checks, and to checks made to resist being disarmed.

Faint conjuration; CL 1st; Craft Wondrous Item, *bull's strength*; Price: 1,800 gp.

Pearl of Power, 0-Level: *Pearls of power* are covered in the *DMG*, but the price for a 0-level pearl is not. Such pearls are also more easily constructed, because of their very minor power level.

Faint transmutation; CL 1st; Craft Wondrous Item, creator must be able to cast 0-level spells; Price: 500 gp.

Porter's Boots: These heavy leather boots always seem worn, even when newly made. Anyone wearing the boots has his carrying capacity increased as if his Strength were 1 to 3 higher. This is an enhancement bonus, and does not stack with additional carry capacity gained by a standard enhancement bonus to Strength.

Faint conjuration; CL 1st; Craft Wondrous Item, *bull's strength*; Price: 500 gp (carrying capacity 1 higher), 1,000 gp (carrying capacity 2 higher), 2,500 gp (carrying capacity 3 higher).

Quill of Endless Ink: These flamboyant writing tools are always made of a colorful feather, generally taken from a parrot or peacock, and always at least a foot long. They can be used to write on nearly any reasonably flat and solid surface, including paper, cloth, stone, metal, wood, and glass. The writing appears without benefit of ink, and does not fade or rub off (though it can be removed with an *erase* spell).

Faint universal; CL 1st; Craft Wondrous Item, *arcane mark*; Price: 900 gp.

Slick Cloak: A *slick cloak* always appears to be made of silk or high quality linen. It is smooth to the touch, but does not feel oily or slippery until a character wearing it is grappled or stuck in a tight spot. The cloak then makes the character slippery granting a +1 to +4 circumstance bonus to all Escape Artist checks the character makes.

Faint conjuration; CL 1st; Craft Wondrous Item, *grease*; Price: 100 gp (+1), 400 gp (+2), 900 gp (+3), 1,600 (+4).

Sparkling Switch: A *sparkling switch* appears to be a small, flexible length of willow wood or similar material. As a standard action, a character holding the switch can cause a tiny spark of fire to appear at its tip. This can be used to light easily flammable materials (such as prepared fires, candles, torches, and lanterns). A character may use the switch to make a touch attack, which does one point of fire damage. The switch is too light for a character to do physical damage with it or gain a Str bonus to the damage done.

Faint evocation; CL 1st; Craft Wondrous Item, *burning hands*; Price: 900 gp.

Universal Instrument: A *universal instrument* can take the form of any masterwork musical instrument small enough to be carried easily by a Medium creature. Thus it can be a masterwork lute, fife, flute, horn, lur, lyre, mandolin, pan pipes, recorder, shawm, tabor, or trumpet, but not an alphorn, floor harp, kettle drum, or piano.

Faint alteration; CL 1st; Craft Wondrous Item, *summon instrument*; Price: 1,200 gp.

Pyramid Review

Crime Scene: Police Investigation (for d20 System)

Published by [Hogshead Publishing](#)

Written by Mark Ricketts

Illustrated by Calvin Clamp, Mario Fiorito, David Esbri Molines, Chris Pepper and Ursula Vernon

80-page b&w softcover; \$18.95

Now under new management and bearing a new logo, with its very first release, the all-new Hogshead Publishing Mark II heads in a direction that under its previous management probably would not have been considered. Not only is ***Crime Scene: Police Investigation*** a supplement for the ***d20 System***, it also marks the inauguration of a series of sourcebooks that will explore different aspects of the world of law enforcement and organized crime. Hogshead has already followed this supplement up with ***Crime Scene: The Mob***, and many more are in the works.

Crime Scene: Police Investigation is not strictly speaking the first ***d20 System*** treatment of law enforcement, but it is the first *straight* treatment. The other is far more satirical in nature, being [The Judge Dredd Roleplaying Game](#), Mongoose Publishing's first RPG licensed from the pages of the British weekly comic *2000 AD*. ***Crime Scene: Police Investigation*** is also and only a treatment of purely American law enforcement at city, county, and state level; Federal law enforcement will be covered in the forthcoming ***Crime Scene: The Feds***. That ***Crime Scene: Police Investigation*** focuses on American law enforcement explains why an English publisher has written this supplement in American English, though it does feel rather odd.

Overall, though, the look and feel of ***Crime Scene: Police Investigation*** is decent enough for a first time release. It is lightly illustrated and the included scenario is the only part of the supplement in need of another proofread as it feels rather rushed. Although the book's table of contents does a reasonable job, an index would have been more useful. It also lacks a bibliography, and even though ***Crime Scene: Police Investigation*** is a game, it should have backed up its research with sources, and lists of further reading and watching.

At its core the book presents six new classes: the Cop, the Trooper, the Deputy, the Detective, the Crime Scene Investigator, and the Criminal Psychologist. Both of these last two allow players to take civilian roles alongside those of the police, though even the civilian Crime Scene Investigator will have some police training. The Criminal Psychologist is also only allowed at the GM's discretion, as few police or sheriff's departments have the resources to hire one, let alone have one on staff. All of the characters start off at first level, but the default rank within the game is that of Sergeant. This allows the PCs a certain degree of autonomy in conducting their investigations and also to begin specializing in particular areas of police work. There are no Prestige Classes in ***Crime Scene: Police Investigation***, but characters can multi-class without restriction to reflect extra training or reassignment.

To account for their previous experience, characters can also select a Starting Department. They provide either two ranks in a pair of skills, such as the Bluff and Surveillance skills for the Vice Department; or a feat and two skill ranks such as the Appraise Suspect Feat and two ranks in the Counseling skill for the Juvenile Department. Despite these bonuses, there is a disparity between a character's initial police rank and the beginning level. First level characters feel very weak and unskilled, and even more so in combat with only a six- or eight-sided die's worth of Hit Points.

Perhaps the default starting level should have been raised to second or third level to better model a character's career

and time on the force, where it takes several years for an officer to attain the rank of sergeant. In addition, had this been allowed for, there would have been room in ***Crime Scene: Police Investigation*** for campaigns focusing on less experienced characters and the GM to run more street-orientated games.

A multitude of new feats and skills are provided to support both characters and campaigns, all of which are professionally related. The new skills include Analyse Narcotics, Autoshop (the ability to search vehicles), Computer Operations, Counseling, Crime Scene Recording, Dog Handling, Drive: Chase and Tailing, Evidence Analysis, and so on. Medical Assistance replaces the Heal skill, and the Police Interrogation skill provides a legally acceptable method getting information from a suspect or witness, while the Interview is its more benign counterpart.

The new feats start out with the basic Driving License feat, which can be taken multiple times to cover competencies with airplanes, helicopters, boats, and motorcycles as well as ordinary cars. The Chemical/Microscopic Analysis, Collecting Evidence, Crime Scene Hazard (spotting dangers inherent to a crime scene), Finger Print Taking, Handwriting Analysis, Take Charge (of the crime scene so that evidence is not lost), and Walking the Area (to spot a scene's most important evidence) feats all support the collection and analysis of evidence, while the Bribery and Informant Handling feats help a cop deal with their street contacts.

The only feat to work differently is that of Promotion, which can be taken multiple times to advance a character from sergeant to lieutenant to captain, as well as also to sheriff. This last is only available to the deputy character, and all of the promotion feats are allowed at the GM's discretion.

Crime Scene: Police Investigation is relatively light on rules, mostly making slight adjustments to certain aspects of combat. Armor Class is retained, rather than armor providing a degree of damage reduction as in other modern-set **d20 System** games. Even more anachronistic is the fact that characters gain a bonus to their Armor Class as they rise in level. The other alteration is the way in which automatic gunfire is handled, requiring the roll of multiple six-sided dice when the characters are letting off more than single shots. This is in addition to the roll to hit, and although these new rules seem to work, they feel clumsy and add an extra complication to the running of the game. In comparison, the rules for car and other vehicle chases are quite simple.

Better still is all of the source material to be found in ***Crime Scene: Police Investigation***, which provides a thorough look at the job that the police do, their procedures, and the limitations the law places on their duties. This covers jurisdiction, constitutional rights, Miranda Rights, and the need for a warrant before and after a crime scene is secured. Also discussed are both large and small municipal police departments and the County Sheriff's Office at the level of local law enforcement, plus state law enforcement. For the municipal department, two types of organization are suggested: the centralized model based on that of the LAPD, and the decentralized model of the NYPD. Besides suggesting how a GM might create a police department for his own campaign, the limits or jurisdiction of this department and its resources are given, and also how it interacts with other organizations and its jurisdiction. This comes right up-to-date with the recent founding of the Department of Homeland Security.

The "Scene of the Crime" is a basic primer for devising (on the GM's part) and investigating (on the player's side) the scene of a crime. This, and the book in general, are not aimed at devising convoluted mysteries, but more solid, down-to-earth crimes and misdemeanors. Though no crime is ever exactly the same as the next, the procedures are, and this is what the section covers. Those GMs wanting more depth will have to wait for the forthcoming ***Crime Scene: Forensics***, which will also be useful if the GM wants to run a *C.S.I.*-style campaign. Additionally, there are notes on handling interrogations and hostage situations, useful not just for law enforcement orientated campaigns.

For the GM there is another pair of character classes -- the sheriff and the SWAT Officer, plus a set of atypical NPCs ready for use. The book also includes a scenario, "Tragedy at Cutter's Creek," which is set in a small Pennsylvania town, and suited for either a small municipal police department or a sheriff's office. The town is suffering from an economic decline, and is not known for its high crime rate. So it will be a big surprise when a case of a missing teenager reveals a dark and nasty secret. Although decently done, the actual writing of "Tragedy at Cutter's Creek" does feel very rushed. Finally, the supplement is rounded out with a pair of appendices, one covering the contents of the various kits the characters will have access to, such as the Crime Scene Kit and the Trace Evidence Kit; and the other, a list of Police parlance and codes.

For the first book from a new publishing team, ***Crime Scene: Police Investigation*** is solidly done and augers well for future releases. It is not perfect, however, and the main problem lies in the implementation of the ***d20 System*** rules -- the first of these being the disparity between a character's starting rank and their starting level, the second the handling of armor class, and the third, the rules for automatic fire. They add another complication to the game, and GMs may want to tinker with them to get them right, or use rules from another ***d20 System*** game.

Yet these problems aside, the book is full of interesting information that can be applied to any modern-set ***d20 System*** game, or indeed any modern RPG. There is little in the way of advice on running law enforcement campaigns, but since they are among the easiest of genres to emulate and the media is full of examples to draw upon, this is not so much of problem. Of course, the GM will need to tone down any cinematic elements of such a source to achieve the realistic style of ***Crime Scene: Police Investigation***.

--Matthew Pook

Pyramid Review

Xcrawl: Sell Out! (for d20 System)

Published by [PandaHead Games](#)

Written by **Brendan J. LaSalle**

Art by Chris Appel, Ed Ball, Allyson Brooks, Marcio Fiorito, Brian Laframboise, & Bob Stevlic

192-page b&w softcover; \$24.95

For the last year, *Xcrawl*, PandaHead's roleplaying game of extreme dungeon sports in a Romanesque world, has concentrated on The Games themselves -- those forays into man-made crypts and labyrinths. The sourcebook for the North American Empire, the larger setting in which The Games take place, is due out this winter, and they've begun to bridge that gap with *Xcrawl: Sell Out!*, the sourcebook for the business of being involved with the crawls.

The full rules of Xcrawl are laid out, or at least as full a set of rules as one can give and not have your sourcebook sound like a set of stereo instructions. What's legal in play? What magics are allowed? Each increasingly lethal division is described, starting with the "let's-pretend" elementary school Action League and finishing up with the majors, Division I (the level at which the big kids play) and Unlimited (a level shown favor by the Emperor because it lets him execute dissenters without public censure).

We learn the attitudes of the different races concerning The Games. Dwarves claim it's an insult to real adventurers, though many enjoy the guilty pleasure. The aloof elves see only fleeting glory in it, but their works are among the most cherished weapons a crawler can carry. And for the put-upon halflings, it's a way to rise above their stigmatized place in society while giving covert assistance to others of their race seeking a better life outside the NAE. The spectators also fall into categories, like the Primitives, who respect only those participants who limit themselves to "real" fantasy gear; the Monsterphiles, who root for the creatures in the dungeons; the Anarchists, who know The Games for the bread-and-circuses pacifier of the populace they really are; and the Non-Believers who think the whole thing is faked.

Past the fans, there's material about a crawler's life in and out of the game. Your alignment (and what it gets you) may change depending on whether you play a face or heel and what you're like in person. The Fame stat introduced in the core book can now be a lasting thing with permanent Fame, and it can be spent in new ways for benefits (getting a good table, or maybe charming your fellow dungeon denizens). There are rules for multi-signature moves -- those spectacular crowd-pleasing stunts associated with a single player can now be performed by the whole team for extra Mojo Pool points and bonuses to the crowd's reaction.

Other little details are added to extend the sports theme further still. In the closely guarded world of the NAE, how do they view raising someone from the dead magically? Now you'll know. What effect does being a crawler have on your day-to-day life? You may find your immune system is now dependent on magic for healing, and the horrors you've witnessed may leave you with one of those thousand-yard stares.

The new prestige classes close the gap between the crawl and the NAE. The Agent promotes his clients while the Bodyguard protects his. The teams can now have a Coach to train them, Groupies to support them, a Scrambler who protects them by making himself a tempting target, and a Superstar who acts as the Captain America of the Xcrawl world. Players can choose to be a Free Agent, picking and choosing with whom he will work, and the Paparazzi (with

the new Photography skill) depends on them for a living.

Some of the new feats are about the Fame rewards or improving your statistical ratings in Xcrawl, but most are about playing better, harder, or faster, allowing you to work through the pain or giving you bonuses in specific dungeon situations.

One of the big (ahem) selling points is the inclusion of a statistics system. Now you can track your performance to see how well you did in a crawl, how you stack up against other crawlers, and how your stats change depending on the dungeon and Dungeon Judge. Classes fall into broader categories; the Launcher, for example, is the team's ranged weapons expert, while the Spiritbrace is whoever serves as the party cleric. You mark off combat actions on the special record sheet provided. Some events are worth more to a particular class (disarming traps boosts the rogue's numbers), and there are bonuses for each class (in case your Spiritbrace lays the smack down on several zombies in a row). You can even be penalized for things like Delay of Dungeon. These numbers are tallied and plugged into a formula to get your statistics.

By far the bulk of the book is merchandising and marketing your character, and the economics of being a star. Want an action figure line for your crawler? You can do that. T-shirts, too, plus mugs, games, and dolls with suction cups on their hands. You can get a sponsor for your crawl -- wear their logo or use their gear, and they'll help pay your way through a dungeon. Make appearances at car shows and be the spokesperson for a new line of SUVs. All that money lets you buy fab new mansions and dress in style. And the prizes . . . oh, the prizes you can score during the dungeon crawl. Stereos, shoes, equipment, and a lifetime supply of Power Apps (with the awesome power of apricots). And what would an RPG supplement be without some swords and monsters?

The creatures range from the cute (the gremlin-like whammies -- an in-game nod to the game show?) to the fairly bland (the bloody, shifting plasma wench) to the confusing (the dark retcher and its retched offspring). There are a couple of distressing sorts (like the thoroughly despicable grimholds) and the amusing death piñatas -- if you thought the monsters guarding the treasure were tough . . .

The gear lists are fairly creative, including as they do items like the mascot costume, the sacrificial knife, and the cheerleader's outfit. There are delightful magic items -- a pen that helps you sign autographs, a watch that warns you when the paparazzi are about -- though it would have been nice to have them paired up with the mundane gimmies instead of placing them deeper in the book. The really nice magic items are much prized in the repressive NAE. Former stars' jerseys, the world's only known magical gun . . . in some cases, even the trophies given out for the crawl championships are possessed of strange powers. If you want to customize your magic items, there are new special abilities to layer on like the power to hit one opponent but damage his partner.

Trouble is, treasure accounts for a lot of the page count. If you think dragon hoard tables are big . . . there are nine pages of random prize lists (and name generators for the sponsors) the GM can roll for his dungeon. Keeping in mind that it's a different setting (modern fantasy), tables like these can replace the more esoteric treasure tables from traditional *Dungeons & Dragons*, but does the referee need a list of random kitchen appliances? And will that have more meaning in the game than flavor text? The restaurant generator is amusing, and useful to any GM who easily gets stuck for a name, but if you're not running a hastily generated pickup game at a convention it may not be worth that page.

This doesn't include the random person tables. That's another five pages, all for people that, by the writer's own admission, are only walk-ons (and to make things worse, they point out you'll probably have a workable idea of the person with just a couple of the possible rolls).

Another nod to the outside world: There's a thumbnail of 101 companies of the NAE. It's good trimming and the individual entries aren't overlong by anyone's definition, but it would have been nice to see fewer of them and more advice on making use of them in the game -- a few adventure seeds, some corporate names perhaps -- but as it is these won't be more than a footnote in the GM's narration without more work.

How much detail is too much detail? Once the sponsorships start rolling in, you'll have to keep track of how many decals you can visibly apply to your armor. Added bookkeeping, sure, but someone may ask. A quick primer on

approximating incorporation in the game? At least it doesn't take up as much space as some of the other extras. There are 10 pages of ads at the back, most for real upcoming PandaHead products -- good, entertaining ads, but ads nonetheless. The book is only divided into four thick chapters, but the lack of a table of contents is offset somewhat with an index.

The writing positively sings in places, though the editing needs some serious tightening. Ed Ball's artwork dominated the core rulebook, but fortunately other artists have had a bigger hand in the sketches for this volume. Their contributions are less stylistic, but also less jarring and impenetrable. The fake ads are still fun and set a tone, and the artwork doesn't steal too much away from the writing.

Sell Out! is a fairly breezy book that does more to convey atmosphere than expand playing options. Those looking for rules and crunch aren't going to walk away empty-handed, but the book dances along a fine line between offering new in-game options and being a gateway product for the NAE book. The vast array of charts and tables plus the endless lists all subtract from a certain measurable utility. The stat system is a good idea and the execution is fairly simple, but -- despite not requiring brain-busting attention to detail -- it may seem superfluous or, to some, annoying.

PandaHead has provided an exhaustive resource that brings the world of Xcrawl to vivid life. Alas, ***Sell Out!*** attempts to serve two masters, one of them in absentia, and so is a purchase better left until after the ***North American Empire*** gets its own book, allowing ***Sell Out!*** to shine like it deserves.

Ask Not For Whom the Bell Tolls

Funerals, Wakes, and Memorials

by [Riina Stewart](#)

Roleplayers are no strangers to in-game death -- characters kill people, people around characters die (often by violence) and in many games the main characters themselves are haunted by the specter of imminent death. Funerals, however, are less commonly played out, missing out on all the potential pathos, depth, excitement, mystery, horror, and opportunity a good funeral can bring. Why dump your NPCs in an unmentioned shallow grave when you can have all the fun of sending them off in style (and throw a swath of plot hooks into the bargain)?

Just what can you do with a funeral?

As in literature, a good scene in a roleplaying game is one which *does* something -- one which furthers the plot, adds depth to the characters, creates interest and excitement, or otherwise adds to the feel of the game. Funeral scenes can fulfill a range of functions.

Providing Closure

The most obvious use of a funeral in game is the same as the main purpose of memorial celebrations in real life -- to provide closure. The death of a long standing NPC can be made more meaningful by allowing the heroes a chance to reflect on the life of the deceased. The death of a PC would in most cases warrant some kind of memorial, and if the player of the departed character is up to it, a funeral can bring a sense of closure to the loss. Funerals, however, don't necessarily need to involve the end of friends, families, and allies. The send off of an enemy has interesting possibilities, if circumstances are such that the PCs might attend.

Creating Theme, Mood and Atmosphere

Funerals, in general, are sad, intense affairs -- the one place in the lives of most people where death is made preeminent and where large groups of people come together to grieve. With few exceptions a funeral will darken the tone and add a sense of sorrow to a game, bringing all the characters face to face with their own mortality. Funerals are obviously an excellent choice for creating mood and atmosphere in a horror game, but they can also be used to add a somber note to nearly any campaign. Even a comedy will become blacker for the introduction of jokes about death.

Introducing Secrets

Many memorial services involve some kind of discussion of the life of the departed individual, and this is a wonderful opportunity for the GM to reveal all sorts of formerly hidden information. This can range from simple characterization (e.g. the dead girl built model ships, and always dreamed of owning a full size sailing vessel; the kindly old man was once an explorer of the farthest reaches of space), or they can be important clues (if he was a surf lifesaver in his youth, why did he get caught in that rip tide?), or even momentous plot revelations (he was the *brother* of Edmund the Bloody). Don't forget that the eulogy is only one source of information -- hints and clues can take all sorts of guises. For example, unexpected guests can reveal whole areas of a person's life -- such as when a group of vagrants come to send off a woman who spent her every weekend down at the local soup kitchen; or when the church slowly fills with knights from an order the PCs didn't even know existed.

Introducing New NPCs

Funerals often bring together people who have never met, from old friends to long lost relatives of the departed, they are one of the few social occasions that people usually make an effort to attend. These people could take the form of strange new contacts (such as that unknown order of Knights), or they could be potential firm allies. If foul play or violence was involved in the person's death and the PCs are inclined to retribution, a dear friend or relative may vow to aid the PCs to achieve revenge. If it was a PC who died, this may be a good opportunity to introduce the replacement. Of course, if it looks as though the PCs were responsible for the death, perhaps that friend or relative is vowing to wreak revenge on *them*. Finally, a new NPC could be unrelated to the funeral at hand -- perhaps someone visiting the grave of a long dead loved one who shares a moment of grief with a character, or a cemetery or funeral house attendant could be seen acting strangely. Perhaps someone has simply chosen to speak to the PCs at the funeral because it is the only place they could be sure of finding them; what if they arranged the death for that very purpose?

Enemies, Villains and Confrontations

There are usually a lot of rules surrounding behavior at funerals, and one of those is an emphasis on seemingly restraint. It is often not appropriate, for example, to start a screaming argument, or come to blows, in the presence of the casket. This, of course, presents a wonderful opportunity for an unusual confrontation with an enemy. Perhaps the villain of the game comes to gloat -- if the cultural context is appropriate the PCs may well have to restrain themselves to hushed murmuring through gritted teeth, and if they *do* lose their cool it will be so much more shocking.

Conversely, grief sets emotions running high, and a funeral might be an ideal place to let go of the usual social restraints and give the PCs a chance to let their hair down with some dramatic yelling and screaming at an enemy they have had to be polite to for the whole campaign. For more ambiguous enemies, a funeral can provide a brief moment to set aside differences as all of them mourn the same person, despite their former conflict, giving you a chance to humanize a long-term villain. (For this to work it is best that the villain not seem to be responsible for the death!) State funerals are often well attended, and social restrictions are more closely observed, so they make a nice place to force a peaceful (or at least restrained) interaction between the PCs and someone they would normally assault on sight. Finally, as hinted above, a funeral is a good place to introduce a new antagonist who seeks retribution from the PCs for the death of someone dear to them. This could be perfectly reasonable (maybe the PCs actually *did* kill them), understandable but misguided (they blame the heroes for dragging them into danger) or totally unwarranted (they wrongly believe that they killed them). Depending on their reasoning this could introduce several different kinds of plot, ranging from the PCs trying to clear their name, through an attempt to make restitution, to a life and death struggle with a nemesis hell bent on revenge.

Demonstrating Cultural Detail

Funerals are excellent demonstrations of local culture. Don't forget to take this into account when planning a funeral scene -- memorials of the dead take many different forms depending on where and why they are held. Religion is often concerned with death, so this is a good place to demonstrate religious details. This can be subtle (the details of a Greek Orthodox funeral differ from those of a Lutheran one) or extreme (perhaps the deceased is respectfully carved up and fed to vultures, as has been the real-world practice in some parts of Tibet). The social status, occupation, and culture of the deceased can also have a profound effect. To list just a few possibilities it could be a military funeral, a ship burial, a cremation (open or in a crematorium), an Irish-style wake (replete with raucous singing, music, and drinking) or perhaps an ancient Egyptian affair with weeks of ceremony. Even small things can be very relevant -- in some countries it is so important to have an open casket that even severe facial injuries will be covered by flowers if any of the face is at all intact. Other traditions, such as what constitutes mourning clothes (black? red? white?), or how freely people can show their grief are also worth considering. If the game in question is a fantasy or science fiction affair this is a chance to go all out with truly alien customs and ceremonies.

Plot Hooks and Unusual Circumstances

It's Your Funeral

Things can take a mysterious or downright weird twist if the dead person isn't actually dead at all. Perhaps they faked their own death for some reason. For example, vampires or other immortals might do such a thing regularly in order to avoid suspicion about their lack of ageing; and there's nothing to say that they wouldn't turn up in disguise, just to see what people do. Perhaps the person in the casket is not actually dead -- poor medical technology can lead to horrifying mistakes, but more dramatically it could be a Romeo-and-Juliet style affair with a poison that feigns death. The latter can be a lot of fun in melodramatic genres such as swashbucklers and romances. Then of course the concept of being buried alive can be profoundly horrific (it certainly inspired Edgar Allan Poe, as seen in *The Cask of Amontillado*). Last but not least, perhaps the funeral is that of one (or all) of the PCs. They could have staged it deliberately (and who could resist seeing what people did at their own funeral?), or it could be a genuine mistake. Tales of a ship lost at sea or a house burnt down could eventually result in a funeral for missing heroes, and what more dramatic time to have them finally return home than in the middle of their own funeral?

Funerals of State

The death of a head of state, or other important personage, is usually attended with a great deal of ceremony, and can offer very different opportunities from a smaller family affair. First of all, many (or even most) of the mourners will have had no personal relationship with the deceased, so for the most part only a few of the people in attendance will be genuinely struck with grief (and those real mourners can be used to great effect to make the others seem shallow and callous). Secondly, there will likely be a large number of attendees -- and that number makes a strong statement about how the dignitary was viewed by the public. A 10-mile-long stream of mourners waving pictures, flowers, and candles is usually the sign of someone who was greatly loved by the people. Likewise, the ceremony will be attended by other socially and politically important individuals, presenting an opportunity for well placed PCs to network, meet dignitaries and generally further their social position. If it is the funeral of a head of state, it can herald the end of an era and the beginning of a new one. If the heir is already chosen, this may be their first public event, and if there is some doubt about the succession the funeral will likely cover an undercurrent of intense intrigue.

You Can't Take it With You

The dead generally no longer need their possessions. Even in cultures where people are buried with wealth, there is usually more left behind than is ceremonially sent to the afterlife. What this means, of course, is that when anyone dies, there are often a lot of things at stake for the potential heirs. Squabbling over an inheritance can make an excellent framework for funereal intrigue -- and the more there is to inherit, the more potential heirs are likely to be involved. Such arguments can be petty or profound, and all sorts of interesting twists can be added by a will that leaves everything to someone unexpected (charity, or a beautiful young mistress, or an unknown illegitimate child). With the heightened emotions of a funeral all sorts of heated discussions could occur at the back of the church, or behind a partially closed door. And, of course, implications of foul play can be leveled at relatives who seem too ambitious, or foul play itself could follow the death as potential heirs start eliminating the competition.

Murder, Bloody Murder

Funerals are a great place to start a murder mystery, if the death is under suspicion, but there's also nothing to say that the death toll can't rise during the memorial. As previously mentioned, a funeral can serve as the backdrop for nearly anything, and both murder and suicide would not be out of place. People at funerals are often extremely upset, and an attempt at suicide by someone who intends to join the dearly departed could provide a tragic scene for the PCs to either witness or try to prevent. For the height of melodrama, mourners can throw themselves into the grave, or onto the pyre. Likewise, blame or greed could easily lead to a sudden killing. For example Lois McMaster Bujold's book *Cetaganda* revolves around an investigation of the mysterious death of a servant at the funeral of an Empress. In this kind of situation the funeral could provide the ideal starting point for an entire story, allowing the introduction of all the major NPCs right from the start, and overshadowing everything with the influence of the original dead character.

Voices from Beyond the Grave

Excellent mileage can be had from dead NPCs, and funerals are a good setting for their introduction. It is tempting to

view the dead person as a prop, but never forget that there are still many interesting ways to characterize them and have them add to the plot. First of all, the dead character may have left instructions for things to be read (or played) in the event of their death. A letter written before their demise (or some other recording such as a video) can introduce all sorts of interesting hooks, from hints as to what lead to their death, to great tasks they wish to see carried on after they're gone. Interaction with such letters or contrivances can be highly poignant (as their dreams and wishes, now come to naught, are revealed) or extremely frustrating (if their letters introduce certain malicious plans which no one can now revenge). Of course, it is possible that the dead person has left extensive instructions with a loyal servant or friend, which they are to carry out after their death -- giving the players an insight into the dead person's personality through the filter of their ally. In the right kind of game there really could be voices uttered from beyond the grave -- as the troubled shade arrives at their memorial service to accuse with a silently pointed finger, or to utter terrible prophecies.

Things to Consider When Running Funerals

The kind of preparation needed to run a funeral varies depending on what you want to do with it. If it is a simple memorial, conducted on the side of the road by a band of travelers, then you can likely let the PCs do most of the talking, and need only determine the contents of the dead man's pack and pockets. On the other hand, a funeral of state requires as much preparation as any party or social event. You will need NPCs, and few interesting scenes that the PCs can interact with (so they don't have to passively listen for hours), and an interesting eulogy. Depending on the effect you wish to achieve, you can actually write the eulogy (or part of it if it's long) and read it out as a grief struck NPC. Take care not to bore the players with long speeches -- this technique is most appropriate when you are using the eulogy to reveal important information. Conversely you could describe the general feel and content of the eulogy, and move on to more relevant things, such as an argument with the dead woman's lover. Of course, it's always possible to have one or all of the PCs speak at the funeral, which can help involve the players in the scene. This is an excellent choice when the dead person was also a PC or was an NPC very close to the main characters; similarly it is an interesting way to involve a highly placed PC with good public speaking skills in an affair of state. If you expect your players to actually speak, rather than tell you what they say, it is probably best to give them some prior warning so that they can prepare their speeches in advance.

Other considerations involve the number and type of mourners -- a funeral full of genuine mourners will feel very different from one full of people paying lip service. As an extreme example consider Neil Gaiman's *The Wake* (from the Sandman series), where everyone in the world sleeps and dreams of the funeral of the King of Dreams, also attended by angels, demons, gods, and spirits of every kind. The number of mourners can be very telling -- a funeral where the PCs are the only ones there could create a deal of sympathy for the departed (and allows the old tale of the millionaire who no one loved, who has left his entire fortune to whoever signs the register). Cultural detail is also important for such an event, and it is worth considering whether the ceremonies in use are appropriate to the culture of the dead person -- a traveler could be given rites that have nothing to do with their actual beliefs. On a similar note, it is wise to try to fit the feel of the funeral to the rest of the game. A generally sedate game suddenly interrupted by some of the theatrics and melodrama described above could come across as very disjointed; and supernatural horror has its place, but isn't appropriate everywhere.

Finally it is important to consider the wishes and limits of the players when running something like this. Players who are extremely upset about the death of the character (especially if it was their PCs) may not want to linger over the details of the ceremony. Likewise it would be crass to run such a scene for a player who is in mourning for a recently departed loved one in the real world. Be sensitive to such things before confronting your players -- funerals generally evoke far more emotion than a death which is swiftly passed over. Which, of course, makes them a wonderful tool for making a game more interesting and intense.

Designer's Notes: GURPS Shapeshifters

The Xigana: An Alien Race Outtake

by Robert M. Schroeck

GURPS Shapeshifters was perhaps the most difficult project I've undertaken, for a lot of reasons, but in the end it came down to the editing. I always write too much, it seems -- whether it's enthusiasm or a broken word count widget, I don't know, but I'm always seem to be 10% over the target word count.

Shapeshifters was no exception.

In the course of developing the book, I came up with a lot of weird and fun ideas, almost as many as the playtesters did. I wish I had had the space to give every one of those ideas the expression they deserved. As it was, I had to cut a lot of my personal favorite shifter types just to wedge the book into 100,000 words. Perhaps someday *Pyramid* readers will learn about the Bioprobes, or the Teilanar, or the Sleeping Werewolf, or the new version of the Were-rat I was working on right up until the last minute. Perhaps. For the moment, though, I'll content myself with sharing one of my favorites among the races that got cut, one designed to demonstrate a very, very odd variety of shapeshifting.

The Xigana

*Lemme tell ya one thing, kid, don't **ever** come on to a Xigana woman.*

*Nah, their men ain't jealous. Hell, the men pay hardly any attention to the women as women, if'n y'know what I mean. Now, Xigana women, they're real easy to look at, if you're not a Pure Earther fanatic, but you make one move on'em, and they'll spear you, like, with their eyes. It's like you stop bein' people to them, that you've sunk **below** animal and down to dirt.*

Coldest damned thing I ever seen.

--Overheard in Rohvin's Place, Eridani Free Port

Cool, Collected, Sophisticated . . .

Among the races of the civilized galaxy, the Xigana are known for their sophistication, their fashionable aloofness, and their taste for tropical resorts and homes. Natives of a planet with a large axial tilt, they escape the fierce, frigid winters of their homeworld by moving to the warmest locales they can find, where they invariably find their way into the *ne plus ultra* of society. This isn't always the upper classes -- but it is always somewhere both low-key and intense. Xigana are frequently patrons of the arts; those who aren't are often the artists themselves, or at least their agents and promoters. A poor Xigana is a rare sight, which many feel is some small recompense for the fact that their race is dying out.

What the Xigana go to great pains to hide from the rest of the galaxy is that they are a metamorphic race. Much as earthly creatures like the weasel/ermine change color with the onset of winter, the Xigana change *form* in response to sustained cold weather -- from humanoid omnivore to great, shaggy carnivorous quadrupeds. This (to them) betrayal of their exalted status as sentients is more than an embarrassment, it is an obscenity, for humanoid Xigana are sterile and virtually non-sexual -- only their beast forms are capable of reproduction. Their entire culture is based around denying this aspect of themselves, and as a result, the Xigana are a dying race.

Xigana

10 points

Attributes: ST -1 [-10]; DX +2 [20]; IQ +1 [10].

Advantages: Appearance (Beautiful) [15]; Manual Dexterity +2 [6]; Reputation +1 (Stylish Sophisticates among the Galaxy at large, all the time) [5]; Voice [10]; Were-form (Two External Triggers [see text] -40%; Slow Change -25%) [20].

Disadvantages: Chauvinistic [-1]; Dying Race [-10]; Intolerance (Beings who are open or casual about sexuality) [-5]; Intolerance (Hairy or reptilian races) [-5]; Odious Racial Habit (Snubs non-biped, non-mammal, and small sophonts) [-10]; Parthenomania [-20]; Proud [-1]; Racial Secret: Dimorphism [-10]; Staid [-1]; Sterile [-3].

Racial Quirks: In denial about their shifting Prefer temperatures of 65° F or higher, and go to extremes to stay warm; Vegetarian [-3].

Skills: Performance (Mating Ritual) at IQ [2]; +2 to Savoir-Faire [1].

Taboo Traits: Carousing, Sex Appeal.

Xigana Predator/Fertile Form

Attributes: Enhanced ST +12 (No Fine Manipulators) [88]; DX +3 [10]; HT +4 [45]; Extra Hit Points +4 [20].

Advantages: Acute Taste and Smell +4 [8]; Alertness +5 [25]; Cast Iron Stomach [15]; Claws [15]; Damage Resistance +1 [3]; Discriminatory Smell [15]; Four Legs [5]; Penetrating Call [5]; Sharp Teeth [5]; Thick Fur [29]; Ultrahearing [5].

Disadvantages: Bestial [-10]; Dull [-1]; Horizontal [-10]; Innumerate [-5]; Mute [-25]; No Fine Manipulators [-30]; Poverty (Dead Broke) [-25]; Presentient [-20]; Sleepy (50%) [-10]; Social Stigma (Barbarian) [-15].

Skills: Climbing at DX [2]; Scrounging at IQ [1]; Stealth-DX+1 [4]; Survival (Arctic, Mountains, specialized)-IQ+1/IQ+7 [6].

Template Cost: 155 points.

Were-form Cost: 55 points.

General description

Xigana (the word is both plural and singular) are a race on the far end of the humanoid scale. Slender and smooth-skinned, they are deceptively fragile in appearance. Their skin color tends ranges between ivory and a pale blue, and their eyes are generally blue, green or golden. Xigana are completely hairless, without even eyebrows or eyelashes.

Their long, delicate fingers are tipped with thick, almost horn-like nails which both males and females carve and paint. Their mouths and noses protrude into something close to, but not quite, a snout. They have broad, flat (some say an herbivore's) teeth, but rarely smile.

Xigana are mammalian, the females possessing breasts similar to a human's.

Determine a Xigana's humanoid height normally for his ST; their weight is 20 pounds less than human normal for their height. In their four-legged "wintershape," their body weight remains the same as their humanoid form, and they measure about 40% of their humanoid height at the shoulder. The Xigana wintershape has thick, shaggy fur, a more prominent snout and ears, and distinct claws. Fur color will match the "summershape" skin color, or, less frequently, be a shade or two lighter; eye color remains the same.

Ecology

The Xigana are native to Gyrris, an earthlike planet fourth from its yellow G-Type star, with a gravity of .9 G. Gyrris has a 27-hour day, and orbits its sun every 510 of its days. Its surface is split equally between land and ocean, but the shorelines vary wildly with the seasons.

Gyrris has an axial tilt almost double that of Earth, which results in extreme seasons that seesaw between conditions almost unimaginable to humans, despite the fact that the planetary average temperature is almost exactly the same as Earth's. Its weather patterns are wild and chaotic, and a large percentage of the planet's water is caught up in its endless storm cycles. Winters on Gyrris are bitterly cold and wracked by almost constant blizzards; summers combine the temperature of Death Valley and the humidity of a swamp with daily thunderstorms, punctuated by frequent monsoons and hurricanes. Its polar ice caps expand and recede visibly over the course of the year.

The Xigana's niche in their world's ecology is roughly equivalent to humanity's on Earth, even excluding the obvious parallels between intelligent species. Their shape-changing biology is not unique -- more than a dozen other species on their homeworld (most of them unrelated to the Xigana) shape-change in response to the cycle of seasons. As might be guessed, Gyrris attracts a large number of xenobiologists and other researchers.

The Xigana's change, like that of the other shifters on Gyrris, is environmentally triggered. If a humanoid Xigana is exposed to temperatures below 40° Fahrenheit for at least two hours, a change to wintershape begins; if there is a potential mate present at the same time, the individual will also feel a compulsion to begin a mating ritual (see below). Predator-form Xigana have an opposite trigger: two or more hours' exposure to a temperature of 70° F or higher returns a Xigana to the humanoid form. The shift between forms takes about one Gyrrisan day, during most of which the individual remains active (though sluggish). The final four hours of change, though, completely incapacitate him.

Because of subtle nutritional and hormonal requirements, a Xigana should go through at least one pair of changes per year. Failure to do so has no immediate ill effects, although apostate Xigana medical researchers (whose work has long since been suppressed) believed that regular changes could prevent certain varieties of cancers and several other diseases that operate by systemic disruption.

Reproduction

Wintershape females are always fertile; couples mate for life and do not stray when in predator form. Gestation lasts 200 days, during which the female's body produces hormones that prevent reversion to summershape should the weather change; the production of these hormones tapers off approximately six weeks after giving birth.

Xigana offspring are born exclusively in wintershape, in litters of two to four. "Pups" are able to walk and function within three weeks of their birth, although this precocity does not carry over into summershape; in fact, Xigana children take longer to learn to walk on two legs than most biped species, possibly because of their ingrained quadruped instincts. They do not gain the ability to take biped form until they are six weeks old.

Xigana are mammalian and can nurse their young in either form.

Psychology

Although to the galaxy in general Xigana seem well adjusted if somewhat effete and snobbish, they are in fact a mire of repression and denial. Inordinately proud of their position at the top of their world's evolutionary ladder, they deny to themselves (and hide from the galaxy at large) the fact that they shape-change into what they see as an inferior animal form.

Worse yet, from their point of view, is that their humanoid forms are sterile; they can only reproduce in wintershape. Combine this fact with an almost universal Xigana disgust with their "animal" alter egos, and the result is a race with deep-seated neuroses and sexual repression. To the average Xigana, the fact that they are required to turn into an animal in order to reproduce is an unspeakable obscenity; subsequently they have tarred *all* romantic and sexual

behavior -- up to and including the most innocent flirting -- with their disgust at their wintershapes. Other aspects of life are likewise affected; for example, while technically omnivorous, nearly all humanoid Xigana follow a vegetarian diet, looking down upon the consumption of meat as "unclean" and "animalistic."

Many Xigana take this to another extreme, looking upon the world that bore them -- and which requires of them the change -- as something to escape. As soon as they are able, these Xigana leave their homeworld, migrating and resettling somewhere, *anywhere*, where the local temperature never drops below 70° F. Those that can't resettle in warmer climes, or who for reason of employment or other obligation must make do with locations that suffer cold weather, are known for the remarkable extremes to which they go to remain warm during the winter: anything from the simple expedient of never leaving their homes, to the latest in temperature-maintaining arctic gear. The only option of which they do not make use is fur clothing, be it real or artificial -- the very idea disgusts them.

Culture

Attitudes like these have been cemented into Xigana culture over millennia by their inclusion in all the major Xigana religions. Even more significantly, the Xigana language itself attempts to deny and obfuscate their dual nature. The language (a M/H skill for non-Xigana) uses complicated tenses, pronouns and euphemisms to refer to their two forms, with the wintershape invariably treated (if it must be discussed at all) as an utterly different creature with which one has an unfortunate and reprehensible connection. One who has succumbed to wintershape is always "away" or "unavailable;" and offworlders who know better never, *ever* inquire about childbearing and offspring -- the only words for pregnancy and sex in the Xigana language are either obscenities, euphemisms or (rarely) obscure medical terminology.

Complicating matters is the fact that the Xigana possess a long, complex and heavily stylized mating ritual, at least partially instinctive in nature. As noted above, it is triggered by dropping temperatures, combined with the proximity of an individual of the opposite sex. An hours-long dance, equal parts touching intimacy and astounding savagery, it is strongly reminiscent of similar behaviors in earthly animals. Initiated while in humanoid form, the ritual ends with the act of mating anywhere from 24 to 48 hours later in predator form. While the change can occur without the ritual, the ritual *includes* the change and cannot complete without it.

Not surprisingly, the mating ritual is perhaps the greatest taboo in Xigana culture. It is never spoken of, even between a mated/mating pair. Native medical and psychological texts are maddeningly elliptical in their oblique attempts to refer to it without actually talking about it. And in every Xigana culture, any hint of its performance in a settled area is enough to have the offending couple arrested and executed -- if they aren't dragged off by a howling mob and lynched first.

Child-rearing is another delicate matter. "Pups" remain with their parents until their first transformation, which is usually some time in their first six months. After that, though, parents will hand over children to be raised in government- or church-run institutions, then go their separate ways, as often as not. The "nuclear family," as humans understand it, is an entirely alien concept to the Xigana.

Outside observers have noted that, as far as the cultural treatment of sexuality is concerned, the Xigana combine the worst aspects of Calvinism, Victorian prudery, and the most oppressive, reactionary branches of Islam. Even so, there are small, quiet rebel factions, trying to change the dominant social paradigm and shatter the racial denial. It will not come as a surprise to learn that these groups are almost universally outlawed on Gyrris, with execution the most common penalty for membership and activism. Additionally, rebels and social activists who attempt to operate off-planet and thus threaten the racial secret are often the targets of assassination squads dispatched by churches, government or even groups of "civic-minded" private citizens.

Politics

Although snobbish and standoffish, the Xigana freely mix in Galactic society. They tend to treat reptilian races and races possessing significant amounts of hair or fur with substantially more disdain than they offer other races, and they will ignore non-bipeds entirely as being "animals" and thus beneath them. They similarly categorize tiny races like the

Cidi (pp. A40-43). They can be at a bit of a loss upon first encountering races that do not fit easily into their pat world view (the Traders, Liook Sujan), but usually accord them "non-animal" status. *Any* race with no discernible romantic or sexual behaviors, such as (again) the Liook Sujan, often become objects of great respect.

Their government has no particularly special allies or enemies among the Galactic civilizations save for the usual suspects. Even so, they are happy to engage in commerce with any civilization -- even those they consider "animals," if a willing middleman can be found. They have parlayed their world's mineral riches and their own skills into a vast wealth.

Xigana Names

Adult Xigana names are usually composed of a personal name followed by an occupational surname. Personal names are two to five syllables long, each syllable being a consonant-vowel pair, plus an optional terminal consonant; sounds which are diphthongs and digraphs in English ("ae," "th," and so on) are common in the various dialects. Tegore, Kurathal, Rawonam, and Namapra are all common Xigana given names. There is no distinction between male and female names.

Occupational surnames may be as generic as "Baker," "Astrogator" and "Engineer," or they can become so complex that they are almost titles: "Chief Partner in Trade with Erapis IV," "Senior Regional Administrator for Evet Continent." As one might expect, such epithets can change many times in an individual's life.

There are no family or clan names. Immature Xigana are known by a given name and use the name of the institution in which they were raised as their surname. An adult Xigana with an institutional surname or no surname at all is regarded as shiftless and lazy. There are no honorifics or surnames indicating marriage/mating status, in the manner of the English "Miss"/"Mrs."

Xigana in the Campaign

As a race, the Xigana can be great fun for the GM: supercilious, obnoxious, and snobbish, without being at all evil. Many Xigana hold positions of power or influence throughout the galaxy, either because of wealth or because they are often good at imposing and/or managing hierarchies. A Xigana would make a good "manager you love to hate" for a group of player characters who share a Patron. Similarly, Xigana make good "shades of gray" opposition -- evil-seeming though not evil, simply unconcerned with what "lesser races" think is legal and illegal.

On the other manipulator, a renegade or insane Xigana can provide a sudden and unexpected plunge into a **Horror** scenario for players expecting a more conventional **Space** encounter: the mysterious, murderous beast that stalks an unsuspecting town or city in the depths of winter. Although their long shift times don't allow the kind of instant disappearance that makes a traditional werewolf story all the more creepy, the presence of a large, shaggy, and most importantly *intelligent* carnivore where one ought not to be can make for an adventure interesting not just for its combats with the beast, but for the investigation done to find out just what it is and where it is from. To add an extra fillip to such a scenario, have a team dispatched from Gyrris to hunt down the "dangerous animal" that they claim was illegally exported from their world.

Other Settings

While obviously designed for use in a **GURPS Space** campaign, the Xigana can be used as-is in a number of other settings. As always, **Atomic Horror**, **Black Ops**, and similar settings can make use of an apparent werewolf, especially if the more obnoxious aspects of the Xigana racial personality are tuned down a bit. The "monster-that-isn't" is a useful device, especially if players need to learn that shooting first isn't always the best tactic.

With a little modification, the Xigana can become a **Fantasy** race. The "scientific" justification for their shifting abilities must be discarded, of course, unless the game world is extremely un-Earthlike. Alternatively, it would not be hard to make them a magical race from the distant Northern or Southern sub-arctic regions of the world. For further

complications, they could be mistaken for more conventional were-creatures. If such weres are evil, that may well be why the Xigana are hiding their nature.

Xigana Characters

Because their shifting abilities are so slow and are all but involuntary, shape-changing will probably not be the primary reason one would choose to play a Xigana. Their complex suite of motivations, behaviors and beliefs, though, make them an intriguing roleplaying challenge.

Xigana characters can fit easily into a standard 100-point campaign. The GM should be aware, though, that unless there is a reason (or repeated reasons) to threaten the racial secret, much of the point cost of this race is wasted on a player character in an exploration/survey or interstellar war campaign. And after the third or fourth time, threats to the secret will not only grow old or repetitive, but will increasingly appear engineered.

Player character Xigana are probably better off as rebels and social activists in a more political campaign. Working quietly with a few trusted friends on several goals including liberalizing their repressed homeworld, they can reveal or conceal their shifting abilities as they see fit. Such characters often have an Enemy in the rest of the Xigana; their frequency of appearance is entirely dependent upon how vocal an activist the character is . . .

The GM may find Xigana NPCs easier to work with. They function well as patrons for any sort of treasure hunter, particularly those specializing in fine artworks. Others may support assassin teams aimed at off-world activists. Away from Patrons, the lone Xigana immigrant who seemingly has nothing to do with a mysterious "Werewolf" serial killer is a good campaign seed, if the GM can justify the necessary temperature extremes.

Sample Character: Tegore Inquisitor

Tegore Inquisitor is one of several "enforcers of orthodoxy" in the largest Xigana denomination, the Genevarians. While he administers to a local "diocese" as part of his duties, his primary job is the creation, dispatch and coordination of so-called "Orthodoxy Teams." These small "special forces"-like groups are assigned the task of capturing or assassinating those heretics who wish to drag the Xigana's secret shame into the sight of the debased Galactic culture.

A one-time officer in the Xigana planetary military, retired with pay due to injury, Tegore entered a Genevarian seminary, and now uses his skills to build the well-trained bands of troopers which protect the Xigana secret. He also makes frequent use of offworlder mercenary teams, who know little (and care less) about his reasons and their targets.

In person he is charming and friendly, with an endearing habit of starting to swear, catching himself, and instead saying something else innocuous and inoffensive. If forced into his "military" persona he suddenly becomes cold and intimidating -- although he still catches and corrects his swearing.

Tegore is not an adventuring character, and would not make a good PC unless the campaign is both political and based on Gyrris. As a frequent employer of offworlders for shady operations, he would be better used as a Contact or even a Patron (as a representative of the Genevarian Church). For characters less than sympathetic to the orthodox cause, Tegore is also a prime candidate for the "mastermind" behind their opposition; the fact that he is quite likable and not even particularly evil can add an extra level of complication to an adventure/campaign resolution.

Sample Character: Tegore Inquisitor

100 points

Xigana male, age 54; 5'10"; 140 lbs.; Ivory skin, green eyes, hairless.

ST 9 [0] **DX** 13 [20] **IQ** 14 [20] **HT** 10 [0]

Advantages: Clerical Investment/5 [25]; Patron: Genevarian Church, 12 or less [30]; Reputation +2 as Defender of the

Faith, Genevarian Church [4]; Status +2 [10]; Xigana [10].

Disadvantages: Duty to Church [-10]; Fanaticism: Genevarian Church [-15]; Lameness: Crippled Leg [-15].

Quirks: Dislikes offworlders; Intensely devout; Only uses stainless-steel canes; Peppers his speech with "near-miss" almost-swearing; Prides himself on organizing the best "Orthodoxy Teams" in the church [-5].

Skills: Administration-14 [2]; Bard-14 [2]; Beam Weapons/TL-16 [2]; Computer Operation/TL-15 [2]; Detect Lies-14 [4]; Diplomacy-14 [4]; Flower Arranging-15 [2]; Guns/TL-16 [2]; Intelligence Analysis-14 [4]; Interrogation-14 [2]; Intimidation-15 [4]; Karate-14 [8]; Knife-14 [2]; Performance (Instinctive Xigana Mating Ritual)-14 [0]; Performance/Ritual (Xigana/Genevarian)-17 [6]; Professional Skill (Genevarian Cleric)-17 [8]; Psychology (Xigana)-14 [4]; Savoir-Faire (Xigana)-16 [1]; Strategy-14 [4]; Streetwise-15 [4]; Tactics-15 [6]; Theology (Xigana/Genevarian)-16 [6].

Tilting at Windmills

by S. E. Mortimer

Introduction

The mill was an integral component of peasant society, yet it is often neglected when a GM designs a medieval village. This technological development was an important tax raiser for the local lord and the miller was often one of the most influential members of rural society; there are other features of interest to gamers in a medieval village just as important, if not more so, than the manor house and local tavern. This article has been kept free of system mechanics although **GURPS Low-Tech** is used as a reference. Also, **GURPS** currency (\$) is used for pricing suggestions, but enough information has been presented to allow the reader to convert to other currencies.

Windmill History

As stated in **Low-Tech** (p. LT85), the first wind-powered mills were developed in Iran in the 6th century for grinding grain. These were horizontal mills with sails that rotated in a horizontal plane around a vertical axis (like a modern revolving door). These mills were fairly inefficient since they were entirely reliant on the wind speed to determine the grinding speed of the millstone.

It is likely that during the Crusades the windmill was introduced to Europe, where it evolved into the more efficient vertical shaft mill. This type of windmill usually incorporates four (sometimes more) vertical sails rotating around a horizontal axle (the "windshaft"). A wooden gear on this axle turns another gear on the vertical post. A millstone is attached to this post and the gear ratio is set to allow a reasonable grinding speed based on the average winds of the area. During the Third Crusade, the improved vertical shaft mill had been taken back to the Middle East. By 1195, windmills were common enough in Europe for Pope Celestine III to levy a tithe on them. He claimed that the air used by the windmills was provided by God and, as such, fell under Church jurisdiction.

The two most innovative countries in regards to windmill technology were the British and the Dutch. Windmills were primarily used to grind grain ("grist mills") but other uses include pumping water ("polder mills"), extracting oil from seeds ("oil mills"), and cutting timber ("saw mills"). The main disadvantage of the vertical shaft mill is that it must be rotated to face the wind. Smaller mills (see *Post Mills*, below) were rotated by means of a long wooden arm, called a "tiller beam," which could be lifted and moved by one person. Larger mills used devices such as treadwheels to rotate the roof-cap mechanism. Later windmills incorporated a large fin (called a "fantail") projecting from the rear of the roof-cap to keep the vanes pointing towards the wind.

Windmill Development

There are three main categories of windmills based roughly on size and technological advancement.

Post Mills

These were the earliest and smallest type of windmill, so-named because of the large central post upon which the housing was balanced. As stated above, a long "tiller beam" was used to rotate the entire structure around to face the wind. The tiller beam also provided an attachment point for a ladder to gain access to the mill.

Smock Mills

These appeared during the 14th century. Instead of rotating the entire structure to face the wind, smock mills consisted

of a fixed main structure, which contained the milling machinery and a rotating roof-cap, which held the windshaft, braking mechanism, and the sails. The roof cap could be rotated by means of a large treadwheel or perhaps via animal power. This development allowed the windmill to be built much larger, enabling more auxiliary machinery to be housed; and much higher, enabling longer sails to catch more wind.

Tower Mills

Similar to smock mills but often larger and made of stone instead of timber. The larger size improved the efficiency of the windmill, and the stone construction provided additional defense against attacks. These windmills were large enough to live in and even today, windmill caretakers (sometimes called "windsmiths") and their families are housed within restored tower mills.

Large tower mills might have multiple floors (as many as 10) devoted to grain milling, flour "boulting" (sifting), removing chaff, and storage. The ground floor served as the living room and master bedroom for the miller. It usually contained a bed for two people, a kitchen alcove, and some storage space. Children would either sleep under the parents' bed or on the upper floors. In smaller windmills children might sleep in platforms mounted up close to the cogwheels. Windmills were drafty and noisy places in which to live.

Feudal Obligations

During the Medieval period it was obligatory for people to take their grain to the mill, which was owned by their local lord. He may also have been the king or the bishop of the nearest monastery or cathedral. Each manor's charter contained a section called "milling soke" which governed mill operation. This was a rigorously enforced monopoly. There is a recorded incident of a man being excommunicated for not taking his grain to the bishop's mill, and there were laws forbidding the ownership of "querns and hand mills." This was a good revenue raiser since the lord kept a percentage of everything that was milled (called "multure"). Archaeological remains reveal the presence of many medieval hand mills, so it is likely that peasants avoided paying multure by grinding at least some of their own grain. Punishment for getting caught usually involved confiscation of animals and grain, or the cash payment of a fine. The larger the landholding, the greater the fine. The lord, in return, was responsible for having enough mills to meet the needs of his people and for handling major repairs. In later times, probably due to labor shortages caused by the Black Death, the lord would rent his mill out to the local miller. He would still retain the right to have his own grain milled for free and expected preferential treatment.

Windmill Operation

Construction

The building of a new mill would have been a fairly rare event in the history of a community, and likely to stir a great deal of interest and gossip. It would also have provided a good source of employment, albeit temporary. The average cost of building a windmill in England, in the 13th-14th centuries was in the order of £8 for a small post mill, £15 for a smock mill, and £25 for a stone tower mill. In **GURPS** terms, this translates to around \$3,200, \$6,000, and \$10,000 respectively (see *Wages and Pricing*, below). Almost all (around 95%) the cost of constructing a mill would have been for labor, while the cost of purchased materials made up the balance. The costs broke down as such:

Labor

Carpenters	35%
Unskilled laborers	25%
Transportation	20%
Roofers	5%
Smiths	4%
Woodcutters	1%
Other	5%

Materials 5%
(timber, millstones, brass, iron, lead, canvas, stone, grease, prefabricated components, etc.)

Maintenance

About 10% of the costs of construction were spent each year on repairs and maintenance. The majority of material costs were for replacing millstones. Two stones were needed -- the top "runner stone" and the bottom "bed stone." As a runner stone wears, it becomes thinner and lighter. Eventually it is not heavy enough to crush the grain and "floats" on top. Once this happened it needed replacing. Basalt was the preferred material and "blue" millstones from Germany (called "Cullin" stones) were considered the best. They usually cost four to five times the price of a local stone, but produced finer, better quality flour.

Production

The top "runner stone" was made with a hole in the center. Through this opening extended a spindle on which the runner stone rested. Grain was milled by hand feeding it through the hole. The runner stone was turned above the stationary bed stone, grinding the grain, and the resultant "meal" was collected. The meal was then sifted ("boulted") into different grades of flour through some sort of fabric -- linen, muslin, and silk made the best boulting cloths. A typical windmill (smock or tower mill) could grind about six bushels of grain an hour if the wind was steady. A good weekly throughput was about 1,000 bushels. Smaller post mills could grind maybe a quarter of this. A bushel was equivalent to approximately eight gallons of dry goods.

The lowest grade of flour came straight from the mill and was unboulted. The first boulting removed larger pieces of bran but smaller pieces remained and the flour was still fairly coarse. This was used for rough breads and "trenchers." *Twice bouted* flour is of a fine quality and used for typical breads and pastries. The finest flour was bouted a third time to remove any remaining traces of bran. Sometimes it was also bleached to further increase its whiteness. Bread made from this white flour was the most desired, but less nutritious than bread made from more coarse flour. The discarded bran was usually used as animal feed.

Wages and Pricing

An average skilled craftsmen in England, such as a carpenter, in the 13th and 14th centuries, earned about three pence per day or £3 per year. This assumes he worked an average of 240 days per year. If more work was available (not likely unless he was in a large city and had a good reputation) then he could earn more. A common laborer earned about half this amount. During the same time period a bushel of wheat was worth approximately 18 pence, or six days' work for our carpenter. According to *Low-Tech* (p. LT8), a carpenter earns about \$100 per month (around \$5 per working day) and a laborer earns \$60 per month (\$3 per day). Using this we can look at contemporary inventories and determine approximate \$ prices for various grains, before and after processing.

Grain prices (one bushel = 8 gallons or 4 "pecks" of dry goods)

Item (One bushel)	Weight	Cost
Oats	32 lbs	\$14
Maslin*	56 lbs	\$24
Barley	48 lbs	\$25
Wheat	60 lbs	\$30
Maslin flour*	54 lbs	\$28
Wheat flour, coarse	56 lbs	\$35 (first bouted flour)
Wheat flour, brown	56 lbs	\$45 (twice bouted flour)

Wheat flour, white 56 lbs \$60 (thrice bolted and bleached flour)

** maslin is mixed grain -- mainly rye with a little wheat and barley.*

Note that these are guidelines only -- simplified prices to assist roleplaying. The actual price of grain, especially wheat, fluctuated greatly even in supposedly economically stable times. This is probably because people had little wish to substitute wheat products for other foods during times when the supply of wheat was unpredictable.

The Miller ("Millwright")

The European reliance on grain products -- especially wheat -- as a dietary staple meant that the mill was a crucial piece of infrastructure and its miller usually had a high social status in the local community. Often he ranked third in social standing -- only the lord of the manor and the parish priest ranked higher. Millers also had a reputation for dishonesty, as portrayed by Chaucer in "The Miller's Tale." One interesting custom was if the miller was discovered taking more than his due, his apprentice would be hanged rather than himself; this was possibly because a master miller was too valuable to execute. Over time it became more common for a farmer to sell his grain to the miller and then buy back processed flour, rather than allow the miller to keep a portion for his services. This meant that the miller became increasingly responsible for finding markets for the village harvest.

The millwright's job was not an easy one. Windmills were complicated hybrids -- a cross between buildings and machinery. Their construction, maintenance, and operation required great skill and long experience. The millwright's skills were passed down from father to son, so a single family could be in control of a windmill for many generations. Hazards included lightning strikes and fires. Sudden wind gusts were also dangerous -- windmills were designed to withstand strong winds from the front only, so "tail winding" could result in serious damage to the sails and machinery.

In spite of the difficulty of the job and his high social standing, a miller's official income was surprisingly low; manorial records indicate that an average wage was maybe six to eight shillings per year for a miller who was a servant of the local lord. This wage was expected to be supplemented by grain livery but even with this toll, his total yearly income would have been modest -- maybe £2, or around \$65 per month -- significantly less than our carpenter. Sometimes the miller would set up a brewery or distillery to supplement this income and sometimes, as mentioned above, he would resort to less honest means to increase his livelihood. In later times, after the Black Death, a self-employed miller, who was renting the mill from his lord, could expect a much more comfortable income.

Roleplaying Suggestions

The importance of the local mill to peasant society means that many encounters in rural villages would involve either the windmill or its miller. Some suggestions follow:

- One of the previously mentioned hazards (lightning, fire, etc.) has damaged the mill during harvest time and stopped flour production. The PCs may decide to wait for it to be repaired which means that other suppliers would get the best prices. Or they may risk breaking the law and taking their grain to an outside mill.
- The local miller has deliberately shortchanged one of the farmers in a bid to send him into debt. His plan is to increase the farmer's level of debt over time and eventually take over his land.
- The village is attacked by raiders and the PCs can't reach the fortified manor house in time. The windmill is close and its stone tower construction might make it suitable for mounting a defense . . .
- The local miller is wrongly accused of skimming from that which is rightfully due to the lord. He is in danger of being severely fined and

Windmill Semaphore

In the Netherlands, windmills could sometimes be seen for many miles and were used to send messages to distant neighbors. The stationary positioning of the four vanes allowed for four different signals. If the vanes were aligned horizontally and vertically, this meant that the miller was taking a short break. If the vanes were positioned diagonally, this meant that the miller was off duty. If the top vane was positioned a little right of vertical, then this meant

losing his miller's rights. The real culprit is one of the lord's servants who is responsible for supervising the manor's grain and flour stores. This servant has a relative who will be able to take over the mill should the original miller be discredited.

- The local miller is (rightfully) accused of taking more grain than he is legally entitled (a practice sometimes called "hanging up the cat"), but nobody is listening to the complaints of the local peasants. Chaucer wrote about the "miller's gold thumb," which is a reference to the practice of pressing one's thumb on the scales when weighing grain. Another trick is to adulterate the flour with contaminants such as sawdust.
- Some very fine quality (and expensive) millstones have been imported by the local lord. The heroes have been hired to escort the shipment from the docks to the lord's manor. The shipment is larger than the lord implied, though, and the PCs' first task is to find a vehicle (or vehicles) capable of carrying the heavy load.
- A local peasant has been caught with a hand mill. This is a crime because everyone is legally obligated to grind all their grain at the lord's mill. A fine was imposed that the peasant could not afford to pay. The lord has reconsidered and "graciously" decided to take the offender's only son as an indentured servant instead.
- The PCs arrive in a village in time to witness the laying of the foundation for a new mill; apparently this is seen as a big deal by the locals and they are celebrating with a festival.
- The mill's construction is being sabotaged. The local lord wants the PCs to discover the culprit. Since this mill will be the second one in the village, a likely suspect is the miller of the original mill. Perhaps he doesn't want competition.

joy and expectation. If the top vane was positioned a little left of vertical, then this meant sorrow and mourning. In World War II, during the German occupation, Dutch windmills were used to warn those in hiding of enemy activity.

Hopefully, the next time the party rides into a rural village they might have to deal with something other than finding a bed for the night and getting drunk at the closest tavern. The local mill is an important rural landmark and its wily miller is a man to be reckoned with -- his social standing makes him difficult to ignore and his disreputable character will keep the heroes on their toes.

Follow the Red Line Around the World

or, How to *Rune* you Pulps

by Brian Rogers

Robin Law's game *Rune* posits an intriguing concept: rotating GMs within a single session. One player starts running the game with his character as an NPC. The Vikings descend into the dungeon, have one or two violent encounters, and then the Referee hands control over to another player, who leads our horn-helmed heroes (yes, yes, but this is *Rune*, okay?) through another series of encounters. Continue ad infinitum, until someone runs a good climax. What you get is a series of combat and puzzle-solving scenes that are even more loosely connected than a traditional dungeon crawl.

While arguments can be made that this is far more of a tactical simulation than a roleplaying game, it does model the game's first-person-shooter origins -- a gratuitous excuse to pummel things into bloody smears -- with the added bonus of speaking with bad accents. Arguments aside, the core idea of swapping the GM position in the middle of the game is one that is transferable to another, more common genre. A genre where the characters routinely move from scenario to scenario with minimal bridging in-between, where the larger plot is something bolted on in loose moments.

This is of course referring to pulp adventure serials, which, while they rely less on pummeling into bloody smears, do have plenty of room for outrageous accents. (It could be used equally well for goofy *Austin Powers*-esque spy games.)

The practice is simple: the Prime GM develops a scenario introduction and conclusion, informing the players in advance of the villains and theme (for example Magic-Hunting Nazis, High-tech Smugglers, Gorilla Cultists, etc.). When the session starts, the Prime GM opens up the story, introducing the Villains, the Hook, and the Major stay-at-home NPCs. After finishing the first major conflict or puzzle he cedes control to the next GM in line *before introducing the clues to the next part*.

That's the job of the new GM, who introduces clues to lead the heroes on the next stage of their quest. In a globe trotting setting this can take them anywhere, and the new scenario needs minimal ties to earlier stages. The second GM provides his hair-raising story up to the next major twist, at which point he hands off, and so on. Eventually it comes back to the prime GM, who runs the wrap up scenario to re-introduce the main plot (which might have gotten lost along the way) and tie everything up into a neat ball.

Well, a ball anyway. And "neat" in the fun and interesting sense, if not in the tidy, loose-end-free sense.

Here's an example: Asha tells her friends she's running a *Rune*-Pulp game, focusing on High tech Nazis. Once they're together, she runs the first part of the adventure.

Asha: "Germans have stolen plans from the Princeton's physics labs." [PCs track down & defeat Germans, but the plans are gone!] "A search of their base reveals . . ."

At which point Asha hands control of the game over to Bob, the player to her right. Bob's PC, NY Cop Rick Delany, becomes an NPC as Asha takes control of Sun Li, her acupuncturist master of kung fu.

Bob: ". . . rubbings of ancient Sanskrit tablets! The tablets are kept at a museum in Cairo." [The little red line on the map runs from New Jersey to Egypt, and our heroes step out into the Cairo sun. They find the tablets were stolen and defeat the thieves] "After capturing the master thief, you see . . ."

And Bob hands the game over to Chip, the player on his right. Rick Delany is once again his

boisterous self as Tommy Caliber, aircraft pilot and mechanic, becomes strangely subdued.

Chip: " . . . him die before your eyes, victim of a poison tooth containing a rare poison only found in Crete!" [And the little red line runs from Cairo to Crete, where wait a band Nazi-hired of assassins.]

And so on, until Asha gets the GM reins back to close things out with the American Nazi Sympathizer being revealed by the last set of clues, bringing the heroes to his penthouse fortress (with zeppelin mooring station, natch!) to recover the stolen rocket plans in a final battle.

Notice how Bob's adventure had nothing to do with Asha's initial premise, but it kept the game moving. Chip's adventure had a nod to Asha's Nazis, but that had no effect on her plot -- the assassins could just have easily been renegades, Mafia stooges or anyone else. Including the Nazi connection just applies a degree of connectivity between the arcs. (For another example, take a look at Pyramid's experimental ["Around the World in Eighty Thrills"](#) series. While presented as a series of adventures for a single GM to run for his players, the rotating authors gives the series as a whole a disjointed feel.)

Since **Rune** is a competitive game, each player has to abide by certain rules for encounter design. While it is unlikely that you'd want to translate **Rune's** difficulty scales, there are other ideas to mine for a rotating GM Pulp game.

- **Protect the GM's PC.** While running, the GM's character is reduced to a supporting role. To make sure there's no favoritism, protecting him is the players' job - if the GM's PC dies, all of the active PCs get reduced experience. This accounts for a lot of the Pulp heroes' "leave no one behind" credo.
- **"But you're dead!"** If any PC dies, the GM can bring him back at the end of his rotation with a suitably pulpy explanation. (We all know the Nazi's didn't *really* switch baskets, right? But hey, it made the movie better.)
- **How the GM earns Experience Points:** During the time that a GM's beloved PC is an NPC his hero is still earning experience, based on how well he runs the session. The goal is to badly bloody the heroes without killing them. Dead heroes aren't to anyone's benefit, so GMs are rewarded for kicking them around, but not knocking them off. This might also explain the fascination with deathtraps . . .

While you might not get a seamless story, what you will get will feel much like the old adventure serials, with their cliffhangers, sudden plot twists and leaps to exotic locales. In the end the Square-Jawed-heroes, adventurous women and intelligent pet gorillas have a chance to save the world from this far-ranging threat. Next month you can bet another threat will appear, forcing them to once again strap on their guns, don their leather jodhpurs, and pack their bandanas for another round-the-world adventure.

Pyramid Pick

Skull & Bones: Swashbuckling Horror in the Golden Age of Piracy (for d20 System)

Published by [Green Ronin Publishing](#)

Written by Gareth-Michael Skarka, Ian Sturrock, and T S Luikart

Cover by David Leri

Illustrated by Andrew Baker, Richard Becker, Larry Byrd, Tim Divar, Steve Lawton, Mike Swann, Joel Talacko, and Brian Wells

192-page perfect bound black and white book; \$27.95

If your tastes run to flying the skull and crossbones as your flag and giving no quarter to your enemy, then the last 12 months have been rich in terms of pirate plunder. This is especially true if you have no objection to the *d20 System* as there have been three supplements published under those mechanics. Avalanche Press, despite the tasteless cover, provided a surprisingly decent historical treatment in [Black Flags: Piracy in the Caribbean](#), while Living Imagination Inc.'s *Pirates!* more a fantastic take on the subject plugged easily into the high fantasy of *Dungeons & Dragons Third Edition*. Those preferring to avoid the *d20 System* might find the pleasingly fast and simple *Bloode Island - Swashbuckling Adventures 1PG* -- recently released by Deep7 as part of their *Shriek!/Bloode Island Double Feature* -- more to their liking. (*Bloode Island* is also available in an expanded version using the *XPG* mechanics). And then there is the third *d20 System* treatment of all things piratical . . .

Skull & Bones: Swashbuckling Horror in the Golden Age of Piracy is the second release in Green Ronin's "Mythic Vistas" line, following on from the wonderfully comprehensive treatment of the biblical age in [Testament: Roleplaying In The Biblical Era](#). Written by T S Luikart, Gareth-Michael Skarka (author of the *Age of Empire* and *Underworld* RPGs), and Ian Sturrock (designer of Mongoose Publishing's [Sláine: The Roleplaying Game of Celtic Heroes](#) and [The Slayer's Guide to Medusas](#), *Skull & Bones* opts for a treatment of its subject half way between *Pirates!* and *Black Flags*. It is set in the Caribbean, or rather on the Spanish Main during the golden years of piracy between 1690 and 1720; essentially after the end of the war of Spanish succession in Europe which released both soldiers and sailors looking to make their fortune. The fantasy element comes in the form of the horrors unleashed by the displaced slaves hauled across the Atlantic from Africa's West Coast. Purposely mixed in with members of other tribes, their beliefs have combined with those of others to coalesce in the melange that is known Voodoo. Calling upon the spirits both dark and light, known as Loa, the Negro priests have at their fingertips magics and powers that have long been denied to good Christians everywhere, unless of course they happen to have a holy relic. Our stalwart pirates may also face more fantastic threats that have been hinted at since the arrival of the Spanish over two centuries before - - Amazons, Island Giants, Jenny Hannivers, Troglodytes and the Zombie.

Skull & Bones wastes little time before getting down to discussing and detailing its adaptation of the *d20 System* to the high seas of the early 18th century. These start with the changes from the core *d20 System*, the first of which is dropping all other races except for humans. The Barbarian, Fighter, and Monk Rogue classes remain little changed -- the Barbarian representing perhaps the disaffected Scots highlander and the like, while Bards, Paladins, and Rangers all receive alterations that remove their arcane or divine derived abilities. The Cleric, Druid, Sorcerer, and Wizard classes are all essentially emasculated as to make them unsuited to the setting. That said, some of the monsters given in the book do have these classes as their preferred ones, but whether they use the altered versions of *Skull & Bones* or

the originals from the *Player's Handbook* is not clear. Also gone from *Skull & Bones* are most of the magic related feats.

Skull & Bones only introduces five new character classes, three of a nautical nature and two tied into the world of Voodoo. The first of the former are Buccaneers, survivors on the islands of the Caribbean who raid boats that come close to the shore; while the Sea Dogs are traditional sailors, whether aboard merchant or pirate ships or serving in the navy of one of the sea going powers of empire. They are able to gain bonuses when sailing their favored ships. The third is the Shantyman, a replacement for the Bard class, who serve as musicians and singers of sea songs aboard ship. Besides possessing several bardic abilities, they can improve the morale of a crew or instill fear in another, and even compose songs of characters' exploits to increase their fame or infamy. Of the last two new classes, the Bokor are the dark adherents of Voodoo, rarely of a benevolent nature and akin to Sorcerers in their spell use, which they call "Wanga." These are gained from ancient pacts and stolen power, and whenever a Wanga is cast, the Bokor suffers damage to his Hit Points. The Hougan or female equivalent, Mambo, are the priests of Voodoo, as well as leaders, spiritual advisers, confessors, and doctors, bonding with and faithfully serving the many Loa to gain rituals and divine spells.

The overall impression of these five classes, and especially the Buccaneer, Sea Dog, and Shantyman classes, is that they all feel very light in terms of abilities, though they do receive a reasonable number of feats. And just five classes does seem somewhat scanty, and it should be noted that *Skull & Bones* lacks an actual "Pirate" class. But then, being a pirate is more of an attitude and what you do, rather than what you are in *Skull & Bones*.

Pleasingly, this supplement provides a clever set of options that plug into and replace parts of character generation, serving to make individualizing a character much easier. For starters, where characters in other *d20 System* supplements receive extra skill levels for being human, in *Skull & Bones* they receive a Background. These do give the four extra skill points, but add a little more in the form of Charisma bonuses and penalties for dealing with certain groups and a contact or two. For example, a Slave has Escape Artist 2, Bluff 2, a Charisma bonus when dealing with other Slaves, a penalty when dealing with slave owners and the upper classes, plus a pair of Slave or Ex-Slave contacts. Likewise a Gentleman or Lady Adventurer receives Diplomacy 2, Knowledge (Any) 2, the bonus when dealing with the Upper Classes or Authorities, the penalty when dealing with Lower Classes, plus the contacts. Other Backgrounds include Colonist, Native, Indentured Servant, Sea Devil, Scum, and Seaman; the format also lends itself to the creation of more. It would have been nice if the authors had included several more to reflect a character's military service during the recent war in Europe. Further, characters can also possess Fortunes, initially four. These are usually of a general nature, providing both benefits and drawbacks: Dolls Eyes gives you the look of a predatory shark and thus +2 to Intimidate checks, but a -2 penalty to other Charisma based skill checks. While the Kid Fortune makes a character thirteen years old and levies a -3 penalty to Strength, but until they turn sixteen they can never die from failed skill saving throws or skill checks. Good Fortunes can also be taken, but must be balanced by an Ill Fortune each. There is a good mix of all three types to choose from and some of the most fun include the "Ex-zombie" -- you used to be undead, but you got better; the Worm -- Peter Lorré at sea; the Parrot Perch/Monkey Magnet-- you have a helpful pet; you are A Kin to Whale and possess great girth; and Whiskey Johnny -- you are extremely alcoholic, as opposed to the mild alcoholism of the average pirate.

Beyond the five basic classes, *Skull & Bones* details six new Prestige Classes, three of which are for players who fancy their characters as duelists, with every level of the three providing a new and more advanced maneuver. The Diestro is the master of "La Destreza," the Spanish school of fencing which takes a scientific and circular approach to defense. The "Master of the Fence" is trained in the English school of swordsmanship that borrows much from boxing and wrestling, and teaches the flashy styles needed for prize fights. The "Masters of the Scrimia" lets characters focus upon the French, German, or Italian styles and allows them to mix and match maneuvers to define their actual school. Along with the maneuvers for each of these three classes, the rules allow characters to parry attacks by giving up an attack and then rolling higher than an opponent's attack roll. These rules are further supported with a complete listing of the "Code Duello" or dueling etiquette, plus a guide to pirate duels and prize fighting.

The other Prestige Classes are again related to the sea. The Mystic Navigator keeps an arcane connection with the sea, and learns to master the winds, reefs, tides and is eventually quite literally able to create land in the form of small islands, and finally sculpt the sea to a character's benefit. The Officer prestige class is actually divided between Sea

Officer, who commands a vessel, and the Warrant Officer, who provides special skills such as Carpentry or Surgery

Skull & Bones makes a number of changes to the ***d20 System*** to get everyone buckling their swashes. Characters are divided into three categories: Cannon Fodder, NPCs, and Player Characters. Cannon Fodder lack Hit Points and take damage directly from their Constitution attribute, and gain no Hit Points whatever their class and level. Both NPCs and Player Characters possess Hit Points as normal, but can take damage directly from their Constitution score once their Hit Points are expended. Suffer too much damage to Constitution and a character must roll on the Afflictions table, which can be anything from an impressive scar to loss of a limb. Thankfully non-lethal damage does not bite into a character's Constitution, and Hit Points recover literally in minutes! Constitution recovery still takes days though.

To further play up the cinematic style warranted by the genre of ***Skull & Bones***, characters also have more than one life! How many is kept secret by the GM, but since the setting lacks the *Raise Dead* and *Resurrection* spells, this is the only way in which a swashbuckling hero or sneering villain can return to fight another day. They work hand-in-hand with the "Rolling the Bones" mechanics that add more to the swashbuckling feel of ***Skull & Bones***. These involve a straight luck roll on 2d6, with high rolls gaining the best results. This is necessary whenever a character suffers a fatal event (such as losing *all* of their Constitution in a fight) and when they lose half their Constitution score and still wish to remain conscious or during the midst of a dramatic event, such as fighting a duel along the rigging spars during a typhoon!

The rules included in ***Skull & Bones*** cover just about every aspect of piracy on the high seas. Not just the tasks of taking a ship out on the open seas and into battle, but also natural hazards such as the tides and weather, cannon fire, fire itself, and boarding actions. In addition to detailing pirate life on board and ashore, they also cover vices and pleasures (drinking, whoring and gambling); plus fame and sway (how a captain manages to lead and control the rough democracy of a pirate crew).

Of course, the rules that everyone will be interested in are those for the world of Voodoo. Practitioners revere the dead and worship Loa, powerfully spiritual beings or gods that are of either the Old World (of which the most recognizable is Legba, Lord of the Crossroads), or the New World (most notably, Baron Samedi, the zombi lord, and Carrefour, who as lord of the midnight crossroads is the counterpart to Legba). Both Hougan and Bokor will need to interact with the Loa, though only the Bokor are likely to traffic with Djab, elemental outsiders of a malicious bent. Each Loa and Djab is thoroughly described as well as the burdens they might lay upon their priests and worshippers if they are not faithful enough. For example, Legba dislikes those who are disrespectful to the elderly or make use of modern technology, such as firearms! He punishes such persons by making them suffer the effects of age and penalizes initiative rolls; or in more extreme cases, Legba as the "Wandering Sun" will decide that he does not want to look upon the unfaithful and stop them going out during the day. As Hougan or Bokor gain levels, they learn rituals usually held in honor of a Loa or to celebrate a particular event, but also to petition them for favors. These can be actual spells granted to the petitioners or a spell like effect that is worked out by the petitioning player.

The darkest of the voodoo rituals, and the one, for which the faith is best known, is that of the Zombi Ritual. This is a means of turning a victim into a member of the living dead, by stripping them of their "Gros-Bon-Age" or soul, which is then stored in a specially prepared skull. In game terms the victim receives the Greater Zombi Template given in the section on "Monstrous Races," and then has as many days as their Constitution and Wisdom attribute modifiers before he succumbs to his undead status . . . Should his friends find and return the skull holding their "Gros-Bon-Age" to be crushed in front of him, his situation can be reversed.

Overall there is a lot of depth to the rules for the faith and magic of Voodoo. To get the most out of them both player and GM will be called upon to put no little effort in. Much of that effort is in roleplaying and adventuring whether going on a quest to assemble the components of a "Drogue," the only magical item which ***Skull & Bones*** allows in which a Bokor can temporarily empower with his Wanga, or in petitioning the Loa for favors. The effect of this is of course, worthwhile, as the powers of voodoo outstrip those of Christianity.

The flavor and setting of ***Skull & Bones*** is supported by an equipment guide, which is not as well illustrated as it could be; a thorough look at plunder with plenty of examples, including both unique and magical items; and the

forementioned section on "Monstrous Races." This includes write ups and statistics for the many Djab, which like all of the entries in the section are all nicely illustrated by Toren Atkinson; and an island by island guide to the Caribbean. Each is given an in period style map along with its history and exports. In addition, every entry is accompanied by at least one scenario hook, so that in effect a **Skull & Bones** GM has at their fingertips over thirty ideas awaiting development. Green Ronin are supporting this guide from their [website](#) with expanded maps ready to download, along with the adventure, **Island of the Damned**, from Adamant Entertainment, who are further supporting this setting with the bi-monthly e-zine, *Buccaneers & Bokor*.

[SPOILER ALERT!]

The game is supported by an adventure "Welcome to the Account," designed for a party of 4th-level characters. It opens with the heroes having just found home on the Pirate Island of Tortuga, just north of Hispaniola. A pair of brothers needs a crew to paddle South to where a Spanish supply ship has berthed in a cove to avoid a hurricane. This makes her ripe for the picking, but how will the player characters react when it seems that the brothers delayed their attack on the ship and sent the characters in first? If they do, it will result in a duel -- a difficult prospect aboard ship, as the rules testify earlier -- and should they win, it will leave them with a prize and some interesting passengers! "Welcome to the Account" is only a short affair, offering only an evening's play at the most, but it is enough to get a campaign started.

[END SPOILER ALERT]

In comparison to **Testament: Roleplaying In The Biblical Era**, where its broad remit left it feeling slightly thin in terms of campaign advice, the authors of **Skull & Bones** conduct themselves with aplomb in a short and salty section. This focuses upon troupe style play, in which a player takes on the multiple roles of three different characters, one at 1st, 4th, and 7th level, essentially the swab level or ordinary seaman, the mates, and the officers. This could be the Captain, the Carpenter's Mate, and a Marine for one player or the Surgeon, the Captain o' the Tops and an Ordinary Seaman for another player. The idea is to get the players involved in all aspects of running a ship and allow for lower level characters to rise in experience and position aboard ship as higher level characters are killed off. This works well aboard Navy vessels where the discipline is tight, but less so in the rough-and-tumble democracy of a pirate ship. In campaigns where the characters are Pirate Heroes or of legendary status, this troupe style is not needed, as the focus is very much upon the one or two hero characters with a mass of crewmen or cannon fodder below them. In addition, there are nine campaign outlines given as alternatives to the usual themes. Each of a differing length, these nine campaign models offer plenty of variety upon the pirate theme, though some need more work than others do.

Physically **Skull & Bones** is a professionally done book, as you would expect from Green Ronin Publishing. The layout is neat and tidy, with the dark gray-colored margins used only occasionally for a side bar of text. Scattered throughout the book are boxes labeled "Legends of Piracy," each containing an illustration of a pirate or buccaneer of note. This includes a note of their Hit Points, class, and levels, but no other game information. The 15 or so described include well-known pirates such as Anne Bonny and Mary Reade, Sir Harry Morgan and Edward "Blackbeard" Teach, as well as lesser known ones like Pierre Le Grand, Bartholomew Portugues and Roche "Rock" Brasihano. What this volume does lack is a bibliography, which is a shame after the one given in **Testament**.

If **Testament: Roleplaying In The Biblical Era** was an excellent treatment of a subject little covered in RPGs, **Skull & Bones: Swashbuckling Horror in the Golden Age of Piracy** is a wonderfully atmospheric treatment of something covered many times before. **Testament** set the standard for the Green Ronin Mythic Vistas imprint and **Skull & Bones** easily matches that, and benefits further from covering a narrower subject. It combines the cinematic and the swashbuckling with a strong sense of history, powering this with a set of intelligent alterations to the **d20 System** that fits the game and the author's approach to it. Which is no surprise really, given Ian Sturrock's efforts on **Sláine: The Roleplaying Game of Celtic Heroes**. Equally and ultimately they achieve a tone throughout the writing that very much feels right for the genre.

It is not inconceivable that **Skull & Bones** could be used to run a campaign in the style of *The Princess Bride* (sans, of course, Fred Savage and Columbo), but really, this is the game with which to do *Pirates of the Caribbean*. It gets the historical aspects as right as it needs to, while adding everything needed to get that element of the supernatural and the

darkness that film contained. So splice your main brace, buckle your swash, set to quarters, run out the guns, and set sail for the Spanish Main, because piracy RPGs don't get any better than this.

Pyramid Review

Pirate's Cove

Published by [Days of Wonder](#)

Designed by Paul Randles and Daniel Stahl

Illustrated by Julian Delval

Graphic Design by Cyrille Daujean

Boardgame boxed set; \$44.95

Pirate's Cove is a legendary island in the Caribbean, a safe haven for scalawags of all persuasions, surrounded closely by five so-called "outer" islands where piles of plunder await. The life of a pirate captain in these waters is many things -- always colorful and adventuresome, often tense, and perhaps occasionally frustrating. Even in the frustrating moments, however, everything gushes with the romanticism of high seas piracy. Here, the pirate lifestyle has been boiled down to its essence: sailing to islands, plundering their valuables, taking them away to be buried, and blasting a broadside into anyone who gets in the way. Treasure, it should be noted, is not the real motivation for the denizens of Pirate's Cove. Fame is what a pirate captain is really after, the immortality of Blackbeard or Bartholomew Roberts. In 12 months, a pirate can rack up enough notoriety to make his name and his fortune or he can be swallowed by the tide of time and never heard from again.

Surveying the islands, the first thing anyone will notice is their lush beauty. From the gray battlements of the fort on Cannon Island to the eerie skull-shaped rock that juts out from one corner of Treasure Island, one couldn't pick a better environment for exercising one's rapacity. Talented local mapmakers Julien Delval and Cyrille Daujean have produced a sturdy map that captures every gorgeous detail of the islands in deep, vibrant colors. Their map clearly displays all the locations a pirate would want to sail to: on its edges are the five outer islands -- the scurrilous Tavern Island; the industrious supply islands called Hull Island, Sail Island, and Cannon Island; and the all-important Crew Island, populated by seasoned sea-salts just waiting for a new captain to sign up with. In the center of the map are Pirate's Cove itself and the even better known Treasure Island, where every successful plundering raid ends with a satisfying month of booty-burying. (Delval and Daujean's map also has a handy numbered track around the outside for monitoring the relative Fame of all pirate captains; "Fame Points" are, by pirate compact, used to count the usually ephemeral quality.)

Competitors for glory among these islands choose every month (remember, they're trying to collect the most Fame in one year -- 12 months) which of the islands to sail to. No one can be sure where his opponents will choose to go until everyone has arrived. And pirate ships, as we all know, find it difficult to cohabitate, especially when there are spoils to be had (which, as we shall see, there most definitely are). There can, ultimately, be only one ship at each of the outer islands. Pirates that meet in the harbors of each of these islands must fight until all but one have retreated. Only then can the island be plundered and its benefits exploited. Combat, as explained in detail below, is always risky, so the navigational decision at the beginning of each month is crucial to a captain's success. It takes a keen sense of others' needs and desires, as well as a healthy dose of instinct, to choose the most profitable location that is least likely to have other visitors.

Putting an extra knot in the rigging, as it were, is the prowling of a legendary pirate who makes a predictable but still bothersome circuit between the outer islands and Treasure Island. Be he a famous pirate of history (Blackbeard) or a rascal believed to be from the pages of fiction (Captain Hook), the awesome firepower of these villains makes the seas

seem that much more crowded, effectively eliminating their current location as a possible destination for all but the bravest and best-equipped. Vanquishing one villain inevitably summons forth another who picks up the cycle where it was left off. What dread pact has been forged to maintain this endless vigil around Pirate's Cove is hard to imagine.

Such are the deterrents, then, for settings one's eye on a particular island. Thankfully, the incentives are just as strong. First, each island has a purpose. Most let you pay doubloons to upgrade the quality of one of your ship's key elements: the Hull, Sails, Crew, and Cannon. These locations, you will have guessed by now, are named in a straightforward manner. On Tavern Island, a pirate captain can pay money to receive a random boon, which might be a special battle tactic, a devastating package of one-use cannon shot, the aid of a skilled craftsman for upgrading your vessel beyond normal means, or the most valuable boon of all, the parrot of one of the great pirates of legend. The knowledge these four famed avians have acquired is not to be scoffed at. Captain Flint's Parrot, for example, can teach a captain how to carry an unlimited amount of treasure on his ship. Long John Silver's Parrot makes any captain devastating in ship-to-ship combat. You can only have one parrot advisor, of course, and be warned: if the creature is killed, its new owner will lose some of his precious Fame. (By the way, all the boons gained from Tavern Island are conveniently recorded on small full-color cards that a captain can simply give to the grocer on his ship for safekeeping).

Before getting on to the reasons for visiting Pirate's Cove and Treasure Island, one other fact about the aforementioned "outer" islands should be noted. Each contains a random amount of booty in four forms: pure Fame Points, gold doubloons, treasure chests, and, occasionally, free supplies and boons like those purchasable on Tavern Island. A typical treasure stash, then, might include one Fame Point, five doubloons, and three treasure chests. The single pirate captain that ends up on the island bearing this stash gets all of those goodies.

Doubloons, as already noted, are useful on the outer islands for upgrading your ship. Treasure chests are a little less versatile. Let's face it: they're heavy and unwieldy, just as likely to be filled with bizarre Incan artifacts as gold coins, and everything inside usually works best as a set anyway. (That silver Spanish oyster-fork is much more valuable with the rest of the silver Spanish tea service than on its own.) For these reasons, sailors around Pirate's Cove prefer to keep their treasure chests closed and stored safely away in their ships' hulls (which may or may not have room for all of them; excess chests will have to be tossed overboard unless the captain happens to be on Hull Island and can upgrade). Until, that is, the ship moors off the shores of Treasure Island, where every chest onboard is summarily off-loaded and buried, each one earning a single Fame Point for the pirate captain burying them. Doubloons, it should be noted, can be buried as well; every three doubloons buried earn one Fame Point.

The last island, Pirate's Cove, is a place a pirate captain hopes he never has to visit. Indeed, he will never willingly choose to go there. It has little of value -- no upgrades and no booty. What it provides is a safe haven for repairing a battle-damaged ship (which costs a couple of doubloons). When forced to retreat from combat, Pirate's Cove is the defeated captain's inevitable destination.

Ah! Combat! Yes, that's what you've really wanted to hear about, isn't it? Well, to understand combat, we must first discuss ship upgrades. You see, besides the Hull that determines the number of chests that a ship can carry, all ship elements give an advantage in combat. Sails provide speed and initiative, allowing the well-rigged ship to maneuver and fire before its opponents. Cannon, of course, blast holes in the enemy, but they require a Crew member each to fire. Thus, pure offensive power is determined by either the number of Cannon or Crew, whichever is lower.

There are important choices to be made in combat, but ultimately plenty of luck is needed, too. A captain can choose which of the four elements of his enemy's ship he wants to aim his cannon at. Common sense dictates that the least upgraded element is generally the best target, since each hit will degrade the element by one step. If just one of the ship elements is reduced to effectively zero, that captain is on his way to Pirate's Cove. Sometimes a wily captain will try to take out the Crew or Cannon of his opponent, to temper any later attacks. The strategies are by no means endless or complex -- they do get a little more interesting when there are more than two combatants -- and generally the best target will be readily apparent to all. The real test is what happens once the cannon are fired, when the captain has no more control than a sailor who's three sheets to the wind. As mentioned, Lady Luck is the final arbiter, and even the biggest broadside has a chance of hitting nothing but minnows. You may as well be rolling a six-sided die for each manned cannon and counting the number of fives and sixes you get.

Many a naïve young sailor has come to Pirate's Cove thinking that there's glory and riches to be found in ship combat. But they're in for a rude awakening. Given the abundance of booty and Fame to be found on the outer islands, it's just not profitable to go picking fights. Every hit to your ship is a pile of doubloons down the drain, and makes you more vulnerable in later combats. It also limits your reasonable island choice each month, as there's only one place to go to improve a particular ship element. This, in turn, makes your moves more predictable to anyone wishing to hound you, and likely keeps you from being able to go dashing after the valuable treasures found on other islands. The pirate who avoids combat most assiduously (and only gets into those fights he knows he can win handily) thus maintains his freedom of movement and gains the advantage of being able to confidently enter a battle when the stakes are worth it. It may not match everyone's view of classic piracy tactics, but it is a fascinating dynamic of competition.

Unfortunately, the seriously detrimental effects of combat also mean that those who make some unlucky choices early on might be nastily crippled for the remainder of the game. I remember one year the most infamous pirate had 45 Fame Points while the most forgettable ended with 10. That won't happen often, but it is definitely possible to get in a position where catching up is extremely improbable. A willingness to fight for third place will keep you from feeling too disappointed when your adventures are over.

You want my opinion on the whole bloody affair? Well, if you prefer your competitions to be purely strategic battles of the mind, you're better off playing Nine Men's Morris with the other fops in the safety of the governor's mansion; **Pirate's Cove** is a place where even the best laid plans can flounder and sink. But, there's no shaking the sense of swashbuckling excitement while you're spending your time around these islands. It's enough to make anyone feel like Captain Blood or Sir Francis Drake, and even the loser will have plenty of stories of valiant combat and sneaky maneuvers to share by the end of it all.

Dork Tower!

Dork Tower!

Two Hundred . . . Whats?

Two hundred milliseconds ago I was typing the word "milliseconds."

Two hundred millennia ago humanity was just about getting its genes together and thinking of itself as "modern." The world's first argument over pizza toppings took place shortly thereafter.

Two hundred seconds ago I was Googling furiously for "200,000 years ago."

Two hundred centuries ago the world was in the midst of its last major ice age; furious Googling indicates that the British Isles were even *chillier* than they are currently.

Two hundred minutes ago I was editing the rest of the articles for this week's issue, fighting off what's threatening to become a migraine.

Two hundred decades ago the common timeline was counting forward from zero, although people wouldn't realize this for another millennia or so.

Two hundred days ago Kenneth Hite's Suppressed Transmission was in the middle of its [200th column](#) celebration.

Two hundred years ago the United States had just about finished buying Louisiana from Crazy Napoleon's Going-Out-Of-America Sale. ("*Nos prix sont si bas, ils sont **fous!***" went one overplayed radio ad of the era.)

Two hundred weeks ago I started writing a column called Random Thought Table.

And I haven't stopped yet.

Of course, coming up with something neat and snazzy to mark this 200th column has turned out to be non-trivial; I've already written about [anniversaries](#), [time](#), and [Girl Scout Cookies](#). Most relevant comments made during my [100th column](#) still apply (assuming I made any relevant comments in the first place). And I can't have *too* much congratulatory back-patting, because I'm saving that for my fourth anniversary in February.

But still, it seems like a shame to let any kind of milestone go unnoticed (or, at the very least, get mined for a column topic . . . although considering that I *still* haven't trotted out my writer's block column -- a sure sign of writerly desperation -- I think I'm doing okay).

And as I was lying in bed last night for an all-too-brief nap, mulling over the implications of this milestone, I was trying to put it in perspective:

- If *Pyramid* was a monthly magazine, like *Dragon Magazine*, I would have been working on it for over 16 years . . . more than half my adult life.
- If it was bimonthly, like *Dungeon Magazine*, it would have been around longer than the gaming hobby.
- And if it was a daily-updated site, like *Salon* online, I would have been here just over six months (no doubt a smoldering stressed-out puddle of goo by now).

I started pondering the gaming potential of these kind of shifts, and I realized that all kinds of possibilities open up once you step back and view a campaign or premise through these different kind of lenses.

For example, the **Traveller** universe posits, as a core premise, that jumps between game worlds take a week each. This nicely limits the setting in a gamer-friendly way, making it difficult for outside forces to interfere with a situation and limiting options of sprinting around to other places for help or resources. ("The thing we need to thwart the Planet-Eater is on planet Boofar! Quickly, to the jumpship!" "Uhh, captain? It'll take two weeks to get there and back." "Hmm . . . That's a lot of eaten planets between now and then . . .")

But one interesting side effect of *Traveller's* jump travel is that those utilizing it experience time much less than the relative week; if someone jumped an obscene number of times, they would find themselves a fair bit younger than their non-jumping counterparts.

So, what happens if you view that one-week limit with a different lens? For example, what if each jump takes a constant *year*? Well, this would probably have two logical effects. First, all else being equal, jumping would probably become less common; after all, if all your non-jumping friends keep aging normally, then you'll leave them behind in your youth as they continue to age. But if a group of stalwart adventurers -- say, the PCs -- has a reason to travel (travell?) a lot, then suddenly the campaign almost stops being a space campaign and instead becomes a *time travel* game . . . albeit one limited to movement in one direction. After all, each time they enter a new world, they've also advanced a year in time. If they start out on a home planet, go somewhere and then return, at least two years will have passed for the PCs (even if it's only been a few minutes to them); the possibilities for plot should be obvious then.

The lens of alternate scales can be used in other games as well. For example, traditional vampire lore has a bitten victim turning into a vampire after a day or so. (Well, an evening, but you know what I'm saying.) But what if that was turned on its ear, so that a bitten victim will turn into a vampire after a decade, with the victim being perfectly normal in the interim and the transformation taking immediate effect after the 10 years? Consider the plot hook possibilities; any starting PC with this affliction immediately has focus for adventuring, since he only has 10 years to get as much done as he can with his life. And, in an existing campaign, giving the PCs a 10-year-bite will probably give the campaign some focus for a number of adventures. Or, if nothing else, it will provide PCs and NPCs alike with an interesting bit of background information; how would you feel if you learned that your sensei, new love interest, or neighboring enemy lord had a bite that would come to vampiric fruition in three years, six months, and 17 days?

The post-apocalyptic zombie movie *28 Days Later* basically uses the same concept; typical zombies take a minute to shamle across a room . . . what if it took them a *second*?

You can get all kinds of interesting concepts if you apply the distorting scale of different times, and the neat thing is you can contemplate distorting numbers for *any* situation. For example, the standard President here in the United States is elected to a four-year term. What if there was an alternate universe where leaders were elected as near-monarchies for four *decade* terms? Or envision a post-information-age hyper-democracy, with the President elected every four months. Either one can provide an interesting backdrop for a group of world-hoppers, all by changing one variable. (Of course, once you hit upon an interesting idea, you can tweak it accordingly; for example, the "near-monarchy" concept would probably work just as well with 10- or 15-year terms, and has at least one real-world presidential precedent for extrapolation purposes.)

Finally, you can tweak fundamentals of biology; if standard humans live 70 years, then you can envision races that live for seven or 700 years, and consider the effects on both the campaign and the psychology and roleplaying of the race. Sadly, these possibilities are difficult to keep in mind, and are seldom fully realized. Most people tend to play elves as "humans who smirk knowingly," and *Star Trek: Voyager* had a shipmate who was supposed to live for seven years . . . a concept which they never did anything with in the year-and-a-half I watched it before my body rejected the show.

Time is one of those concepts that is difficult to wrap your mind around fully; an hour spent in a corner for a child probably feels more agonizing than an adult's entire evening spent frittering away online. As such, the effects and implications of time can often only truly register when we view it askew, either through contemplation, analogy, or downright distortion. Doing so can lead to lots of good gaming possibilities, which can make even hoary old concepts feel fresh and new.

For example, if I was responsible for one column every minute, then I have less than two hours to figure out what I'm doing for my 300th column . . .

--Steven Marsh

Fantasy Origins

for *d20 System/Dungeons & Dragons*

by Mike Tresca

"Where did I come from?"

It's the most basic question that children ask, but often the question goes unanswered in a typical *d20 System* fantasy campaign. The races just came to be, usually in a god's own image, and that's that. But this answer can be as unsatisfying for a gaming group as talk of storks and cabbage patches is for inquisitive children. In short, it pays to be prepared for when PCs ask that same age-old question. This article attempts to provide a basic framework for a Dungeon Master to provide a cohesive evolution for his campaign.

For Dungeon Masters

As a Dungeon Master, it may seem that the origin of races may not be important. However, there are several reasons that a race's origins might matter, including:

- An ancient race that possessed powerful technology might have long since fallen and left behind a legacy of magic and technology. This power could alter the very fabric of civilization, depending on when it was introduced.
- Through chronomancy, an artifact, or the act of divine will, PCs might be transported back in time.
- Alternately, other planes of existence might actually be copies of a particular timeline, "photocopies" of a previous existence or simply a parallel universe.

For Players

A gradual evolutionary theory can provide opportunities for adventure and character development.

- Character races can be evolved and devolved, creating at least two variations on every race. Imagine playing an evolved orc or a devolved dwarf?
- The chronomancy spells in this article can be added to any wizard or sorcerer's repertoire.
- Clerics and druids can choose their theory of creation and structure their views on history and the future accordingly. When viewed through the lens of natural selection, some religions may choose to act or not act if the conflict might impact the future development of a race.

There are a many theories of the origin of humanity (and in the scope of this article, other races). Creationism and evolution are the most popular, but there are many others. Below are just a few:

- **Creationism:** Life is spontaneously created through divine will. The gods are the source of all life and therefore nothing is created without their intervention. In a campaign with creationist theory, it may well be blasphemous to some religions for an arcane spellcaster to create life (like the clone spell). Even the gods might take offense.
- **Gradual Evolution:** Living organisms develop gradually over millions of years, shaped by environmental selection. This theory proposes that all living things are related in some way and evolved into their current forms. The most recent form of gradual evolution is the bipedal humanoid, although there may be more advanced forms. This article examines the effects of gradual evolution on a fantasy campaign.
- **Spontaneous Evolution:** Rather than a slow progression, life spontaneously transforms into something else. Spontaneous evolution can cause an immediate and dramatic impact on a campaign world -- what if trolls began breeding little trolls that were immune to fire?

There are a wide variety of creatures that populate the fantasy universe of *Dungeons & Dragons*. However, historically, it's often difficult to determine which creatures came first. This can be significant when chronomancy is involved, making time travel, evolution, and devolution a possibility. Additionally, knowing which creatures are related to each other can help classify them both scientifically and magically -- biological relationships can have very serious consequences. Finally, knowing which creatures came first helps the Dungeon Master determine the history of his own game world. Attempted below is a basic overview of each creature in the Monster Manual and its place in the evolutionary scheme of things. Additionally, some creatures have "missing links" that require new creatures to fill in the blanks.

There are some general "rules" of gradual evolution. This is by no means a scientific classification but an easy means of quickly classifying creatures of various types.

1. Small creatures increase in size as they evolve when they're mammals, but in most other cases it's the reverse -- large creatures gradually get smaller in size.
2. Creatures tend to evolve from more legs to fewer legs -- thus a behir is the oldest of the draco-forms because it has twelve legs, followed by the basilisk with eight.
3. Evolution takes the easiest, most effective path of development. Therefore, if a creature develops magical abilities, its other evolutionary development probably stalls. Just as turtles remain essentially the same because their physical structure is invaluable in survival, blink dogs are unlikely to evolve further once they developed their magical abilities.
4. Nature likes homogeneity. Blended fantasy creatures would probably be much more blended than they appear in the Monster Manual. For example, a chimera's heads would probably appear much more reptilian rather than distinctly goat- and cat-like, although they may retain features that could cause a casual observer to confuse the creature's appearance with more common creatures.

Origins

Different creatures can be evolved or devolved depending on their type. Certain creature types do not evolve or devolve. Ultimately, devolution and evolution involves shifting the creature's personal time stream so that it advances or regresses as if undergoing millions of years of change. Below is a series of guidelines for how they might develop and where they rank on the evolutionary scale:

Lowest

Ooze
Vermin
Magical Beast
Animal
Giant
Monstrous
Humanoid
Highest

Types outside of the evolutionary scheme include: Construct, Elemental, Fey, Outsider, and Undead.

Plants and another unknown group, fungi, have their own evolutionary paths. This article deals primarily with creatures of the animalia taxonomy.

A creature that evolves or devolves more steps than it has hit dice changes type. These are extreme evolutionary steps.

Aberration

Some sages view the classification of "aberration" as a slur. Some aberrations are simply unclassified creatures with yet-to-be-studied anatomies. Others are magical amalgamations that are crafted through sorcery. The only thing

consistent about aberrations is that they are not uniform in appearance. Aberrations can be evolved and devolved, with bizarre results.

Animal

Animals populate the vast majority of the gradual evolution theory of creation. They are generally considered less evolved than bipedal humanoids. Animals can be evolved and devolved.

Beast

If animals are more common in gradual evolution, beasts are less developed. They tend to be more feral, more aggressive, and less intelligent. Beasts can be evolved and devolved.

Construct

Constructs are created by thinking beings and are thus not part of a natural evolutionary cycle. They cannot be evolved or devolved.

Dragon

Dragons are a peculiar strain of evolution. Although they are highly intelligent, their forms are frozen in evolution. They have more in common with dinosaurs (who have more in common with birds) than with other intelligent races. Dragons can be devolved, but they cannot be evolved. Somewhere along the evolutionary chain their forms froze in time (due to divine intervention, magic, or something else).

Elemental

Elementals are extra-planar and are older than most life on the Prime Plane. They cannot be evolved or devolved.

Fey

Although fey are denizens of the wilds of nature, they are immune to the ravages of time. Fey did not evolve -- they were spontaneously created. Thus, they cannot be evolved or devolved. At the Dungeon Master's option, elves, gnomes, and halflings may be considered fey for evolutionary purposes and thus remain unchanged throughout their development. Some scholars place the unicorn in this category, as it is believed to be a largely symbolic creature, incorruptible and outside normal evolution.

Giant

Giants are larger, more primitive versions of humanoids. They can be evolved and devolved.

Humanoid

Humanoids are higher on the evolutionary chain than most other beings. Their thumbs, stereoscopic vision, and mobility give them greater advantages at creating tools and developing weapons that enhance their chances for survival.

Monstrous Humanoid

Monstrous humanoids are generally less developed than humanoids. They tend to be hairy with tough skins and still possess the artifacts of a more violent time period: claws, fangs, smaller brains, and stronger bodies.

Ooze

The very first life in a gradual evolutionary theory was ooze and thus it is the lowest form of evolution. Some oozes are collections of cells while others are gigantic, single-celled beings. In all cases, oozes cannot be further devolved -- they can be evolved however.

Outsider

Outsiders come from other planes of existence. The majority of them is ageless and cannot be evolved or devolved, although there may be a few exceptions for humanoid-like beings that just happen to be from another reality.

Plant

Unlike animals, plants take much longer to evolve. They can be both evolved and devolved.

Undead

Like constructs, undead are created. They are not a natural part of evolution and therefore cannot be evolved or devolved.

Vermin

Vermin constitute the lower strata of evolutionary development, including rats and insects. Vermin can be evolved or devolved.

Evolution/Devolution

Evolution converges to the bipedal form. Thus, creatures that have monstrous traits are likely to lose them as they evolve further along the evolutionary scale. Conversely, creatures that are devolved become more feral and vicious, gaining claws and bite abilities.

Devolved

"Devolved" is a template that can be added to any corporeal creature (referred to hereafter as the "base creature"). The creature's type remains the same. It uses all the base creature's statistics and special abilities except as noted in their description.

Size: The base creature's size is increased by one size level.

Speed: The base creature's speed is increased in all modes of movement by 10 feet.

AC: The base creature's natural armor is increased by 4.

Damage: The base creature's claw and bite attack is increased by one die.

Special Attacks: Same as the base creature

Special Qualities: Same as the base creature

Base Saves: Same as the base creature. Devolved creatures gain a +4 racial bonus to Fort saves.

Abilities: Increase from the base creature as follows: Str +4, Dex +2, Con +2, Int -4, Wis -4.

Skills: A devolved creature skill points diminishes as its Intelligence decreases. If the creature has a class, it gains skills for class levels normally.

Climate/Terrain: Same as the base creature.

Organization: Solitary, pair, gang (3-5), or tribe (61+).

Challenge Rating: Same as the base creature +1.

Alignment: Creatures that devolve enough to lose intelligence below 3 become neutral in alignment. They can no

longer determine an ethos and act only in the interest of self-preservation.

Treasure: Same as the base creature.

Advancement: Same as the base creature.

Evolved

"Evolved" is a template that can be added to any corporeal creature (referred to hereafter as the "base creature"). The creature's type remains the same. It uses all the base creature's statistics and special abilities except as noted here.

Size: The base creature's size is reduced by one size level (e.g., from Colossal to Gargantuan, Gargantuan to Huge, etc.).

Speed: The base creature's speed is reduced in all modes of movement by 10 feet as physical locomotion becomes less important.

AC: The base creature's natural armor is reduced by 4.

Damage: The base creature's claw and bite attack is reduced by one die (from 1d20 to 1d12 to 1d10 to 1d8 to 1d6 to 1d4). If the base creature inflicts multiple dice of damage, the multiple dice is retained (so 2d6 points of damage becomes 2d4 points of damage).

Special Attacks: An evolved creature retains all the special attacks of the base creature and also gains the supernatural ability to use my light at will as the psionic power. Evolved creatures with an Intelligence or Wisdom score of 8 or higher possess the following psionic abilities, using their level as the manifester level, as specified in the table below. Unless otherwise indicated, the ability is usable once per day.

Level	Abilities
1-2	Lesser mindlink, 3/day, conceal thoughts
3-4	Detect thoughts, sensitivity to psychic impressions
5-6	Mindlink
7-8	Aura sight, forced mindlink
9-10	Mind probe
11-12	Precognition
13-14	Etherealness
15-16	Hypercognition
17-18	Mind blank
19+	Psychic surgery

Special Qualities: An evolved creature has all the special qualities of the base creature, plus low-light vision.

Base Saves: Same as the base creature. Evolved creatures gain a +4 racial bonus to Will saves.

Abilities: Increase from the base creature as follows: Str -4, Dex +2, Con -2, Int +4, Wis +4.

Skills: An evolved creature has 8 skill points, plus its Intelligence modifier, per Hit Die. Treat skills from the base creature's list as class skills and other skills as cross-class. If the creature has a class, it gains skills for class levels normally.

Climate/Terrain: Same as the base creature. Evolved creatures usually move out of their natural surroundings to live in more civilized areas.

Organization: Solitary, pair, gang (3-5), or tribe (61+).

Challenge Rating: Same as the base creature +1.

Alignment: Same as base creature.

Treasure: Same as the base creature.

Advancement: Same as the base creature.

Eras

The following eras help explain when creatures may have evolved and, if intelligent, how long their civilizations have the opportunity to flourish before man comes along. Also listed is the suggested starting place for the monster types listed in the Monster Manual.

Paleozoic Era

- **Cambrian Period (540-500 MYA):** The first single-celled and multicellular life is born. Oozes are the only creatures that might exist during this time period, making them the oldest fantasy beings.
- **Ordovician Period (500-435 MYA):** This era is marked for the first appearance of nautiloids and jawed vertebrates.
- **Silurian Period (435-410 MYA):** Two types of beings evolve in this period, plants and arachnids (vermin).
- **Devonian Period (410-355 MYA):** Creatures with four limbs and distinct digits appear.
- **Carboniferous Period (355-295 MYA):** The first reptiles and flying insects (vermin) appear on land.
- **Permian Period (295-250 MYA):** The first sail-back synapsids crawl onto land.

Mesozoic Era

- **Triassic Period (250-203 MYA):** The dizzying diversity of creatures begins to appear, including dinosaurs (beasts), small mammals (animals), turtles and frogs.
- **Jurassic Period (203-135 MYA):** Birds exist, but this most famous of all periods is best known for its dinosaurs.
- **Cretaceous Period (136-65 MYA):** The first modern mammals come into being while the non-avian dinosaurs die out.

Cenozoic Era

- **Paleocene Epoch (65-53 MYA):** Hedgehogs, owls, shrews and come to be.
- **Eocene Epoch (53-33.7 MYA):** Cats, dogs, elephants, and horses.
- **Oligocene Epoch (33.7-23.5 MYA):** Rhinoceroses, deer and monkeys appear.
- **Miocene Epoch (23.5-5.3 MYA):** Many animals appear, including apes and mice.
- **Pliocene Epoch (5.3-1.75 MYA):** The diversity of whales increases and the first cattle and sheep appear.
- **Pleistocene Epoch (1.75-0.01 MYA):** The first modern humans evolve. This is the era of gigantic mammals and the home of the dire versions of many creatures.
- **Holocene Epoch (0.01-Present):** Humanity as we know it.

Monsters

Below is a sampling of creatures, the effects of evolution and devolution, and their eras and classifications (clade). Some of these terms are arbitrary guesses but can help determine when a race rose to power. Dungeon Masters should consider the implications of an intelligent race that evolved earlier than humanoids. For example, the beholder's morphology is ancient, harkening back to a time when the world was covered with ocean, before land-dwelling life existed. Why didn't they take over the world? Perhaps they did, but the rise and collapse of beholder civilization is long since forgotten to man.

Some creatures defy classification. Manticores, centaurs, harpies, chimeras, lammasu, and other beasts are obviously the result of magical meddling and do not evolve naturally, even if they can reproduce.

Aboleth (*Piscus Diabolus*)

Clade: Lissamphibian

Era: Early to Late Permian

Description: The aboleth is amphibious, but it did not develop actual limbs for walking on land. This places its earliest evolution in the Permian era. It has a head start as an intelligent life form on many other races, but it may well have retreated from other predatory life or even failed to explore other lands.

Evolutionary Modifiers: Aboleths that devolve lose, in order per step: psionics, transformation, enslave. If evolved, aboleths gain 20 ft. land movement for the first step and lose their mucus cloud ability for the second step.

Ankheg (Vermis Rus)

Clade: Chilopoda

Era: Carboniferous

Description: The Carboniferous period is mostly swampland, which gave rise to giant arthropods. The land is humid and tropical, possibly with higher amounts of oxygen. Insects rule during this time, allowing the ankheg to grow to 10 feet long and nearly 800 pounds.

Evolutionary Modifiers: Ankhegs lose the following as they evolve for each step: spit acid, acid.

Basilisk (Statuosaurus)

Clade: Thyreophoran

Era: Early Jurassic

Description: Basilisks have eight legs, making them related to behirs and precursors to dragons. They are part of the draco-branch of evolution. Their size and appears essentially makes them magical armored dinosaurs.

Evolutionary Modifiers: Basilisks lose the following as they evolve for each step: petrifying gaze, one pair of limbs, and one pair of limbs. Basilisks that devolve gain a gore attack with its horn for 2d8 points of damage.

Behir (Behirus Bidens)

Clade: Thyreophoran

Era: Early Triassic

Description: The behir is an ancestor to the dragon with no less than twelve legs. It is related to the basilisk.

Evolutionary Modifiers: Evolved behirs lose one pair of limbs per step of evolution. Devolved behirs lose their breath weapon at the fourth step.

Bugbear (Adoptivus Cinco)

Clade: Australopithicus

Era: Quaternary

Description: The bugbear is lower on the evolutionary scale, appearing before modern humans. As indicated in the Monster Manual, they are not actually directly related to bears.

Bulette (Alopex Actus)

Clade: Parareptile

Era: Permian

Description: The armored appearance of the bulette gives its origins away. The description notes its appearance as a combination between an "armadillo and a snapping turtle." It's not far off. The bulette is related to the scutosaurus and probably originally developed as an herbivore. It later became omnivorous as a matter of necessity.

Canoids (Canis)

Clade: Canidae

Era: Pleistocene

Description: Dogs didn't appear until the Eocene. They include blink dogs, worgs, and winter wolves.

Evolutionary Modifiers: Devolved lose a special ability for each step. Once they lose all special abilities they gain the animal type.

Chuul (Stagnum Cammarus)

Clade: Palniura

Era: Mesozoic

Description: The chuul is distantly related to lobsters and crabs and probably evolved from them.

Evolutionary Modifiers: An evolved chuul loses its paralysis attack.

Cloaker (Trigon Traho)

Clade: Myliobatoidei

Era: Devonian

Description: Related to stingrays, cloakakers were originally amphibious predators. Their venture onto land was probably recent.

Evolutionary Modifiers: An evolved cloaker loses its shadow shift ability, then its moan ability. Devolved cloakakers lose their flight ability and gain the ability to swim at 40 feet (in addition to breathing underwater and aquatic subtype).

Cockatrice (Pullus Malus)

Clade: Archaeopteryx

Era: Late Jurassic

Description: Cockatrices exhibit both lizard and avian characteristics, placing them as ancestors to some of the earliest birds.

Evolutionary Modifiers: An evolved cockatrice loses its petrification ability. A devolved cockatrice gains the reptilian subtype.

Couatl (Serpula Pterotos)

Clade: Archaeopteryx

Era: Early Cretaceous

Description: Bizarrely, the couatl is distantly related to the cockatrice. It too, has both lizard and avian characteristics but is obviously more evolved.

Evolutionary Modifiers: A devolved couatl loses the following abilities, in order: spells, psionics, telepathy, and ethereal jaunt.

Darkmantle (Nigro Mantelum)

Clade: Vampyromorpha

Era: Silurian Period

Description: Incorrectly classified as a gastropod, the darkmantle is actually a form of land squid.

Evolutionary Modifiers: A devolved darkmantle loses its flight ability but gains the ability to swim at 30 ft., breathe underwater, and aquatic subtype. An evolved darkmantle loses its darkness ability.

Delver (Fossor)

Clade: Pulmonata

Era: Devonian Period

Description: Delvers are massive ancestors to common slugs.

Evolutionary Modifiers: An evolved delver loses its stone shape ability, then its corrosive slime. It also loses one size level per step. A devolved delver loses its burrowing speed but gains a swim speed of 10 ft., the ability to breathe underwater, and the aquatic subtype.

Destrachan (Dolosaurus)

Clade: Dromaeosauridae

Era: Early Cretaceous

Description: Destrachans are closely related to the velociraptor, as evidenced by their large claws and powerfully built legs.

Evolutionary Modifiers: Evolved destrachans lose their destructive harmonics, then reverberating harmonics, then protection from sonics. Devolved destrachan gain the reptile subtype.

Digester (Digero Acidus)

Clade: Dromaeosauridae

Era: Late Cretaceous

Description: Digesters are more closely related to the egg-stealer family of dinosaurs, specialized in running after smaller prey.

Evolutionary Modifiers: Evolved digesters lose their acid spray. Devolved digesters gain the reptile subtype.

Dragons (Dracus)

Clade: Hexaform

Era: Late Cretaceous

Description: Dragons are an ancient race that is largely unchanged from its original ancestry.

Evolutionary Modifiers: Devolved dragons lose one ability per evolutionary step, starting with their spell-like abilities and ending with their breath weapon. They also lose their flight ability completely but gain another pair of limbs. Dragons cannot evolve.

Dragonne (Leo Dracus)

Clade: Hexaform

Era: Late Cretaceous

Description: Dragonnes are also a member of the hexaform family.

Evolutionary Modifiers: Devolved dragonnes lose their flight ability but increase their speed to 50 ft. and gain additional pair of limbs. Evolved dragonnes lose their roar ability.

Ettercap (Homo Arachne)

Clade: Micrura

Era: Late Cretaceous

Description: Ettercaps are a highly advanced form of spider.

Evolutionary Modifiers: Devolved ettercaps change dramatically, transforming into medium-sized monstrous spiders. Evolved ettercaps lose their web, then poison abilities.

Frost Worm (Vermis Frigidus)

Clade: Chilopoda

Era: Quaternary

Description: Frost worms are not actually worms. The hint is their mandibles. In actuality, they are distantly related to centipedes, with many small stubby legs often concealed under the snow and ice. They flourished during the quaternary period, when ice ages were common.

Evolutionary Modifiers: Evolved frost worms lose their trill, cold damage, death throws, then breath weapon. They also lose one size level per evolutionary step.

Giants (Gigantes)

Clade: Australopithecus Gigantes

Era: Miocene Epoch

Description: Giants constitute a variety of races, including trolls, ogres, and ogre magi.

Evolutionary Modifiers: Giants decrease in size as they evolve for each evolutionary step.

Girallon (Hexa Siminus)

Clade: Hexaform

Era: Miocene Epoch

Description: Yet another peculiar six-limbed creature, girallons may be distantly related to dragons. A highly evolved girallon might look like a six-limbed race of humans.

Gnoll (Esor Corpus)

Clade: Chilopoda

Era: Pleistocene Epoch

Description: Gnolls are evolved from hyenas; despite wild hypothesizes by uninformed scholars to the contrary. Much of the confusion involves classification of hyenas, which are neither canines nor felines.

Goblinoids (Tuburcinor)

Clade: Australopithecus Tuburcinor

Era: Pliocene Epoch

Description: Goblins and their brethren, including hobgoblins and orcs, are a more primitive offshoot of humanity known as tuburcinor.

Evolutionary Modifiers: Each evolutionary step or devolutionary step changes the size of a goblinoid. In order, goblins evolve into orcs who evolve into hobgoblins.

Gorgon (Bos Ferrum)

Clade: Ornithischia

Era: Early Cretaceous

Description: The iron bull is not actually related to a bull at all, but has much more in common with dinosaurs like the triceratops.

Evolutionary Modifiers: Gorgons that evolve lose their breath weapon. Devolved gorgons gain the reptile subtype.

Gray Render (Reddo Prae)

Clade: Marsupalia

Era: Pleistocene

Description: The gray render is an advanced form of marsupial. It's related to a kangaroo!

Grick (Vermis Restio)

Clade: Annelida

Era: Silurian

Description: The grick is an advanced worm, dangerous above and below ground. Its segmentation gives it away as a member of the annelida family.

Harpy (Harpyiae)

Clade: Hexaform

Era: Late Cretaceous

Description: Harpies are yet another evolutionary development of the hexaform family.

Evolutionary Modifiers: Evolved harpies lose their captivating song ability.

Kraken (Krakenus)

Clade: Teuthoidea

Era: Ordovician Period

Description: Krakens are obviously related to giant squids.

Evolutionary Modifiers: Krakens that devolve lose their spell-like abilities. Krakens that evolve lose their jet, then ink cloud abilities.

Krenshar (Felus Suscito)

Clade: Feloidea

Era: Miocene Epoch

Description: Krenshar are an evolved form of feline.

Evolutionary Modifiers: Evolved krenshar lose the scare ability.

Minotaur (Homo Bos)

Clade: Bovidae

Era: Holocene Epoch

Description: Minotaurs are descended from cattle. In that regard they are very advanced, despite their comparison to other humanoid races.

Evolutionary Modifiers: If devolved enough steps, a minotaur becomes a bull.

Nagas (Serpula Cenuo)

Clade: Squamata

Era: Permian Period

Description: Nagas are another ancient race, descended from snakes.

Evolutionary Modifiers: Devolved naga lose their spells first, then spell-like abilities. Naga that are devolved enough become snakes.

Oozes (Liquefacio)

Clade: Eucarya

Era: Cambrian Period

Description: Oozes come in a variety of types and include black puddings, gelatinous cubes, gray oozes, and ochre jellies. They are the earliest form of single-celled life.

Evolutionary Modifiers: Oozes cannot be devolved. It takes many steps to evolve oozes up the evolutionary chain.

Otyugh (Esor Deluto)

Clade: Asteroidea

Era: Silurian Period

Description: An ancient race, otyughs are carnivorous relatives of the starfish with highly specialized limbs.

Evolutionary Modifiers: Devolved otyughs lose their land speed but can swim and breathe underwater.

Pegasus (Equus Aero)

Clade: Hexaform

Era: Pleiocene Epoch

Description: Pegasi are members of the hexaform family, with four hooves and a pair of wings.

Evolutionary Modifiers: Devolved pegasi have an additional pair of hooves but cannot fly. Their land speed increases by 20 feet.

Piscoids (Homo Piscus)

Clade: Dipnoi

Era: Devonian Period

Description: Piscoids include the locathah, sahuagin and merfolk. They are evolved from the lungfish, which developed the ability to walk and breathe on land.

Evolutionary Modifiers: In evolutionary order, locathah become sahuagin who become merfolk.

Purple Worm (Vermis Purpura)

Clade: Caecilian

Era: Carboniferous Period

Description: The purple worm's title is only partially correct -- it isn't a worm at all. The purple worm is actually a

form of legless, sightless lizard, although its poisonous tail is a hint to its diverse lineage.

Evolutionary Modifiers: Devolved purple worms gain the reptilian subtype.

Remorhaz (Fulmen Vermis)

Clade: Chilopoda

Era: Pleistocene Epoch

Description: Like the frost worm, the remorhaz is an adapted form that grew huge during the many ice ages. Unlike the frost worm, the remorhaz is actually a giant centipede adapted to cold weather.

Evolutionary Modifiers: Evolved remorhazes lose their heat ability. Devolved remorhazes change types to vermin.

Reptiloids (Homo Laneus)

Clade: Dromaesoauridae

Era: Jurassic Period

Description: Lizardoids include troglodytes, lizardfolk, and kobolds. They are relatives of upright dinosaurs.

Evolutionary Modifiers: In evolutionary order, kobolds become troglodytes who become lizardfolk.

Roc (Avis Elephantus)

Clade: Falconiformes

Era: Early Pleistocene

Description: Rocs are so large that they require massive prey. An early evolution of the dinosaur, rocs preyed on the gigantic mammals that roamed during the Pleistocene era.

Evolutionary Modifiers: Evolved rocs shrink in size levels.

Roper (Rigidus Hexa)

Clade: Scaphodoa

Era: Ordovician Period

Description: Ropers are actually land nautiloids. They form shell-like exteriors and then extrude their tentacles at will.

Evolutionary Modifiers: Devolved ropers lose their land speed but can swim instead. They also gain the jet speed common to squids.

Rust Monster (Monstrum Rusticus)

Clade: Blattodea

Era: Silurian Period

Description: Rust monsters are a highly evolved form of cockroach, living off of metal found in dirt. It is commonly

believed that they have six instead of four legs.

Evolutionary Modifiers: Devolved rust monsters lose their Rust special ability and gain the vermin type.

Shocker Lizard (Fulmensaurus)

Clade: Squamata

Era: Carboniferous Period

Description: Shocker lizards are closely related to normal lizards and, despite their electrical ability, are otherwise mundane.

Evolutionary Modifiers: Evolved shocker lizards lose, in order, lethal shock, stunning shock, and electricity sense.

Spider Eater (Esor Arachne)

Clade: Mecoptera

Era: Carboniferous Period

Description: Spider eaters are gigantic relatives of the scorpionfly.

Stirge (Haemophagus)

Clade: Diptera

Era: Carboniferous Period

Description: A larger version of the mosquito, stirges are able to sustain their massive appetites on the large reptiles on land.

Evolutionary Modifiers: A devolved stirge changes to the vermin type.

Wyvern (Scorpiosaurus)

Clade: Pterosauria

Era: Jurassic Period

Description: Some sages have falsely categorized the wyvern as a relative of the dragon. Sometimes categorized by erudite scholars as a "true dragon," the wyvern is a specialized offshoot of the pterosauria. It is a four-limbed creature, making it a logical extension of the pteranodons that evolved before it.

Evolutionary Modifier: Devolved wyverns gain the reptile subtype.

Yrthak (Voxosaurus)

Clade: Pterosauria

Era: Jurassic Period

Description: Another offshoot of the pterosauria, this bizarre creature developed its specialized horn and tongue as a night flier.

Evolutionary Modifier: Devolved yrthak gain the reptile subtype and lose the explosion, then sonic lance, then sonic vulnerability abilities.

The Missing Link

Fantasy bestiaries are filled with creatures that stretch the limits of evolution. Many of the evolved beasts have six limbs, most notably the dragons (two pairs of limbs and a pair of wings). While there is precedent for cephalopods and insects to have multiple limbs, that structure never carried over to vertebrates. Sages believe the below creatures must have existed but their remains have yet to be found. If discovered, it would offer an intriguing clue to the evolution of the hexaforms -- dragons, dragonnes, and pegasi.

Lowest

Hexasaurus

Dragon

Pegasus

Girallon

Harpy

Highest

Hexasaurus

Large Beast

Hit Dice: 6d10-8 (25 hp)

Initiative: +1 (+1 Dex)

Speed: 50 ft, climb 20 ft.

AC: 14 (+1 Dex, -1 size, +4 natural)

Attacks: Bite +7 melee, 4 claws +2 melee

Damage: Bite 1d8+4, claw 1d6+2

Face/Reach: 5 ft by 5 ft/10 ft

Special Attacks: pounce, rake, improved grab

Special Qualities: Low-light vision, darkvision

Saves: Fort +8, Ref +6, Will +2

Abilities: Str 18, Dex 12, Con 16, Int 10, Wis 11, Cha 10

Skills: Climb +9, Hide +10*, Listen +5, Move Silently +9, Spot +5

Challenge Rating: 5

Alignment: Neutral

The hexasaurus is the precursor to the dragon. It has six limbs tipped with ferocious claws and a long, whip-like tail. Its sinewy neck is topped by a maw jammed full of pointy teeth. They are cunning and already begin to exhibit the intelligence that will make dragons so deadly.

Combat

As an arboreal predator, the hexasaurus can catch prey in the trees or on the ground with terrifying speed.

Darkvision: This creature can see in complete darkness, up to 60 feet.

Improved Grab (Ex): When this creature hits with its claws, it attempts to start a grapple as a free action without provoking an attack of opportunity.

Pounce (Ex): If a hexasaurus leaps upon a foe during the first round of combat, it can make a full attack even if it has already taken a move action.

Rake (Ex): A hexasaurus can make two rake attacks with its hind legs for 1d6+2 damage each. If the hexasaurus pounces on an opponent, it can also rake.

Skills: Hexasauruses receive a +4 racial bonus to Hide and Move Silently checks. In forested or overgrown areas, the Hide bonus improves to +8.

New Spells

Devolution

Transmutation

Level: Sor/Wiz 4

Components: V, S, M

Casting Time: 1 action

Range: Medium (100 ft. + 10 ft./level)

Targets: One creature

Duration: Permanent

Saving Throw: Fortitude negates

Spell Resistance: Yes

Devolution evolves a creature one devolutionary step per five caster levels. Upon changing, the subject regains lost hit points as if having rested for a day (though this healing does not restore temporary ability damage and provide other benefits of resting for a day; and changing back does not heal the creature further). If slain, the devolved creature reverts to its original form, though it remains dead.

The devolved creature gains the devolved template. The new form can be disorienting. Any time the devolved creature is in a stressful or demanding situation (such as combat), the creature must succeed at a Will save (DC 19) or suffer a 2 penalty on all attack rolls, saves, skill checks, and ability checks until the situation passes. Creatures who are devolved for a long time (years and years) grow accustomed to their new form and can overcome some of these drawbacks (DM's discretion).

Material Component: A fossil of the creature to be devolved into. Note that a creature can only be devolved from its own species.

Evolution

Transmutation

Level: Sor/Wiz 4

Components: V, S

Casting Time: 1 action

Range: Medium (100 ft. + 10 ft./level)

Targets: One creature

Duration: Permanent

Saving Throw: Fortitude negates

Spell Resistance: Yes

Evolution evolves a creature one evolutionary step per five caster levels. Upon changing, the subject regains lost hit points as if having rested for a day (though this healing does not restore temporary ability damage and provide other benefits of resting for a day; and changing back does not heal the creature further). If slain, the evolved creature reverts to its original form, though it remains dead.

The evolved creature gains the evolved template. The new form can be disorienting. Any time the evolved creature is in a stressful or demanding situation (such as combat), the creature must succeed at a Will save (DC 19) or suffer a 2

penalty on all attack rolls, saves, skill checks, and ability checks until the situation passes. Creatures who are evolved for a long time (years and years) grow accustomed to their new form and can overcome some of these drawbacks (DM's discretion).

Material Components: The true name of the target, whose history and lineage must be written on a piece of parchment and burned in the process.

Greater Devolution

Transmutation

Level: Sor/Wiz 8

Components: V, S, M

Casting Time: 1 action

Range: Medium (100 ft. + 10 ft./level)

Targets: One creature

Duration: Permanent

Saving Throw: Fortitude negates

Spell Resistance: Yes

As the lesser devolution spell, except the target is devolved one step per two caster levels.

Greater Evolution

Transmutation

Level: Sor/Wiz 9

Components: V, S, M

Casting Time: 1 action

Range: Medium (100 ft. + 10 ft./level)

Targets: One creature

Duration: Permanent

Saving Throw: Fortitude negates

Spell Resistance: Yes

As the evolution spell, except the target is evolved one step per two caster levels.

Lesser Devolution

Transmutation

Level: Sor/Wiz 3

Components: V, S

Casting Time: 1 action

Range: Medium (100 ft. + 10 ft./level)

Targets: One creature

Duration: 1 round/level

Saving Throw: Fortitude negates

Spell Resistance: Yes

As per the devolution spell, but with a limited duration.

Lesser Evolution

Transmutation

Level: Sor/Wiz 3

Components: V, S

Casting Time: 1 action

Range: Medium (100 ft. + 10 ft./level)

Targets: One creature

Duration: 1 round/level

Saving Throw: Fortitude negates

Spell Resistance: Yes

As per the evolution spell, but with a limited duration.

Ancient Secrets

New Conspiracies for *Illuminati*: *New World Order*

by Martin Lækkes

It has been quite a while since the *Church of the Subgenius* set was released. With the *Bavarian Fire Drill* expansion on indefinite hold, the thrilling sensation of using new cards looks far off indeed. This article contains just two new cards, but the kind of cards that make the greatest impact on the game: Two new illuminati. Hopefully these cards will make players reach for their collections and start devising new devious plans.

Design Snags

Creating such influential cards is tricky, especially ones that will not be dismissed as homebrew nonsense. An appealing new illuminati needs to be balanced, represent a "real" organization, and have a natural feel to both the parts and the whole. If you can base decks on both the goal and the special ability, then so much the better!

Fasces Romanum and Atlantis were based on the two remaining basic victory conditions: Resistance and global power. The resistance-based illuminati became the Fasces Romanum -- a real world secret society which believes that unity is strength. Atlantis was chosen as the illuminati whose secret plan revolves around global power -- inspired by the network in standard Illuminati. The Atlanteans have ignored the surface world for too long, and need global power to regain influence.

The Goals

There already exist quite a few "foo counts double" goals, and there are only so many tricks these decks can pull, so creating goals based on a total acquired amount made for more interesting decks. However, getting the balance right proved problematic.

With the Fasces Romanum, the problem was that pesky NWO: Solidarity, which doubles all resistance in play. If the amount of resistance required by the goal was set too low, then any deck using Solidarity would be a winner. But, if the amount was set too high, then only decks using the NWO would be viable.

The solution became to do a "doubling" goal, but with the Society of Assassins spin, so that your groups only count double if they have the most resistance in the game. This removed Solidarity from the equation entirely. With Atlantis, finding the right amount of global power was also quite a struggle. It seemed impossible to make the goal balanced in both casual and competitive play. Then again, neither is Bavaria's total power goal! In a completely degenerate play, this official illuminati can win on the second turn.

I finally got the idea of connecting the goal to the basic goal. By reaching 35 global power, the player gets a 3 group discount towards the basic goal. This ensures that the basic goal can not be circumvented, forcing players to spend a few turns on expanding.

The Special Abilities

Coming up with a natural special ability reflecting connections and alliances was easy. Drawing 2 group cards per turn seemed a perfect fit -- it is a simple ability with many applications. While extra group draws is a handy ability for an unmasking Adepts player, he could already do this by playing the UFOs, so that shouldn't be a problem.

Atlantis illuminated ability became to expose two plots, reflecting the supreme wisdom of the Atlanteans. Exposing is

a fundamental mechanic in the game, which made it an obvious choice for an illuminati ability.

Fasces Romanum

The Fasces Romanum was (and is) a pagan illuminated society, based on the idea that unity makes strong, and founded in the days of ancient Rome. Through the centuries the members of the Fasces have remained loyal to each other, and their web of influence has grown considerably. The ideology behind the Fasces was seen in the fascism of 20th century Italy.

Their symbol is a bundle of 23 sticks. One by one they are easily snapped in half, but together they are unbreakable.

Power: 9/9

Goals and Ability: You have allies everywhere. You start your turn by drawing two group cards.

Standing together will help everyone connected to the Fasces, so any group counts double towards your total number of groups controlled, as long as none of your rivals control a group with higher permanent resistance.

Playing the Fasces

Your special goal is both a blessing and a curse. Taking over high-resistance groups from hand is quite cumbersome, unless you've got matching alignments or a bonus to control to help you. Drawing two groups each turn opens up some interesting strategies to you. Resource heavy decks become a lot more viable, as do sandbag decks. If your lead bounces, then you have a better chance than your rival of getting it first.

Two-player strategy: In a two player game you're best off ignoring high-resistance groups. Instead, you should modify the resistance of your groups after you've taken them over. Pack a few sandbags in your deck -- if you get one right, you could cripple your rival in one fell swoop.

Multi-player strategy: High resistance isn't all bad in a multi-player game. If you can build up a good defense against attacks to destroy, then your rivals may have to look elsewhere for easy pickings. You need to be able to pull off an

attack to destroy if a rival has a group with higher resistance than yours.

Beware: Don't forget about power altogether, or you will be on the receiving end of an attack to destroy. Rely too much on duplicate plots for resistance, and you'll realize that one Nevermore! is all it takes to ruin your plans. Be prepared to destroy a rival's Australia!

Power gaming: There are plenty of high resistance groups that also have high power. Play some of these and you should be able to compete with the strongest rivals.

Subtlety: Never Surrender and Commitment are great for working towards your goal, but they can also be used to ruin your rivals' attacks to control from hand.

Deck Building

Key Groups: Wall Street, TV Preachers and SubGenius FisTemples increase the resistance of their puppets. Local Police Departments and Dittoheads both add to the resistance of their master. The Comic Books card ignores the resistance of its weird victims, making it easier to take over high-resistance groups. Australia has resistance 24 on a weekend!

The Convenience Stores card is good in a sandbag deck, and those extra group draws can also be used to power the Thule Group. Nephews of God, www.subgenius.com, Burschenschaften, and Fraternal Orders will let you draw even more groups.

Good Resources: Few resources work directly towards goal, but in a weird deck, the Principia Discordia is a monster. The Orgone Grinder will increase a personality's resistance to 10.

Good Plots: Commitment, Never surrender, and especially Messiah will add to your resistance -- and all of them are free to play. Peace in Our Time adds to +3 resistance to all peaceful groups. Fake Healing will make it easier to take over a high-resistance group, and Resistance is Useless will momentarily prevent a rival's group from overshadowing yours. Partition will let you play two Australias, or one if a rival has one already.

Goal Cards: If you are sandbagging, then there is probably a control/destroy goal that fits your deck. Or perhaps a back-up doubling goal will take your rivals by surprise.

Degenerate deck: Without a doubt: Low-resistance fanatic groups and multiple Never Surrenders -- just look out for Nevermore! Also, a somewhat degenerate group composition can be based on several Dittoheads, or on slurping multiple low-resistance Trading Card Games, and replacing them with other groups.

Opposing the Fasces

Remember that resistance has no effect on attacks to destroy. Try to outpace him -- if you spend a little power to mess up his attacks, he may be very hard pressed to take over those high resistance groups. Also, build a single high-resistance group if you have the means -- and protect it.

If he is using conspicuously many weird groups, be prepared to destroy the Principia Discordia. If he uses mainly peaceful groups, then hang on to your red NWOs.

Cards to use against Fasces Romanum: Backlash can undo a Commitment or Never Surrender at his moment of triumph. Resistance is Useless will postpone his victory 1 round, which should hopefully be enough to bring him down. If he is sandbagging, then Xanadu will keep you safe. The Magic Goes Away will reduce him to a crawl, if he relies on high-resistance groups.

Atlantis

Plato was the first to describe the lost continent of Atlantis. Atlantis housed a prosperous and advanced civilization, until it was suddenly swallowed up by the sea some three and a half millennia ago. In a single fateful day, a horrific natural disaster wiped Atlantis from the face of the earth -- the sur-face, that is.

The Atlanteans had foreseen the apocalypse, and managed to survive. Isolated in the depths of the ocean, the Atlantean society has evolved -- safe from the ravages of time and from the outside world.

Their symbol is a golden monolith, submerged and covered in seaweed.

Power: 7/7

Goals and Ability: You seek to regain control of the world that you have ignored for too long. Control of groups with a total global power of 35, including your own, reduces your basic goal by 3.

To help you in reaching your objective, you can expose 2 plots each turn, as a free move.

Playing Atlantis

Most of your groups will have global power, which makes your power structure very flexible. Use this to ruin your rivals' attacks, or just threaten to do so. Your ability to expose plot cards will be more useful to you if you control a group which can get rid of them. On the down side, your deck will probably lack matching alignments, so get a bonus to control from another source.

Two-player strategy: If you can manage to save a few tokens, then you can use them to foil your rival's takeovers. Exposing (and destroying) your opponent's plots is a particularly aggressive ability, which is perfectly suited for two-player games. In a tight game it may very well clinch the victory.

Multi-player strategy: Focus your exposing on the player, who you think will be your main competitor. Going after several players will just get you too many enemies to handle. Don't just use your global power to get enemies! It can

be used to make friends too.

Beware: Even though your global power is flexible, your rivals may well have more regular power, so look out for incoming attacks.

Power gaming: Most groups with high global power also have a lot of regular power. However, one or more powerful groups, with doubled power turned global, is probably your best power play.

Subtlety: There are many groups and plots that grant or modify global power. With the right hand you can go from innocent to game-winner in a single turn. Global power is useful when working towards many of the goals. If your rivals are too busy counting your global power, they may miss what you're really up to.

Deck Building

Key Groups: Democrats, USA, and Xists all have a global power of 5 -- great if you're going for a straightforward approach. If you want to trick your opponents, then use groups that can change their global power, like Cable TV, Hollywood, and Subliminals. Templars, Wargamers, Psychiatrist and League for Obvious Decency can get rid of exposed plots, and MWOWM can be used to steal a plot that you've just destroyed. Finally, Arms Dealers and Copy Shops do other interesting things with exposed plots, and Great Pyramid might tell you which player's plots to expose.

Good Resources: Big Prawn, Cyborg Soldiers and Necronomicon can double power -- which is very useful if you can also make it global. Fortunately Lenin's Body, Three-Fisted Tales of "Bob" and Midas Mill do just that. Book of Kells and Hidden City will add a little to Atlantis own global power.

Good Plots: Your best plots are the ones that turn regular power into global power, like Media Connections, Hidden Influence, Head Launching, and Nental Ife. These combine well with anything that increases power, including NWOs. Overman is also quite good. Use Cover of Darkness to protect your key resources, and Supernova, The Stars are Right and Saint of Sales to take over even more. Foiled, Psychic Pstench and Nice Idea -- It's Mine Now will let you get rid of a goal card that you've exposed, and Stealing the Plans can salvage a rival's plot that you've just destroyed.

Goal Cards: Your global power can help you achieve most goals, so always have a ?plan b? in your deck. Power for its Own Sake may help you if your rivals manage to prevent you from turning regular power into global power. Degenerate deck: Build a high-power deck (Bavaria-style), and then stack your deck with plots that grant global power. Using multiple Forgery, Cover of Darkness, and resource destroyers is a moderately degenerate way of making sure that nobody else gets your key resources.

Opposing Atlantis

When Atlantis boosts its global power, resources and plots will be more important than the printed global power of his groups. If you have a Suicide Squad, Atlantis is a prime target. Knock out the groups that he uses to get rid of exposed plots. Losing plots is a lot worse than just having them exposed. Don't be afraid of attacking. If there is a target with the right alignment, you'll have more attacking power, than he'll have global power to defend it with.

Cards to use against Atlantis: Anything that lowers power will eventually lower his global power too -- Angst is awesome, but quite a few New World Orders will do nicely too. Canceling actions or plot cards will keep him from creating too much global power, and Nevermore! will ensure that he only uses each such plot once.

Harvest Festival

When Greenery Is More Than Scenery

by Michele Armellini

Good game world designers always state that at a low technology level, the exalted knight would simply starve were it not for the nine peasants tilling the lands to feed him. At higher tech levels, the proportion may be reversed and a farmer's life may be less brutish, but the fact remains that nobody usually wants to roleplay boring farm life. But agricultural activities can actually be an interesting, and even exciting, element in adventures, with the added bonus that the players won't expect it. Sometimes, even the usual crops can make for adventure stuff -- and some crops (and wild plants) are just, well, unusual. This article presents a few ideas for making the harvest festival the place to be, and shows that sometimes a vegetable might become an adventure seed (pun intended!).

As a warning, since agriculture usually is what keeps the game society fed, introducing unusual plants, plant magic, or cultivation methods may well have unforeseen long-term effects on the game world's economy! Dealing with this is out of the scope of this article. If the GM doesn't want to deal with these potential complications, but he'd still like an agricultural MacGuffin, a limiting factor should be added. Maybe the new plant can grow only within a small environment, for instance.

A Rustic Life

While "straight" peasants are probably unsuitable as PCs, bringing adventurers into contact with the farmers might be an interesting change of pace. Maybe the party needs to go into hiding for a while, one of the heroes may need rest for convalescence, or they are all invited by a relative/childhood friend in the home village. Once they are there, they may discover how hard that life is, but they may also appreciate its simple pleasures. Let them get up before dawn to tend the cattle, antagonized by the local youths! Longsword-toting barbarians will be shown how to plough.

It might be funny if the heroes have to prove their worthiness to a local girl, the village elders, or some other key character, not by their usual heroic feats, but by tackling routine farm tasks. The harvest festival will be one of those simple pleasures mentioned above, but of course a brawl might erupt between one of the PCs and a stubborn, ruddy-faced farm boy. If the hero uses its full might, he'll certainly beat the boy, and maybe cause some collateral damage too; but this will affect the party's reputation, and the more permanent the damage (such as the boy's death), the worse the effect.

Of course, once the adventurers have concluded that "nothing happens here," there will be the looming threat the good villagefolks can't deal with: marauding bandits or raiders, or, worse, the greedy local lord's soldiers and taxmen looking for livestock and crops. Or a dragon. Or, for something more realistic, the villainous lord wants to reduce free farmers to serf status. Naturally, a situation like this could happen even if the PCs are perfect strangers (à la Clint Eastwood), but if they were encouraged to develop a liking for the farmers, they will take this much more personally, like Harrison Ford in *Witness*.

Advantaged Regions

Sometimes, the crops and livestock are natural, but rare. Maybe this region produces the best wines, or tobacco, or stallions on the planet; or, it's the *only* wine-producing region. Or maybe the land is so fertile that this is "the granary of the empire." Such advantages will be coveted by others. Adventurers might be tasked with either stealing a few vine saplings (or stallions, silkworm cocoons, etc.), or with providing security against such thefts. For a mercantile adventure, heroes might be appointed to buy, rather than steal, and negotiations with haughty landowners and old, stubborn village elders can be a challenge. Or, if the region itself is the prize, any adventure could quickly escalate into

a military campaign.

Gardening Is A Form Of Art . . .

And natural farming might become a luxury. Right now, in Tokyo a handful of perfect fruit fetches a price that is just below cheap jewelry. If the masses will eat krill pate and mashed seaweeds, steak and chips will be today's truffles. Competent agronomists will be comfortable, tending a rich man's status-symbol extensively tilled farm. Of course such, a waste of good land might result in nationalization attempts by the state, or, more likely, in assaults by envious mobs. "Biological" fungicide and pesticide methods might become prized secrets. And in a high-tech setting, you don't steal saplings or pups -- you steal DNA, which means even higher security standards.

Even in a fantasy/historical setting, kings and nobles may become very fond of certain rare plants, exceptional flowers, or strong spices, and those capable of catering to their whims become important persons. The person who really has the archduke's ear is . . . his gardener! Influencing, bribing, or blackmailing the man might be the purpose of the adventure, and of course the heroes would have to pose as his colleagues. Or, rare varieties of flowers may fetch astounding prices, and those capable of developing, say, a black tulip, could make a fortune.

Field Magic!

In fantasy worlds, magic may be a powerful multiplier of any intervention by a determined farmer. Seemingly trivial spells that protect the crops from parasites would have far-reaching effects if used extensively (as warned about in the introduction). But they can still make for an interesting backdrop if incredibly lush vegetation always grows right around, say, a secret shrine of the Goddess of Nature.

Aggressive spells, on the other hand, make for excellent strategic weapons, the equivalent of a modern bacteriological war aimed at a country's resources rather than at its population. Evil wizards may topple kingdoms by creating magical famines. A way to make a magical villain really unforgettable is to depict his mere presence as harmful for the plants. It's powerful, suggestive imagery: flowers wither when he touches them.

On the other hand, some individuals or race may be attuned to the plants around them. Elves famously suffer when trees are downed, and true "green fingers" have their own abilities and fixations, but there might be a plus side, too; for instance, a wizard having this gift might learn plant spells more easily. Plants might even act as wordless guardians for those endowed with this kind of empathy, or maybe they could get other minor blessings from their green friends (such as healing faster than normal when treated with medicinal herbs).

On a darker note, what if all those zombies, when not hunting the B-movie heroes, were . . . gathering sugar-cane. If zombies are available, they are the ideal unskilled workforce, as they don't sleep, don't eat, and don't complain. They do wear down in the long run. But they can make that old plantation a truly eerie place!

The higher forms of plant magic, of course, might transform the plants, at least temporarily, into valuable tools (or allies) for the caster, making them into impassable barriers, spies above suspicion, safe sanctuaries and, at the most powerful, slow but strong warriors.

Some plants, finally, have something supernatural about them without needing the intervention of any wizard. See below.

Supernatural Plants

To start with, herbal ingredients might be required for magical potions and elixirs. The "magical principle," or "mana," might be stored in any part of the plant. While in many fantasy magical systems a spell doesn't require physical ingredients, this isn't always true, and indeed magical concoctions have a major place in traditional folklore.

It's the wizard's or alchemist's job to prepare the potion, but in the step before that there will be a gardener, or gatherer, or farmer. If there is a small number of very important magical ingredients, mages' guilds will have their own "magical" lands and fields, offering the same profits (and problems) as poppy fields (see below). If the magical plants are hundreds, there will be walled gardens and highly specialized gardeners. Or maybe the most powerful plants only grow in the wild; skilled and tough herbalists will be needed to gather them, and savvy outdoorsmen might be needed to escort them if the wilderness is really dangerous.

Of course, the way this magical harvest is handled will affect the final result. Some herbs may be dried, but are more powerful when fresh, for instance, or a badly preserved magical root might lose all its power. This might be a major problem for magic-using PCs, or a subtle trick to harass an evil wizard.

Supernatural plants, however, might be more than mere ingredients. Some fantasy woods, especially the dark, foreboding variety, seem to have a will of their own. Maybe the single tree isn't sentient, but what if, taken together, they have something like a hive mind? Trees also played an important role in many historical religions, and they may do so in fantasy ones, especially if they are gigantic, extremely old, or belonging to rare species. An oak might be a sacred tree, or even a symbol of certain deities; a whole grove might be holy. Priests and clerics will perform their rituals, but either they are also skilled naturalists, or they might need specialists when the trees get sick!

Maybe the link between the plant and the supernatural being is stronger than symbolism. That incredibly tall tree might be a conduit that allows the clerics to talk with the god it's dedicated to. Or that gnarled, evil-looking stump is the right place for summoning a demon -- or even an altar to the less agreeable, swarming, hungry aspect of the Nature goddess. Or maybe the tree *itself*, after the proper ritual, when the stars are right, comes to life as a demi-god. Or it's an inter-dimensional passage: remember *Sleepy Hollow*.

Priceless Seeds

While silkworm cocoons are worth smuggling, and truffles are worth poaching, there are a few agricultural products that are actually worth much more than their weight in gold: spices and drugs.

Spices can help preserving meat, they add unusual and strong flavors to any food, and above all, at several times in history they were a trendy status symbol (see also ["Variety . . . of Life"](#) for a detailed treatment). Spices can be traded and robbed, but first of all one has to *grow* them. And more often than not, they grow in far-away, dangerous, exotic locales, where the natives are unfriendly and the climate uncomfortable. Foreign powers, pirates, and other interlopers will want to take their cut -- literally, at times. Additional drama might be provided if the spice-bearing plant is otherwise a portent, too (a supernatural living being, above, or a dangerous salad, below).

Drugs include both pharmaceutical products and more . . . recreational kinds. Until recently, they were all extracted from plants or plant parts, ranging from the all-important anti-malarial cinchona bark (quinine) to trance-inducing mushrooms, from the simple herbal remedies to coca leaves. Growing drugs can be illegal, dangerous, profitable; it can foster greed, violence and, of course, addiction when the imprudent farmer, gatherer, or guard tries the produce.

Tribal shamans might exact a fearsome revenge on unwary strangers who gallop across the holy ground where their fungi grow once a year, while, as of today, Kalashnikov-wielding thugs guard poppy fields and airborne troops might be sent in to burn them. Deep into the rain forests, unknown pharmaceuticals might still be hiding within humble flowers, and they might well be worth an expedition. In reality, the researchers would carefully test what they find, but in an adventure some unforeseen accident or illness might force them to become guinea pigs . . .

Dangerous Salads And Dangerous Animals

Historically, mankind has fought a relentless war against plants, at least against those plants we couldn't exploit. The conflict is still going on in the Amazon basin, for instance. Burning or felling forests to make room for farming is a typical aspect of this war (which humans usually win), and it would be a classic theme for a natives-vs.-colonists adventure (Elves vs. Humans in a fantasy setting). Most of the time, the animals are more dangerous than the plants;

defending the latter might provide an interesting campaign scope for ranger characters.

On the other hand, sometimes the salads become dangerous. As a defense against herbivores, the plants have developed a dazzling array of barbs, thorns, irritants, and venoms. In a fantasy world, where huge and thick-tongued herbivores might exist, these humble barbs might have become a hazard even for leather-armored adventurers who just happen to stroll through.

Another way for a plant to become a nuisance is through infestation. Weeds may seem a trivial problem . . . until they start stifling the tribe's sacred plantation or ruining the characters' agricultural enterprise. While ordinary weeds may be just be a nuisance, magically boosted or alien plants may become a serious threat. An extremely infesting, fast-growing, resistant, alien plant, against which the local crops are defenseless, is probably the first step in a terraforming attempt (as in the *Chtorr* series): some off-world intelligence has begun modifying the planet for its own use!

The truly scary plant, however, is the carnivorous plant. It's difficult to believe they are not intelligent. And the tricks, traps, and snares they can employ, intelligent or not, might fool even smart preys. On Earth, humans are lucky these plants are sized to capture just insects. At least, those we *know* about are; clever GMs can always come up with new species. The same rules of realism that apply to inventing new beasts apply. A large carnivorous plant can exist only if it can count on a reliable flow of largish prey, and it should probably be able to lure them within its range. Maybe a salad dangerous enough to kill a group of able-bodied heroes isn't too easy to envision; on the other hand, if an adventurer has been separated from his party, and he's wounded, he should beware of the thickets of hungry bird-eating plants!

Familiar Alternatives

What To Give The *d20 System* Mage Who Doesn't Want A Rat, Bat, Or Cat

by Owen K.C. Stephens

In standard *d20 System* fantasy games, sorcerers and wizards gain familiars at 1st level. These companions are fairly resilient, gain in power as the spellcaster goes up in level, and make excellent spies, guards, messengers, and even potion-delivery systems. Unfortunately, familiars simply aren't appropriate for all mage-type character concepts or all campaign styles. When used properly they can be a great boon to these characters, but for various reasons many arcane spellcaster prefer not to take them. This leaves them underpowered compared to their toad-toting brethren.

This article presents different abilities that arcane spellcaster may take instead of familiars. This decision must be made at first level, and cannot be changed. The abilities increase in power as the spellcaster gains levels, much as familiars do. None of the abilities should unbalance a campaign, though they are designed to replace the most useful familiars in the hands of experienced players. Some of the abilities can be enhanced by spending feats (much as there are feats to augment familiars in some *d20 System* books).

A GM may use these abilities to distinguish between spellcasters from different regions or different colleges. In a game trying for a different feel to magic, these abilities might even replace spellcasting ability, with a spellcaster gaining a new ability at each level he would normally gain a new spell level. The balance of such uses is questionable, but tweaking the frequency abilities are gained or the power of each ability can likely come close to a well-balanced class.

Though these abilities were designed to replace an arcane spellcaster's familiar, a GM may also allow similar abilities, such as a druid's animal companion or a bard's lore, to be replaced with one of these.

Arcane Sense

A spellcaster with this ability has acute sense beyond the normal range of those for its species. Its sense sharpen as it gains levels, as determined by the chart below.

Level	Damage
1-4	Low-Light or Alertness
5-8	Darkvision to 60 ft. (add 60 ft. to range if caster already has darkvision)
9-12	Scent
13-16	Blindsense to 60 ft. (hearing-based)
17+	Blindsight to 60 ft. (hearing-based)

Arcane Stamina

A spellcaster with this ability internalizes some of his arcane energies and feeds off them, allowing him to accomplish feats of stamina others of his build cannot.

Level	Bonus
1-4	Endurance feat
5-8	Toughness feat
9-12	Run feat
13-16	Toughness feat

17-20 Immune to sleep effects; need not sleep.

Craft Master

This ability creates a pool of experience the spellcaster can draw upon whenever item creation or spellcasting requires experience point expenditure. Every time the caster gains experience, his pool gains points equal to 10% of the experience gained. For example, a new 1st level sorcerer with craft master has no points in his pool. On his first adventure, he gains 500 XP, and his pool gains points equal to 10% of that (50). If the sorcerer creates a scroll that takes 5 XP, his pool is reduced to 45, though it will gain more points when he next gains experience.

Divine Spells

A spellcaster with this ability gains a small number of divine spells he may prepare and cast as if they were arcane spells (using his normal spell slots). At 3rd level, and every three levels after, the caster selects one divine spell to add to his arcane spell list. This spell is treated as if it were one level higher, and must be at least two levels lower than the highest level spell the caster already has access to. (For example, a 3rd level wizard with this ability, having access to 2nd level spells, could select *cure minor wounds*, a 0-level spell. He could then prepare and cast it as a 1st level spell.)

The spellcaster must select one class of divine spellcaster he may select spells from, and it must be a class that gains spells at 1st level (it's not possible to select ranger or paladin). Each spell, once selected, cannot be changed. Though the spells are treated as arcane spells, they cannot be learned by other arcane spellcasters.

Guardian

A guardian is similar to a familiar, and similar to a follower gained from the Leadership feat, but it's not quite either of these. A guardian is a loyal defender who places the spellcaster's well-being before its own. A guardian is a NPC of a typical ECL 0 race that starts with one non-heroic class level (normally adept, aristocrat, expert, or warrior). The guardian gains another non-heroic level when the spellcaster reaches 3rd, 5th, 7th, 8th, 10th, 11th, 13th, 14th, and 16th and each subsequent level. A spellcaster whose guardian dies suffers the same penalty as one who loses a familiar. A new guardian cannot be gained for a year and a day.

The oaths and mystic ties between a spellcaster and a guardian make the guardian vulnerable to the spellcaster's magics, resulting in a -4 penalty to any save the guardian makes against the spellcaster's spells. A guardian is loyal to the spellcaster in all ways, and is always of true neutral alignment.

Mage Blade

A mage blade is a shimmering melee weapon of arcane energies formed through sheer will, without the careful control and intricate formulas of spells. A spellcaster with this ability may form a mage blade as a standard action, then fight with it as a normal melee weapon.

The attack is treated as a mundane melee weapon (not a touch attack). A mage blade requires no proficiency and counts as a one-handed melee weapon. A mage blade does mundane weapon damage of a type chosen by the spellcaster at 1st level (bludgeoning, piercing, or slashing). The damage a mage blade deals is based on the spellcaster's level, as detailed below.

Level	Damage
1-2	1d3
3-4	1d4
5-8	1d6
9-12	1d8

13-14 1d10
15+ 1d12

Enhancements: By expending a feat, a spellcaster of 7th level or higher may change his mage blade so its damage is cold, fire, or electrical. A second feat allows a spellcaster of 13th or higher level to change his mage blade so it deals acid, sonic, or magic damage. In both cases the damage type is selected when the feat is taken, and cannot be changed.

Mage Bolts

A mage bolt is a missile of arcane energy created without the careful control and intricate formulas of spells. An arcane spellcaster can fire a single mage bolt as a standard action (which provokes an attack of opportunity) as long as he has at least one spell of 1st level or higher available to cast. A spellcaster who has expended all his spells of 1st level or higher cannot summon the energies needed for a mage bolt until he has rested and regained spells.

A character that gains multiple attacks a round may fire one mage bolt per attack when taking a full-attack action. The attack is treated as a mundane ranged weapon (not a touch attack). A mage bolt requires no proficiency, counts as a light weapon, and has a range increment of 20 feet. A mage bolt does mundane weapon damage of a type chosen by the spellcaster at first level (bludgeoning, piercing or slashing). The damage a mage bolt deals is based on the spellcaster's level, as detailed below.

Level	Damage
1-2	1d2
3-4	1d3
5-8	1d4
9-12	1d6
13-14	1d8
15+	1d10

Enhancements: By expending a feat, a spellcaster of 7th level or higher may change his mage bolt so its damage is cold, fire, or electrical. A second feat allows a spellcaster of 13th or higher level to change his mage bolt so it deals acid, sonic, or magic damage. In both cases the damage type is selected when the feat is taken, and cannot be changed.

Turn Elementals

This ability works like the clerical power to turn undead, but works only against creatures of the elemental type. The spellcaster may do this a number of times per day equal to 1 + (Wis Bonus), with a minimum of once per day.

Enhancements: The Extra Turning feat may be applied to this ability. By expending a feat, a spellcaster of 11th or higher level may gain the ability to rebuke elementals.

Turn Fey

This ability works like the clerical power to turn undead, but works only against creatures of the fey type. The spellcaster may do this a number of times per day equal to 1 + (Wis Bonus), with a minimum of once per day.

Enhancements: The Extra Turning feat may be applied to this ability. By expending a feat, a spellcaster of 11th or higher level may gain the ability to rebuke fey.

Witchlight

The spellcaster is able to create a light as a free action without resorting to spells. The light's radius of illumination is based on the caster's level, as are special abilities gained by the light, as detailed below. A radius of shadowy

illumination is cast out to twice this range. Once the witchlight has a range it may be moved once per round by the caster as a free action, or hover at a set distance, moving when the caster moves. The light may be of any color selected by the caster, but once chosen it cannot be changed.

Level	Radius	Range	Special
1-2	10 ft.	0 ft.	
3-4	20 ft.	10 ft.	
5-8	30 ft.	Close (25 ft. + 5 ft./2 levels)	
9-12	40 ft.	Medium (100 ft. + 10 ft./level)	
13-14	50 ft.	Long (400 ft. + 40 ft./level)	
15+	60 ft.	Long (400 ft. + 40 ft./level)	Light may be used to create a flare targeting any creature within the illumination, once per round, as a free action.

Dragon in the Smoke -- A Penny Dreadful for Victoriana

Published by [Heresy Gaming LLP](#)

Written by Kristian Bjorkelo

Cover by Ursula Vernon

Illustrated by Svetlana Chmakova & Matteo Lolli

56-page b&w softcover; \$12.99

Dragon in the Smoke is the first book to be released for [Victoriana -- A Roleplaying Game of Vile Villainy & Glorious Adventure](#), the English RPG that attempted to meld the traditional elements of fantasy RPGs -- Elves, Dwarves, magic, and so on -- with Victorian-era Steampunk. In truth, the finished product, as evidenced by the core rulebook, lacked coherency, but in the hands of a competent GM, there was nothing to prevent a fine game being run from the rules. This first supplement is not *The Smoke -- 1867*, the sourcebook for London as promised, but rather a scenario designed as an introduction to the setting.

Best played with a party of adventurers from across all levels of society, *Dragon in the Smoke* takes the heroes on an investigation and a hunt from high society into the wretched depths of London's East End. Two children have gone missing and their wealthy parents would prefer that they be returned quietly and without fuss. There are two means provided for getting the characters involved in the scenario: the first at the request of the children's parents, and the second through a chance encounter with the Gnome consulting detective that the parents have hired. The former is designed for use with upper-class characters, while the latter can be used with characters of any social standing. In fact, both could be run by the GM and thus used to bring several disparate characters together. No special requirements are needed in terms of character abilities, but a good mix of social and investigative skills would be a good start. The adventure involves very little in the way of magic, and then only during the climactic fight scene.

Dragon in the Smoke revolves around the wealthy Doyle family, the father, Henry Michael Doyle having made his money in the import/export business, specifically of spices in the Far East. That is, of course, a euphemism for importing the drug opium into China. It has not only made Doyle rich, but also allowed him to cultivate all manner of different contacts as well as his passion for the exotic art of the Orient. His latest acquisition is a statuette of a dragon in green jade, one that is reputed to grant its owner immortality. Unfortunately Doyle was never meant to "own" this piece and the "rightful" owners, a Chinese Tong (one that is political rather than criminal in nature) would very much like to have it back. To facilitate this, they hired agents in London, who have taken advantage of the adventuresome nature of Doyle's two children. Henrietta and her younger brother, Michael, stifled by their proper Victorian upbringing have been sneaking out of the house without their parents' permission or knowledge. It is while they were out that the small gang of thugs, employed by the Tong, took the opportunity to kidnap them.

The path of the investigation leads from the Doyle household and back again, through the streets of London, visiting taverns, a theatre, a rough church, an abandoned factory, and points in between. Along the way, the party should encounter members of the bohemian set, revolutionaries, firebrand preachers, various thugs and ner-do-wells, and finally members of the Tong itself. The many NPCs include a variety of different races as well, including Eldren, Dwarves, Halflings, Ogres, Gnomes, Ratmen, and even a Panda Beastman! They are all well-described, and are only stated up enough as is necessary.

Although the adventure is called ***Dragon in the Smoke***, this comes up against the fact that there are *no* dragons in the world of ***Victoriana***. Despite this, a dragon is involved in the story in a nicely handled manner, though one that is far from original. Over all, the adventure is well done, but what lets it down are the production values. The book itself looks good from the cover inwards, and the internal artwork is not bad, but it is in the details that it goes awry. Much like the corebook, ***Dragon in the Smoke*** suffers from a severe lack of proofreading. The fault lies not with the author, although it is clear that English is not his first language. Rather, the errors present in this book are the sort that should all have been picked up by the editor; in places, both the punctuation and the grammar are truly dreadful.

As an introductory adventure ***Dragon in the Smoke*** works very well, and is nicely grounded in one of the British Empire's more distasteful acts, the First and Second Opium Wars. Their inclusion hints at the hypocrisy of polite Victorian society, while the investigation exposes the heroes to some of its dark underbelly. At the adventure's end, the characters should have gained a handful of experience points, made several new contacts across the social spectrum, and -- for those of the lower and middle classes -- possibly earned them a small stipend. Besides the adventure itself, the book contains rules for creating characters that can wield martial arts, these an intentional omission from the core book. For fans of ***Victoriana***, ***Dragon in the Smoke*** makes several references to the forthcoming ***The Smoke -- 1867***, but this is not necessary to play. A map is not included in the adventure, but really a GM can get by without one.

Another unintended feature of ***Dragon in the Smoke*** is that ***Victoriana*** is not necessary to play it. It can be set any time from the 1850s up until the 1890s, which opens it up for use with a number of different RPGs. Most obvious is ***Castle Falkenstein*** and more so its ***GURPS*** conversion, which would allow the fantasy elements of the setting and adventure to be retained, but they could be dropped for use with ***Space 1889***, ***Cthulhu by Gaslight***, ***GURPS Steampunk***, and the 1850 Juncture of ***Feng Shui***. Finally, the scenario would work very well as a Victorian London set adventure for [***Buffy the Vampire Slayer Roleplaying Game***](#) or even a Dr. Who game in the style of the classic episode, *The Talons of Wen Chiang*.

One other advantage that this adventure has over its core rulebook is one of coherency. Limited to just 56 pages, the author is forced to concentrate upon a single subject; he does in such a manner that it can be run under any number of other games. Let down by shoddy editing and proofreading, ***Dragon in the Smoke*** is nonetheless an enjoyable adventure, with plenty of opportunity for action, roleplaying, and investigation.

Pyramid Review

Draconomicon (for Dungeons & Dragons)

Published by [Wizards of the Coast](#)

Written by Andy Collins, Skip Williams, & James Wyatt

Edited by Michele Carter, Dale Donovan, Gwendolyn F.M. Kestrel, & Charles Ryan

Art direction by Dawn Murin

Art and graphics by Wayne England, Emily Fiegenschuh, Lars Grant-West, Rebecca Guay-Mitchell, David Hudnut, Jeremy Jarvis, Ginger Kubic, John & Laura Lakey, Todd Lockwood, David Martin, Dennis Crabapple-McClain, Matt Mitchell, Mark Nelson, Steve Prescott, Vinod Rams, Richard Sardinha, Ron Spencer, Stephen Tappin, Joel Thomas, Ben Thompson, Sam Wood, Dawn Murin, Mari Kolkowski, & Todd Gamble

288-page full-color hardcover; \$39.95

When you create a game called *Dungeons & Dragons*, sooner or later you're going to have to pony up the dragons. Admittedly, the line has produced this book before, but the 3.5th edition needed its own take, hence the latest incarnation of the *Draconomicon*.

Rather than see the dragon as the huge pile of hit points standing between you and a big pile of treasure, the writers try to flesh out these magnificent beasts. The book treats them as characters first and foremost, participants in the story, and in fact there are guidelines for using them as PCs, NPCs, forces of nature, or just the stuff of legend that dominates an area's history. They can be friend or foe, mentors, or part of the party.

There have been several varieties of dragons introduced over the years, and the issue has been clouded further by the inclusion of pseudo-dragons and other creatures with more than a passing similarity. The book defines what does and doesn't count as a "true" dragon, a necessary consideration because there's a full system for advancing dragons through the various age categories.

The first part of the book goes into heavy detail about dragons as living creatures: what (who) they eat, where they sleep, how they live their lives. Few stones are left unturned as the almost painfully complete ecology is laid out. They give you the bare bones of the beasts, and build from there. That is in no way a metaphor -- the skeletal structure, the scales, the senses, the origin of the flame breath . . . it's all included. There is also plenty about culture: religion, draconic gods, language, misconceptions both from inside the race and without. How they think and how that affects their sense of community is important if you want to know how they get together to mate or raise children.

Big distinctions in the creatures' lives are made through age categories. All dragons start as wyrmlings, and progress through 12 stages to become great wyrms some 1,200 years or more later. When the beast is at the point in its lifespan

where it's ready to die, it's called the twilight, and there's material on both it and the draconic death rituals.

After the general foundation is set down, each dragon category -- the book focuses mostly on the chromatic and metallic types -- is described so you know how blues differ from reds, and whites differ from golds. Once the biology lesson is out of the way, they get to some rules.

The ***Draconomicon*** follows the pattern now familiar to most readers of ***d20 System*** books, but the crunchy bits look at dragons from both sides of a fighter's shield. There are new feats, magics, and prestige classes, for both dragons and those explorers with whose paths they cross. The dragon prestige classes are mostly high-minded and grand, befitting a wondrous beast who seeks to become loftier still. The Dispassionate Watcher of Chronopsis patiently adjudicates matters for his draconic brethren, while the Elemental Master sits and ponders his place as dictated by the very nature of existence itself. Then again, the Unholy Ravager of Tiamat seeks nothing but destruction, held in check only by the Sacred Warrior of Bahamut.

The dragon feats seem like what you'd expect: They're mostly about fighting, but they do help bring the feel of combat with a dragon to life. If you thought dragons were tough customers before, they can now improve in combat just like the PCs. They can constrict with their tails, split their breath weapon among multiple targets (metabreath feats, if you can believe it), or slam the ground so hard it throws you off your feet. (None of these include the epic dragon feats -- those are *really* dangerous.) Then spells that increase the damage of a claw attack or animate breath weapons really ruin your day. And of course, the ever-popular polymorph spells let dragons move undetected among men, making your target harder to find.

On the other side of the rules coin is just folks. Men and their ilk are willing to put their lot in with dragons to one degree or another. Dracolutes worship the draconic gods and Dragonkith serve them, but Dragonriders and Dragonslayers have their own quite obvious uses for dragons (and the Hoardstealer illustration is almost worth the price of admission). New spells ape the dragon's powers or protect the user from them, and the feats allow you to channel dragon-like abilities or improve your chances against oversized beings in combat. If you do manage to kill one, a dragon's parts can be used for any number of spells, rituals, potions, or magic items.

The rest of the book contains primarily DM information. Anyone wanting to match up their dragons with their dungeons can use the tips provided to pit humanoids against the reptiles. How does the GM make the most of his dragon so his players won't walk over it? How does he make it a memorable encounter? Using this book, the winged beasties will become more than a few initiative rolls accompanied by some bursts of fire, they'll be clever and canny opponents, just as you'd expect from someone with centuries of experience.

The adventurers aren't left to their own means. The authors also look at combat from the other side of the equation -- how do you outflank someone who was old when your granddad was in short pants? How do you maneuver the dragon into all the wrong places so you can limit his movement? What forms of attack work best, and which ones are a waste of your firepower? Once both sides have taken this primer to heart, the battles should be much more impressive to play out.

You can have the dragons intermingle with humanoidkind most easily by shape shifting, which allows them to give counsel and seek adventure as any other two-legged being. Barring this, the average dragon can't fit into your standard magic armor, has little need of a shield, and is certainly never seen down at the marketplace. Yet he's always sitting on a stack of equipment and money. Not only does this volume provide new spells and magic items befitting the great race and their girth, it offers reasons why dragons have such a huge stash and tells you to what purpose they put it. Chief among them, it's a ritualistic component for assuring they pass from this life to the next in the manner they'd like. Dragons may become ghosts or even liches when this vale of tears no longer holds any interest for them, and their contributions to the draconic cause may be just beginning at that point. The back of the book takes a quick but terribly useful look at the dragon's hoard, with a handy how-to section on making the treasure experience come alive instead of relegating it to a long-winded DM's laundry list of goodies. There's also a set of sample hoards for CRs 1 through 27, and the items to be found therein have clearly heeded their own advice.

The many forms of the dragon don't end with a change in lifestyle. Just because they aren't "true" dragons doesn't mean the other dragon-like creatures of ***Dungeons & Dragons*** don't warrant some page count. All things draconic are

stuffed into a bestiary. Dragons from other planes, other dimensions, even beyond the grave creep, burrow, and fly from this chapter. Creatures of light, creatures of rust and decay, landwyrms, dragons from the pits of hell, and dozens more let you keep adding twists to what players think of when they hear the word "dragon."

Since there are rules for what dragons are like at different stages of life and more rules that allow them to advance as player characters do (the average PC only gets to see a snapshot of the dragon's total lifespan, so you have to scale it down from changes made over the centuries), the writers also wanted readers to see how dragons of different levels work when the character creation and development systems are put to work. To this end, they've provided a sample character for all the main dragon types at all levels.

Yes, that's right, 10 different dragons, 12 stages of life, 120 sample dragon characters with a thumbnail personality, their stat block, their spells, and their skills. A fourth of the book is taken up by these characters, the write-ups getting longer and longer as the dragons get older. And this is really the problem with the product.

The level of detail throughout is astounding, and while not dull by any stretch, it could obviously have been truncated in the interests of a briefer -- but perhaps less marketable? -- book. Wizards of the Coast seems unwilling to let go of a certain style of book design, one that apparently demands a minimum page count and the hard binding. The text isn't bad, but it's creative filler in too many instances. It's too much of a good thing; you just don't need so much of this. It also suffers from that custom **d20 System** books have of taking a piece of creature information (such as the Swim ability) and putting it in front of almost every single beast complete with the full ability description. Wizards of the Coast has also given up on an index when it's needed most.

The anatomical drawings, the depictions of the typical lair for each dragon type, the combat schematics . . . the artwork is another gallery of some of the finest talent in the business. The layout and graphics hold their own (but get ready for more of that text falling into the crack of the spine), and you can't fault either the quality or the commitment to the subject. Alas, **Draconomicon** fills a need that few fans will want to omit from their collection, and it does so by placing at least as much value on salability as it does on quality.

Murphy's Rules

by Greg Hyland

Murphy's Rules

¿Como Te Llama Gamespeak?

Lately I've been listening to a lot of [This American Life](#), the National Public Radio program with stories and vignettes about . . . well, just about anything involving life in the United States.

And by a lot, I mean a *lot*. I've gone through pretty much every weekly program from 1997 to 2000 in the past month. Listening in this way gives a very distorted view of time; themes flow like waves. In the span of a half-day it is Father's Day, then Election Day, then Thanksgiving, then Christmas. Soon the year changes, and it's Father's Day again.

Anyway, this week's column was indirectly inspired by holiday fare. For the 1999 [Christmas episode](#), writer and humorist David Sedaris had a story detailing an incident in an adult education French class in France, where he and his other classmates found themselves trying to explaining Easter to a Moroccan student. The problem for him and the class was two-fold. First, there was the difficulty in describing unfamiliar concepts in an unfamiliar language: "The rabbit of Easter! He bring of the chocolate! He come in the night when one sleep on a bed. With a hand he have the basket, like for bread!" The second problem was that the holiday traditions *themselves* didn't align; for example, apparently in France tradition has it that Easter chocolate is delivered by a flying bell from Rome, so concepts like "the rabbit of Easter" were viewed as completely cuckoo.

Anyway, the culture aspect of this anecdote should be fairly self-explanatory (and it's one I touch on from time to time already, most recently [a couple months ago](#)). But the aspect I found of this to be most inspiring was the idea of language.

Not too long ago I ran a LARP one-shot. I pregenerated characters for the players, and sent them on their way. Now, this was a LARP set in the ***Fading Suns*** universe, a feudal space opera setting with nobles and churches and grand (but nearly lost) technology coexisting in an uneasy balance. I tried divvying up the group as best I could into the three pillars (nobility, clergy, and skilled laborers), hoping they would find a means of coexisting but remaining stratified within their subgroups, as befit the system.

Almost as an afterthought, I gave two of the groups something that proved instrumental in this goal: Languages.

Within the game world, many factions already had their own languages, used to transmit their own lore and teachings. For example, the church had Latin, while the engineers and think machine (a.k.a. computer) operators had Urthtech, a dialect of the "normal" Urthish language consisting of jargon and slang that is almost incomprehensible to non-speakers. (As an aside, as an ex-comp-sci cadet, I found that to be one of the more brilliant additions of ***Fading Suns***. Watching my physicist and engineering friends get into arguments back in college was a whirlwind of indecipherable jargon, in-jokes, and general geekery gobbledygook.)

While the Tower of Babel's destruction drove mankind into disharmony by spreading the confusion of differing languages, giving each faction in the LARP proved to be a unifying force. By simply allowing subgroups to communicate among themselves -- with the expedient of being able to tell other players "You can't understand us!" -- I was able to create a more immersive simulation of the game world, where various groups guard their secrets fiercely.

As such, I can heartily recommend adding -- or enforcing -- languages for certain campaigns. Here are some ideas to spark your imagination about the addition of other tongues to the game:

Consider being misunderstood. I have had considerable fun playing characters whose command of the prevalent language is less-than-perfect. For example, I have played spiritual entities who can only speak ancient versions of one PC's language, resulting in mangling not dissimilar to David Sedaris' anecdote above: "Ah, yes . . . you seek crystal-shine stone part for to be stopping the bringing to completion the story of aged badness that is threatening to bring final harm to you and the friends of you?" (For some reason I find it easier to do this while adopting an outrageous Monty Python-esque "French" accent.) Usually this technique is only suited for short-term characters or characters who will eventually learn to speak more fluently, since -- let's be honest -- too much mangled language will probably result in

eventual sharp plasticine polyhedrons flung at your head.

On the other hand, it is possible to play a character who will *never* be understood. I never got to witness it firsthand, but my friend [Dennis](#) was in an old *Star Wars* game (pre-*d20 System*). One player was playing a Wookie, who has -- as part of his template -- the condition that one other PC can understand Wookie. So the Wookie player chose the Ewok PC as his confidant . . . and the Ewok doesn't have *any* necessary provisions for being understood by anyone else. Apparently whole scenes would pass with the Wookie and Ewok players gibbering away at each other in their own *Star Wars*-y alien imitations. And all the players loved it.

Consider all communication. Alternate, exclusive communications don't always mean a literal language. For example, science fantasy engineers may have their own tongue (such as Urthtech), or they may instead have access to an exclusive bulletin board system where they can communicate privately or publicly with others of their kind; access to this BBS might only be possible for those who get a special, guild-certified implant that allows them neural access. (And, to be honest, the biggest reason I mention this example is to try to make sure the world doesn't forget what a BBS is/was for at least another few months.) *Changeling* posits a "language" between noble fae that consists entirely of subtle gestures, nuances of word-choice, and minute interactions between its "speakers" (which drives commoners nuts); two nobles may be speaking audibly about the changes in the weather between their fiefs, but in actuality they are subtly threatening each other and attempting to see how willing or eager the other is to go to war. ("My people are very willing to withstand most ordinary storms." "Truly? I've heard it said that this coming season will be tumultuous indeed . . .") Creating and using these kind of alternate "languages" can go a long way toward distinguishing characters and generating new avenues for plots.

Make sure players can't "eavesdrop." Not all groups may have a problem with this, but most groups I've been with have a problem separating player and character knowledge, especially when it comes to conversations they aren't supposed to understand:

Powerful NPC, Speaking to the One PC who Shares His Language: "This group of yours . . . they do not seem worthy and respectful of my help."

PC Who Speaks the Language: "Uhhh . . ."

PC Who Doesn't Speak the Language: "If he happens to think we're not worthy, tell him we will offer to perform a test to prove our merit."

To help prevent this, I'll generally pull players who have the required language aside and have the conversation solely with them. Other groups pass notes or use other techniques, but I've always found this to be too slow . . . and, given my atrocious "refrigerator crayon drawing" handwriting, prone to errors. However, neither option is ideal; even if you don't speak a language, you can still glean information and sensations from the *way* the speaker is talking. (To be honest, this is one area where I'm hoping that some Clever Technological Breakthrough -- like anti-babelfish -- will enable me to keep players together in the same room, while still carrying on false "foreign" conversations with them. If anyone has any ideas, I'm all ears.)

Give useful game information to the language-bearers. Obviously, having a cool language that is never useful is . . . well, not so cool. If other players don't have the language (and thus promote intra-party unity and interaction), then the GM should consider making clues and lore available only in that language, if only to give those who put character points into languages a chance to shine as much as those who put it into the Prevalent Weapon skill.

All this should help bring the fun of communication to the gaming table, and hopefully give you some new ideas.

In the meantime, I need to await the man who wears red and has much fat; soon he comes down the place where there is fire to give us the boxes of things to play.¹

--Steven Marsh

The Sevenpart Soul

by [Chad Underkoffler](#)

Art by [Chris Cooper](#)

Genre & Fidelity: Fairy Tale

Style: Seelie or Unseelie

Campaign Setting and Background Information

The unborn Heir to the throne of the fairy tale kingdom of Mirabilis has been reft of his or her soul by evil magicians! Can anyone avert this curse before the Prince (or Princess) is born and catastrophe ensues?

What Everybody Knows

The Kingdom of Mirabilis

Ruled by Good King Frietag and his wife Good Queen Sarida, Mirabilis is a nation created by the recent union of the two smaller kingdoms of Mira and Bilis.

- *Mira:* The royal family of the Sunblessed has held the crown of Mira since time immemorial. Their clear-sightedness and strength in battle is proverbial, and they have ruled their forested land and plainspoken people with firmness and fairness. Even while a Prince, King Frietag warred against the roaming dragons, evil sorcerers, and wicked witches that came down from the northern mountains every season.
- *Bilis:* In Bilis, the cool valleys spill out onto verdant plains. The folk of Bilis are generous and stout, and both of these characteristics spring from their fertile croplands. The Moonseer family has ruled them with mercy and care since before the first stars lit the sky, and will do so forever, Moon-willing. When but a Princess, Queen Sarida proved a powerful and good witch, and staved off several supernatural attacks against her people by malcontent magicians.
- *Union:* Almost a year ago, these neighboring kingdoms fused into a single land with the marriage of Frietag and Sarida. The magic that runs deep in both of their bloodlines has begun to mix, and has helped push back threats against the new nation: fell monsters, envious kings, and evil wizards.

Mirabilian Magic

The magic of the world of the kingdom of Mirabilis is folk magic, fairy tale magic, empowered superstition. Supernatural abilities reside in people, things, and deeds:

- *People:* Some folk have abilities that surpass -- or transcend -- the skills of mundane people. Any unusual capability or an uncanny mastery of a familiar skill is considered magical. Examples include things in the vein of Eyes of the Hawk, the Strength of 10 Men, the Fastest Man Alive, Uncanny Minstrelry, Speak with Animals, Shapechanging, Spinning Straw into Gold, Catlike Tread, and so forth. These abilities could be the result of an unusual heritage or upbringing -- Son of the Wind, Fairy Changeling, Witch's Daughter, Full-Blooded Ogre, etc. (Some magical animals also fit into this category: felines with footwear, fowl that lay precious metals, dogs with unusually large eyes, etc.)
- *Things:* Magical power can be found in natural products of the earth -- herbs, crystals, the body parts of animals -- or constructed works of fine craftsmanship (which often require powerful natural products in their construction) -- Singing Swords, Invisibility Rings, Holocaust Cloaks, etc.
- *Deeds:* Step on a crack, break your mother's back. Find a penny, pick it up, and all the day you'll have good

luck. Sprinkle spilled salt over your shoulder to turn aside misfortune. Sow a good turn, reap one in return. Ask for your parent's blessing before your feet touch the road. Look into a dish of water when the light of the first star shines into it, and see your destined lover's face. Any superstitious ritual or action taken with the correct intent can be magical.

A magician (wizard, witch, sorcerer, etc.) is a being that possesses the abilities and/or lore of one or more of the above categories; everyone is a potential magician. (See also below, *Running Mirabilian Magic*.)

Disaster at the Anniversary Feast

The royal couple summoned all their loyal subjects to attend them upon the anniversary of their -- and the nation's -- union. A great tournament, fair, and gala ball was declared. Vast supplies of meat and drink were laid in, entertainers from near and far came to ply their trade at court, far-flung nobles -- both major and minor -- obeyed with alacrity, even country-bumpkins came, carrying their hard-won wares and produce to sell. All was well, all were happy, all were safe . . .

. . . Until after the tournament, on the last day of the fair, in the very hall of the fete, hot on the heels of the announcement that Good Queen Sarida was gloriously with child: tragedy struck. The sun itself dimmed, unexpectedly eclipsed by the moon, and seven shadows formed around the sitting Queen, tearing at her, striking long sparks off of her magical protections.

Good King Frietag and his wizard, Greenegg, leapt to her defense with sword and spell, but as hawk-swift as they were, the shadows were lightning. With a terrible shriek, they wrested magic from her -- no, not her, but her unborn child -- and fled. "My baby," she sobbed. "They've stolen its *soul*!"

The Quest

The situation is this: The soul of the still-quickening Heir has been stolen, and ripped into seven pieces. These pieces must be found, recovered, and returned, or else catastrophe will befall Mirabilis. Even the royal wizard Greenegg cannot see a jot of the future past the child's birth, not even to determine the sex of the Heir. All this wise one can glean are vague forebodings of the forthcoming:

- *The best case scenario* is that the child will be born without a soul, leading to either -- if incomplete -- a dire weakness in the future ruler of the land or -- if totally missing -- an unspeakable monster.
- *The worst case scenario* is that the fires that light the Sun and Moon themselves will start to dwindle and die, plunging the entire world into eternal darkness.

As the Queen has been weakened by the attack, so Mirabilis' might has been reduced. King Frietag must redouble efforts to keep the land secure from without, while Greenegg guards and supports Sarida, who struggles to maintain peace within. Therefore, none of these three mighty can seek the infant's soul -- and this inability galls them greatly. They call upon their gathered people, asking for the bravest, smartest, strongest amongst them step forward, to take up this gauntlet, to save their child, the kingdom, and possibly the world.

The Rewards

Why would anyone undertake such a Quest, seeking out obviously dangerous sorcerers?

- It's the right thing to do.
- Pity for the Heir, the King, and the Queen.
- Self-preservation -- if the Heir is weak, the land will be unprotected.
- The King offers a boon to any that bring back a part of the Heir's soul: he will grant anything asked, if it lies within his power, save that the request does not harm or imperil his family, his people, or his kingdom.
- Elevation to the aristocracy.

- Sacks and sacks of treasure.
- Royal pardon for any crime.
- The right to choose any unwed person to take as spouse (provided the spouse-elect agrees).
- And so forth . . .

The Sevenpart Soul

Greenegg can tell the King, the Queen, and those volunteers who take up the Quest the following information:

- Seven Parts:* The seven parts of the Heir's soul are:
 1. Beauty;
 2. Grace;
 3. Health;
 4. Strength;
 5. Willpower;
 6. Wisdom; and
 7. Wit.
- Spiritual Artifacts:* The externalization of the internal leads to power, magically. Thus, the seven parts of the Heir's soul have collapsed into physical objects that bequeath great ability upon the wearer. If held by one utterly lacking in the respective aspect of spirit, it grants them Good ability to all things involving that quality; held by someone with mild familiarity with that aspect, it grants Master ability; and to those already possessing a large amount of that aspect, it grants truly *supernatural* prowess (lifting a castle, jumping over the moon, parrying lightning, that sort of thing).
- Recovery:* The objects that comprise the Sevenpart Soul can only be retaken in three ways:
 1. Surrendered freely to another by the wearer;
 2. Stolen from the wearer's person at noon or midnight; or
 3. If the wearer is bested in a challenge of the spiritual aspect of the artifact.
- One Chance:* The ritual to restore the pieces of the infant's soul can only be performed once: the artifacts must be touched to the Heir's body before its first cry. So, as many pieces -- if not all -- of the Sevenpart Soul must be assembled and guarded for that singular moment.
- Time Limit:* The Queen was exactly two months pregnant when the shadows stole her baby's soul. This means that a clock is ticking, counting down to catastrophe. Greenegg has been able to fix precisely the span remaining: seven months and seven days before the child is born.
- Born Incomplete:* If the Heir is born without its entire soul, catastrophe will ensue. The child will probably be weak or twisted in some manner, since it will be out of balance. This could give rise to troubling future attitudes, actions, and fortunes, leading to personal, Mirabilian, or even world-wide devastation.

What Everybody Doesn't Know

The Seven Sinister Sorcerers

Individually, each of the Seven Sinister Sorcerers began making plans to injure the royal couple of Mirabilis on their anniversary. As they devised their varied stratagems, they became aware of the plans of the others. Among themselves, they came to solemn agreement: whoever's trap successfully sprung and caught the King and Queen, that Sorcerer would lead them all.

Alas, the protections woven around the couple were too strong: the poisoned apple was fed to a horse, the hired assassins were identified and killed before they could strike, the enchanted comb fell into the privy, the misled dupes woke up to their treachery, and so forth. The situation looked hopeless for our villains.

But then, Eniale Morgan realized that the eclipse predicted for later that day (in a rare, outlawed tome of witchery of which she possesses the only copy in the kingdom) would have an effect on the magic of both the Sunblessed and the Moonseer bloodlines. In exchange for freeing her from her gilded cage, she told the other six of the rare opportunity they had been given. Starting with Mazer, the others strongly approved. With the understanding that they'd work together for the nonce and sort out the division of Mirabilis after the Heir was born, they moved with a quickness. Utilizing all their magical talents and skills, they were able to successfully steal and shatter the Heir's soul and escape.

More information on each of the Seven Sinister Sorcerers can be found below (see *NPC Backgrounds* and also *Seven Sinister Situations*).

The Effects of Soul Externalization

What effect with the externalization of the Heir's soul into Spiritual Artifacts have if some or all of the pieces are returned to the Heir? Here are three options:

1. The soul aspect is *strengthened* by the "exercise" it received;
2. The soul aspect is *weakened* by having some of its apportioned amount of power used up; or

3. No effect.

PC Opportunities

Given the nature of the anniversary festivities -- fair, tournament, and ball -- just about any pseudo-medieval fairy tale character can be present at the beginning of the Quest: visiting princes of charm, lackwit but lucky third sons, apprentice witches, merchants, swineherds, chambermaids, blacksmiths, storytellers, heroic little girls off to see their grandma . . . anything.

The Quest -- this campaign -- is "Who's for Adventure?" writ large and sprinkled with Fairy Dust. Encourage your players to generate characters that would accept the challenge; characters that will accept the companionship of the other PCs would also be a good idea. (However, if a PC "party" just doesn't jell, running each PC's adventures in parallel with judicious uses of "cross-cutting" and "meanwhile, in the wastelands . . ." can work rather well.)

Players should decide which part of the kingdom they come from, and how far away from the Palace their home village is: this can help them flesh out their backgrounds with knowledge of (or possible past interactions with) one or more of the Seven Sinister Sorcerers (see below, *NPC Quick Reference Chart*).

NPC Backgrounds

Grobvadr: Ever since he can remember, Grobvadr has desired immortality, and all his researches and evil deeds have centered on this goal. A Master Alchemist, he is wise in the lore of the mystical qualities of plants, metals, minerals, and animals, and how to extract this power for his uses. Unfortunately, Queen Sarida kept thwarting his more involved and depraved experiments. He coldly joined with the other six miscreants in stealing the Heir's soul and won the Pearl Cloak of Wisdom for his trouble. He repaired to his hidden cave lab in the Wastelands of Bilis to apply his new acumen to his alchemical studies, but something has gone wrong. His new insight is showing him that he is doing evil, that he is following a wrong path, and that his entire life has been a tissue of wickedness. Stripped of his personal illusions, he struggles to determine what he must do to save his soul.

Rietta Lachat: Driven by the simple lust for gold (Poor ability to resist her Greed), Rietta is an Expert Knife-fighter, Master Dancer, and Mira's top Master Thief. Her criminal skills are aided by an inherent magical ability: Unable to Be Restrained by Normal Means Against Her Will (Expert). Without mastercraft mundane measures or strong magical ones, she cannot be stopped from going where she wants to go, no matter how secluded or remote. (This power also allows her to shed fetters, the grasping hands of guards, ropes, etc.) However, one snare *has* caught her: love. While attempting to pilfer Xul's Iron Tree, she came upon the enchanter and fell for him madly. He responded in kind, and built her a little cottage up among the waving branches of his home. Separately and together, this couple has plagued King Frietag for a decade. Rietta wears the Silken Slippers of Grace, enhancing her normal agility to supernatural levels -- she can now walk across smoke, skip across water, and dance up the sheerest walls with ease.

Leidan Manticora: Driven by his secret shame of only being a half-ogre rather than a full-blooded one, Leidan Manticora is a big Bully (Poor Social Interactions, except for Intimidation). His heritage has given him Master level Strength and Toughness, which he applies to any obstacle which pops up in his path (Poor Thinking). For Leidan, he is the hammer and everything else is a nail. Unfortunately, Queen Sarida has always been the nail that could not be hammered down. She has stopped every one of his plans; obviously, he wasn't strong enough. However, he should be now, because his hands are sheathed in the Steel Gauntlets of Strength, forged from her very own Heir. he will show the little Queen who's boss *now*. In the Tower of Time, Leidan prepares, gathering his barbarian forces and all the

necessary supplies for war.

Eniale Morgan: Step-sister of King Frietag, Eniale has always been plain-looking and Envious (Poor) of her step-sibling, but she's tried to make up for it with a Good Wit, an Expert gift for Lying, and a Master-ful grasp of intrigue. She's also an Expert in the use of sorcerous sigils and runes. But against the rightful king, all her plans to depose him and rule in his stead have come to naught. After her last escapade, Frietag made her a virtual prisoner in the Palace, where he could keep an eye on her. Freed by the other six, she is the one who realized the opportunity afforded by the eclipse. Her reward for her treachery against her unborn niece or nephew was the Diamond Circlet of Beauty, which has made her ravishing (Master Beautiful) and quite a bit Vain (Poor). Currently, she is insinuating herself into the royal court of the neighboring kingdom of Emases, where she plans to murder the Queen, marry the elderly King, and take his throne . . . all as a prelude to rolling over Mirabilis with Emases' legions.

Mazer Remarque: Mazer Remarque's youthful devotion to chaotic gods was rewarded with the gift of Expert Shapeshifting. This talent, combined with his industrious nature, makes him a Master of his chosen profession -- Sabotage. He hates and fears organization and perfection (Poor Reactions to displays of Order), and loathes Mirabilis and its monarchs because of this. Mazer latched onto Eniale's plan with great fervor, as the destruction of Mirabilis through its soulless Heir would be the crowning achievement of his career. He has remained in the Palace to assure that no one can prune the wonderful flower of anarchy that will grow from the seed he and his comrades have planted. Through his magical transformations, Mazer skulks as slovenly chambermaid, fly on the wall, obsequious minister, squeaking rat, and other forms to gum up the works of the Quest. He is supported in his interference with the Iron Mask of Willpower (reveling in delightful irony that part of the Heir will be the kingdom's undoing), which allows him to resist any mundane privation -- hunger, thirst, sleeplessness, pain -- in this pursuit.

Guillermo Typus: Wise -- or rather, *wicked* -- in the ways of the darker side of the natural world, Guillermo is an Expert in Speaking to Animals and Compounding Toxins (from plants and venoms). He's also Good at Cursing Others with Sickness. He's always been a minor irritant to the King and Queen, living in a small manor in the heart of the Verdulent Swamp of Bilis, where he harries the simple countryfolk. Sickly since birth (Poor Constitution), he claimed the Spiritual Artifact that would bolster his strength: the Amethyst Girdle of Health. Possession of the Girdle eliminates his weakness, positioning this minor player into a more dangerous foe. After a short period of enjoying his newfound wellness, he plans on creating a great swarm of nasty creatures and leading them through the swamps, into the sewers of the capital, where they will burst up into the Palace itself and begin to feed on all within.

Xul (the Crafty): Xul is the grandson of the greatest maker of Miran magical toys, but early in his apprenticeship to the old man, he found that he preferred to create enchanted items for himself rather than others (like his Flying Cloak and his Holocaust Sticks). A Master Enchanter and Intellect, he increasingly sees most other people as simply marionettes having their strings pulled by forces they do not understand. Why shouldn't he be the Puppeteer, then? He'd do a damnsight better job than whatever lout they have working now. This outlook makes him Poor at Interacting with Most People, and when not attempting to take over the throne, he prefers the privacy of his Iron Tree and his enchanted automata to living things. The major exception to this tendency is Rietta Lachat, the thief he loves. He has built her a little cottage for her atop his Tree, which is nearly impossible to reach, unless one is a very skilled climber or can fly. Singly and as a couple, Xul and Rietta have battled with King Frietag for over 10 years. Now, with the added brilliance granted to him through the power of the Ruby Ring of Wit, he is closer than ever to achieving world domination.

NPC Quick Reference Chart

NPC Name	NPC Demesnes	Distance from Palace	NPC Artifact
Grobvadr	A cave near the Wastelands.	Very Far (Bilis)	Pearl Cloak of Wisdom
Rietta Lachat	A cottage high in the Iron Tree.	Far (Mira)	Silken Slippers of Grace

Leidan Manticora	The Tower of Time.	Near (Bilis)	Steel Gauntlets of Strength
Eniale Morgan	Formerly, a prison-suite in the Palace; now, unknown (the court of the King of Emases).	Moderate (on the other side of Mira)	Diamond Circlet of Beauty
Mazer Remarque	Unknown (an unused storage room in the North Tower of the Palace).	Unknown (the Palace itself)	Iron Mask of Willpower
Guillermo Typus	A small manor in the middle of the Verdulent Swamp.	Moderate (Bilis)	Amethyst Girdle of Health
Xul the Crafty	The Iron Tree.	Far (Mira)	Ruby Ring of Wit

Events & Possible Story Arcs

It could be interesting for some groups to play through thwarting the various plots of the Seven Sinister Sorcerers noted in the *What Everyone Doesn't Know* section above. Then, suddenly, stakes are raised by the eclipse and ritual soul-theft of the Heir.

Also, the individual arcs of the PCs could be woven into the storyline of the campaign for maximum joy. For example, if a PC has an evil stepparent, consider making one of the Seven Sinister Sorcerers take on that role. Or if the PC has been enchanted into a four-foot-tall talking rabbit, perhaps completion of the Quest will release them from the curse.

Seven Sinister Situations

Each of the Seven Sinister Sorcerers has a plan for attacking Mirabilis' King and Queen. Depending upon when the PCs encounter them, the plans mentioned in their write-ups will be in different stages of development. *Early* means if the NPC is one of the first two approached; *middle* means that the specific NPC is tackled third, fourth, or fifth; and *late* means that the NPC is one of the last two sorcerers dealt with.

Grobvadr: Grobvadr is wrestling with the emergence of a powerful conscience that is not his own. He has retreated to integrate his thoughts.

- *Early:* Will put up token resistance if approached in this phase, before ultimately surrendering.
 - *Middle:* Will welcome PCs, and offer to aid them in retrieving the Spiritual Artifacts.
 - *Late:* Will already be actively working to collect the Spiritual Artifacts.
-

Rietta Lachat: Rietta really has no plans against the King and Queen currently: the severance of the Heir's soul left her a bit uncomfortable. (She still wants to keep the Slippers; she's just a little guilty over it.) Furthermore, after their escape, she had a huge fight with Xul, and the two are barely speaking to one another.

- *Early:* Remains secluded in her swaying, swinging, difficult-to-reach cottage; enjoying her slippers, not speaking to Xul.
- *Middle:* Guilt over events increases; initial overtures of reconciliation between Rietta and Xul.
- *Late:* Agrees to help Xul in his plan (see below), but guilt over the fate of the Heir is quite high.

Leidan Manticora: Leidan struts around the Tower of Time, spending half the day creating his military force, and the other half roughhousing, gambling, and carousing.

- *Early:* Actively recruiting barbarians to his army; laying in supplies.
 - *Middle:* Training his soldiers; sending out scout units and setting up caches.
 - *Late:* Begins marching on the capital and the Palace.
-

Eniale Morgan: Eniale is playing a longer game -- she's quite content to let the Heir be born and grow while she solidifies her hold on the King (and kingdom) of Emases and begins deep plots of diplomacy and intrigue, to stir up the ire of other neighboring kingdoms against Mirabilis.

- *Early:* Is becoming a fixture in Emases court society.
 - *Middle:* Is about to poison the Queen of Emases.
 - *Late:* Is about to marry the King of Emases.
-

Mazer Remarque: Mazer just likes messing things up, and prefers to start small and move to greater and greater levels of disruption. If possible, he prefers to perform a very small action that causes iterative changes until eventually, the whole target flies apart from the stress.

- *Early:* Does a little sabotage on *all* groups beginning the Quest (make sure their horse throws a shoe; sleeping draught in their wineskins, handing out wrong maps, paying guides to mislead questers, etc.).
 - *Middle:* Begins sending hired thugs and assassins against the PCs and whispering evil rumors about them in the Palace.
 - *Late:* Leaves the Palace himself to take the fight to the PCs, backed by a small group of highly-skilled cutthroats.
-

Guillermo Typus: Guillermo thinks small -- simple pain, cruelty, mayhem, and murder (he's only slightly smarter or sneakier than Leidan). He's mildly sadistic, but strictly minor league.

- *Early:* Guillermo spends most of his time running around the swamps, jumping, swimming, beating up on the peasants, and generally loafing.
 - *Middle:* Guillermo begins collecting his Swarm of Doom and concocting barrels of disease potions and poisonous elixirs.
 - *Late:* Guillermo leads his Swarm of Doom out of the swamps to the sewers, and prepares to dump his noxious brews into the Palace's water supply. After doing so, he'll wait a day or two for the poisons to take effect, and then burst up from below with the Swarm of Doom at his heels.
-

Xul (the Crafty): The Ruby Ring makes Xul supernaturally smart -- smarter than any normal human could ever be. This can be a difficult thing to portray for a GM. Here's a suggestion to help mimic that level of intellect, but *be warned* this will require a delicate touch. Simply, Xul will have thought of all reasonable, normal plans that the PCs could have come up with, and formulated a response. Now, there are three codicils to this:

1. Magic -- especially unknown and undisplayed capabilities -- muddies the waters.
2. Xul sees human interaction as simply a case of stimulus and response (that is, relationships and emotions are imposed from without, rather than arising from within), so that any action taken from random chance or impulse skew Xul's formulations.
3. The quality of Xul's response may be altered by circumstances outside of his control (flash floods washing away his Hopping Dolls, for example).

Furthermore, as the campaign progresses, Xul will become aware of the vying forces arraying upon the field, and will pay specific attention to three of them: Grobvadr's turn to the side of the angels, Eniale Morgan's machinations, and the Questing PCs (in that order).

- *Early*: Xul is creating enchanted toy soldiers and items of mayhem. Rietta is not speaking to him.
- *Middle*: Xul becomes aware that all is not right with Grobvadr and that Eniale is active in Emases. He begins to make-up with Rietta, and begins working on something that will allow him to take hold of other people's strings and become the Great Puppeteer.
- *Late*: Xul completes his special item, and convinces Rietta to smuggle it into the Palace; when activated, it will use the Heir -- through the intertwined mystical bloodlines of Mira and Bilis -- to skein the "strings" controlling all Mirabilians, placing their free will under his control. Xul sends minions to eliminate Grobvadr, and spies to watch Eniale and the PCs.

Advice, Opportunities, & Pitfalls

Fairy Tale Elements

Since fairy tales and myths are ubiquitous world-wide, most people have a decent grasp on how they go. Here's some quick reminders:

1. People get what they deserve in the long run.
2. Innocence protects for a short time only, because it cannot last forever.
3. Do unto others as you would have them do unto you.
4. The youngest children in a family usually suffer the most, but are also the most lucky.
5. Evil tends to stem from envy and jealousy.
6. Step-relations are usually evil.
7. Favors done "for goodness' sake" are repaid greatly; favors done for gain usually backfire; unreturned favors lead to dire consequences.

Style: *Seelie* vs. *Unseelie*

An interesting question the GM should consider is whether he wants to run a *Seelie* fairy tale campaign (more lighthearted; rated G or PG) or an *Unseelie* fairy tale campaign (grimmer and grittier, or possibly just "nonstandard" fairy tales; rated PG-13, R, or NC-17). All players should know which style of game in which they'll be playing: it's often not fun to be a Disney character in a Fractured Fairy Tale -- or vice-versa.

Running Mirabilian Magic

Fairy tale magic -- and thus Mirabilian Magic -- has a different flavor than most RPG magic systems. Enchanted items proliferate, but the reader is rarely told how they are manufactured. Spells range wildly in power level, and aren't constructed to be consistent. Strange things happen; everything is topsy-turvy. Magic almost always "works" -- a failure in doing magic doesn't mean it doesn't activate, it means *something unintended happens* (for example, a flubbed love spell rebounds on the caster, or affects an unintended target).

The core concern with fairy tale magic is that it's a plot element usually used to surmount a difficulty that is presented. Good fairy tale magic is more shield than sword, used in defense (from attack, from hunger, from evil fairy tale magic, from intrigue) to protect the caster. Evil fairy tale magic is more sword than shield, used to hack away at or cow an enemy.

In running Mirabilian Magic, a GM should:

1. *Encourage* his players to come up with fairy-tale like abilities, spells, favors, and items to use in play; if that

- fails, he should *offer* opportunities for the PCs to gain suitable such.
2. Then, the GM must *evaluate* the magic so used. If the magic done is:
 - *Meaningful* (moves the game or storyline forward in a reasonable way), it should be permitted to work.
 - *Gratuitous* (unjustified, unreasonable, unnecessary, overkill, or otherwise out of place in a fairy tale), it should rebound negatively on the caster in some way.
 3. Lastly, the GM should *explore* the ramifications of the result of the magic. If a powerful Bard sings such that the stones of a castle's wall dance out of his way, will that cause the wall to collapse? Once freed of their masonic interment, can they be sung back into place? Or will they steadfastly refuse to return to the wall, leaving a clear breach? Are the stones now more inherently magical, having danced?

Genre Adaptations

With a little twisting, the fairy tale aspects of this campaign can be fit into other genres. Here are three examples:

- *Sevenpart Superpowers*: Nearly everyone rejoiced when they heard the news: Captain Incredible and Miracle Lady were expecting! Metahuman researchers around the world pondered the implications of this super-union; superheroes smiled under mask or cowl, heartened by a new ally to come in the fight against evil; almost every supervillain quaked a bit in fear. *Almost* every supervillain. Seven didn't. Using their combined powers and abilities, they ambushed the pregnant superheroine on her usual-patrol-that-won't-be-affected-by-my-condition, and managed to steal away the incredible superpowers of the child growing within her, and began a reign of terror. They must be stopped!
- *Sevenpart Splices*: Biff and Lacey Suriban, the richest couple in L5 (of Suriban BioTechnoNano, GmbH), spent several fortunes assuring that their progeny would have all the most advanced quality bio- and nano-splices available, literally trillions of credits. In comparison, it could be said -- unfairly perhaps -- that they could have spent more on personal security. Alas. A crack team of combat geneticists stripped the mods from the living embryo of their child. But why? Revenge? Corporate espionage? Activism? Terrorism? Biff Suriban wants to know exactly who and exactly why; Lacey Suriban wants is everyone responsible exactly *dead*; and they have the credits to burn in this pursuit.
- *Sevenpart Streets*: Frankie Dispositivo is a master of the Deal, able to buy and sell *everything* -- the secret recipe for your mother's meatloaf, seven years of bad luck, Hawkie's 20/20 vision, whatever. His wife Molly's a witch, wise in herbs and crystals and moonlight rituals -- to bring love, to interpret dreams, to shed curses. They grew up together as kids, and have always been crazy about each other. Molly captured Frank's conscience with a net made of tears to win him back to the side of Light. Together, these two lovebirds have brought something good back to Miracle Street: a sense of community. In this urban fantasy setting, they are the ones look out for their neighbors, in both the mundane and mystical senses. The whole block has been looking forward to the birth of their baby. But, one doesn't get to be a magical mover and shaker without stepping on a few toes: Frankie's got enemies from before he fell for Molly, and beautiful Molly's always had a number of jealous Wiccans just waiting for the chance to scratch her eyes out. Some of these foes ganged up to teach these mystic do-gooders a little lesson by stealing the soul of their child. Now, Frankie and Molly need the help of their neighbors.

Painless Blades

by Elizabeth McCoy

Once upon a time there was a cabal of vampires (with the usual plans for conquest and domination) and a society of necromancers who didn't appreciate uppity undead. With mighty magics, some partaking of Eastern elementalism, the necromancers forged a blade that would be more sturdy and sharp than anything merely wooden.

When the weapon was done, the final step was to quench it in the heart of a vampire, that it would be their Bane. As it happened, one of the necromancers' sons had been turned by his ex-girlfriend (because sometimes Romeo and Juliet *don't* get along after the initial "wow, s/he's hot!" fades), and so hated his undead state that he was a willing volunteer.

However, apparently he didn't hate the vampires quite as much as he thought he did -- or else he was *really* allergic to pain. His soul does not reside within the blade, but some shreds of mercy do: the weapon will kill a vampire (or anything else) as handily as the usual wood, but it will cause no pain to anything it slices.

There are a few other quirks to the weapon. Firstly, it seems to have a core of silvery wood, the same color as its hilt -- though it is as sturdy as metal. (Indeed, in a modern campaign, it would show up on metal detectors. Magically, however, it is only vulnerable to spells that affect both plants and metals.) Secondly, it craves blood (though not death); it must feed lightly at least once a month, or its powers fade until the next feeding and it becomes dormant. And thirdly, more a feature than a quirk, it can perform a "vampirism" on other weapons.

This weapon-vampirism may be performed once per year without special ritual (though it must have fed sufficiently first), or more often with appropriate rites and spells which have probably been forgotten by the time Painless (also known as Mercy, or Vampire's Bane) shows up again. When the sword strikes a weapon of metal or wood, and its wielder desires, it holds fast! (This may require strength rolls to establish control of the conjoined weapons.) Within seconds, the mundane weapon is absorbed into Painless . . . which grows appropriately.

Naturally, once Painless gets too big, it's difficult to wield. So it must be taken to a blacksmith and "shorn." When a thrifty smith experimented, he discovered that the resulting woodmetal bits retain some of the nature of the original blade -- they cause no pain, damage vampires, and drink blood. They can't absorb other weapons, though.

Aside from weapons, any sufficiently advanced medical type will see the immediate uses for a surgical kit made from the Painless fragments. A full set of scalpels, clamps, and needles is priceless to surgeons and midwives. Excess blood that would get in the way is wicked away into the woodmetal itself. The patient does not have to be sedated due to pain. Even stitching an otherwise-acquired wound closed will ease the discomfort!

Game Mechanics

The Painless blades have the weight and damage of a normal metal weapon of their type. When Painless grows, it is usually balanced appropriately -- its hilt is also woodmetal, though often wrapped in leather for traction.

Painless itself has these attributes:

1. It is made of "woodmetal" -- the strength of metal, and the look and vampiric bane of wood. (If something is immune to *both* metal *and* wood, then it will be invulnerable to damage as usual. Otherwise, it can affect the being.)
2. Any wound it causes, from mortal to papercut, inflicts no pain. This means that there will be no shock/pain modifiers when it

Peacebonding and Chastity Belts . . .

GMs may have a group of player characters who, upon gaining control of Painless, will immediately flood the market with more sliver-blades of various types. If this is likely to become a problem for the campaign, the GM can Take Steps.

Option 1: Anyone flooding the market will become a target! After all, if it's profitable enough that the PCs can start

hits, though some sort of Fright Check may be warranted when the target looks down and sees the spurting blood. Laying it into an existing cut will reduce any pain modifiers (either by 1, or halving them, depending on the granularity of the system; for **GURPS**, halve them).

3. For 2 and 4, it requires blood. It must have at least 1 hit of blood, monthly, from a sapient, *living* being -- vampire blood doesn't count. It has no need for death energies, though this may not be known to its holder. Without blood, it "shuts down." To awaken it, it must drink hits of blood equal to the amount it's missed! (If it is lost for too long, it will only be "woodmetal" and a Vampire Bane for quite some time . . .)
4. It can absorb other weapons, at the holder's desire. (The desire to disarm an enemy may be enough, at the GM's option.) It takes 1 second per half-pound of weapon. It is, however, limited to absorbing wood and metal -- any sort of wood, and any sort of metal, but stone weapons are immune. Once it has done this, it adds the weight to its own, growing appropriately in the blade, hilt, and handguard (from the core, so it will not require re-sharpening immediately).
5. When carefully "shorn" by a blacksmith, the pieces can be used to make more Painless blades. Painless itself will probably require re-sharpening after this process, but its mystical properties are unharmed.

Anything made from a piece of Painless has the first, second, and third abilities. Most commonly, these are weapons, but a few surgical kits do exist, of varying states of precision and craftsmanship. (And tech level, depending on how long Painless has been around.)

Plot Seeds

- *The Chosen Heir*: It's been some decades or centuries, and Painless has been lost and found, lost and found, many a time. Now an uprising of monsters leads a descendant of those ancient necromancers into a quest to find the blade and discover its secrets! The PCs are either starting out as characters looking for this weapon, one or all of them being the heir, or come across a struggling teenager on a Mission. (While Painless is not as earth-shaking a weapon as a Chosen Heir might hope, if the local monsters are normally immune to metal . . . Painless, a blacksmith, and a source of crowbars can outfit quite a few people with woodmetal blades. A nasty surprise for overconfident vampires.)
- *Over-Eating*: In the possession of a scoundrel, Painless has eaten (or its owner intends for it to eat) a prized hereditary sword. The sword so targeted is not magical, but it is old and a fine weapon. If the PCs can't stop the "assassination" of the blade, they'll have to forge a new one -- literally! If they can't sneak a duplicate into place, there's likely to be war . . . or at least they'll lose their jobs. (Perhaps the victim will accept the weapon re-forged from woodmetal? Get a good blacksmith, and hope you can fast-talk around how it's been transmuted.)

wrecking the economy this way, then it's profitable enough for various NPCs to come crawling out of the woodwork to try to buy it, steal it, or loot it from their cooling bodies. If the group doesn't decide to "lose" (or actually lose!) the weapon somewhere to get the heat off, it might get destroyed in the ensuing mayhem. Or they might simply sell it for a single outrageous sum and retire from the field.

If the GM wants to make Painless the source of a campaign, or running series of plots, he can use Option 1 for that. Likewise, if the problem cropped up unexpectedly, this may be a way to get rid of it without compromising the players' expectations.

Option 2: The copies don't last! While the group can corner the market for a while, the items will begin to die off at some rate (a year? a year of life per pound of weight? 10 - weight in pounds years?). They might arm an army, yes, but they'll be working flat-out to keep it armed if the campaign takes very long . . .

Option 3: The copies must be specially constructed to last! This can be dark -- they must be quenched in something's life's blood with a special ritual -- or perhaps they merely require the blood "sacrifice" as normal. (Except they don't shut down, they crumble to dust.) Perhaps they only work *after* they've been used on a vampire!

Option 4: The copies are fragile! They can be burned, are subject to termites, etc. They might even be mildly explosive -- but the PCs are likely to use that to their advantage, so GMs should use that idea with care.

Option 5: Blade-slivers will only work in the hands of a Chosen One! Perhaps each shorn sliver must be fed its owner's blood before it is worked into a final form. Perhaps it must be fed its owner's blood periodically, ensuring that when the owner dies, the blade dies

- *Assassin*: Someone has shaved Painless down to a sliver of hilt, snuck the "letter opener" into a well-guarded town, and intends to assassinate the ruler (after feeding Painless several candle-sticks and fire-irons). This "someone" may be particularly clever PCs, particularly expendable characters given their marching orders, or the players may be running the guards who are supposed to stop this kind of thing from happening.
- *Revenge is Sweet, Love is Sweeter?* And what of the vampire who played Juliet to the sacrifice's Romeo? It seems that she's survived, and is seeking the holder of the blade. Or, more precisely, to steal the blade itself. She hopes to reawaken her Romeo's spirit within it -- but will love or revenge be her goal? If the former, perhaps she needs a handy host-body to "resurrect" her beloved? If the latter, will the ceremony require ritual sacrifices? Either way, the Painless blade itself is unlikely to survive, and a lot of surgeons would be most upset.

. . . Perhaps only those of the correct bloodline can awaken the sliver-blades' powers (leading to a legacy of surgeons?).

The Loremaster's Spellbook

More spells for *d20 System*

by Steve Honeywell

Sages, loremasters and wizards have an affinity for books and information. Where a fighter might spend his hard-earned gold on wine and women, a wizard will save up for a rare text that might contain a hint of magical lore. Naturally, wizards feel the need to keep those books safe and secure. Additionally, they often need answers to particularly tough questions quickly, a difficult proposition in a large library. The following spells can assist wizards, sages, and loremasters in locating necessary information quickly, in moving it from place to place, and in keeping it safe at all costs.

New Spells

1st Level Sorcerer and Wizard Spell

Divination

Find Text. Quickly locates specified text within a selected book.

2nd Level Sorcerer and Wizard Spell

Divination

Relocate Text. Locates previously-read text within nearby books.

3rd Level Sorcerer and Wizard Spell

Transmutation

Imprint. Removes writing from one document, transfers it to another.

4th Level Sorcerer and Wizard Spell

Transmutation

Restore Text. Restores text lost to age, erase spells, and similar magic.

5th Level Sorcerer and Wizard Spell

Conjuration

Disseminate. Makes multiple copies of a selected document or page.

6th Level Sorcerer and Wizard Spell

Transmutation

Scroll Transfer. Writes a scroll into a selected spellbook.

7th Level Sorcerer and Wizard Spell

Transmutation

Fast Scribe. Reduces creation time of scrolls, costs additional experience.

8th Level Sorcerer and Wizard Spell

Abjuration

Book Ward. Prevents theft or unauthorized use of valuable text.

9th Level Sorcerer and Wizard Spell

Transmutation

Safehouse. Makes an exact duplicate of a spellbook.

Book Ward

Abjuration

Level: Sor/Wiz 8

Components: V, S, M

Casting Time: 1 minute

Range: Touch

Target: 1 spellbook

Duration: Permanent until discharged

Saving Throw: None

Spell Resistance: No

The *book ward* spell defends a spellbook or other tome against being read by anyone other than the owner. This spell invokes a variety of wards on the book being protected. All pages in the book are protected by *secret page* that affects everyone but the possessor of the book. Five *sepia snake sigils* and two *explosive runes* are placed in the book in random locations. The spell is activated when someone other than the caster opens the warded book. The *secret page* effect lasts for a number of days equal to the caster's level at the time of the casting. The other wards are permanent until discharged or the book is again in the possession of its owner. The owner of the warded book can suppress the effects or cancel them as desired.

Material Component: A small padlock and key. The key is swallowed by the book's owner at the time of the casting.

Disseminate

Conjuration (Creation)

Level: Sor/Wiz 5

Components: V, S

Casting Time: 1 minute

Range: Touch

Target: 1 or more sheets of paper or book pages

Duration: Permanent

Saving Throw: None

Spell Resistance: No

The *disseminate* spell allows the caster to create a series of exact copies of one or more sheets of parchment or pages from a book. This spell copies all text, maps, and drawings of a non-magical nature and reproduces them exactly on new pieces of parchment. Up to five sheets or pages can be so duplicated, and the caster may create a total number of copies equal to twice his effective caster level.

Fast Scribe

Transmutation

Level: Sor/Wiz 7

Components: V, S, M, XP

Casting Time: 1 minute

Range: Touch

Duration: 1 day

Saving Throw: None

Spell Resistance: No

Fast scribe allows a wizard or sorcerer to greatly reduce the time needed to create a scroll, but increases the

experience point cost for creation. The time needed is cut to 25%, potentially allowing the creator to write up to 2,500 gp worth of scrolls in one day. However, the experience cost for creating these scrolls is increased fourfold as well. The effects of this spell last an entire day, and the scrolls created are permanent until used.

Material Component: Blank scrolls (which become inscribed by the spell), a vial of ink.

XP Cost Four times the normal amount needed to make the scrolls.

Find Text

Divination

Level: Sor/Wiz 1

Components: V

Casting Time: 1 round

Range: Touch

Target: 1 book

Duration: Instantaneous

Saving Throw: None

Spell Resistance: No

This spell must be cast on a book being held by the caster. The caster asks a single question, and if the book being held contains the answer or any information on the given subject, it opens to the exact spot. If the book does not contain the requested information, the spell fails.

Imprint

Transmutation

Level: Sor/Wiz 3

Components: V, S, M

Casting Time: 1 action

Range: Touch

Target: 1 book page, document, or piece of writing

Duration: Permanent

Saving Throw: Yes (object)

Spell Resistance: Yes (object)

When cast, the *imprint* spell removes all non-magical writing from one page in a book, one sheet of parchment, or one document and reproduces it faithfully and completely on a new page. The page set to receive the text must be completely blank, which means this spell cannot be used to forge signatures on documents. Sages and librarians use this spell to rescue fragile documents withered from age and neglect.

Material Component: A blank page of parchment or vellum, a vial of ink

Restore Text

Transmutation

Level: Sor/Wiz 4

Components: V, S, M

Casting Time: 1 action

Range: Touch

Target: 1 blank page or sheet of parchment

Duration: Permanent

Saving Throw: None

Spell Resistance: No

The *restore text* spell reproduces all non-magical writing on a book page or document that has been erased by any means. Magical writings (such as spells, *sepia snake sigils*, etc.) are not restored by the use of this spell.

Material Component: A piece of chalk or a small piece of charcoal.

Relocate Text

Divination

Level: Sor/Wiz 2

Components: V, S, M

Casting Time: 1 action

Effect: Sphere, centered on the caster, with a radius of 10 feet/level

Duration: Instantaneous

Saving Throw: None

Spell Resistance: No

A much more powerful version of the *find text* spell, *relocate text* allows the caster to retrieve information on a given topic from any book he has previously read within the radius of the spell. The book containing the information sought appears in the caster's hand immediately upon the spell's completion. If there is more than one book containing information on the topic, the one with the best or most recent information appears. If there is no book in the area containing the necessary information, or if the book has not previously been studied by the caster, the spell fails. Naturally, this spell is more effective in the caster's own private library.

Material Component: A small piece of paper on which the topic or question is written.

Safehouse

Transmutation

Level: Sor/Wiz 9

Components: V, S, M

Casting Time: 1 hour

Range: Touch

Target: 1 empty spellbook

Duration: Permanent

Saving Throw: Yes (object)

Spell Resistance: Yes (object)

The *safehouse* spell creates an exact duplicate of a spellbook, copying every spell exactly as written and in exactly the same order. To use this spell, the caster must have a blank spellbook prepared and ready to accept spells. Any spellbook being copied that does not belong to the spellcaster using this spell is entitled to a saving throw to prevent duplication.

Material Component: Ink and quills in an amount needed to transcribe all of the spells in the original spellbook.

Scroll Transfer

Transmutation

Level: Sor/Wiz 6

Components: V, S, M, XP

Casting Time: 10 minutes

Range: Touch

Target: 1 scroll

Duration: Permanent

Saving Throw: Yes (object)

Spell Resistance: Yes (object)

Scroll transfer allows the caster to copy the contents of a scroll he can read and understand from the scroll into a spellbook. The spellbook must have enough free pages to accept the new spell.

Material Component: Ink and quills.

XP Cost: The amount needed to write the scroll in question.

Pyramid Review

Lashings of Ginger Beer

Published by [Beyond Belief Games](#)

Written by Simon Washbourne

Illustrated by Allan Dotson, Burgess Sharrocks & Jay Forster

28-page saddle stitched black and white half-sized book; \$6.00

Let us take you back half a century to a simpler age. An age when kids were happy with their lot. When a bicycle was something that you rode rather than a device for performing tricks upon. When music was listened to on a gramophone or on the Light Programme broadcast by the BBC rather than through a pair of earplugs. When England was a green and pleasant land, and not one bisected by three-lane motorways. When the railways ran on time and were yet to be blighted by the coming of the diesel engines that replaced the glory and romance of steam. This is a land known as Idyllic England, a pastoral country that never really was, but existed sometime after the war and before the arrival of rock 'n' roll.

Where it really existed is in the works of Enid Blyton a prolific English Children's author who created *Noddy*, *The Famous Five*, *The Secret Seven*, and others. It is easy to forget that in her day, Enid Blyton was as big as J.K. Rowling, but the adventures of her characters never involved anything quite as arcane. Their concerns were mainly enjoying the countryside, going for bicycle rides in the country, camping, and hearty meals. Along the way, of course, they fall into adventures, especially after spotting suspiciously nefarious adults doing strange things, perhaps villainous in nature. Spurred on by their curious nature, our young heroes spy on these strange characters and are likely to discover that they are up to no good.

The best known of these books comprise Blyton's *Famous Five* series, followed by *the Secret Seven* and others. In the former, four children -- brothers Dick and Julian, their sister Anne, and their tomboy cousin George (Georgina) and her dog, Timmy -- have adventures all over Idyllic England, stopping the plans of smugglers, kidnappers, and so on. It is a world and a genre that will be familiar to older gamers, and it is one that has at times been viciously lampooned. Most notably in the mid-1980s by *The Comic Strip* in the episode "Five Go Mad In Dorset." To many, this single program remains as quotable as any *Monty Python* or *Blackadder* episode.

Which in some ways will be a problem for the roleplaying game that explores this world, ***Lashings of Ginger Beer***. Will either the GM or players be able to overcome that very knowing send up to explore a very innocent time? It is even one that this book acknowledges in its thumbnail illustrations. Yet if both players and GM can put this aside, perhaps they will be able to enjoy a few hours in a simpler age, when the divide between black and white, good and bad was a straight line, rather than a blurry zone of gray.

Lashings of Ginger Beer comes as a small 28-page half-sized booklet, half of which is devoted to the game's adventures. It is nicely laid out in a manner that abrogates the need for an index. If there is a problem with the book it is the layout of the character sheet, which looks a little vague. Another niggle is that the recipe for ginger beer given in the frontispiece listed in metric measurements first and imperial second in brackets. While this would be fine in the 21st century, it is not for the period of Idyllic England, which is very much set in an age of late empire. The book is available from the publisher's website, or as a download from [RPGnow.com](#).

In ***Lashings of Ginger Beer***, everyone plays a kid, aged between 10 and 15 years old. Their age determines the base for their attributes -- Tough, Deft, Clever, and Charm -- each of which are rated between one and three. Younger kids

posses better Deft and Charm, while older kids have better Tough and Clever attributes. Age can be rolled randomly (1d6+9) or chosen; the attribute scores are noted and a point is added to just one of the four.

Kids can be one of three types: good (normal), swots (bookworms), or truants (tomboys). Each is nicely described, and there is even an indication given of what each grows up to be. Thus the good kid lives in a semi-detached suburban house with room at the bottom of the garden for a den or tree house. His father works in insurance or in a bank, drives a solid car such as a Wolsey or Rover, and his mother is a housewife. The good kid will grow up to follow his father into the bank or insurance, or to become a doctor, accountant, solicitor, or politician. If the good kid is a girl, she will grow up, get married, and become a housewife, just like Mummy.

All kids begin with two skills, hide and snoop, both of which are rated at two dice. Another eight dice are spent on these and other skills. They can buy dice in a set of six "things they are good at," different for each kid type. Those "things they are good at" that lie outside of their kid type will be more expensive. The various "things they are good at" all fit the genre such as Act Innocently, Camping, and Spot Nasty People for the good kid; Useless Facts and other academic subjects for the swot; and Fighting, Wriggle (From Grasp), and Lie Convincingly for the truant, who is a slightly naughtier kid type, rather than being truly bad as are some children today. Character generation is simple and takes only a few minutes, all helped by a solid example.

Skill resolution is very simple. Whenever a kid wants to do something, the player rolls a number of six sided dice equal to the values for the appropriate attribute and "things they are good at," hoping for results of six. The more sixes thrown, the better the outcome. Should a kid be successful, he temporarily gains control of the current adventure's narrative to describe his action and its outcome, while the GM retains control of the narrative and describes the outcome if the kid failed. Of course, both player and GM are encouraged to keep within the flavor of Idyllic England.

Lashings of Ginger Beer does this in a number of ways, describing what kids get up to in their hols (holidays) in Idyllic England, suggesting gang names and giving several period phrases. The rules for equipment or rather Useful Items side step the issue of cold hard cash by allowing each kid to have three items. One they receive for free, tied into a skill; for example, a Swot with Useless Facts might have a copy of "1001 Amazing Facts." Good boys would have *Bumper Boys Own Adventure Stories*, while girls would be reading *Girls Own Romantic Adventure Stories*. The other two items are rolled for, with rolls for extra useful items made between adventures (to see if the kid saved enough pocket money) and after Christmas and birthdays to see what presents they received.

As befitting the genre, a gang can have one scruffy dog. Not quite a character in itself, this pet can be taught to obey simple one-word commands, such as sit, fetch, chase and so on. Overall, the rules are very simple, but at the same time, they capture the feel of the world of Idyllic England perfectly.

The remainder of ***Lashings of Ginger Beer*** is taken up by six adventures and mysteries, running in length between one and six pages.

[SPOILER ALERT!]

The longest is "The Big Top Adventure," which has our gallant gang investigating the nefarious doings of a circus owner and some of his performers. It also introduces some new adult skills such as "Spot Nasty Kids" (their answer to the kids' Spot Nasty Person), "Shout Loudly," to stop a kid in his tracks, and "Firm Grip," which opposes the Wriggle (From Grasp) skill. In "The Mystery of the Haunted Castle," the kids have their curiosity aroused by strange lights at a nearby ruin while they are out camping, as does a thin, weasely faced man in "The Mysterious Manor." It is this curiosity that will be the kids undoing in "The Kidnap Caper," while it can be put to one side for "Camp Raids." This sets them against a rival gang of children after their camp is turned over, an adventure that is more akin to Arthur Ransome's *Swallows and Amazons*, another influence on ***Lashings of Ginger Beer***. The last adventure is "The Secret of Demon Rocks," which sends the children to holiday in an old lighthouse, where they might discover wrecker's treasure.

[END SPOILER ALERT]

Lashings of Ginger Beer is very much a simple affair, as befits a far less cynical age. The rules are kept to a

minimum, with those given helping to capture the feel of the games setting -- particularly with the pleasing Useful Item rules. Also minimal are the guidelines for narrative control after skill resolutions, but they are enough to add an element of interactivity that is both pleasing and calls for a greater maturity among players and GM alike. The minimalist nature of the rules does leave room for the adventures, which makes for a very complete little game.

Ultimately, ***Lashings of Ginger Beer*** is a very English game -- and, it should be noted, a very chauvinist one -- but for those of us of a certain age, this is the perfect nostalgia trip, and a delightfully charming one.

Pyramid Review

Oathbound: Arena (for d20 System)

Published by [Bastion Press](#)

Written by Kevin W. Melka and Todd R. Laing

160-page b&w softcover; \$27.95

Oathbound: Arena is a continent sourcebook for the **Oathbound** campaign setting. It includes information on its resident ruling divinity, the warlords who fight to exploit the desert continent's riches, area information, story hooks, a mass combat system, and an adventure to send PCs into Arena. It also includes a few new races, prestige classes, prestige races, gifts, mass combat feats, magic mecha constructs, artifacts, and a few monsters.

The **Oathbound** setting has seven deities bound to the world, each ruling a continent and drawing in outworlders to struggle on their created world. Arena is ruled by Barbello, the Mask of Fury, who thrives on warfare. She has seeded her desert continent with untold riches just waiting to be dug up and exploited. This draws in mortal leaders who wish to mine the riches. However there is no single mortal ruler of the land; it is a constantly shifting field of warlords who strive to control mines, oases, trade routes, fortifications, and populations of slaves. If a weakness appears in a neighbor, warlords are quick to send in their armies to take over the vulnerable resources of lesser leaders. Life is cheap and blood is often spilled to gather the riches that Barbello has buried in the land.

Power is based on armies, which are fielded by money gained from mining using slave labor. It is a fierce competition for resources and expending lives to obtain goals is an often necessary evil of the process. Benevolent leaders are few and far between, and often are quickly brought low by the economics of the land if they do not exploit slave miners. Many of the mortal powers of the land are evil and brutal tyrants who clawed their way to the top.

There are dozens of realms and individual warlords detailed, with interesting story hooks in most of them. Being a polyglot setting that takes elements from other worlds, the warlords are a variety of races and come from a number of cultural backgrounds. There are ancient Egyptian transplants, a race of winged Valkyrie warrior women with a vast stronghold, a goblin who evolved to become the most fearsomely potent enchanter/warlord of the land, an Asherake who seems to be a demigod dominating the largest section of the continent, a number of brutal reptilian warlords (one is a Dragori lizardman from Mystic Eye Game's **Empire of the Dragon Sands** book), and more. There are even a few good warlords including a paladin and two former slaves.

Since the clash of armies is such a big aspect of the setting, a **d20 System** mass combat system is introduced. Units are composed of 1,000 men and are treated mostly as individual characters that can level in unit type, multi-class, use base attacks, and inflict 8-20 dice of damage depending upon unit type and level. Each individual is one hit point for the unit, so each unit has the same amount of starting hit points; only damage and defense change with levels. Instead of AC there is a defense rating. All attacks hit but the base damage is modified by attack roll versus defense and a damage modifier chart, so clashes are always bloody. Arcane units can use blasting spells and divine ones can heal or support other units. There are pseudo-sneak attacking skirmishers, archery units, cavalry units, and base footmen. ECL race troops add directly to a unit's level, and training and battlefield success can modify a unit's level as well. Siege engines and new fantasy battlefield weapons add to the types of factors in a battle. Each mass combat round is one minute long.

Surprisingly, there are no rules for flying forces, either the winged races (such as the setting's Asherake, Vogel, and Valkyries) or flying ships (common among the Asherake and some of the other factions and powers). There are, however, rules for creating and using "Doom Striders" -- magical mecha constructs -- in mass combats. These are

expensive (and, on the face of it, inefficient) constructs that are powered by spell slots but need to expend two-levels of slot energy even to move for one round. They use a critical hit system similar to Battletech mechs where criticals damage internal components such as engines, weapons, etc.

Among the few monsters introduced -- some of which are reprints from other Bastion sources -- the Kine should probably be Magical beasts instead of animals . . . unless you want to see wildshaping druids turn into large regenerating camouflage camels with reach attacks and a swallow hole ability that can take in medium creatures.

The adventure is designed for levels 10-11 but has some notes for scaling it to other power levels; it says it should handle levels 8-14 without problems. It presumes the PCs work for a specific bloodlord from Penance but does not otherwise seem to be connected to the continuing plot from the other ***Oathbound*** supplement adventure series. The adventure drags the PCs into Arena to face perils, factions, intrigue, and mass combat. The read-aloud descriptions unfortunately take the tack of telling PCs how they feel and react instead of limiting descriptions to what they see or hear.

While there are lots of mechanics that were originally created in other ***Oathbound*** products (gifts, prestige races, channeling magic), they are given sufficient information here to run without the other books. Even NPCs who have gifts and prestige races from other books often have the powers listed out in the stat blocks. For instance, a warlord with the feral ravager class from *Librum Equitis* has the class powers for his level listed in his stat block. Only Barbello has some unexplained powers listed simply as standard avatar powers in her stat block.

Arena is a great delving into the ***Oathbound*** setting, providing plenty of description and story fodder for a DM to use in fleshing out the world or setting up adventures. All of the new standard ***d20 System*** mechanical bits are useable, and the mass combat system is a fairly straightforward adoption of standard combat with a few tweaks.

--*John Henry Stam*

This Monstrous Apparition: *Julius Caesar*

*"Between the acting of a dreadful thing
And the first motion, all the interim is
Like a phantasma, or a hideous dream:
-- William Shakespeare, Julius Caesar, II:i:68-70*

Again the sun dips low in the sky, again the year's breath begins to fail. And once again, by guttering light we return to the whispers of dramaturgical magic, the sussurus of conspiracy, the undertone of [sacred sacrifice](#) in [Shakespeare's occult oeuvre](#). This year, the knives come out and we chart our secrets in the gore of *Julius Caesar*. Beware the ides of March, especially when they come in late December . . .

*"Brutus and Caesar: what should be in that 'Caesar?'
Why should that name be sounded more than yours?
Write them together, yours is as fair a name;
Sound them, it doth become the mouth as well;
Weigh them, it is as heavy; conjure with 'em,
'Brutus' will start a spirit as soon as 'Caesar.'"
-- William Shakespeare, Julius Caesar, I:ii:150-155*

Julius Caesar, dictator of Rome, returns in triumph during the feast of Lupercalia after crushing Pompey's rebellion. A soothsayer warns Caesar of danger approaching on the Ides of March, but he dismisses such portents as mere fancies. However, Caesar's triumph stirs bitter resentment in Cassius, who suborns Casca and (eventually) Brutus into a conspiracy. Brutus joins when Mark Antony offers Caesar the crown; although Caesar refuses it, Brutus fears the effect of making Caesar king, and the end of the Republic. While Brutus and the others plot Caesar's murder, Caesar's wife Calpurnia tries to convince him to stay away from the Forum on the Ides of March; she fears the omens, but Decius Brutus (one of the conspirators) convinces Caesar to venture out. Again brushing off the soothsayer and other warnings, Caesar is murdered by the conspirators on the steps of the Senate. Brutus has foolishly prevented Caesar's killers from also murdering Mark Antony; Antony uses Caesar's funeral oration to rouse the city against Brutus, and the conspirators are forced to flee Rome.

Antony joins with Caesar's heir Octavian to rule Rome; they kill or exile the conspirators' friends and supporters. Brutus' inflexibility begins to irritate Cassius, but they remain allies; Caesar's ghost appears to Brutus and promises that they will meet again at Philippi. When the armies of Antony and Octavian meet Brutus and Cassius' armies at Philippi, the conspirators' lack of coordination, and Brutus' eagerness, result in their eventual defeat. Cassius kills himself based on a mistaken report, and Brutus incompetently kills himself at the last. Octavian orders Brutus, "the noblest Roman of them all," buried with full honors. Octavian and Antony prepare to "part the glories of this happy day," foreshadowing the [next round](#) of civil wars that will end the Republic forever.

*"How many ages hence
Shall this our lofty scene be acted o'er,
In states unborn and accents yet unknown?"
-- William Shakespeare, Julius Caesar, II:i:125-127*

Shakespeare's primary source for the history of Julius Caesar was Plutarch's *Lives of the Noble Greeks and Romans*, again most likely from the North 1579 English translation. He may also have taken some material from Suetonius, and there were a number of other Julius Caesar plays on the Elizabethan stage from the 1560s (one was performed on Candlemas of 1562) to the 1590s. Shakespeare may have played in one in 1594, although it's unknown whether that was Thomas Kyd's translation of Garnier's *Cornelie* or another such play. (In *Hamlet*, Shakespeare later has Polonius boast of having played Julius Caesar in his youth.) However, by the late 1590s, plays about conspiracy against tyrants became much more problematic in the harsh climate of the fading Elizabethan era. Shakespeare's decision to return to the material (which he alluded to in his first known play, *Henry VI Part Two*) was dangerous, despite the topic's clear popularity. Thanks to a fortuitous diary entry by a Swiss doctor, we know that *Julius Caesar* was performed at the

Globe on the autumnal equinox of 1599; it was likely written earlier that year. Since then, it has been the most reprinted of all Shakespeare's plays, performed almost without letup for three and a half centuries. (Interestingly, in its 1864 New York run, John Wilkes Booth played Antony.) Its themes and dark actions resonate to this day.

*"Let us be sacrificers, but not butchers, Caius.
We all stand up against the spirit of Caesar;
And in the spirit of men there is no blood:
O! then that we could come by Caesar's spirit,
And not dismember Caesar. But, alas!
Caesar must bleed for it. And, gentle friends,
Let's kill him boldly, but not wrathfully;
Let's carve him as a dish fit for the gods . . ."*
-- William Shakespeare, *Julius Caesar*, II:i:181-188

Primary among those themes is that of ritual sacrifice. As the play opens, Julius Caesar is seemingly the solar king in his splendor. However, the heavens are unruly; comets and planets roll out of their courses and the dead "howl and gibber in the streets." Rather than a firm hand and a fertile realm, Caesar is presiding over a kind of [Misrule](#), driven home by his "foolery" in refusing the crown, and by the plebeians' parade at the beginning of the play during Caesar's triumph. Caesar's wife is barren (implying the Fisher King's sterility), and Caesar himself is half-deaf and suffers from epilepsy. Although Caesar's spirit is mighty, it has not been crowned; the rituals are not intact despite Caesar's injunction to "leave no ceremony out" for Lupercal.

The Roman Lupercalia, the Ides of February, is a fertility ritual featuring a sacred race and the sacrifice of dogs; Cassius calls Caesar a "wolf" in Act I, alluding to both the Lupercal sacrifice and the sacred animal of Rome. Brutus is even more explicit, seeking to exorcise Caesar's spirit by blood, calling on his cohorts to "carve him as a dish fit for the gods." Brutus (and Shakespeare) conducts the assassination itself in ritual tones, with each assassin stabbing in turn, and ceremonially bathing in Caesar's spilled blood. This blood, Antony implies, has ritual power; he urges the people to save their bloody handkerchiefs as relics. On increasingly thin ice, Shakespeare uses allusions to mystery plays, to (Cassius) Longinus (the Roman soldier who killed Christ), and other imagery -- Caesar's ghost even appears on the third day after his death -- to present the killing as, essentially, a Black Mass.

*"BRU. Get you to bed again; it is not day.
Is not to-morrow, boy, the ides of March?
LUC. I know not, sir.
BRU. Look in the calendar, and bring me word."*
-- William Shakespeare, *Julius Caesar*, II:i:43-46

Much as Christ's death met the terms of prophecy and unleashed earthquakes and eclipses, Caesar's death follows soothsayers' warnings, and roils earth and heaven. In Renaissance theology, Christ's death echoes backward in history, a mythopoeic [reality quake](#); Shakespeare does the same with Caesar. In the quote above, the First Folio has Brutus ask Lucius "Is not tomorrow, boy, the *first* of March?" This may not be a misprint, but the playwright's intention, to point up Brutus' unmoored confusion; to set the assassin adrift in time. Shakespeare throughout this scene, and throughout the play, draws attention to the chaotic, compressed nature of time during this interim of "phantasma."

The month between Lupercal and the Ides of March passes in a single night, owls appear at noon, and the repeated references to striking clocks emphasize the onrush of time without a guiding hand on the reins. In *Shakespeare's Mystery Play*, author Steve Sohmer points out that the year before Caesar's death, he had radically upset the Roman calendar, instituting the Julian year at the expense of extending 45 B.C. by 80 extra days. That calendar, of course, had been itself superseded in Catholic Europe in 1582 -- but Elizabethan England clung to Julius Caesar's year, itself increasingly strained and chaotic. In 1599, for example, the Gregorian Easter fell on [April Fools' Day](#) in England, and the Gregorian Annunciation to Mary fell on the Ides of March. Is that why Brutus' wife Portia, who hears a supernatural prophecy in the play, says, "Say I am Merry?"

"But wherefore did you so much tempt the heavens?"

*It is the part of men to fear and tremble
When the most mighty gods by tokens send
Such dreadful heralds to astonish us."*
-- William Shakespeare, *Julius Caesar*, I:iii:59-62

Shakespeare, says Sohmer, was well aware of the calendrical confusion, and played it for all it was worth in *Julius Caesar*. Sohmer also proposes that Shakespeare wrote *Julius Caesar* for the opening of the Globe Theater in 1599, and debuted it on the summer solstice, June 21. The Globe was, it appears, oriented with its axis facing sunrise at the summer solstice, and decorated with astrological and planetary motifs. Although there is no direct documentary evidence for it, it is almost certain that Shakespeare wrote a new play for the Globe's opening, and the only other strong contender, *Henry V*, is better dated earlier than midsummer that year. Interestingly, on June 21, 1599, the new moon exactly coincided with the solstice -- astrologically an excellent time for new ventures, with Mercury, Jupiter, and Saturn in syzygy, also appearing in Gemini, sign of the Twins (patrons of Caesar's legions), favorable for sudden and lasting literary success. The emblematic runners of Lupercalia are also twin brothers, and again we see Shakespeare's fascination with twinning peer out of the wings.

*"You shall confess that you are both deceiv'd.
Here, as I point my sword, the sun arises;
Which is a great way growing on the south,
Weighing the youthful season of the year.
Some two months hence up higher toward the north
He first presents his fire; and the high east
Stands, as the Capitol, directly here."*
-- William Shakespeare, *Julius Caesar*, II:i:118-124

But twins and twisted time merely serve as portents to us that Shakespeare is once more up to his dramaturgical rites. But at what are they aimed? The play, intriguingly, gives us another clue. In Brutus' garden, the conspirators have fallen to squabbling about, of all things, the direction of sunrise. Casca, the first to stab Caesar, draws his sword and points it dramatically at the horizon during the speech quoted above. He points both south of east and north of east, again emphasizing the "unstuck" nature of the heavens (and underlining the calendrical confusion of both 44 B.C. and 1599), then splits the difference, pointing to the "high east" and "the Capitol." Due east of the Globe's stage, as it happens, is the Tower of London -- which, as Shakespeare knew, was founded by Julius Caesar. With a sword stroke, Casca stabs Caesar's Tower, creates a parallel between Rome and Britain, and -- perhaps -- awakens the ley energies embedded in London's sacred geometry. In the play, Casca and Cassius each see a lion prowling around the Capitoline Hill; perhaps a twinned reference to the lions (royal animals of England) kept at the Tower zoo, and to the alchemical lion, twin emblem of royal gold -- and of aqua regia, the destroyer of gold.

Did the swirl of dates and times in Shakespeare's twisted calendars point back to yet another birth? The Annunciation to Mary (promising the birth of the Redeemer) falls on March 25. March 25 was, to all theologically literate Elizabethans, also the date of Christ's crucifixion -- and in the old Julian calendar, behind by 10 days, it fell on the Ides of March. To Caesar, meanwhile, March 25 was the vernal equinox; we know, of course, that Shakespeare performed his play on the autumnal equinox of 1599 and perhaps opened it on the summer solstice. Resting on two "corners of the year," in the parabolic, occult "O" of the new-built Globe in the dark of the moon, Shakespeare reaches back to the spring, and ties it to the death of a tyrant, and the death of a god. And on March 25, 1599, did the foreshadow of Shakespeare's dramaturgical Annunciation-Crucifixion, his Mass of royal sacrifice, call forth the next century's Brutus? If not, Oliver Cromwell's birthday was quite a coincidence indeed.

Carol Connections

I'm blanking on a topic, so I figure I'll throw some random thoughts in the blender and see what develops. *Caveat gamer.*

Earlier today I was knee-deep in the Christmas spirit, in my own way (which is to say, I was home alone in an antisocial kind of way). I was surfing the Internet and checked out one of my favorite sites ([News From Me](#) -- informative home of noted comic/Hollywood/cartoon/writerly hombre Mark Evanier). In yesterday's installment he bemoans the number of pastiches and adaptations based on Charles Dickens' *A Christmas Carol*. He then pegs his favorite and most faithful as *Mr. Magoo's Christmas Carol*.

I tend to agree; I suspect it's because most serial works - such as television shows and comics - think there's a demand for a Christmas-themed story. However, the number of uplifting tropes and permutations available for seasonal fare are fairly small . . . and as soon as you start doing something about "grumpy Christmas-less person gets redeemed," you're skirting close to theft and might as well jump headlong into homage.

(I also considered the fact that there really *are* very few immediately recognizable Christmas offerings that are in the public domain. The only other ones I can think of are the story of the birth of Jesus - which might be considered too religious an offering for your standard sitcom - and the ubiquitous " 'Twas the Night Before Christmas," which I've parodied a number of times in my own day, including once for SJ Games itself . . . which I might share with you all one year if you're *really* good. However, blank verse is often a tough sell for 22 minutes of airtime.)

Anyway, I started considering if there were any *Christmas Carol* derivations that stuck in my mind as being both "memorable" and "good." The *Married . . . With Children* take on it scored high on the former but less so on the latter, even with (or because of) the appearance of late comedian Sam Kinison.

However, there was one that stuck in my mind, even years later, as being both noteworthy and entertaining. It was a primetime special of the *Real Ghostbusters* cartoon called "X-mas Marks The Spot." In it, the Ghostbusting quartet is hired by an elderly - and miserly - gentleman who is being plagued by three ghosts; the 'Busters successfully capture them, and hilarity ensues as Christmas is destroyed.

Now, I'm not going to spend much time raving about this episode. Suffice it to say, I found the fusion of a show about those who bust troublesome ghosts with a tale about troublesome ghosts is the most natural perversion of the hoary tale I've ever seen.

No, the interesting bit for me was when I did some Googling for "Christmas Carol" and "Ghostbusters," trying to learn a bit more about that episode.

It turns out that episode was written by J. Michael Straczynski. In fact, it turns out Straczynski wrote 21 episodes in total during the show's run. Oh, and he was also the story editor for the series for its first couple of years. Now, J. Michael Straczynski is known most immediately to me as a comic book writer of some note, including current stints on *Amazing Spider-Man* and other tales like *Rising Stars*. However, to the world at large he's probably best known as the creator, principal writer, and general mastermind behind *Babylon 5*, possibly the best science fiction television series ever.

Babylon 5 is also, of course, a property that has gone through two RPG iterations to date. (*Ghostbusters* went through two itself, the first of which I still consider one of the finest movie-to-gaming adaptations ever.)

Oh, and the aforementioned Mark Evanier? He was one of the masterminds behind the *Dungeons & Dragons* cartoon, which I understand was also based loosely on some roleplaying game I've never heard of.

(As another aside, [Peter David](#) - another comic writer whose work I admire - also wrote some episodes of *Babylon 5*. The tone and general approach of "Random Thought Table" itself has been heavily influenced on Peter David's own

weekly "But I Digress" column. Oh, and in the interest of full disclosure, I should note that I've only seen one episode of *Babylon 5* myself, although the first DVD set is on one of my shelves somewhere, and for all I know I bought the second season at some point, too.)

Anyway, as the pieces of this small-world conspiracy fell together at a Hitean pace, I found myself considering the gaming implications of all this. And I remembered one of my favorite "tricks" for any ongoing campaign. Namely, reduce, reuse, recycle. Unless there's a compelling plot or game reason to do otherwise, I tend to recycle characters and locations with an abandon.

I first stumbled across this in my long-running **GURPS Supers** campaign; panicking because the PCs decided to kick down a metaphorical plot door I hadn't fully intended them to, I found myself needing a metahuman character in a pinch. I didn't have a new one handy, so I used one I already had: Mandy Taylor. Now, Mandy was introduced in the first adventure of the campaign, when I had even less of a clue what I was doing than normal. As a result, she had the unlikely combination of fire-based and probability manipulation powers (a.k.a. Super Luck). To make a long story short, she ended up killing a PC in my first combat because **GURPS** combat was a tad deadlier than I was expecting (he got better). And she had no good reason to be involved with the plot thread that the PCs were unraveling.

So once the players discovered her involvement - which, again, I note was completely off the cuff - they, too, knew she had no good reason to be there. And this drove them nuts, trying to solve the mystery of *why* she was there. (I ultimately concocted a justification that was pretty good.)

Two adventures later, in similar circumstances, they chose another path less taken . . . and, again, they discovered Mandy. She wasn't a master villain; she just kept getting involved in other people's plans and entangled in events that were over her head. The PCs were rapidly becoming involved in her history; they were oddly protective, and both the players and characters cared about what happened to her.

(As an aside, I ultimately used her probability manipulation as partial justification for her involvement: "What are the *odds* that I would stumble onto the same plot as you?" [groans from the players])

By reusing characters and locations, you immediately add history and continuity to what could otherwise be a seemingly random situation. You reduce the amount of work you would need to do in creating characters and backstory, *and* you might give yourself something new to think about or spark new ideas: Why would the assassin the heroes escaped last month be the surprise witness at an unrelated medical malice suit involving unwitting genetic experiments?

People lead varied lives. Paths have an odd way of twisting back upon themselves and intertwining in unexpected ways. It's improbable that the same creator of a wildly popular science fiction show I'm largely unfamiliar with would *also* be behind a cartoon *and* several comics I enjoy . . . but it's possible. So why can't the ace pilot the PCs encounter also happen to be a billionaire benefactor, genius engineer, or film producer? (It worked for Howard Hughes.) It's a small world, and the ghosts of the past can crop up when you least expect it.

And they *usually* can't be thwarted by [Ghostbusters](#).

--Steven Marsh

Dork Tower!

Dork Tower!

Designers' Notes: GURPS Covert Ops

by William H. Stoddard & Hans-Christian Vortisch

A Tale of Two Books

The project that became [GURPS Covert Ops](#) started out as two entirely different books.

Bill took on the job of preparing a final draft of **GURPS Assassins**, a 32-page treatment of assassins in history, fiction, and gaming, as villains or as heroes. At about the same time, Hans started work on **GURPS Spy-Tech**, a 48-page supplement intended as an update (and upgrade) of the equipment lists from **GURPS Espionage**. The two drafts arrived at Steve Jackson Games, more or less simultaneously . . . there was an interval of silence . . . and then a question came back: Could we collaborate on a single, larger book that integrated what we had done and expanded on it? Having worked together on previous projects, including **GURPS Special Ops** (which Hans co-wrote and Bill edited), we said, "Sure!"

And then things got interesting . . .

Spy-Tech had four chapters, all on different sorts of equipment. **Assassins** had six chapters, two of which looked at equipment. We kept the basic **Assassins** outline, reduced from six chapters to five, and fitted Hans's four chapters into the two technology chapters -- and made those the longest chapters of the planned book. By and large, Hans did the technology chapters, but Bill added low-tech and sidebars on fantasy and speculative equipment, as well as a few passages on other topics. By and large, Bill did the chapters on history, characters, and campaigns, but Hans added accounts of several noteworthy episodes of covert operations.

In the process, the book's mission changed from those of the smaller books. Obviously, it couldn't be just about equipment; it had to look at the people who used the equipment. It needed a broader focus than just assassination. Since it wasn't a new edition of **Espionage**, it couldn't be about spying; instead it was expanded from assassination alone to all kinds of active interference with an enemy's life, liberty, or property. Bill and Hans both thought, and Steve Jackson Games agreed, that the main audience for this book would be people interested in real-world operations, historical, current, or near-future/technothriller; so we kept the fantastic and speculative material in the sidebars, discussing general principles rather than game mechanics. In particular, we eliminated all the ultra-tech equipment that wasn't either already available or likely to be on the market in a few years -- particularly the superscience gadgets. As a result, a good deal of material ended up being cut.

Here, then, are some outtakes: historical material from Hans, and compilations of technology from Bill.

The Spy-Tech of the Future

Long before the technothriller genre got its name, suspense stories had an affinity for high-tech gadgets. But there's a hard-to-define line separating two classes of gadgets. One side holds gadgets that the audience can imagine might exist now, in some top-secret lab, or in the armory of some elite secret agency. The other holds gadgets so radical that they would change the world. The boundary between them is the boundary between technothrillers and speculative fiction. Many past **GURPS** supplements have offered equipment that could be used for covert operations, but only in a speculative fiction setting -- cyberpunk, space opera, or anywhere in between.

Some of these gadgets use power cells, as defined in **GURPS Ultra-Tech**, as their energy source. Less speculative versions would need much larger power sources, or would operate for about 1/10 as long.

First, some surveillance tools:

Beam Sensor (TL8). A laser or infrared beam that sets off an alarm if broken. It can be spotted by throwing glitter, powder, or vapor into its path (for a laser) or by infrared sensors (for an IR beam), and can then be jumped over or crawled under. If there are several beams, an Acrobatics roll may be required. \$400 per single entrance or 100 yards of perimeter.

Biohound (TL10). A small handheld sensor capable of detecting the molecules of a designated lifeform -- as general as a species (e.g., "humans") or as specific as a single individual. A detailed bioscanner analysis is required to detect and track unknown species or specific individuals. On a successful Electronics Operation (Sensors) roll, the biohound can tell if its target came within 5 yards of its sensors, at -1 to skill per half-hour the trail is old. Once acquired, a trail can be followed as long as that is physically possible -- an airlock or ride on a motorcycle would erase it. Additional rolls may be necessary every hour to keep on trace. Only one trail can be followed at a time. \$2,000, 2 lbs.

Sensor Visor (TL10). A goggle or helmet visor offering light intensification, thermal imaging, antiglare features (+5 to HT rolls avoiding to be blinded), and 2-100× magnification. \$1,500, 2 lbs.

Next, tools for intrusion and escape:

Electronic Thumb (TL8). A pocket-sized gadget that can be used to bypass fingerprint and retinal scanners. One end displays a retinal pattern; the other has a plastic pad that can be configured to match a thumbprint. New prints can be downloaded into it by a cable connection. An A cell powers it for a year. \$5,000, 0.25 lb.

Nanogrip Gear (late TL8). A pair of soft gloves and shoes covered with nanofibers that allow climbing up virtually any surface, like a gecko or spider. Add +4 to Climbing. \$250, 3 lbs. for complete set.

Plasma Torch (TL9). A small plasma generator for heavy cutting and welding. Its beam of ionized plasma does 7d per second; even if it doesn't penetrate DR, every 10 hits of damage will reduce DR by one, allowing it to eventually burn through any material. Its C cell powers it for 60 seconds. \$750; 4 lbs.

There is also a larger version available; the heavy plasma torch is a backpack-sized device that does 20d per second. It operates for 200 seconds on an E cell, which is carried on the back, together with the plasma generator. \$3,000; 40 lbs.

Intruder Suit (TL10). Several steps up from the TL8 chameleon suit, this full-body suit (including face mask, hood, gloves, and boots) "bends" the light around the wearer using fiber-optic light guides, granting a blurry almost-invisibility. Observers are -10 on Vision rolls to see the wearer if he is standing still, or -6 on Vision rolls if he is moving. It gives DR 1 (DR 6 against lasers). \$8,000, 12 lbs.

Holobelt (TL10). A holobelt projects a roughly man-sized three-dimensional image around the wearer, to conceal him. Standard holodisks show plants, animals, rocks, or other unanimated objects; alternatively, a disk showing a recording of somebody else can be used. A casual observer may not notice the wearer (+4 Camouflage), but close observation will reveal that something is wrong. In addition, the holo image, projecting light as it does, rather obviously glows in the dark. Once spotted, all attacks on the wearer are at -1 to skill, and attacks aimed at specific body parts are impossible unless the image closely mirrors the wearer. A B cell powers the projector for 24 hours. \$1,100, 4 lbs. Pre-recorded disks are \$100 each.

Cannibal Nanokit (TL11). Nanotech makes it possible to assemble objects at the molecular level -- and to disassemble other objects to provide raw material. A nanokit makes use of this capability for the benefit of people who need to hide what they're carrying. A tube of some seemingly innocuous material such as makeup can be squeezed onto suitable raw material (mechanical objects require metal; fuels and propellants require organic material) and reshape it into a weapon, explosive, or other controlled device, taking 1 minute per pound. The product must be one TL lower than the nanokit's TL. If the availability of suitable raw material is doubtful, roll 3d against the nanokit's TL. The nanokit weighs 1% of the weight of the end product and costs three times as much.

Tau-Field Generator (TL16). A tau-field generator creates a bubble in space/time, in which time is vastly accelerated.

It cuts off all inside the field from those outside, allowing those inside to take any action without interference from others. For example, an operative could deal with his targets at his leisure, since they can neither escape from the field nor get help from the outside. In fact, those outside and on "normal" time will not even note what happens inside the bubble. When the tau-field is switched off, they will see the results of the action inside, but to them, only a moment passed.

A backpack generator runs for 30 minutes of subjective time on a D cell and covers a one- to four-yard radius (depending on the setting chosen by the wearer). \$1,500, 40 lbs.

Intruders may want to take someone back out with them. For this purpose, restraints are helpful:

Pneumospray Hypo (TL7). A hand-held device that uses a charge of compressed air to give an injection. It can penetrate clothing with DR 1. An air cartridge is good for 100 injections. 1/4 lb.; \$125; +3 to Holdout skill. Invented for medical treatment, but assassins will find other uses for it! Changing either the air cartridge or the vial of injected substance takes 2 seconds.

Neural Inhibitor (TL10). A flat disk about 2" in diameter that can be attached to the skin, cutting off nerve impulses. The effects depend on the location; it is placed on the forearm, the forearm and hand are paralyzed (and feel no pain); if placed on the neck near the spinal cord, the entire body from the neck down is paralyzed. Intended for medical purposes (e.g., as a local anesthetic to perform surgery), it has many uses to "bind" kidnapping victims or to control prisoners. Each disk runs 24 hours on its two integral A cells. \$200, 0.25 lb.

The published material in ***GURPS Covert Ops*** includes many futuristic weapons, but as far as possible, these are extrapolations from current designs or research. Here are some more speculative ideas, often taken from classic science fiction:

Knives. At higher TLs, more advanced variations of knives become available.

Vibroblades (TL8) vibrate thousands of times per second, adding 1d to the regular damage of the weapon. DR protects against vibroblades at 1/5 value. The vibration cannot be seen, but generates a faint hum that can be detected at 1 hex range on a Hearing roll and that anyone familiar with vibroblades will recognize. Turning on the vibro effect takes 1 second; a successful Fast-Draw roll activates it as the weapon is drawn. The hilt of a vibroblade contains a B cell (p. B247) which supplies power for 1 hour divided by the blade's weight in pounds. Vibroblades have no added weight, but cost \$200 extra for any knife size.

Monowire blades (TL9) have edges of molecular thickness, enabling them to cut into almost anything, adding 1d to the regular cutting damage of weapon. DR protects against monowire cutting attacks at 1/10 value. Monowire blades have no added weight, but cost \$500 extra for any knife size.

Hyperdense Filament Blades (TL10) appear in laboratories and advanced workshops as a more durable single-molecule tool head. Originally they represent a tiny edge set into a larger blade to permit improved penetration of dense materials and individual cells. These blades are cutting-only tools that gain no damage bonus, but inflict +1d damage and penetrate the target's armor considerably better than anything before: one-fifth normal DR at early TL10 and one-tenth by the end of TL10. They appear in the hands of covert operatives and on the black market in the form of stilettos at first, having the same effect as early TL10 laboratory blades, then as the edge and tip on the most expensive combat knives. These filament lattice blades are the thinnest advanced alloys with hyperdense filaments inserted into the edge and tip in a microscopic copy of the Aztec macauitl. The blade weighs the same as a normal knife, as the lighter alloy is balanced by the heavier edge. Costs vary due to rarity and the bespoke nature of this item from a base of \$1,000× weight, halving at early TL11. Making a hyperdense blade also a vibroblade adds +1d to damage but does not add to the blade's penetration.

Force knives (TL11) are smaller variants on force swords and use the Force Sword skill (p. B50); anyone who has only used the full-sized version is at --2 with the knife size due to unfamiliarity, and vice versa. A force knife is a small hilt, about the size of a dagger hilt; when activated, it generates a "blade" of energy that inflicts cutting or impaling damage. DR protects against force knives at 1/5 value. Any limb that takes twice the damage required to cripple it in a single hit (p. B129) is cut off, and the wound is cauterized; excess damage is lost. Any material weapon that carries a force knife is broken, except on a critical success. It takes 1 second to activate a force knife, except on a Fast-Draw roll, and 1 second more for the blade to stabilize. Power comes from a C cell in the hilt, which allows 10 minutes of continuous use.

Needlers (TL8). Needlers use a magnetic field to fire a steel sliver. Because they don't use chemical propellant, chemsniffers can't locate them, making them easier to conceal. Their damage is impaling rather than crushing as for chemical slugthrowers.

Beam Weapons. Energy projection weapons, or beam weapons, are speculative technology, as none have yet been made practical, especially not as man-portable or concealable weapons! For more detail on these weapons, see **GURPS Ultra-Tech** and **Ultra-Tech 2**. Several varieties would be useful in covert operations:

Lasers (TL8) fire a beam of coherent light. They have very long ranges and no recoil; the dispersion of shots is less than the diameter of the beam. As a result, when a laser is fired on full automatic setting (see pp. B119-120), the damage from all shots that hit the same location in the same turn is totaled before DR is subtracted. Damage is impaling: any damage that gets through DR is doubled. Any hit to the eyes (location 5 from the front; see p. B211) causes double damage and blinds the victim unless he makes a HT roll; +5 for anti-glare goggles. Roll as for crippling injuries to recover. Actual damage to the eye results in permanent blindness. Lasers do half damage in fog or smoke and are stopped by heavy smoke such as generated by military smoke dischargers.

Blasters (TL9) fire a bolt of charged particles; the beam does impaling damage and also inflicts knockback. It is treated as a projectile for blow-through purposes. This isn't a subtle weapon, but may appeal to a heavy.

Disruptors (TL9), or masers, fire coherent microwave radiation. Metal reflects disruptor beams, giving metal armor PD 8; the armor emits massive sparks in the process. Disruptors are thus mainly useful for attacks on unarmored targets. Damage to living targets is tripled after DR; the target's cells actually explode. The model specified here is designed to be broken down into four pocket-sized components; assembly or disassembly takes one minute.

Flamers (TL9) are beam weapons that fire short-range plasma discharges and can hit multiple targets in the same arc of fire (see p. B121). Arsonists are likely to find them useful; they automatically ignite paper and dry wood, and set fire to other flammable materials whose DR is exceeded. Unsealed armor has only 1/2 its normal DR against a flamer. For every 10 points of damage done (before subtracting DR), armor loses 1 point of DR at the location hit; if it loses 1/5 of its original DR it becomes unsealed at that location.

X-ray lasers (TL10), also known as xasers, are similar to standard lasers, but are not affected by smoke, fog, or mirrors. Halve the DR of any armor or force screen against an X-ray laser. *Grasers* (TL14) are even more effective; force screens and armor protect with only 1/5 DR.

Disintegrators (TL15) completely destroy the target, producing heat and concussion in surrounding hexes. Force screens protect at 1/100 DR, and nuclear damper fields completely block them; armor and deflectors provide no protection at all. This is a good weapon for disposing of evidence; if there are no witnesses or recorders, it may not be possible to tell who was disintegrated.

Brainwipe. In societies with highly developed medical capabilities (TL9 and up), neither blood loss nor failure of a major vital organ need be fatal if the victim receives medical care quickly enough. If the brain still functions, cybernetic interfaces may permit it to communicate with other people, despite having the No Physical Body disadvantage (p. CI83). Cloning technology may be able to replace a destroyed body. The only certain death may be destruction of the brain.

There are plenty of crude ways to accomplish this, ranging from blunt instruments to surgical lasers. But a more advanced technology may provide specialized tools.

Brainwipe (TL10) requires bulky and expensive equipment (\$50,000, 500 lbs., 1 cy). The procedure takes an hour and requires Electronics Operation (Medical)/TL10 skill. The necessary equipment is legal only for governments. However, an illegal organization that has the equipment may find it worthwhile to kidnap an enemy and subject him to the process. It's even possible to install the equipment in a moderately large truck or similar vehicle and go to meet the victim.

Mindscramblers (TL12) and *mindrippers* (TL14) are portable weapons that accomplish similar results with focused electromagnetic radiation. They use Beam Weapons (Neural) skill. A mindscrambler can rip apart the target's brain, reducing his DX and IQ to 1 and erasing his memories. A mindripper does the same, but also scans the brain and makes a copy of the information stored in it. (From one point of view, this makes it a tool for kidnappers or thieves rather than assassins.) If the attack hits, roll vs. HT-5 at +1 per 10 points of DR protecting the brain. If the HT roll succeeds, the target suffers no more than a mild headache; if it succeeds by no more than 1 point, he is mentally stunned. If it fails, he suffers the full effects.

Of course, if it's possible to record the information in a brain, the victim may have done so already, as a precautionary measure.

Note: In the shots column, a slash followed by a capital letter indicates the number of shots per power cell of that size.

Weapons call forth defenses, so a futuristic setting may have advanced types of armor as well:

Arachnoweave Armor (TL8). Created using synthetic proteins derived from spider silk. The standard forms are black,

gray, or green for military or combat applications; multicolored patterns cost 25% more and range from camouflage designs (-2 to Vision against similar backgrounds, +2 against inappropriate backgrounds) to brightly colored patterns for sportswear or kimonos (+2 to Vision against any background). Light arachnoweave is PD 1, DR 4 (PD 0, DR 2 vs. impaling); a vest is 0.5 lb. and \$400, a full suit is 1 lb., \$500. Medium arachnoweave is PD 2, DR 8 (PD 1, DR 2 vs. impaling); a vest is 1 lb. and \$600, a full suit is 2.5 lbs. and \$800. Heavy arachnoweave is PD 2, DR 12 (PD 1, DR 2 vs. impaling); a vest is 1.5 lbs. and \$8000, a full suit is 4 lbs. and \$1,000. A vest protects hit locations 9-10 and 17-18. Any 6 rolled does 1 point of crushing damage, even if the attack fails to penetrate the armor.

Bioplas Armor (TL10). Made from pseudo-alive, self-repairing material (repairs minor holes in six hours if it has access to sunlight and air, longer for major damage), bioplastic armor provides PD 2, DR 15. A full suit costs \$2,000 and weighs 3 lbs.

Reflex Armor (TL10). Made of bioplastic (above) and normally gives PD 2, DR 15. However, it also incorporates sophisticated passive sensors to detect incoming projectiles or blows. Melee weapons, thrown objects or other low-velocity attacks are automatically detected; bullets, rockets, and sonic beams on a roll of 14 or less; and hypervelocity projectiles only on a roll of 12 or less. Lasers or similar beams are too fast. Once an incoming attack detected, the bioplastic contracts its "muscles" to become rigid for an instant -- protecting the impact point with PD 5, DR 30. Reflex armor requires a power source (usually a B cell that lasts for three months). A full suit is \$4,000 and weighs 10 lbs.

Energy Cloth (TL11). Woven from single-crystal ballistic fiber and thermal-superconducting material, and easily concealable as part of clothing. A vest protects hit locations 9-10 and 17-18, weighs 2 lbs., and costs \$2,800; a full body suit (with hood) weighs 4 lbs. and costs \$5,600. Either has PD 4, DR 50.

Deflector Belt (TL12). A generator that creates a form-fitting deflector field over the wearer's body and clothing; it does not extend over objects held in the hand (unless they are completely enclosed). Two settings are available: steady, which provides PD 6 but does not let air pass through, and flicker, which provides PD 5 and allows air (and other gases) to pass through. Two C cells provide power for 5 minutes on steady or 10 minutes on flicker. 2 lbs., \$5,000.

Finally, advanced medical care can treat many injuries:

Automedic (TL9). An automedic looks like a coffin with integral medical computer; it will attempt to diagnose and heal anyone placed into it. It is fully automated and stocked with drugs and supplies to deal with any injury or sickness a physician can normally treat. Its computer is programmed with First Aid-14, Diagnosis-13, Physician-13, and Surgery-13 (+1 to skill for every TL over 9). It cannot bring back the dead, and should it be confronted with unknown diseases or strange problems, it will put the patient in suspended animation and call for help. The results of critical automedic failures are up to the GM; a sabotaged unit is a death trap . . .

At TL9, it is \$50,000, 600 lbs. At both TL10 and 11, subtract 100 lbs.; cost remains the same.

Case Study: "I'll Blow That Hitler Up!"

There were many attempts to kill Adolf Hitler (p. WWii110) prior to and during World War II. None of them worked - to the despair of many -- but some came close. Their details illustrate some of the pitfalls of covert operations.

Georg "Schorsch" Elser was a simple carpenter from a small town in Swabia, who liked to puzzle with "inventions." Elser, a socialist, had little interest in political parties (including the Communists). Nevertheless, he understood early on that the Nazi regime was not to the advantage of the common German worker. By 1938 he knew what had to be done: somebody had to kill the Führer.

Hitler and his henchmen came to Munich every year to honor the anniversary of his failed "Beer Hall Putsch" of November 8th, 1923 (p. W:IC8) at the very place of the putsch. In 1938, Elser went to the Bürgerbräukeller at the

Rosenthaler Platz in Munich and reconnoitered the building. Security was lax. He began planning and designing a bomb. For a time, he worked with a company that produced munitions; later he worked at a quarry. He stole explosives, detonators, and blasting caps, cleverly taking small amounts so that nobody noticed. In late summer of 1939, he went to Munich, living off his savings. Every third night for three months he let himself be locked into the beer hall. He build a secret door into the wooden paneling of the pillar right behind where the speaker's table used to be and then carefully cut a 28"×35" hole into the pillar, using tools wrapped with rags to dampen the sound. He made the plaster for the compartment with his own urine to avoid using the taps. His bomb consisted of two Black Forest clocks (lined with cork plates to suppress the ticking), three detonators, and about 20 lbs. of black powder (p. CV80). He set the timer on the night of the 6th to detonate it at 9:20 p.m. on the 8th. It worked as planned, taking down the ceiling and blowing out one of the outer walls (p. W:IC11). The charge was relatively small, considering the inefficient black powder he had to use. But Elser had learned to tamp the charge for maximum effect by reading a combat engineering manual freely available for public education. However, contrary to tradition (and for the first time in years) Hitler had arrived early and had already departed at 9:07 p.m. The huge hall was void of the top Nazis; only 120 of the "old warriors" remained. Eight people were killed and 63 wounded. At first, it was thought a poison gas bomb had been used, due to the thick smoke generated by the plaster and black powder.

Elser was arrested the same day, as he tried to illegally cross the border to Switzerland near Constance. A few days later he was connected with the bombing (he had parts of a detonator and other incriminating evidence with him when he was arrested). The Gestapo couldn't believe one man alone was responsible, and tried to link others to it, but didn't succeed. He was shot at the KZ Dachau on April 9th, 1945.

Another attempt was made on Hitler's life in July 1944, orchestrated by a large conspiracy consisting primarily of conservative general staff officers, but also incorporating social democrats, communists, and others (pp. W32, W:IC24). Many of the men involved had been contemplating an assassination attempt for years. Some had even begun such thinking before the war, and most wanted to see Goebbels and Himmler dead as well. Valuable time passed as they tried to work out how to take over the state and especially the armed forces after Hitler's death ("Operation Wallküre").

The man who eventually took on the suicidal task of actually killing the Führer was Major Claus Graf von Stauffenberg, a conservative aristocrat and member of the general staff. He was deeply convinced that the unlawful killings of prisoners of war, Jews, and civilians were unethical and dishonorable.

Stauffenberg was to meet with Hitler at the Wolfsschanze, near Rastenberg (the armed forces' headquarters), on July 20th, 1944. Fog had prevented him from arriving early, so he only had minutes between a staff meeting and his meeting with Hitler (scheduled for 12:30 p.m.). He stepped out (ostensibly to change his shirt) and primed the explosive charge in his briefcase. He had two 2.2-lb. blocks of plastic explosive (p. CV81). However, Stauffenberg had lost an eye, his right hand, and two fingers on his left hand in combat, so that he was fumbling with the acid detonator, and because of the time pressure, only managed to prime one of the blocks and take it with him to the meeting with Hitler. After placing the briefcase leaning on the table in the conference room, he excused himself to make a phone call. The charge blew up, but was too small to do the job. The blast was partly deflected by the heavy table. Hitler sustained only popped eardrums and a bad bruise on his arm (by afternoon he was back on his feet, giving Mussolini a tour of the carnage). Four others died from the blast.

Stauffenberg and an aide left the Wolfsschanze, believing they had done the job, got past two guards by sheer chutzpah, and headed for Berlin on a He 111 plane that had been provided by the conspirators. There they tried to set in motion their putsch, but it failed as news of his Hitler's survival trickled out. The same evening, Stauffenberg and a few others were caught after a short firefight with the Gestapo. They were executed around midnight. Over 200 others were rounded up and killed or driven to suicide as well, including General Beck (p. W:IC55), Admiral Canaris (p. W50), and Feldmarschall Rommel (pp. W50, WWii112).

Case Study: The Bellasi Case

In the night of August 12, 1999, the Swiss police arrested 39-year old Dino Bellasi at the Zürich airport on charge of embezzlement. Mr. Bellasi, formerly

The Armoury

Bellasi's cache consisted of 248

of the accountant bureau of the Swiss military *Nachrichtendienst* (intelligence service) with the rank of *Stabssekretär/Hauptmann* (captain), was accused of having stolen more than 8.8 million Swiss francs (some \$5.8 million) in a period between 1994 and 1999 by forging invoices which he then cashed at the national bank.

When his home and several other premises were searched, the police found some 220 modern firearms. Piece by piece, it emerged that Bellasi had not only lived very large (with a wife, two concubines, regular brothel visits, expensive cars, and gifts for his friends), but had also invested in luxury houses in Austria and Portugal, a collection of expensive pipes, and modern firearms and munitions. The weapons cache was especially suspicious, since he had acquired dozens of the latest firearms in sets, as if to equip teams with identical weapons (see *The Armoury*). For whom?

In police custody, Bellasi claimed to have acted on order of his superiors at the *Nachrichtendienst*, the aim having been to set up a completely secret shadow intelligence service outside of the control of parliament.

Switzerland had already had a similar covert organization between 1967 and 1990, the infamous P 26 secret army. The 1,000-man strong P 26 had ostensibly been set up for the event of a Soviet attack against Western Europe, to organize resistance and maintain contact to a government in exile. During the Cold War, such covert "guerrilla" organizations had been set up with help of the [CIA](#) all over Europe -- however, such a relationship to NATO was of course totally unacceptable for the adamantly neutral Switzerland. In addition, P 26 was outside the oversight of the democratically elected parliament and funds (some \$6 million annually) were acquired illegally by funnelling them away from the military budget (hidden in acquisition costs). P 26 was abolished in 1990 for these reasons, parliament also naming fear of "self-activation," that is, a putsch (p. CV8) by the covert organization. However, leading figures of P 26 (such as its last commander, Generalstabsobersr Efrem Cattelan, codename "Rico") publically stated that it was only "dormant," not disrupted.

The Bellasi case looked suspiciously as if it was a new or resurrected version of such an organization. Officials denied this, as did Bellasi after "further questioning." Bellasi was sentenced to six years in prison and everybody else implicated was cleared of all accusations. Bellasi walked free in August 2003, after less than four years.

Adventure Seeds

The Bellasi case illustrates several points that may play a role in a *Covert Ops* campaign: how to set up a covert organization within existing structures, how to acquire funds, how to get suitable weapons, and how to deny everything after the cover has been blown.

The most important point, finance, would appear to be fairly simple: find an accountant who knows how to get the blank documents required for cash withdrawals, to bury the withdrawals inside other posts, and to hide the money in off-shore "businesses."

The case also illustrates a number of things you should *not* do: don't waste your

firearms (including some 30 older collector's pieces, mainly pre-WWII military rifles), numerous sound suppressors, scopes, and targeting devices, as well as more than 70,000 rounds of ammunition. He had spent a total of 566,199 Swiss francs (more than \$370,000) on the more modern weapons. All were bought legally from a dealer in Bern.

Among these were 3× H&K MK23 MOD0 (p. SO114), 1× Ruger MKII with integral suppressor (similar to High Standard [HDMS](#), p. CV66), 7× SIG-Sauer [P228](#) (pp. C63, SO114), 6× SIG-Sauer P229 (in .357 SIG, p. CV67), 7× S&W Model 29 (p. HT110), 2× Beretta [Mod 12S](#), 4× FN P90 (pp. HT116, SW52), 2× H&K MP5A5 (pp. SO117, SW52), 3× H&K [MP5K](#) (p. CV68), 5× IMI Mini-Uzi (p. HT116), 2× Olympic Arms CAR-15 with integral suppressor (based on Colt [CAR-15 R635](#), p. MF28), 4× Orbis MGV-176 with suppressor (based on American 180, p. HT116), 1× Accuracy International [AW](#) (p. MF24), 1× Barrett Model 90 (p. HT115), 1× H&K HK33SG1 (p. SW53), 3× Izhmash AKS-74U (pp. HT114, SO115), 1× Remington Model 700 (p. CV67), 3× Steyr SSG 69 -- one with integral suppressor (p. SW53), 7× Mossberg Model 590 (p. C63), 5× Remington Model 870 with short barrel (pp. C63, HT112), plus custom-made sniper rifles with integral suppressor by Kitzmann, Marlin, and Sabatti.

Some of the ammunition was stowed (illegally) on military premises (where he and other members of the army and intelligence trained with the

funds on trifles, don't try to withdraw money *after* you left the organization you stole it from, and don't carry weapons on your person if you haven't got the right papers for them.

weapons), much of the rest in Bellasi's private stowage rooms.

While the Bellasi case has been officially closed in Switzerland by the authorities, some questions remain. Here are some suggestions how to use the affair in a ***Covert Ops*** campaign:

Common Fraud

Everything happened as the court ruled. There was no conspiracy, no shadow army, and no criminal connection to the underworld. Bellasi was an embezzler who liked guns, girls and tobacco pipes, in short, a common criminal -- and, like every criminal who let himself get caught, a stupid one.

Still, real covert operatives might have found Bellasi (or a similar, but fictional person in Switzerland or another country) more than useful. He had access to funds, he could provide modern weapons including suppressed sniper rifles, and he knew many people in local and foreign intelligence as well as the underworld. He might become an unwilling puppet in a larger conspiracy, or the logistics specialist for the player characters (or the NPCs).

Organized Crime

It has been widely speculated that Bellasi had connections to organized crime -- especially to Serbian organizations. Criminals have similar requirements for secrecy, money, and weapons as covert organizations, although their goals are ultimately not political, but to acquire more money. In a ***GURPS Cops*** campaign, detectives could try to unravel the case itself, or track back money or a mafia assassin's murder weapon to the cache.

Shadow Army

Everything happened as Bellasi first claimed. He might have acted on orders of the Swiss military intelligence service (a very small organization indeed), be on the payroll of the Gnomes of Zürich, or a foreign service. The houses in Austria and Portugal would have been safe houses for covert agents, the weapons cached for operatives or hired assassins.
